Brian K. Shoichet, UCSF  
James S. Fraser, UCSF

To the Editors of Nature,

The publication of AlphaFold2 was a breakthrough moment for structural biology. Its impact has been far-ranging. Structure predictions for individual proteins opened new avenues for understanding biological systems and small molecule drug discovery. Large-scale prediction studies enabled evolutionary analyses and genetic variant interpretations. The open code was extended and modified for new methods and applications in protein design and protein-protein assembly prediction. These examples, among many, demonstrate how subsequent research and benchmarks have been made possible because the code and models were open and downloadable.

For these reasons, we were disappointed with the lack of code, or even executables accompanying the publication of AlphaFold3 in *Nature*. Although AlphaFold3 expands AlphaFold2's capacities to include small molecules, nucleic acids, and chemical modifications, it was released without the means to test and use the software in a high-throughput manner. This does not align with the principles of scientific progress, which rely on the ability of the community to evaluate, use, and build upon existing work. The high-profile publication advertises capabilities that remain locked behind the doors of the parent company.

In this publication, several deviations from our community's standards stand out. First, the absence of available code compromises peer review, a cornerstone of scientific publication and a standard typically upheld by journals. Indeed, one of us (RD) was a reviewer, and despite repeated requests, he was not given access to code during the review<sup>a</sup>. Second, the model's limited availability on a hosted web server, capped at ten predictions per day, restricts the scientific community's capacity to verify the broad claims of the findings or apply the predictions on a large scale. Specifically, the inability to make predictions on novel organic molecules akin to chemical probes and drugs, one of the central claims of the paper, makes it impossible to test or use this method. Finally, the pseudocode released will require months of effort to turn into workable code that approximates the performance, wasting valuable time and resources. Even if such a reimplementations is attempted, restricted access raises questions about whether the results could be fully validated.

Computational costs of machine learning approaches are becoming prohibitive for academic institutions, owing to the high costs of training the models, leaving much computational research and potential breakthroughs in the hands of for-profit companies. While companies have the right to capitalize on their innovations, using the imprimatur of academic publications without the possibility of reproducing the results, far less building on them, subverts the enterprise. The amount of disclosure in the AlphaFold3 publication is appropriate for an announcement on a company website (which, indeed, the authors used to preview these developments), but it fails to meet the scientific community's standards of being usable, scalable, and transparent.

This moment can motivate our community to raise the bar of openness and transparency to accelerate scientific progress. When journals fail to enforce their written policies about making code available to reviewers<sup>1</sup> and alongside publications<sup>2</sup>, they demonstrate how these policies are applied inequitably and how editorial decisions do not align with the needs of the scientific community. While there is an ever-changing landscape of how science is performed and communicated, journals should uphold their role in the community by ensuring that science is reproducible upon dissemination, regardless of who the authors are.

AI approaches now directly impact biological discovery and human health. Fully realizing their potential will require not only technical breakthroughs but also open and collaborative efforts to build on others' findings, as is foundational in all scientific research.

1)<https://web.archive.org/web/20240511023627/https://www.nature.com/nature-portfolio/editorial-policies/reporting-standards>

2)<https://web.archive.org/web/20240511023855/https://www.nature.com/nature/for-authors/initial-submission>

a) After we posted this letter, and after >500 signatures were collected, AlphaFold3 authors from DeepMind and Isomorphic Labs announced via X that they would release the model including weights for academic use within six months.

Santiago Castillo, Mayo Clinic  
Santiago Vargas, LBNL  
Sarah EJ Bowman, HWI  
Sarah Shahmoradian, UTSW  
Sarel Fleishman, Weizmann Institute of Science  
Savvas Savvides, Ghent University  
Sean Hacking, UCSF  
Sebastian Rowe, Harvard  
Sébastien Fiorucci, Université Côte d'Azur  
Selvakumar Edwardraja, University of Queensland  
Sen Liu, Hubei University of Technology  
Sergio Sanchez-Carrillo, Centro de Biología Molecular Severo Ochoa  
Seth Woodbury, University of Washington Institute for Protein Design  
Seychelle Vos, MIT  
Shachar Sherman, Harvard University (SCRB)  
Shankar Raj Devkota, Monash University

Sharon Li, University of Wisconsin - Madison  
Shawn Costello, Stanford University  
Shozeb Haider, University College London  
Shruthi Viswanath, National Center for Biological Sciences, TIFR, India  
Shuo Zhang, Weill Cornell Medicine  
Siavash Moghadami, PhD Student  
Silas Kieser, University of Geneva  
Simon Dür, EPFL  
Simon John Clark, University of Tübingen  
Simon Tournier, Univ. Paris Cité  
Smita Mohanty, Oklahoma State University  
Sonya M. Hanson, Flatiron Institute  
Souradyuti Ghosh, Mahindra University  
Spencer S. Ericksen, University of Wisconsin-Madison, UWCCC-DDC  
Srajan Kapoor, SUNY - Buffalo  
Srijit Seal, MIT  
Stan Z. Li, Westlake University  
Stefan Frielingsdorf, Berlin Institute of Technology  
Stefano Forli, Scripps Research  
stephane mouilleron, The Francis Crick Institute  
Stephane Rety, CNRS  
Steven L. Salzberg, Bloomberg Distinguished Professor of Biomedical Engineering, Computer Science, and Biostatistics, Johns Hopkins University  
Steven Ness, University of Victoria  
Stuart L. Schreiber, Arena BioWorks  
Sukrit Singh, Memorial Sloan Kettering Cancer Center  
Sumbul Haider, University of California, Irvine  
Sun Hur, Harvard Medical School/HHMI  
Surabhi Rathore, UCSF  
Surya Pratap Singh, Banasthali Vidyapith  
Susanna Grigson, Flinders University  
Sushmita Roy, Wisconsin Institute for Discovery and Biostatistics and Medical Informatics, University of Wisconsin-Madison  
Suzanne Ackloo, SGC at the University of Toronto  
Swastik Phulera, Scripps Research  
Takanori Nakane, Osaka University  
Tamir Gonen, UCLA  
Tanja Kortemme, UCSF  
Tarun karthik kumar Mamidi, The University of Alabama at Birmingham  
Tate Staples, Duke  
Tey Jia Rong, Institute of Systems Biology, National University of Malaysia  
Thomas C Terwilliger, New Mexico Consortium  
Thomas E. Ferrin, University of California, San Francisco  
Thomas James McCorvie, Newcastle University

Tiago N Cordeiro, NOVA university  
Tiew Yik Ting, INBIOSIS, The National University of Malaysia  
Timothy A. Whitehead, University of Colorado, Boulder  
Timothy Gao, University of California, Berkeley  
Timothy P. Jenkins, Department of Biotechnology and Biomedicine, DTU  
Timothy Springer, Harvard Medical School  
Tobias Madl, Medical University of Graz, Austria  
Tom Rapoport, Harvard Medical School and Howard Hughes Medical Institute investigator  
Tomas Bruna, Joint Genome Institute, Lawrence Berkeley National Laboratory  
Tomas Malinauskas, University of Oxford  
Tsan Sam Xiao, Case Western Reserve University  
Tsvetomir Bonev, Self  
Tunca Dogan, Hacettepe University  
Umberto Lupo, EPFL  
Unchun Yang, Chung-Ang University  
Uroš Zavrtanik, University of Ljubljana  
Vidhi Pareek, Pennsylvania State University  
Vikram Khipple Mulligan, Center for Computational Biology, Flatiron Institute  
Viktor Danov, None  
Vincent Chaptal, CNRS  
Vincent Zaballa, UCI  
Vladimir Yarov-Yarovoy, University of California, Davis  
Wade Harper, Department of Cell Biology, Harvard Medical School  
Wenhao Gao, RTH, University of Copenhagen  
William Cole, Self  
William DeGrado, UCSF  
William S. DeWitt, UC Berkeley  
Xavier Robert, CNRS, France  
Xi Chen, Tsinghua University  
Xuhui Huang, University of Wisconsin-Madison  
Yifan Cheng, UCSF  
Ying Sun, University of Copenhagen  
Yoan R. Monneau, St Jude children's research hospital  
Yoel A. Klug, University of Oxford  
Yogesh Kalakoti, Linköping University  
Yogesh Taparia, Ben-Gurion University of The Negev, Israel  
Yoshihisa Hirota, Shibaura Institute of Technology  
Yuchen Lou, Imperial College London  
Yuichiro Takagi, IUSM  
Yusuf Şeflekçi, Biruni University  
Zachary A Martinez, Caltech  
Zeba Rizvi, Gabe Lander lab, Scripps Research  
Zeynep H Gumus, Icahn School of Medicine at Mount Sinai  
Zhangzhi Peng, Duke University

Zhongyue John Yang, Department of Chemistry and Data Science Institute, Vanderbilt University  
Zibo Chen, Westlake University
