Empowering Standardisation through Education in Europe

for Researchers & Teachers

Why do we need standardisation?

Standards are definitions which give us:

- **Consistency in measuring and evaluating product performance.**
- **Markets with seamless integration of products from different companies.**
- **Consumer guarantees that products are safe, durable, and fairly priced.**

Without standards, we compromise the robustness of industries, economic growth, and our capacity to achieve key strategic initiatives like the European Green Deal. However, limited and fragmented educational resources prevent standardisation uptake. This is where the EDU4Standards research project will innovate standardisation education in European Higher Education Institutes, with 5 key strategic objectives to ensure that standardisation is embedded into the European educational framework.

5 Pilot Programmes

will contribute to achieve the following objectives

Embedding standardisation across disciplines in Bachelor's and Master's degrees

Broadening standardisation reach through Research and Technology organisations

Extra-curricular hands-on standardisation experiences

Standardisation skills for the workforce across industries

01 Teaching Concept of Standardisation

The EDU4Standards project is developing an Innovative Teaching Concept of Standardisation (ITCoS) aimed at integrating standardisation more comprehensively into the curricula of Higher Education Institutes (HEIs) across Europe.

02 Higher Education courses on Standardisation

More than 200 standardisation-skilled teachers, institutions, and courses will broaden institutional capacity for standardisation teaching.

03 Academic Standards Days

- 15+ events
- 10+ countries
- Researchers, students, academic staff, professionals
- Deepen **engagement** with standardisation in Europe

04 EU Student Standardisation Association

A single association based on the existing groups and projects, with 100+ members, will ensure the long-term success of standardisation education.

05 A Standardisation Community

The community of educators and student, built organically throughout the project, will continue to grow in the future.

Impact delivered by 2027

 **200+**

Teachers equipped with standardisation knowledge

 **200+**

Students & professionals educated and ready to contribute to standardisation

 **1**

EU Student Standardisation Association

 **100**

Higher education institutes offering courses on standardisation

 **1**

EU Standardisation Education Roadmap to chart a course for the future

 **15+**

Academic standards Days
