GROMACS GitLab and Version Control

Sebastian Wingbermhle

How to code for GROMACS (day 1)

Tonight

Up for dinner, chatting and some games?

Ugglan

Närkesgatan 6 (Södermalm)

T-bana: walk from Medborgarplatsen

7 pm

Agenda

1. Set up and manage your local git
2. Prepare for uploading a change
3. Upload an MR
4. Our review system
5. GROMACS on GitLab – an overview

Set up and manage your local git

- After cloning, you have one branch **main**
- However, at least one release branch is actively maintained (now **release-2023**). To add it:
`git fetch origin`
`git checkout -b 'release-2023' 'origin/release-2023'`
- GitLab identifies you by your mail address. Set it in your config file you edit by typing:
`git config --global --edit`

Set up and manage your local git

- Keep your git up-to-date:
git checkout main
git pull origin main
git checkout release-2023
git pull origin release-2023
- These commands can be stored in a script you run daily or once a week

Set up and manage your local git

- For every change, create a new branch with a meaningful name (will be visible on GitLab):
`git checkout -b <name_of_new_branch>`
- Helpful git commands while coding:
`git diff`, `git grep`, ...
- Once done, create a commit:
`git add .`
`git commit -m "<title_of_MR>"`

Prepare for uploading a change

- Make sure your branch is compatible with the current state of the repository:
git checkout <my_branch>
git pull --rebase origin main
- If your local git is up-to-date, you can use:
git checkout <my_branch>
git rebase main
- Reuse recorded resolution for merge conflicts:
git config --global rerere.enabled true

Prepare for uploading a change

- Test compile your branch locally (the most relevant setup):

```
cmake <branch> -DGMX_DOUBLE=?\  
                -DGMX_MPI=?\  
                -DGMX_GPU=?\  
                -DREGRESSIONTEST_DOWNLOAD=ON\  
                -DCMAKE_BUILD_TYPE=Debug
```

```
make -j <processes> # build code
```

```
(make -j <processes> webpage # only if docs changed)
```

```
make -j <processes> tests
```

```
make check # pass this before uploading!
```

Prepare for uploading a change

- We use automatic code formatting by clang:
git checkout <my_branch>
diff-index to preview, update-workdir to format
bash admin/clang-format.sh update-workdir
bash admin/clang-tidy.sh -B=<build_dir> update-workdir
- Make sure the copyright is up-to-date:
bash admin/copyright.sh --copyright=full update-workdir
- If you change the docs:
docs/doxygen/includesorter.py -S . -B <build_dir>

Upload an MR

- Push your branch to our online repository (origin, sometimes remote in GitLab docs)
`git push origin <name_of_local_branch>`
- When logging in to GitLab, you'll be asked to create a merge request (MR)

✔ You pushed to `workshopExercise` at [GROMACS / GROMACS](#) just now

Create merge request

New merge request

From `workshopExercise` into `main` [Change branches](#)

Title (required) **Meaningful title (Gitlab suggests your commit message)**

Rename check_atom_names to checkAtomNames

Mark as draft

Drafts cannot be merged until marked ready.

Description **Documentation for the future: concise and intelligible**

Preview **B** *I*              

This MR renames a function internal to grompp such that it meets the recent GROMACS naming conventions.

If you already know that you will soon modify the MR, please cancel this pipeline to save resources!

Our review system

- Goals:
 - Can the MR be understood?
 - Is the MR scientifically correct?
 - Does it conform to our coding standards?
 - Is the implementation efficient?
- 2 approvals (1 from each group) needed

Our review system

8 ✓ Requires 3 approvals from GMX Core Main and GMX Developer Main.

Our review system

- Review is needed to ensure code quality, but it is nearly always the bottleneck when trying to get code in!
- Be an active reviewer and build trust to get approval permissions!
- Trade reviews (with both core developers as well as other workshop participants)!
- Engage in design discussions early!

GROMACS on GitLab – an overview

- We delete source branches after merging to save space

GROMACS on GitLab – an overview

- Every MR is a branch of the GROMACS repository on GitLab
- The official GROMACS versions are stored in protected branches: **main** (the next major release) and **release-***
- We frequently merge from the oldest **release** up to **main** to make sure bug fixes are propagated
 - Always fix bugs in the first maintained release they were found in

GROMACS on GitLab – an overview

- We document the contents of a release with the help of tags and GitLab releases

GROMACS >  GROMACS > **Tags**

Tags give the ability to mark specific points in history as being important

GROMACS on GitLab – an overview

- We document our plans in issues linked to milestones
- The milestones are the actual deadlines enforced during our release cycle!
- If you want the Stockholm team to be aware of a larger code contribution, write an issue and link it to the correct milestone!

Questions?

Exercise

Change the name of the function **check_atom_names** to **checkAtomNames** everywhere in the GROMACS source code!
