

# RDA DDPIG: Gathering Use Cases

Within the context of the Task Force on Use Cases (<https://goo.gl/tx4vaP>) in the RDA Data Discovery Paradigms IG (<https://goo.gl/HDYqe9>), we would like to further enrich our current list of use cases. A use-case roughly corresponds to the following narrative:

Imagine you are in the process of looking for data on an online repository (data discovery process). What is the functionality that is currently missing but would be important for you to be present?

Feel free to submit as many answers as you like.

\*Required

"As a": Please add the role under which this use-case is relevant \*

- Researcher / Professor
- PhD Student
- Master Student
- Librarian
- Funder
- Other: \_\_\_\_\_

"Theme": Please under the general Scientific discipline / domain this use-case fall under. \*

- Life Sciences
- Computer Science

Physical Science

Social Sciences

Health Sciences

Earth Sciences

General

Other: \_\_\_\_\_

"I want...": What is the particular need for data discovery that you wish to be addressed (e.g. "I want to have a single-entry point for reference data", or "I want to be able to sort a search result by popularity - the number of downloads and accesses") \*

Your answer

---

"So that...": What will you gain if this particular wish/functionality is ultimately provided? (e.g. "So that I can select the appropriate reference dataset for my research"). \*

Your answer

---

Example repository: if available, please provide some information on one or more repositories that could be improved by the requested functionality.

Your answer

---

Any further comments?

Your answer

---

If you wish, please enter your contact details (name, email

address), so we can follow-up the stated requirements for further details.
