Pan-Arctic Observing
System of Systems:
Implementing Observations
for Societal Needs

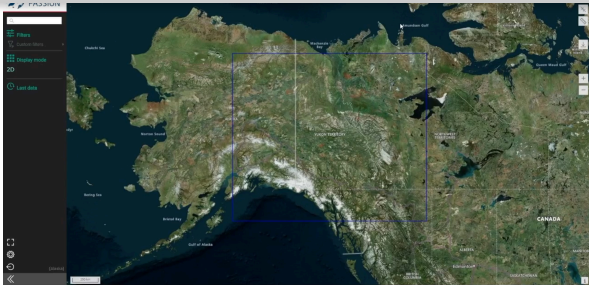

Winter 2024 Newsletter

A message from the coordinator

Dear friends and partners of Arctic PASSION!

We are excited to share another newsletter with you, comprising a few snippets from our news blog as a teaser to dive deeper into our website and to learn more about what we have been doing in the past months. You will find information on the state of several of our services under development, on activities we have been involved in and insightful interviews. The Arctic, even more so than many other parts of the globe, has experienced yet another winter of extreme warmth, making an observing system that provides adequate information as a base for decision-making from local to international scales even more relevant. Arctic PASSION contributes to such an observing system in co-creation and collaboration with its international partners. Enjoy the read and make sure to contact us on one of the upcoming meetings or online!

Best wishes,
Michael

An Arctic Fire RISK management service

Arctic PASSION is developing an INtegrated Fire Risk mAnagement (INFRA) pilot service and would like feedback on it's development. [Read more...](#)

Introducing ALEX

Finally, we have the technology to observe trends in permafrost landscape change in the Arctic.
