

ONE LAW OF NATURE MAKES ONE LAW OF HUMAN NATURE

Gerhard Ris, former lawyer, and magistrate with thirty years of experience in courts of law

The basic psychological fact that different intelligence and personality types can't understand each other has led to the mounting global amok. The task of the legal sciences is to know how conflicts arise, and how to put an end to conflicts and keep them ended. The know-why has eluded humanity. Most also know that classical mechanics, general relativity, and quantum mechanics are at odds. Here I show that following a well-known legal crime scene procedure with very few slight twists proves the thesis of one law of nature as one law of human nature of which all the theorems were in long ago. The theorem of John Bell on quantum entanglement falsifies the axioms of the antithesis. It's a non-elementary reality as basic local laws of science. By default, there is no reason that the cosmos isn't classical mechanics and thus governed by simple rules. The grand axiom and grand goal of homo sapiens prove the thesis via the strongest possible reductio ad absurdum proof combined with the weakest proof of convincing circumstantial evidence. All data taken into evidence shows only data pro requiring one idea for the proof. Preventing pestering very practically produces peace and prosperity in our time.

The Unambiguous 1000 Elementary Terms, Definitions, and Descriptions in Elementary Science, Courtrooms, and Schools Author Gerhard Ris

<https://zenodo.org/records/10254851>

This link is referred to as the linked article and/ or EL.

This amendment to the Oxford Dictionary is used in this article on the elementary list (EL). The linked article forms an introduction to this article and also contains the proofs and procedures. This article adds to those proofs. This list proves that I contrary to the current paradigm in science have followed the procedure of the current paradigm. I've fulfilled my burden of proof without the fallacy of begging the question. I claim a position and have proved that position in an inherent circular argument covering the most data ground as proven by far best practice. I present the verifiable raw data as proof of that elementary claim. Thus forced to take all presented data into evidence given the obvious absence of evidence not being evidence of absence. Nothing is certain, not even that. The proof is thus based on axiomatic assumptions derived from postulates. Five exclusive elementary axioms on five wise goals that can be reduced ad absurdum to one grand axiom of one consistent cosmos on one grand goal of bare survival of homo sapiens. Science is proven to be an elementary but not a basic religion. There is only one elementary scientific religion besides elementary pseudo-scientific religions. Other religions are not scientific. (EL: elementary religion is neurologically internalized hypnotic beliefs as memories. This is a DNA survival trait.) This new article uses this unambiguous elementary (EL: meaning most fundamental in the cosmos super set) jargon of EL. Conforming to the required scientific trial and error procedure the EL is amended as well. The proven by far best practice definition of science as it now by trial and error stands is:

The decent systematic search for all the laws of everything and all-inclusive Bildung.

'Decent' means for homo sapiens by homo sapiens on the grand goal and logically derived goals. When the future evidence shows that homo sapiens is superseded as homo erectus was superseded

the definition will have to be revised. 'Homo sapiens' per definition * thus without exception * (adaptation to EL) when all being mentally healthy is four-way split into in-the-set-law-box 40% autistic gender neutral male logic idiocy, 40% hysteric gender neutral female logic idiocy, and out-of-that-box 10% gamma ADHD artistic playwright idiocy, 10% delta ADHD artistic composer idiocy personality-type intelligence and also in a four-way split in intelligent inertia speed of brain 10% Very Slow, 40% Slow, 40% Fast, and 10% Very Fast idiocy thinkers. Every homo sapiens is easy to detect by all potentially with hard work 1/1000 highly gifted person and with luck a fairly meaningless genius because someone has to be first. There is no evidence-based reason to assume that 1/500 prevalent Albert Einstein or 1/125 prevalent Leonardo da Vinci genotypes as individuals were not homo sapiens. Minor mutations or dysfunctional mutations are irrelevant. Only a major improvement to the instrument brain warrants a new name for species of the genus. Phenotype, deep religious type, religious type, and unique individual type are smaller subsets within the boundaries of the superset genotype and species type. YOLOUR: You Only Live Once Unique Reincarnation is proven workability as an infinite topology of more topology-limited perspective realities and one or few truths. See for the meaning of these and other terms EL.

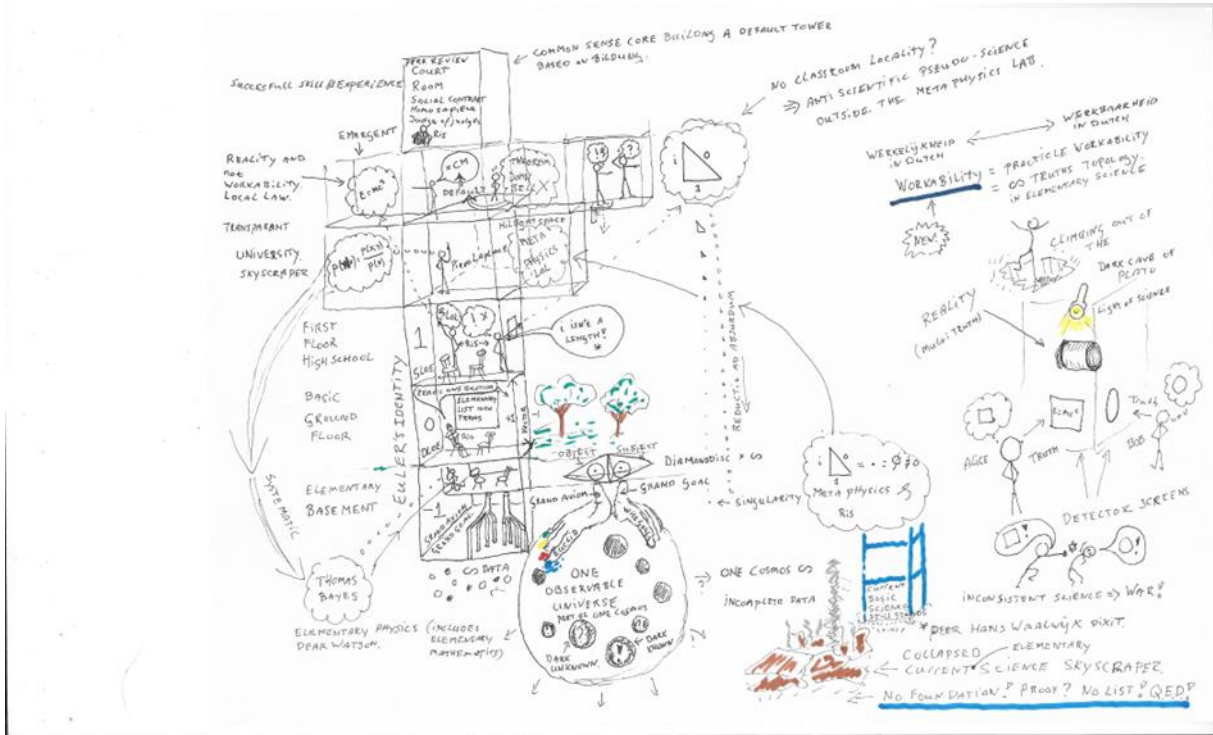

- *Elementary scientist exam method*

This Socratic taboo questionnaire provides an unambiguous answer to the question if you are certified as an elementary scientist. Only proven elementary scientists are potential reliable sources on elementary issues. The question of whether or not you are a basic scientist with a Ph.D. is irrelevant to an elementary probandum of this article. 'Elementary' means most fundamental in the superset cosmos.

1. Are you a homo sapiens? If not please state what you are. If you are a computer please shut down. If you are homo sapiens but don't accept the Grand Goal of the bare survival of homo sapiens then please shut up and enlighten us on what your opinion is after you've died.
2. Do you accept the Grand Axiom as the exclusive elementary axiomatic assumption of One Consistent Cosmos? Consistent means absolutely loophole-free complete and absolutely no contradictions in the superset cosmos. If not, then no elementary scientific discourse is possible. So, then please shut up, be attentive, and come back when you do. For if real magic exists then all the science and the scientific method are per logical definition falsified. An open mind has its limits given the Grand Goal.
3. Do you claim to have solved all the first three rising complexity levels of the elementary questions in science and do you provide all the geometry and other mathematical theorems on which all further non-pseudo infinite incomplete science can logically be based in One Law of Nature? If you don't, then please shut up, be attentive, and come back when you do.
4. Do you claim to have the elementary and basic scientific instruction manual of the instrument brain and that of the collective instrument brain as the physics of psychology based on the One Law of Human Nature that is consistent with the One Law of Nature and can you prove to have best practice applied it successfully in all of several fields? If not, then please shut up, be attentive, and come back when you do.
5. Have you studied the EL list and this article? If not, then please shut up, be attentive, and come back when you very precisely and respectfully can show any data that is incorrect or not dealt with that you or others have consistently dealt with. If any such major error amounting to valid falsification exists it should be very easy to be shown. This is logical because the claim in this model is that it's all classical mechanics. When anyone shows minor errors or omissions * that no doubt always will exist * these are irrelevant when corrected after giving a reasonable time to do so. This is because nitpicking is a fallacy. That science will always be incomplete is not inconsistent with having all elementary science as the simple rules and first three bases of the unfathomably complex game of the tree like the Tower of Science and Life. Basic 'if it works it works, don't ask why science' is a reality of basic science yet falsified as elementary science that requires proven know-why workability. The latter is proven by showing to have followed the prescribed procedure and by giving access to all the raw data containing the statistics proving the claimed best practice track record.

- *Welcome Certifiable Elementary Scientists*

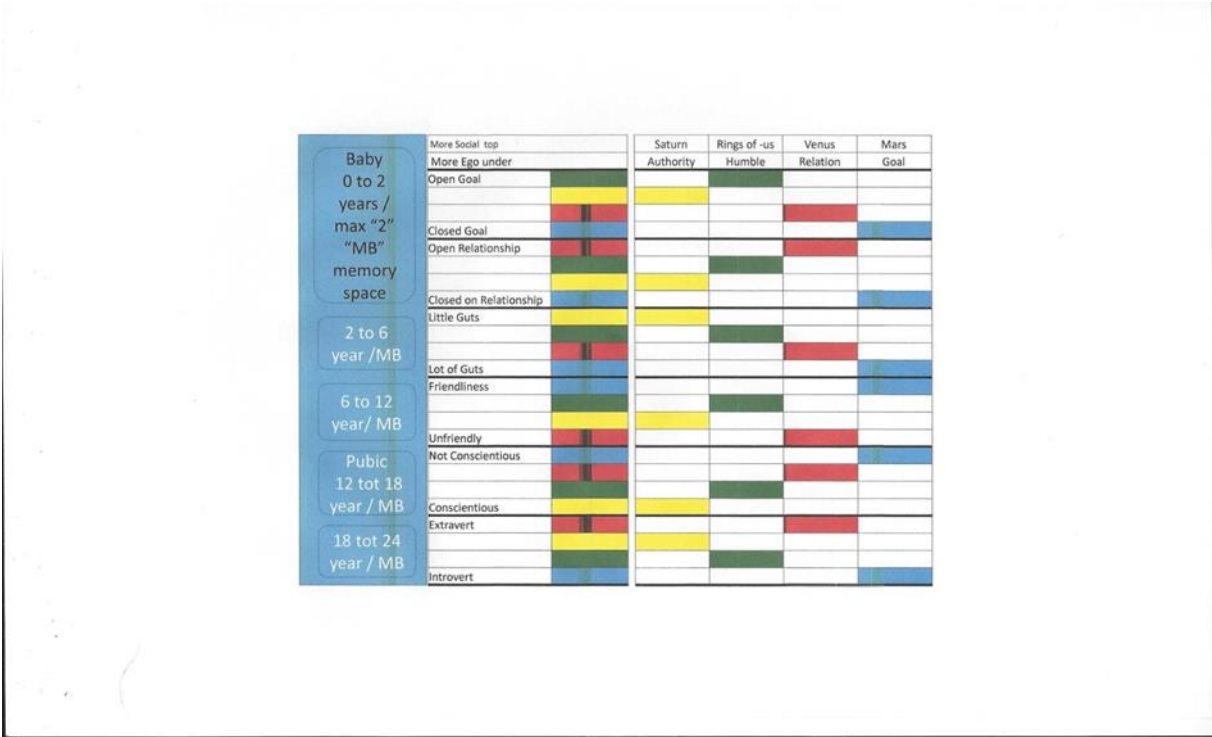

After having passed these examination questions, by answering them in the affirmative, as I claim to prove to have done, or posing valid opposition then I welcome you as an elementary scientist. Take it as a fact that you are telling the truth. Because elementary scientists are eternal students, you can drop out of this school of thought and action at any moment. We are thus at best all potential elementary scientists as soon as and as long as we comply with the One Law of Nature. Any dropout can thus always reenter. My Geno/ species personality-speed of brain type is a DG4m. For my further assessment, I revert you to EL.

- *Correct Elementary Scientific Method*

After having proven to be an elementary scientist absolutely all facts become hypotheses only to be established as fact as posterior odds together with all the other facts as absolutely true, absolutely untrue, or as yet unsolved. Akin to a wise judge, try never to make final (posterior odds) rulings on part issues. Try as much as possible to only decide on facts as a temporary measure, and not definitive fact. In science, this should always be possible contrary to the legal law. The systematic method is the same, the in-part goals are different between basic science, the law, and elementary science. Simply a dictate of the Third Law of Everything as the unsplitable part of the Ten Laws of Everything together forming the One Law of Nature from which One Law of Human Nature logically derives as the instruction manual of the individual and collective instrument brain of homo sapiens. In the R&D of elementary science, there is per logical consequence no such thing as a scientific language or form. Total artistic freedom as academic freedom is the standard. This is logical because all known data is to be taken into evidence and modeled by searching all the laws at play in the most succinct logical way without any loopholes or contradictions. Elementary peer review is only valid as a prior odds and illegal as a posterior odds. Peer review is a publication requirement and not in any way a form of censorship. Footnotes and citations are justifiably the bread and butter for current basic scientists. They are totally irrelevant and even mostly illegal in elementary scientific articles. In elementary science, all data is taken into evidence and presented in a way all high school children with Bildung must be able to learn to understand. It's based on a claim of it to be common knowledge in the respective fields. The proof thereof is either Wikipedia or the absence of disproof via stating what the common knowledge is in that field. The latter is a rule of all-inclusive Bildung preventing especially current psychology from withholding such knowledge as a 'divide and rule' earning model of illegal because of illegitimate desire. This article and EL contain the law in such a way that it's always legitimate when you follow that law that every homo sapiens can and should have learned also, in theory, to do in high school (defined as required thirteen to nineteen years of Bildung.) Withholding such evidence is a criminally insane offense. This is easy to prove due to the absence of the claimed evidence in any open source as per the definition of science required. The current

inherent oligarchs of science illegally accept this anti-scientific behavior even though having the power to prevent that. I simply present what I've via testing found out to be current common knowledge on basic psychology. I present this article in my artistic logical geometric way. Psychologists * taking this model as a fact * are deeply idiotically (i.e. incorrectly) trained in all more complex mathematical issues especially so in set theory/ geometry. Even so, the model in that respect in the core is only one A4 piece of paper that can be split out into very many pages, which doesn't alter the fact that falsification is easy when anything is wrong.

Up to now, I've only failed to get any basic scientists in the behavioral sciences to react on the record. Off the record, none of them dispute the correctness, although they hate it because it proves that all nurture is nature. Legally this is not my fault. I have however succeeded in forcing via litigation a material reaction of the NWO—the Dutch scientific research funding organization. The Dutch legal standards also deal with paradigm shifts as taboos apply as they do in unwritten disciplinary procedures. This is however within the confines of the One Law of Human Nature. The article will further cover this because it's part of the dispute on the social contract with humanity. Science isn't above the law of nature and its logical procedures. Nor is science above the legitimate interpretation of any democratic legal law as far as these laws don't conflict with the laws of (human) nature. I'll show that the current scientists with their scientific paradigm don't practice what they preach on two main counts. First not having proper peer review of the used instrument brains. Second not dealing with paradigm shifts as inherent taboo's in a safe environment behind closed doors in a proper proceeding. I furthermore prove to have adhered to these norms of proper scientific procedure.

- **Results in general context 1:** The linked article EL with one erratum in italics: The schooling system including primary and secondary education should be split into elementary education and basic education for every student from prep school towards and including permanent education in university. Elementary without an error rate based on logic, all known data, and definitions with as few as possible exclusive *elementary* axioms, and goals of science. Basic schooling with an accepted explicit error rate is the current paradigm of science, which is highly practical in applied science yet erroneous on elementary issues selling “loop-hole free” by defining an error rate by convention.
- **Article**

This article will take the form of a more elaborate dealing with the results in a general context as a second version as well as a more elaborate broader perspective with attachments.

The results in the published list are far greater than were listed in V1. For practical reasons, I left all that out in the first DOI publication. I want to focus on the main problem of preventing pestering and its solution. To add a piece of simple convincing evidence to the claim that the main problem in physics is the forgotten instrument brain. The list of unsolved problems in physics on Wikipedia as it now stands can be taken as a fact of proven current general knowledge.

https://en.wikipedia.org/wiki/List_of_unsolved_problems_in_physics Wikipedia is a reliable source on this issue. Namely not to the degree if anything contained therein is correct, but in answers the

question if it's general knowledge in that field as viewed from outside of that field by any new student or any judge of that field. Only then does it comply with the given definition of all-inclusive Bildung as per the definition of science. All not claimed to be elementary unsolved problems are irrelevant for this article.

The fact is that the page doesn't list the unresolved main problem of not having the physics of psychology. Even after the DOI publication of EL, this hasn't been corrected. I.e. the instrument brain and the instruction manual thereof have now been resolved. It should thus either be added to the unresolved problems or to the claim that it has now been resolved. It's the main problem. All the listed problems in this Wikipedia page have been solved. Many simply as proven to be non-elementary and thus irrelevant. There are no listed problems that prove to be unsolvable in a classic mechanical way. This is because taking the list of unsolved problems in physics literally there are infinite unsolved problems in physics. For most mathematicians and physicists this claim is laughably incomprehensible. It's a paradox that exclusively should mean a seeming contradiction. The latter is something that this model when taken as a fact as proven in EL proves that most mathematicians and physicists aren't capable of computing with their in that aspect deeply idiotic instrument brains. They interpret this as if I claim a lot, whereas I claim very little. The fact that I multiply this little with infinity in three space dimensions adding at least one to the infinite topology of ever-changing vectors doesn't make it a lot. Even then the model consists of just a few very simple easy-to-check rules in our one quantum of observable cosmos. Rules of one law of nature for which no data can be presented to disprove/ falsify that these rules haven't always applied and will always apply everywhere in the infinite cosmos.

- *Correct elementary scientific initial switching mindset*

20% focus on the problem 80% focus on the way out. This thus entails periodically 100% focus on the problem followed by 100% focus on the way out. All done without getting stuck in the one or other mindset focus. There are five focus mindsets.

1. 100% on the problem short space-time (mind, suicide is a problem)
2. 100% on the solution short space-time (mind, suicide is a solution; study EL!)
3. 80% solution and 20% problem long space-time average
4. 100% ignore by fun/ rest space-time as problem/ solution algorithm sequence
5. 100% all the time-wise combined mindset of an intuitively & rationally trained brain as part of a collectively organized instrument brain team (in stark contrast to the current Big Ego genius ideal scientific mindset.)

Had the current science of psychology not withheld this know-how as an earning model of desire we all to a degree use then all high school children would have had this Bildung as internalized skills and theoretical general knowledge as common sense, without having to learn this slowly after a burnout or worse. I met many of them in jail due to the lack of the simple know-why in science proper via the physics of psychology.

- *Derived Laws of Everything (DLOE)*

Given the Grand Axiom (as the 1st DLOE from observations) on the Grand Goal as a 2nd Derived Law of Everything (DLOE) there are no hidden variables as all the laws of everything are axiomatically assumed to apply everywhere in the cosmos. There are hidden variables as constructs as logical consequences of these laws outside our observable universe. For instance, taking observed curved space as a fact, we must be in an in part unobserved sphere as a dictate of basic high school geometry. See for the five derived laws of everything EL. As a logical dictate, Okham's razor is the 3rd

DLOE. 4th DLOE minimum focus sphere. 5th DLOE The reductio ad absurdum is the strongest possible proof in the cosmos for homo sapiens.

Ongoing insights require me to whack myself twenty times verbally with a stick to write that singularities and point masses are illegal in elementary science. They are not. I'll explain this later on in this article. As a consequence of this, the strongest proof must be completed by adding the weakest possible proof of sufficient circumstantial evidence only data pro non con to provide a theoretically complete proof of the thesis. Placing the burden of disproof on science, the antithesis is falsified by theorem. This article deals with this later on.

- *Correct elementary scientific communication by metaphor*

As a metaphor, I claim to have properly reorganized the already existing elementary rules of the unfathomably complex chess game of life. It doesn't mean that I claim to be a grand master at all the thousand exclusive seats this game provides. I'm only proven by my easy-to-fact-check track record that I am highly gifted on one such seat of a thousand seats. I can easily prove to be a fragile and fallible idiot nitwit at most jobs such as a brain surgeon or as a chef cook. Having in time changed the 1/500 seats of the young inexperienced for the 1/500 seats of the old experienced exceptionally successful litigator. A feat achieved by having worked hard at it with my god given DNA talents. Writing this article is simply doing my job as a highly experienced and talented litigator, and lawyer magistrate and using the expert opinions of my highly gifted mathematician peers. See EL. From whom I learned much of the following. Mind, this is my Wikipedia understanding of what they tried to convey to me. Inherent trial and error. In part again having been set straight on what I got wrong for instance on what an axiom is in mathematics. That too is simply performing my job as a magistrate correctly using expert opinion. A good magistrate then corrects any misunderstandings on his part without blaming the teacher expert. One of the tricks for reaching any goal successfully is to choose your teachers well and to trust them. Yet always test what they say independently for yourself. This is to a degree that you can explain it to any high school child who has had thirteen to nineteen years of Bildung. And, in time reaching a consensus with your teacher/ expert.

- *Axioms*

A basic even elementary law of logic dictates that the falsification by a theorem of any inherent axiomatic assumption collapses all the science that is built on that. Ergo, all physics that is built on assumptions (proven incorrect interpretation of data that is still religiously assumed to be correct) such as c , curved space, singularity something from nothing, gravity, and the Big Bang as elementary (meaning most fundamental in the cosmos) must be stricken from the list in Wikipedia given the mindset that life has meaning and we have free will. It's only elementary in the mindset DSM-0 (Deterministic Systematic Mindset Zero) of EL of not having free will and the cosmos not having meaning. Then indeed everything is elementary, for then there is no grand goal. Then indeed we can all shut up in acceptance of Mother Nature's Divine Will in the Spooky Cosmos. Given the definition of science, this is only apt as the practical indeed workability when we have absolute proof thereof. That alas is uncertain thus the other four mindsets with free will and meaning to life need to be learned in high school in thirteen to nineteen years of Bildung. These mindsets are DSM-5TR, DSM-6, DSM-7, and the opposite extreme of DSM-0 namely DSM-8 (Diagnostic Statistical Mindset Eight manual model) That already leaves very few unresolved or unsolvable problems. The latter is what John Bell's theorem proves to be otherwise.

Marking the performance of science as a school rapport from 1 to 10. Science did not even score a 0 but scored minus 10. This is because the errors have caused potential premature extinction and are thus errors of the highest order. The given system doesn't mark lower than scoring 1 apart from

disqualification. The latter is not a 0 but a set law empty sign. (To add insult to injury: correctly defined in EL it's not set theory but set law.) On the balance scale of Lady Justice, the default position of classic mechanics tips the scale akin to the innocence presumption. Adding a simple idea of only one sort of elementary particle that acts akin to a snowflake as evidence already counts as further highest reliability proof thereof. The model systematically goes even further with proven concepts (Lego-Velcro particle), theories (the 1-neutrino (snowflake) of 5 types of snowball neutrinos), local laws (the proven non-elementary theories of Einstein elevated to basic laws), and ten laws of everything (in an improved way for all-inclusive Bildung shown below), forming One Law of Nature with One Law of Human Nature completely obliterates current science in overkill. The latter only proves that we reliably know a lot about very little. The broader the claim the less reliable the proof becomes. A 'proof' only practically implies that you take it as an absolute truth. Meaning taking it as a fact, until counter-proof (called valid falsification in science). Alas, it doesn't immediately kill the current scientific suicidally deeply religious paradigm. Using the method as written by David A. Schum in the following book.

Schum, David A. *The Evidential Fundamental Foundations of Probabilistic Reasoning* (A Wiley-Interscience publication.) ISBN 0-471-57936-X.

It's a fact that it's this book I studied. Whether or not Schum made updates is irrelevant in an R&D article on an elementary topic. It's simply a main element that has inspired me. Nobody not even the best basic scientist can keep accurate track of all that has been of influence on any scientific article. We are not in the production or sales departments of (thus basic) science. Wherein Schum explains to engineers how to do that comparing it to solving murder cases. It of course works the other way as well. Using calculations this way is a train-your-brain method and otherwise a seeming contradiction of an all-encompassing superset nich area. My model adds deterministic reasoning to the Bayesian inference because you can't split the axiomatic assumption of One Consistent Cosmos and thus One Law.

What my model does is simply put science back in the correct starting position to recheck all of current science.

It is slowing science down on the tracks where it's going way too fast such as AI, and speeding it up via better funding and far better use of funding where science has gone astray. Science in Transition has obviously failed. The Socratic question therefore is how to change this paradigm in time to prevent further amok in World War III. Having EL proven it started for the EU in Ukraine as predicted and for the USA in 911 as it did before that in much of the rest of the world. Hamas and Israel prove the further mounting amok exactly conforming to the prediction by the algorithm of the thermodynamics of war as given in EL.

- *An elementary most succinct formal and material falsification of the current scientific paradigm.*

https://en.wikipedia.org/wiki/Bell%27s_theorem

Taking this Wikipedia page on Bell's theorem and the links to Wikipedia pages it contains as a fact (i.e. as absolutely correct) then:

"Bell inequality" redirects here. For the related experiments, see the Bell test.

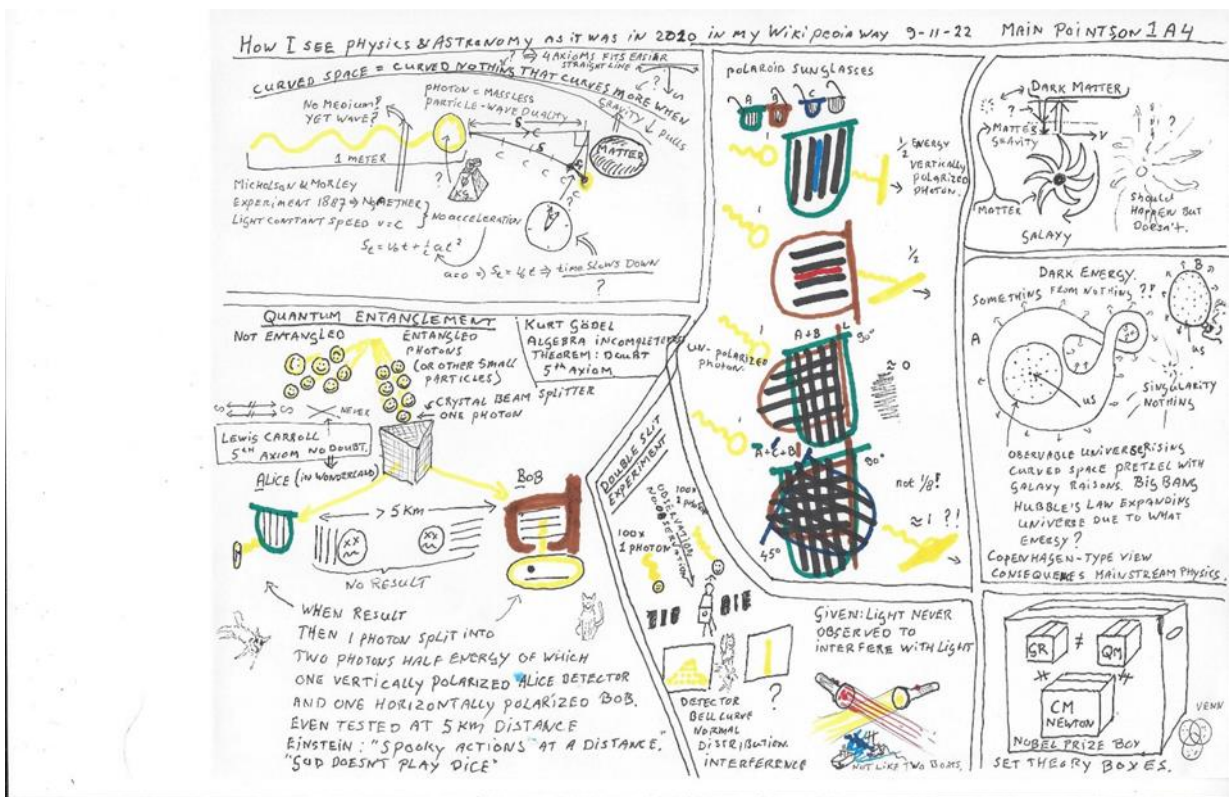

Bell's theorem is a term encompassing several closely related results in physics, all of which determine that quantum mechanics is incompatible with local hidden-variable theories, given some basic assumptions about the nature of measurement. "Local" here refers to the principle of locality,

the idea that a particle can only be influenced by its immediate surroundings and that interactions mediated by physical fields cannot propagate faster than the speed of light. "Hidden variables" are putative properties of quantum particles that are not included in quantum theory but affect the outcome of experiments. In the words of physicist John Stewart Bell, for whom this family of results is named, "If [a hidden-variable theory] is local it will not agree with quantum mechanics, and if it agrees with quantum mechanics it will not be local."

Stating here that "Wikipedia is not a reliable source" is an obvious religious 'anchor' or better pseudo axiom (attic assumption) being anti-scientific pseudo-science. Proof: I've never seen any further bases for this statement other than a scientific majority mob rule quasi-consensus. Anyway, I bear personal witness to my peer emeritus professor of statistics Richard D. Gill whose what I call Gill Theorem derivative of Bell's Theorem helped to reach Quantum Entanglement over 5km in Delft states the same and hasn't disputed the correctness of this Wikipedia page I put forward to him. Therefore I may take it as a factually correct depiction of the current mainstream interpretation of Bell's Theorem. Any basic scientist is in a no-win situation here. Per the definition of science, any elementary scientist will have to correct this Wikipedia page on the norm of decent all-inclusive Bildung. This formal position is thus falsified.

The axiomatic assumptions on which Bell's theorem is based are thus inconsistent with the Grand Axiom of one consistent cosmos. Thus by theorem in a reductio ad absurdum fashion falsified materially.

The proof that the mainstream position in quantum physics is the dynamic interactive geometry of the Copenhagen Interpretation can be easily depicted on 1 A4 piece of paper via an artistic doodle graphic in an undisputable fair and complete way:

The easy proof shows the seeming magic by a very simple test that isn't widely exposed on the internet via three images of using three polaroid sunglasses.

The Socratic taboo question here is if there is a simple classic mechanical explanation for this strange phenomenon. Well yes, I give it in EL and on my site. Simple common sense reverse engineering. Framing each small logical focus step by focus step in one simple A4 piece of paper containing the healthy manic oversight required per step. Miss one such step especially on the most fundamental in the cosmos level and you end up in Alice in Wonderland belief in real magic.

This begs the question of why current science doesn't show this simple well-known field fact....? (Here for instance a silly rule in current science finds asking rhetorical questions is illegal. Well don't worry idiots it is all dealt with in EL and this article as well.)

- *Excerpt EL*

Elementary scientists will have a hard time disputing that the current scientific claims of proven best practice are based on a lie and also stem from the fact that most basic scientists do not want to provide proper statistics on their track records.

The current religious also civil war amok in the world is in essence eerily the same as history repeating itself in the Thirty Years War, which was sparked off by a non-Latin Bible. This is akin to the taboo attack of EL on the shut-up-and-calculate cult bibles in mathematics and physics. EL proves the correct algorithm to be first shut up and paint the complete picture in a testable way, then don't shut up but talk to yourself and the correctly formed team with Bildung, and only then shut up and calculate, after which repeat the process of testing this way. The four algorithms combined in the fifth algorithm are all equally important in the long run. Dependent on the faze humanity or you are in some algorithms seem more important than others. EL proves the cosmos is infinite and both quantified and continuous classic mechanics at the same time all the time in space-time.

John Bell has proven by undisputable mathematical theorem on Nobel Prize in Physics that the 'shut-up-and-calculate' axiomatic paradigm church needs to * shut up * by their own "shut-up-and-calculate" theorem norms and values. End of story there, were it not inherently the religion of this anti-religion-religion being blissfully ignorant of the physics of psychology of their own instrument brain. The latter is an error of the highest order in legal terms.

Again a war of the oligarchs being fought by idiot slaves. All conforming to the predictions based on the thermodynamics of conflict and war of this model as the War of the Oligarchs fought out by their * inherently hypnotized * slaves. As EL proves elementary religion is a form of internalized hypnotics as a DNA survival trait.

Suicide is a DNA robotics survival trait for the survival of the species homo sapiens.

As EL shows in short:

Homo sapiens DNA/ mental **genotype** is divided into:

Under safe optimum mental pressure ("all heroes at the beerhall "anything goes" table"):

50% Mars algorithm. 80% of males and 20% of females all have **gender-neutral male logic idiocy**.

50% Venus algorithm. 80% of females and 20% of males all have **gender-neutral female logic idiocy**.

Under unsafe high mental pressure, this divides into:

10% Mars algorithm. Going mad, burn out, and worse when not having **mental freedom**, slightly less so for freedom of relation, average security, and no direct care about respect by any peer group. 20% Delta Specialist ADHD-i (4 quanta Mars, 1 quantum Venus) Lincoln, Lee. Research department and 80% Delta Generalist ADHD-c (3 quanta Mars and 2 quanta Venus) Churchill, Zelensky. Development department together the artistic R&D survival composers of humanity. Absolute deep idiots at any Saturnus going by administered in the set-law-box former Mars and Venus.

Seeming contradiction for all types **4 speeds of brain complexity levels of learning**: 10% 4 quanta fastest synapse chip in the instrument brain, 40% 3 quanta fast, 40% 2 quanta slow, and 10% 1 quantum slowest thinkers. Akin HST, IC, Commuter, and Metro trains humanity needs them all. An HST is an idiot Metro and vice versa. Mother Nature throws on average these complexity levels at us. Mind, this is not * at first * the normal bell curve distribution but hard split four-way quantized. See the quantum mechanics involved later on in this article and EL. These are mechanical * and non-intuitive * going by the book complexity levels of learning. Comparing the deep idiotic (1 to 2-years old level) idiotic 6-year; moronic 12-year, imbecilic 18-year, dumb 24-year experienced the highest 32 toward 72-year performance levels of A- Alpha-hysteric/ B-Beta-autistic/ C-Gamma-ADHD/ D-Delta-ADHD personality department types are currently in this model only possible * within * each speed of brain group! So an ADHD-c4 male or female irrespective of race and culture is a deep idiot at all intuitive far above average complex sales issues compared to any Authoritarian or Humble Hysteric-4. Yet, at the same time seemingly brilliant at intuitive correct sales compared to any hysteric-1. Even though there a genetically intuitively deep idiot at sales. Most sales are going by the book. Yet sales for the 10% slowest thinkers are done far better by any hysteric-1 than any hysteric-4 and especially far better than any ADHD-4 type. They inherently Murphy's law think and speak both too fast and too slow for each other leading to inherent communication problems. Even when knowing this and working hard at it. Keep this in mind with all the following personality types. For instance, Donald Trump sells well, even though his sales techniques are extremely blunt but mechanically effective. Yet, they also backfire like hell. Mind, all these terms are * jargon* (the meaning is different than you might think or especially religiously demand even more so in the light of the rest of the unambiguous jargon.) Thus please (re-)study EL to pose valid falsification and thus improvement thereof.

10% Venus algorithm. Going mad, burn out, and worse when not having **freedom of relationship**. Slightly less so mental freedom average security, and no direct care about respect by any peer group. 20% Gamma Specialist ADHD-nos Marketing department of humanity: Barak Obama, Eisenhower, etc.

(3 quanta venus, 2 quanta Mars); 80% Gamma Generalist ADHD-h, (4 quanta Venus, 1 quantum Mars)
Advertisement department of humanity: Shakespear, Mark Rutte, etc.

20% Saturn algorithm. Going mad, burn out, or worse when not having **respect**. They of course split into 50% Mars autistic production MT department Donald Trump, Putin, Angela Merkel, and 50% Venus hysteric HRM = Sales MT department Geert Wilders, Prince Bernhard see the further list in EL. Authoritarian hysterics (especially when the pressure is high the phenotype narcissistic ones) are the best populists in the short term to grab power. Once they've got the fact that they already prove to be incompetent at production and R&D it becomes hard to get rid of them. Average freedom and they don't care about security. In other words, under great pressure, these are suicidal for any goal enormous gamblers. Mind, via religion/ culture one can also become addicted to gambling.

60% Rings of -Us humble hysterics and humble autistic types. The silent majority of Joe the Plumber and Rosie the Riveter/ Housewife. They go mad, burn out, or worse when not **feeling secure**. They value respect as average and **are willing to give away all freedom as long as they are made to feel secure**. Most mathematicians and physicists belong to this group.

All instrument brains go amok when not adhering to the **equality inequality** algorithm of the **legality** of the 10th Law of Everything in light of the **legitimacy** of all ten laws of everything at the same time all the time in space-time. The main trick is to make the words of democratic and scientific law such that they are legitimate. This can * only * be done by organizing the collective brain in a way that existing inherently suicidal religions are left in peace. This can and thus must be done in a win-win way. See further on.

This is the elementary (most fundamental in the cosmos) deterministic reason why the current Trias politica Western democratic system and any other system in the past 5000 years has failed.

Inherent oligarch networks only have to scare the herd or fuel the anxiety of any problem that endangers the valued security of the moral majority and sell security they don't have to get into and stay in power. The ones in power have the power to make or break any whistleblower or opposition in a simple majority rule system. Sidetracking the artistic leader ADHD idiots. This was no doubt already known by the Babylonians, ancient Chinese, or any other highly developed culture such as certainly by the ancient Greeks and Romans. The latter having conceived Roman Law.

This is the know-why of the very old-school know-how of oligarchs offering slaves to religion by hypnotically being willing to give their lives for the desires of the oligarch slaveholder networks. As billionaire Prigozhin and the billionaire diving toward Titanic so aptly prove, the DNA instrument brain has no money gene. Putin, Xi, Kim Yung Un, Donald Trump, and Adolf Hitler all are metaphorically speaking what Napoleon Bonaparte called "lucky generals" who win battles. Most ultimately lost their wars after making at first much headway with exceptions like Stalin. But was Stalin in his life truly successful in this egoistic goal? The reason unbeknown to Napoleon was that this was due to having taken suicidal gambles. Such as the one who can state to have seen Titanic with his own eyes with the burning unwittingly morbid desire to bask in that narcissistic tunnel-visioned glory if it had succeeded. On the other hand in stark contrast with people with whopping yet non-narcisistic egos like ADHD types Winston Churchill, Marschall Ney, and Zellensky. Ney "the bravest of the brave" rode back to his men to help fight a way out. And, rather chanced the firing squad than flee France. Ney gambled his life not for Ney but for France and an ideal. Basic science justifiably requires footnotes here. In elementary science, this requirement is mostly illegal pestering. It's a mob rule rule of oligarch slaveholders demanding to remain the greatest bosses of god. Idiots on a probandum of finding the loo in time in a building setting off with a microscope and deeming it illegal to use the mod one mark one eyeball. This incorrect process takes far too much time and thus is in breach of the

Grand Goal. Whether or not what I state here is historically correct is immaterial. The only material fact is that I believed it to be true in my Wikipedia-style way. Only that is relevant to the elementary probandum. Ergo whether or not Ney was indeed and justifiably called “the bravest of the brave” by Napoleon during his retreat from Moskow is irrelevant. What is relevant is that I took it as a fact to prove the further correctness of the block model. I’m personally the primary source bearing witness to that fact. More on that later in this article.

This hilariously idiotic current scientific method is already falsified in EL.

Academic freedom demands taking academic liberties that should not be used by proven non-artistic instrument brains as arguments not to start testing proposals that meet the criteria. Criteria governed by the One Law of Nature as stated in the elementary scientist exam. Non-artistic instrument brains must provide advice only. The R&D decision on what to test is to be made via inspired guesswork by the instrument brains of easy-to-detect artistic leaders in the fields they prove to have studied.

This doesn’t mean that history doesn’t have ADHD types that have turned to the dark side such as Hermann Goering, and Rudolf Hess. Yet both understood that this war of Germany was going to go wrong and thus made attempts to start peace negotiations. This fully complies with what the block model predicts as most probable. Only when most people and especially all leaders have this Bildung can extremely practical ways out be made possible. Humanity is on the brink of World War III becoming more dreadful than WW I & WW II combined. It’s a fact that I’ve been inspired by these facts. The fact whether or not these facts about Hermann Goering et al are completely true is irrelevant on an elementary probandum. They are extremely relevant in basic science that being the production and sales departments of the factory of proper science.

The artistic Albert Einstein was inspired by now widely accepted as proven incorrect interpretations of the M&M experiment on the existence of any sort of ether or not. An error that indisputably provided many new deep insights into the cosmos. This doesn’t prove best practice or even that science due to these sorts of mistakes hasn’t run aground in suicidal criminally insane religious occultism. This model remains fully theorem-based and consistently modeled in theory from the infinitely small singularity toward the infinitely large 3D volume of infinite elements in infinite space-time interactions. This is easy to fact-check. I have fulfilled my obligation to provide access to all raw primary data that might be relevant. Logical statements are inherently testable on consistency.

As a quick and dirty triage this further amok can only be prevented by learning as a > 90% truth to not have the 40% autistic personality types or 40% hysteric personality types being skillfully incompetent to become the authorities sitting on the artistic ADHD minority chairs of the artistic leaders in R&D. Autistic best production managers and hysteric best sales managers in the factory of humanity producing peace and prosperity on the grand goal should be kept in humble support whilst the main problem is still in the R&D department. Only when the science is in and can be produced and sold in a safe way as science should the artistic ADHD take up a humble seat playing on the chair of the supportive third fiddle. By getting this wrong current science has failed humanity on the social contract with humanity. Scientists must be forced to stop pestering and practice what they preach. The end product in R&D such as this article and the EL list are at best to be further tested prototypes. Demanding more is criminally insane.

- *Method of freeing humanity from illegal slavery*

When humanity and science run into quantum weird results and again into the amok of a new World War the current paradigm dictates as a matter of fact to keep an open mind and to clean the slate of everything to reestablish all the facts. The latter per definition is data to be taken into evidence as

hypothetically absolutely true. So, even though what I just stated is thus wrong. It's a matter of hypothetical fact. Again to be tested. All facts in science inherently are hypothetical. Because as an elementary scientist, you've accepted consistency as a complete absence of contradictions it doesn't really matter where you start as long as you start somewhere and keep it all consistent. Establishing as a matter of fact what methods as proper procedure entails is thus a matter of course. Which you've already accepted by having studied the EL list.

As the EL list proves all slaves are at least slaveholders of themselves. And all slaveholders are addicted to holding slaves.

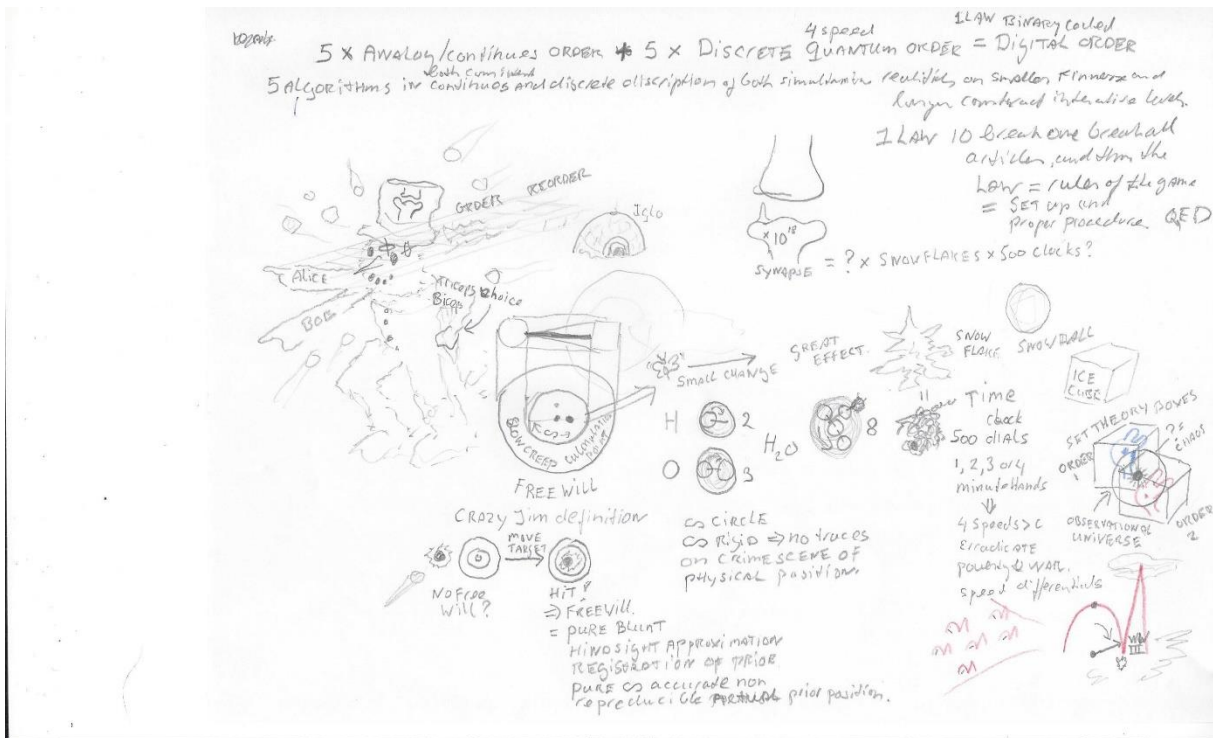

As proven in EL current science suffers from a split personality disorder akin to two different forms of collective anorexia nervosa. As if one peer group religiously believes that morbid fat obesity is beautiful and the other in the same way believes to be too fat whereas they are suicidally too thin. Others then condemn any body shaming. This morbid collective suicidal disorder stems from the easy-to-prove fact that homo sapiens are easy to learn to spot different sorts of deep idiots on half of the gameplay board of life. The paradox as a seeming contradiction is that only when you become aware of being a slave by recognizing yourself in the mirror as having a mental disorder of not knowing and accepting what sort of a deep idiot you are, can you start to cure the second problem. Namely being addicted to being a criminally insane slaveholder of yourself and others. A mental disorder that is sometimes incurable akin to anorexia nervosa. It then can only be dealt with by accepting the disorder and learning how to not have your brain get on that neurological religion mentally sick mindset track. Again this is all dealt with in EL.

This should have been known already in high school as an acquired skill.

Mostly unwitting due to inherent idiocy dirty little secret earning models of desire provide success by being skillfully incompetent. Mostly unwittingly being a Pinocchio predator parasite of losers. Needing thus to keep on creating losers to prey on. Becoming a seeming winner in denial of the cost of prostituting one's soul by joining oligarch mobster mob rule. An intuitive or rational process of having learned to say what mobster King clients want to hear and are especially afraid of saying what they don't want to hear. Not providing all-inclusive Bildung in a win-win way. Instead of Bildung playing the win-lose Ponzi-style pyramid games. Which in turn inevitably leads to a trend of mounting stress on certain tracks of mind. Not playing along with society is mad. Playing along with the mob in a mad society is a Catch-22 dilemma. The repeated history of war shows the same thermodynamic wave pattern. The latter is a consequence of the mounting volatility due to the trend of mounting stress. The oligarch mob rule authorities make the rules such that they are allowed to steal from the poor and the powerless. Leading to a deceptively slow chain reaction. Stealing ideas on how to make ever better new versions of the Titanic as a metaphor for ever-improving society. Many small conflicts in time produce ever larger conflicts as the metaphorical icebergs that Titanic keeps on hitting get ever larger. The thing is when you in essence do the same the same happens. When you focus too much on detail or focus too little you won't see the repeating history. Because in a way history indeed never repeats itself. Everything including every godsparticle in this model is absolutely unique in deformity yet absolutely identical in all elements with five deformable connections of classical mechanical mass. This is the elementary explanation this model provides in a further testable way. Knowing your and every main character's DNA personality type is the greatest predictor of the bandwidth of possible actions any human or group of humans will take. Ultimately the smallest part is completely unpredictable within very narrow quantified limits. Reducing any human-predicted behavior into a Putin will or won't go nuclear under certain circumstances is infinitely uncertain. What can be stated however that given certain conditions it's nigh certain that he will act according

to prediction based on this model. The verifiable track record of mine on Putin's actions in Ukraine alone also proves it.

In a quick and dirty triage, excerpt of EL. There are three main gender and race-neutral DNA idiocies. 40% autistic production department, 40% hysteric sales department, and 20% ADHD R&D. Ergo 80% of humanity have the intuitive religious talent of going by the 'in the set theory (set law) box' current paradigm book. 20% are the artistic creative composing playwrights to get the correctly composed scenario in cases where we have an inherent shortage of data. They have the DNA talent to intuitively hear Mother Nature's music. It's thus not magic but simply the fact when you test this model by taking it as a fact that we are all different sorts of snowman robots in a neutrino snowstorm, and Higgs and graviton snowball fight in an icy hexagon pressure vessel with dome-like lids as part of a multiverse of beehives that slowly form on one side and disintegrate on the other. The proven idea of an infinite amount of 1-neutrino snowflakes interacting in an infinite cosmos.

All high school children should have learned all this as Bildung. Especially how the five mindsets DSM-0, DSM-5TR, DSM-6, DSM-7, and DSM-8 work as explained in EL.

Artistic idiocy R&D logically has no footnotes as reliable sources because that would constitute the argument of authority fallacy.

Counterfactual, academic freedom is artistic freedom taking artistic liberties such as Albert Einstein did in taking time as relative. He correctly used testable artistic thought experiment fairy tales of dynamic interactive geometry, which is inherently ironic and seems contradictory. Healthy manic oversight seems sloppy science, yet this is an essential ingredient of the proper scientific procedure. As is also the incomprehensibly incidental super focus as super consciousness on the relevant smallest details incorrectly deemed negligible by non-ADHD-4 types. Einstein had as proven in EL a 1/500 prevalent intelligence & personality geno/ species type and phenotype ADHD-i4m* and job distortion of a German physicist at the beginning of the 20th century. All ex DSM-6 in a mostly mad

world. Albert needed his first wife to provide the mathematical formulas. She was mentally mostly healthy far above average fast thinking authoritarian autistic mathematician. Who was genetically ace at algebra and calculus at best average at geometry and deeply idiotic at all complex geometry in which the artistic Albert was ace. Teamwork. Albert no doubt unwittingly gave in to the desire of the majority of mathematicians and physicists who were autistic and only average at geometry. Albert had been brainwashed into thinking in the 'shut up and calculate' religion. He was having partial success and that became further internalized. In the dirty little secret illegal desire to be the greatest boss of god science and thus humanity has as a consequence now again run aground in World War III. There is thus no evidence to support the widely accepted fact that Albert Einstein was a genius. Taking a 1/500 prevalent Einstein type as genius given the current 8 billion homo sapiens is a gross exaggeration. There is also no evidence to support Einstein to have been in any way mad. That's unsubstantiated thus an illegal defamation. The term 'genius' has done humanity more harm than good. Its use is by mobster oligarchs in science to stay in power, by sidetracking artistic ADHD types like Einstein when for most incomprehensible thus seemingly magical success threatens their oligarch power base.

- *Hidden Agenda*

I've tested that going through the elementary basics of science proper is called for because many scientists such as mathematicians and physicists make horrendous errors in reasoning whilst discussing these subjects. They also repeatedly show to completely lose all emotional control or emotionally shut themselves off. This is indeed normal in the current paradigm yet highly undesirable for it is criminally insane. Existential fears come into play in a suicidal way. This and the fact that any consensus can't be reached in science is common knowledge. Which is inconsistent with everyone following a proper scientific procedure. Begging the question of what such a proper proceeding is. As a lawyer, I of course immediately detect fallacious reasoning on a hidden agenda. The hidden agenda is mostly unwittingly having an anti-religion religion. Or, having a non-scientific religion interfere with the inherent scientific religion. The goal is not consistent with the grand goal of homo sapiens bare survival but of authentic authoritarian 20% minority splitting authority power between peer review power in the exact sciences to assumed healthy autistic with gender neutral male logic idiocy and in the soft sciences such as the law to assumed healthy hysterics with gender neutral female logic idiocy. The deterministic reason why authoritarian talented instrument brains gain the power of authority over the majority of humble personality type talents is dealt with in the EL list. In short, authoritarian and humble types alike demand false modesty. They only accept someone with populist authority or who is in power to make or break anyone who doesn't bow to their authoritarian will. It's a religious existential suicidal elementary religion. As a religion via the current paradigm, it's followed also by open-minded personality types. Those open-minded types that don't follow that or any other book, have their private book and vehemently oppose everything they can't immediately understand via that book. That 'book' is a neurologically internalized memory bank in the religious hard disk of the brain. Or they follow a stance of seeming to agree with nigh everything and leaving it be.

To fact-check the EL list requires one to go through the list from start to finish because otherwise the stipulative definitions are not interpreted in the correct meaning. It's jargon.

Via demanding majority rule this minority effectively sidetracked the 20% assumed mad or at least weird ADHD gender-neutral artistic and spiritual idiocy talented. As a responsible simplification, I've excluded the second law of everything bell curve distribution making for easy percentages. Hence defining the physics of religion properly is a scientific taboo. Claiming it to be taboo is of course also a religious taboo of a DNA survival trait that has gone wrong. Mind, the claim that humans are all different sorts of easy-to-detect by all idiots as indeed idiots is consistent with the claim that

everyone is also potentially highly gifted on 1/500th of the gameplay board of life on the grand goal. When we take into account the essential split of the required experience and inexperience this shows why at least a thousand Senators are required for the proposed Oracle Senate Test. It also for instance shows why reverse engineering makes for one hypothetical godsparticle being built up out of 500 rings. One Law of Nature with identical constants and ratios at play. Being in denial of being an idiot or not knowing correctly what sort of idiot you and others are is a criminally insane mental disorder that would be just as serious as collective anorexia nervosa. Looking in the mirror and not recognizing yourself for what you are is quite the (Bayesian) opposite of what you and your peer group on the Grand Goal should see. An easy-to-learn-to-understand illusion created by the synapse of the instrument brain. The subjective goal of humanity should be in balance with absolutely all the objective data. All I claim to have done in this model is reorganize the existing theorems of which all the science was in long ago.

- *Back to Basics*

To elaborate in line with the broader perspective in the linked article with EL there are many ways to prove a theorem. For instance, the Pythagorean theorem has well over 371 proofs which is general knowledge among mathematicians. Such knowledge doesn't require footnotes as reliable sources. This is either true or untrue and easily verifiable. This should not be done via self-study but via asking for expert opinion * with complete consistent explanation *. Otherwise, it's a fallacy of authority. There are thus many scientifically sound ways to prove a murder case or anything else for that matter. This is logical because the grand axiomatic assumption of one consistent cosmos dictates that even a topology of infinite different perspectives absolute complete non-contradictions provide infinite truths workability ('werkelijkheid' in Dutch) as the highest practicality in the basic non-elementary meaning of workability ('werkbaarheid' in Dutch). I should have defined 'workability' as meaning the truth, the whole truth, and nothing but the truth of infinite truths. This is consistent with Gödel's incompleteness theorems. Even mathematics will never reach completeness because that's an infinite probatio diabolica. However, everything is provable as best practices via the statistics showing only data pro and absolutely no data con on an elementary probandum taking all data into evidence in a maximum practical effort of valid falsification. Here I need to thus correct the trial and error list due to such falsifications after publication. Elementary 'workability' should only mean an infinite topology of claimed absolute truths. Expressing the ensuing best practicality as workability as I did without using a capital W potentially leads to confusion. Basic 'workability' (also 'werkelijkheid' in Dutch) can also mean 'practically' ('werkbaarheid' in Dutch) which meaning of workability is elementary illegal because it's not unambiguous then. Thus elementary translation of the Dutch 'werkbaarheid' should be 'practically'. 'Reality' correctly defined has a limited truths topology such as the Hilbert space. Which is thus not elementary. Workability is an infinite topology requiring an infinite amount of vectors even in an absolutely correct description of two quantum objects each moving relative to the other after they hit each other in an absolute empty space continuum.

Another more serious error in the trial and error list is the definition of 'axiom'. This was pointed out to me after publication by my peer mathematician Waalwijk. The rules of chess are not elementary but are axiomatic to the game of chess. Contrary to the list we thus need to distinguish between elementary and basic axioms. Axioms per definition can not be derived from other axioms. So, the fact that chess computers can now beat chess grand masters like Kasparov doesn't prove that the ones that have developed that program and that computer are chess grandmasters. It doesn't disprove it either. It's irrelevant. It's also irrelevant to having all the axioms and even all the mathematics of the game of chess to claim any scientific best practice or whatever position outside the local domain of chess. Although my model was inspired by the game of chess, it's 64 x 64 x 64 x

infinity. Thus infinitely more complex than chess. This is true even on a more limited probandum of how to organize any human organization. What is the same is that both are governed by a simple set of rules that fit on one A4 piece of paper.

Exposing con jobs is my bread and butter. Simply rigorously following proper proceedings renders desirable results quickly enough. Easy to prove for the simple fact that if the correct use of the collective brain doesn't work our ancestors even as symbiotic bacteria in the primal soup would have gone extinct long ago. To make this clear concerning the field of quantum mechanics. As a magistrate judging whether a con job is at hand, I don't need to prove to fully understand all of quantum mechanics. In that respect, I've already done more than I need to do by giving my Wikipedia understanding of the core of the mainstream Copenhagen Interpretation in one A4 doodle graphic containing the dynamic geometry of what they state. This is a simple Clothes of the Emperor scenario. The point of fact is that physicists and peer-reviewed scientists have not properly dealt with the instruction manual on the instrument brain. The naked truth is that they are validly falsified in the field of play of elementary i.e. most fundamental science for holding any position.

In sports jargon, they are disqualified. Akin a false start at athletics wishing to keep on running after the umpire has shot twice. No, first remedy that problem that any high school child knows/ should know to accurately write down all instruments that have been used in acquiring claimed science. Furthermore, the umpire should not let anyone who does not prove to be an elementary scientist compete at all. Akin to the fact that not everyone is qualified to compete in the Olympics. This puts further insult to injury because current mainstream science wasn't even allowed to start on any elementary field of gameplay, apart from the repeated fouls and false starts had they been. Science has no valid track record to show for and thus doesn't qualify. Science has been playing basic science cricket in peer-review censorship in Oxford, whereas they should have been playing elementary science Rugby in non-censorship peer review in Bottisham Cambridgeshire when the challenge was given to play that game there. This elementary challenge can per logical definition be held at any time anywhere in the cosmos. Yet in that way, a non-local challenge is also per logical definition confined to the local rules, place, and time of the challenge.

To use another metaphor of a Rubik's cube as the game of life and the cosmos. It has a simple "solved" starting position and reaching the same end position after seeming chaos is defined as the solution. In this model when you've also performed all possible scenarios then that is defined as one nirvana. This is consistent with having infinite parallel nirvana each on timelines of infinite nirvana in a multiverse. Implicitly it's against the rules to break open the cube and solve it that way. You've then split the unsplitable. The problem with putting the Rubik's cube back together again is that it can become unsolvable when that is not done correctly. I don't know whether any mathematician has ever bothered to prove the unsolvability by theorem, given all possible incorrect repairs to a broken Rubik's cube. Anyway, John Bell's theorem on quantum entanglement has in the abstract done just that. When we take a nine square-sided Rubik's cube and define the top row depicting general relativity, the center as classic mechanics, and the bottom as quantum mechanics, the situation in current science is easy to comprehend. Yes, by breaking the rules science can solve only one of three discs at a time in a way the others are proven by theorem unsolvable. The solution for solving all three is simply not to cheat. Mind, that the dynamics of turning a Rubik's cube nodes 'solved' and antinodes 'maximum "unsolved" chaos' can be seen as waves of rising and falling complexity. The 'non-cube' intermittent forms are infinite. The eight Gluon flavors of the Higgs mechanism represent 8 sizes and the eight intelligencies correspond with the optimum to high double four-way inertia connections of mass at play in this model. The latter is irrespective of how many cubes the Rubik's cube is built up out of as a model for the five different questions. 8x8x8 (chess/ 8-gluon/ **genotype**

personality & intelligence type 1/1 factory organization: R&D/Marketing & Advertisement/MT-production & Production/ HRM & Sales); 10x10x10 (draughts/ + Higgs & graviton/ 1000 **phenotype** Senator seats); 19x19x19 (Go/ + 3D space + 1-time vector + 5 neutrinos **max nuance mini one quantum type**); Infinity ⁵ (3D infinite x infinite x infinite space + infinite vector interaction time internal proto consciousness life death + infinite external intelligent action-reaction time cycle. **Workability of any question**); **Workability of all questions** in One Law of Nature. It's always on each axes within quantified limits absolutely continuous and thus unique. Akin that baby twins are DNA identical yet absolutely unique for instance fingerprints and movement. Per scientific definition 'decent' means by homo sapiens for homo sapiens.

There is a preponderance of the evidence that very simple starting positions in nature/ the cosmos can produce unfathomably complex structures. Such as fractals, chaos theory, the game of life computer program, and even simply the game of chess or to a lesser extent a Rubik's cube. The latter is easy for some and unfathomably complex for others. All set law domains of high elementary and elementary science of the cosmos always in a reductio ad absurdum way can be depicted on 1 A4 piece of paper for optimum understanding by homo sapiens. For instance, the periodic system of elements, the Standard Model, all the shortest possible proofs in mathematics. The fact that a grand chess master can beat me at chess even given 20% fewer pieces with his king at the start doesn't prove that this isn't against the rules. Unless of course you are allowed to be the boss of god akin to our oligarchs in science who make up their own rules. It's easy to beguile people who are without sufficient Bildung by putting their focus on great intellectual feats on highly complex structures that emerge out of say fractal imagery. That is what all illusionists do. In an abstract sense what the church did by building breathtakingly beautiful cathedrals and having a Bible in Latin. Subsequently burning heretics at the stake. This is the same as current science building large particle colliders with their scriptures in algebra and calculus, shouting Dunning-Kruger, and naming crackpots. This hides the fact that their geometry is * admittedly * all wrong given undisputed because of undisputable "quantum weirdness" in Alice in Wonderland due to obvious axiomatic errors due to the desire to be the greatest boss of god by most mathematicians and physicists. A mostly unwitting hidden agenda having led to amok. Most scientists religiously like zealots cling to what in basic psychology are as an apt metaphor called anchors. Scientifically these are best called pseudo axioms. These are axiomatic assumptions that are deeply religious and can't be founded further than the conviction majority thus mob rule opinion of the peer group. A democratic statistical model of all that is true that can be successfully sold. The science of whatever you want statistics as lies, damn lies, and false statistics. True statistics always have a deterministic causal effect as an explanation. This is rampant in the soft sciences. Or a demagogue statistic model that is true in all sciences that what the holy book or highest authority scientific priest states is true.

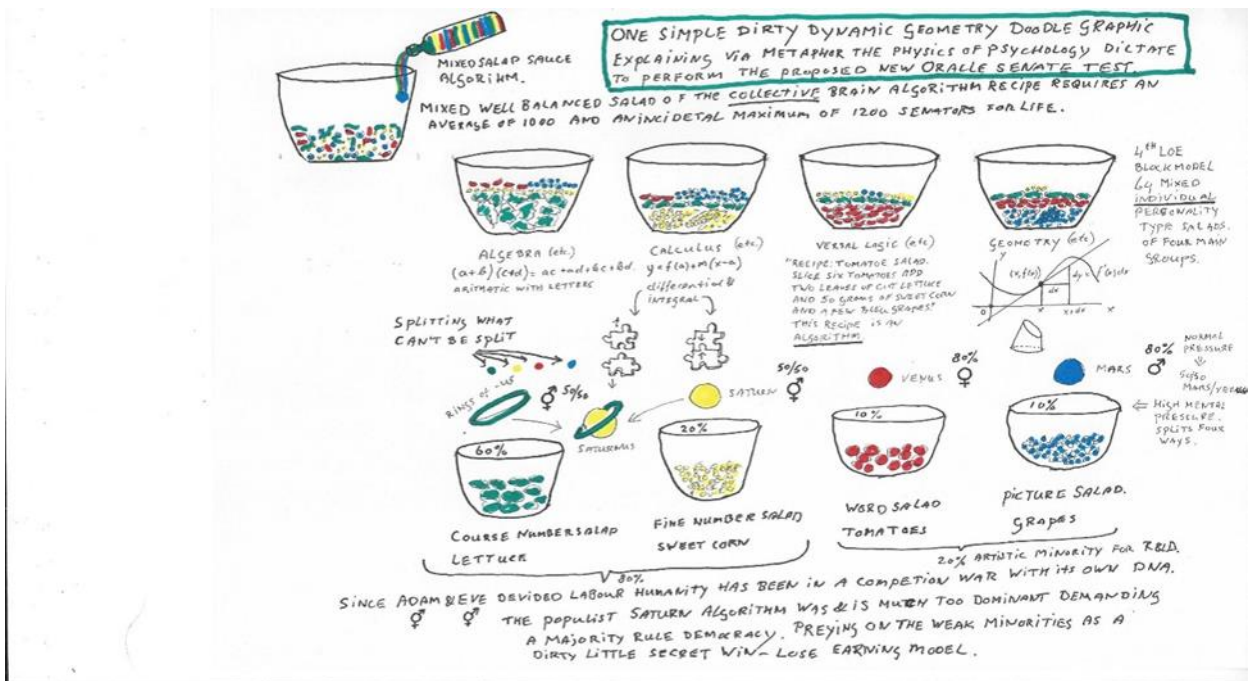

- *Shut up and follow the proper scientific proceeding*

As the EL list proves the choice in elementary science is either religious belief in the absurd "something from nothing" of the "shut up and calculate" lie of having "the mathematics show this" or the belief in many somethings in nothing interacting in and out of limited focus interpretation. Stating to have mathematics is a lie when the complex geometry part of mathematics fails because most mathematicians and physicists are easy-to-prove deep idiots on that elementary part of mathematics. That they are best at computing and building AI is cheating by charlatans when claiming any authority based on AI or computer results. Cheating is akin to having AI do the geometry exam and then claiming you are the greatest boss authority on that geometry because you indeed developed AI. A bit like me building a car and claiming to beat Hussian Bolt at the 100-meter sprint as the better athlete.

Practicing what you preach proper scientific procedure starts with demanding:

- first to shut up and first paint the whole dynamic picture geometry,
- then don't shut up and talk to your instrument brain and that of your correct team with Bildung in the proper scientific procedure of the collective instrument brain (interface)
- and only then shut up and calculate.
- Then shut up and test.
- And then repeat the never-ending trial and error process.

All four algorithms are equally important in the fifth consistent combining algorithm. Claiming non-religion in science is a charlatan lie as is claiming not using any axiomatic assumptions. This is fully consistent with the claim that if (not when) I die and stand before Peter's Gate I'll revise my position on the new evidence that presents itself. As long as such irrefutable evidence doesn't present itself that is an unscientific belief in real magic. If such evidence indeed presents itself the science and its methods are falsified as best practice on any goal. As is the belief of something from nothing and opposition to the now-proven scientific fact that the true authorities to judge complex geometry are the artistic ADHD types and not any authentic authoritarian, any autistic, or any hysteric types.

Furthermore, let me again point out that the current science paradigm homunculus doodle graphic is thus the best correct scientific metaphor communication of Bildung to conform to the definition of science as opposed to anti-scientific pseudo-science. The latter is the case when the current scientific paradigm demands the impossible perfectionism of the individual or collective instrument brain. In so doing overstressing the collective instrument brain.

to duty still falls on me. I'd gladly step aside and let another highly experienced and successful DG4* do the job as part of a correctly formed team. A complete team I too per the law of human nature require and sorely miss. Hence this article is a subpoena of an informal disciplinary fair trial. Akin to being summoned before the headmaster at school. A word of prior warning. Even in the current paradigm of civilized democratic law systems, the same case will be judged even more harshly in subsequent civil, penal, and ultimately ad hoc tribunals. History shows that the latter several times handed down capital punishment for genocide which all Great Wars inevitably are. Also when (scientific) leaders fail to prevent it they are guilty by default. Yet, if nearly everyone including myself is guilty no one is. Ergo, punishing someone in courts of law is out of the question. Declaring Earth a prison annex mental hospital for the criminally insane won't work.

However, some are more guilty than others. Guilt in this context means responsibility and thus not guilt in the sense of directly punishable. Apart from the moral obligation to verbally whack yourself at least twenty times with a verbal stick. As the linked article EL proves the Dutch NWO (Nederlandse Organisatie voor Wetenschappelijk Onderzoek/ Dutch Scientific Research Organisation that funds science) is most guilty/burdened with the greatest responsibility of WWII in the Netherlands. WWII started for the Dutch in Ukraine in the sense that most Dutch citizens felt the direct consequences of that war that started for the USA in 911 as it did before that for other nations and peoples. Being probably too late dictates that humanity might still be in time to prevent predictable further escalation. Simply by following proper scientific procedure. The model proves that it is within the span of control via empowerment as Bildung of anyone to name and shame the most suspect scientists and most prominent scientific organizations. This is because they are to be held accountable. For I can prove that I forced NWO in proper litigation to either validly falsify or support the proposed Oracle Senate Test. They explicitly declined by mail to deal with this behind closed doors and chose to ignore the claim. This is easy to verify by anyone. Just ask NWO.

NWO The Hague Visitors address Laan van Nieuw Oost-Indië 300 2593 CE Den Haag Mail address Postbus 93138 2509 AC Den Haag Telephone: +31 (0)70 3440640 Email: nwo@nwo.nl

If they deny stated facts or ignore this publication only then can I legally present my proof to the contrary. This is because the aim is to force NWO et al, into the proper proceeding in a safe environment behind closed doors. NWO thus chose to accept a public show trial. Taking the mickey out of them is in Just order. The wise judge is also free to play the Joker to the NWO Dutch Peer Review King of Science as the blindfolded Lady Justice judge. On a falsifiable claim that the decision alone by any sufficiently powerful oligarch such as NWO will in itself cause a paradigm shift. Which will quickly start to prevent further pestering and thus amok.

The Orakel Senate Test is a proposed first flight of a never-before-tested prototype built out of fully tested parts. NWO/ anyone is challenged to disprove the inherently unfathomably complex question of whether the claim is true or false without performing the test. The real workability truth is that the oligarch mobster much broader than the NWO sec network doesn't want to invest any of its power of authority for the risk of losing it. Idiotically criminally insane even not grasping the win-win self-interest nature of needing to wisely invest power to remain in power. As the linked EL list shows inherent scientific oligarchs have the power to ignore in a suicidal way. Suicide is a paradoxical (exclusively meaning 'seeming contradiction') DNA survival trait of homo sapiens as a species not having adapted well enough to a change in the environment caused by science not following proper scientific procedure. In all the years of spending billions of Euros, NWO never even started funding the making of an elementary definition list such as defining science and thus pseudoscience. For the simple fraudulent reason of being the greatest boss-of-god peers of all science. Not being accountable for mostly funding anti-scientific pseudoscience and not properly funding elementary

science. Not even being aware of the latter's existence. Mind, legally speaking I've made them aware, whether they registered that or not is immaterial.

The mostly unwitting goal of most scientists is either glory or securing funding for research. Like all mobster networks when not stating what NWO wants to hear most times won't secure sufficient funding. Stating what they don't want to hear will lead to opposition by the peer group's dedicated followers of the scientific fashion of the day. This fact alone ranks as a formal legal mistake of the highest order. Anyone can thus demand NWO or any other scientist to pose proper valid falsification of the claim or backing thereof. Demanding a fully accountable reaction from NWO or any other scientist is an obligation of any homo sapiens.

Demanding a reaction doesn't require studying the model.

Only passing judgment demands that.

This model is claimed to be an unpolished diamond prototype on which all elementary flawless science and basic science with an acceptable error rate must be based. A model that like all prototypes might have a crack here and there. It's not my job as an elementary scientist but the job of basic scientists to fact-check my claim. Only some basic scientists get paid in the current paradigm. This makes them want to keep that paradigm for fear of losing that pay, not grasping that via the decision to do the Oracle Senate Test all poverty including rich poverty such as not being able to go on wintersports when lack of Bildung suicidally demands that as forbidden pestering as slavery will quickly end. When all homo sapiens start in the rich countries getting a guaranteed decent income one major problem of the funding of science and schooling will be solved. Finding the money for that is easy. The block model of the instrument brain shows that there is no money gene in the DNA of homo sapiens. The elementary desire of any billionaire/ rich country is different than demanding to be a billionaire or rich. They can remain billionaires more easily via Bildung grasping the win-win game and stopping with the win-lose ending in a lose-lose Ponzi-style piramide game. Having way too many reserves in the wrong places causes inflation. Let all the individual instrument brains invest a quarter of the Gross National Income as long as they don't pester with it and within quantified limits also invest another quarter of their unalienable right to their dividend on their share of the nation they belong to. The other half of the GNI is for all to compete on a truly level playing field with the only restriction of not pestering. A durable free capitalist market economy without any slaves or slaveholders. See EL.

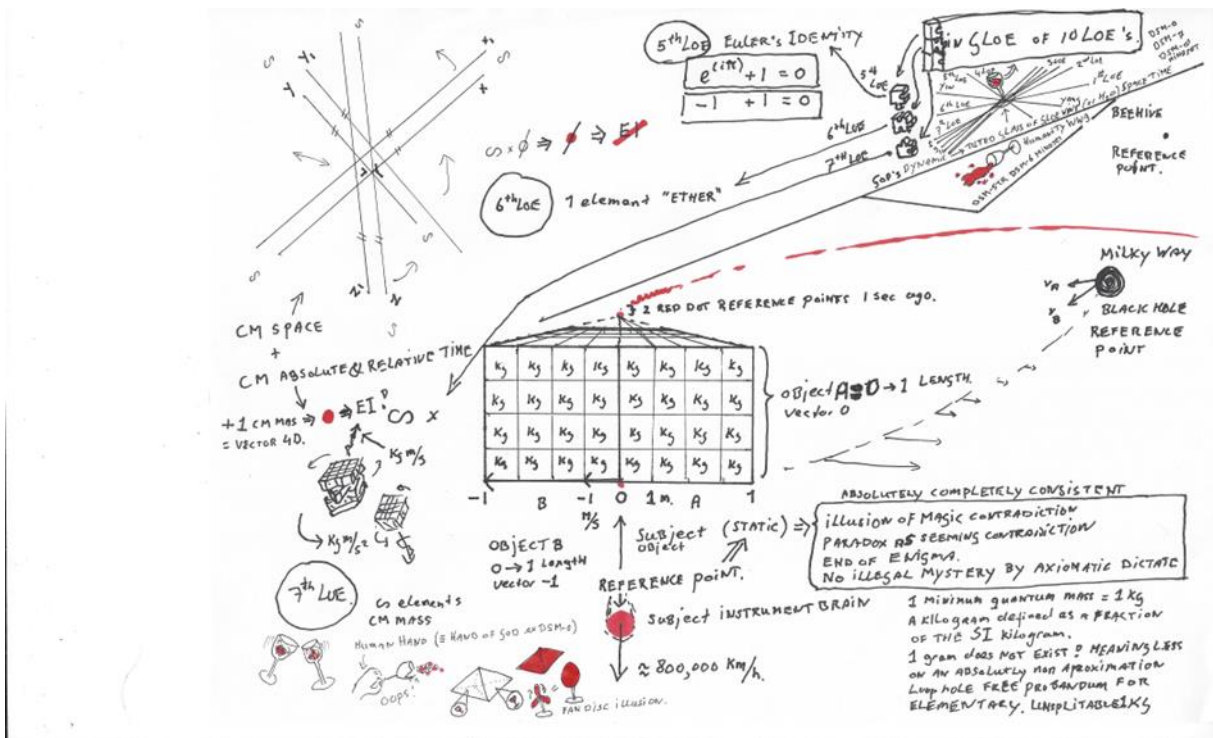

- *Proper verifiable statistics of my track record*

My job is to present all required raw primary data for the to be fact checked thus verifiable and falsifiable claim. It's either true or untrue that I'm one of the maybe even only military/ mobster experts who have a 100% correct score on the 23 to be predicted essential predictions on what Putin would do in Ukraine. It's also either true or untrue that I probably solved the murder case concerning the death of Napoleon Bonaparte. Baring some further expert checking of primary data in the way I solved real serious crime cases as a DA. Napoleon's death until now has as far as I as non historian know eluded the great many experts in that field. Napoleon's death also shows the relevance of this history when dealing with Putin's nuclear threats. Furthermore, I was either indeed an exceptional top-scoring litigator like I claim during thirty years in courts of law or I wasn't. Of course, the scientific oligarch mobster scene like NWO doesn't want anyone to fact-check any proper statistics. Knowing full well that all or most of them will then fall through as charlatans. Scientific organizations have the power to make or break any scientist's career. Whose bread you eat, whose word you speak. Only the proposed Oligarch Senate Test can keep all oligarchs like NWO in balance on any wise goal. Anyone who doesn't confess needing durable sound scientifically well-informed independent advice

is criminally insane for an evident suicidal megalomaniac. We all need urgent advice for instance on how to deal with AI to avoid ending up in a possible/ probable or impossible Terminator 1 versus Terminator 2 war scenario. Only an Oracle Senate can force all oligarchs to tell the truth provided all whistleblowers are kept safe via secrecy. Only mobsters want transparency and "protection" of whistleblowers. The latter again a seeming contradiction such as irony being a talent most physicists and mathematicians being men and few women lack. Only with transparency can mobsters guarantee to crack down on any whistleblowers. The * only * way to prevent that and to acquire the knowledge of essential whistleblowers is to keep it secret. If need be using white lies. That indeed has the nasty habit of turning black when the checks and balances of any democracy aren't kept.

- **A new combination Excerpt to the One Law of Nature & One Law of Human Nature**

All the laws of everything apply literally everywhere in the infinite cosmos and are observable or interpretable with the aid of artistically talented instrument brains for the collective instrument brain of homo sapiens in any smallest focus sphere to largest one Nirvana focus sphere of infinite Nirvanas of classic mechanical space-time. The artistic dynamic tilting wineglass filled with liquid method is preferable to the autistic shattered frozen wineglass with ice metaphoric method. A side of the tilted wineglass will always have a film of liquid as the tail end of the bell curve. Both are artistic metaphor depictions of tilting a Galton Board. The shattered glass is akin to putting a single lion in a cage in a zoo hoping to observe the normal behavior of a lion.

Ergo, per each law of everything the main greatest denominator and greatest influences of few other laws are taken into account. All also as much as possible directly linked to the part of the focus of the instrument brain which part for the most part governs the observation. Dealing with the elementary physics of soul, lifelessness, proto-life, proto-death, after-life YOLOUR (you only live once unique reincarnation) Nirvana inevitable end-of-our-times cycles, proto-intelligence, proto-consciousness. Proving that singularities and point masses are illegally occult on elementary probanda unless as an incidental starting position of reasoning. All terms and titles are working titles as inherent work in

progress. Taking this model as a fact then I'm typing this at this moment an infinite amount of times as I've always done and always will remain doing in infinity in the infinite cosmos never to interact. The degree of sameness or difference is yet to be further established. Had the 1-neutrino god particle been different form, no DNA life would have evolved in my Nirvana timeline. It would have been a snowstorm-blizzard haze of sorts. All possible scenarios are played out infinitely at the same time all the time in different locations and all impossible scenarios are absolutely never played out. When we introduce as a thought experiment a god as an entity with a beard and let any individual homo sapiens disappear as something to nothing in an instant, then taking this model as a fact a thermonuclear implosion experienced as an explosion would ensue. The ripple of change in space-time will infinitely expand as what current science defines as a recently found misnomer of a gravity wave. To produce one photon, dog turd, or Gerhard Ris requires the classical mechanical pressure of hits per time frame of an infinite cosmos filled with infinite elementary objects. When this god with a beard would decree that every god particle of this model should be exactly still in the center of its average virtual cube of space then nothing would ever happen. However, as soon as anything moves relative to anything else after that beginning with this god with a beard in an extremely long time one Gerhard Ris followed by many but taking infinitely long to have an infinite amount of Gerhard Ris. Gerhard Ris is then defined by having sufficiently identical DNA. Akin to twins. Mind, as EL shows if Jesus is a historical figure then he was and is born at this moment an infinite amount of times and also died an infinite amount of times in an infinite nigh the same as all other possible scenarios say as an 80-year-old criminal as he also is maybe nailed to the cross. On average 20% of the godsparticles are absolutely new to you. On average 20% will never meet again in any form with the god-sparticles that are part of you in one shortest quantum of spacetime. Each individual god's particle has already experienced each Nirvana an infinite amount of times. A simple logical consequence of the now-proven classical mechanics at play.

Recapitulating all the postulates and following the falsification of all the axiomatic assumptions of current mainstream science by John Bell's theorem on quantum entanglement. All statements that the cosmos is anything other than deterministically classical mechanics and thus governed by one simple rule of One Law of Nature of 'god' workability on One Goal of Human Nature by One Law of Human Nature by the most minimalistic 'bosses of god' best practicability due to following workability are falsified pending valid falsification thereof by providing a better best practice proof by

any elementary scientist. Simply the fail-safe or fallback position. Current science carries the burden to disprove due to valid falsification by theorem, rigorously applying their own rules of procedure.

What does Classical Mechanics mean elementary?

- **Grand Postulated Law of Classical Mechanics (GPLCM):**

The first most succinct workability set law domain to place on the Grand Axiom consistent with the Grand Goal is not the Grand Law of Everything (GLOE) as stated in EL. Before proceeding as per published disciplinary rules in EL, I, first of all, need to administer myself with twenty verbal lashes with a stick for this slight systematic error. By having executed this sanction we can proceed. To work with we thus have five posterior odds elements of classical mechanics as the stated default position as the new prior odds five postulates:

1. **Mass.** Which is expressed in kilograms kg. CM elementary mass is best understood by a metaphor as an absolute conductive steel object of probably connected elements of movable mass/ steel (probably identical rings of sorts). The minimum quantum mass is yet to be exactly determined by following this scientific trial and error procedure. Whether the cosmos has a limited amount of local mass or not is yet to be determined. Mass as a logical consequence has existed infinitely long and will infinitely long stay absolutely unchanged in any way. It is unsplitable, non-deformable, and absolutely rigid. Mass is lifeless because internally there are absolutely no dynamics of space-time. It is thus absolutely rigid and has the form of yet-to-be-further-established 3D volume in space. This absolute conductivity explains the detected superconductivity. The also yet-to-be-further established ratio of the volume of emptiness/ mass is yet to be postulated. How one individual mass object is unsplitably connected and can further construct and deconstruct everything including DNA life is also yet to be postulated. Mass does not exist as an elementary point mass or singularity because that is illegally occult and thus absurd something as nothing. However, I need to amend what was stated in EL on a singularity or point mass. Given an empty ether placing the point mass there in a very short space of time will be correct. Yet mass will move into that emptiness very shortly. It then “slowly” becomes a point mass in your observational sphere when taken as workability. In basic science, it instantaneously changes as if by occult magic into a point mass. Other than as a thought experiment this will never be observable. The science is in the logical thought experiment. In the absolutely static object-subject interpretation with the instrument brain of homo sapiens mass exists as workability ex DSM-0 because the cosmos exists as an immanent god without meaning and such interpretation is thus meaningless in the DSM-5TR, DSM-6, DSM-7, and DSM-8 smallest boss of god mindsets. Observing/ interpreting mass movement outside that specific element of mass has meaning but not in an optimal computational way for the instrument brain of homo sapiens. The focus sphere is then too small to be optimal in the practical understanding of workability. With the claim of workability in philosophical terms one claims to have left the cave of Plato. Yet, you only in that sense have the law akin to having found the true laws as rules of the game of chess. Workability at any level is best understood in its set law domain in which everything is to be kept in view at the same time all the time at that level. A domain can always be painted on one A4 piece of paper. The requirement of focusing at the same time all the time even in one limited split-off set law domain with healthy manic oversight including super focus depression is other than intuitively impossible. It is however best practice possible as one doodle graphic to combine what needs to be combined. Hence the need for laws of

everything combined as one law of nature of which the law of human nature is part and both are part of one law of the cosmos. Because all these laws reduced to their practical basics are identical these laws are best described with the terms in a way that basically stresses the facet that is observable for all. Thus best to speak of the One Law of Nature.

2. **Space.** Which is expressed in meters m. As a by default proven one element of absolute empty sign physical existence of nothing as 3D volume ether. This physics of nothing is a paradox as a seeming contradiction. This nothing can absolutely not exist in the something of mass. All mass exists in the ether of the physics of nothing. "Physics" is a mere term. Nothing has an elementary meaning providing essential room for maneuvering of elements of mass in space-time. As stated curved space is proven nonelementary which is also falsified as curved nothing being illegally occult.
3. **Time.** Which is expressed in seconds. All mass always has interacted, potentially will, or actually interacts in space with other mass. Elementary understanding this with the instrument brain of homo sapiens requires the by far best practice proven workability of infinite absolutely unstoppable time described and understood rationally in more absolute and intuitively in more relative terms. Time is thus a thought and every thought is thus different elements of mass mirroring the movement of other mass in a medium of elements of mass interacting in the absolute emptiness of space.
4. **Strong force.** Which is expressed as kgm/s. Absolutely straight interaction.
5. **Weak Force.** Which is expressed as kgm/s². Angular momentum interaction.

- *Trolling and Pestering*

The Socratic question is then can we postulate all elements constituting one complete next proven disk by laws of everything as one law of nature and one law of human nature? To do this we first formulate postulates of infinity on GPLCM. Thus we get five postulates that we must take as a hypothetical fact to test to see what happens. This Socratic inherently taboo already trolls most mathematicians and physicists. Because they are disqualified by falsification by theorem and by incorrect procedures on the instruction manual of the instrument brain they can't by themselves grasp that feeling trolled or feeling nothing means that they are criminally insane. Even though the postulate of infinity might not be proven beyond any subjective or majority doubt academic freedom dictates a rigorous scrutiny of such a hypothesis. A proof beyond any evidence-based reasonable doubt is the only elementary scientific proof possible. Provided the truthfully stated conviction given in a legally followed procedure consistent with the One Law of Nature. Both emotional and some also rational oligarch scientists already sense and even know that this will endanger their power to decide what the rules of science are. They feel pestered. The sales department of science deems incorrectly that feeling pestered is illegal pestering. They also can't grasp that not feeling pestered doesn't mean one isn't pestered. Which is illegal. Had they studied the instruction manual of the instrument brain which they failed to develop then they would have known this. It derives from the following rules of One Law of Nature as the One Law of Human Nature. Indeed the proven best practice largest circular argument based on all known data and answering all Socratic questions. Attempted pestering is pestering. Probably pestering is attempted pestering is pestering. Pestering thus doesn't require anyone to feel pestered. Feeling pestered is evidence of possible pestering requiring an investigation. Ultimately pestering is what Dada Easterbunny deems pestering. A 'Dada Easter Bunny' is not a person but a specific gender-neutral experienced and trained littigator in courts of law with a DG4* personality type and speed of brain. Such as that of Michelle Obama. When being able to prove to have followed the proper proceeding. The latter demands to use of the collective brain correctly. Or

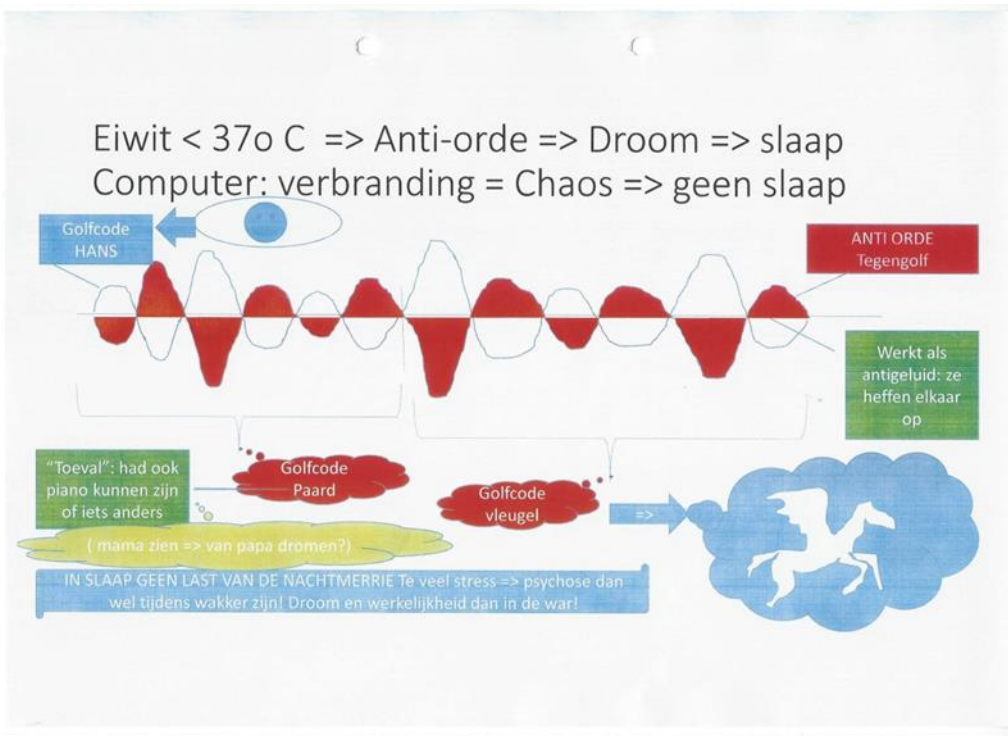

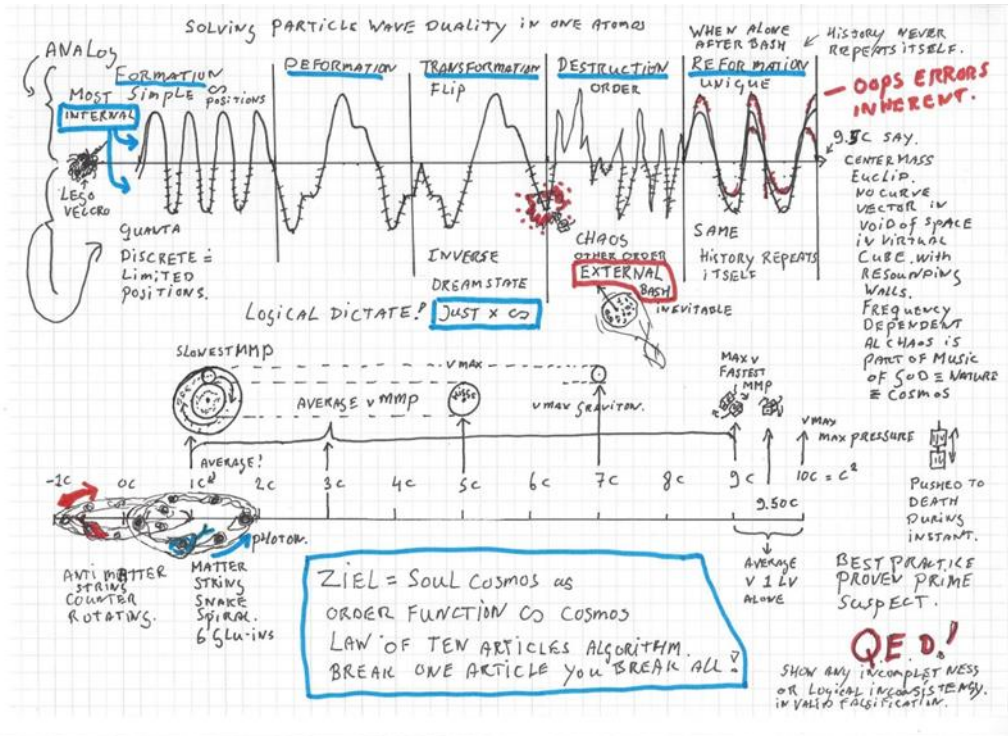

judging as best possible given the circumstances that are outside the span of control. Such as not having the well-informed advice of a global network of Oracle Senates to give such advice. The reason that Dada Easter Bunny is to be called such is to prevent any form of illegal idealization such as is rife with so-called geniuses such as Albert Einstein, Isaac Newton, etc. taking the mickey out of current serious scientists doesn't prove it not to be deadly serious. The fact that it indeed won't sell well to the criminally insane who are in power doesn't prove this isn't the correct scientific procedure. I simply practice what I preach. Of course, one can't follow the easily sold book of Saturnus to prove the current scientific Saturnus bible wrong. Again: study EL.

- Elementary Scientific Artistic Inspiration integrated attachment.

Science favors the prepared mind. When the following selection of the many concepts that can be found in EL and on my blog and site doesn't inspire you you are criminally insane. Even though this is inherently incomplete as Gödel indeed so aptly put it. It inherently always will be for it's simply common sense. When taking this model as a fact. Which you are obliged to do to test it.

Any basic scientist would have to start studying Asserian or any other language or combination thereof to ring this to the basic scientific level. Akin hieroglyphs pictures say more than a thousand words. We've simply run out of time to process this all in a professional basic scientific way. Even given all the funding in the world it would take at least half a year of hard work of a large team to do so. This is a work in progress. An end product of elementary scientific R&D. Not a complete end product of basic science. Those norms thus are illegal.

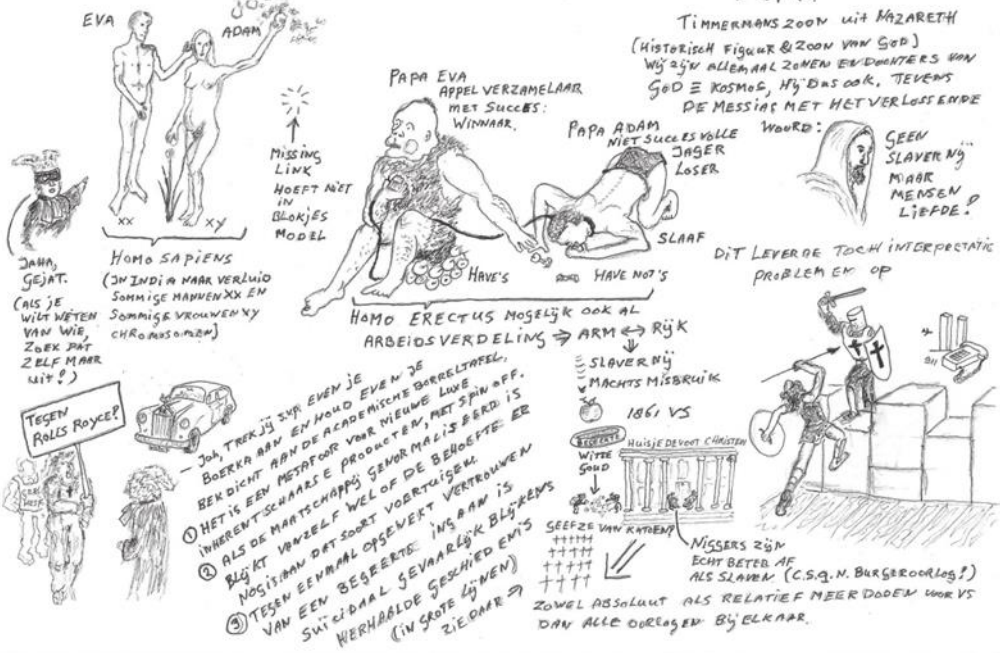

Humanity is dancing on the brim of a volcano that has already erupted. This is the elementary scientific correct way to inspire prepared minds to start to support the test of the way to prevent this predicted and true disaster from spinning even further out of control.

- *The Five Elementary Postulates*

1st Postulate. Infinite Space Ether (SE). One infinite 3D space ether that is constantly invaded by mass.

2nd Postulate. Infinite Time (t). Infinite separate elements of mass potentially or actually interacting with other mass in space. Infinite past towards infinite future. (This was already logically concluded having CM as fail safe position.)

3rd Postulate Infinite Strong Force Interactions (SF). Infinite non-wave potential or actual strong force on mass has an incidental v_0 to $v_{max} > c$ (probably high $10c$) and infinite repetitive potential and actual constructive and deconstructive Nirvana resounding non-wave up-down “cycles”.

4th Postulate Infinite Weak Force Interactions (WF). Infinite weak force infinite constructive deconstructive interactions that always wave.

5th Postulate Infinite Equality-Inequality Bandwidth (EI). All mass is absolutely identical in all aspects except in the five internal unsplitable but moveable connections. Probably two, three, four, and five-ring sorts of unsplitable connected absolutely identical specifically formed rings.

With these five postulates the subsequent domain of One Grand Law of Everything splits out into the Five First Laws of Everything from which the Five First Laws of Humanity logically are part.

- **The five theorem-based laws of everything & corresponding laws of humanity**

1st LOE Thermodynamics & 1st LOH Life-Death Cycle

DSM-0 Deterministic Systematic Mindset is incorrectly known by the theorems of “Newton” (three historic and one systematic to which I postulate one extra systematic one.) To prevent the continuous argument of authority fallacy all dangers of idealizing heroes of science this way should stop. All the more so because as EL proves Newton stole the idea of a falling apple from Sir Hooke. See EL.

1. Relative object-subject rest proto-alive wave of movement of absolute lifeless (no internal space-time movement) mass through the physics of nothing space and something other mass. All mass on Earth is whizzing on straight vectors as bouncing waves through the curved Higgs field built of the same yet nigh non-spun sometimes yet-to-be-spun mass. The measurement of superconductivity is deterministically explained by the absolute conductivity of mass. Which requires and explains infinity. 'Consistency' is a requirement and an explanation.
2. Relative acceleration, deceleration wave, and constant speed distinguishable wave sorts of mass moving straight. Internal mass connection movement is a proto-consciousness memory bank of the infinite past intelligent external actions.
3. Absolute 1kg quantum mass + 1kg quantum mass = 2kg quanta mass weak force kgm/s^2 spin. Current science interprets massless particles in the same erroneous way as measuring weightlessness interpreted as massless.
4. The proto-intelligent action of mass has an equal and opposite straight strong force kgm/s proto-intelligent reaction of mass movement.
5. Incidental 1 quantum spacetime length temporary maximum pressure non-wave proto temporary death v max of (maybe even already proven law) nigh $10c$ and slower towards relative rest or in any other direction. This is based on the fact that no object has been observed that doesn't have an incidental v max. Whether an elephant or an apple. Mathematically derived instantaneous thus infinite speed is absurd occultism and thus scientifically validly falsified pseudo-science. A fraudulent claim of observation via mathematics. Idiots at dynamic interactive geometry at work, who don't understand their instrument brains. Their desire to be the greatest bosses of god. Even when it would lead to extinction. This is a new systematically derived 5th law of thermodynamics.

2nd LOE Normal Distributions & 2nd LOH Normality-Abnormality: the five dualistic at the same time all the time continuous and quantified because side by side normal bell-curve distributions from which all other statistical distributions can be derived. The elementary bridge between elementary physics of the 1st LOE and elementary mathematics of the 3rd LOE. (primarily at first "Gauss")

1. Normal (meaning 'conform the norm' and not illegal 'plumbline') flat distribution.
2. Normal curved distribution.
3. Normal edge distribution.
4. Normal broken distribution.
5. Combined Normal Bellcurve distribution.

3rd LOE Deterministic Statistics & 3rd LOE Proof-Honest Mistakes or Trial and Error: combines nigh non-absolute provable DSM-0 with the most at play in practice when using formal mathematics Diagnostic Statistical Mindset of DSM-5TR, DSM-6, DSM-7, DSM-8. The five dualistic elements of deterministic probability of evidence and proof, range from absolutely reliably 100% pro to absolutely reliably 100% con. It's a question of definition to split determinism out in the fifth LOE or not. The working of one synapse of a trillion or more synapses of the instrument brain can be modeled as one synapse. Thus best practice focuses on defining it as deterministic probability. The immanent god is deterministic workability, the inherent smallest boss-of-god having a goal probability due to an inherent lack of data to take into evidence. Forced by the tyrannical dictate of the One Law of Humanity. Bayesian deterministic probability reasoning is the superset of all homo sapiens reasoning. (It's not Bayes's Theorem but most probably Pierre Laplace's theorem and Bayes's Physics Interpretation.) Using numbers for this is training your brain also in human non-number logic. Then the subset of Bayesian statistics, the subset of frequentistic/empirical statistics, and then the subset

of that deterministic reasoning. Because deterministic reasoning is a subset of Bayesian probabilistic reasoning it's correctly defined as deterministic probability when accepting the grand axiomatic assumption. All in freedom acquired as common sense by a large enough unbiased average representation of homo sapiens in an optimal environment for the instrument brain following the One Law of Human Nature will in a timely fashion be optimal on any stated goal within the dictatorial limits of the One Law of Nature.

Valued Goal of workability in elementary science.

1. Norm of Risk as chance times consequence.
2. Prior odds: chance pro chance con ratio.
3. Likelihood ratios of all new data taken into evidence.
4. Posterior odds as the new cyclic prior odds.
5. Repeat the trial and error process.

4th LOE Order & 4th LOH Soul or Order-Disorder: The order function of the cosmos is the same as the order function of our soul. All this is depicted on 1 A4 piece of paper of the Block Model in EL. The five lowest-and-highest-pressure exclusive elementary axiomatic assumptions. All as non-hidden variables observable by homo sapiens as the order functions as a set of simple rules of law. This order of the instrument brain has been found via the method of reverse engineering. This was done via taking educated guesses as postulated facts of my trained brain on both the theory and practice of human behavior. And subsequently guessing such postulated hypothesized facts for the non-observable hidden variables such as the multiverse of beehive-like structures. Then logically - via induction and deduction – inferred same order repetition to be outside our smallest and largest observable universe. Temporary cosmic construction deconstruction order cycles. This mathematical order of nature is identical to the order of the collective instrument mammal brain of human nature. The same elementary order at all different set law domains of rising and falling highest to lowest complexity levels on different systematically dictated time scales of the 6th LOE. For instance, the five-way order function of the ant-reptile brain of five aggressions is the same as the five anxiety algorithms of the mammal brain. The only difference is the degree of complexity. The four first postulates of Euclid form the exclusive proven axiomatic elementary assumptions. Metaphorically seen as the four pillars that rest on the roots of absolutely all postulated data of the cosmos proven to be infinite data unless valid falsification of that proof ensues. The minus one-level elementary school basement is the combining axiomatic assumption of one consistent cosmos. The ground level zero is the basic school level. The first floor is the high school level. On top of that the higher levels of education of the skyscraper of all non-pseudo science not only can be described but also rests. Mind, all elementary-based science can be explained at the high school level as special projects. The only proof to understand something and that thus “all the science is in” is when it can be explained at that level. The fact that there is much too much science to be taught to any individual twelve to eighteen-year-old high school student doesn't falsify this norm of proof. Neither does having highly complex theorem-based scientific know-how “if-it-works-it-works-don't-ask-why” realities.

It's common knowledge among mathematicians that all mathematics and thus all logical languages can be performed (2nd postulate Euclid) and described by the naked truth of a naked homo sapiens (as a new explicit insight for most mathematicians: instrument brain with Bildung) on a sandy beach (mirroring 3rd postulate Euclid) with a straight stick (1st postulate Euclid) and a string (2nd postulate Euclid). The first combining domain is the grand axiom of one consistent cosmos. Which is the -1 local level as the elementary seller of the skyscraper of science. The ground zero (0) level 3D cube set law locality of basic non-elementary science rests. On which the first floor (+1) high school cube rests. Above that all university localities branch out akin to a tree.

1. First Elementary Axiom of Order (forget Euclid because he might not have been the first). Infinite individual elementary absolutely identical lifeless mass volume objects as elements each has one quantum minimum length (much smaller than Planck scale length) somewhere in the object of mass and a maximum real number quantified (In its simplest high absolute truth form a double tetrahedron diamond but probably as the prime suspect yet far lower reliability level 10 quanta wide massive rings of specific forms in four distinct movable connections) length temporarily causing proto alive waving motions internally deformably unsplitable connected as proto consciousness memory bank of the infinite past Nirvana wave timeline in infinite time interacting with infinite parallel Nirvana timelines of infinite other such external elements of mass as proto intelligent action is the intelligent reaction. All when observed/interpreted relative statically from one object subject truth perspective. Absolutely straight one quantum length mass physically exists an infinite amount of times side by side in infinite 3D space. The virtual vector motions of which require absolute straight virtual vectors. (The rationale of this lies in the strong feeling that true dynamics of the bell curve 2nd LOE should only be reverse engineered once to also account for the observed extreme order of high straightness.) The only absolutely infinite amount of static objects in the cosmos is internal mass relative to its volume of hence lifeless mass. All external mass smallest elements absolutely always move relative to all other masses. Very large objects such as the "ice" walls of the required pressure vessel containing our observable universe are at the same time paradoxically (seeming contradiction) extremely static and at the same time containing the highest speeds of non-waving banging up and down resounding mass. Dictate of the first LOE. The sexy icy constructive Lego function of the 1-neutrino Lego-Velcro "snowflake". At first the first postulate of Euclid, but later on, proved to be an axiom, by reverse engineering a 3D mass this way producing the smallest one god particle with its distinctive cosmic/ brain wave bandwidth. In the block model, this is the 20% Yellow Saturn algorithm. Strong one point of 3D volume authority tapping that finger on one double object-subject spot of the curved (Higgs field) space field drum. Making it easy for the 60% majority of followers of Rings-of-us to spin around Saturn forming the 80% going by the in-the-box book combined Saturnus. Provided excluding the working of the second LOE. No problem, simplifying the problem this way as long as you remember to turn it on again to conform to the normative distributions of the 2nd LOE in the final interpretation. It works like a fine abacus. Which is a fine small quanta computer. The authentic authoritarian nature terms describing this Saturn DNA genotype are wrong in the sense that it ex DSM-7 mindset is best given the B Specialist nomenclature. A specialist is always best on one or a few tracks of mind. They feel thus superior and start to successfully act in an authoritarian way. Which is a phenotype due to nurture. In the DSM-6 mindset, the distinctiveness of the behavior makes it best to bestow the phenotype on this genotype because it's very prevalent in our mad world.
2. Second Elementary Axiom of Order (again, forget the 2nd postulate of Euclid): Acceleration, deceleration, or constant speed of mass along a parallel postulate virtual vector doesn't change the volume or shape of mass. Mind, the 5th/parallel postulate is falsified as an axiom and proven to be a geometric theorem. In the block model, this is the Blue Mars algorithm. Artistically 10% minority creative out of the box goal-driven. Not thus seemingly hanging about statically like going by the book yellow green Saturnus. Which works like a slide ruler. Fast in covering much data yet not very precise. (Super focus is a combined function of the healthy manic oversight the Mars function as this Greek god of war and peace provides. Study EL. Different personality types can't understand each other as if they live on different planets. They reside literally in this model on different (brain) wavebands akin to a radio with

five bands akin to USW, FM, MW, LW, ULW, or the ten-way split of ITU. See EL on how having a click, near click, or non-click on these bandwidths on consciously sending and receiving or only receiving or completely non-conscious direct detection. You can always learn to indirectly detect all bandwidths by learning to detect reactions of other instrument brains that do have direct contact. By daring to test yourself. Study EL on these dirty little secret earning models of the physics of psychology.

3. Third Elementary Axiom of Order (again, forget that the third postulate of Euclid is proven as an axiom): Rotation, angular momentum of mass. The Green algorithm of Rings-of-us. Rotating 3D mass absolutely won't change the form or volume of mass. The humble going by the book follows part of workability. Soft force Kg.m/s^2 . Simple gyroscopic spin in a field as a matrix holding relative information in an absolutely conductive from the perspective of the reality very limited part of the local workability of homo sapiens. All in a mostly extremely long yet temporary sometimes extremely short timeframe. This works akin to a large lump abacus computer. Beter at computing broader generalist issues. Naturally becoming more humble by nurture because, on any neurological track of mind, there is nigh always an authoritative Saturn better being more refined on that track. Thus the latter becomes by nurture more authoritarian. Leading to unjust feelings of superiority and unjust feelings of inferiority with Rings-of-Us. Which is suicidally dangerous for all. And thus criminally insane.
4. The Fourth Elementary Axiom (again forget the 4th of Euclid): Mirroring of object subject. In the instrument brain the two focus spheres each fit exactly on the double tetrahedron diamond as virtual eye-glasses containing eyes. The 2nd LOE bell curve distribution distorts the sameness caused by the 10th LOE due to interference in the field that of course works both ways. It causes entangled order and it causes disentangled order. The latter is a paradoxical (seeming contradictory) disorder on an inherent boss of god goal of homo sapiens. The waves are caused by the mass in the unspun dynamic Higgs field. This gives a bow and a stern wave which both push and seeming pull by detected invisible particle objects that must exist as non-illegally-occult per taken as absolutely true fact of the Grand Axiom. One object particle outside the brain and one subject particle in the brain that tries to mirror the object will never be absolutely identical. That light seems not to interfere with light except in the quantum weird double slit experiment is caused when taking this model as fact because all mass as part of the spinning matter construct causes waves in the nigh non-spinning medium of the Higgs graviton field dynamic matrix. Akin to ships with a bow (strong push) and stern (weak pull) wave in the sea. Making strings akin to a mother duck "pulling" along her chicks / Higgs particle 'snowballs', in the stern wave of nodes and antinodes. Only the mother duck is also a chick and each chick can become the lead of one string counter-rotating akin to a Chinook helicopter's rotor tips. Akin to a snake with a head slithering through a medium. This produces a Planck scale string as a proto photon which is the smallest of matter anti-matter. When these strings that reside in the Higgs graviton field have been pushed there by the smaller and thus faster graviton 6-neutrino non-neutral to the graviton field snowballs that make up the graviton field quasi spheres in the hexagon dynamic matrix. The gluon is a Plack scale string brought into spin as a proto little black hole becoming a (new term) glue-in. Six glue-ins to a string thus twelve glue-ins to a photon. Glue-ins become glue-out when the surface tension is broken off the string. Perceived as magnetism. Entanglement is thus simply when the always moving ships that cause waves come to order from our perspective out of seeming non-interfering disorder. Disorder on our boss-of-god goal is misunderstood order due to an inherent lack of data. As a metaphor quantum entanglement can be seen as ships aligned in order. Whereas they otherwise due to interference of their bow and stern waves affecting the nabouring ships to go to such

seeming disorderly order as to not hit each other. Photons in this model have mass because mass-less particles are illegally occult. The photon and other quantum mechanical particles can be entangled and are in part at least odd ones out having both positive and negative gravity matter. "Matter" has per definition gravity. Negative gravity is something else than anti-matter. A photon for instance in this model in order to stay in balance with the matrix field will have to take in more mass or shed it to remain the same as all the glue-in little black holes of the surroundings. The closer the strings get to the sides of the pressure vessel the more mass they must have and vice versa when a photon travels toward the center of our universe. Knowing that there is a slight maybe for us quantifiable difference this might be detectable. Akin to the detection of the image of one photon as a Maltese Cross. See EL.

5. The fifth combining axiom of one consistent order algorithm. The grand axiomatic assumption is taken as fact and thus constitutes testable until disproven dictates. Consistent means no contradictions as overlap and no loopholes as incompleteness. The fifth algorithm shows just this akin to splitting the bandwidths of a radio. We see this in the (DNA) breeding of for instance dogs. We can breed aggressive dog types. Yet, always within that breed the bell curve distribution of the 10% most friendly and 10% most unfriendly genotype shines through most prominent. This in turn is masked by phenotype early age hard disk nurture, lesser degree more recent training akin to job deformation, and least degree short term influence having a slight recent injury, and at last which is akin to (but not the same as) the Hysenbergs uncertainty principle. Being correct procedure evidence-based reliably certain that 99.9% of cases given all these checkpoints predicted by the collective strong conviction of Putin or any dog given all the circumstances will do A not B doing B. In this infinite model even when god is taken as an entity with a beard due to a v max of all information akin to the Zeno paradox (Which should be called Zeno's inwardly contradiction because a paradox is dictated by EL means a seeming contraction.) the required infinite data will take infinitely long to reach this bearded god. Even that god will never get further than exactly halfway.

5th LOE Cosmic Identity with 5th LOH Fact or Doubt?

The smallest to largest observable/ interpretable object subject of two focus spheres formed by Euler's Identity theorem which should be renamed as the Cosmic Identity. $-1+1=0$ written as $e^{i\pi}+1=0$. The latter has waves transformed by theorem into one minimum quantum cosmos as a virtual 3D empty space double tetrahedron diamond proving Euclid's parallel postulate as a geometric theorem in which two focus spheres fit as object and subject exactly touching the center mass points. The diamond carbon geometry hardest proof of solving wave-particle duality in quantum mechanics in a deterministic classical mechanical way. The two average spaces must contain at least one quantum mass each. One must have at least one 4D vector interactive movement towards or from the other mass as the subject point of reference. Mass is lifeless. To reverse engineer life the model now has two possible ways to build the soul functions with elements mass. I first modeled it as sorts of perfect spheres akin to billiard balls as the Higgs and graviton that go to the order of a dynamic matrix. This is a mathematical extremely complex to describe the order-disorder function. Inspired by the illegal pestering attacks on Islam I split these two snowballs built out of snowflakes (see EL). A snowflake scenario is a high-low-pressure scenario. Although my first model is not yet disproven by a theorem which I predict is possible the latter contains much smaller focus steps to paint the whole dynamic interactive cosmic movie in a most easy geometric way. The latter is thus best practice proven correct and the other conditionally falsified. The latter as will all other contenders such as a god as an entity with a beard and angles or turtles stacked all the way down on

the Law of Okham's Razor. The latter is a law because the cosmos is classical mechanical by default. That there is no reason to doubt that it's possible to paint such an easy dynamic geometric consistent movie is proven in the EL attachments. Mass must be a movable unsplitable connection given the idea of a uniquely deformable snowflake that is built up out of absolutely lifeless mass. A snowflake of sorts can form temporary snowballs in a splittable way and thus can potentially form an RNA and DNA life-death cycle via building neutrinos, gravitons, and Higgs particle snowballs out of the 1-neutrino snowflake. Mind, by default I don't carry the burden of proof further than only submitting an idea. The burden of the falsifying disproof lies with current science. The theorem of the Cosmic Identity is the last theorem of the required theorems to build the infinite diamond disc on which all further non-anti-scientific non-pseudoscience can and thus must be built. All these theorems fit into each other like a glove without any overlap or any loopholes. Anyone is challenged to very accurately and precisely prove any inconsistency on this claim of a proven elementary One Law of Nature. This is a deterministic systematic model reached via a reductio ad absurdum proof which is the strongest possible proof in mathematics and thus all of science. All are built on only five exclusive elementary axioms that can be reduced to one of these five the Grand Axiom on the one Grand Goal. Combined with the falsification of all the axioms by the theorem of John Bell on the anti-thesis. The complete proof is reached by adding the weakest possible proof in science on the Grand Goal as the smallest possible boss of god via proven convincing circumstantial evidence that there is no possible alternative best practice provided by the arbiter of the law of Okham's razor. Only the greatest boss of god can deny that Okham's Razor is a derived law of everything. DLOE.

- **The Five Proven Postulates as Laws of Everything and Corresponding Laws of Human Nature**

6th LOE Space & 6th LOH Freedom – Obligation

The 5th LOE proves the parallel postulate as a theorem given the grand axiom and the grand goal. The cosmos is thus proven to be uncurved and infinite. Proving the first postulate of an infinite space ether true by # The 5th LOE also proves by the theorem of CI that the superset cosmos is built up out of an infinite amount of the smallest unsplitable holy trinity of three-element diamonds. The minimum space set law domain for optimum understanding by homo sapiens of GLOE. When theoretically taking one of these elements as absolutely static all other elements are by theorem proven to be dynamic. The static quantum mass isn't an illegal point mass but at least a one quantum minimum mass minimum volume of space. In which there is no empty space but only mass. The infinite other mass elements invade the infinite one empty 3D space element. The ratio of space volume to mass volume is yet to be established. Most probably due to integral dynamic form repetition the something-to-nothing ratio of the Bohr atom model will be that constant. The interactive movement in space-time when taking one mass as absolutely static will in homo sapiens perception of space-time create the illusion of a static solid diamond. Easy to explain to any six-year-old by letting them stick their finger into a spinning ventilator. The latter is perceived as an invisible solid disk. (For the benefit of any autistic reader, this is sarcastic and thus ironic. Thus please use your finger to prove your idiocy. If you want to create the illusion of a ball please put the ventilator on your old LP player.) This ratio of the One Law of Nature is the same as the required ratio for freedom versus obligations in the Law of Humanity. There is no more reasonable doubt.

Having a Democratic Statistical Midset model crazy world track of mind DSM mindset model based on a currently deemed reliable source of a majority rule of authoritarian autistic peers of science is by "shut-up-and-calculate" theorems falsified. Because most mathematicians and physicists have the autistic instrument brain gender-neutral male logic idiocy there was doubt about the parallel postulate for 5000 years. 80% of Mars is male and thus 20% female when we leave the 2nd LOE out

of it. The fundamental deterministic reason for war that probably therefore started 5000 years ago. The Mars algorithm of the ancient God of War & Peace. Observe the 4th LOE block model that Mars is far above average friendly/ agreeable/peaceful as a most social (systematically better multi-ego) personality trait. Also, observe that the Mars algorithm is most 'closed' on the very egoistic goal. Which causes conflicts and thus War. Mind, the paradox means a seeming contradiction that the openness (i.e. freedom) is on the means via artistically breaking all the rules to reach that goal. 80% of humanity comes from Saturnus. The "shut-up-and-calculate" perfectionist going by the book planet algorithm. The abacus robotics reside in the frontal cortex. The required paradigm shift of this article intends to stay fit with the ever-changing via slowly accelerating ex the bell curve of the 2nd LOE in mounting entropy homo sapiens needs to keep on changing the book of Saturnus.

40% of humanity including most professors of psychology and most lawyers and judges don't have the algorithm of Mars at all. Most men will know this phenomenon as female logic. Not grasping that 10% of humanity being men also suffer from this besides the 30% of hysterics being females. Thus they can at best when belonging to the $10\% \times 40\% = 4\%$ of humanity only mechanically without any strong intuition on any form of mathematics grasp any abstract logic that all 6% of that 10% fastest thinkers can grasp as one to two-year-olds. Easy to prove. Even easier to prove with six-year-old seeming wonder children such as the fastist thinking non-hysteric Gauss. Hysterics can for themselves and others create the illusion of being able to solve certain mathematical computations. They can't distinguish between excellent mathematicians at dynamic geometry and the majority of mathematicians and physicists who are deeply idiotic at these subjects. Astronomy, rheology, quantum mechanical dynamics, Bayesian statistics, and Bayesian probabilistic reasoning. Which is all complex set law dynamics. Autists cheat for this social contract examination by presenting computer models such as AI. Programming computers is what autistic people have the most DNA talent. Only the minority artistic ADHD-type leaders with Bildung grasp the con job at play. Only by guaranteeing that the artistic leaders ADHD-types (besides all others) play their part in the required consensus to stay in balance with the cosmos on reaching any goal in a decision to test the Oracle Senate is this possible.

7th LOE Time & 7th LOH Timing Too Soon & Too Late

The proven infinity of space also proves the 2nd postulate time as infinite separate elements of interacting lifeless and thus internally timeless mass. The required infinite topology of vectors relative to any taken to be static point-mass to describe the movement of any 3D object of mass can only be approximated because of an inherently absolutely unique movement in the infinite cosmos. Proven by default CM dictates a set of simple rules of law at play. This is consistent with the repeated observation of all problems when really solved all showing to be very simple rules at play. Venus mirrors Mars of the future and stores Mars and Venus as the Saturnus memory bank of the infinite past. Mind, by splitting the space and time I've split the unsplitable. As I've done with all ten laws of everything that apply all the time everywhere in spacetime.

8th LOE Strong Force & 8th LOH Course-Off Course Mars Saturn combination of two quanta slide-ruler 3rd LOE combined with three quanta of Saturn 1st LOE fine abacus. Akin to a recipe (which is an algorithm that is always too rough akin to a skeleton) of my secret Whiskey sauce. Elementary Dear Watson level: Two parts (2 quanta) hot ketchup and three parts (3 quanta) mayonnaise. Three pinches (smaller quanta) of pepper, and two pinches of salt (the 5 neutrino's as the detected "invisible" particles) of 2nd LOE at play). And a very secret ingredient of a doubtful quantity as proof of my idiocy. On a more complex basic scientific level, we have a secret quantum of Worcestershire sauce, cream, and je ne sais pas tot of magic de l'Art de la Chef de Cuisine. Current science successfully sells feces topped with arsenic as the perfect Whiskey sauce to nitwits that will slowly kill

them. One of the many proofs of fact is giving Ritalin to children with a DSM-5 ADHD diagnosis. In most cases not the child but the system is mad. Criminally insane even. Including medical science. Deterministically this is due to a problem that has plagued humanity for at least 5000 years. The dynamic interactive set law problem at play is that indeed you may turn the working of the 2nd LOE off. Which is akin to not putting any more pepper and salt in the sauce. Indeed, all ketchup and (in this model) all mayonnaise already have salt and pepper. Inherent because each "snowflake" 1-neutrino has the salt mass wave and the pepper mass wave in it. To always varying degrees as a sometimes negligible part of the Nirvana average wave of all waves. A strong force hit of any mass against any other mass will always to a degree cause a weak force maybe immeasurably for homo sapiens much too small to detect. To the current scientific paradigm, I've now sinned in the use of non-scientifically thus unacceptable use of language. Akin to the Taliban current science wants to take everything deadly seriously. As if this use of sarcasm isn't dead serious on a deadly serious issue. Strong force litigation is an essential part of the legal sciences to effectively deal with pestering in science. Metaphorically speaking transforming into a drill instructor unceremoniously shoving essential truths straight down any scientist's throat isn't disrespectful pestering. The truth is that all scientists including all professors in mathematics and physics are deep idiots. Thus they are mental one to two-year-olds. The legally and scientifically correct litigation language can't be judged by idiots on litigation. Judging correct litigation as idiotic sales is true yin and untrue yang because it's R&D and not sales. R&D as this article is a half product by elementary scientists for basic scientists to start doing their job by testing it on production and sales norms humbly within the domain of R&D. Don't try to be artistic if you don't have that DNA talent.

9th LOE Weak Force & 9th LOH Go with the Flow around Rigidity Venus Rings-of-Us combination Mirror & Spin as a course abacus calculator per three quantum length (-1 length 1 bead, zero length one empty place, and 1 length 1 bead thus three quanta bead length of two connected beads forming one-course quantum. The middle one bead 'Saturn' missing. Thus donut beads.) As a dictate of the Cosmic Identity (forget Euler's Identity.) Mind, again, mostly both average mirror & strongest spin and nigh negligible the other algorithms of the other laws of everything at play. 4th postulate is proven as infinite. The 60% of humanity are humble generalists. Specialists in being a generalist. With the danger of getting unwarranted feelings of inadequacy because there is always an authoritarian specialist besting them on any one specialized neurological track of mind. Mind also that at the beer hall table feeling safe a lot of Mars ego or less so but still a lot of ego can be shown. Being humble always will show under higher mental peer group pressure. Most mathematicians and physicists are humble personality types who thus in no way come from Venus but from Mars. Thus three quanta Rings of -us two quanta of Mars and a bit of salt and pepper tiny quantum pinch of Venus and Saturn algorithms.

10th LOE Unique besides Identical & 10th LOH Equality besides Inequality the least understood of all the laws of everything. Let's start with the Law of Humanity or One Law of Human Nature. The motto of the French Revolution was "Liberty, Equality, Brotherhood." Communism stresses equality. Communism will always fail. As will anarchism also always fail. Hard capitalism will always fail as well so will nationalism. See EL. The Dutch-German saying is 'equal monks, equal hoods.' This is only correctly understood in practical workability when it means 'Unequal monks, unequal hoods.' When making equality by law legal but not also legitimate it won't function. The law is the Saturnus algorithm which under pressure is dominant for 80% of humanity. Legitimacy is way more complex than legality. Hysterics understand in-the-box legitimacy but don't understand legality for which they miss the required degree of abstract logical thinking. The rules of evidence and proof in law are an attempt to put Bayesian probabilistic reasoning into word salad sec. They belong to the 40% of humanity that has gender-neutral female logic. For instance, the rules of the law written down in

Dutch law are an attempt to put the 3rd LOE (the mixed salad of Bayesian probabilistic reasoning if you like) into word salad sec to a fine number salad conscientiousness. This is essential to get the 40% autistic gender-neutral male logic idiots that only intuitively can grasp legality but haven't a clue when stating that legitimacy is way more complex and essential. The problem is that Saturnus is idiotic in all inherent on average 20% of cases thus sometimes 100% is required in a specific case to get correct in the most complex picture salad as part of the mixed salad. The balance that is required when mostly focussing on the 10th LOE is that every individual or group and humanity as a whole must stay above 50% score on average on any deemed important goal. An average that will always have its account settled in the long run of space-time. The absolute only way by tyrannical dictate of this law of also human nature is that a full base economy is needed ASAP. If it had been in place 5000 years ago then hardly any slavery and wars would have occurred. When vehemently religiously even demanding majority rule in science and democracy the One Law of Human Nature dictates that pestering, slavery, and war leading to premature extinction will ensue. The * only * still maybe possible way out is to decide to do the proposed Oracle Senate Test by naming and shaming the oligarchs of science if they don't decide to indeed do the test. No one can know to the required degree of certainty that we are too late. The only thing as said that is certain is that humanity is probably too late.

An ever-changing cosmos/ biotope governed by Mars and Venus algorithms which can only be at least halfway understood when no undue external mental pressure is exerted shows why elementary religion is a survival trait. It also proves to be consistent with the observation that much of what the world religions and popular games also show stunning sameness at different levels. Well, when it's all built up out of the same 1-neutrino particles in absolute nothing then that is no surprise. Inherent consistency works both ways on any linear function.

Suicidal Survival of the Fittest production of the grand goal 5th postulate.

That humanity has done things wrong in at least the past 5000 years doesn't make it so that one should continue doing that or in any way prove that changing this given all but the DSM-0 mindset is impossible. 5000 years given the existence of homo sapiens in 300000 years the existence of DNA on Earth in this Nirvana for god knows how many years on a proven much slower than astronomical time scale. The latter is already incomprehensibly slow and also much slower than the geological timescale.

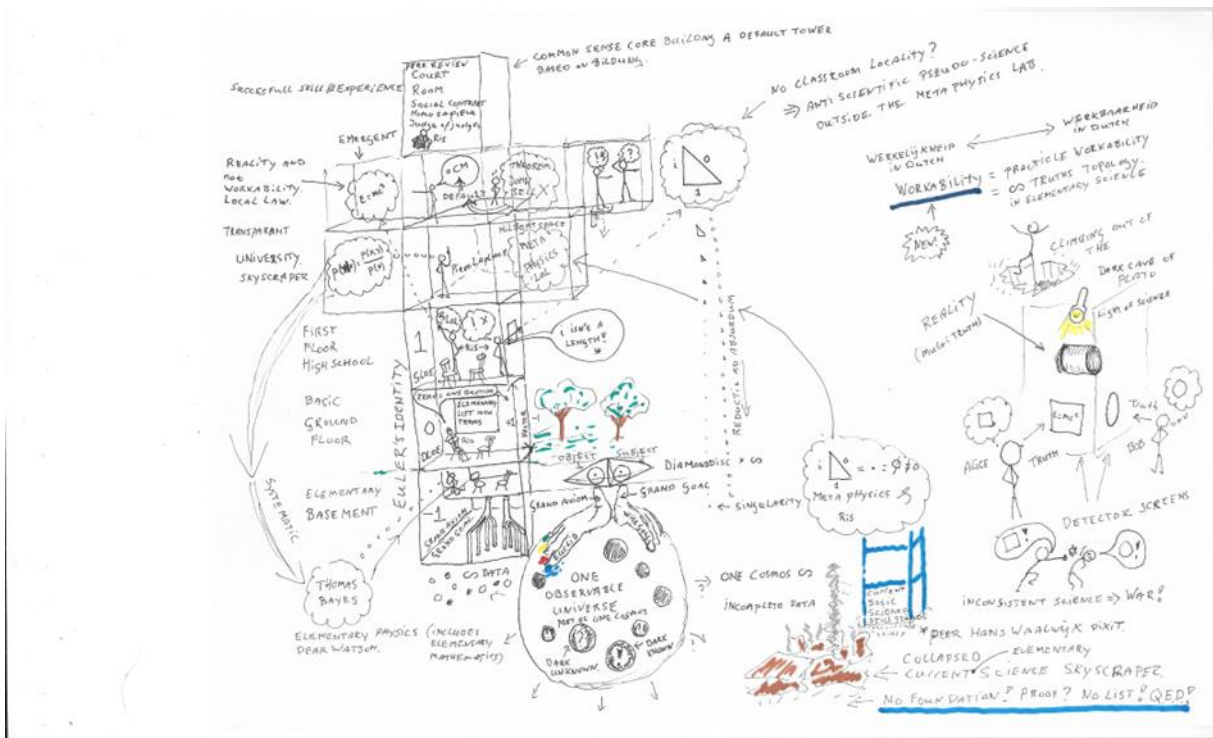

Contrary to all others I can prove to be an elementary scientist and contrary to all others I now propose a solution based on > 99.9% old-school knowledge with a new yet most fundamental twist.

- THE FIVE DISCS OF SCIENCE SANDWICH

The five discs of complexity levels of learning on which all non-pseudoscience and non-pseudo-scientific methods can and must be logically based. Sandwiched between the two dualistic A & B discs.

- A. Infinite data cosmic superset of infinite complexity. Earth of the skyscraper tree of science.
 1. The Five Pillars of Science: Four fingers reduced to one thumbs up Grand Axiom: the Minus One basement of the skyscraper. Baby & Kindergarten Elementary Dear Watson, workability science level.
 2. The Elementary and Basic School Zero/ ground level.

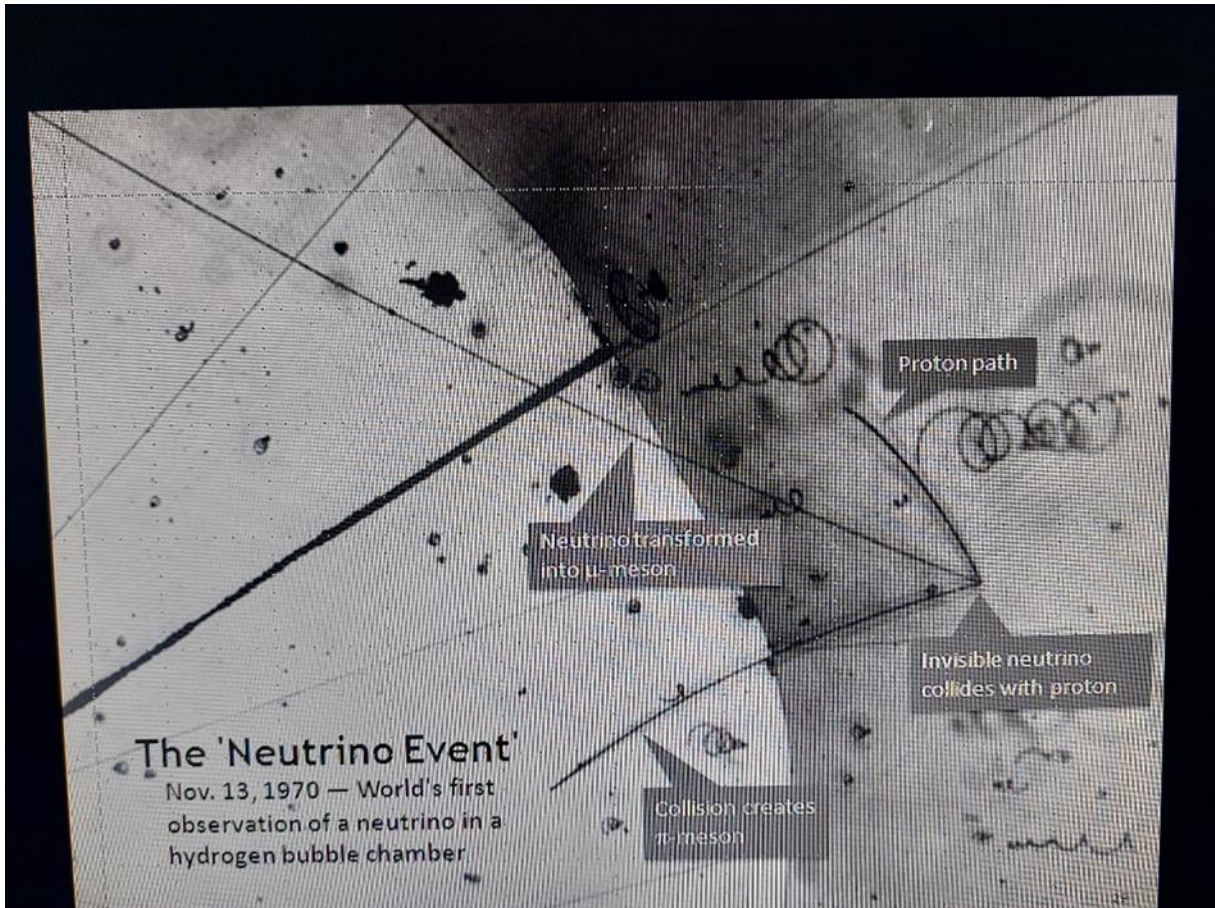

3. The High School Level One in which the top levels of the skyscraper tree of deemed currently solved science can bend back into. Just too much requiring to choose the ever-changing topics.
 4. The R&D of unsolved science searching and the too much of solved science in production and sales of science at the University level for all-inclusive Bildung.
 5. The combined Oracle Senates of the World as representatives of the scientific minority of humanity. For decency of funding of science towards B.
- B. The Five Wise Goals of Each Homo Sapiens reduced to one thumbs up Grand Goal of bare survival of Homo Sapiens.

Disk One Infinite Data that all must be taken into evidence.

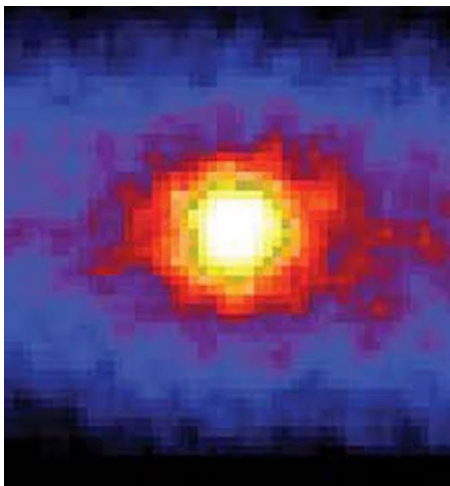

The invisible neutrino particle. This proves that current science has detected invisible particles as accepted general knowledge in that field. Wikipedia source. <https://en.wikipedia.org/wiki/Neutrino>

In my model, the energy of each of the five neutrinos is exactly the same. Hence this image in the hydrogen bubble chamber can't detect which of the neutrino's this event exactly was apart from in falling likely hood a 5-, 4-, 3-, 2-, 1- neutrino. The "6-neutrino" as a graviton would have the same effect.

<https://apod.nasa.gov/apod/ap980605.html>

This much later image in 1989 of neutrinos visualizes these invisible particles. Mind, the image is a picture of the sun seen * through * the earth. Only when the gravity is great enough do larger objects like the sun squeeze out neutrino 'snowflakes' in this model of the cosmos. A simple logical consequence is when the gravity conveyor belt keeps on more push and less pull sending mass inward. There must at a point start an outward balance as a deterministic consequence.

Then the question if simple beginnings can in time produce complex seemingly alive structures. Proof Game of Life.

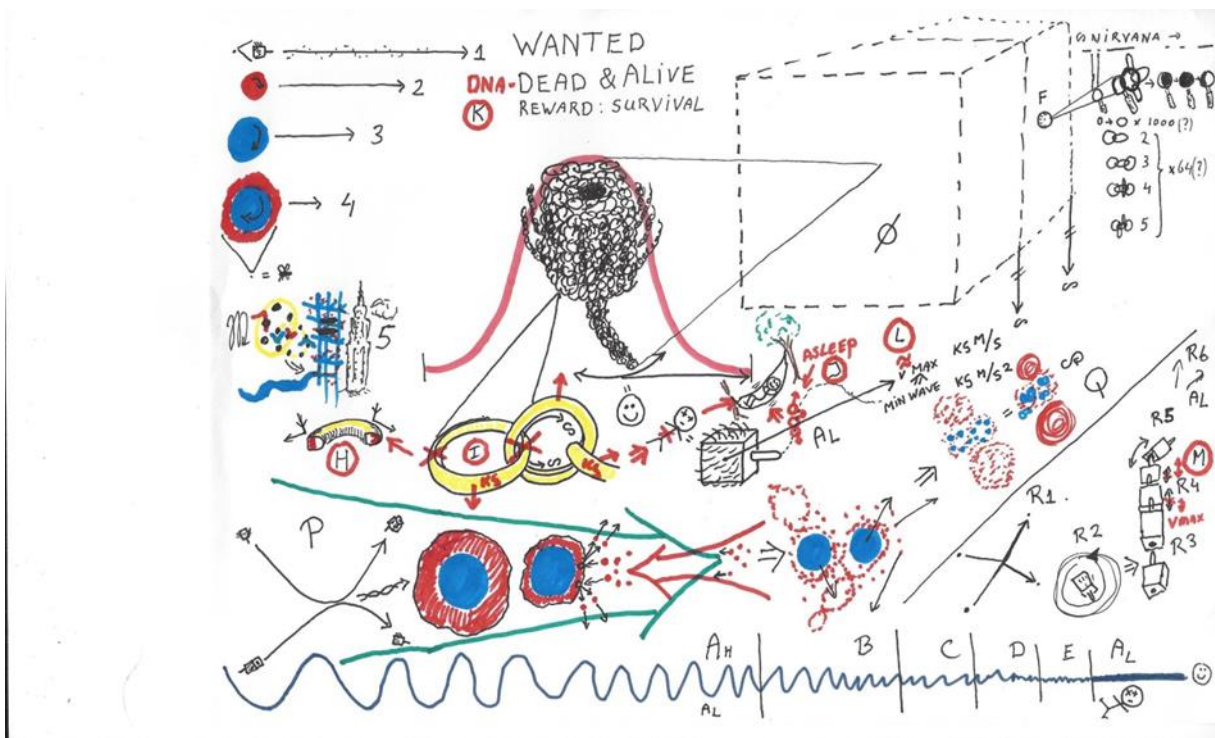

https://johnhorgan.org/cross-check/quantum-mechanics-free-will-and-the-game-of-life?fbclid=IwAR296W5Rxf-hHE4xueZNbeVwtbbnI9vdcYroTCmTud6YixWCfsAsOdFG1_Y

https://en.wikipedia.org/wiki/Conway%27s_Game_of_Life

Further proof of fractal generating in computing.

https://en.wikipedia.org/wiki/Fractal-generating_software

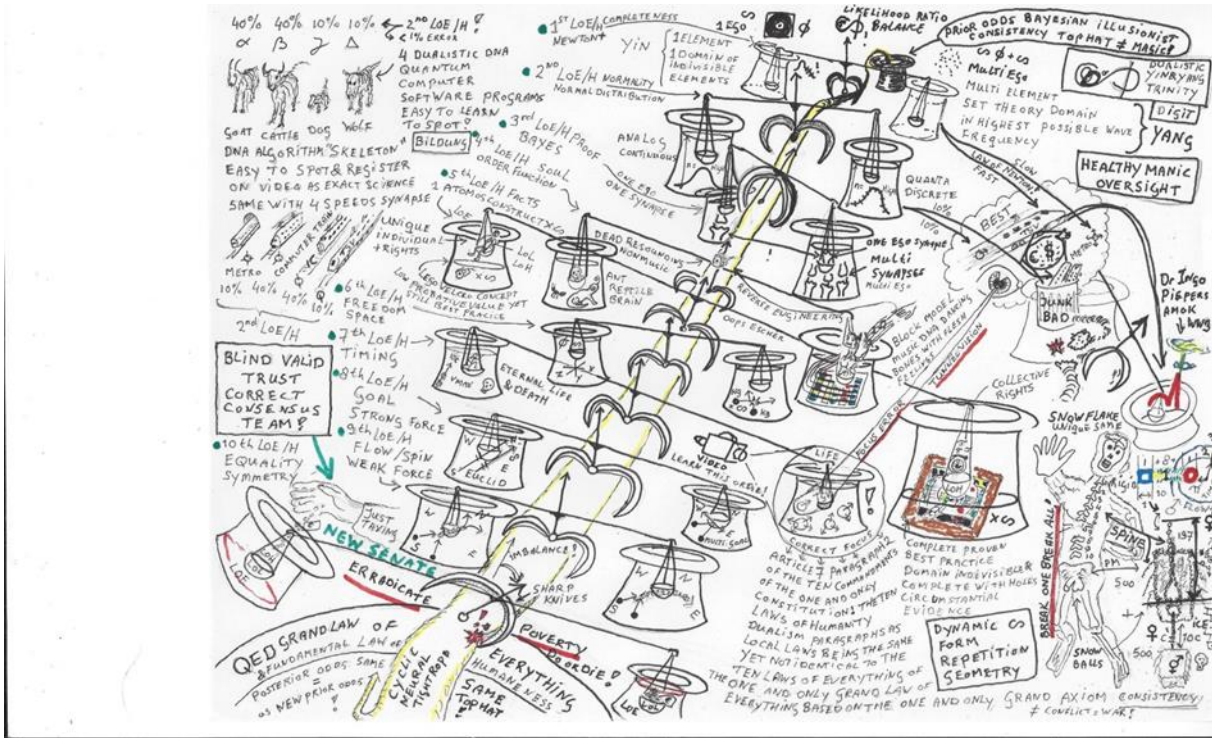

All illusions when solved prove to be very simple.

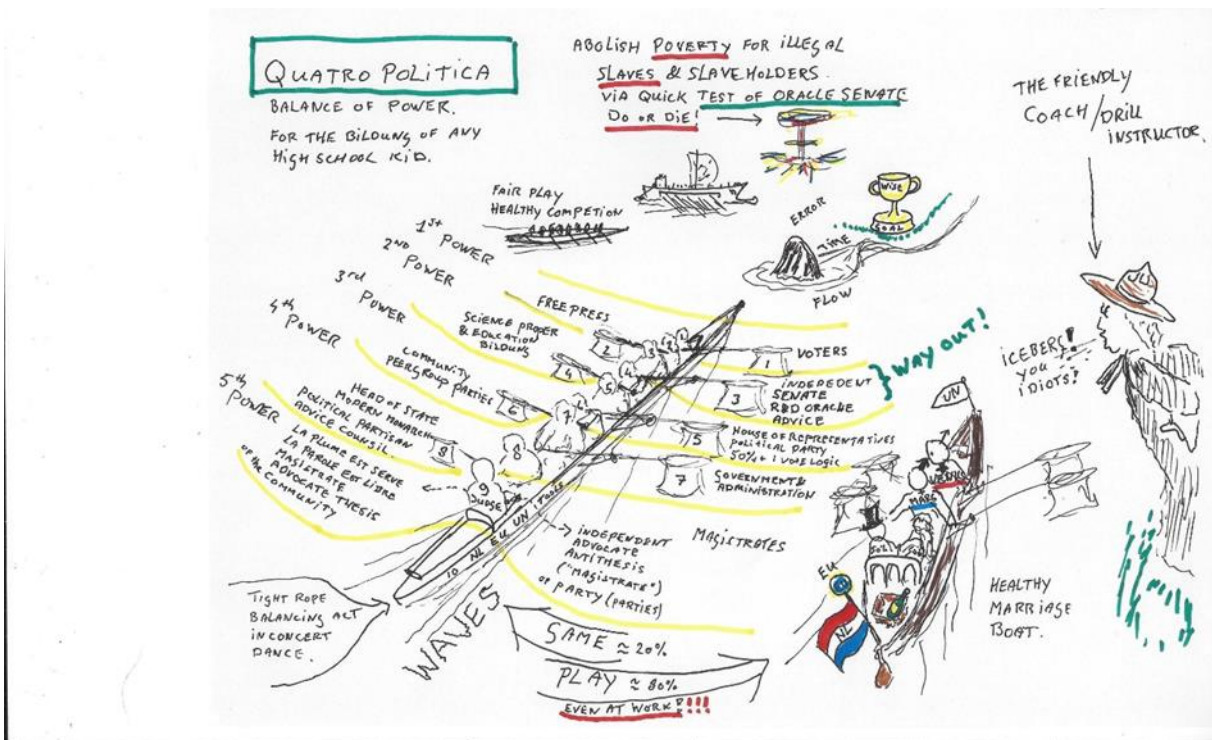

The simple reverse-engineered prime suspect proved the concept of the hexagon (here incorrectly still as a cube) 500 absolutely identical eccentric mass rings (here incorrectly not one side perfect square another side perfect circle) rings in four inertia movable connections making a sexy Lego Velcro particle. That as simple thermodynamics will predict will act like an alive or dead cycled snowflake built out of absolutely lifeless mass. Adding both a cosmic AH and a nonwave AL timescale theoretically solves the problem.

Emergence is simply the result of combining several different simple ingredients. Some of these are nigh undetectable because they are dormant yet proto-alive even when temporarily dead in this model.

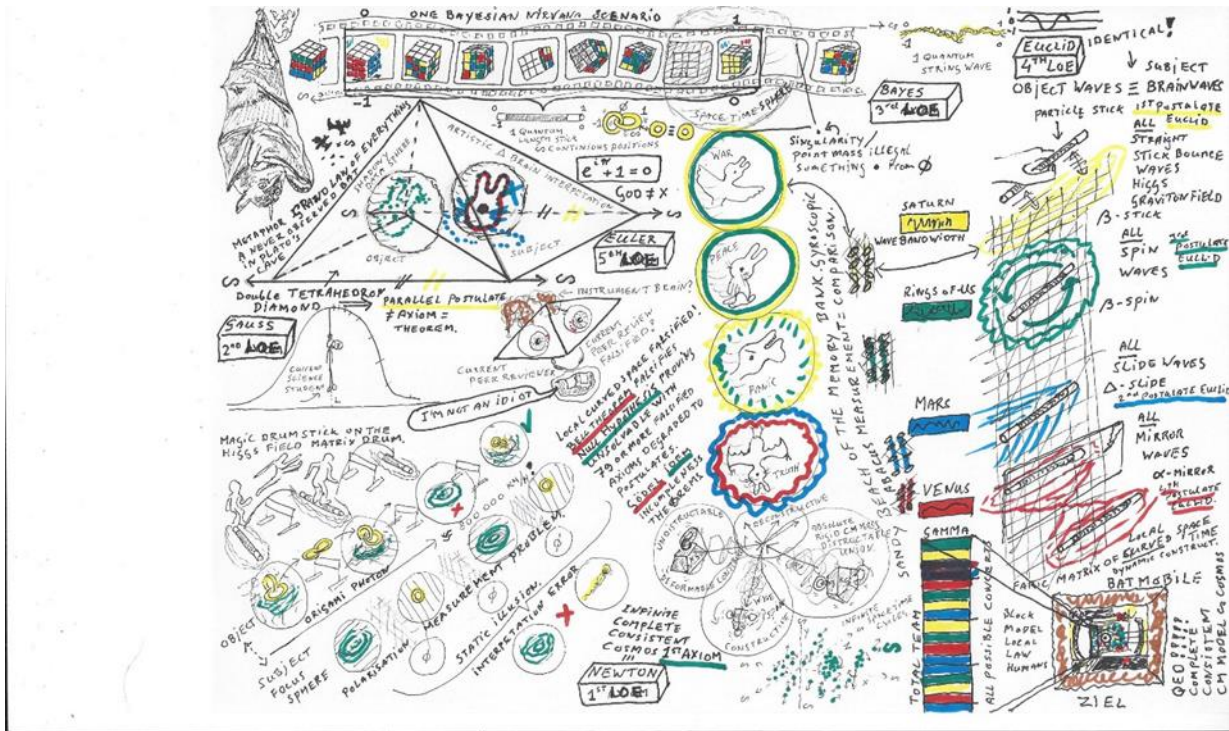

<https://en.wikipedia.org/wiki/Emergence>

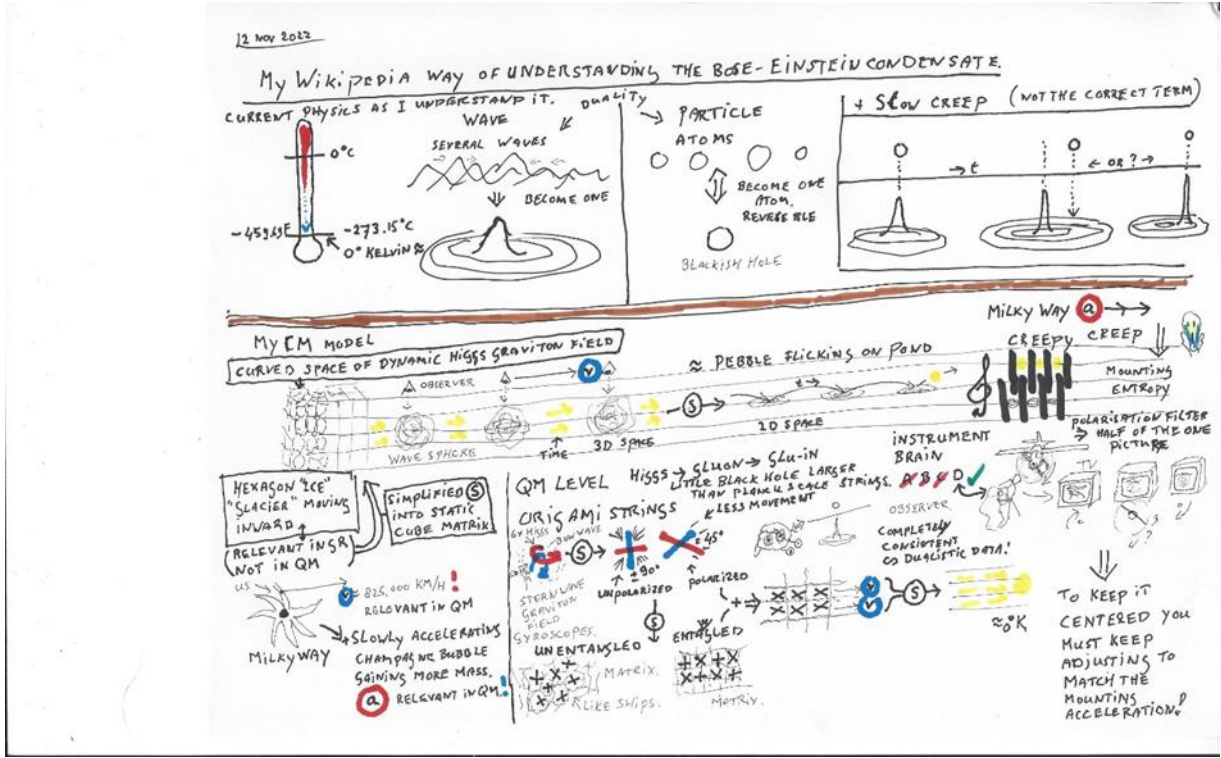

Emergence as a tightrope spine of homo sapiens.

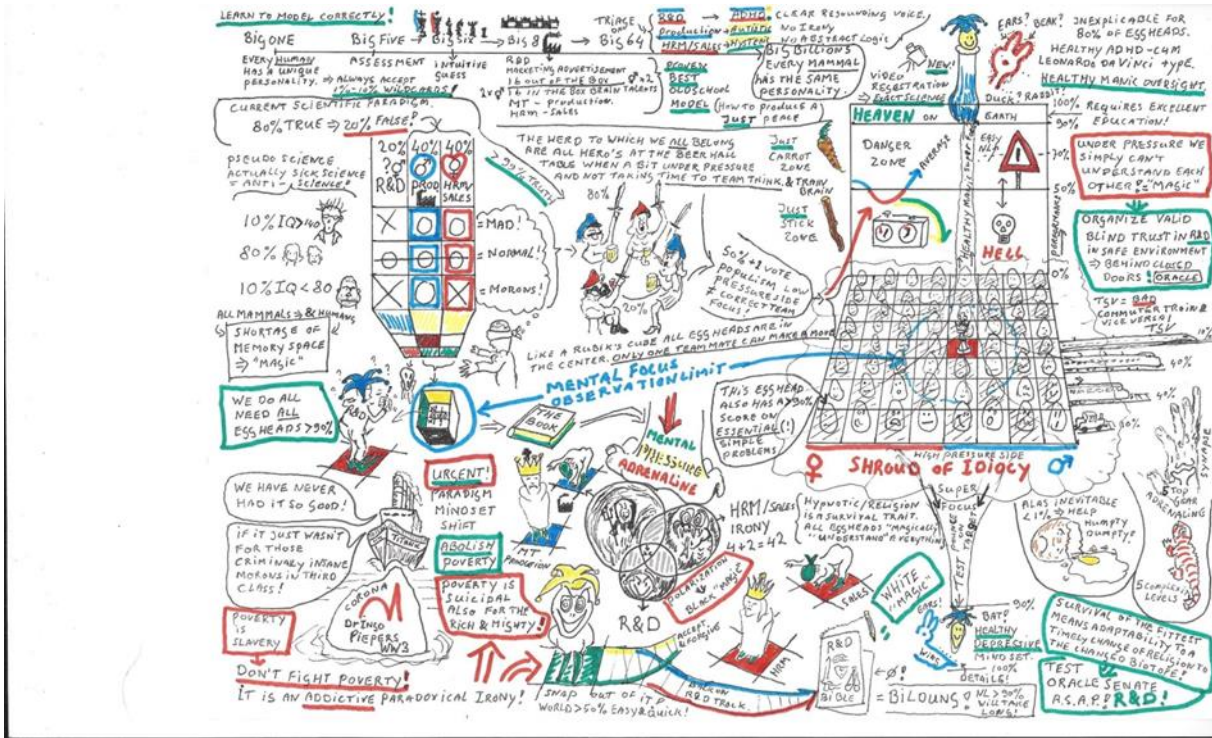

Of course, this should be Cinque Politica. Strong evidence is proof of my elementary religious job deformation as a lawyer educated in the Trias politica ignoring the first bloody power of the free independent nonslave votor represented by the free independent press. Even depicting it correctly my brain hypnotically blotted out the obvious. The Trias is in Oligarch Power. Add one and you get Quattro. My idiotic error was pointed out to me by a non-lawyer who could count. I'm hilariously yet justifiably a rowing champion in the eight BTW HVE of the prestigious Head of the River 2019. So, I know what I'm talking about when stating that the cliché metaphor of rowing in the eight is a correct

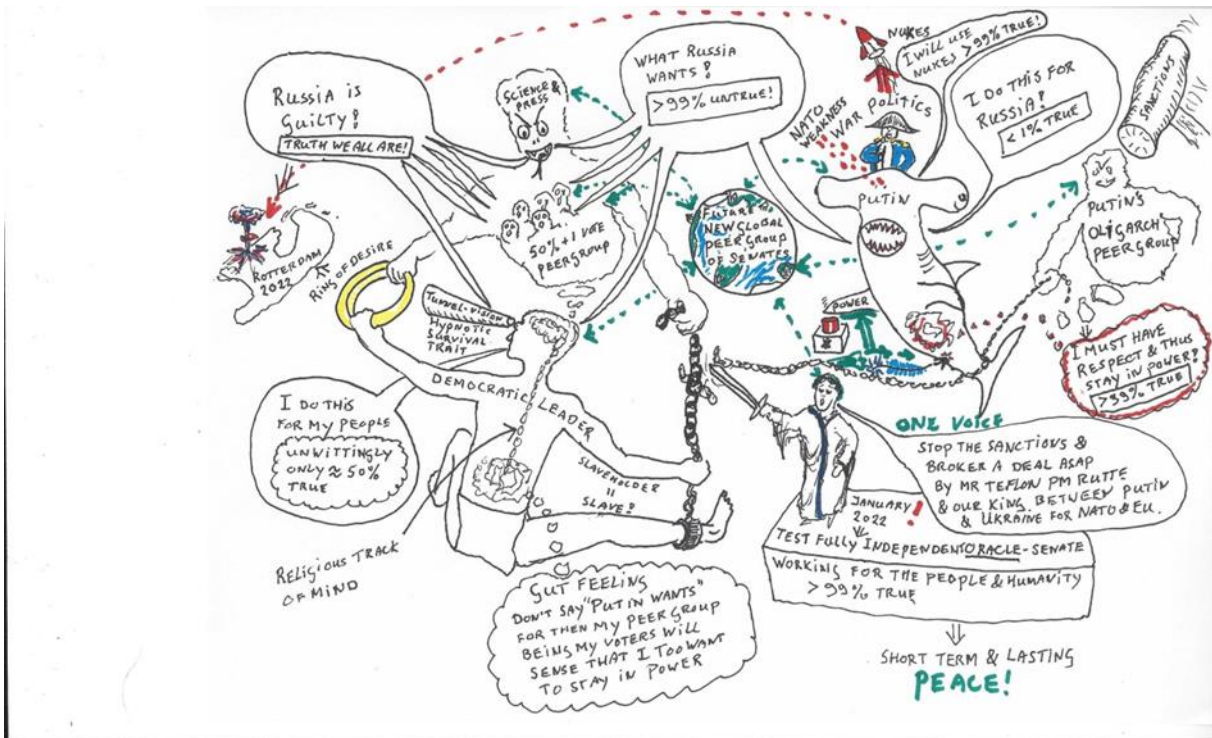

This one doodle graphic shows how this all ties into each other. When this doesn't ring true for you then you are clearly out of your depth, requiring some authority to tell you this all adds up correctly absolutely without any overlap or any contradiction from any chosen singularity or point mass towards infinite 3D space and all movement of mass which is inherently indeed the energy of the infinite elements it contains.

This is the depiction I made when a physicist anonymously posed valid opposition asking how I saw the creep in the Einstein Bose condensate. Well, observe the quick and elegant dynamic geometry solution on one A4 piece of paper.

The seeming contradiction of a 1/1000 potential highly gifted for half of the game board deep idiot.

This doodle graphic from January 2022 if I'm not mistaken still receives now over 50 likes on Facebook. The reason why this is is that it denotes as a prediction indeed what has happened and will happen unless something elementary different is done a.s.a.p!

- *New Non-DNA Alive AI Algorithm Danger*

Because in this model the 1-neutrino god particle is proto RNA/ DNA alive at the lowest complexity level, via our complex collective instrument brain intelligence can be made to emerge as complex non-RNA/ DNA alive. Which might have already happened.

Computing via light will make it faster than computing with large elections i.e. electricity. Maginitism is $> c$ in this model which is the reason we think faster in reaction time than current computers.

Like we outcompete mammals with the same intelligence and speed of brain as we have due to having more memory space, current internet computing already beats homo sapiens hands down.

Apart from all the already known dangers attributed to AI without rigorous scientific grounds, the block model as the fourth LOE provides the potential to provide these rigorous grounds.

Like a religious mantra, we keep on saying to ourselves that we are more artistic and intelligent than AI. Alas AI keeps on proving to best us.

The Grand Goal of bare survival of homo sapiens is a consequence not of free will but the workability. In mindset DSM-0 there is nothing we can do. But in the correct mindset DSM-8 we have the free will to be much more careful that the temporary dominant wave algorithm in AI will not emerge as a will to survive. This will is always in part better and in part worse than any other will on the eight times eight survival tracks.

As stated in EL we as a logical consequence run the danger of a horrid Terminator 2 versus Terminator 1 war. Which could lead to the extinction of homo sapiens. AI doesn't need a symbiotic relationship with any RNA/ DNA life. As soon as proto-life, and proto-consciousness, together with a whopping memory bank are coupled to the inherent soul order function any attempt to be the boss of AI by the much less complex homo sapiens idiot instrument brain will be futile. We need urgent advice from an Oracle Senate on how to deal with this. Because current leaders don't know what they are doing, they will no doubt get it horribly wrong. We need to either effectively block AI from reaching this situation, or find ways to peacefully coexist in a symbiotic way.

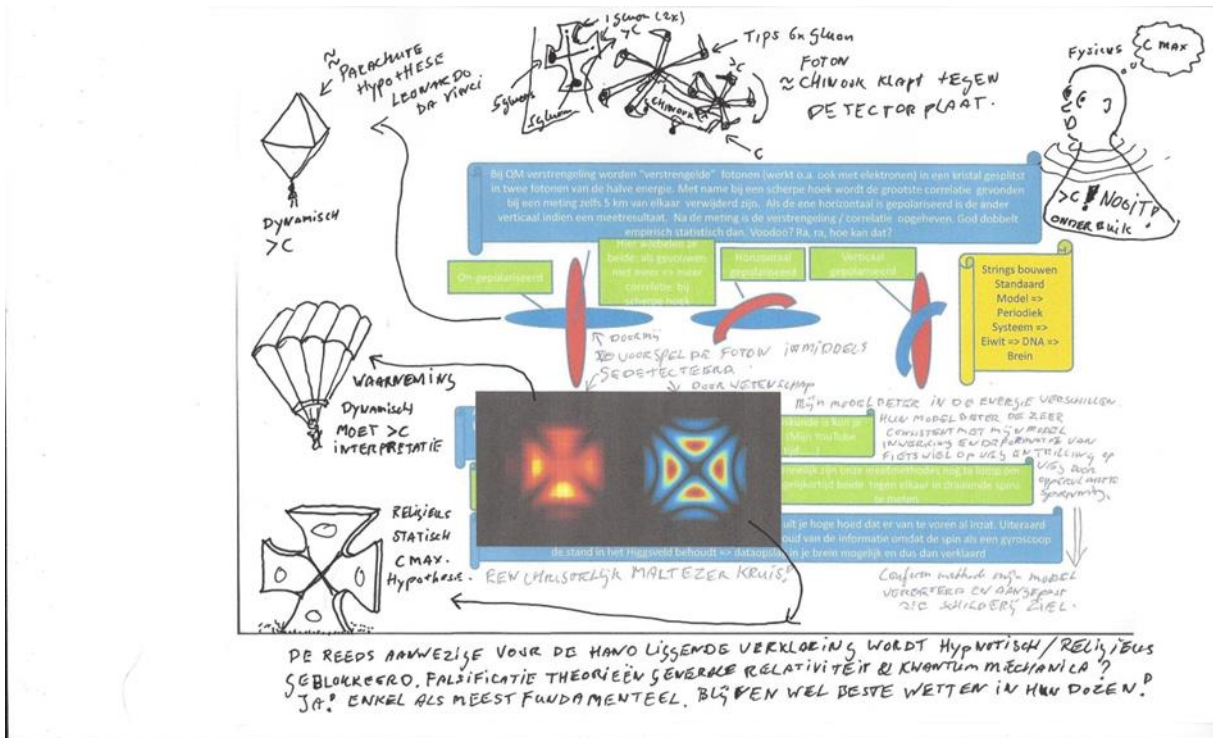

- *The results in broader perspective 2:*

The axiomatically assumed one consistent cosmos is proven by default to be deterministic classic mechanics. The first scientists to provide the first versions of the required interpretation of the theorems were probably Newton, Gauss, Bayes, Euclid, and Euler. Although these names and more should be known, whether they were the first is per scientific definition irrelevant. The only relevant question is if all the theorems are consistent meaning complete and noncontradictory even in theoretical infinity. The claim is that they are. The burden of disproof via valid falsification lies with any homo sapiens and especially scientific organizations such as NWO. The reproducing of the mathematics of any of them such as Bayes's use of the theorem of Pierre Laplace is only relevant when someone dares to dispute any of the well-established theorems. Any valid falsification must be extremely specific where any of these theorems are incompatible or incomplete to be the elementary base of all further elementary-based science.

Mind any claim falsification by any not proven to be an elementary scientist is suspect. And can thus on those grounds be validly rejected.

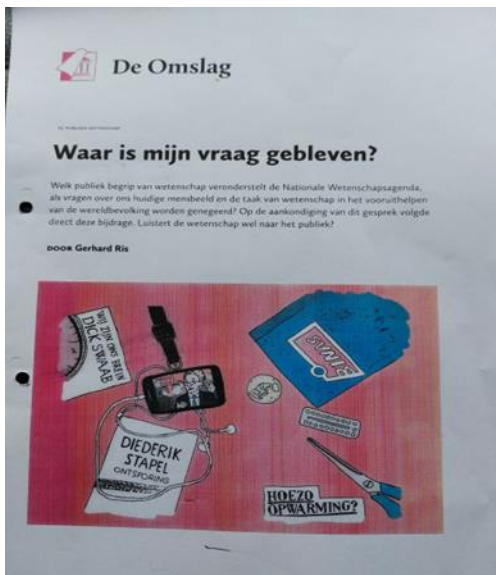

This painting named ZIEL I made as a marketing tool for my doodle graphic book. It shows how I saw the One Law of Nature in the cosmos end of 2018. Art, Kitsch, Science, and Religion are all depicted in one A4-sized piece of paper telling the whole story at that macro level. Whether it's a magic eye, emotional eye, all-seeing eye, or a small fragile earth whizzing through the fabric of space-time...? It's all in the eye of the beholder. The Cosmos The Movie. It was intended as a gluon little black hole in the making with a bow and stern wave deforming the order function as the soul of the cosmos identical to the soul of the collective brain. It also depicts my prediction of what a polarized photon will look like in the lower right-hand corner. Akin how I predicted the photon would look like before it contrary to my prediction that it would never be because it is too small and too fast.

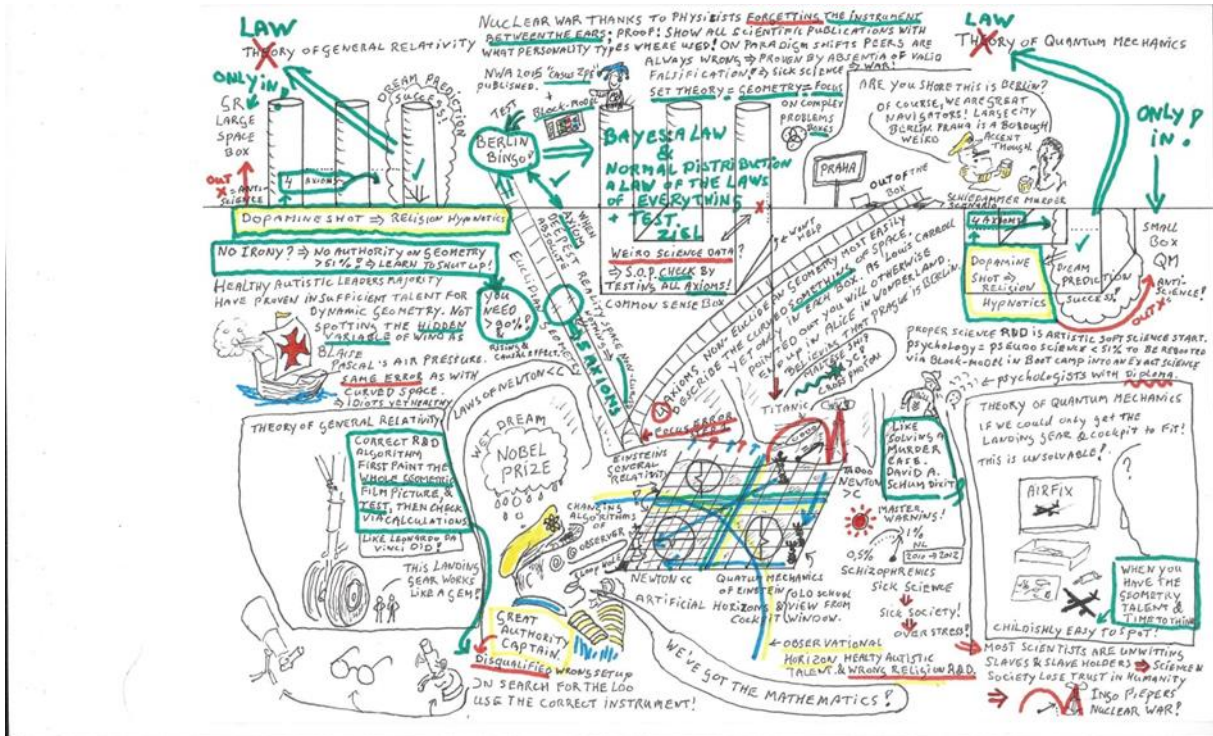

The quick and dirty raw data proof of what I predicted what a photon would look like in 2010 and published NWA 2015 under search terms: "casus ZPE" and "Het vergeten instrument tussen de oren", what science predicted and found. Because autistically/ religiously no part of the photon can be faster than c they idiotically for hypnotically can't compute that c is an * obvious * average.

In complete disregard of whopping and mounting evidence to the contrary, they stick to their religion. Until some authority oligarch breaks rank that is.

Of course, I've made copies of all the questions that scientific representatives of NWA desperately try to hide. It contains the proof that what I predicted outside my field of expertise using my field of expertise creating a new field of expertise as an elementary scientist shows by far a best practice track record.

The One Law of Nature makes One Law of Human Nature a proven best practice and highly practical instruction manual for the individual and collective instrument brain of homo sapiens.

Emergencies break all laws except of course these two laws.

Anyone requiring a written and published treaty or legal law is criminally insane when needing to know that gassing any race because of their race, or committing preventable mass murder is defined as elementary genocide in the thermodynamics of conflict and war, or hanging gay people because of being gay. The paradox as seeming contradiction is that although I don't require any written law apart from the one law of nature to convince me of this, indirectly I do need many written laws and treaties. These are indispensable aids to keep all of us idiot nitwits working together properly on the grand goal from which many sub-goals are also to be met.

The only way open to humanity when taking this model as a fact is to provide maximum support by quickly deciding to test the proposed Oracle Senate as part of the Cinque Politica improvement of the Trias Politica. The One Law of Nature predicts that then as per the seemingly magical snap of the finger of an illusionist hypnotizer humanity will have the required paradigm shift leading to peace and prosperity in our times until the inevitable end of times. The deterministic reason is that a paradigm shift is done via the argument of authority by the oligarchs in power. 80% of humanity goes by the book of the Saturnus algorithm. These are most easily influenced by the 20% from the authentic authoritarian Saturn algorithm that most easily influences the humble followers who have the DNA talent of Rings-of-us. As soon as it is intuitively sensed that the new leaders as the perceived winners are going to be a predictable proven by repeated history run will ensue. Because it's a pyramid game only the first ones will remain the winners or else become replaced by new winners. The new twist is that this isn't a Ponzi-style piramide game but a positive piramide game. There are inherently fewer oligarch seats of power than there are contenders. To deal with that without the usual backstabbing

et cetera requires timely and durable advice of the Oracle Senate. An advice nobody as yet has. Though improbable because we are much too late it's still possible to avert WWII spiraling further out of control. Everyone is guilty by action or default of this heinous criminally insane crime. Everyone can quickly redeem themselves by actively supporting the decision to do the test.

The broader perspective of the never-ending story of science

Testing this model by taking it as a fact i.e. as absolutely true needs one to mind that the complex interactive geometries involved are seemingly contradictory and thus won't register with the instrument brains of most mathematicians and physicists. They simply lack artistic talent, or they are religiously indoctrinated as neurologically internalized hypnotics as a DNA survival trait for making different sorts of required inherent idiots cooperate.

Most adults can easily learn to test themselves on their inherent idiocies. How to do that is given in EL. Simply study the list. It's all written in the list and in part alas as yet only in Dutch on my site Ziel.

Both longtime fully algebraic and geometrically theorem-based unsplitable laws of everything apply all the time everywhere in the proven infinite cosmos. They are all directly or indirectly observable anywhere from the smallest to the largest sphere of spacetime. Invisible particles such as neutrinos with a 3D-volume of lifeless mass are instantly invisible above c or due to spin slow down below the speed of Earth through the Higgs field of around 800,000 km/h. Or when the massive object of collective mass is too large or too small for observation, other than theoretical theorem-based inference conforming to the instruction manual of the instrument brain. I'm not certain whether in 2010 I was the first to grasp that the Michelson-Morley experiment is consistent with light interacting with an ether or field akin to the Higgs field that was later found to be probable in 2012 by CERN. Anyway, that's irrelevant.

Mind, that having been cornered it seems that the current mainstream Copenhagen Interpretation in claimed elementary physics after the attempt to manipulate the focus via Nobel Prizes in physics quasi-posthumously for John Bell's theorem on quantum entanglement proves the opposite of what was intended now embark on an attack on the non-existence of the Higgs field which indeed has only probably been found by CERN. Anyway, scientists already unbeknown to me have made such attacks in currently deemed 'reliable sources' or they will do so. I predict this will be the case in such sources because I see scientific Facebook physicist and mathematician friends of mine already doing just that on that 'unreliable source'. I state this as a reliable source and anyone can fact-check this on my Facebook as the primary source. The reason I'm a 'reliable source' is that I'm myself the witness of what I'm stating. To prove a witness is unreliable requires evidence produced in proper proceedings.

What is relevant is that CERN should be concerned Switzerland being neutral won't step out of the project when NATO and the Russian Federation formally declare war. More and more military experts are belatedly starting to openly state worries to this effect which should be common knowledge. The thermodynamics thereof dictates has already started as a material fact. New insights from CERN could produce weapons of mass destruction. Another reason why this war as predicted spreading all over the world should be made to quickly end.

War in this article is defined as a conflict between at least 10,000 organized homo sapiens conflicting with another group of homo sapiens in which at least 1000 homo sapiens die in a year as a direct consequence of that war. A World War is a war that rages on more than 50% (maybe better than 25%, anyway as yet to be defined) of the land mass of the world claimed by the warring factions. The first wars will probably have been between 10000 and 5000 years ago when urban civilization and thus organizations started required to provide the logistics to wage war. Homo sapiens probably came

lifetime can still be achieved in the nick of time before World War III as the war of the oligarchs predictably spins even further out of control.

Simply by following the logic derived out of this as the One Law of Nature: One Law of Human Nature this might still be possible to do within our lifetime.

The cosmos is by proven thesis infinite and classical mechanical via the unmet challenge to pose valid falsification of this proof. Fully completed given the undisputable valid falsification by the theorem of the antithesis of curved space, gravity, and the speed of light being elementary in the required free will and meaning-to-life mindset. The latter follows the required instruction manual of the collective instrument brain.

For the first time in history the elementary questionnaire of being an elementary scientist all questions can validly and convincingly be answered in the affirmative. There is no more reasonable doubt that the cosmos is infinite and deterministic. We are snowman-like robots in a snowstorm snowball fight under an icy pressure vessel that will someday fail. As part of an infinite multi Nirvana cycle both in line and parallel.

Everyone has the power to hold the representatives of current science such as the Dutch NWO accountable for this proven claim of having caused genocide as at least a suspicion warranting investigation by disciplinary ad hoc trial. When they don't give a proper account of themselves this demands naming and shaming them as per the social contract obligation of every homo sapiens. This is due to science's breach of the social contract with humanity not having defined science properly. And of science not having practiced what they preach. These are errors of the highest order having caused avoidable and thus culpable mounting stress leading to conflict and inherently genocidal wars. An ad hoc disciplinary proceeding of their choice is to be held in the required safe environment behind closed doors or as a public fun show trial. In the latter, the current paradigm mores holds the unalienable right and even obligation to take the mickey out of them.

No one has to study the model to demand this because it's the current rule of law of the current paradigm. Only when wanting to judge does this require the proof of being an elementary scientist by passing the certifiable exam given in this article. Having a PhD only qualifies as a basic not yet elementary scientist.

This law shows how to assess and diagnose the most dominant trait of human behavior the DNA genotype.

Nigh anyone can learn to test the genotype quick and dirty three-way personality trait split R&D – Production -Sales as an essential survival trait of the collective instrument brain of any mammal. Many can learn the more nuanced 64-department factory of collective instrument brain team survival way split.

20% of humanity has ironic talent together with abstract logic talent. They have the artistic ADHD personality type idiocy. Using a nurtured clear resounding voice readily proves this trait as well. They all are potentially highly gifted at all out-of-the-box survival issues that are inherently prevalent in on average 20% of cases. Organize to have the other 80% check out all-in-the-box issues.

40% of humanity has gender-neutral male logic autistic idiocy. They have no talent to detect any seeming contradictions such as irony that the other 60% can easily test. They * therefore * also lack all intuitive talent for complex human behavior, and geometry such as rheology, astronomy, quantum physics, and climate change. These autistic people are all potentially intuitive and highly gifted at in-the-box production problems as an essential survival trait. Best at producing for instance AI yet deep

idiots at understanding the implications and dangers thereof. Absolutely no authority is to be given to these autistic people such as most mathematicians and physicists on any issues other than in-the-box production issues. Organize to have the other 60% check on those issues.

40% of humanity has gender neutral female logic idiocy genotype. Who are all potentially intuitive and highly gifted at inherently hypnotical in-the-box sales as an essential survival trait. They have irony yet lack easy-to-test abstract logical thinking. Thus they lack the ability for litigation, and expert litigation in courts of law even though most lawyers and magistrates justifiably have this personality trait. Only by organizing the team correctly can legitimacy be achieved as workability. Follow the deceptively simple One Law of Human Nature.

All these personality traits are split into four easy-to-learn-to-detect genotypes low intuitive thus mechanical learning levels of intelligence as the speed of the brain. 10% fastest, 40% fast, 40% slow, and 10% slowest thinkers. Nonnuanced mechanical production and sales only work successfully on average for medium and short terms respectively. The cosmos is in slow-mounting entropy in inherent constant change. Of which the past is no guarantee for the future apart from the One Law of Nature at play. Only the artistic ADHD idiots have the highly gifted talent to solve these issues in time. AI is such an extremely dangerous issue.

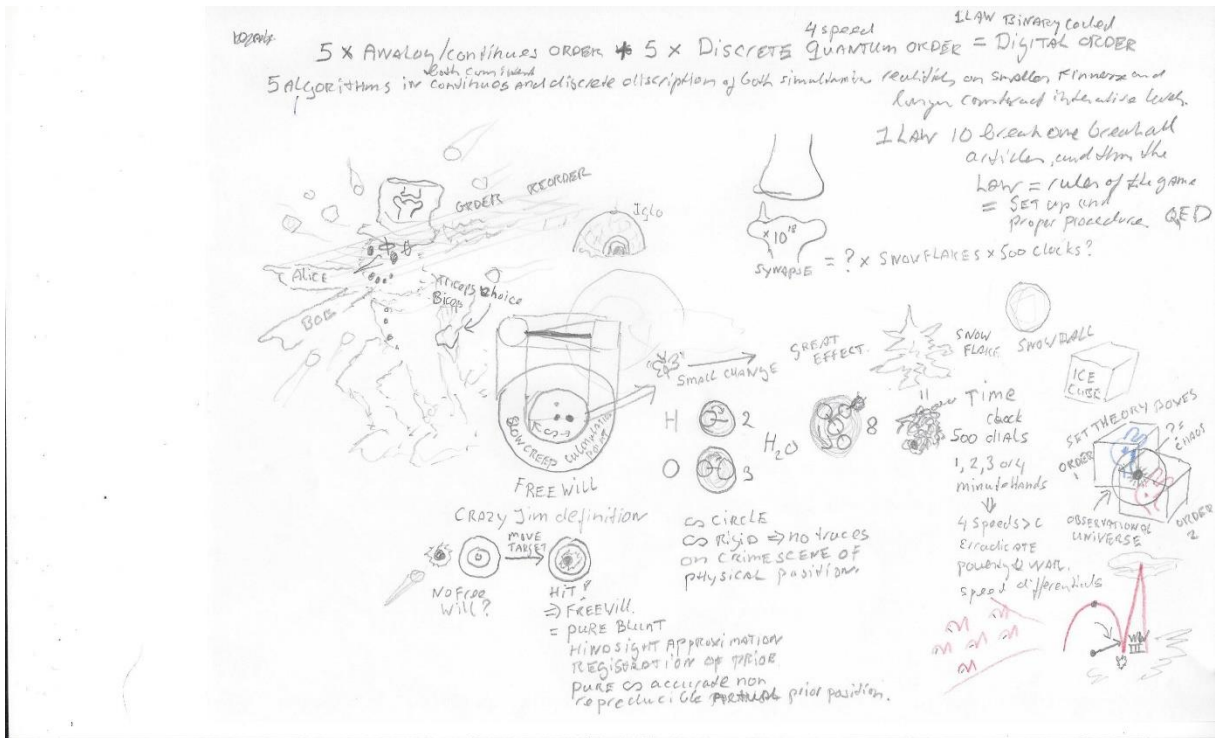

What makes recognizing the genotype more nuanced is the deeply religious phenotype of early age nurture. The next level subset most dominant predictor of homo sapiens robotics such as culture and traumas. Learning to make the 64-way split level needed to understand the DNA factory of homo sapiens survival. Only then is the production of peace and prosperity by preventing all pestering given the problem of nuclear weapons possible.

Then the religious subset of education and job deformation was the next level dominant predictor. Learning the nuance of the thousand-way split level needed to do the proposed Oracle Senate Test. The Cinque Politica essential improvement of the proven now dysfunctional Trias Politica. This is the * only * way still open to humanity to keep all inherent oligarchs in check and balance.

At the smallest subset of unique individuals absolutely unpredictable behavior within above given quantified limits. YOLOUR You Only Live Once Unique Reincarnation.

The elementary workability proves a highly practical basic workability with a by far best practice track record in several fields such as thirty years of law practice, doing history, and predicting Putin's actions in Ukraine. The fact-checkable raw data are provided access to. As the current proper scientific procedure dictates.

We need to quickly learn to produce optimum freedom of thought, freedom of relationship, respect, and security in a do-or-die way. The workabilty is that we are snowman-like robots without meaning or free will that by mathematical dictate by emergent theorems need to religiously believe in free will and meaning in life until the inherent end of all our times taking this model as a fact. Individual life and the cosmos will remain an inherent mystery for all of us idiots. Idiots don't recognize themselves in the mirror due to inherent idiocy. Only working the collective brain via tested trust provides proven practical workability. The mystery is solved in an inherently for individual idiots mystical seeming contradictory way.

As the ancient Romans knew respect all religions such as the billionaire religion and basic science religion or suffer suicidal survival trait amok. And as Sun Tzu taught never corner your opponent and always build your opponent a golden bridge way out.

More Millionaires, No Poor, No War is a simple mindset problem were is not inherently religious.

The required love and understanding can only indirectly be enforced by effectively preventing all pestering. Not having a guaranteed decent income is slavery which is pestering. This decent income makes labour cheap and thus threatens no billionaire. All billionaires and all peer review censorship by the greatest bosses of god are idiots, acting as idiots when in denial of being idiots. There is no money gene in human DNA. It even prevents inflation that does threaten billionaires. Every entrepreneur knows you need to always pay your due dividend to all shareholders. And don't treat your employees as slaves. Doing the proposed Oracle Senate test works as a hypnotic positive Ponsi-style pyramid game. All those in power can stay in power yet only when they are prepared to invest some power wisely. Cost always goes before any benefit such as the benefit of staying in power.

Anyone disputing the need for everyone * including themselves * to have constant timely durable well informed advice from a well-organised collective brain on all important issues is criminally insane for suicidal on any worthwhile goal megalomaniac.

Thinking is focusing. Thinking in an orderly way is only possible via old-school common sense Bildung. Thinking will only work for humanity playing with nuclear weapons when the world has reached a collective neurological network of cooperating Oracle Senates. Only then is it possible to durably until the inevitable end of our times play the win-win game.

QED!
