## **6th INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC STUDIES**

### **EVALUATION PROCESS and POLICIES**

All applications have undergone double blind peer review process. In addition, each paper was accepted and the process of publishing in the book was carried out through editorial oversight. The published papers were presented and discussed at the meeting.

Full texts and abstracts published in accordance with the Symposium Policy have been prepared in accordance with ethical rules and APA standards. Authors of all papers are both ethically and legally responsible.

### **PARTICIPANTS COUNTRIES**

Türkiye, Albania, Algeria, Azerbaijan, Bangladesh, Bulgaria, Ethiopia, Georgia, India, Indonesia, Iran, Kazakhstan, Malaysia, Morocco, Nigeria, Pakistan, Philippines, Saudi Arabia, Slovenia, Sri Lanka, Uganda, Ukraine

### **TOTAL ACCEPTED ARTICLES: 306**

The Number of Accepted Papers from Türkiye: 200  
The Number of Accepted Full Papers from Other Countries: 211  
The Number of Total Papers: 411

**6th INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF  
MULTIDISCIPLINARY SCIENTIFIC STUDIES**

**CHAIRPERSONS OF THE ORGANIZING BOARD**

**Prof. Dr. Mehmet Fırat BARAN**

Siirt Üniversitesi

**Assoc. Prof. Dr. Arzu ALTUNTAŞ**

Siirt Üniversitesi

**Assoc. Prof. Dr. Seyithan SEYDOŞOĞLU**

Siirt Üniversitesi

**SYMPOSIUM COORDINATORS**

- **Assoc. Prof. Dr. Seyithan SEYDOŞOĞLU**
  - Siirt Üniversitesi
  - **Atabek MOVLYANOV**  
IKSAD Scientific Support Coordinator

**6th INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF  
MULTIDISCIPLINARY SCIENTIFIC STUDIES**

**ORGANIZING BOARD**

Dr. Arzu ALTUNTAŞ (Siirt Üniversitesi, Ziraat Fakültesi, TÜRKİYE)

Dr. Eda KOÇAK GIYAK (Siirt Üniversitesi, Güzel Sanatlar ve Tasarım Fakültesi, TÜRKİYE)

Dr. Fatma GÜR (Atatürk Üniversitesi Sağlık Hizmetleri MYO, TÜRKİYE)

Dr. Jasjit SINGH (LUND University, SWEDISH)

Dr. Melekber SÜLÜŞOĞLU DURUL, (Kocaeli Üniversitesi, Ziraat Fakültesi, TÜRKİYE)

Dr. Nilgün Onursal (Siirt Üniversitesi Eğitim Fakültesi, TÜRKİYE)

Dr. Ristina Siti Sundari (University of Perjuangan Tasikmalaya, West Java, INDONESIA)

Dr. Seden TURAMBERK ÖZERDEN (Girne American Universty, CYPRUS)

Dr. Sipan SOYSAL (Siirt Üniversitesi, Ziraat Fakültesi, TÜRKİYE)

Dr. Şahla Abbasova (Hazar Üniversitesi Mimarlık ve Tasarım Bölümü Başkanı,  
AZERBAYCAN)

Dr. Şahin AY (Siirt Üniversitesi, Kurtalan MYO, TÜRKİYE)

Dr. Telman Nusretoğlu (Hazar Üniversitesi Tarih Bölümü Başkanı, AZERBAYCAN)

Dr. Yeter ÇİLESİZ (Sivas Bilim ve Teknoloji Üniversitesi, TÜRKİYE)

Dr. Remzi EKİNCİ (Dicle Üniversitesi)

Dr. Zubair ASLAM (University of Agriculture, Department of Agronomy, Faisalabad-  
PAKİSTAN)

Burak ŞAHİN (Mersin Üniversitesi)

## 6th INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC STUDIES

### SCIENCE AND ADVISORY BOARD

- Dr. Abdurrahim YILMAZ-(Bolu Abant İzzet Baysal Üniversitesi, Ziraat Fakültesi, BOLU)  
Dr. Ali Beyhan UÇAK (Siirt Üniversitesi, Ziraat Fakültesi, SİİRT)  
Dr. Alamettin BAYAV (Isparta Uygulamalı Bilimler Üniversitesi, Ziraat Fakültesi, ISPARTA)  
Dr. A. Konuralp ELİÇİN (Dicle Üniversitesi Ziraat Fakültesi, DİYARBAKIR)  
Dr. Ahmet ÇELİK (Adıyaman Üniversitesi, Ziraat Fakültesi, Adıyaman, TÜRKİYE)  
Dr. Arzu ÇİĞ (Siirt Üniversitesi, Ziraat Fakültesi, SİİRT)  
Dr. Aynur BİLMEZ ÖZÇINAR- (Siirt Üniversitesi, Ziraat Fakültesi, SİİRT)  
Dr. Betül TÜLEK (Çankırı Karatekin Üniversitesi, Orman Fakültesi, ÇANKIRI)  
Dr. Cihan DEMİR (Kırklareli Üniversitesi, KIRKLARELİ)  
Dr. Erhan KAHYA (Tekirdağ Namık Kemal Üniversitesi, TEKİRDAĞ)  
Dr. Esra BİLİCİ (Uşak Üniversitesi, Eşma MYO, UŞAK)  
Dr. Fatih ÇİĞ (Siirt Üniversitesi, Ziraat Fakültesi, SİİRT)  
Dr. Fatih TAŞ (Siirt Üniversitesi, Tıp Fakültesi, SİİRT)  
Dr. Ferhat ÖZTÜRK (Şırnak Üniversitesi, ŞIRNAK)  
Dr. Fırat PALA (Siirt Üniversitesi, Ziraat Fakültesi, SİİRT)  
Dr. Gülcan Demiroğlu Topçu (Ege Üniversitesi Ziraat Fakültesi, İZMİR)  
Dr. Mustafa CENGİZ (Siirt Üniversitesi, SİİRT)  
Dr. Bahri GÜR (İğdir Üniversitesi, İĞDIR)  
Dr. Fatma GÜR (Atatürk Üniversitesi, ERZURUM)  
Dr. Canan Veyselova Sezer (Eskişehir Teknik Üniversitesi, Eskişehir)  
Dr. Gülşah ÇALIŞKAN (Uşak Üniversitesi, Eşma MYO, UŞAK)  
Dr. Görkem ÖRÜK (Siirt Üniversitesi, Ziraat Fakültesi, SİİRT)  
Dr. Halil İbrahim OĞUZ (Adıyaman Üniversitesi, Ziraat Fakültesi, ADIYAMAN)  
Dr. H. Deniz ŞİRELİ (Dicle Üniversitesi, Ziraat Fakültesi, DİYARBAKIR)  
Dr. Hülya ÜNVER (Düzce Üniversitesi Ziraat Fakültesi, DÜZCE)  
Dr. Hüseyin ŞAHİN (Tekirdağ Namık Kemal Üniversitesi, Tıp Fakültesi, SİİRT)  
Dr. İlker İNAL (Doğu Akdeniz Araş. Enstitüsü, ADANA)  
Dr. Korkmaz BELLİTÜRK (Tekirdağ Namık Kemal Üniversitesi, Ziraat Fakültesi, TEKİRDAĞ)  
Dr. Mehmet POLAT (Isparta Uygulamalı Bilimler Üniversitesi, Ziraat Fakültesi, ISPARTA)  
Dr. Mehmet Can DAL (TC Milli Eğitim Bakanlığı, DİYARBAKIR)  
Dr. Mesut YILMAZ (Akdeniz Üniversitesi, Su Ürünleri Fakültesi, ANTALYA)  
Dr. Nurret ÖZBAY (Bingöl Üniversitesi, Ziraat Fakültesi, BİNGÖL)  
Dr. Nurhan KESKİN (Van Yüzüncü Yıl Üniversitesi, Ziraat Fakültesi, VAN)  
Dr. Osman GÖKDOĞAN (Isparta Uygulamalı Bilimler Üniversitesi, Ziraat Fakültesi, ISPARTA)  
Dr. Ömer ACER (Siirt Üniversitesi, Tıp Fakültesi, SİİRT)  
Dr. Özden Sevgül AYTAR (Siirt Üniversitesi, Tasarım MYO, SİİRT)  
Dr. Umut Pekin TİMUR (Çankırı Karatekin Üniversitesi, Orman Fakültesi, ÇANKIRI)  
Dr. Reşat ESKİCİ (Dicle Üniversitesi, Bismil MYO, DİYARBAKIR)  
Dr. Suat BENEK (Tekirdağ Namık Kemal Üniversitesi, Tıp Fakültesi, TEKİRDAĞ)  
Dr. Sıdika EKREN (Ege Üniversitesi Ziraat Fakültesi, İZMİR)  
Dr. Zeynep DUMANOĞLU (Bingöl Üniversitesi, Ziraat Fakültesi, BİNGÖL)  
Dr. Zeynep ÜNAL (Niğde Ömer Halisdemir Üniversitesi, Ziraat Fakültesi, NİĞDE)  
Dr. Abdul Khaliq (University of Agriculture, Department of Agronomy, Faisalabad, PAKISTAN)  
Dr. Adnan Abbas (Nanjing university of information science and technology, nanjing CHINA).  
Dr. Ali Mekki (University of Sfax, Biological Engineering-Environmental Bioprocesses and Soil Science, Sfax-TUNISIA)  
Dr. Ajar Nath Yadav (Eternal University, Department of Biotechnology, Himachal Pradesh-INDIA)  
Dr. Ashokkumar Vallabhrai Rajani (Junagadh Agricultural University, College of Agriculture, Dept. of Agril. Chem. & Soil Science, Gujarat-INDIA)  
Dr. Barbara Wiśniowska-Kielian (University of Agriculture in Krakow, Faculty of Agriculture and Economics, Department of Agricultural and Environmental Chemistry, Krakow-POLAND)  
Dr. Blend Ibrahim (School of Tourism and Hospitality Management. Department of Tourism Girne American University, CYPRUS)  
Dr. hab. Barbara Sawicka (University of Life Sciences in Lublin, Faculty of Agroengineering, Department of Plant Production Technology and Commodity Sciences, Lublin-POLAND)  
M.Sc. Benjamin Bantchina (Bursa Uludag University, Faculty of Agriculture, Department of Biosystems Engineering, Bursa-TURKEY)

## 6th INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC STUDIES

### SCIENCE AND ADVISORY BOARD

- Dr. Brygida Klemens (Opole University of Technology, Faculty of Economics and Management, Opole-POLAND)
- Dr. Derya Timuçin, (School of Tourism and Hospitality Management. Department of Tourism Girne American University, CYPRUS)
- Dr. Grzegorz Pączka (Rzeszów University, Department of Natural Theories of Agriculture and Environmental Education, Rzeszów, POLAND)
- Dr. Fahrurrozi Fahrurrozi (University of Bengkulu, Faculty of Agriculture, Dept. of Crop Production, Bengkulu-INDONESIA)
- Dr. Herák David, (Czech University of Life Sciences Prague, CZECH REPUBLIC)
- Dr. Hüseyin Bozdağlar (Girne American University, School of Tourism and Hospitality Cyprus)
- Dr. Irshad Bibi (University of Agriculture, Faculty of Agriculture, Institute of Soil and Environmental Sciences, Faisalabad-PAKISTAN)
- Dr. İsmet Esenyel (Girne American University, School of Tourism and Hospitality Cyprus)
- Dr. Jam Nazeer Ahmad University of Agriculture, Faculty of Agriculture, Department of Entomology, Faisalabad-PAKISTAN)
- Dr. Khalid Hussain (University of Agriculture, Faculty of Agriculture, Department of Agronomy, Faisalabad-PAKISTAN)
- Dr. Mazhar Rafique (University of Haripur, Faculty of Agriculture Sciences, Department of Soil & Climate Sciences-Pakistan)
- Dr. Muhammad Arshad (University of Agriculture, Faculty of Agriculture, Department of Entomology, Faisalabad-PAKISTAN)
- Dr. Muhammad Shahbaz Naeem (University of Agriculture, Faculty of Agriculture, Department of Agronomy, Faisalabad-PAKISTAN)
- Dr. Mohammad Mehdizadeh (University of Mohagheh, Department of Agronomy and Plant Breeding, Ardabili-IRAN)
- Dr. Muhammad Zahid Ihsan (Islamia University of Bahawalpur, Cholistan Institute of Desert Studies, Bahawalpur-PAKISTAN)
- Dr. Muhammad Adnan (University of Swabi, Department of Agriculture, Swabi-PAKISTAN)
- Dr. Muhammad Zubair Siddiqi (Hankyong National University, Department of Biotechnology, SOUTH KOREA)
- Dr. Mushtaque Ahmed Jatoti, (University of Zagreb, Department of Pomology, Zagreb, Croatia, Beijing, CHINA)
- Dr. Murat Akkaya (Girne American University, Vocational School, CYPRUS)
- Dr. Nabeel Khan Niazi (University of Agriculture, Faculty of Agriculture, Institute of Soil and Environmental Sciences, Faisalabad-PAKISTAN)
- Dr. Ristina Siti Sundari (Tasikmalaya University-INDONESIA).
- Dr. Rana Nadeem Abbas (University of Agriculture, Faculty of Agriculture, Department of Agronomy, Faisalabad-PAKISTAN)
- Dr. Mazhar Rafique (University of Haripur, Faculty of Agriculture Sciences, Department of Soil & Climate Sciences-Pakistan)
- Dr. Safdar Bashir (Ghazi University, Faculty of Agricultural Sciences, Department of Soil and Environmental Sciences, Dera Ghazi Khan-PAKISTAN)
- Dr. Sardar Alam Cheema (University of Agriculture, Faculty of Agriculture, Department of Agronomy, Faisalabad-PAKISTAN)
- Dr. Shah Fahad (University of Haripur, Department of Agronomy, Haripur-PAKISTAN)
- Dr. Saddam Hussain (University of Agriculture, Faculty of Agriculture, Department of Agronomy, Faisalabad-PAKISTAN)
- M.Sc. Setyo Budi Kurniawan (Universiti Kebangsaan Malaysia, Faculty of Engineering & Built Environment, Department of Chemical and Process Engineering, MALAYSIA)
- Dr. Tahir IGBAL, (Arid Agriculture University, Rawalpindi, PAKISTAN)
- Dr. Wan Taek Im (Hankyong National University, Department of Biotechnology, SOUTH KOREA)
- Dr. Viliana Vasileva (Agricultural Academy, Institute of Forage Crops, Forage Production and Livestock Department, Pleven-BULGARIA)
- Dr. Zain Mushtaq (Department of Soil Science, Faculty of Agricultural Sciences, University of the Punjab, Lahore, PAKISTAN)
- Dr. Zhongbing Chen (Czech University of Life Sciences Prague, Faculty of Environmental Sciences, Prague-CZECH REPUBLIC)
- Dr. Zizis Vryzas (Democritus University, Thrace School of Agricultural & Forestry Sciences, Department of Agricultural Development, Orestiada-GREECE)
- Dr. Zulfiqar Ahmad Dasti (University of Agriculture, Faculty of Agriculture, Institute of Soil and Environmental Sciences, Faisalabad-PAKISTAN)
- Dr. Zubair Aslam (University of Agriculture, Faculty of Agriculture, Department of Agronomy, Faisalabad-PAKISTAN)

**6th INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF  
MULTIDISCIPLINARY SCIENTIFIC STUDIES**

**6th INTERNATIONAL CONFERENCE ON GLOBAL  
PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC  
STUDIES**

/

---

**APRIL 9-16, 2024**

**Lisbon, PORTUGAL**

**SYMPOSIUM SCHEDULE**

# 6th INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC STUDIES

April 09-16, 2024 / Lisbon, Portugal

## CONFERENCE PROGRAM

### IMPORTANT, PLEASE READ CAREFULLY

- ❖ To be able to attend a meeting online, login via <https://zoom.us/join> site, enter ID "Meeting ID or Personal Link Name" and solidify the session.
- ❖ The Zoom application is free and no need to create an account.
- ❖ The Zoom application can be used without registration.
- ❖ The application works on tablets, phones and PCs.
- ❖ The participant must be connected to the session 5 minutes before the presentation time.
- ❖ All congress participants can connect live and listen to all sessions.
- ❖ Moderator is responsible for the presentation and scientific discussion (question-answer) section of the session.

### Points to Take into Consideration - TECHNICAL INFORMATION

- ◆ Make sure your computer has a microphone and is working.
- ◆ You should be able to use screen sharing feature in Zoom.
- ◆ Attendance certificates will be sent to you as pdf at the end of the congress.
- ◆ Requests such as change of place and time will not be taken into consideration in the congress program.

### ÖNEMLİ, DİKKATLE OKUYUNUZ LÜTFEN

- ❖ Kongremizde Yazım Kurallarına uygun gönderilmiş ve bilim kurulundan geçen bildirimler için online (video konferans sistemi üzerinden) sunum imkanı sağlanmıştır.
- ❖ Online sunum yapabilmek için <https://zoom.us/join> sitesi üzerinden giriş yaparak "Meeting ID or Personal Link Name" yerine ID numarasını girerek oturuma katılabiliyorsunuz.
- ❖ Zoom uygulaması ücretsizdir ve hesap oluşturmaya gerek yoktur.
- ❖ Zoom uygulaması kaydolmadan kullanılabilir.
- ❖ Uygulama tablet, telefon ve PC'lerde çalışıyor.
- ❖ Her oturumdaki sunucular, sunum saatinden 5 dk öncesinde oturuma bağlanmış olmaları gerekmektedir.
- ❖ Tüm kongre katılımcıları canlı bağlanarak tüm oturumları dinleyebilir.
- ❖ Moderatör - oturumdaki sunum ve bilimsel tartışma (soru-cevap) kısmından sorumludur.

### Dikkat Edilmesi Gerekenler- TEKNİK BİLGİLER

- ◆ Bilgisayarınızda mikrofon olduğuna ve çalıştığına emin olun.
- ◆ Zoom'da ekran paylaşma özelliğine kullanabilmelisiniz.
- ◆ Kabul edilen bildiri sahiplerinin mail adreslerine Zoom uygulamasında oluşturduğumuz oturuma ait ID numarası gönderilecektir.
- ◆ Katılım belgeleri kongre sonunda tarafınıza pdf olarak gönderilecektir
- ◆ Kongre programında yer ve saat değişikliği gibi talepler dikkate alınmayacaktır

Before you login to Zoom please indicate your name surname and hall number,  
exp. H- 1, M. Fırat BARAN

CONGRESS LANGUAGES: English and All Turkish Dialects

# Face to Face / İbis Lisboa Malhoa

11.04.2024

HALL-1

LISBON LOCAL TIME

18<sup>00</sup> : 21<sup>00</sup>

## HEAD OF SESSION: Prof. Dr. Kagan GUNCE

Authors	Affiliation	Presentation title
Leman Üstündağ	<i>Bandırma Onyediy Eylül University</i>	Proverbs Expression with Kinetic Typographyabstract
Mustafa Deniz Türkoğlu Merve Uysal	<i>Haliç University</i>	On the Existence of Concircular Transformation on Non-Riemannian Manifolds
Zehra Funda Akbulut Soner Guler	<i>Van Yuzuncu Yıl University</i>	Sustainability in Concrete: Exploring the Benefits of Pozzolanic Cementitious Materials
Zehra Funda Akbulut Soner Guler Faruk Osmanoğlu Mehmet Rıza Kavanç	<i>Van Yuzuncu Yıl University</i>	Assessing the Role and Significance of Colored Concrete in Modern Construction Practices
Nasirov Azimidin Normamatovich	<i>Tashkent International University of Kimyo</i>	French and the Image of Amir Temur Interpretations in Uzbek Literature (in the example of the novels of Marcel Brion and Muhammad Ali)
Botirov Azizbek Mirzakarimovich	<i>Tashkent International University of Kimyo</i>	Students in the Process of Independent Education Forming Knowledge Skills
Rakhimov Akmal Akbarovich	<i>Tashkent International University of Kimyo</i>	Information in the Process of Electronic Education Methods of Ensuring Security
Yashchenko Ganna	<i>National Forestry University of Ukraine</i>	Public Administration Decisions in the Conditions of Military and Humanitarian Crises
Senem Akkoç Eyüp Başaran	<i>Süleyman Demirel University</i>	Synthesis, Spectral Characterization and Antiproliferative Activity of a Novel Thymol-Linked Imino Compound
Eyüp Başaran Senem Akkoç	<i>Süleyman Demirel University</i>	A Novel Fluorine-Containing Hydrazone Compound: Synthesis, Structural and in Vitro Cytotoxic Activity Studies
Nurhan Doğan	<i>Afyonkarahisar Health Sciences University</i>	Project Implementation Course the Role of the Scientific Research Methodology in Determining the Self-Efficacy Level
Nurhan Doğan İsmet Doğan	<i>Afyonkarahisar Health Sciences University</i>	Suicide Mortality Trends in Children, Adolescents And Young Adults in Turkey
Kağan Günçe	<i>Eastern Mediterranean University</i>	Conservation of Vernacular Architecture in Rural Settlements with Tourism: A Case Study from Northern Cyprus
İslam Safa Kaya	<i>Kırıkkale University</i>	Criminal Jurisdiction for International Crimes Committed on the High Seas
Ali Cengiz	<i>Kırıkkale University</i>	Application of International Law of War
Yusuf Sert	<i>Yozgat Bozok University</i>	2,4-Dihydro-1h-Cyclopenta[B]Indol-3-One: Frontier Molecular Orbital Analysis
Yusuf Sert	<i>Yozgat Bozok University</i>	2-(2,6-Dioxopiperidin-3-Yl)-5-Fluoroisindoline-1,3-Dione: Molecular Docking and Mep Analysis
Betül Yılmaz	<i>Marmara University</i>	Generations in The Workplace and Changing Work Values
Türkan Kaplan	<i>University of Turkish Aeronautical Association</i>	Participation Patterns of Adults Participating in The University of Turkish Aeronautical Association Lifelong Development Application and Research Centre (Yagem) Certificate Programmes

(All speakers required to be connected to the session 10 min before the session starts)

Moderator is responsible for ensuring the smooth running of the presentation, managing the group discussion and dynamics.

# Face to Face / İbis Lisboa Malhoa

14.04.2024

HALL-1

LISBON LOCAL TIME

18<sup>00</sup> : 21<sup>00</sup>

## HEAD OF SESSION: Prof. Dr. M. Firat BARAN

Authors	Affiliation	Presentation title
Eda Koçak Giyak	<i>Siirt University</i>	Evaluation of The Concept of Urban Heat Island in Terms of Urban Sink Areas
M. Berkay Kızıllkan Eda Koçak Giyak	<i>Siirt University</i>	A Review To Space Syntax With The Scope Of Urban Planning And Architecture
Melekber Sülüšoğlu Durul Sezai Ercişli	<i>Kocaeli University</i>	The Importance Of Callus Culture In Fruit Growing And Its Areas Of Use
Arzu Altuntaş	<i>Siirt University</i>	The Effects of Global Migration on Urban Identity from the Perspective of Landscape Architecture
Arzu Altuntaş	<i>Siirt University</i>	An Evaluation on Artificial Intelligence Supported Design and Planning in Landscape Architecture: Trends and Applications
Canser Gül Nilay Çömez Sevda Albayrak Hülya Durmuş	<i>Manisa Celal Bayar University</i>	The Effect of Surface Treatments on Wear Resistance in Cold Spray Coating of 7075 Aluminum Alloys
Hülya Durmuş Canser Gül Nilay Çömez Sevda Albayrak	<i>Manisa Celal Bayar University</i>	Effects of Surface Treatments Prior to Cold Spray on the Wear Resistance of 2024 Alloys
Seyithan Seydoşoğlu Gülşah Bengisu	<i>Siirt University</i>	What's That Smell? Alternative Forage Basil with Reference of Pharmacological Animal Studies
Mehmet Karaman	<i>Muş Alparslan University</i>	Examination of Advanced Bread Wheat Genotypes ( <i>Triticum aestivum</i> L.) in Terms of Yield and Some Technological Quality Characteristics
Mehmet Karaman	<i>Muş Alparslan University</i>	Evaluation of Some Chickpea Varieties in Terms of Morphological and Physiological Characteristics
Esra Bilici	<i>Usak University</i>	The Role of Estrogen Receptors in Malignities
Şahin Ay	<i>Siirt University</i>	Money Laundering Crime And Related Regulations
Ayhan Dağdeviren Yusuf Ziya Akbaş	<i>Çankırı Karatekin University</i>	The City of Museums: Bursa
Yusuf Ziya Akbaş Ayhan Dağdeviren	<i>Çankırı Karatekin University</i>	Culture Routes of Turkey

(All speakers required to be connected to the session 10 min before the session starts)

Moderator is responsible for ensuring the smooth running of the presentation, managing the group discussion and dynamics.

HALL-2

LISBON LOCAL TIME

18<sup>00</sup> : 21<sup>00</sup>

## HEAD OF SESSION: Nilgün ONURSAL

Authors	Affiliation	Presentation title
Nilgün Onursal	<i>Siirt University</i>	Examination Of The Removal Of Cobalt (Ii) From Aqueous Solution By Mixed Type Sivas/Yildizeli Clay In Terms Of Isotherm And Kinetic
Nilgün Onursal	<i>Siirt University</i>	Analysis Of Adsorption Kinetics Of Zinc With Malatya Kilo With Linear Models Derived From Pseudo-Second Kinetic Order Model
Ferhat Öztürk Tarkan Ayaz	<i>Şırnak University</i>	Evaluation of Yield Characteristics of Different Maize Varieties Under Derik/Mardin Conditions
Ferhat Öztürk Tarkan Ayaz	<i>Şırnak University</i>	Determination of Yield Characteristics of Some Maize Varieties Under Kızıltepe/Mardin Conditions
Yılmaz Seçim Mehmet Fatih Yalçinkaya Zekeriya Yetiş	<i>Necmettin Erbakan University</i>	Cultural Journey in the Kitchen: Ethiopian Culinary Culture
Raziye Pekşen Akça Hatice Bekçi Umay Büşra Celiloğlu	<i>Kayseri University</i>	Supporting Children Learning with Nature with Biomimicry
Hatice Bekçi Raziye Pekşen Akça Umay Büşra Celiloğlu	<i>Kayseri University</i>	Contribution Of Experimental Activity Examples Prepared For Children To Learning
Yeter Çilesiz	<i>Sivas University of Science and Technology</i>	An Overview of Artificial Intelligence (AI) Applications in Agricultural Biotechnology
Yeter Çilesiz	<i>Sivas University of Science and Technology</i>	Modern Plant Biotechnology to Achieve Food Security

(All speakers required to be connected to the session 10 min before the session starts)

Moderator is responsible for ensuring the smooth running of the presentation, managing the group discussion and dynamics.

## HEAD OF SESSION: Yahya NAS

Authors	Affiliation	Presentation title
Ijlal Ocak Emine Akkaş Baysal Hazal Çelikkaya	<i>Afyon Kocatepe University</i>	An Action Research on Using “Outdoor Experiments” on “Pressure” Subject in 8th Grade Science Teaching
Latif Onur Uğur Servet Kesim	<i>Afyon Kocatepe University</i>	A Model Proposal for Estimate the Approximate Costs and Contract Fees of Public Education Buildings (School Buildings)
Latif Onur Uğur	<i>Düzce University</i>	A Model for Determining The Achievement Level in Civil Engineering Education
Mena Azimi Mehtap Ünlü Söğüt	<i>Ondokuz Mayıs University</i>	Relationship Between Vitamin B-12 and The Human Gut Microbiome
Mena Azimi	<i>Ondokuz Mayıs University</i>	The Role of Probiotic and Prebiotics in Calcium Bioavailability
Bertuğ Sakın	<i>University of Health Sciences</i>	The Effect of Individuals Emotional States on Language Usage in Relation to Environmental Influences
Kemal Barış İlbi Ceren Güneröz	<i>Ankara University</i>	Evaluation of Gertrude Stein's Studio in the Context of Postmodern Museum Practices
Yahya Nas	<i>Şırnak University</i>	Influence of Foliar Applications of Calcium on Yield and Quality of Head Lettuce ( <i>Lactuca sativa</i> L. var capitata)
Kübra Öztürk Emine Anik	<i>İstanbul Kültür University</i>	Digital Human Resources Management and Digital Marketing Management; Innovative Cooperation

(All speakers required to be connected to the session 10 min before the session starts)

Moderator is responsible for ensuring the smooth running of the presentation, managing the group discussion and dynamics.

## HEAD OF SESSION: Özge KUTLU

Authors	Affiliation	Presentation title
Özge Kutlu Sevinç Sütü	<i>Burdur Mehmet Akif Ersoy University</i>	Digital Old Age: Digital Literacy and Adaptation to Technology in The Elderly
Özge Kutlu Deniz Say Şahin	<i>Burdur Mehmet Akif Ersoy University</i>	Safe Housing from Elderly Rights Perspective
Ferhat Öztürk Tarkan Ayaz	<i>Sirnak University</i>	Evaluation of Yield Factors of Different Corn Varieties Under Harran Conditions
Özge Ökcü Ayşe Tanşu Yonca Yavuz Akçay	<i>İstanbul Rumeli University</i>	Current Treatment Approaches in Fibromyalgia Syndrome
Özge Ökcü Rıdvan Gök	<i>İstanbul Rumeli University</i>	Benefits of Exercise for Children
Celalettin Vatandaş Saniye Vatandaş	<i>Tekirdağ Namık Kemal University</i>	Transformation Process of Shopping Spaces and Shopping Centres
Veysi Acıbuca Aybüke Kaya	<i>Mardin Artuklu University</i>	Wheat Production and Self-Sufficiency Levels of Oecd Countries
Tarkan Ayaz	<i>Şırnak University</i>	Potential Pest in Pistachio Fields of Şırnak Province: Pistachio Psyllid [ <i>Agonoscena Pistaciae</i> Burck. and Laut.] (Hemiptera: Aphalaridae)]
Mehmet Günsen Bilal Can Erkan Korkmaz Bellitürk Ahmet Çelik	<i>Adıyaman University</i>	Obtaining Vermicomposting From Mixture Of Snack Sunflower Waste And Cow Manure For Zero Waste Aim
Lebriz Çınar Korkmaz Bellitürk Ahmet Çelik	<i>Adıyaman University</i>	Organic Matter in Sustainable Agriculture and The Relationship Between Earthworms and Soil Health
Ferhat Öztürk Tarkan Ayaz	<i>Sirnak University</i>	Comparison of Yield Characteristics of Some Corn Varieties Under Harran/Şanlıurfa Environments

(All speakers required to be connected to the session 10 min before the session starts)

Moderator is responsible for ensuring the smooth running of the presentation, managing the group discussion and dynamics.

## HEAD OF SESSION: Esam Y. Salah

Authors	Affiliation	Presentation title
Konstantin Babov Svitlana Onishchak Oleksandr Bibikov Irina Babova Alexander Plakida	<i>Ukrainian Research Institute of Medical Rehabilitation and Resort Therapy of the Ministry of Health of Ukraine</i>	Robotic Systems in Rehabilitation for Gunshot Wounds of the Upper Limb
Harish-A Suganthi P	<i>R.M.K. Engineering College</i>	Flight Control System Using System of Linear Equation
Darshini K Christy Jenefa J Suganthi P	<i>R.M.K. Engineering College</i>	The Synergy of Mathematics and Biosystems Engineering: Enhancing Precision and Sustainability
Esam Y. Salah	<i>Dr. Babasaheb Ambedkar Marathwada University</i>	A Conformable Fractional Derivative Model for Hiv-1 Infection with Stem Cell Transplantation
Dushyanth N Suganthi P	<i>R.M.K. Engineering College</i>	Mathematics: The Key to Unlocking Solar and Wind Energy Optimization
Deepak A Balapriyan R Brijesh M	<i>R.M.K. Engineering College</i>	Guardian of the Deep: AI-powered Underwater Drones for Aquatic Life Health Monitoring and Conservation
R. J. Vishal Suganthi P Meena M	<i>R.M.K. Engineering College</i>	Mathematical Applications in Medical Science: Mathematical Applications in Epidemiological Analysis and Disease Control
G. Kushal K. Sravan Kumar Akshay Jilla	<i>R.M.K. Engineering College</i>	A Matrix Based Simulation

(All speakers required to be connected to the session 10 min before the session starts)

Moderator is responsible for ensuring the smooth running of the presentation, managing the group discussion and dynamics.

# SYMPOSIUM PHOTOS

The Stirling polynomials  $S_2(n, k; x)$  and numbers  $S_2(n, k)$  of the second kind are given by the following exponential generating functions (cf. [2,4,9,14,16]):

$$\sum_{n=0}^{\infty} S_2(n, k; x) \frac{x^n}{n!} = \frac{(\lambda e^x - 1)^k}{k!} e^{x\lambda} \quad \text{and} \quad \sum_{n=0}^{\infty} S_2(n, k) \frac{x^n}{n!} = \frac{(e^x - 1)^k}{k!}. \quad (2.1)$$

In combinatorics, Stirling number of the second kind  $S_2(n, k)$  counts the number of ways in which  $n$  distinguishable objects can be partitioned into  $k$  indistinguishable subsets when each subset has to contain at least one object. The Stirling numbers of the second kind can also be derived by the following recurrence relation for  $\zeta \in \mathbb{N}_0$  (cf. [2,4,9,14,16]):

$$x^n = \sum_{k=0}^n S_2(n, k) (x)_k, \quad (2.2)$$

where  $(x)_n = x(x-1)(x-2)\cdots(x-(n-1))$  for  $n \in \mathbb{N}$  with  $(x)_0 = 1$  (see [5,19,20]).

Also, the Apostol-Stirling polynomials  $S_{2,\lambda}(n, k; x)$  and numbers  $S_{2,\lambda}(n, k)$  of the second kind are given by the following exponential generating functions (cf. [2,4,9,14,16]):

$$\sum_{n=0}^{\infty} S_{2,\lambda}(n, k; x) \frac{x^n}{n!} = \frac{(\lambda e^x - 1)^k}{k!} e^{x\lambda} \quad \text{and} \quad \sum_{n=0}^{\infty} S_{2,\lambda}(n, k) \frac{x^n}{n!} = \frac{(\lambda e^x - 1)^k}{k!}. \quad (2.3)$$

For each integer  $k \in \mathbb{N}_0$ ,  $S_k(n) = \sum_{i=0}^n i^k$  is named the sum of integer powers. The exponential generating function of  $S_k(n)$  is as follows (cf. [?]):

$$\sum_{n=0}^{\infty} S_k(n) \frac{x^n}{n!} = \frac{e^{(n+1)x} - 1}{e^x - 1}. \quad (2.4)$$

The bivariate Bell polynomials are defined as follows:

$$\sum_{n=0}^{\infty} Bel_n(x, y) \frac{x^n}{n!} = e^{y(e^x - 1)} e^{xy}. \quad (2.5)$$

When  $x = 0$ ,  $Bel_n(0, y) := Bel_n(y)$  called the classical Bell polynomials (also called exponential polynomials) obtained by means of the following generating function (cf. [1,2,3,5,21]).

# SYMPOSIUM PHOTOS

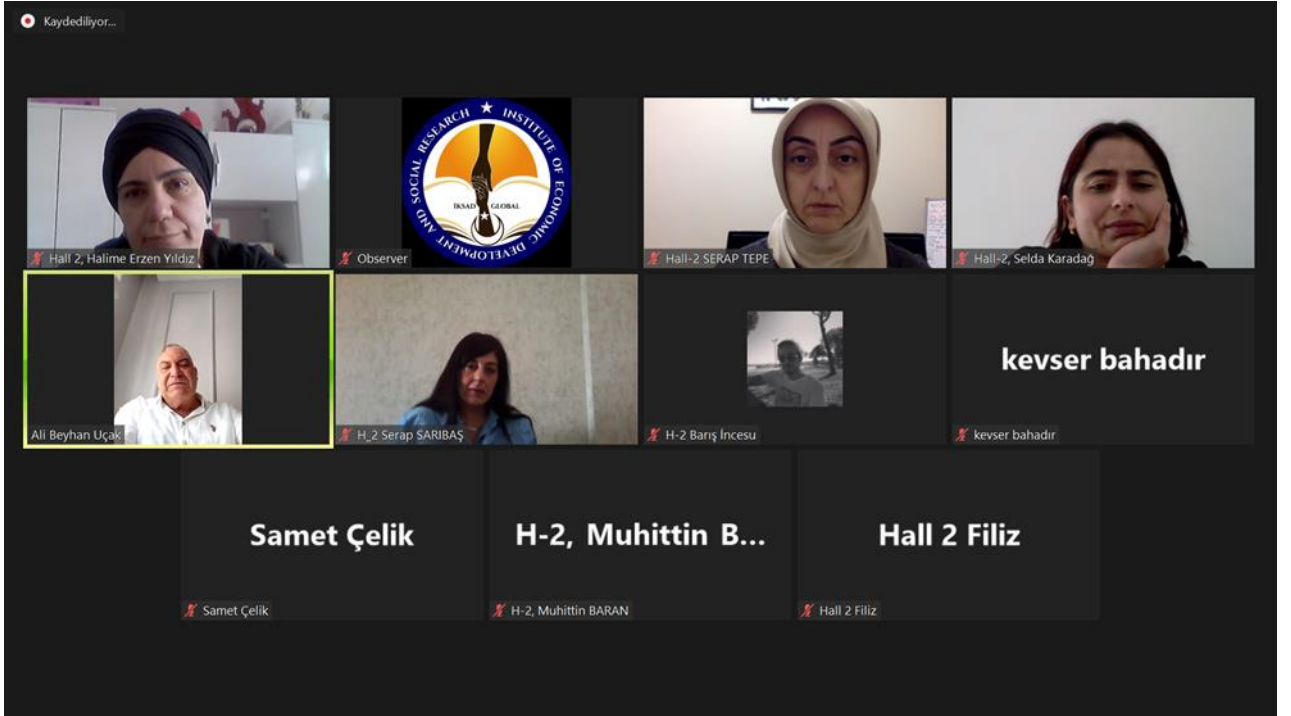

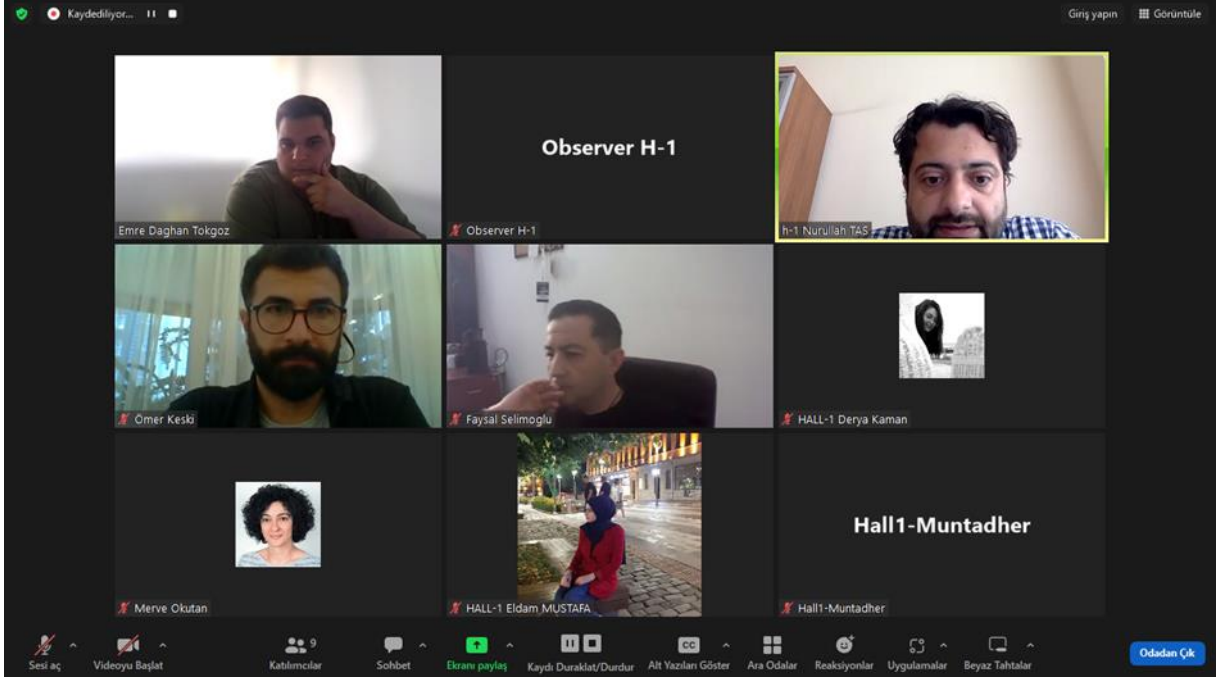

The screenshot shows a Zoom meeting in progress. The main window displays a presentation slide titled "Mirizzi Sendromu". The slide features a diagram of the biliary system with the following labels: "Distended common hepatic duct", "Inflammation causing obstruction", "Impacted gallstone in cystic duct", and "Distended gallbladder". The Zoom interface includes a top toolbar with options like "Giriş yapın" and "Görüntüle", a right-hand sidebar with participant thumbnails for "Observer H-1", "H-1 Fatih TÜRKÖĞLU", "Busra Özdenizci Kose", and "H-1 Atik Rahimov", and a bottom toolbar with various meeting controls. The status bar at the bottom indicates the time as 12:50 on 13.04.2024.

The screenshot shows a Zoom meeting in progress. The main window displays a presentation slide titled "Quantum Software Development Lifecycle". The slide contains the following text:

- This study explores **Quantum Software Development Lifecycle (QSDLC)**, a specialized framework designed to adapt and extend traditional software development methodologies for the unique context of quantum computing.
- This study analyzes each phase of the QSDLC, **from conceptualization to maintenance**, highlighting how these phases differ significantly from their classical counterparts due to the intricacies of quantum technology.
- The QSDLC is characterized by a series of distinct, yet interconnected phases that guide the development of quantum applications.

To the right of the text is a staircase diagram with the following phases: "Conceptualization", "Requirements Analysis", "Design", "Implementation", "Testing", "Deployment", and "Maintenance". The Zoom interface includes a top toolbar with options like "Giriş yapın" and "Görüntüle", a right-hand sidebar with participant thumbnails for "Observer H-1", "H-1 Fatih TÜRKÖĞLU", "hall 1 gökçe Sari", and another participant, and a bottom toolbar with various meeting controls. The status bar at the bottom indicates the time as 12:50 on 13.04.2024.

**ÖZET**

Adventif köklenme bitkilerin kök dokusu dışındaki bir dokudan köklenmesi olayıdır. Zira alanda yetiştirilen birçok tür, çelik yöntemiyle başarıyla üretilebilir ve uygulaması kolaydır, ancak bu tekniğin başarısı, çeliğin adventif kök oluşturma yeteneğine bağlıdır. Adventif köklenme aynı zamanda vejetatif yolla üreyen bitkiler için de önemlidir. Hormonların adventif köklenme üzerinde önemli etkileri olduğu bilinmektedir. Çelikle bitki üretiminde IBA ve IAA hormonları yaygın olarak kullanılan hormonlardır. IBA'ın etkisini IAA'ye dönüştürerek gösterdiği düşünülmektedir. Bu nedenle IBA-IAA dönüşümü, adventif kök oluşumunda kilit bir rol oynamaktadır. HB24 geninin Arabidopsis türünde köklenme sürecinde görev aldığı ve IBA-IAA dönüşümünü kontrol ettiği bilinmektedir, buna rağmen adventif köklenme üzerindeki etkileri tam olarak araştırılmamıştır. Bu çalışma HB24 geninin adventif köklenme üzerindeki etkilerini araştırmayı amaçlamıştır. Bu amaçla HB24 geninin insersiyonel TDNA mutant hatlarında adventif kök gelişimi yabancı tip bitkilerle karşılaştırmalı olarak analiz edilmiştir. Çimlenme sonrası kökler uzaklaştırılarak, hipokotil kısımları medyaya temas edecek şekilde yeni bir medyaya aktarılmıştır. Bitkilerin adventif kök oluşumu 7. gün sonunda gözlenmiştir. Mutant bitkilerde yabancı tip bitkiler ile karşılaştırıldığında adventif köklenmenin azaldığı gözlemlenmiştir. Bu etkinin bir transkripsiyon faktörü olan HB24'ün IBA-IAA dönüşümünü gerçekleştiren genlerin anlatımlarını kontrol ederek gerçekleştirdiği düşünülmektedir. Bu çalışma ile elde edilen sonuçlar adventif köklenmenin daha iyi anlaşılabilmesi adına önemli veriler ortaya çıkarmıştır. 2210-A burs programı için TÜBİTAK'a ve bu araştırmayı finanse ettiği için Çanakkale Onsekiz Mart Üniversitesi BAP'a (Zeytin HB24 geninin karakterizasyonu ve Fonksiyonel Analizi - FBA-2022-3917) teşekkür ederim.

**Anahtar Kelimeler:** Adventif köklenme, HB24, IBA-IAA dönüşümü

**FUNCTIONAL ANALYSIS OF HB24 GENE AND ITS ROLE IN ADVENTITIOUS  
ROOTING IN ARABIDOPSIS THALIANA**

**ABSTRACT**

Adventitious rooting is the rooting of plants from a tissue rather than the root tissue. Many cultivated agricultural species can be successfully propagated by the cutting method and are easy to implement, but the success of this technique depends on the ability of the cutting to form adventitious roots. Adventitious rooting is also important for plants that reproduce vegetatively. It is known that hormones have important effects on adventitious rooting. IBA and IAA hormones are hormones widely used in the cutting method. It is thought that IBA shows its effect by turning into IAA. Therefore, IBA-IAA conversion plays a key role in adventitious root formation. It is known that the HB24 gene is involved in the rooting process and controls the IBA-IAA conversion in Arabidopsis species, but its effects on adventitious rooting have not been fully investigated. This study aimed to investigate the effects of the HB24 gene on adventitious rooting. For this purpose, adventitious root development in insertion TDNA mutant lines of the HB24 gene has been analyzed comparatively with wild-type plants. Following germination, roots were removed, and hypocotyl portions were transferred to new media in a manner that they would come into contact with the media. Adventitious root formation in plants was observed after 7 days. It was observed that, compared to wild-type plants, adventitious rooting decreased in mutant plants. This effect is thought to be mediated by HB24, a transcription factor, regulating the expressions of genes involved in IBA-IAA conversion. The results obtained from this study have provided important data for a better understanding of adventitious rooting. I would like to thank TÜBİTAK for 2210-A scholarship program and Çanakkale Onsekiz Mart University BAP (Characterization and Functional Analysis of the olive HB24 gene - FBA-2022-3917) for funding this research.

**Keywords:** Adventitious rooting, HB24, IBA-IAA transformation

**ABSTRACT**

Introduction and Purpose: Communication is our most basic need. Language is the most important tool for people to communicate with each other. Language consists of words and defines verbal communication, which is the most effective form of communication. The need for communication has constantly changed in the historical process and gained new forms. Technology has developed, changed and new communication channels have been formed with the need to reproduce information and deliver it to more masses. With the development of technology, which is one of the most important parts of this change, people's communication styles, their understanding of entertainment, and their social environment interactions have been reshaped. Each language has proverbs that describe its own values. Proverbs are a concise, pleasing, stereotyped expression tool that shows the moral and cultural values, lifestyle and thought structure of nations. In the simplest terms, kinetic typography is expressed as an animation application that conveys emotions and thoughts while using movement and writing together. Today, the widespread use of digital environments, smart devices, etc. and the need to access and comprehend information quickly have expanded the usage areas of kinetic typography. This research is about the expression of a proverb selected to transfer proverbs from the past to the present with kinetic typography. Due to the insufficiency of the number of previous studies on this subject, the aim of this research is to create an experimental example. The example chosen for the research; Ömer Asım Aksoy's "Dictionary of Proverbs and Sayings

**ÖZET**

Weyl uzayları, Hermann Weyl tarafından 1918 yılında fizikteki birleşik alanlar teorisini formülize etmek için ortaya atılmıştır. Weyl'in bu çalışması başta kabul edilmese de Weyl manifoldları hem fizikçilerin hem de matematikçilerin ilgi alanlarından olmuştur. Koordinat fonksiyonu ile ifade edilen metrik tensör uzayımızın yapısını belirlemede büyük önem taşır. Bu çalışmada, öncelikle olarak, Riemann manifoldları, bu manifoldlara ait uzayın geometrik büyüklükleri, bu büyüklüklere dair eğrilik ve eğrilikle ilgili özellikler; sonrasında Weyl manifoldları, bu manifoldların yapılarına dair özellikler verilerek; bunlara ek olarak üzerinde yarı simetrik rekürant metrik koneksiyonu tanımlanmış Weyl manifoldları ve bu manifoldların eğrilikleri, ilgili özellikleri ve niceliklerinden bahsedilmiştir. Böylece farklı metriklerle tanımlanmış Weyl uzayının dönüşümleri içerisinde yer alan bileşenleri nasıl değiştiği gözlenmiştir. Weyl manifoldları üzerinde çember koruyan (konsörkılır) dönüşümün varlığı incelenerek; ispatlanmıştır. Bunun yanısıra yarı simetrik rekürant metrik koneksiyona sahip eğriliğin yapısı, bu dönüşüm altında simetri özellikleri, Bianchi özdeşliği ispatlanarak literatüre kazandırılmıştır. Konsörkılır eğriliğin konformal eğrilik altında gradyant olabilmesi için gerek ve yeter koşul ispatlanarak, gösterilmiştir.

**Anahtar Kelimeler:** Weyl Manifoldlar, Riemannian Manifoldlar, Konsörkılır Dönüşümler

**ON THE EXISTENCE OF CONCIRCULAR TRANSFORMATION ON NON-  
RIEMANNIAN MANIFOLDS**

**ABSTRACT**

Weyl spaces were introduced by Hermann Weyl in 1918 to formulate the unified field theory in physics. Although Weyl's work was not accepted at first, Weyl manifolds have been of interest to both physicists and mathematicians. The metric expressed by the coordinate function is of great importance in determining the structure of our tensor space. In this study, first, Riemannian manifolds, geometric quantities of the space belonging to these manifolds, curvature and curvature related properties of these quantities; then Weyl manifolds, properties related to the structure of these manifolds; in addition to these, Weyl manifolds on which the semisymmetric recurrent metric connection is defined and the curvatures of these manifolds, the related properties and quantities are mentioned. Thus, it is observed how the components in the transformations of Weyl space defined by different metrics change. The existence of a circle preserving (concircular) map on Weyl manifolds is analyzed and proved. In addition, the structure of the curvature with a semisymmetric recurrent metric conformation, symmetry properties under this transformation, and Bianchi identity are proved and introduced to the literature. The necessary and sufficient condition for a concircular curvature to be gradient under conformal curvature is proved and shown.

**ABSTRACT**

Crisis situations, whether military or humanitarian in nature, present complex challenges for decision-makers. The decisions made during such crises can have significant impacts on human life, safety, and well-being. This makes it essential that public administrators take a thoughtful and informed approach to decision-making in such situations. This essay will explore the role of public administration in navigating military and humanitarian crises. It will argue that decisions made during crisis situations should prioritize the protection of human life and safety, be transparent and accountable, and involve international cooperation and coordination. However, it will also consider counter-arguments that suggest decisions may need to prioritize national security interests, be made quickly and without full information, and may be difficult to achieve international cooperation and coordination. During crisis situations, decisions must prioritize the protection of human life and safety. Such decisions should be based on the principles of human rights and humanitarian law. This means that the needs of vulnerable populations, such as refugees and internally displaced persons, should be taken into account. Decision-makers should also consider the potential long-term consequences of their actions. For example, decisions made during military crises may have lasting impacts on the political and social stability of affected areas. Therefore, public administrators must take a comprehensive approach to decision-making during crises, which prioritizes the needs of affected communities. In addition to prioritizing human life and safety, decisions made during crisis situations should be transparent and accountable. This means that decisions should be communicated clearly to the public, and based on evidence and expert analysis. Decision-makers must be accountable for their actions and decisions, and should be willing to answer questions and justify their choices. Transparency and accountability are essential for maintaining public trust and ensuring that decisions made during crisis situations are effective and just. International cooperation and coordination are also essential for effective decision-making during crisis situations. Decisions should be made in consultation with other governments and international organizations, taking into account international norms and standards. Collaboration with non-governmental organizations and civil society groups can help ensure decisions are informed by the needs of affected communities. Effective international cooperation and coordination can help ensure that decisions made during crisis situations are effective, just, and responsive to the needs of affected communities.

## **AÇIK DENİZDE İŞLENEN ULUSLARARASI SUÇLARDA CEZA YETKİSİ**

**Doç. Dr. İslam Safa KAYA**  
Kırıkkale Üniversitesi  
**Email:**islamsafakaya@kku.edu.tr

### **ÖZET**

Devletler, kendi egemenlikleri dahilinde olan iç sular ve karasuları ile yetinmemiş, kendi lehlerine hak ve yetkiler barındıran bitişik bölge, münhasır ekonomik bölge ve kıta sahanlığı alanlarında da egemenliklerini kullanmıştır. Tüm bu deniz alanları dışında kalan ve herhangi bir devletin egemenliğinin söz konusu olmadığı deniz alanı ise 'açık deniz' olarak adlandırılmaktadır. Tüm devletlerin ortak kullanımına tabi olan açık denizde, serbestlik ilkesi temel ilkedir. Açık deniz, hiçbir devletin egemenliği altında olmadığından açık denizde bir devletin yargı yetkisinin doğrudan uygulanması söz konusu olmamaktadır. Açık denizde işlenen suçlarda yargı yetkisi tartışmalı olduğu için bu alanda uluslararası işbirliği ve yapılan uluslararası anlaşmalar oldukça önem arz etmektedir. Ceza yetkisi belirlenirken belirli ilkeler ve uluslararası anlaşmalar göz önünde bulundurulmaktadır. Örneğin, 1982 tarihli Birleşmiş Milletler Deniz Hukuku Sözleşmesi, açık denizde işlenen suçlarla mücadele edebilmek için önemli düzenlemeler içermektedir. Ceza yetkisinin belirlendiği ilkelerden biri 'bayrak yasası' ilkesidir. Bu ilke gereğince devletler, kendi bayraklarını taşıyan gemiler üzerinde münhasır yetkiye sahip olmaktadır. Dolayısıyla, geminin bayrağını taşıdığı devlet, gemide işlenmiş olan suçlarda ceza yetkisine sahip olabilmekte ve yargılama yapabilmektedir. Açık denizde suç işleyen kişinin, vatandaşı olduğu devlet de, kendi vatandaşı için ceza yetkisine sahip olabilmekte ve yargı yetkisini kullanabilmektedir. Bazı suçların ise, tüm uluslararası toplumun ortak menfaatlerine karşı işlendiği kabul edilmektedir. Söz konusu bu suçlar işlendiğinde evrensel yargı yetkisi dediğimiz ilke devreye girmektedir. Bu suçları işleyen kişiler, herhangi bir devlet tarafından yargılanabilmektedir.

THE HIGH SEA**

**ABSTRACT**

States were not satisfied with the internal waters and territorial waters within their sovereignty. They have also exercised their sovereignty in the contiguous zone, exclusive economic zone and continental shelf areas, which contain rights and powers in their favor. The sea area outside of all these sea areas, where the sovereignty of any state is not in question, is called the 'high sea'. In the high seas, which are subject to the common use of all states, the principle of freedom is fundamental. The high seas are not under the sovereignty of any state. Therefore, there is no direct application of a State's jurisdiction on the high seas. Since jurisdiction over crimes committed on the high seas is controversial, international cooperation and international agreements in this field are of great importance. Specific principles and international agreements are taken into account when determining criminal jurisdiction. For instance, the 1982 United Nations Convention on the Law of the Sea contains important provisions to combat crimes committed on the high seas. One of the principles on which criminal jurisdiction is determined is the principle of 'flag law'. According to this principle, states have exclusive jurisdiction over ships flying their flags. Therefore, the state whose flag the ship flies may have criminal jurisdiction and prosecute crimes committed on board the ship. The state of nationality of the person who commits a crime on the high seas may also have criminal jurisdiction and can exercise jurisdiction over its own nationals. Some crimes are recognized as being committed against the common interests of the entire international community. When such crimes are committed, the principle of universal jurisdiction comes into play. People who have committed such crimes can be prosecuted by any state.

**Keywords:** High seas, international crimes, criminal jurisdiction, flag law, universal jurisdiction.

**ÖZET**

Savaş ne yazık ki tarih boyunca sayısız insanın ölümüne, yıkıma ve acıya sebep olmuş bir gerçektir. Özellikle 1. ve 2. Dünya Savaşları öncesi dönemde devletler savaşı meşru bir hak olarak gördüğü için bu dönemde savaş tarihin bir parçası haline gelmiştir. Gelişen teknolojik imkanlar, insan nüfusundaki artış ve küresel anlaşmazlıklar sebebiyle 1. ve 2. Dünya savaşları büyük bir insani felakete sebep olmuştur. Dünya kamuoyu artık bu duruma sessiz kalmamayı tercih etmiş ve savaşı meşru bir hak olarak gören geleneği terk ederek savaşı sadece zorunlu durumlarda ve sınırlı bir şekilde uygulanabileceği hukuki bir zemine oturtmaya çalışmıştır. Bunu yaparken savaş suçlarını ve yasaklarını uluslararası sözleşmelerle belirlemiş, bu suç ve yasakların ceza ve yaptırımlarını da belirleyerek bunlara aykırı eylemlerin yargılanacağı yargı organları tesis etmiştir. Bu hukuki reform küresel savaşları engellemiş görünse de bölgesel savaşları engellemede yeterli olamamıştır. Özellikle Bosna'da yaşanan Srebrenitsa Katliamı, ABD'nin Irak'ı İşgali ve Rusya-Ukrayna Savaşı gibi birçok bölgesel savaş gerçekleşmiştir. Savaş suçlarının tespiti ve bu suçların faillerinin yargılanarak cezalandırılması da uygulamada tam anlamıyla etkili olamamaktadır. Bu kapsamda uluslararası savaş hukukunu inceleyip, bu hukuk sisteminin eksik ve aksayan yönlerini tespit ederek çözüm ve öneriler sunmaya çalışacağız.

**APPLICATION OF THE INTERNATIONAL LAW OF WAR**

**ABSTRACT**

War is unfortunately a reality that has caused countless deaths, destruction and pain throughout history. Especially in the period before the 1st and 2nd World Wars, war became a part of history as states considered war as a legitimate right. Due to developing technological opportunities, increase in human population and global conflicts, the First and Second World Wars caused a great humanitarian disaster. The world public opinion has chosen not to remain silent to this situation and has abandoned the tradition that considered war as a legitimate right and has tried to place war on a legal basis where it can only be implemented in cases of necessity and in a limited way. While doing this, it determined war crimes and prohibitions with international agreements, determined the penalties and sanctions of these crimes and prohibitions, and established judicial bodies where actions contrary to them would be tried. Although this legal reform seemed to prevent global wars, but it was not sufficient to prevent regional wars. Many regional wars took place, especially the Srebrenica Massacre in Bosnia, the US Occupation of Iraq and the Russia-Ukraine War. The most important reason for this is the detection of war crimes and the prosecution and punishment of the perpetrators of these crimes are not fully effective in practice. In this context, we will examine the international law of war, identify the deficiencies and defects of this legal system and try to offer solutions and suggestions.

### **ÖZET**

Günümüz çalışma hayatı farklı kuşaklardan oluşmaktadır. Bu kuşaklar literatürde; Sessiz Kuşak (1925-1945), Bebek Patlaması Kuşağı (1946-1964), X Kuşağı (1965-1979), Y Kuşağı (1980-1995) ve Z Kuşağı (1995-2010) olarak adlandırılmaktadır. Her bir kuşağın kendine özgü karakteristik yapısı vardır ve birbirinden farklıdır. Aynı zamanda çalışma hayatında yer alan kuşakların çalışmadan beklentileri ve çalışmaya yükledikleri anlam da birbirinden farklıdır. Bu farklılıkların bilinmesi çalışma ortamında oldukça önem arz etmektedir. İş gücü piyasasının büyük bir kısmı X, Y ve Z kuşaklarından oluşmaktadır. Her bir kuşağın farklılaşan bireysel değerleri ve bunun etkisi çalışma hayatında da kendini göstermektedir. Bireysel değerler ve çalışma değerlerinde ortaya çıkan bu farklılıklar çatışmalara neden olmaktadır. Her kuşağın birbirini anlaması ve farklılıklarının ne olduğunu bilmesi kuşak çatışmalarını azaltacaktır. Ulusal literatürde, kuşak sınıflandırmaları ve kuşakların karakteristik özelliklerinin ele alınışı uluslararası literatürle benzer şekildedir. Her ülkenin, kültürü, değerleri, inançları gelenek ve görenekleri birbirinden farklıdır. Bu farklılıklar toplumun şekillenmesinde ve onların karakteristik yapısında etkili olmaktadır. Her kuşak bulunduğu dönem içinde kendine özgü siyasal, sosyal ve kültürel olarak bir kimlik oluşturmakta ve bulunduğu dönemin koşullarını yansıtmaktadır. Bu nedenle bu çalışmada kuşak konusu Türkiye özelinde ele alınacaktır. Türkiye'deki ekonomik, tarihsel, ve sosyo-kültürel olaylar dönemsel olarak incelenecek ve kuşaklar üzerindeki etkileri belirlenecektir. Ayrıca, kuşakların değişen çalışma değerleri ayrıntılı olarak ele alınacaktır.

**GENERATIONS IN THE WORKPLACE AND CHANGING WORK VALUES**

**ABSTRACT**

Today's working life consists of different generations. These generations are referred to in the literature as the Silent Generation (1925-1945), the Baby Boomers (1946-1964), Generation X (1965-1979), Generation Y (1980-1995), and Generation Z (1995-2010). Each generation has its own unique characteristic structure and differs from one another. At the same time, the expectations from work and the significance attributed to work vary among the generations present in the workforce. The awareness of these differences is highly significant in the work environment. The majority of the workforce consists of Generation X, Y, and Z. The evolving individual values of each generation have an impact on the working life as well. The differences arising in individual values and work values lead to conflicts. Each generation understanding one another and knowing their differences will reduce intergenerational conflicts. In national literature, the classification of generations and the examination of their characteristic features are similarly approached to the international literature. Each country has its own culture, values, beliefs, traditions, and customs that differ from one another. These differences are effective in shaping the society and its characteristic structure. Each generation forms its unique political, social, and cultural identity within the period it exists and reflects the conditions of that period. Therefore, this study will focus on the issue of generations specifically in Türkiye. Economic, historical, and socio-cultural events in Türkiye will be examined periodically, and their effects on generations will be determined. Additionally, the changing work values of generations will be detailedly examined.

**ÖZET**

Bu çalışma, küreselleşme sonucu üniversitelerin dönüşüm sürecine girmesi ile yaşam boyu öğrenme merkezlerinin sundukları sertifika programlarının tüm dünyada olduğu gibi ülkemizde de artmasından yola çıkılarak, Türk Hava Kurumu Üniversitesi Yaşam Boyu Gelişim Uygulama ve Araştırma Merkezi (YAGEM) bünyesinde sunulan programların düzenlenme biçimleri ile sertifika programlarına katılan yetişkinlerin katılım örüntülerinin ilişkilendirilmesi amacıyla yapılmıştır. Araştırmada, karma araştırma yöntemlerinden üçleme (triangulation) tercih edilmiştir. Araştırmanın evrenini, Eylül, 2022 – Mart, 2023 tarihleri arasında Türk Hava Kurumu Üniversitesi bünyesinde sunulan mesleki ve kişisel gelişim sertifika programlarına katılan 204 yetişkin oluşturmaktadır. Araştırmanın nicel kısmına basit tesadüfi örnekleme ve nitel kısmına kartopu örnekleme ile ulaşılmıştır. Araştırmada elde edilen nicel veriler, araştırmacı tarafından oluşturulan ve uzman görüşü alınan 14 maddelik anket yoluyla basılı ve çevrim içi form olacak şekilde toplanmıştır. Nicel verilerin analizi SPSS programı ile Ki-Kare Bağımsızlık Testi kullanılarak yapılmıştır. Araştırmanın nitel bölümünde ise 6 yönetici, 7 eğitici, 8 terk ve 12 mezun katılımcıyla yarı yapılandırılmış görüşme yapılmış ve veri analizinde betimsel veri analizi yöntemi uygulanmıştır. Araştırmada yetişkinlerin bazı demografik özellikleri, program biçimi ve katılım özellikleri ile katılım amaçları, programı tamamlamama nedenleri, öğrenme sürecinde karşılaşılan güçlükler ve programların sunulma biçimleri ilişkilendirilmiştir. Araştırmada gerek nicel gerekse nitel yöntemler yoluyla toplanan veriler ışığında YAGEM programlarına katılan yetişkin öğrenenler arasında katılım amacı olarak mesleki nedenlerin başat yönelim olduğu bulgulanmışken, katılımcı terklerinde çoğunlukla bireysel nedenler özellikle de aile ve iş sorumlulukları ve öğrenme sürecinde karşılaşılan güçlüklerde ise program düzenlenmesine dair sorunları içeren kurumsal engeller ortaya konulmuştur.

**PARTICIPATION PATTERNS OF ADULTS PARTICIPATING IN THE  
UNIVERSITY OF TURKISH AERONAUTICAL ASSOCIATION LIFELONG  
DEVELOPMENT APPLICATION AND RESEARCH CENTRE (YAGEM)  
CERTIFICATE PROGRAMMES**

**ABSTRACT**

Based on the fact that the number of certificate programmes offered by lifelong learning centres has increased in our country as well as all over the world with the transformation process of universities as a result of globalisation, this study was conducted in order to associate the ways of organising the programmes offered at the Lifelong Development Application and Research Centre (YAGEM) of the University of Turkish Aeronautical Association with the participation patterns of adults participating in the certificate programmes. In the research, triangulation, one of the mixed research methods, was preferred. The population of the study consists of 204 adults who participated in professional and personal development certificate programmes offered at Turkish Aeronautical Association University between September, 2022 and March, 2023. The quantitative part of the research was reached by simple random sampling and the qualitative part was reached by snowball sampling. The quantitative data obtained in the study were collected in printed and online forms through a 14-item questionnaire created by the researcher and received expert opinion. Quantitative data were analysed using the SPSS programme and Chi-Square Independence Test. In the qualitative part of the study, semi-structured interviews were conducted with 6 managers, 7 trainers, 8 dropouts and 12 graduates and descriptive data analysis method was applied in data analysis. In the research, some demographic characteristics of the adults, programme format and participation characteristics, participation purposes, reasons for not completing the programme, difficulties encountered in the learning process and the way the programmes are presented were associated. In the light of the data collected through both quantitative and qualitative methods, among the adult learners who participated in the YAGEM programmes; vocational reasons were found to be the dominant orientation as the purpose of participation while individual reasons, especially family and work responsibilities, were found to be the most common reasons for participant drop-outs and institutional barriers, including problems related to the organisation of the programme, were revealed as the difficulties encountered in the learning process.

**ÖZET**

İletişim, dünya üzerinde yaşamını devam ettiren insan ve hayvan gibi canlı türler ve artık günümüzde teknolojinin gelişimi ile ortaya çıkan yapay zeka gibi insan ya da hayvan dışı cansız varlıkların kullandığı önemli bir sistemdir. Şüphesiz ki dili kullanan tüm canlı cansız varlıklar arasında en gelişmiş dilsel iletişim sistemine insanoğlu sahiptir. Canlı bir varlık olarak insan nasıl ki yaşamı boyunca karşılaştığı iyi ya da kötü deneyimlere bağlı olarak farklı psikolojik süreçler geçirebiliyor ve bu duygudurum dönemlerine bağlı olarak davranışları değişkenlik gösterebiliyorsa, yaşadığı psikolojik değişikliklere bağlı olarak diğer insanlarla iletişimde kullandığı dilsel eğilimler de farklılaşabilmektedir. Önde gelen birçok ünlü dilbilimci, insan iletişiminin temelinde kullanılan dilsel yapıların insanın maruz kaldığı çevrenin bilişsel algısı ile yakından ilişkili olduğunu savunmaktadır. İnsan iletişim sistemi beyindeki Broca, Wernicke ve Angular Girus gibi dominant dil merkezleri ve dilsel üretimi mükemmel kılmak için sahip olduğumuz dil, dudak, damak, diş, gırtlak ve yutak gibi artikülasyon organlarının varlığı sebebiyle son derece fizyolojik bir yapı barındırmakla beraber aynı zamanda da dil üretimini sağlayabilmek için psikolojik bir alt yapıya sahiptir. Bu açıdan dilin kognitif süreçlerini inceleyen ve dilbilim ile psikolojinin kesişiminde bulunan psikodilbilim alanı, bireylerin psikolojik özelliklerine bağlı olarak gelişen dilsel üretimler üzerinde de durmaktadır. Bu araştırmada, kişilerin maruz kaldıkları çevresel faktörlerin onların psikolojik durumlarına etkileri ve bu etki sonucu bireylerin dil kullanım eğilimlerinin ne şekilde etkilendiği ve ne yönde değiştiği ele alınmıştır. Elde edilen bulgular, bireylerin günlük hayatta yaşadıkları deneyimlerin onların dili linguistikal çerçevede ne şekilde kurguladıkları ve sosyal iletişimde ne şekilde kullandıklarını ortaya çıkarmaktadır.

**THE EFFECT OF INDIVIDUALS EMOTIONAL STATES ON LANGUAGE USAGE  
IN RELATION TO ENVIRONMENTAL INFLUENCES**

**ABSTRACT**

Communication is a crucial system utilized by living species such as humans and animals, as well as non-living entities like artificial intelligence that has emerged with the advancement of technology. Undoubtedly, among all living and non-living entities using language, humans possess the most advanced linguistic communication system. As living beings, individuals can undergo various psychological processes based on the positive or negative experiences they encounter throughout their lives. The behaviors of individuals can vary depending on these emotional states. Linguistic tendencies used in communication by individuals may differ based on the mood swings related to these emotional states. Many prominent linguists argue that the linguistic structures at the core of human communication are closely linked to the cognitive perception of the environment the individual is exposed to. The human communication system encompasses highly physiological structures such as dominant language centers in the brain like Broca, Wernicke, and Angular Gyrus, as well as articulation organs like the tongue, lips, palate, teeth, larynx, and pharynx, which contribute to perfecting linguistic production. Additionally, it possesses a psychological infrastructure to enable language production. In this regard, the field of psycholinguistics, which examines the cognitive processes of language and intersects with linguistics and psychology, also focuses on linguistic productions that develop based on individuals' psychological characteristics. This study explores the impact of environmental factors on individuals' psychological states and how individuals' language usage tendencies are affected and altered as a result of this influence. The findings reveal how individuals construct their language in a linguistic framework and utilize it in social communication based on their daily experiences.

**Keywords:** Language usage, language psychology, psycholinguistics.

**YAPRAKTAN KALSİYUM UYGULAMALARININ BAŞ SALATA (*Lactuca sativa* L.

**ÖZET**

Yapraktan gübreleme, yaprağı tüketilen sebzelerin bitki gelişimi, verim ve kalite özellikleri üzerinde önemli bir role sahiptir. Bu çalışmada, yapraktan uygulanan kalsiyum nitrat ve kalsiyum klorür gübrelerinin baş salatada (*Lactuca sativa* L. var *capitata*) verim ve kalitesine olan etkileri araştırılmıştır. Çalışma örtü altında yürütülmüştür. Kalsiyum nitrat ve kalsiyum klorür (50 ppm, 100 ppm ve 150 ppm) gübreleri üç farklı dozda ve üç farklı periyotta yapraklara püskürtülmüştür. Uygulamalar fide dikiminden 15 gün sonra başlayarak 10'ar gün arayla yapılmıştır. Gübreler, yapraklar tamamen ıslanincaya kadar şarjlı sırt pülverizatörü ile uygulanmıştır. Çalışma tesadüf blokları deneme desenine göre 4 tekerrürlü olarak yürütülmüştür. Sonuçlar, yapraktan uygulanan kalsiyum nitrat ve kalsiyum klorür gübrelerinin, ortalama baş ağırlığı, renk, pH, ve verimi artırarak olumlu yönde etkilediğini göstermiştir. Kalsiyum nitrat gübresi, kontrol uygulamasına göre her üç dozda da verimi artırmıştır. Benzer şekilde, renk değerleri yapraktan uygulanan kalsiyum nitrat ve kalsiyum klorür gübreleri ile artış göstermiştir. Bununla birlikte, uygulamaların SÇKM, yaş ve kuru ağırlık üzerine etkisi önemsiz çıkmıştır. Sonuç olarak, bu çalışma yapraktan uygulanan kalsiyum nitrat ve kalsiyum klorür gübrelerinin baş salatada verim ve kaliteyi artırabileceğini ortaya koymuştur.

**Anahtar Kelimeler:** Yapraktan gübreleme, kalsiyum, renk, verim

**INFLUENCE OF FOLIAR APPLICATIONS OF CALCIUM ON YIELD AND  
QUALITY OF HEAD LETTUCE (*Lactuca sativa* L. var *capitata*)**

**ABSTRACT**

Foliar fertilization plays an important role in the development, yield, and quality characteristics of leafy vegetables. This study investigated the effects of foliar-applied calcium nitrate and calcium chloride fertilizers on the yield and quality of lettuce (*Lactuca sativa* L. var *capitata*) under greenhouse conditions. Calcium nitrate and calcium chloride fertilizers (at concentrations of 50 ppm, 100 ppm, and 150 ppm) were sprayed on the leaves in three different doses and at three distinct periods. Applications began 15 days after transplanting and were repeated at 10-day intervals using a rechargeable back sprayer until the leaves were thoroughly wetted. The study was laid out in a randomized complete block design with four replicates. The results showed that foliar application of calcium nitrate and calcium chloride fertilizers had a positive influence by increasing average head weight, color, pH, and yield. Calcium nitrate fertilizer significantly increased yield at all three doses compared to the control treatment. Similarly, color values improved with foliar application of both fertilizers. However, the effects on TSS, wet weight, and dry weight were not statistically significant. In conclusion, this study suggests that foliar spraying with calcium nitrate and calcium chloride fertilizers can be an effective strategy to enhance the yield and quality of head lettuce.

**Keywords:** Foliar spray, calcium, colour, yield

### **ÖZET**

Fibromiyalji sendromu (FMS), klinik olarak kas-iskelet sistemi ağrısı, kas gücü ve enduransında azalma, genel kondisyon kaybı, eklem hareket açıklığı kaybı, yumuşak doku hassasiyeti, sertlik, genel yorgunluk ve uyku bozuklukları ile karakterize, yaygın kronik, idiopatik bir durumdur. Etiyoloji ve patogenezi iyi bilinmemekle birlikte FMS'nin oksidatif stres, mitokondriyal fonksiyon bozukluğu, multivitamin eksiklikleri ve oksidanlar/ antioksidanlar arasındaki orantısızlığın bu sendroma sebep olduğu düşünülmektedir. Hastalık başlangıç ve devamı, hastalığın seyrini ve yaşam kalitesini olumsuz yönde etkileyen genetik/biyolojik ve psikososyal faktörler ile yakından ilişkilidir. Ayrıca FMS, kronik yorgunluk sendromu, iritabl bağırsak sendromu, fonksiyonel dispepsi, miyojenik temporomandibular bozukluk, gerilim baş ağrısı, miyofasiyal ağrı sendromu, huzursuz bacak sendromu, interstisyel sistit, mesane ağrısı sendromu, travma sonrası stres bozukluğu ile de ilişkili olan karmaşık bir sendromdur. Hastalık tanısına ilişkin herhangi bir objektif test veya biyobelirteç tanımlanmamış olmakla birlikte bu hastalarda tek başına farmakolojik tedavi yetersizdir. Ağrıya neden olan farklı mekanizmalar göz önüne alındığında, kronik ağrının periferik, merkezi, bilişsel-duygusal ve kişilerarası nedenlerini hedef alan multidisipliner programlar ile tedavi edilmesi uygun olmaktadır. Bu popülasyondaki duygusal semptomların tedavi edilmesi ile, bilişsel durumdaki bozulma devam etse bile, dikkat süreçlerindeki iyileşmenin artacağı gösterilmiştir. FMS'li hastalarda aerobik ve dirençli egzersizler, elektroterapi yöntemleri, hidroterapi, balneoterapi, manipülasyon, kayropratik yöntemler, biofeedback, hipnoz, duyuşsal tedaviler, magnetoterapi, masaj, bilişsel davranışçı terapi, farmakolojik ajanlar, akupunktur, zihin beden tedavileri, hiper barik oksijen tedavisi, optik sinir stimülasyonu, lidokain infüzyonu, melatonin, koenzim Q10, D ve E vitaminleri takviyesi ile palmitoiletanolamid uygulanması gibi çok çeşitli tedavi yaklaşımları hastalık semptomlarında iyileşmeye neden olacağı bilinmektedir. Bu bağlamda FMS'nin tedavisinde multidisipliner bir bakış açısıyla interdisipliner bir yaklaşım hastalık semptomları azaltmakta etkili olacaktır.

**Anahtar Kelimeler:** Fibromiyalji sendromu, tedavi, koenzim Q10

## **CURRENT TREATMENT APPROACHES IN FIBROMYALGIA SYNDROME**

### **ABSTRACT**

Fibromyalgia syndrome (FMS) is a common chronic, idiopathic condition clinically characterized by musculoskeletal pain, decreased muscle strength and endurance, general deconditioning, loss of joint range of motion, soft tissue tenderness, stiffness, general fatigue and sleep disorders. Although the etiology and pathogenesis of FMS are not well known, oxidative stress, mitochondrial dysfunction, multivitamin deficiencies and disproportion between oxidants / antioxidants are thought to cause this syndrome. The onset and continuation of the disease are closely related to genetic/biological and psychosocial factors that negatively affect the course of the disease and quality of life. In addition, FMS, chronic fatigue syndrome, irritable bowel syndrome, functional dyspepsia, myogenic temporomandibular disorder, tension headache, myofascial pain syndrome, irritable It is a complex syndrome that is also associated with leg syndrome, interstitial cystitis, bladder pain syndrome, and post-traumatic stress disorder. Although no objective test or biomarker has been defined for the diagnosis of the disease, pharmacological treatment alone is inadequate in these patients. Considering the different mechanisms that cause pain, it is appropriate to treat chronic pain with multidisciplinary programs targeting peripheral, central, cognitive-emotional and interpersonal causes. It has been shown that by treating emotional symptoms in this population, improvement in attentional processes will increase, even if impairment in cognitive status persists. In patients with FMS, aerobic and resistant exercises, electrotherapy methods, hydrotherapy, balneotherapy, manipulation, chiropractic methods, biofeedback, hypnosis, sensory treatments, magnetotherapy, massage, cognitive behavioral therapy, pharmacological agents, acupuncture, mind-body treatments, hyperbaric oxygen therapy, It is known that a wide variety of treatment approaches, such as optic nerve stimulation, lidocaine infusion, melatonin, coenzyme Q10, vitamins D and E supplementation, and administration of palmitoylethanolamide, will lead to improvement in disease symptoms. In this context, an interdisciplinary approach from a multidisciplinary perspective in the treatment of FMS will be effective in reducing disease symptoms.

### **ÖZET**

Egzersiz kas ve eklem hareketleri kullanarak enerji harcanmasıyla sonuçlanan düzenli fiziksel aktiviteler olarak tanımlanabilir. Çocukluk çağında egzersiz yapma alışkanlığı bilişsel, duygusal, fiziksel ve psikolojik gelişime, yetişkinlik çağında yapılan egzersize göre daha çok etkilidir. Bunun sebebi, bireylerin hareket ve yaşam tarzı gelişimi ve öğrenmenin çocukluk çağlarında daha kolay olmasıdır. Günümüz teknolojik olanakların hızla gelişmesi, beden gücüyle gerçekleştirilen birçok eylemin artık tamamen teknolojik olanaklar kullanılarak kolaylıkla yapılması ve sedanter yaşamın yaygınlaşması çocukluk çağlarında bile obezite, diyabet, inme, yüksek tansiyon, osteoporoz ve koroner hastalıkların görülme sıklığında artışa sebep olmuştur. Dünya Sağlık Örgütü verilerine göre kronik hastalıklardaki artışın risk faktörleri coğrafyalara göre değişmekle birlikte, yüksek gelirli ülkelerdeki en büyük risk faktörü fiziksel inaktivite ve yüksek kolesteroldür. Egzersiz ve yüksek fiziksel aktivite düzeyi ile diyabet, koroner kalp hastalığı, inme, yüksek tansiyon, osteoporoz, kolon kanseri riski, depresyon, kaygı ve aşırı stres bulguları azalmaktadır. Düzenli fiziksel aktivite ve spor yapan çocuklarda olumlu benlik saygısı, beden imgesi değerlendirmesi, kendilik algısı ve mental dayanıklılığın gelişmesinin kolaylaştığı bilinmektedir. Ayrıca sigara, alkol, uyuşturucu madde ve ilaç kullanım sıklıkları daha düşük, birine zarar verme ve bir şeyleri kırıp dökme isteklerinin daha az, ders çalışma, kitap gazete okuma ve akademik performans oranlarının daha yüksek olduğu gözlenmektedir. Amerikan Pediatri Akademisi, 2 yaşın altındaki çocuklar için ekran başında zaman geçirilmemesini, 2 yaşın üzerinde ise bu sürenin 1-2 saat ile kısıtlanmasını önermektedir. Bunların dışında özellikle sosyal çevrede çocuklar için aerobik egzersize uygun alanlar oluşturulması için belediyelerle iş birliği içinde olunmalı ve ilgili birimler bu konularda teşvik edilmelidir.

**Anahtar Kelimeler:** Egzersiz, çocukluk çağı, psikolojik gelişim

## **BENEFITS OF EXERCISE FOR CHILDREN**

### **ABSTRACT**

Exercise can be defined as regular physical activities that result in energy expenditure using muscle and joint movements. The habit of exercising in childhood is more effective on cognitive, emotional, physical and psychological development than exercise in adulthood. The reason for this is that individuals' movement and lifestyle development and learning are easier in childhood. The rapid development of today's technological opportunities, the fact that many actions performed with physical strength are now easily performed using technological facilities, and the spread of sedentary life has led to an increase in the incidence of obesity, diabetes, stroke, high blood pressure, osteoporosis and coronary diseases, even in childhood. According to World Health Organization data, although the risk factors for the increase in chronic diseases vary by geography, the biggest risk factors in high-income countries are physical inactivity and high cholesterol. With exercise and high physical activity levels, diabetes, coronary heart disease, stroke, high blood pressure, osteoporosis, colon cancer risk, depression, anxiety and excessive stress symptoms decrease. It is known that the development of positive self-esteem, body image evaluation, self-perception and mental endurance is facilitated in children who engage in regular physical activity and sports. In addition, it is observed that the frequency of cigarette, alcohol, drug and medication use is lower, the desire to harm someone and break things is less, and the rates of studying, reading books and newspapers and academic performance are higher. The American Academy of Pediatrics recommends that children under the age of 2 not spend time in front of the screen, and for children over the age of 2, this time should be limited to 1-2 hours. Apart from these, cooperation should be made with municipalities to create areas suitable for aerobic exercise for children, especially in the social environment, and relevant units should be encouraged on these issues.

**ÖZET**

Buğday üretimi, dünya genelinde gıda güvenliği, ekonomik kalkınma ve tarımsal faaliyetlerin sürdürülebilirliği açısından büyük öneme sahiptir. Buğday, önemli besin maddeleri içeren, özellikle de karbonhidrat, protein, lif, vitaminler ve mineraller bakımından zengin bir üründür. Yeterli buğday üretimi, bir ülkenin kendi nüfusunu besleyebilmesi ve dışa bağımlılığın azaltılması bakımından önemlidir. Dünya buğday üretiminin ülkelere göre dağılımındaki farklılıklar, birçok etkenin bir araya gelmesi sonucunda ortaya çıkar. İklim, toprak özellikleri, tarım politikaları, teknolojik kapasite, sulama sistemleri, ticaret politikaları ve ekonomik koşullar bu faktörler arasında yer almaktadır. Bu sebeple, dünya genelinde buğday üretimi belirli bölgelerde yoğunlaşabilir veya azalabilir. Buğday üretiminin dağılımındaki farklılıkları anlamak, hem yerel hem de küresel gıda güvenliği stratejileri için önemlidir. Bu çalışmada, OECD (Ekonomik İşbirliği ve Kalkınma Örgütü), ülkelerindeki buğday üretimi ve söz konusu ülkelerin buğday üretiminde kendine yeterlilik seviyeleri araştırılmıştır. OECD, dünya genelinde ekonomik işbirliği ve kalkınma konularında bir araya gelen 38 ülkeden oluşmaktadır. Araştırmanın ana materyalini Birleşmiş Milletler Gıda ve Tarım Örgütü'nün (FAO) 2020 yılına ilişkin buğday verileri oluşturmaktadır. 38 OECD ülkesinden İzlanda ve Kosta Rika ülkeleri için belirtilen dönemde FAO'da veri bulunmadığı için veriler 36 ülke üzerinden analiz edilmiştir. Belirtilen dönemde üretim miktarında ABD, ithalat miktarında Türkiye, ihracat miktarında Kanada, hektara buğday veriminde Yeni Zelanda'nın ilk sırada yer aldığı belirlenmiştir. Buğday üretiminde kendine yeterlilik seviyeleri en yüksek olan ülkeler sırasıyla Letonya, Litvanya ve Estonya gibi nüfus miktarı düşük olan ülkeler olarak tespit edilmiştir. Kolombiya, Güney Kore ve Portekiz ise buğdayda kendine yeterlilik seviyeleri en düşük ülkeler olarak belirlenmiştir. Bu çalışmadan elde edilen sonuçlar ile, ilgili ülkelerin buğday ile ilgili tarım politikaları ve yayım stratejilerinin oluşturulmasında daha etkili kararlar alınmasına yardımcı olunması, tarımsal uygulamaların optimize edilmesi, üretimin sürdürülebilirliği ile ticaret ve pazarlama planlarını gerçekleştirmesine katkı sağlaması hedeflenmektedir.

**Anahtar Kelimeler:** OECD, buğday, üretim, pazar.

**WHEAT PRODUCTION AND SELF-SUFFICIENCY LEVELS OF OECD  
COUNTRIES**

**ABSTRACT**

Wheat production is important for global food security, economic development and agricultural sustainability. Wheat is an important source of nutrients, in particular carbohydrates, protein, fibre, vitamins and minerals. Adequate wheat production is important for a country's ability to feed its own population and can be a factor in the reduction of external dependence. Many factors combine to determine how wheat is produced in different parts of the world. These factors include climate, soil characteristics, agricultural policy, technological capabilities, irrigation schemes, trade policy and economic conditions. When these factors come together, the world's wheat production can be concentrated in certain regions or can be reduced. It is important for both local and global food security strategies to understand differences in the distribution of wheat production. This study looked at wheat production in OECD (Organisation for Economic Co-operation and Development) countries. It also looked at the degree of self-sufficiency in wheat production in these countries. The OECD consists of 38 countries that work together on economic cooperation and development issues around the world. The main material used in the research is the wheat data for the year 2020 from the Food and Agriculture Organisation of the United Nations (FAO). Out of the 38 OECD countries, data for Iceland and Costa Rica were analysed for 36 countries, as the FAO did not have any data for the period in question. Over the period, the United States was the first country in terms of production, Turkey was the first in terms of imports, Canada was the first in terms of exports and New Zealand was the first in terms of wheat yield per hectare. The countries with the highest degree of self-sufficiency in wheat production were Latvia, Lithuania and Estonia, which have small populations. Colombia, South Korea and Portugal were the countries with the lowest level of self-sufficiency in wheat. The results of this study are intended to help the countries concerned to make more effective decisions in the formulation of agricultural policies and extension strategies related to wheat, the optimisation and sustainability of agricultural practices and the implementation of trade and marketing plans.

**ABSTRACT**

Pistachio is one of the agricultural products that have an important place in the economy of our country. It provides employment opportunities in many areas from the production stage until it is ready for consumption. Since it is such an economically important product, it is tried to be grown in every area where it can be cultivated. In recent years, there has been a rapid increase in production areas in Şırnak province and its districts. In parallel with this increase in area, problems related to plant protection arise. Plant protection problems that may arise in pistachio fields should be combated in a timely and technically appropriate manner. In many scientific studies conducted in pistachio fields, it has been reported that Pistachio Psyllid [Agonoscena pistaciae Burck. and Laut.) is one of the most common and intensive pests. The pest, which does its main damage by sucking plant sap during the nymph stage, also causes fumagin formation. With its damage, it causes early and dense fall of leaves and prevents the fruits from filling. Especially in the pistachio fields located in Şırnak Center, Güçlükönak, İdil and Silopi districts, pistachio trees should be controlled from mid-April when pistachio trees start to leaf out and when 20-30 nymphs per compound leaf are seen, it is necessary to decide to fight against A. Pistaciae and spraying should be done. Determination of the prevalence, damage status and contamination rate of A. pistaciae, which is a potential main pest for pistachio orchards established and to be established in Şırnak province and its districts, will form the basis for the Integrated Pistachio Control studies to be carried out in this province.

**ABSTRACT**

This study was conducted to determine the yield characteristics of some maize varieties as second crop in Kuyulu/Derik conditions in 2017. The study was established according to the randomized block design with three replications. In the study, 3 varieties (Dkc 5783, Agm 1644 and 32T83) were used. Differences between varieties were found to be significant for all traits. In the study, plant number, moisture content, hectoliter weight and yield characteristics were analyzed. According to the average results obtained from the traits examined in the study, the number of plants varied between 80000 (plants/ha) and 91000 (plants/ha), moisture content between 23% and 29%, hectoliter weight between 61 kg/hl and 68 kg/hl and grain yield between 14580 kg/ha and 14870 kg/ha. Agm 1644 was the leading variety in terms of grain yield.

**ABSTRACT**

This study was conducted to determine the yield characteristics of some maize varieties as second crop in Harran (Şanlıurfa) conditions in 2020. The study was established according to the randomized block design with three replications. In the study, 4 varieties (Aramis, Agm 1670, 32T83 and Capella) were used. Differences between varieties were found to be significant for all traits. In the study, plant number, moisture content, hectoliter weight and yield characteristics were analyzed. According to the average results obtained from the traits examined in the study, the number of plants varied between 83000 (plants/ha) and 113000 (plants/ha), moisture content between 22,3% and 27,9%, hectoliter weight between 61 kg/hl and 69 kg/hl and grain yield between 11770 kg/ha and 15620 kg/ha. Agm1670 was the leading variety in terms of grain yield.

### **ÖZET**

Kamu hizmetlerindeki dijital dönüşüm, modern toplumların karşılaştığı birçok zorluğu ele alırken, vatandaşlara daha etkili, erişilebilir ve şeffaf hizmetler sunma potansiyeline sahiptir. Bu dönüşüm, geleneksel hizmet sunum yöntemlerinin yerini dijital teknolojilerin aldığı bir süreç olarak tanımlanabilir. İnternet üzerinden yapılan başvurular, online ödemeler, e-devlet uygulamaları ve diğer dijital platformlar aracılığıyla hizmet sunumu, vatandaşların bekleme sürelerini azaltırken, hizmetlere daha hızlı erişim imkanı sağlamaktadır. Bu da, vatandaş memnuniyetinin artmasına ve kamu kurumlarının daha verimli çalışmasına katkıda bulunmaktadır. Ancak, kamu hizmetlerindeki dijital dönüşümün beraberinde getirdiği güvenlik ve gizlilik konuları, hassas kamu verilerinin çevrimiçi ortamlarda saklanması ve işlenmesiyle ilgili endişeler de vardır. Bu nedenle, güçlü siber güvenlik politikaları ve veri koruma yönetmelikleri bu süreçte kritik öneme sahiptir. Dijitalleşme aynı zamanda yönetim süreçlerinde de önemli bir dönüşüme neden olmaktadır. Ancak, dijital dönüşümün başarılı olabilmesi için dijital okuryazarlık düzeyinin artırılması ve herkesin teknolojiye eşit şekilde erişim sağlaması gerekmektedir. Bu çalışma, kamu hizmetlerindeki dijital dönüşümün potansiyelini ve zorluklarını ele almaktadır. Bu dönüşümün başarılı olabilmesi için güvenlik, gizlilik, eşitlik ve katılım gibi konuların dikkate alınması gerekmektedir. Yalnızca bu şekilde, kamu hizmetlerinde dijitalleşme, toplumların ihtiyaçlarını daha etkili bir şekilde karşılayabilir ve kapsayıcı bir toplum için adil bir fırsat eşitliği sağlayabilir.

**DIGITAL TRANSFORMATION IN THE PUBLIC SECTOR: A NEW ERA IN  
GOVERNANCE**

**ABSTRACT**

The digital transformation in public services holds the potential to address many of the challenges faced by modern societies while providing citizens with more effective, accessible, and transparent services. This transformation can be defined as a process where traditional service delivery methods are replaced by digital technologies. Application submissions, online payments, e-government applications, and other digital platforms facilitate service delivery, reducing waiting times and providing faster access to services, thereby contributing to increased citizen satisfaction and more efficient functioning of public institutions. However, the security and privacy concerns associated with the digital transformation of public services, particularly regarding the storage and processing of sensitive public data in online environments, are significant. Therefore, robust cybersecurity policies and data protection regulations are critically important in this process. Additionally, digital transformation also brings about a significant transformation in governance processes. However, for digital transformation to be successful, it is essential to increase digital literacy levels and ensure equal access to technology for everyone. This study addresses the potential and challenges of digital transformation in public services, emphasizing the importance of considering security, privacy, equality, and participation. Only in this way can digitalization of public services effectively meet the needs of societies and provide fair opportunities for inclusive communities.

**ABSTRACT**

Robotic systems usage in the rehabilitation of gunshot and mine-explosive wounds of the upper limb is an evidence-based method that improves function and quality of life. Polytrauma, including traumas of extremities, occupies first place in the structure of primary permeable wounds. Injuries of the upper extremities are often accompanied by damage to peripheral nerves. Such injuries significantly increase the duration of rehabilitation and lead to further disability and decreasing in quality of life. We reviewed a clinical case of long-term staged rehabilitation after a mine explosion wound of the left upper limb, complicated by post-traumatic neuritis of the left radial, ulnar and median nerves and significant loss of limb function (loss of function of left hand, flexion contracture of the left elbow joint etc.) in 45 years old man with a diagnosis of gunshot fragmentation wound of the lower third of the left shoulder with a gunshot multi-fragment intra-articular fracture of the distal epimetaphysis of the left humerus. The examination revealed a significant decrease in muscle strength of the left upper limb up to 1-2 points, pain during movements up to 6-7 points due to VAS, almost complete limitation of movements in the left elbow and wrist joints, limitation of movements in the left shoulder joint, impaired sensitivity, and edema syndrome in the lower third of the forearm, impaired grasping function. Outpatient rehabilitation was carried out, and the volume of rehabilitation assistance was high. Rehabilitation was carried out in three courses of 18–21 days with breaks of 1–2 weeks over a long period. Rehabilitation includes: physical therapy, ergotherapy, physical modalities (laser, ultrasound, electrotherapy), and medicines to reduce pain, edema and inflammation. During the 1<sup>st</sup> rehabilitation course, a robotic Smart glove was used, and in the 2<sup>nd</sup> and 3<sup>rd</sup> courses, Upper Limb Intelligent Feedback and Training System was additionally used.

**ABSTRACT**

Modern flight control systems rely heavily on linear algebra for real-time decision making. These systems model the complex dynamics of an aircraft using systems of linear equations. Each equation relates the aircraft's state, including position, velocity, and orientation, to the control inputs like movements of ailerons, elevators, and rudders. Solving these systems in real-time allows the control system to predict how the aircraft will respond to pilot commands or external disturbances. By analyzing these equations, engineers can design control laws that ensure stability and efficient flight paths. Linear algebra's ability to represent relationships between flight parameters and efficiently solve complex systems makes it a cornerstone of modern flight control technology, contributing to safe and smooth air travel.

**Keywords:** Flight control systems, Linear algebra, Real-time decision making, Systems of linear equations, Aircraft dynamics, Control inputs, State variables, Control laws, Stability, Efficient flight paths, Safe air travel

In the realm of mental health, depression stands as a formidable challenge where communication barriers often hinder seeking help, the advent of a Motivational AI Tool for Depression emerges as a beacon of hope. Designed to cater to individuals battling depression, this innovative tool offers solace and support when words fail. Through personalized encouragement and empathetic interactions, it serves as a virtual confidant, fostering emotional resilience and alleviating stress. In the face of despair and the alarming rise in suicide rates, this tool stands as a lifeline, offering companionship and motivation, ultimately paving the path towards healing and renewed hope.

**A CONFORMABLE FRACTIONAL DERIVATIVE MODEL  
FOR HIV-1 INFECTION WITH STEM CELL TRANSPLANTATION**

**ESAM Y. SALAH**

Department of Mathematics, Dr. Babasaheb Ambedkar Marathwada University, Aurangabad  
(M.S.), India.”

**ABSTRACT**

The authors have proposed a new mathematical model to analyze the effects of stem cell transplantation on HIV-1-infected patients. The model employs a system of first-order nonlinear ordinary differential equations. The equations represent five main populations: stem cells, free HIV viral particles, productively infected T cells (actively producing new virus), infected T cells in the eclipse phase (infected but not yet producing virus), and uninfected T cells. This mathematical modelling approach can be utilized to study the interactions between transplanted stem cells and the dynamics of HIV infection within the patient's T cell population. By developing these novel differential equations, the authors aim to gain insights into how stem cell transplantation may impact disease progression in individuals positive for HIV-1. In this study, the conformable fractional derivative (CFD) of order  $q$  in conjunction with the LC operator of order  $\rho$  is employed to develop the model. Fixed-point theorems were utilized to prove the existence and uniqueness of the solutions to this model. The study discusses the stability of the mathematical model and equilibrium points. Adam Moulton's method was used to find an approximate solution to the given model. The study also examined the effects of changing the  $q$  and  $\rho$  values. The study found that there is convergence in solution curves when altering  $q$  while maintaining a constant  $\rho$  value, in contrast to what it observed when changing the value of  $\rho$  and preserving the  $q$  value constant.

**Keywords:** Conformable derivative; Fixed point theorem; Adams-Moulton approach.

**ABSTRACT**

This paper explores how mathematics is essential for optimizing solar and wind energy systems. It dives into various aspects of both technologies, starting with solar energy, where mathematical models predict sunlight levels, optimize panel positioning, and account for factors like shading and weather. Additionally, optimization algorithms are instrumental in designing solar tracking systems for enhanced energy capture. When it comes to wind energy, mathematical models simulate airflow and predict wind speeds, aiding in turbine design and placement optimization. Furthermore, mathematical optimization fine-tunes turbine geometry and layout to maximize energy output while minimizing wake effects. Integrating these renewable sources with storage and the grid is facilitated by algorithms, ensuring efficient utilization of clean energy. Overall, this paper underscores the pivotal role of mathematics in advancing solar and wind technologies for a sustainable future.

Brijeshmathimariappan1@gmail.com

**ABSTRACT**

Guardian of the Deep is an innovative idea to monitor and enhance the health of aquatic species. It works through integration of autonomous underwater drones with advanced artificial intelligence algorithm and environmental sensors. Nowadays marine ecosystem faces several challenges such as pollution, overfishing and climate change. In order to it, this project aims to update the conservation methods by providing real time data on the health of aquatic organisms. The autonomous underwater drones navigate through oceans, capturing comprehensive datasets and the collected data undergoes detailed analysis through AI algorithms and it generates the health reports for various aquatic species. It also monitors pollution level, thermal imaging, overfishing. The reports collected highlights trends, identify potential trends and areas need for attention. This innovative initiative emerges as a formidable force in safeguarding aquatic life and restoring the health of our Aquatic species. This is a collaborative approach, engaging research institutions, conservation organizations and public. By this project we increase understanding about marine ecosystem and also it promotes active participation of public in marine conservation effort.

**Keywords:** Underwater drones, Artificial intelligence, aquatic life health, marine ecosystem, biodiversity monitoring

**ABSTRACT**

Epidemiology, a cornerstone of medical sciences, intricately unravels the complex web of health and disease within populations. At its core, it delves into the distribution, determinants, and dynamics of health-related events, employing meticulous research methodologies and statistical techniques such as observational studies, cohort investigations, case-control analyses, and randomized controlled trials. Through these endeavours, epidemiology identifies patterns, risk factors, and causal relationships, offering a comprehensive understanding of diverse diseases. Its paramount significance lies in contributing to public health through the informed development of evidence-based interventions and policies. By scrutinizing demographics, genetics, environmental exposures, and socio-economic determinants, epidemiologists yield crucial insights into disease prevention and control. Whether tracking infectious diseases, investigating outbreaks, or studying chronic conditions and lifestyle influences, epidemiology serves as a guiding force for healthcare strategies. Beyond its analytical methodologies, epidemiology stands as the vanguard in the ongoing quest for global health equity. Its influence extends into the development of targeted interventions and vaccination programs, actively mitigating the burden of diseases worldwide. The discipline addresses disparities in health outcomes, acknowledging the intricate interplay between biological, environmental, and social determinants. In navigating public health crises and contributing to the formulation of holistic healthcare strategies, epidemiologists become indispensable agents of change. In an era marked by interconnected global health challenges, epidemiology fosters resilience and paves the way for a healthier, more equitable future for communities worldwide.

**ABSTRACT**

This abstract proposes a novel solution to urban traffic congestion by leveraging matrix-based simulation and control techniques. It begins with comprehensive data collection from sensors and cameras to analyze traffic patterns and congestion points. Representing the road network as a graph, an adjacency matrix is created to model traffic dynamics. Optimization algorithms are then applied to devise optimal traffic signal timings and routing strategies. A real-time control system adjusts signals and lanes based on current conditions, aiming to minimize travel times and enhance efficiency. Evaluation through simulations and field trials assesses the system's impact on travel time reduction, fuel savings, and emissions. This approach offers a promising avenue for cities to address congestion and create more sustainable urban environments.

**Keywords:** urban traffic congestion, to model traffic dynamics

**BASIS AND RANK**

**AKSHAY JILLA**

R.M.K. Engineering College, Student, Information and Technology, Thiruvallur, India.

**Email:** 230751.CB@rmkec.ac.in

**ABSTRACT**

Basis and rank are fundamental concepts in linear algebra with broad applications in various fields including mathematics, engineering, and computer science. A basis for a vector space is a set of linearly independent vectors that span the entire space, providing a framework for expressing any vector within that space as a unique linear combination of basis vectors. The concept of basis allows for the representation and analysis of vectors in terms of a minimal set of independent components, facilitating operations such as solving systems of linear equations and understanding the structure of vector spaces. The rank of a matrix is a measure of its linear independence and dimensionality, defined as the maximum number of linearly independent columns or rows within the matrix. It provides crucial insights into the properties and solutions of systems of linear equations, as well as the geometric interpretation of transformations represented by matrices. Understanding the rank of a matrix is essential in numerous computational tasks such as solving systems of linear equations, performing matrix factorizations, and solving optimization problems. In summary, the concepts of basis and rank play pivotal roles in linear algebra, offering powerful tools for analyzing vector spaces, matrices, and their transformations. Their applications extend across diverse fields, underpinning essential operations and insights in mathematical and computational domains.

**Keywords:** vector spaces, Basis, rank

**ABSTRACT**

The COVID-19 pandemic has underscored the critical need for accessible and affordable ventilator solutions, particularly in resource-constrained environments. This abstract explores the concept of a do-it-yourself (DIY) ventilator as a viable alternative. Utilizing readily available materials and open-source designs, DIY ventilators offer a low-cost solution for providing respiratory support to patients in emergency situations. By leveraging components such as Arduino microcontrollers, 3D-printed parts, and basic electronic circuits, individuals with basic technical skills can assemble functional ventilators. However, safety, reliability, and adherence to medical standards remain paramount considerations. Collaborative efforts between medical professionals, engineers, and DIY enthusiasts are essential for refining designs, ensuring efficacy, and disseminating best practices. DIY ventilators have the potential to complement traditional medical equipment during crises, extending respiratory support to those in need, especially in underserved communities. Continued research and innovation in this field hold promise for enhancing global healthcare resilience.

**ABSTRACT**

The agricultural sector stands on the precipice of transformation, poised to embrace the symbiotic relationship between mathematics and farming economies. This ABSTRACT delves into the innovative application of mathematical modeling and optimization techniques to revolutionize traditional farming practices, catalyzing sustainable growth and prosperity. At the heart of this paradigm shift lies the integration of advanced data analytics, machine learning algorithms, and mathematical models. Through meticulous analysis of historical crop yield data, weather patterns, soil quality metrics, and market demand fluctuations, farmers can unlock invaluable insights into the complex dynamics of agricultural production. By harnessing the predictive power of mathematical models, farmers gain the ability to forecast optimal planting schedules, irrigation regimes, and fertilizer applications, tailored to specific crop varieties and regional conditions. Moreover, optimization algorithms serve as the cornerstone of resource allocation strategies, orchestrating the efficient utilization of water, energy, and nutrients to maximize yield while minimizing environmental impact. By fine-tuning these variables, farmers can achieve remarkable improvements in productivity and profitability, fostering economic resilience and food security in farming communities.

**ABSTRACT**

This research paper explores the transformative impact of integrating ChatGPT, an advanced language model, into Ayurvedic education to enhance the overall learning experience. With the increasing interest in Ayurveda and the demand for innovative educational approaches, this research explores how ChatGPT can enrich the learning environment. Ayurvedic students often struggle to memorize extensive information, especially complex terms, within tight deadlines. Integrating ChatGPT enables efficient access to Ayurvedic information, helping students overcome memorization challenges and stay current in their studies. This facilitates a better grasp of intricate concepts, allowing them to stay informed and updated in their studies. This contemporary paper provides the responses given by ChatGPT for the authors' prompt on Ayurveda, teaching, and learning.

**Keywords:** Ayurvedic education, language models, ChatGPT, personalized learning, interactive teaching, artificial intelligence, Ayurveda, educational technology.

**ABSTRACT**

In this study the optical properties of PVA/(2 and 4)wt.% glycerin doping by (3,5,7 and 9) M H<sub>2</sub>SO<sub>4</sub> such as the, transmission and absorption spectra have been record as a function of doping ratio. The UV-vis absorption properties of polyvinyl alcohol (PVA) membranes were investigated by UV-VIS spectroscopy. The samples were investigated in initial state and after UV and gamma exposure. Some modification appears in the spectra of samples containing glycerin after doping by H<sub>2</sub>SO<sub>4</sub>. This behavior indicates modifications induced in the local structure of the polymeric, membranes.

**Keywords:** UV-VIS spectroscopy, gamma exposure

**ABSTRACT**

Diabetes is defined as a metabolic disease commonly observed in clinics and is characterized by hyperglycemia due to impaired insulin secretion, insulin resistance, or both, resulting in impaired metabolism of sugars, lipids, and protein. Herbal plants are now used to treat diabetes since they have fewer adverse effects. However, the current study was designed to evaluate the effects of *Cheiranthus cheiri* seeds in alloxan-induced diabetic rats. For this purpose, adult

albino rats weighing about 180-200g were separated into four groups. The first group was negative group (non-diabetic) rats. The second group was positive control alloxan (150 mg/kg body weight) and a standard diet. The third group was standard (glibenclamide 10 mg/kg body weight) along with The fourth group was treated as ethanolic extract of *Cheiranthus cheiri* seeds (10 mg/kg body weight). On the 21<sup>st</sup> day, the blood sample was collected for measuring blood glucose levels. Parameters like serum CBC, serum glucose, serum insulin, and Oxidative stress markers (TAC, TOS, MDA) were assessed. For histological analysis, samples of pancreatic tissue were collected. One-way ANOVA (Analysis of Variance) and DMR (Duncan's multiple range) were used to statistically analyze the data. Results of the current study revealed that *Cheiranthus cheiri* had significant effects on body weight and normalized the levels of fasting blood glucose, serum glucose, and serum insulin in the treatment group as compared to the positive control group. According to histopathological examination. However, in the positive control group, the pancreas showed the destruction of  $\beta$ -cells, small-sized islets of Langerhans, and loss of cellular contents. The normal histological structure was restored in the *Cheiranthus cheiri* seeds-treated group, demonstrating that normal pancreatic parenchyma and completely functional  $\beta$ -cells in islets of Langerhans were advantageous for pancreatic beta-cell regeneration. Additionally, *Cheiranthus cheiri* seeds enhanced beta cell performance and returned INS-1, INS-2, PDX-1, and IGF-1 expression to normal levels. In conclusion, it was discovered that *Cheiranthus cheiri* seeds are advantageous for the normal functioning of the pancreas and the regeneration of beta cells.

**Keywords:** *Cheiranthus cheiri*, alloxan, glibenclamide

**ABSTRACT**

Programmes for skill development are essential because they empower people, improve their employability, and promote economic growth. This research paper delves into the assessment of available skill development programmes in India so as to determine their effectiveness and identify some critical obstacles that hamper their success. The need for skill development to empower people and boost the economy keeps growing, as it is important to know the strengths and weaknesses of present activities. This study utilizes a mixed-methods approach to assess the results and consequences of skill development programmes among various sectors and demographic segments. The comprehensive analysis identifies key challenges impeding the effectiveness of these initiatives like access issues, standards-related problems, significance issues, and inclusiveness concerns, among others. Moreover, this paper has strategic recommendations based on empirical evidence and stakeholder perspectives designed to increase the impact and extend the reach of skill development programmes in India. Policymakers, practitioners, and stakeholders can create an enabling environment for capacity building through resolving these challenges and implementing targeted strategies thereby contributing towards inclusive growth for socioeconomic advancement.

**ABSTRACT**

Human resource management is a very imperative feature in the education practice. Human resources in an educational institution submit to every individual or group functioning in that institute, counting educators, learners, administrators, and all supplementary members of the workforce running in that institute. Online teaching and learning came into the style. Artificial intelligence (AI) is altering every market sector, and the education sector is no exception. AI has been converted into a fundamental component of educational institutions and has a force on teachers and students. The educational sector has embraced the recent techniques of training and learning. Hence, artificial intelligence (AI) gives opportunities for education to turn effortlessly accessible both inside and outside the classroom. In the demand of the present times, AI has a vast potential in the education sector in the market and is a progressive change. This paper attempts to get an insight on the role of AI in sustainable instruction of higher education institutions from the teacher's perception.

**ABSTRACT**

This in-depth study examines the use of Azolla microphylla, rich in protein with a rate of up to 27%, in chicken feed at different percentages: 5%, 10% and 15%, in separate batches. The results obtained are remarkable, particularly with regard to the weight gain of the Fayoumi hens, with a concentration of 15% of Azolla which particularly stands out. It is notable that even fresh Azolla, used as a dietary supplement at 50%, resulted in a higher average live weight compared to the control group (1150.90g vs 1034.63g). This approach also led to impressive results in terms of lipid content and weight gain. The demonstrated effectiveness of Azolla suggests that it could be used as a partial substitute for soybean meal, thereby improving the protein quality of Fayoumi chicken meat.

**ABSTRACT**

Quantum mechanics is a physical science, it allows the development of technology in many fields such as computing, electronics, and chemistry. Quantum mechanics is the description of the behavior of matter in all their details, everything that happens at the atomic scale. The phenomena are described by the wave function which contains all the information on the particles of a system and its behavior follows the Schrödinger equation. There are several challenges in modern physics like the resolution of the Schrödinger, Klein Gordan, Dirac equations, etc with the attractive Coulomb force and other potentials. The resolution of the Schrodinger equation allows the identification of some physical systems and their properties by finding bound states and the eigenfunctions which are resolved using many different methods, with modified Kratzer potential. The results obtained are important in several branches of theoretical physics as well as quantum chemistry because they are more general and useful for studying nuclear charge radius, spin, and nuclear diffusion. In this paper the shrodinger equation was solved to determine the energy eigenvalues of some selected diatomic molecules like (CO,NO...) for the Kratzer fues potential employing an analytical method called the WKB approximation. The results are satisfied and accurate with other method outcomes.

**Keywords:** Shrodinger equation, Kratzer fues potential, WKB approximation, eigenvalues of energy, diatomic molecules.

**ABSTRACT**

This study delves into the profound impacts of the Bengal Partition and the subsequent Bangladesh Partition on the marginalized Namasudra Dalit community, focusing on their struggles and identity. The Bengal Partition of 1947 carved the region into East Bengal, a part of Pakistan, and West Bengal, which remained a part of India. This division based on religious lines led to immense communal violence and mass migrations. The Namasudra Dalits, primarily residing in East Bengal, were profoundly affected by this partition. Many were forced to leave their ancestral lands, facing displacement, violence, and a loss of identity. The Bangladesh Partition of 1971 was another pivotal moment, resulting in the formation of the independent nation of Bangladesh. This partition, arising from the Bangladesh Liberation War, brought further turmoil to the Namasudra Dalit community. The conflict and subsequent partition led to widespread violence, displacement, and an erosion of their socio-economic standing. These partitions had a lasting impact on the lives of the Namasudra Dalit community. Displaced from their homes and facing discrimination in both East and West Bengal, they struggled to rebuild their lives. The loss of land and livelihoods exacerbated their already marginalized status, pushing many into poverty and vulnerability. In his autobiography 'Interrogating My Chandal Life,' Manoranjan Byapari offers a poignant account of these partition shadows and the Dalit identity crisis. Byapari, a Namasudra Dalit himself, vividly portrays the struggles, discrimination, and resilience of his community amidst the chaos of partition. Through his personal narrative, he sheds light on the profound impacts of these historical events on the lives of the Namasudra Dalits, highlighting their quest for identity and dignity.

**Keywords:** Partition, Namasudra Dalit, Caste discrimination, violence and displacement.

**SUSTAINABLE MANUFACTURING IN GARMENTS INDUSTRY BY APPLYING

**ABSTRACT**

Addressing the pressing challenges of resource depletion and climate change requires the adoption of sustainable practices in production and consumption. This study explores the application of simulation and lean tools to reduce waste in manufacturing processes, employing techniques such as simulations and Kaizen in the garment production. By examining the gap between batch production flow and single-piece flow using ARENA simulation software, the study evaluates their impact on productivity and resource utilization. Results indicate a notable improvement in productivity (31 pieces per day), also average work in progress (WIP) decreased from 26.1 to 5.75 pieces, when adopting the one-piece flow approach, showcasing its advantage over batch flow in terms of reducing waste and optimizing resource usage. Furthermore, through Kaizen, the study demonstrates significant improvements in time and cost efficiency. For instance, by streamlining the watch pocket operation, cycle time decreased from 0.83 minutes to 0.75 minutes per garment, thus 0.08 minutes per garment is saved. As daily production is 30,000 pieces resulting in substantial cost savings of Rs 120,000 per month. Similarly, by optimizing the parts numbering operation, cycle time is reduced from 0.68 minutes to 0.52 minutes per garment, thus 0.16 minutes is saved per garment. As daily production is 30,000 pieces this leads to a cost savings of Rs 240,000 per month. The results highlight the potential for reduced waste in support of sustainable manufacturing and consumption practices for the circular economy. This study contributes to increased efficiency, reduced waste, and improved overall performance in the garments industry.

**Keywords:** Lean tools, Sustainable manufacturing, ARENA simulation tool, Kaizen, Waste reduction, Performance improvement.

**ABSTRACT**

Mathematics serves as the backbone of engineering, providing the fundamental tools and methodologies for analysis, design, and problem-solving. Through a comprehensive overview, this paper highlights key areas where mathematics is employed, including modeling and simulation, statics and dynamics, control systems, signal processing, optimization, probability and statistics, numerical methods, and electrical engineering. Each section demonstrates how mathematical principles are intricately woven into the fabric of engineering practice, enabling engineers to tackle complex challenges and innovate across diverse domains. By elucidating the symbiotic relationship between mathematics and engineering, this paper underscores the significance of mathematical proficiency in shaping the modern landscape of technological advancement and innovation. It also delves into the critical intersections between mathematics and engineering, illuminating the pervasive influence of mathematical principles on engineering practice. Through a systematic examination of key domains, including modeling, analysis, and optimization, it underscores the indispensable role of mathematics in fostering innovation and problem-solving in engineering. By elucidating concrete examples and applications, this paper illustrates how mathematical concepts such as differential equations, linear algebra, and optimization algorithms underpin various engineering disciplines, from mechanical and civil engineering to electrical and biomedical engineering. Moreover, it explores the evolving landscape of interdisciplinary research, where the integration of mathematics and engineering fuels advancements in fields such as robotics, artificial intelligence, and sustainable infrastructure. Through a nuanced exploration of theory and practice, this paper underscores the symbiotic relationship between mathematics and

**ABSTRACT**

The presence of numerous anatomic and physiologic obstacles has long made ocular drug delivery a problem for ophthalmologists and researchers into drug delivery. Inevitable ocular obstacles, both static and dynamic, not only prevent xenobiotics from entering the eye, but also prevent therapeutic substances from being actively absorbed. Improved medication bioavailability and controlled drug release at the location of action, which can address several ocular defences, should be included when creating the optimum delivery system. To treat disorders of the anterior and posterior segment, traditional ophthalmic drugs include anti-vascular endothelial growth factor intravitreal injections and topical eye drops agents. Puncture plugs, eye implants, contact lenses with drug-eluting material, and ocular iontophoresis are examples of modern innovations for controlled and prolonged medication release for the anterior ocular segment illnesses. Various intravitreal implants have been approved as a result of parallel attempts ocular drug delivery method for diseases of the back of the eye. Dendrimers, microneedles, nanomicelles, nanoparticles, nanomicelles, liposomes, and nanowafers are among the new drug delivery technologies being investigated for anterior and posterior abnormalities. To increase patient compliance for diseases of the back of the eye, new techniques for the noninvasive delivery of potent treatments are becoming more popular. In this review article topics are covered in the current developments and upcoming difficulties in ocular drug administration this review article.

**ABSTRACT**

As transportation technology advances, it's more important than ever to make sure that roads are safe, especially for Advanced Driver Assistance Systems (ADAS). Many innovative approaches to capturing road incident data using advanced sensors and processing it through an intelligent algorithm that utilizes Machine Learning and AI techniques. The goal is to improve ADAS's ability to detect and respond to road irregularities quickly. Various Deep Learning and AI frameworks are being used on extensive datasets that include different road conditions. The models are fine-tuned to recognize different features associated with the classification of the dataset, allowing for a comprehensive and accurate detection mechanism. Much research has been done including studying a robust dataset that has a wide range of road scenarios. This dataset is used to train and validate the machine learning models to ensure they can work in real-world conditions. ADAS has been optimized with contributions that allow vehicles to identify and respond to road anomalies in real-time. This solution will enhance safety for vehicle occupants and contribute to the overall reliability of autonomous and semi-autonomous driving systems. In conclusion, this research advances the field of road anomaly detection by proposing a comprehensive solution that powers Machine Learning and Artificial Intelligence within ADAS.

**ABSTRACT**

Composite materials are increasingly used in aeronautics. Their excellent mechanical properties and their low weight give them a definite advantage over to metallic materials. In this work we presented a numerical study of anisotropic and stratified plates. Le sujet principal est la mécanique des matériaux composites renforcés de fibres. Ces matériaux sont généralement composés de fibres cassantes et d'un matrice ductile. La géométrie se présente sous la forme d'un stratifié. qui se compose de plusieurs couches parallèles. L'avantage de Cette construction est qu'elle donne au matériau plus de résistance et moins de poids. calculation consists in determining the characteristics mechanics of the material according to those of its components is to determine the homogenized technical constants of the layer ( $E$ ,  $G$  and  $\nu$ ), due to the regular arrangement of the fibres, by the mixing rule.

**Keywords:** Composite, epoxy carbon, mechanical properties, the mixing rule..

**ÖZET**

Azot, hücre bileşiminde karbon içeren maddelerle birleşerek aminoasitler, amidler, proteinler, vitaminler ve hormonlar gibi çeşitli organik bileşikler oluşturması nedeniyle canlı yaşamında önemli bir yer tutar. Atmosferde bitkilerin yararlanamayacağı formda oldukça yüksek düzeylerde azot bulunmasına rağmen, topraklarda bitkilerin yararlanabileceği formdaki azotun miktarı genel olarak çok düşüktür. Atmosferde bulunan azottan canlıların büyük bir bölümü doğrudan doğruya yararlanamazlar. Organizmaların büyük bir bölümü azotu ancak suda erimiş nitrat veya amonyum iyonları halinde topraktan alabilmektedir. Doğada oldukça hareketli olan azot, toprak ile atmosfer arasında canlı organizmalar (biyolojik yolla); endüstriyel faaliyetler, şimşek çakma, yıldırım düşme gibi atmosferik olaylarla sürekli bir dolanım halindedir. Biyolojik yolla yarayışlı azotun toprağa bağlanmasında etkili olan mikroorganizmaların başlıcaları; toprakta serbest yaşayan aktinomisetler, mavi-yeşil algler, clostridiumlar ve baklagil köklerinde ortak yaşayan(simbiyoz) Rhizobium türü bakterilerdir. Bunların en önemlileri, konak seçici Rhizobium bakterileri olup, *Leguminosae* (Baklagiller) familyasındaki bitkilerle birlikte bulunur ve bu bitkilerin köklerinde nodüller oluşturarak atmosfer azotunu toprağa fikse ederler. Bu gruba giren baklagillerin simbiyotik yaşam sürdürdükleri bitkiler ve bu bitkilere özgü bakteri türleri birbirlerinden belirgin olarak farklıdır. Bu nedenle yeni baklagil ekilen bir alanda, ürün artışını önemli derecede sağlayan uygun bakteri ile aşılama yapılması önerilmektedir. Pek çok toprakta nodül bakterilerinin sayısı veya kalitesi yeterli olmamaktadır. Bu koşullarda toprak veya tohumun etkinliği yüksek olan Rhizobium kültürleriyle aşılama gereklidir. Aşılama: Azot tespit etmek yönünden baklagil bitkilerinin köklerinde yumrucuk meydana getirebilecek etkili bakteri suş veya suşlarının toprağa/tohuma verilmesidir. Her baklagil bitkisi için özel bakteri grubu olduğu gibi, her grup içerisinde de azot tespit etme yönünden etkili veya etkisiz suşlar bulunmaktadır. Etkisiz suşlar, yumrucuk meydana getirmelerine karşılık azot tespit etme güçleri çok düşüktür. Bu nedenle, çeşitli bitkiler için etkili suşların bulunup üretilmesi zorunludur.

**Anahtar Kelimeler:** Bakteri aşılama, Biyolojik azot fiksasyonu, İnokülasyon, Rhizobium bakterisi.

## **INOCULATION SEQUENCE IN SOIL AND SEED**

### **ABSTRACT**

Nitrogen has an important place in living life because it combines with carbon-containing substances in cell composition to form various organic compounds such as amino acids, amides, proteins, vitamins and hormones. Although there are quite high levels of nitrogen in the atmosphere in the form that plants cannot utilise, the amount of nitrogen in the form that plants can utilise in soils is generally very low. Most of the living organisms cannot directly utilise the nitrogen in the atmosphere. Most of the organisms can only take nitrogen from the soil in the form of nitrate or ammonium ions dissolved in water. Nitrogen, which is highly mobile in nature, is in a continuous circulation between the soil and the atmosphere by living organisms (biologically) and atmospheric events such as industrial activities, lightning strikes and lightning strikes. The main microorganisms that are effective in the binding of biologically useful nitrogen to the soil are actinomycetes, blue-green algae, clostridium and Rhizobium bacteria that live freely in the soil and symbiosis in legume roots. The most important of these are host-selective Rhizobium bacteria, which coexist with plants of the Leguminosae family and fix atmospheric nitrogen into the soil by forming nodules on the roots of these plants. The plants with which the legumes in this group live symbiotically and the bacterial species specific to these plants are distinctly different from each other. For this reason, it is recommended to inoculate a newly planted legume area with the appropriate bacteria, which significantly increases the yield. In many soils, the number or quality of nodule bacteria is not sufficient. Under these conditions, it is necessary to inoculate the soil or seed with highly effective Rhizobium cultures. Inoculation: In terms of nitrogen fixation, it is the introduction of effective bacterial strains or strains that can form nodules in the roots of legume plants into the soil/seed. As there is a special group of bacteria for each legume plant, there are effective or ineffective strains within each group in terms of nitrogen fixation. Although ineffective strains form nodules, their nitrogen fixing power is very low. Therefore, it is necessary to find and produce effective strains for various plants.

**Keywords:** Bacterial inoculation, Biological nitrogen fixation, Inoculation, Rhizobium bacteria.

**ABSTRACT**

In thermal power and manufacturing processes, solar energy has grown extensively utilized. This work investigates the heat diffusion characteristics of an Unsteady Oldroyd B hybrid nano liquid across an expanding cylinder to improve the Parabolic Trough Solar Collector (PTSC) heat transfer efficiency. A stable magnetic field is used in the radial path in the appearance of radiant heating and general generating or absorbing heat with the Cattaneo-Christov (CC) heat flow model. A hybrid nano liquid composed of two distinct nanoparticles,  $\text{CoFe}_2\text{O}_4$  and  $\text{Fe}_3\text{O}_4$ , embedded in ethylene glycol as the primary fluid, is used to formulate the mathematical model. The mathematical model is then reconstructed into a nonlinear ordinary differential equations (ODEs) system, utilizing the proper likeness transformation. The MATLAB software function `bvp5c` is employed to arrive at a numerical solution to the posed problem. We observed the fluctuations in the flow and thermal area, as well as the local Nusselt number, impacted by the pertinent dimensionless characteristics. The findings are addressed graphically and tabularly for several nanoparticle shapes (spherical, brick, and platelet). It has been discovered that spherical shapes have a faster heat conduction rate than brick and platelet nanoparticle shapes. While unsteadiness parameters tend to increase the temperature field, the augmentation of the temperature relaxation factor reduces the energy profile.

**Keywords:** Thermal radiation, Magnetic field, Oldroyd B, Cattaneo-Christov (CC) heat flux, Heat transfer.

**GENERALIZED SYSTEM OF EXTENDED NONLINEAR VARIATIONAL  
INEQUALITIES GOVERNED BY GAUSS-SEIDEL-TYPE ITERATIVE APPROACH**

**ABSTRACT**

This paper aims to investigate novel generalized systems encompassing extended nonlinear variational inequalities, featuring  $3k$ -distinct nonlinear relaxed cocoercive operators. We delve into the associated fixed point problem arising from this innovative generalized system of extended nonlinear variational inequalities. To address this problem, we propose explicit iterative methods with  $k$  steps, incorporating projection operators. Leveraging the equivalent fixed point problem, we advocate the utilization of  $k$ -steps Gauss-Seidel-type iterative algorithms to derive an approximate solution for the system under consideration. Convergence results for these newly introduced  $k$ -step explicit iterative methods are established. Additionally, the paper explores specific instances of the extended variational inequalities system as special cases.

**Keywords:**  $k$ -steps Gauss-Seidel type iterative algorithm, Generalized system of extended nonlinear variational inequalities, Projection, Relaxed  $(\alpha, \beta)$ -cocoercivity,  $\kappa$ -Lipschitz continuity.

**INFLUENCING FACTORS ON THE ORIGIN OF MUSICAL SOUNDS  
AND VOWELS**

**Dr. Serenenen ALTAN-UYA**

Citi University, 14190 Ulaanbaatar, Mongolia

**Email:** Altanuya68@gmail.com

**ABSTRACT**

The creation of Mother Nature is the conscious man. In connection with the birth of this perfect human being, the first forms of interaction between nature and human sounds were formed, and the first cultural forms such as dance, music, and writing developed over thousands of years. Human and natural sounds are the sources of factors that influence the formation of musical sounds. Sound is a physical phenomenon that humans and animals hear, and is a wave that vibrates through solids, liquids, and gases. Humans are capable of hearing sounds in the range of 20-20,000 Hertz, and the process of human sound has evolved over 20,000-30,000 years through the stages of family, tribe, and ethnicity. As early humans communicated with each other through sound, intelligence developed and language emerged. The famous English scientist Charles Darwin wrote in his book "On the Origin of Species" 150 years ago that "the sounds of birds are somewhat similar to human sounds." Darwin's theory was supported by Shiner Miyagawa, a scientist from Japan, who noted that "it seems that ancient people imitated the chirping of birds and made various sounds. International linguists agree that "Language is a whole system of gestures, rules, signs, pronunciations, and words that communicate with each other that convey common human understanding, ideas, and meanings." As language developed, so did the need for people to write down what they were thinking and what they wanted to say. Human history has survived to this day thanks to the origins of literacy, but it has often flourished and perished. Linguists divide the origin of ancient writing into the following periods: sign language, gestural signs, pictorial signs, semantic signs, phonetic signs, perfect signs, conventional signs, pronouns, etc. Influenced by these factors, modern music led to the historical stage of vowel marking.

**ABSTRACT**

What does made someone get up early and feel good with themselves? The motivation. For many tasks, the brain needs to produce what moves us. In the university, there is a natural competition to be better than our classmates. The students are involved in projects beyond the classroom with the aim of getting better opportunities at university. However, it is important to note that this motivation can be an important factor in the job market that students may face in the future. It is for this reason that it is essential to prepare for competition in the job market right from university. Cognitive maturation requires students to take responsibility when it comes to participating in university projects. Making compromises during this period is the first step towards understanding the rules of coexistence and ensuring a better working environment. The objective of this study is to examine how motivated students are when they join and actively participate in extracurricular activities offered at their educational institution - seeing that gaining this experience can prevent the frustration and anxiety that the demands of a job can bring, and what impact the experience has on the job market. The first step to analyze these impacts will be to interview students from different courses. Interviewing those who participate, those who do not participate and questioning them how experience in acquiring this previous knowledge can help them in the job market. Those who do not participate tend to have difficulties in finding better opportunities and, consequently, those who participate will have more opportunities due to the contacts that are made during the participation in these projects. In the end, it is expected to understand the results of an experience acquired at the university, before entering the job market. Aiming to improve the quality of life of students, avoiding anxiety and promoting motivation in the execution of tasks. In addition to promoting the extracurricular opportunities that the university environment provides to students the various benefits of participating in projects.

**ABSTRACT**

This study consisted of a comparative study of the photocatalytic performance of zinc oxide nanoparticles (ZnO NPs) synthesized through two distinct green methods: hydrothermal synthesis and co-precipitation in the presence of Retama (RT) plant extract. The hydrothermal method involved the use of water-based solvents and controlled temperature-pressure conditions, while the co-precipitation method utilized aqueous solutions form RT-ZnO NPs. The nanoparticles were characterized using various analytical techniques such as X-ray diffraction (XRD), Fourier Transform Infrared Spectroscopy (FT-IR), and the point of zero charge (PZC). Subsequently, the synthesized RT-ZnO nanoparticles were tested for their photocatalytic efficiency, specifically their ability to degrade the herbicide Linuron (LNR) in pure water using UV light under various conditions. The kinetics of LNR photodegradation were also studied. RT-ZnO NPs synthesized via hydrothermal synthesis and co-precipitation demonstrated an effective degradation rate of approximately 90% and 100% for LNR (2 x 10<sup>-5</sup> M) at neutral pH (pH=7.21) under UV light, respectively. These results highlighted variations in photocatalytic activity between the ZnO nanoparticles produced using the two different green synthesis routes. The findings revealed that RT-ZnO nanoparticles prepared through the hydrothermal method exhibited superior photocatalytic efficiency compared to those synthesized by co-precipitation. The study suggests that the synthesis method significantly affects the photocatalytic performance of ZnO, offering insights into optimizing eco-friendly approaches for producing highly efficient photocatalysts for environmental remediation applications. This comparative analysis sheds light on the potential and limitations of different green synthesis methods in achieving enhanced photocatalytic efficiency in ZnO nanoparticles to be used in the treatment of wastewater.

**Keywords:** Zinc Oxide nanoparticles, green synthesis, hydrothermal and co-precipitation methods, photocatalytic degradation, Linuron.

**ABSTRACT**

The presence of emerging contaminants such as pharmaceuticals in natural waters has raised increasing concern due to their frequent appearance and persistence in the aquatic ecosystem and the threat to health and safety of aquatic life, even at trace concentrations. Subsequently, it is essential to develop new technologies that can efficiently eliminate such contaminants from the wastewater. Photocatalytic degradation in the presence of light is one of the most advanced and efficient technologies for wastewater decontamination due to simple, economical, and eco-friendly process. Many photocatalysts such as metal oxides, sulfides, and other semiconductors are used for wastewater treatment. Recently, metal-organic frameworks (MOFs) possess fascinating photocatalytic applications with their unique properties of ultra-high surface area, high porosity, and controllable chemical properties and strong stability Iron based metal organic framework using a di-carboxylate linker succinic acid (Fe-SA MOF), was synthesized using co-precipitation method and characterized by the point of zero charge (PZC) it was examined for the photocatalytic degradation of a pharmaceutical pollutant namely Ibuprofen (IBP) via photo-Fenton process. Fe-SA MOF exhibited highest degradation of 75% in 150 min at natural pH (4.5) in the presence of 0.25 g L<sup>-1</sup> of the synthesized catalysts under UV-Visible light. The as-prepared Fe-SA MOF was applied for photo-Fenton oxidation of Ibuprofen (IBP). It exhibited efficient photo-Fenton catalytic degradation upon visible light irradiation. The IBP (5.10<sup>-5</sup> M) was completely degraded within 150 min under UV-visible light with the aid of Fe-SA MOF (0.25 g/L) and H<sub>2</sub>O<sub>2</sub> (10<sup>-3</sup> M) in aqueous solution (pH = 4.5).

**INFLUENCE OF DIRECTORS COMPENSATION ON EARNINGS MANAGEMENT  
PRACTICES IN THE NIGERIAN BANKING SECTOR**

**Muinat Wuraola SALAWU**

Department of Accounting, Faculty of Management Sciences, University of Lagos

**Moruff Adeyemi SALAWU**

Department of Accounting Education, School of Business Education, Federal College of  
Education (Technical), Akoka

**ABSTRACT**

The study evaluated the influence of director compensation on earnings management (EM) practices within the Nigerian banking sector. This stems from the fact that, while compensation contracts have been proposed as one tool for ensuring that both executive directors and non-executive directors (NEDs) effectively monitor the organization's affairs, they may induce EM practices due to being tied to accounting earnings (e.g. bonuses) or stock prices (e.g. stock based compensation). The adjusted population of eleven listed commercial banks was used as the census sampling method was employed. Anchored on the agency theory, the study measured directors compensation using a mix of executive directors and NEDs compensation while EM practices was proxied by discretionary provision for loan loss (DPLLs) measured using the Beaver and Engel (1996) model. Using the Ordinary least square regression, all forms of directors compensation except executive compensation were found to have positive effect on EM practices of the studied banks which shows that regulating compensation of directors should be a focus for regulatory agencies. Although only NEDs fees and allowances was found to significantly affect EM practices while other compensation variables has an insignificant effect on EM practices. The study thus recommended a shift of focus from just Chairmans compensation to include the totality of NEDs compensation and an institution of guidelines for mandatory disclosure of directors compensation. **Keywords:** directors compensation, earnings management, discretionary provision for loan loss, fees and allowances, banking sector

**ABSTRACT**

The modern world faces an increase in psychosocial problems associated with reduced emotional contact among youth. It is particularly important to study barriers to establishing emotional connections during adolescence. Understanding the relationship between locus of control and emotional contact may contribute to the development of effective youth psychological support strategies. The research aims to elucidate the features of barriers to establishing emotional contacts in adolescents with different loci of control. The sample consists of 96 adolescents, including 49 females (51%) and 47 males (49%). The average age of respondents is 20 years old. In the majority of surveyed adolescents, namely 90.6%, an external locus of control prevails, while 9.4% of young men exhibit an internal locus. When considering internality in spheres such as failures, family relations, work relationships, health, and illness, externality predominates critically, whereas in the spheres of achievements and interpersonal relationships, the values of externality and internality are approximately balanced. The indicators of barriers to establishing emotional contacts in adolescents are at a fairly high level. Half of the study participants have a high level of barriers to establishing emotional contacts in interpersonal communication, significantly deteriorating the quality of communication with their environment. One-quarter of respondents have an average level of barriers, and another quarter is distributed across moderate and low levels of barriers to establishing emotional contacts. Regarding the relationship between internality level and barriers to establishing emotional contacts in adolescents, the following features were identified: 1) among young men with an external locus of control, a high level of barriers to establishing emotional contacts prevails; 2) among young men with an internal locus of control, the average level of these barriers predominates. A reverse relationship between internality and the level of barriers to establishing emotional contacts in adolescents was established. That is, as the level of internality increases, the level of barriers decreases.

**Keywords:** emotional contact, locus of control, externality, internality.

**ABSTRACT**

Diatomite is a natural material of Algerian origin in powder form also called kieselguhrs a white coloration and high porosity over 72%, Textural and superficial characterization of diatomite was carried out by several analysis techniques, X-ray diffraction and scanning electron microscope SEM and IR infrared and BET. The results show that crude kieselguhr is formed of several components and in particular silica, alumina and calcium carbonates occupying time the surface of the pores of the material in question. To this end we have made of chemical and thermal treatments on natural porous diatomite to improve the quality and valued these materials, the chemical activation was performed with sulfuric acid and nitric acid. Another thermal activation was conducted at two temperatures, 800 ° C and 1000 ° C. The results showed that this activation has a significant effect on the average pore diameter. This was presumably attributed to the elimination of carbonates which leads to the improvement of the porous structure of the diatomite. These characterizations prepared and processed materials were performed in different laboratories. Particular attention was paid to the identification of the effect of the activation of the diatomite on these features by linking with the adsorbent properties in perspective prepared materials will be used in the water treatment field.

**ABSTRACT**

A series of naturally occurring diatomaceous earth samples from sig mascara (Algeria northwestern), were investigated, which are characterized by the expansion and evolution during the Messinian age. Four varieties of diatomite were distinguished, characterized, and successfully used to adsorb methylene blue dye in aqueous medium. Several properties and characteristics of diatomite have been outlined using analytical methods such as X-ray fluorescence spectrometry, X-ray diffraction (XRD), Fourier transform infrared spectroscopy (FTIR), N<sub>2</sub> adsorption–desorption (BET), and scanning electron microscopy (SEM), as well as other complementary analysis tests. Results showed that silica and calcium carbonates were the main constituents of the diatomite samples (ranging between 32.8 and 61.5% for SiO<sub>2</sub>; and 13.8–25.9% for CaO), with a slight difference in chemical composition between selected samples. Typical for all diatomite samples, the XRD analysis suggests a high mass quantity of amorphous phase (Opal); high content of crystal phase was also registered. FTIR allowed determining the basic characteristic silica bands regarding diatomite samples. While the BET and SEM investigations revealed that the studied diatomite material has a highly porous structure and was very rich in diatoms. The maximum adsorption capacity of methylene blue that was calculated from the Langmuir isotherm model was 116.59 mg/g. The diatomite deposit may find promising applications as low-cost adsorbent for dyes removal from water.

**ABSTRACT**

Diabetic peripheral neuropathy (DPN) is a complex condition influenced by various factors, with primary risks linked to unbalanced glycemic levels and the duration of diabetes. It exhibits a robust correlation with other diabetes' microrangiopathies. The aim of our work was to assess of the association of DPN with diabetic retinopathy (DR) in a population of patients with type 2 diabetes. This was a descriptive cross-sectional study of 100 type 2 diabetic patients hospitalized at the Tunis National Institute of Nutrition (INNTA). The sample was subdivided into two groups; the first comprises patients with DR and the second patients without DR. In each group, we compared clinical and metabolic characteristics and associated degenerative complications. Mean age was  $57.20 \pm 8.48$  years. Women accounted for 74%. 29% of patients were smokers. Median weight was 91 [65 ;110 ] kg. Median BMI was 30.46 [22.50 ;38.28 ]kg/m<sup>2</sup>. The mean duration of diabetes was 14.79 4.55 years. The majority (70%) of patients were on human insulin. Mean HbA1C was 10.33%. Chronic kidney disease was 35%. Mean creatinine clearance was  $93.16 \pm 19.19$  ml/L/1.73m<sup>2</sup>. The respective frequencies of diabetic neuropathy, diabetic retinopathy and diabetic nephropathy were 30%, 55% and 46%. Macroangiopathy was present in 35% of cases (coronary artery disease (10%), stroke (3%),

obliterative arteriopathy of the lower limbs (18%). The onset of DR was significantly correlated with the duration of diabetes ( $p=0,003$ ). DR was associated with poor glycemic control ( $p=0.004$ ), with diabetic nephropathy ( $p=0,004$ ) but not with coronary artery disease ( $p=0,65$ ). DR was significantly more prevalent in patients with PDN ( $p<10^{-3}$ ). In conclusion, our study suggests a significant association between the presence of diabetic neuropathy and the likelihood of concurrent retinopathy in individuals with Type 2 diabetes. The findings underscore the interconnection of microvascular complications in diabetes, emphasizing the potential utility of neuropathy assessments as indicators for the presence of retinopathy.

**ABSTRACT**

Diagnosis of peripheral diabetic neuropathy can significantly improve the prognosis and help prevent severe complications. The aim of this work was to assess early onset diabetic neuropathy and to study clinical and biological characteristics of this population. This was a prospective study carried out over 6 months in department C of the national nutrition institute of Tunis. We included all diabetic patients hospitalized for poorly controlled diabetes in whom diabetes had been progressing for less than 5 years and who presented with diabetic neuropathy. Then we collected their clinico-biological characteristics from medical records. Creatinine clearance was estimated using CKD-Epi formula. We included 31 patients. The population was characterized by a female predominance with a sex ratio of 4.16. The mean age was  $61.4 \pm 8.2$  years. 71% of patients were smokers. The frequency of hypertension and dyslipidemia was respectively 45% and 61.3%. All were men. The median BMI was  $32.4 \text{ Kg/m}^2$  with extremes of 26.2 and  $34.2 \text{ Kg/m}^2$ . Median weight was 82 with extremes of 67 and 110 kg. The mean duration of diabetes was  $3.7 \pm 1.6$  years with extremes of 4 months and 5 years. All of patients of patients were on human insulin. The mean HbA1C was  $11.2 \pm 3.5\%$ . All patients were characterized by a glycemic imbalance on oral antidiabetics indicating a switch to insulin.

Chronic kidney disease was present in 4 patients. Mean creatinine clearance was  $100.8 \pm 19.6$  ml/min. No patient had diabetic retinopathy. In summary, our study illuminates the clinical and biological features of early-onset diabetic neuropathy. Our population was characterized by the high prevalence of male gender, smoking, uncontrolled diabetes and obesity. Further study are needed to characterize this entity.

**ABSTRACT**

Millets, a ray of sustainability, are gaining renewed attention in recent years for their significant contribution to food security, climate resilience, nutritional density, and as a boon to the field of Entrepreneurship. Indian millets are nutritionally superior to wheat and rice as they are rich in protein, vitamins and minerals. India is among the top five exporters of millets in the world Millet start-ups have emerged as a promising industry in India, focusing on production and global reach. Understanding the youth's perception and attitude towards millets is crucial for gauging the feasibility of integrating these ancient grains into contemporary diets and lifestyles. This study is centred on examining the awareness levels and attitudes of youth of Madurai district towards millet products and its nutritional benefits and consumption pattern with a particular emphasis on their potential for long chain millet-based start-ups. This study delves into the perceptions and attitude of youth regarding the taste, accessibility and versatility of millets while exploring the entrepreneurial inclination for the betterment of society. This study examines the youth awareness level about existing Indian government start-ups schemes and support mechanism aiming to promote millet, awareness and entrepreneurial opportunities in India. 200 respondents were chosen and stratified random sampling method has been used. To assess their perception towards the readiness to embrace multi-based enterprises sophisticated tools such as factor analysis, Mann-Whitney test, Kruskal-Wallis test, one way ANOVA test, post hocc test, weighted average and Garrett ranking technique. Based on the research findings suggestions were given in order to enhance budding entrepreneurs to enter into millet industry. This study is initiative to support with the Indian government in the achievement of SDG goal of zero poverty and no hunger.

**INFLUENCE OF CORTISOL ON THE FIBRIL FORMATION KINETICS OF A $\beta$ 42  
PEPTIDE: A MULTI-TECHNICAL APPROACH**

**Marilena CARBONE**

University of Rome Tor Vergata, Department of Chemical Science and Technologies, Rome,  
Italy.

**Email:** carbone@uniroma2.it

**ABSTRACT**

Amyloid- $\beta$  peptide (A $\beta$ ) aggregates are known to be correlated with pathological neurodegenerative diseases. The fibril formation process of such peptides in solution is influenced by several factors, such as the ionic strength of the buffer, concentration, pH, and presence of other molecules, just to mention a few. In this paper, we report a detailed analysis of in vitro A $\beta$ 42 fibril formation in the presence of cortisol at different relative concentrations. The thioflavin T fluorescence assay allowed us to monitor the fibril formation kinetics, while a morphological characterization of the aggregates was obtained by atomic force microscopy. Moreover, infrared absorption spectroscopy was exploited to investigate the secondary structure changes along the fibril formation path. Molecular dynamics calculations allowed us to understand the intermolecular interactions with cortisol. The combined results demonstrated the influence of cortisol on the fibril formation process: indeed, at cortisol-A $\beta$ 42 concentration ratio ( $\alpha$ ) close to 0.1 a faster organization of A $\beta$ 42 fragments into fibrils is promoted, while for  $\alpha = 1$  the formation of fibrils is completely inhibited.

**ABSTRACT**

This study investigates the [3+2] cycloaddition (32CA) reactions involving nitrene and acetylene derivatives 4b, 5b, and 6b using Molecular Electron Density Theory (MEDT) and Density Functional Theory (DFT) methods at the B3LYP-D3/6 31G (d) computational level. The research reveals the zwitterionic (zw-type) nature of these reactions, unveiling a one-step mechanism with activation enthalpies ranging from 8.80 to 14.37 kcal mol<sup>-1</sup> in acetonitrile and ethanol solvents. The reaction with (4b) produces two regioisomeric pathways leading to products P<sub>1,5-4b</sub> and P<sub>1,4-4b</sub>, while reactions with (5b) and (6b) result in the formation of a single product. Topological analysis categorizes the nitrene as a zwitterionic three-atom component (TAC), and conceptual density functional theory (CDFT) indices classify the 32CA reactions as forward electron density flux (FEDF) reactions. Further insights from Bond Evolution Theory (BET) indicate that the formation of new C-C and C-O covalent bonds does not initiate in the transition states but occurs in intermediate stages, displaying pseudoradical centers of atoms already engaged in bonding.

**ABSTRACT**

This research paper aims to compare different mechanisms associated with the recognition and enforcement of international investment awards under distinct jurisdictions, specifically focusing on the legal landscapes of India, the United Kingdom, and the United States. Principally, India has not participated in the ICSID Convention, thereby absolving it from any obligation to attend to investment arbitral awards on par with domestic court judgements as stated under Article 54. In addition to this, India has referred to the commercial reservation provision of Article I(3) within the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, that is the “New York Convention”. Subsequently, there is a restriction on the application of New York Convention in India solely to foreign awards arising from commercial relationships under the Indian law as elucidated by Section 44 of the Act. This paper aims to branch out and delve into how Indian courts interpret this provision, thereby acknowledging its applicability and potentially excluding investment arbitral awards from its scope at the same time. Unlike India, the regime in the United States of America is oriented towards a pro-enforcement stance, as far as investment arbitration awards under ICSID are concerned. The enforcement of such awards is governed by the provisions of the Federal Arbitration Act (FAA) and the New York convention. The FAA lays down a framework for the enforcement of arbitration agreements and awards, encompassing both, domestic as well as international awards. Section 207 of this act deals particularly with ICSID awards, giving them the same status as final judgments of a U.S court as far as enforcement and recognition are concerned. The country is also a party to the New York Convention. Chapter-2 of the FAA ensures that it is implemented. As enshrined in Article-III of the convention, the US enforces and recognizes ICSID awards. Enforcement of ICSID awards however can be refused if one of the grounds mentioned in Article-V, such as a breach of public policy or procedural irregularities are found. The United Kingdom member of the International Centre for Settlement of Investment Disputes (ICSID) and is a signatory to the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards. Further, the United Kingdom adheres to the United Nations Commission on International Trade Law (UNCITRAL) Model Law on International Commercial Arbitration. The enforcement of an award depends on the country in which the seat of arbitration is situated and is governed by the rules followed in that country. In the UK, arbitration awards can be enforced by invoking the Arbitration Act 1996, the New York Convention, the Geneva Convention 1927, the Administration of Justice Act 1920, the Foreign Judgments (Reciprocal Enforcement) Act 1933, and Common Law.

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

---

There are two procedures to enforce an arbitral award. The first method is to seek the leave of the Court to enforce the award, and the second is to seek the same relief from the national Courts as set out in the arbitral award. The enforcement of the award can be challenged on the limited grounds laid down in the New York convention. The National Court can refuse to enforce the award if the Court opines that enforcement of the award would violate public policy. Arbitral proceedings dealing with complex issues of law can be appealed to the Supreme Court; this process can take approximately two years. There is a specified time limit in which the award is to be enforced. Non-compliance with an award is considered a violation of the arbitration agreement.

**ABSTRACT**

Rural development aims to uplift the standard of living and economic prospects in rural regions. This paper delves into the realm of linear algebra, showcasing its potential in addressing the distinct challenges faced by rural communities. Imagine it as wielding mathematical tools—like matrix operations, eigenvalue analysis, and linear regression—to optimize resource allocation, infrastructure planning, and community empowerment strategies. Through the exploration of case studies and theoretical frameworks, we illuminate how linear algebra can dissect agricultural productivity, streamline transportation networks, and tailor energy systems to suit rural environments seamlessly. Furthermore, we highlight its role in social dynamics, such as healthcare accessibility and education levels. These insights are invaluable for policymakers and community leaders striving to make well-informed decisions. By weaving mathematics with rural development objectives, this research provides a roadmap for leveraging linear algebra to foster sustainable growth and inclusivity in rural areas. It paints a vivid picture of how mathematical rigor can translate into real-world solutions, driving positive change and prosperity in rural communities. Using Geometric Information Systems software we can improve transportation networks and how to make transportation efficient.

This paper serves as a testament to the transformative power of linear algebra, showcasing its capacity to address multifaceted challenges and drive progress in even the most remote corners of the world.

**ABSTRACT**

This abstract provides an overview of different ways to use math to study solar and wind energy. It discusses how researchers have applied mathematical models to understand and improve the efficiency of renewable energy systems. These models help predict energy production, optimize resource allocation, and design better technologies. The review covers various methods such as differential equations, optimization techniques, and statistical analysis. It also explores real-world applications like forecasting energy generation, assessing environmental impacts, and enhancing energy storage solutions. Overall, this review highlights the importance of mathematical modeling in advancing sustainable energy sources like solar and wind power.

**Keywords:** solar energy, wind energy, mathematical modeling, efficiency improvement, renewable energy systems, energy production prediction, resource allocation optimization, technology design, differential equations, optimization techniques, statistical analysis, energy generation forecasting, environmental impact assessment, energy storage solutions, sustainable energy sources.

**ABSTRACT**

The green method was utilized to produce zinc oxide nanoparticles (ZnO-NPs) by utilizing juice from *Rosmarinus officinalis*. The Green approach is safer, less hazardous, more cost-efficient, energy-efficient, and environmentally friendly than its chemically produced counterparts. The ZnO-NPs were examined for their optical characteristics using XRD, FT-IR, and UV-Vis spectroscopy. The Zn-O bond's distinctive absorption peak was discovered in the FTIR spectrum at 416 cm<sup>-1</sup>. The ZnO XRD results revealed a propensity for the three strongest diffraction peaks. The average diameter of ZnO NP crystallites was 31 nm. ZnO nanoparticles were evaluated for their photocatalytic ability when exposed to UV for drug degradation in aqueous solution. The ZnO photocatalyst is able to remove difenoconazole from water with strong photocatalytic activity, as evidenced by the results. Additionally, after 2 hours, total deterioration was achieved.

**Keywords:** ZnO nanoparticles, Pesticide, Green method, difenoconazole, Degradation.

**YOĞUNLUK FONKSİYONEL TEORİSİ KULLANILARAK Pt<sub>n</sub> (n= 2-15,18,22,24)  
NANO KÜMELERİNİN İNCELENMESİ**

**Ayşe DEMİRKIRAN**  
Ege Üniversitesi  
**Email:**aysece19@gmail.com

**ÖZET**

Pt<sub>n</sub> (n=2-15, 18,22,24) atom kümelerinin elektronik, geometrik ve manyetik özellikleri, geliştirilmiş gradyent yaklaşımı ile yoğunluk fonksiyonel teori (YFT) kullanılarak incelendi. Platin kümelerinin en yüksek dolu moleküler orbital (HOMO), en düşük boş moleküler orbital (LUMO), homo-lumo fark enerjisi (HLG), bağlanma enerjisi, manyetizasyon ve bağ uzunluğu değerleri artan atom sayısına bağlı olarak hesaplandı. Bu kümelerin artan atom sayısı ile boyut olarak hangi yapıları tercih ettiği belirlendi. Bulk yapıya bakıldığında Pt'nin manyetik olmadığı halde, platin nano atom kümelerinin manyetik değerler kazandığı ve artan atom numarası ile genel olarak azaldığı bulundu. Pt<sub>14</sub> atom kümesinin manyetik özelliğini kaybettiği belirlendi.

**Anahtar Kelimeler:** Yoğunluk Fonksiyonel Teori, Elektronik yapı, Pt<sub>n</sub> atom kümleri, Geliştirilmiş gradyent yaklaşımı

**INVESTIGATION of Pt<sub>n</sub> (n= 2-15,18,22,24) NANO CLUSTERS by USING DENSITY  
FUNCTIONAL THEORY**

**ABSTRACT**

The electronic, geometric and magnetic properties of Pt<sub>n</sub> (n=2-15,18,22,24) clusters are investigated by using density functional theory (DFT) within generalized gradient approximation. The size dependence of binding energy, highest occupied molecular orbital (HOMO), lowest unoccupied molecular orbital (LUMO), homo-lumo difference energy (HLG), magnetizasyon and bond length values are calculated for platinum clusters. It was determined that Pt<sub>n</sub> clusters prefer the structure in size with increasing number of atoms. Looking at the bulk structure, it was found that while Pt is not magnetic, the magnetic values of Pt<sub>n</sub> (n=2-15,18,22,24) nano atom clusters generally decrease with increasing atomic number. It was determined that the Pt<sub>14</sub> cluster lost its magnetic properties.

**Keywords:** Density Functional Theory, Electronic structure, Pt<sub>n</sub> clusters, generalized gradient approximation

**BİYOMOLEKÜL TANISI İÇİN ÇOKLU SENSÖR TABANLI ARAYÜZ TASARIMI**

**ÖZET**

Biyomoleküler tanı, hastalıkların erken teşhisi, tedavi süreçlerinin izlenmesi gibi klinik uygulamalarda kullanılan araştırma teknikleri yoluyla elde edilen bilgilerdir. Biyosensör teknolojilerinde ve elektrokimyasal hücre tasarımlarında gerçekleştirilen elektrokimyasal ölçümler, biyomoleküler etkileşimleri ve hücresel olayları anlamak için kullanılır. Bu bağlamda biyomoleküler teşhiste yaygın olarak kullanılan cihazlar potansiyostat cihazlarıdır, ancak mevcut potansiyostat cihazları genellikle yalnızca tek bir elektrotu ölçer ve bu da birden fazla elektrot kullanmanın faydalarını sınırlandırır. Ayrıca mevcut çok kanallı potansiyostat cihazları pahalıdır. Bu bağlamda bu çalışma, biyomoleküler teşhis uygulamaları için potansiyostat cihazlarının daha etkin kullanımını geliştirmek amacıyla tek kanallı bir potansiyostata bağlanan bir arayüz tasarımıdır. Buradaki arayüz tasarımı, mikroişlemci yazılımı ve özel devre tasarımı ile tek kanaldan birden fazla elektrotun sıralı ölçümlerini gerçekleştirebilmektedir. Bu özellik, birden fazla elektrot kullanıldığında analitik esneklik, hızlı veri toplama ve pratik ölçüm gibi avantajlar sağlar. Aynı zamanda pahalı çok kanallı potansiyostat cihazına olan ihtiyacı da azaltır. Ayrıca mikroişlemci yazılımı ile ölçümler potansiyostat cihazının bilgisayar yazılımına veri olarak aktarılabilir. Bu veriler potansiyostat yazılımı ile grafiksel verilere dönüştürülebilmekte ve bu veriler üzerinde yorum yapılabilir. Mevcut devre topolojisinden farklı bir devre topolojisi kullanıldığından ve yazılım desteği eklendiğinden, bireysel ölçümler veya zaman girişi yapılarak analitik tarama ve ölçümler belirlenen periyotlarda otomatik olarak gerçekleştirilebilmektedir. Bu çalışma, biyomoleküler teşhis alanında elektrokimyasal ölçümleri geliştirerek tıp, analitik kimya, eczacılık gibi ölçüm gerektiren sektörlerle kolaylık sağlamayı hedeflemektedir. Deneylerin daha pratik ve hızlı bir şekilde gerçekleştirmesine katkıda bulunacaktır.

**Keywords:** Biyosensör teknolojileri, analitik kimya, eczacılık

**MULTI-SENSOR-BASED INTERFACE DESIGN FOR BIOMOLLECULE  
DIAGNOSIS**

**ABSTRACT**

Biomolecular diagnosis is the information obtained through research techniques used in clinical applications such as early diagnosis of diseases and monitoring of treatment processes. Electrochemical measurements performed in biosensor technologies and electrochemical cell designs are used to understand biomolecular interactions and cellular events. Devices commonly used in biomolecular diagnostics in this context are potentiostat devices, but current potentiostat devices generally measure only a single electrode, limiting the benefits of using multiple electrodes. Additionally, existing multi-channel potentiostat devices are expensive. In this context, this study is the design of an interface connected to a single-channel potentiostat to improve the more effective use of potentiostat devices for biomolecular diagnostic applications. The interface design here can perform sequential measurements of multiple electrodes from a single channel with microprocessor software and special circuit design. This feature provides advantages such as analytical flexibility, rapid data collection and practical measurement when multiple electrodes are used. It also reduces the need for expensive multi-channel potentiostat device. In addition, measurements can be transferred as data to the computer software of the potentiostat device with the microprocessor software. These data can be converted into graphical data with potentiostat software and comments can be made on these data. Since a circuit topology different from the existing circuit topology is used and software support is added, analytical scanning and measurements can be carried out automatically in specified periods by making individual measurements or time entry. This study aims to provide convenience to sectors requiring measurement such as medicine, analytical chemistry and pharmacy by developing electrochemical measurements in the field of biomolecular diagnostics. It will contribute to making experiments more practical and faster.

**ÖZET**

Sosyal bilgiler; tarih, coğrafya, sosyoloji, psikoloji, antropoloji gibi birçok sosyal bilim disiplininin derlediği bilgileri ilköğretim ve ortaokul düzeyindeki öğrencilerin hazırlanmış olmalarına uygun biçimde düzenleyip öğretmek ve öğrencilere günlük yaşamlarında kullanabilecekleri bilgi, değer ve beceriler kazandırmayı amaçlayan bir dersiştir. Sosyal bilgiler dersinin öğrencilere kazandırmayı amaçladığı becerilerden biri, girişimciliştir. Girişimcilik, bireyin karşılaştığı olanakları en iyi biçimde değerlendirerek yaşam kalitesini geliştirmesine yönelik bir beceridir. Girişimcilik bireysel yarar sağlamak odaklı olabileceği gibi toplumsal koşulların geliştirilmesine ilişkin de olabilmektedir. Dolayısıyla girişimciliğin hitap ettiği alanlar bağlamında birçok türü mevcuttur. Sosyal bilgiler dersinde öğrencilere girişimcilik becerisi kazandırmak amacıyla kullanılan materyallerin başında ders kitapları gelmektedir. Ders kitaplarının bu kapsamdaki önemi göz önüne alındığında girişimcilik becerisini kazandırmakla ilgili içeriğinin yeterli düzeyde ve girişimcilik becerisi kazandırma amacına uygun biçimde tasarlanmış olması beklenmektedir. Bu bakış açısıyla gerçekleştirilen çalışmada sosyal bilgiler ders kitaplarının girişimcilik becerisi kazandırmadaki rolünün öğrenciler tarafından nasıl görüldüğü irdelenmiştir. Çalışmada nitel araştırma yöntemlerinden temel nitel desen kullanılmıştır. Çalışmanın katılımcı grubu kolay ulaşılabilir örnekleme yöntemi ile oluşturulmuştur. Katılımcı grubunda Ağrı il sınırları içerisindeki üç ortaokulda öğrenim görmekte olan dört tane 5. sınıf, beş tane 6. sınıf ve dört tane 7. sınıf öğrencisi olmak üzere toplam 13 katılımcı yer almıştır. Araştırmanın verileri araştırmacılar tarafından tasarlanan yarı yapılandırılmış görüşme formu kullanılarak toplanmıştır. Verilerin çözümlenmesinde betimsel analiz tekniğinden yararlanılmıştır. Çalışmanın sonunda ortaokul öğrencilerinin sosyal bilgiler ders kitaplarını girişimcilik becerisi kazandırmada başlıca role sahip ancak içerik açısından yetersiz materyaller olarak gördükleri belirlenmiştir. Çalışmada ayrıca öğrencilerin; sosyal bilgiler ders kitaplarının girişimcilik bağlamı içeriğinin geliştirilmesi gerektiği ve girişimcilik becerisi kazandırmak amaçlı sınıf içi etkinlikler yapılması görüşünde oldukları sonucuna ulaşılmıştır. Araştırmada ulaşılan sonuçlar esas alınarak, ortaokul öğrencilerinin sosyal bilgiler ders kitaplarının girişimcilik kazandırmadaki rolüne ilişkin görüşleriyle ilgili daha kapsamlı araştırmalar yapılması önerilmiştir.

**Anahtar Kelimeler:** Sosyal bilgiler ders kitabı, ortaokul öğrencileri, girişimcilik becerisi, görüş

**EXAMINING THE ROLE OF MIDDLE SCHOOL SOCIAL STUDIES  
COURSEBOOKS IN ACQUIRING ENTREPRENEURSHIP SKILL BASED ON  
STUDENTS' VIEWS**

**ABSTRACT**

Social studies is a course that organizes the information compiled from many social science disciplines such as history, geography, sociology, psychology and anthropology in accordance with the readiness of primary and middle school students and aims to provide students with knowledge, values and skills that they can use in their daily lives. One of the skills that the social studies course aims to provide students with is entrepreneurship. Entrepreneurship is a skill focused on improving the quality of individuals' lives by making the best use of the opportunities they encounter. Entrepreneurship can be focused on providing individual benefit or it can be related to the development of social conditions. Therefore, there are many types of entrepreneurship in terms of the areas it covers. Coursebooks are one of the most important materials used in the social studies course to provide students with entrepreneurship skills. Considering the importance of coursebooks in this context, it is expected that the content related to acquiring entrepreneurship skills should be adequate and designed in accordance with the purpose of acquiring entrepreneurship skill. This study examined how students view the role of social studies coursebooks in acquiring entrepreneurship skill. Basic qualitative design, was used in the study. A total of 13 participants, four 5th grade, five 6th grade and four 7th grade students from three middle schools in Ağrı province, were included in the participant group which was formed by convenience sampling method. The data were collected through a semi-structured interview form and analyzed through descriptive analysis. In the study, it was determined that middle school students saw social studies coursebooks as materials that have a major role in acquiring entrepreneurship skills but are insufficient in terms of content. In the study, it was also concluded that students thought that the content of social studies coursebooks in the context of entrepreneurship should be improved and in class activities should be carried out in order to acquire entrepreneurship skill. In the study, it is recommended that more comprehensive research be conducted on the views of middle school students on the role of social studies coursebooks in acquiring entrepreneurship skill.

**Keywords:** Social studies coursebook, middle school students, entrepreneurship skill, view

**ÖZET**

Yabancı göçü, global çapta çözüm bulunması ve kontrollü biçimde yürütülmesi gereken, göçmenlerin ikamet ettiği kentler de merkezi yönetimi ve belediyeleri ciddi biçimde çok yönlü programlar uygulamaya zorlayan, dinamik yapıya sahip bir süreçtir. Bireylerin ülkelerinde ki savaş, iç çatışmalar, daha iyi eğitim ve yaşam koşulları gibi gerekçelerle yapmış olduğu dış göç, yerleşme düşüncesinde olunan ülkeyi siyasi, ekonomik, kültürel ve psikolojik olarak etkilemektedir. Türkiye’de merkezi idare adına göç sürecini Göç İdaresi Genel Müdürlüğü yönetmekte olup, kentler de il temsilcilikleri vasıtasıyla denetim ve kontrolleri gerçekleştirmektedir. Kentlerin belediye yönetimleri de merkezi idareyle birlikte bu sürece zorunlu olarak dâhil olmaktadır. Yabancı göçüyle gelen insanların barınma, ulaşım, eğitim, güvenlik ve alt yapı sorunlarının doğrudan muhatabı, merkezi yönetime ilaveten belediyeler olmaktadır. Belediyeler, yabancı göçüyle ortaya çıkan sorunlara yönelik olarak kısıtlı bütçeleriyle çözüm üretmeye çalışmaktadırlar. 6458 sayılı Yabancılar ve Uluslararası Koruma Kanunu, 5216 ile 6360 sayılı Büyükşehir Belediyesi Kanunları ve 5393 Sayılı Belediye Kanunu göçmen ve sığınmacı süreciyle olarak belediyeleri yetkilendirmiş bulunsa da, önemli olan özellikle yoğun yabancı göçü alan belediyelerin bütçelerine, bütün süreci zorlanmadan yürütebileceği ve gerekli alt yapı yatırımlarını oluşturabileceği bütçeyi aktarmaktır. TÜİK verilerine göre, Türkiye’ye 2022 yılında gelen yabancı uyruklu nüfus %25 ile Rusya Federasyonu, %8,1 ile Ukrayna, %6,5 ile İran, %5,4 ile Afganistan ve %4,8 ile Irak vatandaşlarıdır. Türkiye’de hâlihazırda çok sayıda Suriyeli ve Afganistanlı göçmen ve sığınmacıların bulunduğu da göz önünde bulundurulursa, göçmen nüfusunun hızla artmış olduğu değerlendirilmektedir. Çalışmanın amacı; belediyelerin karşı karşıya kaldığı yabancı göçüyle nasıl mücadele edebileceğini değerlendirmek, ortaya çıkan problemlerin çözüm yollarını irdeleyerek incelemektir. Yabancı göç sürecinin belediyeleri ciddi kaynak sıkıntısı içerisine ittiğinin ve hizmet sunumunda problemler yarattığının anlaşılması bakımından alana katkısı olacaktır. Çalışmada belediyelerce göç sürecinin yönetilmesine ilişkin kanunlar, ilgili mevzuatlar, konuya ilişkin yazılı eserler, internet kaynakları irdelenerek, literatür taraması uygulanmıştır.

**Anahtar Kelimeler:** Yabancı göçü, belediyeler, alt yapı, yatırımlar, kanunlar

**EFFECTS OF FOREIGN MIGRATION ON SERVICE PROVISION OF  
MUNICIPALITIES**

**ABSTRACT**

Foreign migration is a dynamic process that needs to be solved on a global scale and carried out in a controlled manner, forcing the central government and municipalities to implement seriously multifaceted programs in the cities where immigrants reside. Emigration by individuals due to reasons such as war, internal conflicts, better education and living conditions in their country affects the country where they intend to settle politically, economically, culturally and psychologically. In Turkey, the General Directorate of Migration Management manages the migration process on behalf of the central administration, and inspections and controls are carried out in cities through provincial representatives. Municipal administrations of cities are also necessarily involved in this process together with the central administration. In addition to the central government, municipalities are the direct addressees of the housing, transportation, education, security and infrastructure problems of people who come with foreign migration. Municipalities are trying to find solutions to the problems arising from foreign immigration with their limited budgets. Although the Law on Foreigners and International Protection No. 6458, the Metropolitan Municipality Laws No. 5216 and 6360 and the Municipality Law No. 5393 have authorized municipalities with regard to the immigrant and refugee process, the important thing is that the municipalities, especially those receiving intense foreign immigration, have access to their budgets so that they can carry out the whole process without difficulty and create the necessary infrastructure investments. is to transfer the budget. According to TÜİK data, the foreign national population coming to Turkey in 2022 are citizens of the Russian Federation with 25%, Ukraine with 8.1%, Iran with 6.5%, Afghanistan with 5.4% and Iraq with 4.8%. Considering that there are already many Syrian and Afghan immigrants and refugees in Turkey, it is considered that the immigrant population has increased rapidly. Purpose of the study; The aim is to evaluate how municipalities can combat the foreign migration they face and to examine the solutions to the problems that arise. It will contribute to the field in terms of understanding that the foreign migration process pushes municipalities into serious resource shortages and creates problems in service delivery. In the study, a literature review was conducted by examining the laws regarding the management of the migration process by municipalities, relevant legislation, written works and internet resources on the subject.

**Keywords:** Foreign immigration, municipalities, infrastructure, investments, laws

**AVRUPA BİRLİĞİ'NİN COVID-19 PANDEMİSİNE MÜDAHALELERİ: KÜRESEL  
KRİZLERDE AKTÖRLÜĞÜN DEĞERLENDİRİLMESİ**

**Dr. Büşra KILIÇ (ORCID:0000-0002-3335-106)**

Independent Researcher

**Email:** kilic\_busra@windowslive.com

**ÖZET**

Bu araştırma, COVID-19 pandemisi sürecinde Avrupa Birliği'nin (AB) sergilediği politik eylemler ve reaksiyonlar üzerine odaklanarak, aktörlük teorisi bağlamında kapsamlı bir analiz sunmaktadır. François Duchêne tarafından 1972 yılında ileri sürülen "Sivil Güç" paradigması temel alınarak, AB'nin "aktör olarak doğası"na yönelik tartışmalar, Ian Manners'ın 2000'lerde geliştirdiği "Normatif Güç" kavramı ile derinleşerek yeni bir boyut kazanmıştır. COVID-19 pandemisi, AB'nin dayanıklılığını, işbirliğine dayalı politika oluşturma yeteneğini ve genel kriz yönetim kapasitesini kritik bir şekilde test etmiştir. Bu bağlamda, üye devletlerin sınırlarını kapatma ve bağımsız yardım arayışlarına girişmeleri, özellikle İtalya'nın uluslararası alanda geniş yankı bulan ve karşılıksız kalan yardım talepleri dikkat çekici olmuştur. Pandemiye bağlı ekonomik sıkıntılara karşılık olarak, AB liderleri, büyük bir kurtarma fonunun kurulması da dahil olmak üzere, geniş kapsamlı bir toparlanma stratejisine yönelik taahhütlerde bulunmuşlardır. AB'nin COVID-19 pandemisine yanıtları, "hastalığın yayılmasını sınırlama, ulusal sağlık sistemlerini destekleme, sosyo-ekonomik etkileriyle mücadele ve aşılarda adil dağıtımını sağlama" konularında kapsamlı bir yaklaşımı içermektedir. Bu çalışma, aktörlük teorisinin çerçevesi içinde AB'nin COVID-19 pandemisi süresince dış politika sahnesindeki performansını değerlendirir. Araştırma, özellikle dayanışma, güven oluşturma ve komşu ülkelere mali yardım sağlama gibi kritik faktörlere odaklanarak, AB'nin beklenmedik küresel durumlar karşısındaki rolünün evrimine yönelik derinlemesine bir perspektif sunmayı amaçlamaktadır. Bu bağlamda, Birliğin öngörülemez zorluklara nasıl tepki verdiğine dair kapsamlı bir inceleme gerçekleştirilecektir.

**Anahtar Kelimeler:** AB Dış Politikası, COVID-19, Aktör Olarak AB, Küresel Krizler

**THE EUROPEAN UNION'S RESPONSE TO THE COVID-19 PANDEMIC:  
EVALUATING ACTORNESS IN GLOBAL CRISES**

**ABSTRACT**

This research focuses on the political actions and reactions exhibited by the European Union (EU) during the COVID-19 pandemic, offering a comprehensive analysis within the context of actorness theory. Starting with François Duchêne's "Civilian Power" paradigm proposed in 1972, discussions on the EU's "nature as an actor" have deepened and gained a new dimension through Ian Manners' "Normative Power" concept developed in the 2000s. The COVID-19 pandemic critically tested the EU's resilience, capacity for collaborative policy-making, and overall crisis management capabilities. In this context, the closing of borders by member states and their independent efforts to seek aid, particularly Italy's widely echoed and unmet requests for assistance, have been noteworthy. In response to the economic difficulties caused by the pandemic, EU leaders have committed to a broad recovery strategy, including the establishment of a significant recovery fund. The EU's responses to the COVID-19 pandemic encompass a comprehensive approach addressing "limiting the spread of the disease, supporting national health systems, combating the socio-economic impacts, and ensuring the equitable distribution of vaccines." This study evaluates the EU's performance on the foreign policy stage during the COVID-19 pandemic through the lens of actorness theory. The research aims to provide a deep perspective on the EU's evolving role in the face of unexpected global situations, focusing specifically on critical factors such as solidarity, trust-building, and providing financial assistance to neighboring countries. In this regard, a comprehensive examination of how the Union has responded to unforeseen challenges will be conducted.

**ÖZET**

Bu araştırmada, yetişkin bireylerde gıda enflasyonunun beslenme alışkanlıklarına etkisini belirlemek amaçlanmıştır. Araştırma, Ankara Üniversitesine bağlı fakülte ve yüksekokullarda çalışan 19-64 yaş arası, gıda alışverişi yapan akademik/idari personel ile anket formu aracılığıyla yürütülmüştür. Araştırmaya katılan bireylerin %61,1'i kadın, %38,9'u erkektir. Kadınların yaş ortalaması 32,9±8,26 yıl, erkeklerin 35,1±9,65 yıldır ( $t=-2,017$ ,  $p=0,045$ ). Katılımcıların hane içine giren aylık toplam gelirleri %29,5'i 60.001 ₺ ve üzeri, %14,9'u 50.001-60.000 ₺, %16,7'si 40.001-50.000 ₺, %17,5'i 30.001-40.000 ₺, %15,6'sı 20.001-30.000 ₺, %4,4'ü 12.001-20.000 ₺ aralığında yer almaktadır. Araştırma kapsamında bireylere son zamanlarda gıda enflasyonu nedeniyle beslenme alışkanlıklarının değişme durumu sorgulanmış, bireylerin %69,8'i gıda enflasyonunun beslenme alışkanlıklarını değiştirdiğini ifade etmiştir. Bu bireylerin %49,5'i daha uygun fiyatlı gıdaları tercih etmeye başladığını, %22,4'ü gıda çeşitliliğini azalttığını, %13,0'ü gıda miktarını azalttığını belirtmektedir. Gıda enflasyonu nedeniyle bireylerin %27,3'ü ana öğün atlamak zorunda kaldıklarını belirtmiş, tüketilmeyen ana öğünün sıklıkla öğle öğünü (%58,7) ve sonrasında kahvaltı öğünü (%28) olduğu görülmektedir. Gıda enflasyonu nedeniyle ara öğün tüketiminde azalma oranı erkeklerde kadınlara kıyasla daha yüksektir ve bu fark istatistiksel olarak anlamlıdır ( $p=0,034$ ). Bireylerin %36,7'si gıda enflasyonu nedeniyle ana/ara öğünde tükettikleri yiyecek miktarının azaldığını ifade etmiştir. Gelir düzeyi, bireylerin beslenme alışkanlıklarını önemli düzeyde etkileyen bir faktördür. Düşük gelir düzeylerindeki bireylerin beslenme alışkanlıklarının gıda enflasyonundan daha fazla etkilendiği anlaşılmaktadır. Artan gıda fiyatları sonucu ortaya çıkan gıda enflasyonunun bireylerin beslenme alışkanlıklarını etkilediği görülmektedir. Bu sonuçların politika yapıcılar için önemli bir veri kaynağı olduğu ve gerekli düzenlemeler yapılırken dikkate alınması gerektiği düşünülmektedir.

**Anahtar Kelimeler:** gıda enflasyonu, beslenme, öğün tüketimi

**DOES FOOD INFLATION AFFECT NUTRITIONAL HABITS?**

**ABSTRACT**

The study aimed to determine the effect of food inflation on eating habits of adult individuals. The study was conducted with academic/administrative staff aged between 19-64 working in faculties and colleges affiliated to Ankara University who shop for food through a questionnaire form. Of the individuals, 61.1% were female and 38.9% were male. The mean age of women was  $32.9 \pm 8.26$  and  $35.1 \pm 9.65$  years for men ( $t = -2.017$ ,  $p = 0.045$ ). The total monthly household income of the participants is 29.5% 60.001₺ and above, 14.9% 50.001-60.000₺, 16.7% 40.001-50.000₺, 17.5% 30.001-40.000₺, 15.6% 20.001-30.000₺, 4.4% 12.001-20.000₺. The research, individuals were asked about the recent changes in their eating habits due to food inflation, and 69.8% of the individuals stated that food inflation has changed their eating habits. Among these individuals, 49.5% stated that they started to prefer more affordable foods, 22.4% stated that they reduced food variety, and 13.0% stated that they reduced the amount of food. Due to food inflation, 27.3% of the individuals stated that they had to skip main meals, and it was observed that the main meal that was not consumed was lunch (58.7%) and then breakfast (28%). The rate of decrease in snack consumption due to food inflation was higher in men than in women and this difference was statistically significant ( $p = 0.034$ ). 36.7% of the individuals stated that the amount of food consumed at main/intermediate meals decreased due to food inflation. Income level is a factor that significantly affects the dietary habits of individuals. It is understood that the dietary habits of individuals at low income levels are more affected by food inflation. It is observed that food inflation resulting from rising food prices affects the dietary habits of individuals. It is thought that these results are an important data source for policy makers and should be taken into consideration when making necessary arrangements.

**Keywords:** food inflation, nutrition, meal consumption

## **SÜT SIĞIRCILIĞIDA HAYVAN REFAHI UYGULAMALARI**

**Dr. Levend COŞKUNTUNA (ORCID:0000-0001-7137-4198)**

Tekirdağ Namık Kemal Üniversitesi, Ziraat Fakültesi Zootečni Bölümü

**Email:**lcoskuntuna@nku.edu.tr

### **ÖZET**

Süt sığircılığı, büyükbaş hayvancılığın içinde önemli bir bölümünü oluşturmaktadır. Süt sığircılığı faaliyetlerinin başarılı bir şekilde yürütülebilmesi için, hayvan bakımı, yönetimi, uygun hayvan seçimi ve barınak gibi faktörlerin yanı sıra yeterli ve kaliteli yem ile etkili bir besleme programının uygulanması gerekmektedir. Günümüzde süt sığircılığı genellikle entansif koşullarda büyük kapasiteli işletmelerde yapılmaktadır, Bu tip işletmelerde verim kontrolü ve hayvanların doğal davranışlarını sergileyebilmeleri için gerekli düzenlemeler yapılması ve hayvan refahının korunması büyük bir önem taşımaktadır. Hayvan refahı, bir hayvanın yaşadığı koşulların, sağlık durumunun, yaşam kalitesinin ve mutluluğunun bir yansıması olarak tanımlanmaktadır. Bir hayvanın refah içinde olduğu kabul edilebilmesi için, bu hayvanın sağlıklı, rahat, iyi beslenmiş, güvende, türünün doğal davranışlarını sergileyebilir, korkusuzca yaşayabilir, ağrı veya stresten muzdarip olmadığı kabul edilmektedir. Hayvan refahıyla ilgili olarak, farklı ülkelerde çok sayıda yasa ve yönetmelik düzenlenmiştir. İklimsel ve çevresel koşulların dikkatlice yönetilmesi, süt sığırları işletmesinin başarısı için kritik bir rol oynamaktadır. Hayvan refahının sağlanabilmesi değişik faktörlere bağlıdır. Bunlardan bazıları, İşletmenin konumlandırılacağı bölgenin iklimsel faktörleri ve işletme içi iklim şartları olarak sıralamak mümkündür. İklim koşulları, belirli bir bölgenin sıcaklık, nem, rüzgâr ve yağış gibi faktörlerini içermektedir. Bu koşulların istenilen sınırların altında veya üstünde olması, özellikle süt sığırlarının verimliliğini olumlu ya da olumsuz yönde etkileyebilmektedir. Süt sığırlarının yaşadığı iklim koşulları, süt üretimi, sağlık ve genel refahlarını etkileyebilir. Süt sığırları için en uygun sıcaklık genellikle 5-25°C arasındadır; ancak 10-20°C arasındaki sıcaklıklar süt sığırları için en ideal olanlardır. Yüksek sıcaklık, düşük sıcaklığa göre süt sığırları üzerinde daha fazla olumsuz etki yaratabilir. Ayrıca, nem seviyeleri de önemlidir. Süt sığırları için en uygun nem seviyeleri genellikle %50-70 arasında bulunur. Yüksek sıcaklık ve yüksek nem koşulları altında, süt sığırları verimlerini kaybedebilir ve stres yaşayabilirler. Hayvanların refahını artırmak için buldukları işletmelerde farklı uygulamalar yapılmaktadır. Bu uygulamalarda, hemhayvan refahı arttırmakta hem de işletme karlılığına olumlu bir şekilde yansımaktadır.

**Anahtar Kelimeler:** Süt sığırları, Hayvan Refahı, Stress, Sıcaklık.

**ANIMAL WELFARE PRACTICES IN DAIRY FARMING**

**ABSTRACT**

Dairy cattle farming constitutes an important part of cattle farming. To carry out dairy cattle activities successfully, it is necessary to implement an effective feeding program with sufficient and high-quality feed as well as factors such as animal care, management, appropriate animal selection, and shelter. Nowadays, dairy cattle farming is generally carried out in large-capacity enterprises under intensive conditions. In such enterprises, it is of great importance to make the necessary arrangements for yield control so that animals can exhibit their natural behaviors and to protect animal welfare. Animal welfare is defined as a reflection of an animal's living conditions, health, quality of life, and happiness. For an animal to be considered to be in welfare, it must be healthy, comfortable, well-fed, safe, able to exhibit the natural behaviors of its species, able to live without fear, and not suffering from pain or stress. Animal welfare is regulated by numerous laws and regulations in different countries. Careful management of climatic and environmental conditions plays a critical role in the success of the dairy cattle enterprise. Ensuring animal welfare depends on different factors. Some of these factors can be listed as climatic factors of the region where the enterprise will be located and climatic conditions within the enterprise. Climatic conditions include factors such as temperature, humidity, wind, and precipitation in a particular region. The fact that these conditions are below or above the desired limits can affect the productivity of dairy cattle positively or negatively. The climatic conditions in which dairy cattle live can affect their milk production, health, and general welfare. The optimum temperature for dairy cattle is usually between 5-25°C; however, temperatures between 10-20°C are the most ideal for dairy cattle. High temperatures can have more negative effects on dairy cattle than low temperatures. Humidity levels are also important. Optimal humidity levels for dairy cattle are usually found between 50-70%. Under conditions of high temperature and humidity, dairy cattle can lose productivity and experience stress. To improve the welfare of animals, different practices are carried out on the farms where they are located. These practices both increase animal welfare and have a positive impact on business profitability.

**Keywords:** Dairy cattle, Animal Welfare, Stress, Temperature.

## **SÜT SIĞIRLARINDA SİLAJ TÜKETİMİNİ ARTTIRMANIN ÖNEMİ**

**Dr. Levend COŞKUNTUNA (ORCID:0000-0001-7137-4198)**

Tekirdağ Namık Kemal Üniversitesi, Ziraat Fakültesi Zootečni Bölümü

**Email:**lcoskuntuna@nku.edu.tr

### **ÖZET**

Dünya süt üretiminin % 85'ı ve et üretiminin % 20'ine yakını sığırlardan elde edilmektedir. Ülkemizde ise süt üretiminin yaklaşık % 90'nı ve kırmızı et üretiminin yaklaşık olarak % 80'i sığırlardan karşılanmaktadır. Bu değerli hayvanların beslenmesi de büyük önem arz etmektedir. Bu beslemenin de ekonomik olarak yapılması gerekmektedir. Bunun için, hazırlanan rasyonların dengeli olması ve hayvanın tüm günlük ihtiyaçlarını karşılaması gerekmektedir. Hayvanın ihtiyaçlarını karşılamada ise, farklı yem hammaddelerinde yararlanılmaktadır. Bu yem hammaddeleri içerisinde de silaj önemli bir yer tutmaktadır. Silaj, günümüzde tüm hayvancılık işletmelerinde gelişmekte olan düvelerin, besi danalarının, kurudaki ve laktasyondaki ineklerin yemlenmesinde yoğun bir şekilde kullanılmaktadır. Silajın verilmiş miktarı, hayvanların yaşına ve verim düzeyine bağlı olarak değişim göstermektedir. Silajı kısaca tanımlayacak olursak; su içeriği yüksek yeşil yem bitkilerinin, küçük parçacıklara ayrılarak, havasız bir ortamda süt asidi bakterilerinin fermantasyonuna uğratılmaları yoluyla elde edilmektedir. Silaj; bir çeşit hayvan turşusu olarak ta adlandırılabilir. Silaj, yeterli düzeyde şeker içerdiğinden herhangi bir katkı maddesi kullanmaya gerek duyulmadan değerlendirilebilecek bir yem kaynağıdır. Silaj; birim alandan fazla miktarda sindirilebilir besin maddesi sağlayan, lezzetli ve besleme değeri yüksek bir yemdir. Silaj; uzun süre saklanabilen ve kış mevsiminde taze ve sulu yem olarak tüketilebilen ideal bir besin maddesidir. Silaj yapımında birbiri ile ilişkili üç etken bulunmaktadır. Bunlar; silaj yapılacak yem materyali, silaj yapım yönetimi ve fermantasyon işlemidir. Kaliteli bir silaj elde edebilmek için tüm bu etkenlerin üzerinde özenle durulması gerekmektedir. Silo yemleri hem süt inekleri tarafından severek tüketilmekte hem rumen faaliyetlerinin düzenlenmesine yardımcı olmaktadır. Ayrıca süt verimini arttırmaktadır. Bu açıdan, rasyona katılım ve hayvanlar tarafından tüketim miktarının artırılma yollarına gidilmesi gerekmektedir. Süt ineklerinin beslenmesinde rasyonlarında günlük 15 – 30 kg kadar kullanılmaktadır. Silaj kullanımı sırasında kesif yem ve kaliteli kuru ot ile desteklenmesi gerekmektedir.

**Anahtar Kelimeler:** Silaj, Yem Tüketimi, Ruminant, Besleme, Süt Verimi.

## **THE IMPORTANCE OF INCREASING SILAGE CONSUMPTION IN DAIRY COWS**

### **ABSTRACT**

In the world, 85% of milk production and nearly 20% of meat production is obtained from cattle. In our country, approximately 90% of milk production and 80% of red meat production is made from cattle. Feeding these valuable animals is also of great importance. This feeding should also be done economically. For this, the rations prepared must be balanced and meet all the daily needs of the animal. Different feed raw materials are used to meet the needs of the animal. Silage has an important place among these feed raw materials. Silage is used intensively in all livestock farms today for feeding developing heifers, fattening calves, and dry and lactating cows. The amount of silage fed varies depending on the age and efficiency level of the animals. If we define silage briefly; It is obtained by separating green fodder plants with high water content into small particles and fermentation of milk acid bacteria in an airless environment. Silage can also be called a kind of animal pickle. Silage is a feed source that can be evaluated without the need to use any additives since it contains sufficient sugar. Silage is a feed that provides a large amount of digestible nutrients per unit area, is delicious, and has high nutritional value. Silage is an ideal nutrient that can be stored for a long time and can be consumed as fresh and juicy feed during the winter season. There are three interrelated factors in silage production. These are; forage material to be silaged, silage production management, and fermentation process. All these factors should be carefully emphasized to obtain a quality silage. Silo feeds are both consumed fondly by dairy cows and help to regulate rumen activities. It also increases milk yield. In this respect, it is necessary to increase the amount of inclusion in the ration and consumption by animals. It is used in the rations of dairy cows at a daily rate of 15 - 30 kg. During the use of silage, it should be supported with concentrated feed and quality dry grass.

**ÖZET**

Türkiye ekonomisi dünya ekonomisindeki değişme ve gelişmelere bağlı olarak geleneksel ekonomi politikaları uygulamaları ile makroekonomik istikrarı sağlamayı çalışmıştır. Ancak 2016 yılından sonra başlayan ve 2021 yılında ‘yeni ekonomi politikası’ ile adlandırılan politika geleneksel olmayan geleneksel ekonomi politikalarından oluşan farklı bir model arayışı dönemidir. 1990-2016 yılları arası ekonomi politikası liberalleşme politikaları temeline dayalı dışa açılma ve finansal liberalizasyon politikalarını içermektedir. 2016 yılından sonra ise serbest piyasa ekonomisi kural ve kurumlarını işletirken, enerji ve ara mallardaki dış bağımlılığın düşürülmesi hedeflenmiştir. 2020 yılındaki küresel pandemi süreci sonrası ise cari fazla vermeyi ve rekabetçi kurlarla üretimdeki ve dünya ticaretindeki payını artırma amacıyla ‘geleneksel ekonomi politikalarına aykırı düşük faiz politikası’ ile ekonomik yapısını bağımlılığı yüksek bir yapıdan, ileri teknoloji ve ithal girdi bağımlılığı düşük bir yapıya dönüştürmeyi hedeflemiştir (Buluş; 2023,23). Ancak uygulanan bu politikanın enflasyon üzerinde yarattığı baskı, Türkiye ekonomisinde yeniden yüksek enflasyonun yaşanması politika değişikliğini de beraberinde getirmiştir. Türkiye ekonomisi 2023 yılında 191 ülke arasında en yüksek enflasyona sahip altıncı ülke olmuştur. Bu durum ekonomi politikası yapıcılarını ‘‘Ekonomide Rasyonel Dönüşüm Programı’’ olarak adlandırılan tekrar geleneksel politikalara dönmeye neden olmuştur. Ekonomide rasyonel dönüşüm programı toplumsal refahın artması için rasyonel politikaların uygulanmasını temel almıştır. Toplumsal refah hedefine ulaşmak için şeffaflık, sürdürülebilir yüksek büyüme için mali disiplinin tesis edilmesi ve fiyat istikrarı temel hedef olarak belirlenmiştir. Özellikle orta vadede enflasyonun yeniden tek haneli rakamlara düşürülmesi risk ve belirsizliğin azaltılarak her alanda öngörülebilirliğin artırıldığı, güvenilirliğinin sağlandığı makro ekonomik yapının sağlanması için etkin ekonomi politikalarının uygulanması gerekliliği vurgulanmıştır.

**Anahtar Kelimeler:** Türkiye Ekonomisi, yeni ekonomi, rasyonel politikalar.

**APPLICATION OF RATIONAL TRANSFORMATION PROGRAMS IN TURKISH  
ECONOMY AND ITS EFFECTS**

**ABSTRACT**

Depending on the changes and developments in the world economy, the Turkish economy has tried to ensure macroeconomic stability through the implementation of traditional economic policies. However, the policy that started after 2016 and is called the "new economic policy" in 2021 is a period of searching for a different model consisting of non-traditional traditional economic policies. Economic policy between 1990 and 2016 includes opening up and financial liberalization policies based on liberalization policies. After 2016, it was aimed to reduce external dependence on energy and intermediate goods while operating the free market economy rules and institutions. After the global pandemic process in 2020, it aimed to transform its economic structure from a highly dependent structure to a structure with low dependence on advanced technology and imported inputs, with a "low interest policy contrary to traditional economic policies" in order to achieve a current account surplus and increase its share in production and world trade with competitive exchange rates. (Invention; 2023,23). However, the pressure created by this policy on inflation and the re-experiencing high inflation in the Turkish economy brought about a policy change. In 2023, the Turkish economy was the sixth country with the highest inflation among 191 countries. This situation has caused economic policy makers to return to traditional policies, which is called the "Rational Transformation Program in the Economy". The rational transformation program in the economy is based on the implementation of rational policies to increase social welfare. In order to achieve the goal of social welfare, transparency, establishment of fiscal discipline for sustainable high growth and price stability have been determined as the main objectives. It was emphasized that effective economic policies should be implemented in order to reduce inflation back to single digits, to reduce risk and uncertainty, to increase predictability in all areas and to ensure a macroeconomic structure in which reliability is ensured, especially in the medium term.

**Keywords:** Turkish Economy, new economy, rational policies.

**ÖZET**

İnsanlar ve iktisatçılar yıllarca doğayı sınırsız bir kaynak olarak görmüşlerdir. Doğal kaynakların varlığının kıt olması ve bilinçsiz kullanımının çevreye zararlarının anlaşılmasından sonra yeni kavramlara ihtiyaç duyulmuştur. Yeşil ekonomi diğer adıyla düşük karbon emisyonlu ekonomi tam olarak burada ortaya çıkmıştır. Yeşil ekonomi, çevre problemlerinin giderek arttığı günümüz çağında çevresel riskleri ve ekolojik kısıtları azaltmayı hedefleyen ve bu hedefleri korurken sürdürülebilir kalkınmayı destekleyen bir ekonomi anlayışıdır. Yeşil ekonominin kaynak kullanımına etkileri hem çevresel hem ekonomik açıdan çok önemlidir. Kaynak kullanımı; çevresel açıdan, doğal kaynakların etkili bir şekilde kullanılması, çevre kirliliğinin azaltılmasına, iklim değişikliğinin engellenmesine ve doğal yaşamın korunmasına yönelik bir önem taşımaktadır. Ekonomik açıdan ise, kaynakların daha verimli kullanımı, işletmelerin maliyetlerinin düşürülmesi ve rekabet gücünün artırılması gibi faktörlerle birlikte uzun vadeli sürdürülebilir bir büyümeyi desteklemektedir. Kaynak kullanımlarını yeni boyutlara geçirmek enerjinin, suyun ve ham maddelerin daha etkin verimli kullanılmasına teşvik etmek, israfların önüne geçilmesini sağlayıp çevreci kaynak kullanımının teşvik edilmesi yeşil ekonomi modelinin temellerinde yatmaktadır. Yeşil ekonominin geniş kapsamlı bir şekilde benimsenmesi için, ülkelerin oluşturduğu politikaların sektörlerde faaliyet gösteren şirketleri yeşil ekonomiye geçiş konusunda teşvik edici ve yeşil ekonomi uygulayan firmalara destek sağlayıcı nitelikte olması gerekmektedir. Bu çerçevede çalışmanın amacı; yeşil ekonomi anlayışının önce genel anlamda ele alınarak sonrasında harcanan kaynaklar üzerinde sırasıyla turizm, enerji, inşaat, tarım ve gıda sektörlerinde sektör bazında negatif ve pozitif etkilerini ortaya koymaktır.

**Anahtar Kelimeler:** Yeşil ekonomi, çevre, doğal kaynaklar, yeşil sürdürülebilirlik, kaynak etkinliği, kaynak kullanımı.

**THE IMPACTS OF GREEN ECONOMY ON RESOURCE UTILIZATION BY  
SECTORS**

**ABSTRACT**

After the scarcity of natural resources and the understanding of the environmental damages of unconscious use of natural resources, new concepts were needed. A green economy, also known as a low carbon emission economy, has emerged here. The green economy is an understanding of the economy that aims to reduce environmental risks and ecological shortages in today's age of increasing environmental problems and supports sustainable development while maintaining these goals. The effects of a green economy on resource utilization are very important both environmentally and economically. Resource utilization is environmentally important for the effective use of natural resources, reduction of environmental pollution, prevention of climate change, and protection of natural life. In economic terms, it supports long-term sustainable growth with factors such as more efficient use of resources, reducing the costs of enterprises, and increasing competitiveness. Taking resource use to new dimensions, encouraging more efficient use of energy, water, and raw materials, preventing waste, and encouraging the use of environmentally friendly resources lie at the foundations of the green economy model. For the green economy to be adopted comprehensively, the policies established by the countries should encourage the companies operating in the sectors to transition to a green economy and provide support to the companies implementing the green economy. In this framework, the study aims to first discuss the green economy concept in general terms and then to reveal the negative and positive effects on the resources spent on a sectoral basis in tourism, energy, construction, agriculture, and food sectors respectively.

**Keywords:** Green economy, environment, natural resources, green sustainability, resource efficiency, resource utilisation.

**ÖZET**

Dünya ekonomisindeki değişim dinamiğinin etkilendiği en önemli politik araçlardan biri para politikasıdır. Çünkü günümüzde hızla değişen ve gelişen piyasalar finansal piyasalardır. Bu gelişmeler finansal sistemin düzenli işlemlerini sağlamak adına Merkez bankalarına ve para politikası uygulamalarına önemli görevler yüklemiştir. Hükümetin para arzını kontrol etmek için izlediği politikalar bütünü para politikasıdır. Ülkelerin para politikasını yürüten kurum merkez bankasıdır. Her ülkenin merkez bankası bir tür özel kamu iktisadi kuruluşudur. Merkez bankaları para politikaları uygularken ve para arzlarını belirlerken paranın dolaşım hızını dikkate almaktadır. Öğrenme, bilgi ve yeni değişime uyum içinde gerekli olan sorumluluktur. Merkez bankasına yenilik ve değişim ortamında düşen sorumluluk, etkinliği, güvenliği ve etkin parasal kontrolü aynı anda sağlamaktır. Merkez bankaları bu sorumluluklarını piyasaları gÖZETim altında tutarak uyguladıkları para politikası ile gerçekleştireceklerdir. Fakat, yenilik ve değişim merkez bankalarının finansal sistemin sağlıklı bir şekilde işlemlerini ve enflasyonsuz bir ortamda sürdürülebilir bir büyüme oranının gerçekleşmesini giderek zorlaştırmaktadır. Çünkü finansal yeniliklerdeki değişim ve gelişmeler paranın tanımını değiştirmeye başlamıştır. Yapısal değişiklikler ve finansal yeniliklere paralel olarak önceden bir politika belirlenmeye temel olabilecek bir parasal ilişkiyi tahmin edebilmek zorlaşmıştır. Bu durum bütünselleşmiş ekonomi politikalarını da başarısız kılmış, bütünleşmiş politikaların başarısızlığı da para politikalarını etkilemiştir. Çünkü karar birimlerinin amaç fonksiyonunu gerçekleştirmede en çok öğrenip bilgi akışını gerçekleştirdikleri ve birbir etkilendikleri para ve paraya dair konulardır. Onun için değişimin baş döndürücü hızla olduğu finansal piyasalarda para politikasının ve merkez bankasının dinamik yapıda olması gerekmektedir.

**Anahtar Kelimeler:** Türkiye Ekonomisi, öğrenen ekonomi, para politikaları.

**THE EFFECTIVENESS OF MONETARY POLICY IN THE LEARNING  
ECONOMY: AN EVALUATION ON THE TURKISH ECONOMY**

**ABSTRACT**

One of the most important political tools that affects the dynamics of change in the world economy is monetary policy. Because today's rapidly changing and developing markets are financial markets. These developments have imposed important duties on central banks and monetary policy practices in order to ensure the regular functioning of the financial system. Monetary policy is the set of policies followed by the government to control the money supply. The institution that carries out the monetary policy of the countries is the central bank. The central bank of every country is a type of specialized public economic institution. Central banks take into account the speed of circulation of money when implementing monetary policies and determining money supplies. Learning is the responsibility required to adapt to knowledge and new change. The responsibility of the central bank in an environment of innovation and change is to ensure efficiency, security and effective monetary control at the same time. Central banks will fulfill these responsibilities through the monetary policy they implement by keeping the markets under surveillance. However, innovation and change make it increasingly difficult for central banks to ensure the healthy functioning of the financial system and to achieve a sustainable growth rate in an inflation-free environment. Because changes and developments in financial innovations have begun to change the definition of money. In parallel with structural changes and financial innovations, it has become difficult to predict a monetary relationship that could be the basis for determining a policy in advance. This situation also made integrated economic policies unsuccessful, and the failure of integrated policies also affected monetary policies. Because it is money and money-related issues that decision-making units learn the most about, flow information to, and are directly affected by in achieving their objective function. Therefore, in financial markets where change occurs at a dizzying pace, monetary policy and the central bank must have a dynamic structure.

**ABSTRACT**

Technology advancements and cloud accounting have significantly impacted the calibre of accounting information systems, especially in the hospitality sector. Accuracy and operational performance have grown because of the faster and more effective data processing made possible by the incorporation of cloud accounting into accounting procedures. Better access to real-time financial data, which is essential for decision-making in the hospitality sector, has also been made possible by cloud computing. Additionally, technological advancements have aided in the creation of cloud-based accounting systems, which improve decision-making abilities and support the development of higher-calibre information systems. These developments have been crucial in helping businesses become more cost-effective while also improving business performance through digital transformation and digital leadership. This study investigates how technology improvements and cloud accounting affect the calibre of accounting information systems in the hospitality sector. The swift advancement of technology has led to the emergence of cloud accounting as a game-changing instrument for augmenting data processing and administration across multiple industries. This study intends to offer important insights into how accounting information systems are changing in the hotel sector in response to cloud accounting and technology breakthroughs through a quantitative data analysis. The results of this study regarding the impact of cloud accounting and technological advancements on the calibre of accounting information systems in the hospitality sector will be very helpful to

**ABSTRACT**

Online shopping platforms have been attracting many customers since they were introduced in the last decade of the 20th century. Using online shopping platforms, customers can purchase any merchandise anywhere and anytime without the need to physically go from store to store to find a product or wait in lines to check out. Despite their advantages in comparison with instore shopping, customers often have concerns when they shop for products that require measurements estimation such as furniture and clothes. Choosing the wrong clothing size, in particular, is a common issue experienced by many online shoppers. Therefore, in this research, a model is proposed that utilizes computer vision and machine learning to estimate upper body measurements of humans. The process involves using a portable camera to capture an image, enhancing its quality, isolating the human body, calibrating, extracting body features, marking the image, and generating accurate results. This method, using a single RGB camera, holds great potential for the fashion industry. We have also introduced ellipse-like approximations to minimize the difference between manual and software measurements. Our approach has shown better results than the current state-of-the-art, with an average difference of  $\pm 1$  cm compared to traditional manual tape measurements. Artificial intelligence is being applied to predict body dimensions in the apparel industry, leading to cost reduction and improved efficiency. We proposed a back propagation artificial neural network (BP-ANN) model to predict pattern making-related body dimensions using key human body measurements. The model was trained using anthropometric data from 120 young females in northeastern China, demonstrating that the BP-ANN model is more accurate and stable than the linear regression (LR) model. This method can be valuable in creating garment patterns for form-fitting clothing, and its precision can be further enhanced with a larger learning dataset in the future. There is a growing interest in deep learning-based recommender systems, particularly for outfit recommendation. Deep neural networks can identify important product features from images and text descriptions, and represent them as semantic vectors. This is especially relevant in the fashion domain, where various product features contribute to creating outfits. In our study, we compare different fusion methods for outfit recommendation that combine product features extracted from visual and textual data into multimodal item representations. We evaluate traditional fusion methods against attention-based fusion methods, which are designed to capture the interdependencies between different modalities more effectively.

**Keywords:** BP-ANN model, Online shopping platforms

**TECH-INFUSED LANDSCAPES: ADVANCEMENTS AND CHALLENGES IN  
MODERN LANDSCAPE ARCHITECTURE**

**ABSTRACT**

Recent technological progress has revolutionized landscape architecture, offering a suite of tools that enhance design precision and sustainability. Geographic Information Systems (GIS), Remote Sensing (RS), and Global Positioning Systems (GPS) provide landscape architects with invaluable data for informed decision-making, fostering sustainable design solutions. Building Information Modeling (BIM) and parametric design streamline processes and promote collaboration, driving innovation in landscape architecture. Virtual Reality (VR) and Augmented Reality (AR) technologies enable immersive experiences, facilitating stakeholder engagement and early design feedback. Drones and LIDAR technology improve site analysis, monitoring, and safety on construction sites, while digital fabrication and robotics push boundaries in material innovation. Addressing challenges such as data privacy and digital literacy is essential to fully harness the potential of these technologies. Through continuous research, education, and collaboration, landscape architecture can lead towards a more resilient, inclusive, and sustainable future."

**ABSTRACT**

Vector calculus is an indispensable tool in the field of computer graphics, serving as the mathematical foundation for a wide range of techniques and algorithms essential for creating visually compelling digital imagery. This paper provides a comprehensive overview of the applications of vector calculus in computer graphics, focusing on its role in various aspects of rendering, modelling, and simulation. The methodology of this paper involves a systematic exploration of vector calculus principles and their implementation in key areas of computer graphics. Beginning with an introduction to basic vector calculus concepts such as dot products, cross products, and vector derivatives, the paper proceeds to delve into specific applications within the realm of computer graphics. These applications include geometric transformations, surface modelling, lighting and shading computations, ray tracing, and physics-based simulations. Geometric transformations, such as translation, rotation, and scaling, are essential for positioning and animating objects in a virtual scene. Vector calculus enables the representation and manipulation of geometric transformations, facilitating the seamless integration of objects into a coherent visual environment. Additionally, vector calculus plays a crucial role in surface modelling techniques, such as parametric surfaces, implicit surfaces, and spline interpolation, enabling the creation of smooth and natural-looking surfaces. Furthermore, vector calculus is integral to lighting and shading computations, where it facilitates the simulation of light interactions with surfaces. Through operations such as surface normal calculations, lighting models, and material properties, vector calculus contributes to the generation of realistic illumination and shading effects. In the domain of ray tracing, vector calculus operations are employed to compute ray-object intersections, reflections, refractions, and shadowing effects, resulting in high-fidelity renderings with accurate light transport. In conclusion, the applications of vector calculus in computer graphics are vast and diverse, spanning across rendering, modelling, and simulation domains. By leveraging vector calculus principles, computer graphics practitioners can achieve unparalleled levels of realism and visual fidelity in digital imagery, paving the way for ground breaking advancements in the field. As computational power continues to advance, further exploration and innovation in vector calculus-based techniques promise to push the boundaries of what is possible in computer graphics.

**ABSTRACT**

Space debris mitigation is crucial for ensuring the sustainability of space activities. This ABSTRACT proposes novel approaches to tackle this pressing issue. Firstly, employing active debris removal techniques, such as robotic capture and deorbiting, can effectively reduce the population of hazardous debris. Secondly, implementing satellite design standards for end-of-life disposal, including provisions for propulsion systems or deployable sails for deorbiting, can prevent the creation of new debris. Additionally, advancements in collision avoidance algorithms and satellite maneuvering capabilities can mitigate the risk of collisions, thereby reducing the generation of debris fragments. Furthermore, international cooperation and regulations are essential for promoting responsible space practices and enforcing debris mitigation measures. By integrating these innovative strategies, we can address the growing challenge of space debris and safeguard the long-term sustainability of space exploration and utilization.

**ABSTRACT**

Zootechnics, the science of animal husbandry, plays a crucial role in ensuring efficient livestock production while considering animal welfare and sustainability. Mathematics, with its analytical and predictive capabilities, offers a powerful toolset for optimizing various aspects of zootechnical practices. This ABSTRACT explores the integration of mathematics into zootechnics, focusing on its application in areas such as breeding, nutrition, health management, and environmental impact assessment. Mathematical modeling facilitates the understanding of complex biological processes underlying animal growth, reproduction, and disease dynamics. By employing techniques such as differential equations, optimization algorithms, and statistical analysis, researchers can develop predictive models to optimize breeding programs, enhance feed efficiency, and mitigate disease outbreaks. Furthermore, mathematical modeling allows for the simulation of environmental factors, enabling the assessment of their impact on animal welfare and production systems. In addition to modeling, mathematical tools like linear programming and decision analysis aid in resource allocation, such as determining optimal feed formulations to meet nutritional requirements while minimizing costs. Furthermore, mathematical optimization techniques can optimize breeding strategies to maximize desired traits while considering genetic diversity and inbreeding avoidance.

**ABSTRACT**

This research delves into the realm of 3D printing, exploring the transformative potential of mathematical optimization techniques in the pursuit of maximizing efficiency and minimizing production costs. Additive manufacturing, while revolutionary, faces challenges in terms of optimizing various parameters to enhance overall performance. The study centres on the utilization of mathematical models and algorithms to optimize critical aspects of the 3D printing process, including print speed, layer thickness, and material usage. By employing mathematical optimization, the research aims to achieve a balance between efficiency and cost-effectiveness, paving the way for a more streamlined and resource-efficient additive manufacturing workflow. Mathematical optimization algorithms play a pivotal role in fine-tuning the intricate parameters involved in 3D printing. These algorithms systematically explore and analyze a vast design space, identifying optimal configurations that lead to enhanced production efficiency. Case studies exemplify the practical applications of mathematical optimization, showcasing its ability to significantly reduce production times and material waste. Through quantitative analysis, the research demonstrates the tangible impact of mathematical optimization on the economic viability of 3D printing processes, making a compelling case for its integration into mainstream additive manufacturing workflows. The findings contribute to the broader discourse on advancing the precision and economic sustainability of 3D printing technologies. By elucidating the synergies between mathematical optimization and additive manufacturing, this research not only expands our understanding of the intricate dynamics within 3D printing but also presents a quantitative framework for realizing cost-effective, high-performance outcomes. Ultimately, the study advocates for the incorporation of mathematical optimization as a fundamental tool in the arsenal of additive manufacturing, propelling the industry towards greater efficiency and economic viability.

**ABSTRACT**

Aquaponics technology represents a sustainable and innovative approach to food production that combines aquaculture and hydroponics in a closed-loop system. In aquaponics, fish and plants are cultivated together in a symbiotic relationship where fish waste provides nutrients for plant growth, and plants help filter and clean the water for the fish. This self-sustaining ecosystem maximizes resource efficiency, minimizes waste, and offers numerous benefits, including higher yields, reduced water usage, and minimal environmental impact. Aquaponics technology involves components such as fish tanks, grow beds, water circulation systems, beneficial bacteria, and monitoring mechanisms to maintain optimal conditions for both fish and plants. By integrating aquaculture and hydroponics, aquaponics technology offers a sustainable and environmentally friendly solution for producing a diverse range of crops in a controlled and efficient manner. Continued research, development, and education in aquaponics technology can further enhance its potential as a viable and scalable method of food production for the future.

**ABSTRACT**

The intersection of mathematics and agriculture presents a fertile ground for innovation, optimization, and sustainable development. This Abstract explores the pivotal role of mathematics in addressing key challenges and unlocking the potential of agriculture to feed a growing global population while ensuring environmental sustainability and economic viability. Mathematical models and algorithms play a crucial role in optimizing various aspects of agricultural systems, from crop planning and management to livestock production and farm mechanization. Optimization techniques enable farmers to make informed decisions regarding resource allocation, land use, and production practices, leading to increased efficiency, productivity, and profitability. Furthermore, mathematical modeling facilitates the analysis and prediction of complex biological phenomena such as plant growth, pest dynamics, and disease spread. By harnessing mathematical principles, researchers and practitioners can develop innovative plant protection strategies, mitigate risks, and enhance resilience against environmental stressors and climate variability.

**ABSTRACT**

Mathematics plays a pivotal role in the analysis and optimization of rocket launch trajectories, ensuring precise and efficient delivery of payloads into space. This paper explores the application of mathematics in rocket trajectory analysis, focusing on key areas such as dynamics, orbital mechanics, numerical methods, optimization algorithms, control theory, and uncertainty analysis. Differential equations derived from classical mechanics and orbital dynamics are used to model the motion of rockets, accounting for gravitational forces, aerodynamic drag, and thrust from rocket engines. Numerical methods, including numerical integration techniques and optimization algorithms, are employed to solve complex trajectory equations and optimize mission parameters such as launch angle, thrust profile, and staging events. Control theory is utilized to design guidance and control systems that steer rockets along their intended trajectories and stabilize their orientation during flight. Additionally, uncertainty analysis techniques are applied to assess and mitigate uncertainties in trajectory predictions, ensuring the reliability and success of space missions. Through the application of mathematics, rocket launch trajectory analysis facilitates the advancement of space exploration and satellite deployment with improved accuracy and efficiency.

**Keywords:** rocket launch, trajectory analysis, mathematics, dynamics, orbital mechanics, numerical methods, optimization algorithms, control theory, uncertainty analysis, space exploration.

**ABSTRACT**

Medical analysis is evolving with innovative technology, enhancing affected person consequences and healthcare transport. Advancements encompass mRNA vaccines for customized most cancers remedies, PSMA-centered therapy refining prostate most cancers care, and immunotherapeutic strategies for noncommunicable sicknesses. User pleasant diagnostic exams cater to resource-confined settings, while virtual connectivity and AIassisted telemedicine enhance real-time selection-making. Wearable sensors reveal important symptoms, and blockchain secures health information. Nanomedicine gives particular focused therapies, and genomic medicine tailors treatments to genetic profiles. These improvements herald a transformative era in analysis, promising revolutionized healthcare, advanced results, and personalized remedy. Facing prostate cancer can feel daunting, but new treatments are like precision weapons, precisely targeting the disease while advanced imaging helps catch it early, like a skilled detective cracking a case. No matter where you are, top-quality healthcare should be accessible. Imagine diagnostic tests as simple as brewing your morning coffee, providing rapid results and peace of mind, even in remote areas. Telemedicine brings your doctor to you, offering advice and support through video calls, while wearable devices keep you informed about your health, like a trusted friend always by your side. Your medical history is precious and should be protected. Blockchain technology ensures your data stays secure, like a fortress guarding your secrets. Tiny nanoparticles are like silent warriors, fighting disease without harming healthy cells, while genomic medicine unlocks the secrets of your DNA, guiding personalized treatment decisions. In essence, these innovations are revolutionizing healthcare, ensuring that every step of your medical journey is tailored to your needs, preferences, and unique biology.

**A COMPLEMENTARY APPROACH TO TREATING PETS - BACH FLOWER  
DROPS**

**Natasa ANTIC (ORCID:0009-0000-6589-6563)**

Beka Vet Veterinary Pharmacy, Belgrade, Serbia

**Email:** natasa.antic119@gmail.com

**ABSTRACT**

Bach's flower essences result from the research of Dr. Edward Bach, a British doctor. Learning from nature and living beings, and from his personal experience with the disease, led him to hypotheses about the influence of emotional imbalance on the disease manifestation. He divided emotional states into seven groups: fear, insecurity, lack of interest (absence of spirit), loneliness, and hypersensitivity to the influence and ideas of others, depression and despair, and excessive concern for the well-being of others and treated them with thirty eight flower essences. Pets also may express personality, awareness, emotions, and may get into an emotional imbalance. Such conditions alters behavior of the pet, and may lead to psychosomatic diseases (diarrhea due to fear). In addition to allopathic treatment, inclusion of Bach drops shortens the recovery time, which is a kind of blessing for both the pet and the owner. Bach's flower essences, are natural and do not have contraindications. No antagonism, no synergism with other medicines has been demonstrated, nor can they be overdosed. These are the reasons why they can be used for a wide range of animal behavioral problems. They are safe and gently and subtly restore balance and reduce flaws, while enhancing virtues. Treatment with Bach essences is carried out through individual therapy. Five to a maximum of seven flower essences in water solution can be combined in the so-called utility bottle. The length of therapy is usually three weeks. Bach drops may help in situations such are; stress from relocation (animals are territorial); fear from loud noises, new things, people, etc.; aggression; dominant behavior; lack of self-confidence; depression; traumatic past, and many other conditions. Bach's flower essences, with their uniqueness and perfect simplicity, are valuable tool that may improve practitioners' art of healing (*ars medica*) and allows self-healing of living beings.

**Keywords:** Bach drops, flower essences, complementary approach to treating pets

**ABSTRACT**

In recent years, unprecedented climatic variations have been observed in North Africa, with all these changes in climate parameters bound to have adverse impacts on the environment and the socio-economic activity of countries. According to the report by the Intergovernmental Panel on Climate Change (IPCC2021), global warming in North Africa is higher than the global average, with temperatures rising from  $0.74C^{\circ}$  to  $20C^{\circ}$  depending on the region. Algeria has not escaped this trend. Indeed, the signs of these variations have become increasingly significant in recent years. The aim of this study is to analyze temperature trends in northeastern Algeria. Six stations with a common measurement period of sixty years (1962 to 2022) were chosen for this study.

**ABSTRACT**

This study explores how Islamic digital marketing fosters customer trust among Muslim consumers. Employing a qualitative research approach, in-depth interviews will be conducted with a targeted group of participants. Thematic analysis will be used to examine participants' experiences and perceptions of Islamic digital marketing practices. The research aims to uncover the key elements that build trust within this specific marketing approach and how it resonates with Islamic values. This qualitative approach will provide rich insights into the subjective experiences and decision-making processes of Muslim consumers in the digital marketplace. The findings will contribute to a deeper understanding of how Islamic digital marketing can be strategically utilized to build trust and establish stronger customer relationships.

**ABSTRACT**

The evaluation of water quality is needed for maintains the fresh potable water. For preventing the water born diseases, fresh drinking water is required. The objective of this paper is to comparative study of the assessment of quality of water among two distinct water bodies of Ranchi, Jharkhand. The assessment of distinct hydrological parameters will assist to identify the sources of pollutant. The analytical assessment of the water sample has been made by using different instrument/experiment. The obtained result shows that some of the hydrological parameters are exists within standard prescribe limit of BIS and some are beyond the limit of BIS. The multivariate statistical tools have been used to evaluate the quality of water. In based of statistical tools water quality index used to identify the distinct classes of water quality. The comparative study of two water bodies shows distinct excellency categories of water. Also, this present study are used to maintain and management of water quality.

**ABSTRACT**

Partridge or field partridge (*Perdix perdix*) is a species of bird from the pheasant family (Phasianidae). It inhabits areas with a moderate climate, but it can rarely be found on mountain plains and higher altitudes. It lives in Europe and the western part of Asia, and it has been successfully settled in North America as a hunting bird. Diseases of parasitic etiology represent a major health problem for partridges. Among them is coccidiosis. Coccidiosis is considered the single most common disease in gamebird production; this intestinal parasite is transmitted in faeces by single celled organisms called oocysts. The production and spread of this parasite is very fast, one oocyst can reproduce resulting in millions of oocysts. If left undetected coccidia can cause waves of very ill birds and numerous deaths. When oocysts are within the faeces or environment moisture and warmth causes them to sporulate making them “infective”. The birds then ingest these oocysts and the cycle within the intestinal tract starts, multiplying and causing illness. The most common coccidia species found in partridges reared in the Serbia are: *Eimeria kofoidi*, *Eimeria caucasica* and *Eimeria legionensis*. Most abundant species are *E. kofoidi*. *E.kofoidi* invades duodenum and jejunum, however heavy infections cause the parasite to spread to the ileum. White spots can be seen from the outside of the intestine, the duodenum contains thick mucus and white streaks, thick green or yellow mucus is found in the upper intestine. *E.caucasica* invades the duodenum and the lesions spotted from the outside of the intestine are pinkish/reddish spots. *E.legionensis* mainly invades the caecae. Petechial hemorrhaging is common inside the folds of the caecae with no normal caecal contents present, instead there are cheesy white cores sometimes in fragments but with heavy infections it is seen as one whole core.

**Keywords:** partridge, *Perdix perdix*, coccidiosis, Serbia

### **ABSTRACT**

The growing demand for portable and sustainable power sources has led to significant research in energy harvesting technologies. Footstep power generators, which convert kinetic energy from human footsteps into electrical energy, offer a promising solution for powering low-power electronic devices. This paper presents a review of footstep power generator designs, focusing on piezoelectric energy harvesting mechanisms. The working principle of piezoelectric materials and their suitability for footstep power generation are discussed. Distinctive design considerations, such as material choice, generator configuration, and power management circuitry, are explored. The paper also analyzes the challenges and opportunities associated with footstep power generators, including efficiency improvement, energy storage integration, and practical applications. Finally, the prospects of footstep power generation technology are discussed. The increasing miniaturization and portability of electronic devices have intensified the need for efficient and sustainable power sources. Batteries, the conventional power source, have limitations such as finite lifespan, environmental impact, and the requirement for periodic replacement. Energy harvesting technologies offer a promising alternative by extracting energy from ambient sources such as vibrations, solar radiation, and thermal gradients. Footstep power generation is a type of energy harvesting technology that converts the kinetic energy of human footsteps into electrical energy. This technology can power a variety of wearable and portable electronic devices, reducing reliance on batteries and promoting sustainable energy use. Piezoelectric materials show a unique property where mechanical stress applied to the material induces an electric charge. This phenomenon can be exploited to convert the pressure exerted during a footstep into electrical energy. Piezoelectric ceramics, such as lead zirconate titanate (PZT), are commonly used materials for footstep power generators due to their high piezoelectric coefficients. The design of a footstep power generator involves several key considerations: **Material Selection:** The choice of piezoelectric material is crucial for efficient energy conversion. Factors such as piezoelectric coefficient, mechanical properties, and cost need to be considered. **Generator Configuration:** The arrangement of piezoelectric elements within the generator significantly changes the output voltage and power. Different configurations, such as cantilever beams and stacked plates, are explored to perfect power generation. **Power Management Circuitry:** The harvested electrical energy is often in the form of low voltage spikes. Power management circuitry is essential to rectify, regulate, and store the harvested energy for efficient use by the target device. Footstep power generation technology faces several challenges: **Efficiency Improvement:** Enhancing the efficiency of energy conversion from footsteps stays a primary focus. Research efforts are directed towards improved material properties, optimized generator designs, and advanced power management techniques. **Energy Storage Integration:** Integrating energy storage devices, such as capacitors

or batteries, is crucial for storing the harvested energy and providing a stable power supply for electronic devices. Practical Applications: Developing practical applications for footstep power generators requires addressing factors such as user comfort, durability, and cost-effectiveness. Despite these challenges, footstep power generation presents exciting opportunities: Sustainable Power Source: Footstep power generators offer a sustainable and environmentally friendly alternative to batteries, reducing reliance on non-renewable resources. Wearable Electronics: Integration with wearable electronics can power devices such as health trackers, smartwatches, and fitness monitors. Wireless Sensor Networks: Footstep-generated power can be used to power wireless sensor nodes, enabling perpetual operation in remote or inaccessible locations. Footstep power generation technology holds immense potential for powering low-power electronic devices in a sustainable and efficient manner. Advancements in material science, improved generator designs, and innovative energy storage solutions are expected to enhance the efficiency and practicality of this technology. As research progresses, footstep power generators have the potential to revolutionize the way we power our wearable and portable devices, contributing to a more sustainable future. Footstep power generators offer a promising solution for powering low-power electronic devices by converting the kinetic energy of human footsteps into electrical energy. Piezoelectric materials play a vital role in this energy conversion process. This paper has reviewed the working principle of footstep power generators, design considerations, challenges, and opportunities. Future advancements in this technology hold the potential to create a change in thinking towards sustainable and wearable power solutions.

**Keywords:** Footstep power generator, piezoelectric energy harvesting, renewable energy, sustainable power

**ABSTRACT**

The effects of climate change disproportionately affect vulnerable populations worldwide, especially in low-lying and densely populated areas like Bangladesh. This study focuses on the district of Sunamganj, which is in Bangladesh's northeast and is particularly vulnerable to climate-related disasters like floods, cyclones, and riverbank erosion. Primary data was gathered from a variety of governmental and non-governmental organizations and through field level questionnaire surveys. Peer-reviewed books, research papers, journals, and databases have all provided secondary data. This study explores the complex effects of climate change on the lives and livelihoods of vulnerable communities in Sunamganj by thoroughly examining primary and secondary data sources. The research indicates that the local population faces health risks, food insecurity, displacement, and asset loss because of climate change exacerbating pre-existing vulnerabilities. Furthermore, the study emphasizes the significance of integrated approaches to mitigating and adapting to climate change, stressing the necessity of policy interventions as well as community-based initiatives to strengthen adaptive capacity and build resilience in vulnerable areas like Sunamganj. This research adds to the current conversation on climate resilience and sustainable development in Bangladesh and beyond by offering empirical data and insights into the localized effects of climate change.

**ABSTRACT**

Spinal cord injury (SCI) is a neurological disorder that causes serious dysfunctions of the whole body. The results of studies describing the determinants and the rate of BMD loss in people after SCI are inconclusive. The study covered 50 young Caucasian men after spinal cord injuries. Forearm bone mineral density (BMD), bone mineral content (BMC) and T-score in distal (dis) and proximal (prox) part was measured by densitometry. Somatic measurements and body composition measurements were taken. To assess smoking, the following were used on the Global Adult Tobacco Survey questionnaire. Muscle strength was measured using a Jamar dynamometer. Active male smokers after SCI had significantly lower BMD dis, BMC dis and prox male non-smokers after SCI. Physical activity was a significant positive predictor for BMC prox. Predictor of interactions of physical activity and fat mass was significant for BMC dis (positive direction). It was also found that the predictor of interactions of four variables: physical activity, fat mass, hand grip strength (positive direction), and years of active smoking (negative direction) was significant for BMD dis. The predictor of interactions of age at injury (additive direction) and the number of cigarettes smoked per day (negative direction) was significant for T-score prox. Non-smoking physically active men after SCI had the most advantageous values of mean forearm BMD. Active smoking may reduce the protective role of physical activity for bone health in young men after SCI.

**ABSTRACT**

Anti-Communism political emigration had originated from the end of World War II in Albania. Waves of immigration to western countries started in the last months of the war and continued with intensity immediately after its termination. Anti-Communism immigration was nationwide almost from all regions of the country, but in terms of political Albania, the largest groups of immigrants were from North and South Albania. While political emigration from Central Albania was relatively low. This expansion was related to the intensity and extent of the armed conflict among Albanians in these areas. The political immigration was established as consequence of various reasons: First, as a result of the establishment of the communist dictatorship in Albania. This was the main reason, which not only did not create opportunities and chances for national reconciliation after conflict dramatic developments that Albanians had among themselves during World War II, but the establishment of the communist dictatorship was a source of deepening hostilities. Secondly, the political emigration of a large number of Albanians was a result of the Civil War that took place in Albania from autumn 1943 to November 1944. In this context,

**THE IMPACT OF POLITICAL PRESSURE ON JUDICIAL INDEPENDENCE: A  
COMPARATIVE ANALYSIS OF INDIA AND THE UK**

**Dr Rida Zulfiqar**  
University of Szeged

**ABSTRACT**

The concept of judicial independence is very important for keeping the rule of law, democracy, and the protection of human rights. This paper aims to study how political pressure affects judicial independence, with a focus on India and the UK. For our study, we use a qualitative method. This includes looking at case studies, legal documents, times when politics interfered with the courts, and talking to or getting opinions from experts in law. In India, we see political pressure in several ways. For example, the government might change laws that affect how judges are chosen or speak against judges in public. This can make it hard for judges to make decisions freely. In the UK, there are systems meant to protect judges from such pressures. For instance, the Judicial Appointments Commission helps in choosing judges without political influence. However, even with these systems, there are still challenges that need attention. When we compare India and the UK, we notice both differences and similarities in how they keep their courts free from political pressure. Each country has its own way of dealing with this issue, influenced by its culture, laws, and history. Some methods work well in protecting judges, while others may not. From our study, we learn how important it is to keep the judiciary independent in democracies. Political pressures can threaten this independence, but there are ways to protect it. We suggest some ideas for making sure judges can work without fear of political interference. In conclusion, our paper shows how political pressure can challenge the independence of the judiciary in both India and the UK. It's crucial for democratic societies to keep an eye on this issue and take steps to protect the freedom of their courts. This way, judges can make fair decisions, which is important for everyone's rights and for democracy itself.

**ABSTRACT**

Human Activity Recognition (HAR) is a pivotal component in the development of intelligent systems for various applications, ranging from healthcare to surveillance. This paper presents a comprehensive exploration of Human Activity Recognition using Recurrent Neural Networks (RNNs), leveraging their temporal modeling capabilities to capture sequential patterns in sensor data. The proposed methodology involves the acquisition of sensor data, such as accelerometers and gyroscopes, followed by a feature extraction process to distill relevant information from the raw data. An optimized RNN architecture is then employed to learn temporal dependencies and patterns in the sequential data. The model is trained on diverse labeled datasets, ensuring adaptability to a wide range of human activities.

**ABSTRACT**

The advent of autonomous vehicles has revolutionized transportation, offering enhanced safety, efficiency, and convenience. This research paper presents an Arduino-based autonomous vehicle system that integrates voice recognition technology with Google Assistant, aiming to address the need for intuitive control mechanisms in autonomous vehicles. The Arduino Uno is interfaced with the motor driver and Bluetooth module, while the ultrasonic sensor is connected to both the motor driver and servo motor. The Google Assistant on an Android device serves as the interface for voice commands, providing seamless interaction with the autonomous vehicle. The paper aims to address the demand for smart and efficient transportation systems by combining Arduino-based automation with voice recognition capabilities. The integration of voice recognition technology enhances user interaction and accessibility, paving the way for intuitive control interfaces in future transportation solutions. This research highlights the potential of Arduino-based platforms in prototyping and developing advanced automation systems for diverse applications. In conclusion, the Arduino-based autonomous vehicle system utilizing voice recognition technology presents a promising avenue for the advancement of intelligent transportation systems. By leveraging the capabilities of Arduino and Google Assistant, the research paper demonstrates a scalable and adaptable solution for creating efficient and user-friendly autonomous vehicles.

**ABSTRACT**

Chemical Vapor Deposition (CVD) coatings are widely used in machining applications due to their ability to withstand at high temperatures and exhibition desirable properties such as high hardness, wear resistance, and chemical stability. This paper investigates the significance of microstructure in determining the performance of CVD coatings applied to cemented carbide cutting tools. The microstructure, influenced by the C/(C + N) ratio, plays essential role in the coating's characteristics and performance during cutting operations. Many studies have proved that the combination of elements like B or Si into the coating composition can enhance both hardness and microstructure, thereby improving cutting performance. The CVD process involves thermally-induced chemical reactions conducted at elevated temperatures in an atmosphere-controlled reactor. Thin-film coatings are formed through reactions between gaseous phases and the heated substrate surface. Different gases injected into the reactor lead to the formation of these thin film layers of the coatings. For instance, TiN and titanium carbide (TiC) are formed through specific chemical reactions involving precursor gases such as TiCl<sub>4</sub>, N<sub>2</sub>, CH<sub>4</sub>, and H<sub>2</sub>. The resulting coatings exhibit a hard, wear-resistant with strong bonds to the substrate. Understanding and optimizing the microstructure of CVD coatings offer a promising way for enhancing the performance and durability of cemented carbide cutting tools in machining applications. This current paper aims to extreme-understand of CVD coating technology and its applications in improving the efficiency and increase lifetime of cutting tools in machining processes.

**ABSTRACT**

This project focuses on the design, development, and implementation of an innovative all-wheel parking brake system for commercial vehicles. The proposed system leverages the reliability and efficiency of a spring actuator commonly found in commercial vehicles, aiming to enhance the overall safety and parking functionality of the vehicle. The primary objective of the project is to create a parking brake system that can effectively engage and disengage all wheels simultaneously, providing robust and secure immobilization of the vehicle during parking. The methodology involves a comprehensive study of existing parking brake systems, a detailed analysis of commercial vehicle spring actuators, and the design and prototyping of a novel mechanism to synchronize the engagement of all wheels. The project aims to address challenges related to the simultaneous actuation of multiple wheels, ensuring uniform and reliable braking force distribution.

### **ÖZET**

Bu makalenin amacı, son dönemlerde hızla yükselmekte olan “Yeşil Ekonomi”ye doğru geçişin sürdürülebilir büyüme üzerindeki etkisini analiz etmektir. Yeşil ekonomi, çevresel riskleri ve ekolojik kısıtlıların azaltılmasını desteklemektedir. Sürdürülebilir büyüme ise, gelir eşitsizliğinin azaltılması ile birlikte ekonomik istikrar ve refahı korumaktadır. Ekonomik büyüme, bir ekonomide mal ve hizmet üretimi miktarında olan artıştır. Dünyada nüfusun hızla artması ve artan nüfusla birlikte hızla artan üretim ile birlikte daha hızlı bir tüketim eğiliminin oluşmasına neden olmuştur. Çevrenin ve ekolojik düzenin korunması için “yeşil ekonomi” yaklaşımı daha yaygın hale gelmeye başlamıştır. Uluslararası düzeyde belirli politikalar üretilmeye başlanmıştır. Yeşil ekonomi; açık yeşil ekonomi, orta yeşil ekonomi ve ileri yeşil ekonomi olarak üçe ayrılmaktadır. Açık yeşil ekonomi, devlete karşı çıkmışlardır. Orta yeşil ekonomi, devlet müdahalesini savunmaktadır. İleri yeşil ekonomi ise, devlet müdahalesini rolü azdır. Yeşil ekonominin amacı, eşitlik ve adalet, refah ve kalkındır. Solow’un neoklasik büyüme modeli üç önemli iddia ortaya atmaktadır. Birincisi, teknolojik gelişmeler olmadığında, daha az kaynak ve üretim mümkün kılacaktır. İkincisi, ekonominin kilit kaynağı yatırım ve tasarruftur. Üçüncüsü ise, daha az gelişmiş ekonomiler sermaye miktarını istikrarlı hale getirene kadar gelişmiş ekonomilerden daha hızlı büyüyecektir. Sonuç olarak ise, uygulanan politikaların uzun dönemde büyüme ve yeşil ekonomi arasında pozitif ve olumlu bir ilişki olduğu görülmüştür. Artan teknolojik ilerleme ve uzmanlaşma ile kısa dönemde de sürdürülebilir büyüme üzerinde pozitif sonuçların ortaya çıkacağı kaçınılmaz olarak görülmektedir.

**Anahtar Kelimeler:** Yeşil Ekonomi, Ekonomik Büyüme, Sürdürülebilir Büyüme

**THE RELATIONSHIP BETWEEN GREEN ECONOMY AND SUSTAINABLE  
GROWTH**

**ABSTRACT**

The purpose of this article is to analyze the impact of the transition towards the rapidly rising "Green Economy" on sustainable growth. The green economy supports the reduction of environmental risks and ecological scarcities. Sustainable growth, on the other hand, aims to maintain economic stability and welfare while reducing income inequality. Economic growth refers to an increase in the quantity of goods and services produced in an economy. The rapid increase in population worldwide, coupled with increasing production, has led to a faster trend in consumption. The approach of "green economy" has become more widespread to preserve the environment and ecological balance. Certain policies have begun to be formulated at the international level. The green economy is divided into three categories: open green economy, middle green economy, and advanced green economy. The open green economy opposes government intervention. The middle green economy advocates for government intervention. The advanced green economy minimizes the role of government intervention. The aim of the green economy is equality and justice, welfare, and development. Solow's neoclassical growth model makes three important claims. First, technological advancements will make it possible to produce more with fewer resources. Second, the key sources of the economy are investment and savings. Third, less developed economies will grow faster than developed economies until they stabilize the capital stock. As a result, it has been observed that the policies implemented have a positive and beneficial relationship between growth and the green economy in the long run. It is inevitable that with increasing technological progress and specialization, positive outcomes will emerge for sustainable growth in the short term as well.

**ÖZET**

Distopya sözcüğü ile yakın anlamlı olan apokaliptik kelimesi insanlığın sonunu getirecek olan son ve önlenemez felaket/kıyamet anlamında kullanılır. Yönetmenliğini Mel Gibson'ın yaptığı, 2006 yılında gösterime giren film *Apocalypto*, Maya uygarlığının 7. yüzyıldaki çöküş dönemine odaklanmasıyla birlikte, uygarlık hakkında siyasi, kültürel ve dini bilgilerde sunar. Kolomb öncesi Amerikan uygarlıklarından biri olan Maya uygarlığı, binlerce yıl boyunca Meksika'nın güneydoğusundan, Honduras, El Salvador ve Guatemala'ya kadar uzanan Mezoamerika bölgesinde hüküm sürmüştür ve bu yüzden film, Meksi'da Veracruz'un güneyindeki Catemaco ve Los Tuxtlas çevresinde çekilmiştir. *Apocalypto* filminde Yukatek Mayacası kullanılmış ve tüm gösterime girdiği ülkelerde dublaj yasaklanmış, sadece İngilizce altyazı ile gösterilmektedir. Film, köylerinde mutlu bir şekilde yaşayan Maya halkının hayatlarından kesitlilerle başlar ve köye gelen bir grup asker köyü yağmalar ve kadınları köle, erkekleri ise Maya geleneğine göre kurban etmek üzere esir alırlar. Sonrasında esir yerli halkı zorlu ve sonunun ne olduğunu bilmedikleri bir yolculuk bekler ve filmin yaklaşık kırk dakikalık bölümünü içeren ve seyirciyi de merak içinde bırakan bu yolculuk sonrası zigguratları ve insan kurbanı ayinleri ile ünlü Maya başkentine ulaşırlar. Kuraklığın problem olduğu bölgede kurban törenleri yapılmakta ve esir alınan köy halkını da bu akıbet beklemektedir. Filmin yayınlamasıyla birlikte tarih eleştirmenleri, tarihsel çelişkilerle dolu olduğu ve gerçeği yansıtmadığı gerekçesiyle Maya uygarlığının diğer mezoamerikan uygarlıkları Mayalar İnkalara Azteklerle birbirine karıştırıldığı ve taraflı bir bakış sunduğunu iddia etmişlerdir. Tüm bu eleştirilere rağmen *Apocalypto* filmi kurgusal tasvirleriyle Maya medeniyetinin çöküşünün yakın olduğu bir dönemde, çöküşün getirdiği çaresizlik ve beraberinde yaygınlaşan zulüm, kabileler arası iç savaş, salgın hastalıklar, yabancıların istilasını gibi konulara apokaliptik bir bakış açısıyla bir dönemim en görkemli medeniyetinin yok oluşunu anlatır.

**Anahtar Kelimeler:** Mezoamerika Uygarlıkları, Kurban Ritüeli, Apokaliptik Dönem

**APOCALYPTIC NARRATIVES IN CINEMA: THE POLITICAL, RELIGIOUS AND  
CULTURAL PRESENCE OF THE MAYA, A MESOAMERICAN CIVILIZATION IN  
THE MOVIE “APOCALYPTO”**

**ABSTARCT**

The term "apocalyptic," closely associated with "dystopia," refers to the ultimate and inevitable catastrophe or apocalypse that will result in the extinction of humanity. Directed by Mel Gibson and released in 2006, *Apocalypto* centers on the collapse of the Mayan civilization in the 7th century and provides political, cultural, and religious information about the civilization. The Mayan civilization, an ancient American culture that existed for thousands of years, exerted control over the Mesoamerican region, spanning from southeastern Mexico to Honduras, El Salvador, and Guatemala. Therefore, the movie was filmed in the vicinity of Catemaco and Los Tuxtlas, located south of Veracruz in Mexico. The movie *Apocalypto*, which was shot with Yukatek Mayaca, was banned from dubbing in all countries where it was released and was released only with English subtitles. The movie opens by depicting the lives of the Mayan populace, who reside contentedly in their community. Upon the troops' arrival in the village, they engage in looting and seize the women as slaves, while capturing the men to be sacrificed in conformity with the Mayan tradition. The captive locals then embark on a challenging and unpredictable journey to the Mayan capital, famous for its ziggurats and human sacrifice rituals, which lasts for about forty minutes of the movie and leaves the audience in suspense. In the drought-stricken region, sacrifice ceremonies are executed, and the captured people anxiously await their inevitable destiny. Following the premiere, historians criticized it for including several historical discrepancies and failing to accurately depict reality, arguing that the movie gave a skewed perspective of the Mayan civilization, often conflating it with other Mesoamerican civilizations such as the Incas and Aztecs. Despite all these criticisms, the movie *Apocalypto* narrates the downfall of the Maya civilization during a period when its collapse was imminent, depicting the desperation brought by the collapse, the widespread oppression that followed, inter-tribal warfare, epidemic diseases, and the invasion of foreigners, all from an apocalyptic perspective, portraying the demise of one of the most magnificent civilizations of its time.

**ÖZET**

Obezite, dünya genelinde giderek artan bir sağlık sorunudur ve etkileri üzerine yapılan araştırmalar büyük önem taşımaktadır. Çalışmada, farklı bir sentetik veri üretme tekniği ile birlikte, Palechor ve Manotas (2019) araştırmasında yer alan veriler kullanılarak farklı makine öğrenmesi tekniklerinin performans karşılaştırması yapılmıştır. Palechor ve Manotas (2019) çalışmasında uyguladığı teknikten farklı olarak bu çalışmada SMOTE-NC (Synthetic Minority Over-sampling Technique for Nominal and Continuous) veri üretme yöntemi bazı farklı koşullarda uygulanmıştır. Yaş, cinsiyet, yeme alışkanlıkları ve fiziksel aktivite gibi çeşitli özellikler kullanılarak obezite riskini belirlemek üzere elde edilen bu veri setinde dengesiz veri problemini gidermek için SMOTE-NC tekniği kullanılmıştır. Bu yöntem, azınlık sınıfların örneklerini sentetik olarak artırarak dengesizliği giderip modelin daha dengeli ve güvenilir sonuçlar üretmesinin yanında, SMOTE tekniğinden farklı olarak, veri setinde hem sürekli hem de kategorik değişkenlerin olması durumunda kullanılması önerilen bir yöntemdir. Çalışmada, hem ham veri hem de veri çoğaltıldıktan sonra, Naive Bayes, Lojistik Regresyon, Rastgele Orman, Karar Ağaçları, K-En Yakın Komşu Algoritması ve Destek Vektör Makineleri (SVM) sınıflandırma algoritmalarının karşılaştırması sunulmuştur. Python programı kullanılarak yürütülen bu çalışmada, algoritma performansları doğruluk(accuracy), kesinlik (precision), duyarlılık (recall) ve F1 skor (F1 score) değerlerine bakılarak değerlendirilmiştir. Ayrıca, özellikle sağlık verilerinde sıkça karşılaşılan bir sorun olan dengesiz veri problemine işaret eden bu çalışma TÜBİTAK tarafından desteklenmektedir.

**Anahtar Kelimeler:** Obezite, Python, Makine Öğrenmesi, SMOTE-NC

**OBESITY PREDICTION MODEL PROPOSAL USING MACHINE LEARNING  
TECHNIQUES**

**ABSTRACT**

Obesity is an increasingly prevalent health issue worldwide, and research on its effects is of great importance. In the study, the performance comparison of different machine learning techniques is carried out with the data presented in the Palechor and Manotas (2019) research, along with a different synthetic data generation technique. Unlike the technique employed by Palechor and Manotas (2019), this study applies the SMOTE-NC (Synthetic Minority Over-sampling Technique for Nominal and Continuous) data generation method under different conditions. SMOTE-NC technique is used to eliminate the problem of unbalanced data in this data set, which is obtained to determine the risk of obesity by using various features such as age, gender, eating habits and physical activity. This method mitigates imbalance by synthetically increasing samples of minority classes, leading to a more balanced and reliable model performance. Additionally, unlike the SMOTE technique, SMOTE-NC is recommended for datasets containing both continuous and categorical variables. The study presents a comparison of classification algorithms including Naive Bayes, Logistic Regression, Random Forest, Decision Trees, K-Nearest Neighbors Algorithm, and Support Vector Machines (SVM) on both raw and augmented data. Conducted using Python programming, the performance of algorithms is evaluated based on metrics such as accuracy, precision, recall, and F1 score. Moreover, this study, which highlights the commonly encountered issue of imbalanced data in health data, is supported by TUBITAK (The Scientific and Technological Research Council of Turkey).

**Keywords:** Obesity, Python, Machine Learning, SMOTE-NC

**ÖZET**

Bu çalışmada, Mersin ili Anamur ilçesinde muz üretiminde girdi kullanımı brüt kar analizinin belirlenmesi amaçlanmıştır. Çalışmanın ana materyalini Mersin ili Anamur ilçesinde muz üretimi yapan 251 üreticiden anket yöntemiyle elde edilen veriler oluşturmuştur. Araştırma alanında toplam muz üretim alanı 210,30 ha ve ortalama muz üretim alanı 0,83 ha olarak hesaplanmıştır. Toplam üretim miktarı 16.195,00 ton olarak belirlenmiş, ortalama muz verimi 77.009,03 kg/ha olarak bulunmuştur. Gayri safi üretim değeri 847.099,33 TL/ha, değişken masraflar 256.318,63 TL/ha ve brüt kâr 590.780,70,08 TL/ha olarak bulunmuştur. Muz üretiminde enerji eşdeğerleri, sera gazı emisyonları ve değişken masraflar içerisindeki en yüksek payı gübre girdisinin aldığı sonucuna ulaşılmıştır.

**Anahtar Kelimeler:** Brüt kâr, girdi kullanımı, muz üretimi, Mersin

**INPUT USAGE AND GROSS PROFIT ANALYSIS IN BANANA PRODUCTION  
(MERSİN PROVINCE EXAMPLE)**

**ABSTRACT**

In this study, energy use and greenhouse gas emissions in greenhouse banana production in Anamur district of Mersin province were determined and gross profit analysis was conducted. The main material of the study was the data obtained from 251 banana producers by survey method. In order to calculate energy equivalents, the amounts of inputs used in banana production were found and these input data were multiplied by energy equivalent coefficients. The total banana production area in the research area was calculated as 210.30 ha and the average banana production area was calculated as 0.83 ha. The total production amount was determined as 16,195.00 tons and the average banana yield was 77,009.03 kg ha<sup>-1</sup>. Gross production value, variable costs and gross profit were found as 847,099.33 TL ha<sup>-1</sup>, 256,318.63 TL ha<sup>-1</sup> and 590,780.70.08 TL ha<sup>-1</sup>. It was concluded that fertilizer input had the highest share in energy equivalents, greenhouse gas emissions and variable costs in banana production. Energy use efficiency higher than 1 indicated that inputs were used efficiently.

**ÖZET**

Yüzyıllar boyunca egemenliğin tek bir kişide toplanması, özellikle de bu makamın halifelikle birleşmesi çağdaşlık önünde bir engel teşkil eden sorun haline gelmiştir. Bu nedenle ulu önder Türkiye Cumhuriyeti'ni kurarken emin adımlarla bazı inkılaplar yapma yoluna gitmiştir. Laiklik, halifelik makamını da elinde tutan bir egemen güçten sonra belki de en önemli ve gerçekleştirilmesi en zor olan inkılap olarak karşımıza çıkmaktadır. Temelsiz bir zemine dayanmadan gerçekleşmeyecek laiklik için belli adımların atılması gerekiyordu. Öncelikle saltanatın kaldırılması ve halifenin değişiminden sonra herhangi bir siyasi gücü ve önemi kalmayan halifelik makamı 3 Mart 1924'te kaldırıldı. Böylece laik devlet için en önemli adım atıldı. Bu önemli iki adımdan sonra eğitim, hukuk ve askeri alanlarda da değişimler yaşandı ve dinin etkisi bu kurumlarından üzerinden kaldırıldı. Tevhit-i Tedrisat kanunu ile eğitimde ikilikler ortadan kalkmış ve dinin etkisinden ayrılmıştır. Seriyeye ve Evkaf Vekâleti ve Erkan-ı Harbiye-i Umumiye Vekâletlerinin Kaldırılması da vakıflar ve askeriyenin laikleşme çalışmalarından biri olmuştur. Bu bahsettiğimiz aşamalardan sonra en son olarak Laiklik anayasaya girmiş ve Türkiye Cumhuriyeti laik devlet olarak anayasada yer almıştır. Cumhuriyet'i kuran kadro ve özellikle Atatürk, yönü Batı olan bir ulus devleti için çabalamıştır. Hem Batı'ya ayak uyduran hem de milliyetçilik bilincinde olan yeni bir devletin var olabilmesi ve ayakta kalabilmesi için laiklik çok önemlidir. Eğer laiklik ilkesine sadece din ve siyaset perspektifinden bakarsak hem kuruluş felsefesini anlayamayız hem de devletimiz ve milletimiz için laikliğin anlamı eksik kalmış olur. Orta Asya steplerinden beri dine dayalı bir yönetim anlayışına sahip olan bir millet için alışması, kabullenmesi zor olan laiklik günümüzde bile en çok tartışılan konuların başında gelmektedir. Bu çalışmamızda laiklik kavramı anayasaya girene kadar hangi aşamalardan geçildi, hangi adımlar atıldı ve bu yapılara karşı gösterilen tepkiler neler oldu sorularının cevapları irdelenmiştir.

**Anahtar Kelimeler:** Laiklik, Değişim, Bilinç, Halifelik

**EVALUATIONS ON SECULARISM IN THE EARLY REPUBLICAN PERIOD**

**ABSTRACT**

For centuries, the concentration of sovereignty in a single person, especially the combination of this office with the caliphate, has become a problem that poses an obstacle to modernity. For this reason, the great leader took firm steps towards making some reforms while establishing the Republic of Turkey. Secularism appears as perhaps the most important and most difficult revolution to realize after a sovereign power that also holds the office of caliphate. Certain steps had to be taken for secularism, which could not be achieved without being based on a baseless basis. First of all, the office of caliphate, which no longer had any political power or importance after the abolition of the sultanate and the change of the caliph, was abolished on March 3, 1924. Thus, the most important step for the secular state was taken. After these two important steps, changes also took place in the fields of education, law and military, and the influence of religion was removed from these institutions. With the Tevhit-i Tedrisat law, dualities in education were eliminated and separated from the influence of religion. The abolition of the Ministry of Seriyeye and Foundations and the Ministry of Erkan-ı Harbiye-i Umumiye was also one of the secularization efforts of the foundations and the military. After the stages we mentioned, secularism was finally included in the constitution and the Republic of Turkey was included in the constitution as a secular state. The team that founded the Republic, and especially Ataturk, strived for a nation-state whose orientation was Western. Secularism is very important for the existence and survival of a new state that keeps pace with the West and is nationalist-conscious. If we look at the principle of secularism only from the perspective of religion and politics, we cannot understand the founding philosophy and the meaning of secularism for our state and nation will be missing. Secularism, which is difficult to get used to and accept for a nation that has had a religion-based management approach since the Central Asian steppes, is one of the most discussed topics even today. In this study, the answers to the questions of what stages were passed until the concept of secularism was included in the constitution, what steps were taken and what were the reactions to these actions were examined.

**ÖZET**

Anadolu coğrafyasında geçmişten gelen ülkedeki taşra yönetimi idare hukuku ekseninde mülki idareye dayanmaktadır. Ülkenin her noktasındaki toprakların yönetimi taşra dediğimiz bölgede temsilciler aracılığıyla yerine getirilmektedir. Taşradaki temsilciler olan mülki idare amirleri ilde vali, ilçede kaymakamlar olarak bu görevi kesintisiz bir şekilde yerine getirmektedirler. Mülki idare amirleri egemen olduğu bölgesinde toplumun güvenliğinden eğitime yaşantısından sosyal ve ekonomik durumuna bir çok alanında muhafazasını sağlamakla yetkili ve sorumludurlar. Bu hizmet görevinin geçmişi çok eskiye dayanmakla beraber kendine özgü bir süreçle tarihsel özgeçmişe sahiptir. Tarihten gelen görev ve sorumluluklar ile beraber çok önem arz eden bir konum olmakla beraber günümüzde büyük özveriye dayanan bir meslek dalıdır. Ondan ötürü günümüzde mahalli idare amirlerinin göreve başlangıç aşamasında uzun eğitim süreçleri olup toplum ve dünyayı tanıma ve anlama üzerinde uygulamalı ve teorik eğitimleri söz konusudur. Bunun yanısıra dünyadaki kamu yönetimlerindeki yeni düzenleme ve uygulamaların benimsenmesine yönelik değişimlerle birlikte mülki idare açısından örgütlenme konusunda büyük önem arz etmektedir. Bu çalışma günümüz Anadolu coğrafyasında mülki idare amirlerinin görev bilinci ve anlayışı doğrultusunda görev ve sorumluluklarına değinilecek olup toplum tarafından bakış açıları ve talepler doğrultusunda meslek işlev ve görevlerine göre incelenecektir. Bunun yanı sıra mahalli idare amirlerinin yetişme süreci ve toplum beklentileri meslekteki yeni düşünce ve algılar, mesleğin yeniden yorumlanma gereklilikleri toplum nazarında ifade edilecektir. Toplumun taşradaki yeni talepleride mahalli idare amirleri açısından değerlendirilecektir.

**UNDERSTANDING OF PUBLIC ADMINISTRATION OF LOCAL  
ADMINISTRATORS IN ANATOLIAN GEOGRAPHY**

**ABSTRACT**

In the Anatolian geography, the administration from the past is based on provincial administration and corrupt civil administration. The management of the lands in each region of the country is carried out through regional representatives in the provinces. The civil administrators, who are the representatives in the provinces, constantly fulfill this purpose as governors in the province and district governors in the districts. Civil administrators are authorized and responsible for ensuring the preservation of social life, education, life and many socially and economically operated areas in the region they dominate. Although the history of this service duty dates back to ancient times, it has a traditional CV with a unique process. Togetherness with duties and responsibilities coming from history is very important. It is currently a professional branch based on great dedication. Therefore, today, local government chiefs have long training sessions and practical and theoretical training on global and global recognition and understanding during their induction into office. The civil administration plan along with the expenses is of great importance in planning. This study will touch upon the duty awareness and understanding of the civil administration chiefs in today's Anatolian geography, the duty plan duties and responsibilities, and the perspectives and demands of the society will be examined according to their professional functions. In addition, the development of the local administration chiefs The process of expressing the process and social relations, new thoughts and perceptions in the professions, and the requirements for reinterpretation of the profession in the eyes of society. The collapse of society in the provinces will be evaluated again from the perspective of local administrators.

**ÖZET**

20. yüzyılın önde gelen ressamlarından bir olan Patrick Caulfield, minimalist bir sanatçı olarak kabul edilmektedir. Çalışmalarında, grafik tasarım alanlarından biri olan vektörel illüstrasyonu kullanmaktadır. Caulfield'in çalışmalarında illüstrasyonun ve iç mekânın bütünleşmesi görülmektedir. Mekânın bütünleşmesinde çizgisel formlar ve renkler kullanılmış olmakla birlikte, çalışmaları iki boyutlu ve üç boyutlu bir etkiye sahiptir. Çizgisel olarak oluşturulan figürler ve formlar mekân içinde devamlılığı sağlayan basit geometrik şekillerle oluşturulmaktadır. Caulfield'in tasarım yaklaşımı, soyut dışavurumculuğa karşı olarak oluşmuş bir akım olan minimalizmdir. Minimalizm üslubu; sade bir dil kullanarak basit anlatımı hedeflemektedir. Akım, 1960'lı yıllarda popülerleşmeye başlamış, soyut bir anlatımda ilerlemiştir. Minimalizm akımının yaklaşımında geometrik figürlerin, soyutlanmış formların, basit sade ve keskin hatlarla aktarıldığı gözlenmektedir. Patrick Caulfield'in tasarım yaklaşımında; İngiliz sanatını minimalist yaklaşım üzerinden ele alan ve vektörel tabanlı illüstratif uygulamaların çoğunluklu olduğu görülmektedir. Bu araştırmada kapsamında Caulfield'in vektörel tabanlı illüstratif yaklaşımlı uygulamalarındaki minimalist tavır incelenecektir. Araştırmada nitel araştırma yöntemlerinden betimsel tarama modeli kullanılacak olup, grafik tasarım alanlarından biri olan vektörel illüstrasyon alanı adı altında Patrick Caulfield'in minimalist yaklaşımlarının İngiliz sanatında nasıl bir rol oynadığı açığa çıkarılmaya çalışılacaktır.

**Anahtar Kelimeler:** Grafik Tasarım, İllüstrasyon, İngiliz Sanatı, Minimalizm, Vektörel İllüstrasyon

## **MINIMALIST APPROACH IN PATRICK CAULFIELD ILLUSTRATIONS**

### **ABSTRACT**

One of the 20th century's leading painters, Patrick Caulfield is considered a minimalist artist. In his works, he uses vector illustration, one of the fields of graphic design. In Caulfield's works, the integration of illustration and interior space is seen. Although linear forms and colors are used in the integration of space, his works have a two-dimensional and three dimensional effect. The figures and forms created linearly are formed with simple geometric shapes that provide continuity in space. Caulfield's design approach is minimalism, a movement formed in opposition to ABSTRACT expressionism. Minimalism style aims for simple expression by using a plain language. The movement started to become popular in the 1960s and progressed in an ABSTRACT expression. In the approach of the minimalism movement, it is observed that geometric figures, ABSTRACTed forms are conveyed with simple, simple and sharp lines. In Patrick Caulfield's design approach; it is seen that there is a majority of vector-based illustrative applications that deal with British art through a minimalist approach. Within the scope of this research, the minimalist attitude in Caulfield's vector-based illustrative applications will be examined. In the research, the descriptive survey model, one of the qualitative research methods, will be used and it will be tried to reveal how Patrick Caulfield's minimalist approaches play a role in British art under the field of vector illustration, one of the graphic design fields.

**Keywords:** Graphic Design, Illustration, British Art, Minimalism, Vector Illustration

**(2 + 1)-BOYUTLU CALOGERO-BOGOYAVLENSKII-SCHIFF DENKLEMİNİN  
RASYONEL ( $G'/G$ ) GENİŞLETME YÖNTEMİYLE SOLİTON ÇÖZÜMLERİ**

**ÖZET**

Adi ve kısmi diferansiyel denklemler, fiziksel, biyolojik ve kimyasal süreçleri matematiksel olarak modellemek için en güçlü araçlardır. Lineer olmayan kısmi diferansiyel denklemler sisteminin tam çözümleri için çeşitli yaklaşımlar geliştirilmiştir. Yakın zaman içerisinde ortaya çıkan rasyonel ( $G'/G$ ) açılım yöntemi ele alınarak (2+1) boyutlu Calogero – Bogoyavlenskii – Schiff denklemi için uygun dalga dönüşümü altında adi diferansiyel denkleme indirgenerek kesin ve soliton dalga çözümleri elde edilmiştir. Son yıllarda bulunan Rasyonel ( $G'/G$ ) açılım metodu ise, trigonometrik, rasyonel ve hiperbolik fonksiyonlara dizilen uygun biçimlerde çeşitli soliton çözümlerin elde edilmesinde kullanılmaktadır. Rasyonel ( $G'/G$ ) açılım metodu, etkin, özlü ve sonraki çalışmalarda ele alınabilecek diğer lineer olmayan modellere analitik çözümler bulabilen bir yöntemdir. Lineer olmayan kısmi diferansiyel denklemlerin kesin çözümlerini bulmak için Maple hesaplama programı kullanılmıştır. Program sayesinde karmaşık cebirsel hesaplamaları daha kolay bulunmuştur.

**Anahtar Kelimeler:** Lineer olmayan kısmi diferansiyel denklemler, Rasyonel ( $G'/G$ ) açılım metodu, Calogero – Bogoyavlenskii – Schiff denklemi.

**SOLITON SOLUTIONS OF (2 + 1)-DIMENSIONAL CALOGERO-  
BOGOYAVLENSKII-SCHIFF EQUATION WITH RATIONAL ( $G'/G$ ) EXPANSION  
METHOD**

**ABSTRACT**

Ordinary and partial differential equations are the most powerful tools for mathematically modeling physical, biological, and chemical processes. Various approaches have been developed for the exact solutions of nonlinear partial differential equation systems. The rational ( $G'/G$ ) expansion method, which emerged recently, has been considered and exact and soliton wave solutions have been obtained by reducing the (2+1) dimensional Calogero – Bogoyavlenskii – Schiff equation to an ordinary differential equation under an appropriate wave transformation. The Rational expansion method found in recent years is used to obtain various soliton solutions in suitable forms arranged to trigonometric, rational, and hyperbolic functions. The Rational expansion method is an effective, concise method that can find analytical solutions to other nonlinear models that can be addressed in subsequent studies. The Maple computation program was used to find the exact solutions of nonlinear partial differential equations. Thanks to the program, complex algebraic calculations were found more easily.

**Keywords:** Nonlinear Partial Differential Equations, Rational expansion method, Calogero – Bogoyavlenskii – Schiff equation.

**ÖZET**

Kısmi diferansiyel denklemler, fizik, mühendislik, matematik ve diğer bilim alanlarında yaygın olarak kullanılır. Lineer olmayan kısmi diferansiyel denklem sistemlerinin tam çözümleri için farklı yaklaşımlar bulunmuştur. Yakın zaman içerisinde ortaya çıkan modifiye edilmiş Sardar alt denklem yöntemi kullanılarak Zakharov - Kuznetsov (ZK) denklem çifti denklemini uygun dalga dönüşümleri altında adi diferansiyel denkleme indirgeyerek kesin ve soliton dalga çözümleri elde edilmiştir. Modifiye edilmiş Sardar alt denklem metodu, klasik ve kesirli dereceden lineer olmayan kısmi diferansiyel denklemler için karanlık, parlak, W - şekilli, karışık karanlık-parlak, tekil, karışık tekil solitonlar, periyodik ve diğer çözümler de dahil olmak üzere çok sayıda soliton çözümü üretmek için kullanılabilir güçlü ve sağlam bir yaklaşımdır. ZK denklemleri, Korteweg - de Vries (KdV) denkleminin iki boyutlu genellemesidir. Bu çalışma, lineer olmayan ZK denkleminin çözümlerinin ayrıntılı bir sayısal incelemesini sunar. Lineer olmayan kısmi diferansiyel denklemlerin kesin çözümlerini bulmak için Maple hesaplama programı kullanılmıştır. Böylelikle karmaşık cebirsel hesaplamaları daha kolay bulunmuştur.

**Anahtar Kelimeler:** Lineer olmayan kısmi diferansiyel denklemler, modifiye edilmiş Sardar alt denklem yöntemi, Zakharov - Kuznetsov (ZK) denklem çifti.

**APPLICATION OF THE MODIFIED SARDAR SUB EQUATION METHOD FOR  
ZAKHAROV-KUZNETSOV COUPLED SYSTEM**

**ABSTRACT**

Partial differential equations are widely used in physics, engineering, mathematics, and other scientific fields. Different approaches have been found for the exact solutions of nonlinear partial differential equation systems. Recently, using the modified Sardar sub-equation method, exact and soliton wave solutions have been obtained by reducing the Zakharov - Kuznetsov (ZK) equation pair to an ordinary differential equation under appropriate wave transformations. ZK equations are a two-dimensional generalization of the Korteweg-de Vries (KdV) equation. This study presents a detailed numerical examination of the solutions of the nonlinear two-dimensional ZK equation. The Maple computation program has been used to find exact solutions for non-linear partial differential equations. Thus, complex algebraic calculations have been found more easily.

**Keywords:** Nonlinear Partial Differential Equations, Modified Sardar Sub-equation Method, Zakharov - Kuznetsov (ZK) Equation Pair.

**VOLATILITY ANALYSIS OF ESG INDICES AND CONVENTIONAL STOCK  
MARKET INDICES: A COMPARATIVE STUDY**

**ABSTRACT**

The incorporation of Environmental, Social, and Governance (ESG) considerations into investment decisions has accelerated significantly in the dynamic world of modern finance. Benchmark indexes are crucial measuring sticks for evaluating the performance of the market. This study investigates the volatility dynamics of Environmental, Social, and Governance (ESG) indices in comparison to conventional stock market indices. Volatility analysis is crucial for investors seeking to manage risk and optimize portfolio performance. We employ a comprehensive dataset spanning a significant timeframe from 2010 to 2023 to capture diverse market conditions. Through statistical methodologies and econometric techniques, we analyze the volatility patterns, assess the impact of ESG factors on market fluctuations, and explore potential correlations with conventional indices. Our findings offer insights into the relative stability and risk characteristics of ESG investments compared to traditional market benchmarks, contributing to informed decision-making in sustainable investing and risk management strategies.

**Keywords:** ESG, Volatility, Conventional stock market indices

**ABSTRACT**

Urban vegetation is a basic component and cornerstone of urban ecosystems. Consequently, a better comprehension of the temporal and spatial patterns of change of this vegetation is essential for more efficient environmental management of the urban environment, to improve the urban habitat, and to mitigate the damaging effects of accelerated urbanization. This review explored research from articles indexed in the Scopus database on the topic of urban vegetation between 2018 and 2023. A process of selection, filtering, and refining in the Scopus database generated 683 articles. Once exported in CSV format, the data was analyzed using Scopus Analytics, VOSviewer, and MS Excel. The aim was to offer guidance on current topics and predict future tendencies in research on this theme. The results of this analysis show that 60,32% of articles were published in the last three years (2021, 2022, and 2023). China is the country most interested in this topic, with 195 articles (28.55%). Over the last five years, researchers from several different disciplines have taken an interest in urban vegetation. The field of environmental sciences contributed the most, with 33.56% of papers published. In terms of sources, the journal *Urban Forestry and Urban Greening* came out on top with 58 articles and 982 citations. The topic of urban vegetation has gained significant attention from researchers with diverse scientific backgrounds. This analysis argues that, given the concerning state of environmental issues, the promotion of vegetation in urban environments—which provides a multitude of ecosystem services and helps create biologically diverse and better-balanced urban ecosystems—can become a fundamental pillar for a more sustainable future city.

**OPTIMAL DIRECTIONS FOR ENSURING FINANCIAL SECURITY AT THE  
ECONOMIC ENTITY LEVEL**

**Associate Professor Victoria POSTOLACHE (ORCID: 0000-0003-4023-9705)**  
Alec Russo Balti State University, Faculty for Exact, Economic and Natural Science,  
Department of economic sciences, Balti, Republic of Moldova  
**Email:** vic.postolache@yahoo.com

**ABSTRACT**

In modern economic market conditions, all enterprises face financial risks, insufficient financial resources, a high level of competition and other internal and external threats. In order to operate stably and ensure sustainable development in this situation, it is necessary to create a financial security system for the enterprise. The financial security of an enterprise is based on the financial policy of the enterprise, which guarantees an effective increase in production, in which the enterprise will become independent of financial and credit institutions. In order to obtain economic benefits, an economic entity must competently and rationally manage financial resources, and this presupposes the presence of the necessary level of financial security. The specificity of this component of economic security is due to the fact that financial security, along with financial relations in general, is included in all areas of economic activity and acts as a necessary condition for the development and successful operation of an economic entity. Thus, the relevance of the chosen research topic is that financial security is an important part of economic security and has a significant impact on the current state of an economic entity, and assessing the level of financial security allows us to identify and neutralize threats that lead to the deterioration of the state his finances.

**Keywords:** financial security, financial resources, financial policy, indicators of financial security

**AYNI DİL AİLESİNE MENSUP OLAN İKİ DİLİN ÜNSÜZLERİNİN

**ÖZET**

İki ve ikiden fazla dilin biçimbilgisel yapısında ve leksikolojik anlamında ortak özelliklerinin gözlemlenmesi söz konusu dillerin çoğunlukla jeneolojik açıdan akraba diller olduğunu ve kendilerinin bir ortak kaynaktan, “kök dil” adlandırabileceğimiz bir ortak dilden tüendiğini kanıtlar. Araştırmamızın konusu Hint-Avrupa dilleri ailesinin İran dilleri öbeğine ait olan Farsça ve Peştu dillerinin ünsüz sesleridir. Çok eski tarihe sahip Farsça Doğu’da oldukça büyük alanda yaygınlaşmış , klâsik eserlerin yazıldığı Hint-Avrupa dil ailesinin İran dilleri öbeğine aittir. Söz konusu dil İran İslam Cumhuriyetinin resmi devlet dilidir. Hint-Avrupa dillerinin İran dilleri öbeğine ait olan Peştu dili Peştunların ana dili olarak genellikle bütün Güney vâ Güneydoğu Afganistan’da, Kuzey Batı ve Batı Pakistan’da yaygınlaşmıştır. Darice ile beraber Afganistan’da resmi devlet dili olarak bilinir. Her iki dile yazıda Arap alfabesini kullanmakla Arap alfabesinin mevcut bulan harflerine, dillerine uygun çeşitli harfler, , diakritik işaretler eklenilmiştir. Farslar Arap alfabesine 4 grafik örnek , Peştunlar ise 18 grafik örnek ekleyerek telâffuzlarına uygun olarak alfabelerini geliştirmişler. Peştu ve Farsça dilleri aynı dil grubuna ait olmalarına rağmen ünsüz ve ünlü seslerinin sayılarına göre birbirlerinden esaslı olarak farklıdır. Farsçada 23 ünsüz , 6 monoftong ünlü ve 1 diftong bulanmasına karşın Peştucada 30 ünsüz, 9 ünlü, 7 monoftong ünlü ses bulunmaktadır. Sonuçta Farsçada harf sayısının 30 şema örneği şeklinde belirlenmesine rağmen Peştucada harf sayısı toplam olarak 46’dır. Peştu dilinde harf sayısının çoğunluk oluşturması Peştunların telâffuzunda monoftong, diftongların sayıca yeğlik oluşturması , aynı zamanda ünlü ve ünsüzlerin birçoğunun burun sesleri özelliklerini alabilmesi (*ing.: nasal vowel; nasal consonant*) ve söz konusu dildeki özel ünsüzlerin bulunmasının sonucudur.

**Anahtar Kelimeler:** Hint-Avrupa dilleri ailesi, İran dilleri, Peştu dili, ünlü sesler, ünsüz sesler.

**CONSONANTS IN TWO LANGUAGES OF THE SAME LANGUAGE FAMILY  
WITHIN COMPARATIVE STUDY**

**ABSTARCT**

If two or more languages have common features in their grammatical structure and lexical composition, these languages are genetically related languages and they are descended from one common source, conventionally called the “root language”. The object of our research is the consonant sounds of the Persian and Pashto languages belonging to the Iranian group of the Indo-European language family. Widespread in the East with classical works written on it the Persian language which has an ancient history, belongs to the Iranian group of the Indo-European language family. This language is the official state language of the Islamic Republic of Iran. The Pashto language, which belongs to the Iranian group of Indo-European languages, as the mother tongue of the Pashtuns, is mainly spread throughout southern and southeastern Afghanistan, as well as in northwestern and western Pakistan. It is the official state language in Afghanistan along with Dari language. By using the Arabic alphabet in writing, both languages have added different letters and diacritical marks to the existing letters of the Arabic alphabet. The Persians added 4 graphic samples to the Arabic alphabet: the Pashtuns added 18 and improved their alphabet according to their pronunciation. Although Pashto and Persian belong to the same language group, they differ significantly in terms of the number of consonants and vowels. In Persian there are 23 consonants, 6 monophthong vowels and 1 diphthong; while Pashto has 30 consonants, 9 vowels and 7 monophthong vowel sounds. Thus, if the letters of the Persian language are identified in the form of only 30 graphic patterns, the total number of letters in the Pashto language is 46. This happens mainly due to the presence of many monophthongs and diphthongs in Pashtun pronunciation, as well as the nasalization of many vowels and consonants (nasal vowel; nasal consonant) and the presence of special consonants of this language.

**Keywords:** Indo-European language group, Iranian languages, Pashto language, vowel sounds, consonant sounds.

**AN OVERVIEW OF FOOD ENGINEERING BRANCHES: FROM CHEMISTRY TO

**ABSTRACT**

Food engineering encompasses various branches that focus on different aspects of food production, processing, and preservation. One key area is food chemistry, which delves into the composition, structure, and properties of food molecules. Understanding these elements helps in creating new food products, enhancing flavour, and improving nutritional value. Food microbiology is another vital branch, studying the role of microorganisms in food spoilage, fermentation, and foodborne illnesses. This knowledge aids in developing methods to prevent contamination and extend shelf life. Food process engineering involves designing and optimizing equipment and processes for food production, such as mixing, heating, and packaging, to ensure efficiency and safety. Food biotechnology explores the use of biological systems, such as enzymes and microorganisms, to enhance food quality, production, and sustainability. Meanwhile, food safety and quality assurance focus on implementing regulations and standards to ensure that food products meet safety and quality criteria throughout the supply chain. Finally, food packaging engineering involves designing packaging materials and systems that protect food from physical, chemical, and microbial damage, while also considering environmental sustainability. Overall, these branches of food engineering work together to innovate and improve the way we produce, process, and consume food.

**Keywords:** food engineering, branches, food chemistry, food microbiology, food process engineering, food biotechnology, food safety, quality assurance, food packaging engineering

**ABSTRACT**

We meticulously gathered insights from reputable journals, enriching our app development process with evidence-based research and ensuring a foundation rooted in the latest advancements in urban waste management. M. Karthik & co authors (2023) devised a solution for overflowing trash cans using a budget-friendly embedded device with ultrasonic sensors. It monitors in real-time, alerting collectors when limits are reached for timely city sanitation, promoting a healthier environment. S. Subburaj & co authors (2023) proposed a smart waste collection system optimizing routes during peak hours, ensuring road safety via a user-friendly app and real-time public map updates. Soumyabrata Saha & co author (2023) introduced a tailored smart waste management system for urban areas, emphasizing efficiency through regular sterilization, and incorporating dynamic scheduling and route optimization for improved service quality. Pardeep Kumar & co author (2023) developed a model for smart trash bins, focusing on reliability metrics and identifying critical components for timely maintenance. Minhaz Uddin Sohag & co author (2020) present a smart IoT waste management system for urban areas, utilizing Arduino Uno and sensors to monitor and alert authorities when bins are full, reducing manpower and ensuring cost-effective and efficient waste management.

**Keywords:** urban waste management, smart waste collection system

**ABSTRACT**

The study examined retirement anxiety and job performance towards secondary school teachers in Eleme Local Government of Rivers State, Nigeria. The study adopted correlational research design. Three research questions and three hypotheses guided the study. The population consisted of 400 teachers in senior/Junior secondary schools in Eleme, Rivers State, Nigeria. A sample of 200 respondent selected using Taro Yamane formular was used for the study. The instrument for data collection was a questionnaire titled: Retirement Anxiety and Job Performance (RAJP). Data collected were analyzed using Pearson Product Moment correlation method for both the research questions and hypotheses with the use of the statistical packaged for social sciences (SPSS). The instrument was structured using Likert type of response with Strongly Agree (SA), Agree (A) Disagree (D) and Strongly Disagree (SD) options respectively. The instrument was validated by experts in measurement and evaluation. A reliability of 0.86 was obtained using Cronbach"alpha formula. The results of the study revealed that (1) there is a perfect positive correlation and where is a significant relationship between retirement anxiety and job performance towards secondary school teachers in Eleme River State. (2) there is a high positive correlation and where is a significant relationship between retirement anxiety and job performance of male towards secondary school teachers in Eleme Rivers State. (3) there is a low positive correlation and there is significance relationship between retirement anxiety and job performance of female towards secondary school teachers in Eleme Rivers. It was recommended that Pension Administrations in conjunction with Nigeria Union of Teachers (NUT) Should organize regular enlightenment programs that can improve employees knowledge and behaviors towards retirements planning

**ABSTRACT**

Modular arithmetic, a foundational mathematical concept, plays a pivotal role in ensuring the security of cryptographic systems. This abstract explores the significance of modular arithmetic in cryptography, focusing on its key applications and contributions. In public-key cryptography, modular arithmetic forms the backbone of algorithms like RSA, introducing complexity through the challenge of factoring large numbers and thereby securing key exchange and digital signatures. In symmetric key cryptography, modular arithmetic facilitates the development of robust block ciphers and stream ciphers, ensuring secure data encryption and decryption processes. The Diffie-Hellman key exchange protocol relies on modular arithmetic for establishing confidential communication channels. Furthermore, modular arithmetic is instrumental in cryptographic hash functions, essential for maintaining data integrity through the generation of fixed-size hash values. This abstract emphasizes the enduring importance of modular arithmetic as an essential tool in cryptographic systems, fostering secure communication and information protection.

**ABSTRACT**

Fuzzy graph theory serves as a powerful tool for modeling ambiguous networks prevalent in various domains such as finance and social interactions. This paper delves into the examination of connectivity within fuzzy graphs, elucidating its pivotal role in network analysis. Through the establishment of key properties, we investigate the connectivity status of vertices, shedding light on fundamental aspects of network characteristics. Furthermore, we propose novel methodologies for quantifying and analyzing connectivity patterns, contributing to a deeper understanding of network dynamics. Additionally, we explore practical applications, including the consolidation of banking institutions to enhance financial stability and resilience, and the identification of central nodes affected by infectious diseases for effective disease control and mitigation strategies. By leveraging fuzzy graph theory, this study provides valuable insights into complex network structures, offering tangible solutions for real-world challenges in diverse domains.

**ABSTRACT**

Fast-paced development and industrialization pose a significant threat to the environment. Textile industries and products play a crucial role in deteriorating environmental conditions. Therefore, it is imperative to focus on the sustainability of textile industries and products. Biodegradability and eco-friendly processes are key criteria for ensuring sustainable products. The fiber serves as the fundamental unit for yarn manufacturing, determining the sustainability and functionality of the end product. Hence, there is a growing demand to incorporate eco-friendly and biodegradable fibers into yarn production. While conventional cotton and petroleum-derived fibers are not sustainable, organic natural fibers and regenerated cellulose fibers can contribute to eco-friendliness. In addition to sustainability, functionality is an essential attribute of yarn. Aesthetic, physiological, and tactile functions represent the functional behavior of yarn. Various fibers such as organic cotton, natural colored cotton, bamboo, Tencel, Seacell, Smartcell, Lyocell, soybean protein, and synthetic polyester based on PLA obtained from corn are environmentally friendly options. Melange yarn made from these fibers offers high aesthetic value with excellent thermal and moisture transmission properties. This paper discusses the literature on eco-friendly fibers used in melange yarn manufacturing and their functional behavior. Bamboo fiber possesses biodegradable, natural anti-bacterial, UV resistance, and comfort properties. The manufacturing process of Lyocell is a closed-loop and direct dissolving process that does not release any chemicals. Seacell is a combination of seaweed in the Lyocell manufacturing process, containing vitamins, amino acids, carbohydrates, and minerals, resulting in fibers that promote health and offer skincare benefits. Silver particles are added to produce Seacell active fiber, which is degradable, antibacterial, and breathable. Alginate is an eco-friendly fiber produced from alginic acid obtained from marine brown algae, with suitable applications in the medical field.

**Keywords:** Sustainability, Biodegradability, Seacell, Smart cell

## **HYBRID INVERTER WITH SOLAR BATTERY CHARGING**

### **ABSTRACT**

The global push towards renewable energy sources has intensified in response to climate change concerns and the necessity for sustainable energy solutions. Among these, solar photovoltaic (PV) systems have emerged as a prominent player in the renewable energy landscape. However, the intermittent nature of solar power generation presents challenges for grid stability and energy reliability. Hybrid inverters with solar battery charging capabilities offer a promising solution by efficiently managing solar energy generation, storage, and distribution. This abstract explores the design, operation, and benefits of hybrid inverters with solar battery charging, highlighting their pivotal role in advancing renewable energy integration. Hybrid inverters represent a significant evolution in power conversion technology, combining the functionalities of grid-tied and off-grid inverters. By seamlessly integrating multiple energy sources, including solar PV systems, batteries, and the grid, hybrid inverters offer enhanced flexibility and reliability in managing energy flow. The integration of solar battery charging functionality enables these inverters to store excess solar energy during periods of high generation and discharge it during times of low generation or high demand, thereby optimizing self-consumption and reducing reliance on the grid. Designing hybrid inverters with solar battery charging involves intricate control algorithms and power electronics to efficiently manage energy flow. Key components include maximum power point tracking (MPPT) algorithms for solar energy harvesting, battery management systems (BMS) for charge/discharge control, and grid synchronization circuits for seamless grid interaction. Advanced communication interfaces enable remote monitoring and control of the hybrid inverter system, allowing users to monitor energy generation, storage levels, and consumption patterns in real-time. Operationally, hybrid inverters with solar battery charging offer numerous benefits for residential and commercial applications. By harnessing solar energy and storing it in batteries, these inverters help reduce electricity bills by offsetting peak demand charges and providing backup power during grid outages. Furthermore, they contribute to grid stability and resilience by reducing strain on the utility infrastructure and facilitating the integration of variable renewable energy sources into the grid. In conclusion, hybrid inverters with solar battery charging represent a transformative technology in the transition towards a sustainable energy future. Their ability to efficiently manage solar energy generation, storage, and distribution makes them indispensable for maximizing self-consumption, reducing carbon emissions, and enhancing energy independence. As the adoption of renewable energy systems continues to grow, hybrid inverters with solar battery charging will play an increasingly vital role in shaping the future of energy generation and distribution.

**ABSTRACT**

In the ongoing pursuit of sustainable energy solutions, the concept of Cosmic Solar Revolutionizing Energy (CSRE) emerges as a transformative initiative leveraging innovative solar technologies to harness the power of the cosmos. With the sun as our cosmic powerhouse, CSRE envisions a future where every corner of the globe can access clean and renewable solar energy, transcending the limitations of traditional solar panels dictated by daylight hours and weather conditions. Central to CSRE's vision are cutting-edge technologies aimed at pushing the boundaries of solar power generation. Space-based solar power (SBSP) stands out as a pioneering approach, involving the capture of solar energy directly in space and its transmission to Earth via wireless power transmission systems. By situating solar panels in orbit around the Earth, SBSP enables the continuous capture of sunlight, untethered by atmospheric interference. Additionally, the development of quantum dot solar cells represents another revolutionary stride, utilizing nanoscale semiconductor particles to capture a broader spectrum of sunlight and enhance energy conversion efficiency, even in low-light conditions. The global impact of CSRE could be profound, with the potential to alleviate energy poverty and drive sustainable development by providing clean and reliable energy access to remote and underserved communities worldwide. Furthermore, by diminishing reliance on fossil fuels, CSRE contributes significantly to mitigating climate change and preserving the planet's health for future generations. Despite its ambitious vision, CSRE faces challenges such as cost, technological feasibility, and regulatory obstacles. However, through continued investment in research and development, alongside collaboration between governments, industries, and academia, these challenges can be navigated and overcome. In conclusion, Cosmic Solar Revolutionizing Energy embodies a bold and visionary approach towards a brighter and more sustainable future. By tapping into the boundless energy of the cosmos, CSRE opens new pathways for progress and prosperity while safeguarding the planet. With innovation, determination, and collective commitment, CSRE has the potential to reshape the global energy landscape, ushering in an era of sustainable abundance for all.

**ABSTRACT**

The basic precaution that is taken after experiencing a little symptom of abnormal actions in our body is medicine. These medicines are used for precautionary purposes or to tackle abnormal activities inside the host. The usage of medication creates a complex experience for the patients and the doctors, as the medicines are valid for a certain period of time (i.e., the expiration date), and the identification of various classifications of the same kind of medicine makes the task more vigorous. The medicines in the form of pills are available in the same shape with different components, so the knowledge of differentiating between those medicines is only available to professionals. Since the medicines are being used by people who do not have knowledge of them, the identification of these medicines is made much simpler by adding a certain Quick Response (QR) code that specifies the expiry date, type of medicine, nearest available medical stores, and caution along with the medicine for side effects and allergy identification. Some existing applications with these features lack proof along with the medication recommendation. A survey emphasizes that people get afraid of wrong information from some unknown application regarding a life-related recommendation, so valid proof is required for people to follow such recommendations. Hence, this idea is aimed at providing the necessary real-time possible outcomes of those medicines so as to avoid fear. This method of identification is possible only when the manufacturing of these medicines is done in a fashion so as to regulate certain codes for certain pills. This method makes the task of identification much easier. Along with precautions and side effects information about those medicines, people taking medications place a strong faith in the search results provided.

SmartView introduces a pioneering system designed to revolutionize television control by integrating intelligence and seamless interaction. At the forefront of this innovation is the SmartView Remote, which promises to redefine conventional methods of television control. This groundbreaking solution combines advanced software algorithms with cutting-edge hardware components to deliver an unparalleled level of control and convenience. SmartView's SmartView Remote features a sleek and intuitive Fully displayed touchscreen interface that replaces traditional remotes. Users can effortlessly navigate channels, adjust volume levels, customize settings, and access additional features with simple gestures and taps. This intuitive interface aims to streamline the user experience, providing enhanced control and convenience. One of the key features of SmartView is its seamless connectivity. By leveraging wireless technologies such as Bluetooth and Wi-Fi, the SmartView Remote establishes robust communication with television sets, eliminating the constraints of traditional infrared-based remotes. This allows users to control their TVs from anywhere within range, without the need for line-of-sight. Accessibility is also a priority with SmartView. The system includes features such as voice control, tactile feedback, and customizable accessibility settings, ensuring that users of all abilities can easily interact with their television sets. With its forward-thinking design and commitment to innovation, SmartView promises to redefine television control, ushering in an era of intuitive, personalized, and accessible viewing experiences for users around the world.

**ABSTRACT**

Agricultural biotechnology is a multidisciplinary field that applies principles of biology and technology to enhance agricultural productivity, sustainability, and food security. This technology involves the use of genetic engineering, molecular biology, and other advanced techniques to develop crops with desirable traits such as resistance to pests and diseases, tolerance to environmental stresses, and improved nutritional content. One of the key areas of focus in agricultural biotechnology is the development of genetically modified (GM) crops. GM crops are engineered to express specific traits that confer advantages such as increased yield, reduced pesticide use, and enhanced nutritional value. For example, scientists have developed GM crops that are resistant to herbicides, allowing farmers to control weeds more effectively without harming the crop plants. Another important application of agricultural biotechnology is the development of genetically modified organisms (GMOs) for animal agriculture. GMOs can be engineered to produce pharmaceuticals, vaccines, or other valuable products in their milk, eggs, or meat. Additionally, GMOs can be used to improve animal health and welfare by reducing the incidence of diseases and improving the efficiency of feed conversion. In addition to genetic engineering, agricultural biotechnology also encompasses other technologies such as marker-assisted breeding, tissue culture, and nanotechnology. These technologies enable scientists to accelerate the breeding process, develop disease-resistant varieties, and improve the efficiency of nutrient uptake in plants. Overall, agricultural biotechnology holds great promise for addressing some of the most pressing challenges facing modern agriculture, including the need to feed a growing global population while minimizing environmental impact. By harnessing the power of biotechnology, farmers can produce more food with fewer resources, reduce the use of chemical inputs, and mitigate the effects of climate change on agricultural production.

**Keywords:** Agriculture biotechnology, genetic engineering, genetically modified crops, sustainability, food security, pest resistance, environmental stresses, nutritional enhancement, marker-assisted breeding, animal agriculture.

**ABSTRACT**

Signal processing involves the manipulation and analysis of signals to extract relevant information. Differential algebra, a branch of mathematics, offers a powerful framework for signal processing tasks. This ABSTRACT explores the application of differential algebra in signal processing. Differential algebra provides tools for describing the behavior of signals in terms of differential equations and algebraic equations. By representing signals as mathematical functions, transformations such as differentiation and integration can be applied to analyze their properties. Moreover, differential algebra facilitates the modeling of signal systems, enabling the design and optimization of filters, controllers, and other signal processing components. One key advantage of using differential algebra in signal processing is its ability to handle complex signals with nonlinear dynamics. Through techniques like Taylor series expansions and differential elimination, nonlinear signal processing problems can be efficiently solved. Additionally, differential algebra aids in signal estimation and prediction by formulating dynamic models that capture the underlying dynamics of the signals. In summary, differential algebra offers a versatile framework for signal processing tasks, including analysis, modeling, and estimation. Its application enables the development of efficient algorithms for a wide range of signal processing applications, from communications and audio processing to biomedical signal analysis and beyond.

**ABSTRACT**

Mathematics forms the cornerstone of image processing, providing a robust framework for analyzing, manipulating, and interpreting digital images across various domains. This ABSTRACT delves into the multifaceted applications of mathematics in image processing, elucidating its pivotal role in transforming raw pixel data into actionable insights. At the core of image processing lies linear algebra, facilitating operations such as image transformation, enhancement, and compression. Matrices and vectors represent images, while linear transformations enable geometric alterations such as rotation, scaling, and translation. Additionally, Fourier analysis harnesses the power of mathematics to decompose images into frequency components, enabling techniques such as Fourier filtering and edge detection. Convolution, a fundamental operation in image processing, utilizes mathematical kernels to perform tasks such as blurring, sharpening, and edge detection. Moreover, mathematical morphology facilitates shape-based analysis and object extraction, while histogram analysis offers insights into pixel intensity distributions for contrast enhancement and segmentation. The advent of advanced mathematical concepts has revolutionized image processing. Wavelet transforms provide a multi-resolution analysis framework, enabling compression, denoising, and feature extraction. Partial differential equations play a crucial role in image restoration and inpainting, preserving image structures while suppressing noise and artifacts. In recent years, machine learning and deep learning techniques have leveraged mathematical principles to achieve state-of-the-art performance in image processing tasks. Neural networks, convolutional architectures, and optimization algorithms harness mathematical optimization and statistical methods for tasks such as image classification, object detection, and image generation. In essence, mathematics serves as the bedrock of image processing, empowering engineers and researchers to unravel the intricacies of digital images and unlock their full potential across diverse applications, from medical diagnostics and remote sensing to computer vision and digital art.

**Keywords:** Image processing, Mathematics, Linear algebra, Fourier analysis, Convolution, Mathematical morphology, Histogram analysis, Wavelet transforms, Partial differential equations, Machine learning, Deep learning, Neural networks, Convolutional architectures, Optimization algorithms, Digital images, Geometric transformations, Frequency components, Edge detection, Compression, Denoising

**ABSTRACT**

Introduction: Neuroendocrine tumors, formerly called "Carcinoid Tumor", which can be seen in areas where neuroendocrine cells are present, are most commonly seen in the appendix. However, it is the most common tumor of the appendix. Its incidence in other organs is 23% in the ileum, 13% in the rectum and 11.5% in the bronchi. Although it is most often seen between the ages of 30-40, it can also be seen in children. 71% of them are located at the tip of the appendix, and 70% are smaller than 1 cm. The rate of carcinoid tumors in patients with appendectomy is 0.3-0.9%. In our study, a patient diagnosed with carcinoid tumor after appendectomy is presented. CASE: A 22-year-old female patient admitted to the emergency department with severe abdominal pain. In the physical examination, abdominal guarding and rebound tenderness were present and in the blood tests, the WBC was 17,000. The patient's computed tomography was reported as "appendix diameter is 12 mm, its surroundings are dirty and there is appendicolith in the lumen". The patient was taken into operation with the preliminary diagnosis of acute appendicitis. The patient underwent laparoscopic appendectomy. There were no problems in the follow-up of the patient and the patient was discharged in full recovery on the first postoperative day. The patient then came to the outpatient clinic with the pathology result. The patient's pathology result was "appendix carcinoid tumor". According to the report, the tumor was at the tip of the appendix and the distance of the tumor to the root of the appendix was 4 cm. Since the tumor was at the tip of the appendix, the medical oncology department was contacted and the patient was followed up. No problems requiring reintervention were encountered during follow-up. Conclusion: Carcinoid tumours of the appendix often occur with the clinical picture of acute appendicitis. In most cases, they are found incidentally during appendectomies and the diagnosis of carcinoid tumor is rarely suspected before histopathological diagnosis. Although life expectancy is good, imaging should be emphasised in the close follow-up of this group of patients because of the high rate of concomitant colorectal tumours.

**ABSTRACT**

**Introduction:** Cholecystectomy is one of the most frequently performed operations in general surgery clinics all over the world. Complications that may occur after cholecystectomy are the nightmares of general surgeons due to the difficulty of management and the need for experience and knowledge. In particular, bile duct injuries can lead to serious problems that can lead to loss of life if not recognised during the operation. In our study, the case management of biliary tract injury caused by Mirizzi Syndrome during the cholecystectomy operation performed on a patient diagnosed with chronic cholecystitis is presented. **CASE:** It was learned that a 44-year-old female patient was admitted to a Tertiary Health Facility and received medical treatment as a result of an acute cholecystitis attack approximately 12 years ago. When the patient's medical records were examined, the hepatobiliary ultrasound performed on the patient revealed many calculus in the gallbladder, increased wall thickness and increased pericholecystic fluid. After the patient recovered with medical treatment and his pain disappeared, he was discharged and invited for surgery 6 weeks later. However, it was learned that the patient avoided the operation due to fear of surgery. The patient had 4 more attacks in a 12-year period and received treatment at various health centers. After medical treatment, the operation was planned for the patient who was admitted to our hospital during his last attack, and the patient was prepared for the operation under elective conditions. The operation was started laparoscopically and it was observed that the patient's omentum and transverse colon were rigidly adherent to the gallbladder. The gallbladder was opened in a controlled manner and it was seen that the gallbladder was attached to the bile duct. After controlled dissections, it was understood that the gallbladder was fistulized into the bile duct (Mirizzi type 4). Since the adhesions were severe, it was decided to continue the operation with laparotomy. In this case, the gallbladder was separated from the bile duct and cholecystectomy was completed. A T-tube was placed in the bile duct, and the integrity of the bile ducts was seen in the subsequent choledochography. The procedure was terminated by placing a drain. The patient's T-tube was removed after 20 days, and the patient was discharged in full recovery, as there was no problem in the post-operative follow-up. **Conclusion:** Biliary tract injuries are one of the most feared complications of cholecystectomy operations and are a headache for surgeons due to the difficulty of management and the problems that may develop afterwards. The most important process is to recognize this situation at the time of the surgery and make a decision about what to do.

**Keywords:** Mirizzi Syndrome, Cholecystectomy, Complication

**HEIDEGGER'İN TEKNİK KAVRAMI ÜZERİNDEN *METROPOLİS* FİLMİNİN BİR  
ANALİZİ**

**ÖZET**

Bu çalışmada Fritz Lang'ın 1927 yapımı "*Metropolis*" adlı sinema filminde işlenen temalar hakkında detaylı bir analiz sunulmaktadır. Filmde teknolojik gelişmelerin hayata nasıl yansıdığı, insanların kapitalist ve proletarya olarak adlandırabileceğimiz şekliyle iki sınıfa ayrılması, yer altı ve yer üstü şehirleri arasındaki ayırım, düşünmeyi kısırtan unsurlar, teknolojinin hayat üzerindeki olumsuz ve yıkıcı etkileri gibi konular ele alınmaktadır. Tüm bu işlenen konular Heidegger'in teknik kavramına yüklemiş olduğu anlamı akıllara getirmektedir. Heidegger'in teknik kavramına yönelttiği eleştirileri göz önünde bulundurduğumuzda film, onun düşünme kavramıyla da bize bir şeyler söylemektedir. Heidegger, teknik sözcüğünün kökenini araştırdığında Grekçe Tekhnikon yani tekhne'ye ait olan anlamına geldiğini görür. Buradan hareketle teknik ve tekhne arasında bağ kurmaya başlar. Tekhne hem el becerisi el sanatları anlamında hem de zihinsel sanatlar anlamında kullanılmaktadır. Bu durumda tekhne asıl olan şey poiesis'tir, yani öne çıkarmadır. Ona göre amaç ve araç, açığa çıkmanın alanına girer ve araç olan tekniğin özüne inmeye çalıştığımız zamanda gizini açma ile karşı karşıya kalırız. Bu durumda teknik sadece bir araç değildir, gizini açmanın ve hakikatin alanına da girmektedir. Bu anlamda Heidegger, düşünmeyi de tekniğe ulaşmada önemli görür. Çünkü bir şeyi görünüşe getirmenin dibinde kök salan şey "düşünmedir". Heidegger, modern insanın doğaya ve varlığa bakışını eleştirmekte ve bunun teknikle bağlantısı olduğunu düşünmektedir. Ona göre tekniğin yanlış yorumlanması insanın doğayla olan ilişkisini bozmakta ve onu doğanın bir parçası olarak görmek yerine onu kontrol etmeye çalışan bir varlık haline getirmektedir. Heidegger'in teknik konusundaki eleştirileri ve asıl anlamda tekniğin özünün düşünme olduğunun unutulması bakış açısıyla filmdeki karakterlerin düşünme süreçleri, teknolojinin insanlar üzerindeki etkileri çalışmamızda detaylı bir şekilde incelenmektedir. Ayrıca filmdeki hakikat arayışı, düşünme eyleminin önemi, teknolojinin gizemli yönleri ve insanın bu süreçteki rolü gibi konulara odaklanıldığı zaman tüm bunlarda Heidegger'in izlerini bulmak mümkündür. Sonuç olarak bu çalışmada Heidegger'in teknik kavramı aracılığıyla *Metropolis* filmindeki teknolojinin yıkıcı boyutları, karakterlerin yaşadığı deneyimler, düşünme süreçleri ve hakikat arayışlarının bir analizi sunulmuştur.

**Anahtar Kelimeler:** Metropolis, Heidegger, Teknik, Düşünme, İnsan.

**AN ANALYSIS OF THE MOVIE METROPOLIS THROUGH HEIDEGGER'S  
TECHNICAL CONCEPT**

**ABSTRACT**

In this study, a detailed analysis is presented about the themes in Fritz Lang's 1927 movie "*Metropolis*". The film deals with topics such as how technological developments are reflected in life, the division of people into two classes that we can call capitalist and proletariat, the distinction between underground and aboveground cities, elements that provoke thought, and the negative and destructive effects of technology on life. All these topics bring to mind the meaning Heidegger gave to the concept of technique. Considering Heidegger's criticisms of the concept of technique, the film also tells us something with his concept of "thinking". When Heidegger investigates the origin of the word technique, he sees that it comes from the Greek word *Technikon*, meaning belonging to *tekhne*. From this point on, he begins to establish a connection between technique and *techne*. *Tekhne* is used both in the sense of manual dexterity and in the sense of mental arts. In this case, the main thing in *techne* is *poiesis*, that is, bringing to the fore. According to him, the purpose and the means enter the field of revelation, and when we try to get to the essence of the technique, which is the tool, we are faced with revealing the secret. In this case, technology is not just a tool, it also enters the field of revealing and truth. In this sense, Heidegger sees thinking as important in achieving technique. Because what is rooted at the bottom of bringing something into appearance is "thinking". Heidegger criticizes modern man's view of nature and existence and thinks that this has a connection with technology. According to him, misinterpretation of technique disrupts man's relationship with nature and turns him into an entity that tries to control nature rather than seeing it as a part of nature. In our study, the thinking processes of the characters in the film and the effects of technology on people are examined in detail from the perspective of Heidegger's criticisms of technology and forgetting that the essence of technique is thinking. In addition, when the film focuses on topics such as the search for truth, the importance of the act of thinking, the mysterious aspects of technology and the role of humans in this process, it is possible to find traces of Heidegger in all of these. As a result, in this study, an analysis of the destructive dimensions of technology, the experiences of the characters, their thinking processes and their search for truth in the movie *Metropolis* is presented through Heidegger's technical concept.

**Keywords:** *Metropolis*, Heidegger, Technique, Thinking, Human.

**ÖZET**

MoneyPay uygulaması, Migros'un finansal hizmetler alanında sunduğu yenilikçi bir proje olarak öne çıkmaktadır. Farklı altyapılarda olan ödeme platformlarından gelen talepler doğrultusunda ödeme sistemleri için yazılım dili ve işletim sisteminden bağımsız uygulama geliştirme platformlarının oluşturulması ile dijital ürün-hizmet satış ve tahsilat sürecini uçtan uca kontrol edilmesi bu çalışmanın başlatılma gerekçesini oluşturmaktadır. Bu doğrultuda yapılan çalışmalarda hem ulusal hem de uluslararası finans sektörlerinde katma değer yaratmak için otomasyonun ve matematiksel modellemenin gücünden faydalanmak zorunlu bir hale gelmiştir. Çalışma kapsamında Fintech ürünlerine başvuran müşterilerin en doğru, en karlı ve en hızlı şekilde tahsilat sürecinin yönetilmesi sağlanmıştır. Üretilen ve analiz edilen bilgilerin doğrultusunda müşteri edinim ve satış süreçlerinin verimlilikleri artırılmıştır. Ayrıca birçok alt birimden meydana gelen bu pazarlama sisteminin veri bütünlüğünü ve doğru işleyişini otomatik testlerle kontrol altında tutmak çok önemlidir. Yapılan çalışma sonucunda geliştirilen akıllı platform ile dijital ürün satışı, elektronik cüzdana bakiye yükleme, tüm pos cihazlarında QR ile ödeme, NFC ile ödeme, Migros kasalarında hızlı ödeme, 7/24 para transferi, fatura ödeme, altın, gümüş, platin gibi kıymetli maden ve döviz yatırımları, oyun ve e-pin kodu satın alma, alışveriş ve ihtiyaç kredilerinden yararlanabilme, kullanıcının yapay zeka algoritmaları ile skorlanması sonucunda kazanacağı mikro kredi limiti ile birlikte harcama yapabilmesi süreçlerinin gerçekleştirilmesi sağlanmıştır. Farklı farklı ödeme seçenekleri ve mikro krediyle kasada ödeme adımı zincir mağazalara sunulan çözümlerle analitik olarak planlanması ve hızlı çözüm sunulması, kasada ödeme sistemleri için bir ilk niteliğindedir.

**Anahtar Kelimeler:** MoneyPay, Ödeme Sistemleri, Fintech

**DEVELOPMENT OF FINTECH TECHNOLOGIES FOR MONEYPAY  
APPLICATION**

**ABSTRACT**

MoneyPay application stands out as an innovative project offered by Migros in the field of financial services. The reason for starting this study is to create application development platforms independent of the software language and operating system for payment systems in line with the demands from payment platforms with different infrastructures and to control the digital product-service sales and collection process end-to-end. In studies carried out in this direction, it has become necessary to benefit from the power of automation and mathematical modeling to create added value in both national and international financial sectors. Within the scope of the study, it was ensured that the collection process of customers applying for Fintech products was managed in the most accurate, most profitable and fastest way. In line with the information produced and analyzed, the efficiency of customer acquisition and sales processes has been increased. In addition, it is very important to keep the data integrity and correct functioning of this marketing system, which consists of many subunits, under control with automatic tests. With the smart platform developed as a result of the study, digital product sales, balance loading to electronic wallet, payment with QR on all POS devices, payment with NFC, fast payment at Migros cash registers, 24/7 money transfer, bill payment, precious metals such as gold, silver, platinum and Foreign exchange investments, purchasing games and e-Pin codes, benefiting from shopping and consumer loans, and allowing the user to spend with the micro credit limit he will earn as a result of scoring with artificial intelligence algorithms have been carried out. Analytical planning and providing quick solutions with the solutions offered to chain stores at the checkout step with different payment options and micro credit is a first for payment at the checkout systems.

**ÖZET**

Dental tedavilerde hastaların artan estetik beklentileri diş hekimlerini daha estetik materyal kullanmaya ve daha hassas uygulamalara yönlendirmektedir. Hastaların estetik kaygılarının giderilmesi için porselen laminate veneer uygulamaları tercih edilen tedavi yöntemlerinden biri olmuştur. Porselen laminate veneerler (PLV), özellikle estetik alandaki pozisyon veya şekil bozukluğu olan, renklenmiş, travmaya sonucu kırılmış ya da aşınmış dişlerde kaybedilen estetiği rehabilite etmek amacıyla son yıllarda oldukça popüler hale gelmiş bir tedavi seçeneğidir. Günümüzde bu restorasyonlar marjinal bölgedeki kırılma dayanımı, uzun dönem renk stabilitesi ve aşınmaya karşı direncinden dolayı sıklıkla kullanılmaktadır. Diş dokusunda minimal preparasyon ya da preparasyonsuz şekilde uygulanan porselen laminate veneerler sağlıklı diş dokusunu da korumasıyla diş hekimliğinde oldukça sık uygulanan bir tedavi olmuştur. Bu restorasyonlarda tanısız muhlama yöntemi hem preparasyondan önce bitim aşamasının planlanabilmesine hem de geçici restorasyonun hazırlanabilmesine imkân sunar. Porselen laminate veneerlerde önemli başarı faktörlerinden biri klinisyenin tecrübesi ve kontrollü diş dokusunun kaldırılmasıdır. Minede tamamlanan preparasyon rezin simanın bağlanma dayanıklılığını artırırken dentinde tamamlanan restorasyonlar ise mikrosızıntı oluşturmaktadır. Günümüzde laminate veneerler için kullanılan materyaller, toz-likit fırınlama yöntemi ile üretilen feldspatik seramikler, cam seramikler, oksit seramikler ve cad-cam yöntemi ile hazırlanan seramiklerdir. Porselen laminate veneerlerin uzun dönem klinik başarısını etkileyen etkenler, diş yüzeyinin yapısı, preparasyon derinliği, porselen tipi ve kalınlığı, rezin siman ve dental adezivinin tipi, diş morfolojisi, fonksiyonel ve parafonksiyonel çene hareketleridir. Bu restorasyonların en önemli başarısızlık nedenleri ise kırılma, mikrosızıntı ve diş yüzeyinden ayrılmalarıdır. Bu derlemenin amacı; porselen lamine veneerler hakkında kullanılan güncel yapım teknikleri, materyalleri ve klinik başarı parametrelerini değerlendirmektir.

**Anahtar kelimeler:** Porselen, laminate restorasyonlar, klinik başarı

**FACTORS AFFECTING THE SUCCESS OF PORCELAIN LAMINATE VENEER  
RESTORATIONS**

**ABSTRACT**

The increasing aesthetic expectations of patients in dental treatments lead dentists to use more aesthetic materials and perform more precise applications. Porcelain laminate veneer applications have become one of the preferred treatment methods for addressing patients' aesthetic concerns. Porcelain laminate veneers (PLVs) have become increasingly popular in recent years as a treatment option for rehabilitating poor aesthetics in teeth with positional or shape abnormalities, discoloration, fractures due to trauma, or wear. These restorations are frequently used today due to their fracture resistance in marginal regions, long-term color stability, and resistance to wear. Porcelain laminate veneers, whether applied with minimal preparation or no-preparation have become a commonly used treatment in dentistry while also preserving healthy dental tissue. The diagnostic wax-up method in these restorations allows for planning the final stage before preparation and the preparation of temporary restorations. One of the important success factors for porcelain laminate veneers is the clinician's experience and controlled removal of dental tissue. Preparation completed in enamel enhances the bond strength of resin cement, while restoration completed in dentin creates microleakage. Materials used for laminate veneers today include feldspathic ceramics produced by the powder-liquid firing method, glass ceramics, oxide ceramics, and ceramics cad-cam manufacturing method. Factors influencing the long-term success of porcelain laminate veneers include the structure of the tooth surface, depth of preparation, type and thickness of porcelain, type of resin cement and dental adhesive, tooth morphology, and functional and parafunctional jaw movements. The most significant causes of failure in these restorations are fracture, microleakage, and debonding from the tooth surface. The purpose of this review is to evaluate current fabrication techniques, materials, and clinical success parameters used in porcelain laminate veneers.

**ABSTRACT**

The peel and pomace portion of Kinnow mandarin (*Citrus reticulata*) rich in polyphenols, flavonoids like naringin, carotenoids, pectin, and essential oils, which makes up 30–40% of the fruit weight, is the main waste product of the kinnow juice industry. These bioactive substances are highly valuable in food processing, pharmaceutical, and biofuel manufacturing industries, and they are also nutritionally sound. The valuable components can be extracted with a variety of very effective methods and utilized for a variety of purposes. The Kinnow peel, otherwise a waste, is more valuable to the industry since it is readily available and inexpensive, and it serves multiple purposes. This organic waste holds a great potential to be converted into nutritious value-added products, using various extraction approaches. Extraction helps in isolation of bioactive phytochemicals from the by-products that could be used as nutritional supplements in food systems. This study was carried out to separation of bioactive compounds from kinnow peel. The crude extract obtained was analyzed for total phenolic content as well as antioxidant activity, using UV-Spectrophotometer analysis.

**ABSTRACT**

During the process of the treatment of COVID-19 hospitalized patients, physicians still face a lot of unknowns and problems. Despite the application of the treatment protocol, it is still unknown why the medical status of a certain number of patients worsens and ends with death. Many factors were analyzed for the prediction of the clinical outcome of the patients using different methods. The aim of this paper was to develop a prediction model based on initial laboratory blood test results, accompanying comorbidities, and demographics to help physicians to better understand the medical state of patients with respect to possible clinical outcomes using neural networks, hypothesis testing, and confidence intervals.

**ABSTRACT**

Research background: Safety and quality are fundamental factors in tourism influencing tourists' overall experience. Ensuring a safe environment and offering high-quality services are crucial for maintaining the positive reputation of a destination and fostering repeat visits. The contribution investigates the theoretical bases of the issues in the field of quality and risk assessment in tourism, analyzing how the perception of risk and quality has evolved in response to various global events and disasters. Purpose of the research: The purpose of the research is to explore the theoretical foundations of quality and risk assessment in tourism, understand how the perception of these factors has changed over time due to global events, and highlight the importance of preparedness and adaptation to changing global risks. Its goal is to discuss various assessment methods and emphasize the need to integrate internal and external aspects of the business for effective quality and risk management, which is essential for achieving a sustainable and competitive environment in tourism. Methods: The research provides brief comparisons and identifies common features between these areas. It mentions models or methods suitable for both risk and quality assessment. It also discusses the importance of having general standards for effective evaluation and comparison in the tourism sector. Additionally, techniques such as brainstorming, the Delphi technique, self-assessment, and gap analysis are highlighted as part of the evaluative processes. Findings & Value added: The research suggests a multidisciplinary approach is necessary for a comprehensive understanding and effective management of quality and risk in a dynamic, global context, particularly in tourism. This approach enables a thorough understanding and effective management, emphasizing the growing focus on social and environmental responsibility. It points out the need to integrate different perspectives and methods in the evaluation of quality and risk to achieve sustainable outcomes and ensure the prosperity of tourism now and in the future.

**ABSTRACT**

CRISPR-Cas9 technology has emerged as a powerful tool for precise gene editing and has significantly advanced the field of genetic engineering. The development of this technology began with the discovery of clustered regularly interspaced short palindromic repeats (CRISPR) and the associated Cas9 protein in bacteria. These CRISPR sequences were found to play a role in the bacterial immune system by recognizing and cleaving foreign DNA. The CRISPR-Cas9 system consists of two main components: the guide RNA (gRNA) and the Cas9 protein. The gRNA is designed to specifically bind to the target DNA sequence of interest, while the Cas9 protein acts as a molecular scissor, cutting the DNA at the targeted location. The simplicity and versatility of the CRISPR-Cas9 system have revolutionized genetic engineering. Compared to previous gene editing techniques, such as zinc finger nucleases (ZFNs) and transcription activator-like effector nucleases (TALENs), CRISPR-Cas9 is more efficient, cost-effective, and easier to implement. It allows scientists to precisely modify DNA sequences by either introducing specific changes or deleting and inserting genetic material. The applications of CRISPR-Cas9 technology are vast and span across various fields. In biomedicine, CRISPR-Cas9 holds great promise for the treatment of genetic disorders. By correcting disease-causing mutations, researchers aim to develop novel therapies for conditions such as cystic fibrosis, sickle cell anemia, and muscular dystrophy. Additionally, CRISPR-Cas9 has been used to engineer immune cells for cancer immunotherapy, enhancing their ability to target and eliminate cancer cells. In agriculture, CRISPR-Cas9 offers opportunities for developing crops with improved traits, such as resistance to pests, diseases, and environmental stresses. This technology can also be used to enhance crop yield and nutritional content, contributing to global food security. Furthermore, CRISPR-Cas9 has revolutionized basic scientific research, allowing scientists to study gene function and understand the underlying mechanisms of diseases. By selectively modifying genes in model organisms, researchers can gain insights into the roles of specific genes and their impact on biological processes. Despite its immense potential, there are still challenges associated with CRISPR-Cas9 technology. Off-target effects, where Cas9 mistakenly edits unintended DNA sequences, are a concern and efforts are being made to improve the specificity of the system. Ethical considerations regarding the use of CRISPR-Cas9 in human germline editing and potential unintended consequences also need to be carefully addressed. In conclusion, the development of CRISPR-Cas9 technology has opened up new possibilities in genetic engineering and biotechnology. Its simplicity, efficiency, and versatility have paved the way for advancements in medicine, agriculture, and scientific research. Ongoing research and technological improvements will continue to refine and expand the applications of CRISPR-Cas9, ultimately shaping the future of genetic manipulation and its impact on various fields.

**ABSTRACT**

Service quality plays a pivotal role in the success of businesses across diverse sectors, making it a topic of enduring interest in scholarly circles. This bibliometric study offers a thorough examination of the changing landscape of service quality research. By systematically reviewing academic literature from the past decade, the aim is to provide insights into publication trends, key contributors, social networks, and emerging themes within the realm of service quality. The analysis demonstrates a significant uptick in publications related to service quality research, indicating its growing impact on the field. Notably, this research is prominently featured in esteemed academic journals, with the United States being the primary source of scholarly contributions. Furthermore, collaborations between academics in the United States and those in China are prevalent. Additionally, researchers predominantly concentrate on evaluating service quality alongside other factors such as customer satisfaction and loyalty.

**ABSTRACT**

Rural entrepreneurship initiates transformative change in villages through innovative activities aimed at achieving economic gains. In the era of globalization, Indian villages are becoming increasingly interconnected with the global world. The traditional characteristics of Indian villages are rapidly evolving because of various local and global factors. Technological and communication advances, including mobile phones, the Internet, roads, and transportation, serve as connective mechanisms linking each village to the global landscape. The study states that the culture of folk art or pottery in the rural areas of North Dinajpur is experiencing revival and coexistence with global culture rather than decline. The research employs ethnography as a methodological paradigm for a deeper understanding of entrepreneurial activities, emphasizing field data collected through methods such as observation, in-depth unstructured interviews, and case studies. Two villages in the district were selected purposively and studied rigorously to understand the context of the study. Theoretically, Howard E. Aldrich aligns with the three main sociological concerns of entrepreneurship. First, "entrepreneurs can both reproduce and challenge existing social orders." Second, "Entrepreneurship ensures the reproduction of existing organizational populations and creates a basis for the creation of new populations depending on the diverse perspectives and skills of the founders, as well as the socio-political context in which it is created." Third, "entrepreneurs influence the level of stratification and inequality in society by shaping the life chances of founders and their employees." The findings highlight that social forces such as modernization and globalization have brought about radical changes in the craft, upending the status of traditional potters. Folk art coexists with the larger global culture, creating cultural hybrids to revitalize it. Through adaptations such as online marketing and payment modes, traditional artisans are being integrated into the larger capitalist system. Field observations reveal a diverse division of labor involving members of other races, technologies, and communication facilities. Various social processes act as driving factors, bringing about changes in the means of production, inspiring new marketing strategies, and creating employment opportunities for rural dwellers.

**ABSTRACT**

One of the main advantages of ferrites is their high surface area, which provides a large number of active sites for the catalytic degradation of dyes. The presence of iron in ferrites also makes them effective catalysts for the oxidation of various organic pollutants, including dyes. Ferrites are iron oxide materials that contain iron (Fe) and other metallic cations such as nickel (Ni), cobalt (Co), zinc (Zn), manganese (Mn), and others. There are several methods used to synthesize ferrites, including Sol-gel, co-precipitation, solid state, hydrothermal, and microemulsion. In the proposed study, the sol-gel technique will be adopted to synthesize the Cobalt Nickel ferrites. The suggested method involves the hydrolysis of metal alkoxides to form a gel-like precursor, which will then be heated to form ferrite particles. Synthesized ferrites were characterized by using SEM, XRD, VSM FTIR, and UV-visible spectroscopy. The synthesized ferrites were then tested for the photocatalytic degradation of methyl orange MO and methylene blue MB under Visible light irradiation.

**ABSTRACT**

This project is an analytical endeavor to develop a three-dimensional constitutive model for Shape Memory Alloys (SMAs), considering the complex interplay of mechanical stress, temperature, and phase transformation. The goal is to accurately simulate SMAs' unique thermo-mechanical behaviors, which have been challenging due to their ability to revert to their original shape upon heating. The model will be implemented via a user material subroutine in a commercial finite element package, enabling diverse scenario simulations. This initiative aims to address existing simulation challenges, thereby enhancing the potential use of SMAs in various engineering applications and contributing to the field's advancement.

**ABSTRACT**

Two-dimensional signals in experimental and clinical physiology can be analyzed in various ways. In recent years, a particularly popular approach includes the application of contemporary computational methods for the quantification of changes in resolution unit values and the use of the obtained features to train and test deep learning models. The features can be quantified using fractal analysis, by calculating fractal dimension and lacunarity, as well as through textural analysis. When quantifying texture, one can use approaches based on the gray-level co-occurrence matrix or run-length matrix, as well as the discrete wavelet transform. All of these quantifiers can be applied as input data for the development of complex artificial neural networks. The output data of the networks may include the state of the patient, the diagnosis, prognosis, or a status of a cell or tissue. Such deep learning models, based on multilayer perceptrons or convolutional neural networks, may in some cases achieve relatively high classification accuracy and other performance indicators. Here, we present our recent data on yeast cell models related to the creation of machine learning algorithms for the classification of sublethal cell damage induced by various chemical stimuli. We suggest that it may be possible to create a useful and affordable model that can be applied in future cell physiology, pathophysiology, and pathology research.

**ABSTRACT:**

Cybercrime is recognized as a global problem, with a substantial number of people falling victim to it. However, the severity of this issue is predominantly experiencing by women, posing a threat to their social lives. This research has delved into the intricate relationship between gender in cyberspace and the state, with a specific focus on gender identity that shapes the nature of cybercrime against women in the patriarchal social structure in India. Methodologically, the study focuses on secondary data, including various committee reports published by the Government of India, particularly those from the National Crime Records Bureau (NCRB), as well as books, journal articles, publications, national and international research papers, newspapers, and magazines. These sources were utilized to investigate the intersectionality of these phenomena. The study employed intersectionality as a theoretical paradigm to understand how different identities of women in terms of age, religion, caste, and class, contribute to vulnerable situations to them in the cyber world. The theory also have been used to understand the experiences of women who suffer from different kinds of cyber-attacks. The study classifies various forms of cybercrimes against women in its recent trend. It tries to analyse the effectivity of cyber laws and law enforcement processes that projects a different scenario of women's status in cyber landscape. The study also highlights the patriarchal influences, gender socialization, gender inequality, and societal discrimination against women that lead to more cyberattacks, especially targeting minor girls. In addition to this, numerous other factors, such as the dynamics of power inequalities in every sphere of life, inherent evils of social structure, gender stereotypes, rigid masculinity, patriarchal social structure, and control over women's sexuality, are also responsible for cyber-attacks against women in India. However, it emphasizes that women, particularly in the cyber world, are vulnerable and bear a significant burden of cyberattacks.

**ABSTRACT**

ZnO is a common semiconductor II-IV with a band gap energy (EG) of 3.1–3.4 eV that shows good electrical, optical, and chemical properties. At room temperature, it possesses an extremely significant excitation binding energy of 60 meV. In this work, synthesis of Zinc oxide (ZnO) thin film as a starting material by sol-gel method and then deposited on glass substrate to form thin layers of ZnO by dip-coating technique. This film of ZnO was annealed at 450 °C. The structural and optical properties of prepared ZnO thin film were measured by X-ray diffraction (XRD), Ultraviolet spectroscopy (UV-visible) respectively. These results; it was shown that thin film is polycrystalline with ZnO hexagonal wurtzite crystal structure and P63mc space group (JCPDS card no. 00-036-1451) and no secondary phases were observed, UV-visible transmittance spectra of the prepared film revealed good transparency in the visible region, the FESEM image revealed morphology nanorod nanoparticle with smaller grain size and the EDX verified the elemental composition and uniform of the film

**ABSTRACT**

Chimeric antigen receptors (CARs) are designed receptors that target cancer cells by combining an immune cell with a novel specialization. These immune cells could be either natural killer (NK) cells or T lymphocytes. Chimeric antigen receptors (CARs) have proven to be an effective way to amplify and reroute the natural characteristics of both CD8+ and CD4+ T lymphocyte subsets, based on the efficacy of targeting CD19 in B cell malignancies. Dual-signalling CARs allow for the quick production of tumor-specific drugs for each individual cancer patient by reprogramming T cells' effector, metabolic, and survival capabilities in addition to redirecting and activating them. Cell-based therapy has undergone a significant change as a result of this strategy. Rather than relying on the discovery and growth of uncommon naturally occurring T cells with therapeutic potential, it now produces optimal T cell products through genetic engineering. An important part of the immune system, NK cells are essential for innate immunity. For CAR engineering, NK cells provide an alternative to T-cells. NK-cells have the potential to be a source of allogeneic "off-the-shelf" cellular therapy because they do not induce GVHD or other alloimmune or autoimmune toxicities. They can mediate significant anti-tumor effects without causing potentially fatal alloreactivity like GVHD. Researchers are currently investigating the use of CAR-engineered NK cells for the treatment of various haematological and non-haematological malignancies due to the several distinct benefits of NK cells. NK-cells, on the other hand, are only authorized for preclinical studies, in contrast to CAR-Tcells. **Keywords:** Chimeric antigen receptors (CARs),Cancer ,Immunotherapy, Natural killer (NK) cells, T lymphocytes

**ABSTRACT**

There are many different cognitive effects of screen use, both good and bad. It may enhance young children's abilities and capacity for creative thought in the same way that it can enhance schooling and learning. Reading electronic books and using learning-to-read apps can help kids become more proficient readers and thinkers. But screen timing should be the only thing it does. Excessive screen usage can impact cognitive domains like executive functioning, sensory motor development, and academic performance. Additionally, it negatively impacts social, cognitive, physical, spoken language, and social development. A child's language development is impacted by the reduction of screen time in quality time and interaction with parents, caregivers, teachers, and elders. It detracts from psychological health. Metabolic syndrome is also a result of excessive screen time (MetS). The term "Mets" refers to a group of conditions that include obesity, type 2 diabetes mellitus, cardiovascular disease, various chronic illnesses, and early mortality. Features including abdominal obesity, elevated blood pressure, elevated fasting glucose, elevated triglycerides, and low HDL cholesterol may be considered clinical criteria for Metabolic Syndrome. It increases obesity and decreases physical activity. It increasing higher energy intake like sugar-sweetened beverages and high fat dietary intake cause increased secretion of insulin, and increases the amount of fat stores in the body which can lead to obesity. A child's body is less sensitive to insulin than an adult's, which causes insulin resistance and insulin-insensitive tissues, also known as type 2 diabetes mellitus. Parents or other caregivers should pay close attention to the timing of screen time because it might cause additional conditions that are detrimental to a child's development.

**ABSTRACT**

The study investigated the impact of anger management training on the levels of anger and odd behavior among university students. The main objective of this study was to evaluate the effectiveness of therapeutic interventions for reducing Anger and Odd Behavior among the student population in Pakistan. The study recruited those with higher scores on both anger and odd behaviors. The Quzai experimental design was used, and the sample consisted of 80 students aged between 18 to 25 from both genders of male and female students from different universities in Pakistan. Anger management training was provided to the experimental group. The level of aggression was measured before and after anger the training. The study found a significant difference in anger and odd behavior scores of the participants in the experimental group and the control group after receiving the intervention Anger management training had a great impact on student's life to lessen their anger and odd behavior It enables the students to manage their negative emotion and its' expression more acceptably.

**Keywords:** Anger, odd behavior, anger management training, students.

**THE BEHAVIOR OF BARLEY IN A CHANGING ENVIRONMENT**

**ADJOU DJ Abdellatif \***

Department of Nature and Life Sciences, Institute of Sciences, University Center of Tipaza

**ABSTRACT**

Cereal farming in Algeria faces off climatic and technical constraints, with barley production remaining low and above all variable in space and time compared to the real potential of these agro-ecological zones. Production in semi-arid zones must involve the adoption of relatively more adapted varieties which use less intensive techniques and tolerate a variable climate. For this, the selection of more efficient varieties is necessary to ensure production stability and improved yields. Our study consists of testing eight lines of Barley in the Sidi Bel Abbès region and comparing them with two control varieties.

**THE THIRD EYE FOR THE BLIND**

**S. SHIVAANISHRI**

R.M.K Engineering College, Student, Electronics and Communications Engineering,  
Thiruvallur, India.

**Email:**ec@rmkec.ac.in

**ABSTRACT**

The third eye for blinds is an innovation that helps blind people to navigate with speed and confidence by detecting the nearby obstacles using the help of ultrasonic waves and notifying them with a buzzer sound or vibration. The spectacles would detect the person or things that is before them. They only need to wear this device as a bandor cloth. The vibration intensity and rate of beeping increase with a decrease in distance; this is a fully automated device. It will be wearable technology for the blinds. One of the main peculiarities of this device is that it will be affordable. The Arduino Pro Mini 328-15/16 MHzboard is worn like a device. It will be equipped with ultrasonic sensors consisting of modules. Using the sensor, the visually impaired can detect the objects around them and travel quickly. When used on a large scale, with improvements in the prototype, it will drastically benefit the community. Thus, this device will be of great use for the blinds and help them travel to different places.

**Keywords:** Arduino UNO, Ultrasonic sensor, Vibration motor, Buzzer

**ABSTRACT**

This research paper aims to compare different mechanisms associated with the recognition and enforcement of international investment awards under distinct jurisdictions, specifically focusing on the legal landscapes of India, the United Kingdom, and the United States. Principally, India has not participated in the ICSID Convention, thereby absolving it from any obligation to attend to investment arbitral awards on par with domestic court judgements as stated under Article 54. In addition to this, India has referred to the commercial reservation provision of Article I(3) within the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, that is the “New York Convention”. Subsequently, there is a restriction on the application of New York Convention in India solely to foreign awards arising from commercial relationships under the Indian law as elucidated by Section 44 of the Act. This paper aims to branch out and delve into how Indian courts interpret this provision, thereby acknowledging its applicability and potentially excluding investment arbitral awards from its scope at the same time. Unlike India, the regime in the United States of America is oriented towards a pro-enforcement stance, as far as investment arbitration awards under ICSID are concerned. The enforcement of such awards is governed by the provisions of the Federal Arbitration Act (FAA) and the New York convention. The FAA lays down a framework for the enforcement of arbitration agreements and awards, encompassing both, domestic as well as international awards. Section 207 of this act deals particularly with ICSID awards, giving them the same status as final judgments of a U.S court as far as enforcement and recognition are concerned. The country is also a party to the New York Convention. Chapter-2 of the FAA ensures that it is implemented. As enshrined in Article-III of the convention, the US enforces and recognizes ICSID awards. Enforcement of ICSID awards however can be refused if one of the grounds mentioned in Article-V, such as a breach of public policy or procedural irregularities are found. The United Kingdom member of the International Centre for Settlement of Investment Disputes (ICSID) and is a signatory to the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards. Further, the United Kingdom adheres to the United Nations Commission on International Trade Law (UNCITRAL) Model Law on International Commercial Arbitration. The enforcement of an award depends on the country in which the seat of arbitration is situated and is governed by the rules followed in that country. In the UK, arbitration awards can be enforced by invoking the Arbitration Act 1996, the New York Convention, the Geneva Convention 1927, the Administration of Justice Act 1920, the Foreign Judgments (Reciprocal Enforcement) Act 1933, and Common Law. There are two procedures to enforce an arbitral award. The first method is to seek the leave of the Court to enforce the award, and the second is to seek the same relief from the national Courts as set out in the arbitral

---

award. The enforcement of the award can be challenged on the limited grounds laid down in the New York convention. The National Court can refuse to enforce the award if the Court opines that enforcement of the award would violate public policy. Arbitral proceedings dealing with complex issues of law can be appealed to the Supreme Court; this process can take approximately two years. There is a specified time limit in which the award is to be enforced. Non-compliance with an award is considered a violation of the arbitration agreement.

**ABSTRACT**

As a potential cancer treatment strategy, hyperthermia involves selectively raising the temperature in affected tissues while sparing healthy tissues nearby. The aim of this study was to experiment with various geometries of silver, copper, and gold nanostructures, such as nanorods, spheres, and ellipses, to incorporate into hyperthermia-based medical treatment of cancerous tumors. In order to induce the destruction of malignant cells, the ambient temperature of these metal nanostructures was raised from 42 to 46 °C, and the time taken for them to reach this temperature was calculated. In the spherical zone of malignant tissue, metallic nanostructures were analyzed using COMSOL Multiphysics heat transport module. The thermal responses of metallic nanostructures were assessed in various ways. In order to reach optimal treatment temperatures, different geometries showed varying degrees of heating over time. In contrast to other forms, nanorods specifically, silver nanorods coated in gold exhibited quick temperature attainment. Anticipating future uses in cancer treatment, this study offers important new insights into the role of metallic nanoparticles in hyperthermia.

**ABSTRACT**

Ergonomics in the workplace is the science of adapting tasks and work environments to workers. It reviews how well employee tasks can be completed without straining their body and without risking long-term health. As a result, ergonomic principles play an essential role in ensuring employee's safety, health, comfort, effectiveness, quality, and well-being in their work environment. However, public awareness on this matter is still at a low level. This situation has led to an increase in the statistics of accidents and injuries occurring in the workplace. Thus, this study aims to investigate ergonomics awareness in a company in Lahad Datu, Sabah. A qualitative research method was used to obtain information from the respondents. This study gathered 12 respondents using interviews and observation. The interview questionnaire structure consisting of several questions such as demographics, ergonomics awareness amongst oil palm office workers, office furniture and workstation, office environment, posture adjustment, office arrangement and the best way to create awareness in employees to practice ergonomics in the office. Hence, the observation was using Nordic Body Map (NBM) and Rapid Upper Limb Assessment (RULA). The study's findings show that the respondents still lack awareness of the importance of ergonomics implementation. As for the performance, it can be concluded that it is still in the unfavourable stage. Therefore, the need for improvement is required by the proposed improvement of implementation of ergonomics programs.

**Keywords:** Awareness, Ergonomics, Nordic Body Map (NBM), Rapid Upper Limb Assessment (RULA)

**ABSTRACT**

Datura, a genus of medicinal herbs from the Solanaceae family, has both toxic and medicinal properties. Different plant parts of the Datura plant, especially *D. stramonium* L., commonly known as Datura or jimson weed, exhibit potent analgesic, antiviral, antidiarrheal and anti-inflammatory activities, due to its wide range of bioactive components. With these pharmacological activities, *D. stramonium* can potentially be used to treat many human diseases, including ulcers, infections, wounds, rheumatism, gout, bruises, swellings, sciatica, fever, toothache, asthma, and bronchitis. Preliminary phytochemical studies on the plant extract of Datura revealed alkaloids, carbohydrates, cardiac glycosides, tannins, flavonoids, amino acids, and phenolic compounds. It also contains toxic tropane alkaloids, including atropine, scopolamine, and hyoscamine. Although some studies on *D. stramonium* have reported possible pharmacological effects, information about toxicity remains almost entirely uncertain. Furthermore, frequent use of *D. stramonium* for recreational purposes has resulted in toxic syndromes. Therefore, it becomes necessary to be aware of the toxic aspects and potential risks associated with its use. The present review aims to summarize the phytochemical composition, pharmacological and toxicological aspects of Datura plant.

**Keywords:** Datura stramonium, alkaloids, atropine, cardiac glycosides, hyoscamine, Ayurveda.

**ÖZET**

1970’li yıllardan bu yana önemli çevre sorunlarına maruz kalan dünya ülkeleri, sorunları çözmek için çeşitli kurumlar oluşturmuş, yasalar çıkarmış ve planlar hazırlamıştır. Sosyal, kültürel ve ekonomik açıdan dengeli büyümeyi ve hızlı gelişmeyi hedef alan ve ülke kaynaklarının daha verimli kullanılması amacıyla bir dizi kalkınma planları oluşturulmuştur. Nitekim her beş yılda bir düzenlenen kalkınma planları, çevre ile ilgili düzenlemeleri içeren ve çevre politikalarına yön vermede önemli bir belirleyicidir. Nitekim çevre politikasının etkinliği, toplumun çevre ile olan ilişkisiyle doğrudan ilgidir. Dolayısıyla çevre politikası, toplumun çevreyle olan ilişkisini düzenlemek amacıyla belirlenen hedefler doğrultusunda çevrenin korunması ve geliştirilmesine yönelik faaliyetlerin geliştirilmesidir. Bu bağlamda çalışmada 1963-2023 yılları arasındaki kalkınma planlarında, çevre sorunları, çevre kirliliği, çevre yönetimi, kentleşme ve konut politikası, insan sağlığı, sürdürülebilir kalkınma ve ekonomik politikalar çevre ile ilişkisi bağlamında ele alınarak çevre politikası değerlendirmeye alınmıştır. Çevre sorunlarının çözümü için uygulanan bu politikalar hem Avrupa Birliği hem de uluslararası standartlar çerçevesinde egemen politik-yönetimsel bir anlayışın hakim olduğu görülmektedir. Ayrıca kalkınma planlarında ortaya konan hedefler ve ilkeler doğrultusunda ilk aşamada “çevreyi dışlamayan kalkınma” anlayışı hakim olurken daha sonra “sürekli ve dengeli (sürdürülebilir) kalkınma” anlayışının hakim olduğu sonucuna varılmıştır. Çevrenin korunması açısından etkili sonuçlar elde edilebilmesi için çevre politikalarının tutarlı ve kararlı şekilde benimsenip uygulanması çevre-kalkınma ilişkisinin etkinliğini de artırmaktadır.

**Anahtar Kelimeler:** Çevre Sorunları, Çevre Politikaları, Kalkınma Planları

**EVALUATION OF THE ENVIRONMENT-DEVELOPMENT RELATIONSHIP IN  
DEVELOPMENT PLANS**

**ABSTRACT**

Countries around the world, which have been exposed to significant environmental problems since the 1970s, have established various institutions, enacted laws and prepared plans to solve the problems. A series of development plans have been created to target socially, culturally and economically balanced growth and rapid development, and to use the country's resources more efficiently. As a matter of fact, development plans prepared every five years are an important determinant in guiding environmental policies and containing environmental regulations. As a matter of fact, the effectiveness of environmental policy is directly related to society's relationship with the environment. Therefore, environmental policy is the development of activities aimed at protecting and improving the environment in line with the targets determined to regulate society's relationship with the environment. In this context, in the study, environmental problems, environmental pollution, environmental management, urbanization and housing policy, human health, sustainable development and economic policies were evaluated in the context of their relationship with the environment in the development plans between 1963 and 2023. These policies implemented for the solution of environmental problems seem to be dominated by a dominant political-administrative approach within the framework of both the European Union and international standards. In addition, in line with the targets and principles set out in the development plans, it was concluded that while the understanding of "development that does not exclude the environment" dominated in the first stage, the understanding of "continuous and balanced (sustainable) development" dominated later on. In order to achieve effective results in terms of environmental protection, the consistent and determined adoption and implementation of environmental policies also increases the effectiveness of the environment-development relationship.

**ÖZET**

Günümüzde anne ölümlerinin dünya çapında önemli bir halk sağlığı sorunu olduğu bilinmektedir. Bu ölümlerin nedenleri, ülkelerin gelişmişlik durumlarına bağlı olarak belirgin şekilde değişmekte olup büyük kısmının önlenabilir nedenlere bağlı olarak geliştiği görülmektedir. Sağlık Bakanlığı tarafından yayınlanan raporda 2015-2019 yılları arasında gerçekleşen anne ölümlerinin %45'inin önlenabilir nedenlerden kaynaklandığı belirtilmektedir. Bu önlenabilir nedenler incelendiğinde, enfeksiyonun anne ölüm oranında önemli bir paya sahip olduğu tespit edilmektedir. Prekonsepsiyonel dönemde gelişen riskli davranışlar ve enfeksiyon etkenlerine maruziyet durumundan kaynaklı olarak gebelikte görülen maternal ve perinatal enfeksiyonlar, hem anne hem de fetus için ciddi morbidite ve mortaliteye neden olmaktadır. Bu enfeksiyonlar gebelikte abortusa, intrauterin ölüme, fetusta konjenital anomaliye ve neonatal enfeksiyona neden olmaktadır. Maternal ve perinatal enfeksiyonlar sadece gebeliği etkilemekle kalmayıp aynı zamanda doğum sonu neonatal süreçte malformasyonlara da neden olabilmekte hatta asemptomatik olan yenidoğanlarda belirti ve bulgular ile yaşamın ilerleyen sürecinde de etkileri görülebilmektedir. Amerikan Obstetri ve Jinekoloji Birliği (ACOG-American College of Obstetrics and Gynecology), Kanada Obstetri ve Jinekoloji Birliği (SOGC-Society of Obstetricians and Gynecologists of Canada) ve Hastalık Önleme ve Kontrol Merkezi (CDCP-Centers for Disease Control and Prevention) maternal perinatal enfeksiyonların tespiti için tüm gebelerden 35-37. gebelik haftasında tarama amacıyla vajinorektal kültür alınmasını önermektedir. Oldukça önemli bir halk sağlığı sorunu olan bu enfeksiyonların gelişmesinin önüne geçme ve etkilerinin önlenmesi için gerekli bakım ve danışmanlığın sağlanması elzemdir. Doğum öncesi bakım ve danışmanlıkta amaç enfeksiyon etkenlerine karşı kişileri korumak ve olası problemlere karşı önlem almaktır. Bu bakım ve danışmanlık multidisipliner olarak sağlık profesyonellerince verilmekte olup ebeler ve hemşirelerin rollerinin oldukça önemli olduğu bilinmektedir.

**CARE AND COUNSELING IN MATERNAL-PERINATAL INFECTIONS**

**ABSTRACT**

Today, it is known that maternal deaths are an important public health problem worldwide. The causes of these deaths vary significantly depending on the development level of the countries, and most of them appear to be due to preventable causes. The report published by the Ministry of Health states that 45% of maternal deaths between 2015 and 2019 were due to preventable causes. When these preventable causes are examined, it is determined that infection has a significant share in the maternal mortality rate. Maternal and perinatal infections during pregnancy, caused by risky behaviors and exposure to infectious agents during the preconception period, cause serious morbidity and mortality for both the mother and the fetus. These infections cause abortion during pregnancy, intrauterine death, congenital anomalies in the fetus, and neonatal infection. Maternal and perinatal infections not only affect pregnancy, but also can cause malformations in the postpartum neonatal period, and their effects can even be seen in asymptomatic newborns with signs and symptoms later in life. American College of Obstetrics and Gynecology (ACOG), Canadian Society of Obstetrics and Gynecology (SOGC) and Centers for Disease Control and Prevention (CDC) recommend taking a vaginal culture for screening purposes during the gestational week. It is essential to provide the necessary care and consultancy to prevent the development of these infections, which are a very important public health problem, and to prevent their effects. The aim of prenatal care and counseling is to protect people against infectious agents and take precautions against possible problems. This care and consultancy is provided by multidisciplinary health professionals, and it is known that the roles of midwives and nurses are very important.

**ABSTRACT**

Throughout history, the media has been one of the most effective tools of political leaders and regimes in influencing society. Dictatorships, in particular, tend to manipulate the media for their own purposes. Such authoritarian regimes have used the media to maintain control over society and consolidate their power. This paper aims to find the role of media in dictator propaganda and its effects on nation. Dictators have become adept at spreading their propaganda through the media. They have manipulated public perception by controlling state-sponsored media outlets, producing content praising their leadership, and suppressing dissenting voices. This serves to present leaders in a sacred image and legitimize dictatorships. Censorship and repression are methods frequently used by dictatorships to consolidate their control over the media. With practices such as closing down independent media outlets, putting pressure on journalists, and even imprisoning them, dictators have silenced opposing voices while ensuring the dissemination of the information they want. This situation has led to distortion of facts, misinformation and society's alienation from reality. As seen in many examples throughout history, dictators such as Stalin, Mussolini, and Hitler manipulated the media for their own interests. These leaders used the media to support their ideologies and policies, shaping society's mindset and suppressing dissenting voices. As a result, the role of the media in dictatorships has a huge impact on shaping society's perception, controlling the flow of information and restricting freedom of thought. In this context, protecting media freedom and diversity is of critical importance for strengthening democratic values.

**ÖZET**

Endüstriyel, mesleki ve evsel faaliyetler gibi farklı kaynaklar sebebiyle petrol, yağ ve organik çözücüler gibi kirleticiler tarafından oluşturulan su kirliliği tüm canlıları ve çevreyi olumsuz etkilemektedir. Bu sorunun çözümüne yönelik olarak, suyun yağsı kirleticilerden etkin bir şekilde arındırılması için bir dizi çalışma yapılmaktadır. Bu çalışmaların bir kısmı, polimerik üç boyutlu sorbentlerin hazırlanması ve yüzey modifikasyonu üzerinedir. Özellikle, yüzey modifikasyonu kullanılarak malzeme yüzeyinin pürüzlülük ve yüzey enerjisi parametreleri ele alınıp su temas açısının 90 ila 150°'nin üzerine çıkarılması ile hidrofobik/süperhidrofobik malzemeler elde edilmesi amaçlanmaktadır. Yaptığımız çalışmanın odak noktası, gelişmiş malzemelerin tasarımı ve uygulaması için etkin bir yaklaşım olan yüzey modifikasyonudur. Bu amaç doğrultusunda, dopaminin alkali sulu ortamda oksidatif polimerizasyonu ile oluşan polidopamin (PDA) ticari melamin sünger üzerine eş zamanlı kaplanmıştır. Oluşturulan PDA esaslı yüzeyde malzemeye ileri modifikasyonlara olanak tanıyan fonksiyonel gruplar da kazandırılmıştır. Bununla birlikte, dopaminin polimerizasyonu ile ilgili olarak substrat yüzeyinde birikimde sıklıkla karşılaşılan sorunlar ele alınmıştır. Bu sorunların başında, uzun birikim-reaksiyon süresi ve kaplamanın zayıf stabilitesi gelmektedir. Bu problemlerin üstesinden gelinebilmesi için polimerizasyon ortamında reaktif oksijen türleri üretebilecek bir katalizör sisteminden yararlanılmıştır. İlk olarak polimerizasyon süresine katalizör etkisinin incelenmesi için  $\text{CuSO}_4$ ,  $\text{H}_2\text{O}_2$  ve farklı molar oranlarda  $\text{CuSO}_4$  ve  $\text{H}_2\text{O}_2$  karışımı reaksiyon ortamına eklenmiştir. Çözeltilerin renk değişimleri ve UV-Vis absorbansları takip edilerek elde edilen sonuçlara göre ortamdaki  $\text{H}_2\text{O}_2$  miktarı arttıkça PDA için karakteristik olan pikin absorbans değeri artmıştır. Daha sonra, değişen  $\text{Cu}^{2+}/\text{H}_2\text{O}_2$  katalizör oranlarında sentezlenen PDA ile kaplanmış melamin süngerler hazırlanmıştır ve katalizör oranının mekanik özellikler üzerindeki etkisi incelenmiştir. Bu çalışmanın sonucunda elde edilen ürün, yapısal olarak kararlı bir ara ürün olarak değerlendirilmiş ve ileri modifikasyonlara uygun olduğu tespit edilmiştir. Bu bulgu, su kirliliği sorununa etkili bir çözüm sunma amacıyla literatüre bir katkı yapmayı hedeflemektedir.

**Anahtar Kelimeler:** dopamin, melamin, katalizör sistemi, mekanik davranış

**INVESTIGATION OF CATALYST EFFECT IN THE PREPARATION OF PDA  
BASED MELAMINE SPONGES**

**ABSTRACT**

Water pollution from various sources, such as industrial, commercial and domestic activities, containing pollutants such as crude oil, oil and organic solvents, adversely affects all living organisms and the environment. In order to address this problem, a number of studies have been carried out to effectively purify water from oily pollutants. Some of these studies focus on the preparation of three-dimensional polymeric sorbents and surface modification. Specifically, the aim is to achieve hydrophobic/superhydrophobic materials by controlling parameters such as surface roughness and surface energy through surface modification, resulting in a water contact angle of 90 to 150° or higher. The focus of our study is on surface modification, which is an effective approach for the design and application of advanced materials. For this purpose, polydopamine (PDA) formed by oxidative polymerisation of dopamine in an alkaline aqueous medium was simultaneously coated onto a commercial melamine sponge. Functional groups were also introduced onto the PDA-based surface to allow further modification of the material. However, the problems often encountered in the deposition on the substrate surface related to the polymerisation of dopamine have been addressed. The main problems are the long deposition-reaction time and the poor stability of the coating. In order to overcome these problems, a catalyst system capable of generating reactive oxygen species in the polymerisation environment was used. Firstly, CuSO<sub>4</sub>, H<sub>2</sub>O<sub>2</sub> and a mixture of CuSO<sub>4</sub> and H<sub>2</sub>O<sub>2</sub> at different molar ratios were added to the reaction medium to investigate the effect of the catalyst on the polymerisation time. According to the results obtained by monitoring the colour changes and UV-Vis absorbance of the solutions, the absorbance value of the peak characteristic for PDA increased with the increased amount of H<sub>2</sub>O<sub>2</sub>. Subsequently, melamine sponges coated with PDA synthesised at different Cu<sup>2+</sup>/H<sub>2</sub>O<sub>2</sub> catalyst ratios were prepared and the effect of the catalyst ratio on the mechanical properties was studied. The product obtained as a result of this study was evaluated as a structurally stable intermediate and found to be suitable for further modifications. This finding is expected to make a contribution to the literature in order to provide an effective solution to the problem of water pollution.

**ABSTRACT**

Voriconazole is an antifungal medication effective against fungal infections and is often used to treat serious infections such as systemic fungal infections. Voriconazole belongs to the triazole class of antifungal drugs and, by its chemical structure, aims to control infections by inhibiting the growth and proliferation of fungal cells. Voriconazole is commonly used to treat serious fungal infections, especially aspergillosis. It is also effective in treating invasive candidiasis and other fungal infections. Voriconazole may also be used in the prophylactic treatment of patients with immunodeficiency conditions. In the literature review, studies on the quantity determination of voriconazole in pharmaceutical preparations were found. Changing industry technologies and quality control needs increase the need for faster, reliable and repeatable analytical methods in the analysis of pharmaceutical active ingredients. The aim of this study is to develop methods different from the methods in the literature for the quantification of the active ingredient Voriconazole in pharmaceutical preparations, to validate them, and at the same time to show that these methods can be applied by making quantification in pharmaceutical preparations containing the active ingredient Voriconazole. This study aims to analyze voriconazole in pharmaceutical preparations using the assisted UV-visible spectrophotometry method. Voriconazole is a triazole antifungal agent effective in the treatment of invasive fungal infections. This study aims to develop an analytical technique that will allow voriconazole to be measured in a simple and cost-effective manner. The method is based on the reduction of voriconazole by reaction with thionine under alkaline conditions.

**ÖZET**

Bu araştırmanın amacı doğum müdahalelerinin karşılanmış doğum beklentisi ve memnuniyete etkisini incelemektir. Çalışma; analitik- kesitsel tipte, Eylül 2021- Eylül 2022 tarihleri arasında yapıldı. Bu çalışmanın evrenini Şehir Hastanesine doğum yapmak için başvuran gebeler, örneklemini ise normal doğum için başvuran 422 primipar gebe oluşturdu. Verilerin toplanmasında “Tanıtıcı Bilgi Formu”, “Doğum Eylemi İzlem Formu”, “Doğum Beklentisi ve Doğum Deneyimi Ölçeği” kullanıldı. Verilerin değerlendirilmesinde tanımlayıcı istatistikler, dağılımın normalliği için Shapiro- Wilk testi, Mann Whitney U Testi, değişkenler arasındaki ilişkinin değerlendirilmesinde stepwise metodu ile çoklu linear regresyon analizi kullanıldı. Kadınların yaş ortalaması  $25,78 \pm 3,95$  olup, %44,8’inin lise mezunu olduğu, %82,7’sinin isteyerek gebe kaldığı, %97,6’sının gebelik döneminde sağlık kontrolüne gittiği saptandı. Kadınlara uygulanan başlıca doğum müdahalelerinin; sürekli elektro fetal monitorizasyon (%95,7), epizyotomi (%90,3), indüksiyon (%81,3), vakum uygulaması (%4,0) olduğu görüldü. Yapılan bu çalışma ile doğumda uygulanan müdahalelerden analjezik kullanımının doğum beklentisi ve doğum memnuniyetine pozitif yönde, vakum uygulamasının ise negatif yönde etkilendiği saptandı. Epizyotomi, indüksiyon, yeme içmeyi kısıtlamak, antispazmolitik kullanımı ve sürekli elektro fetal monitör kullanımının da doğum memnuniyetini negatif yönde etkilediği görüldü. Araştırmada kadınlara uygulanan doğum müdahalelerinden kadınların karşılanmış doğum beklentilerini ve memnuniyetlerini etkilediği tespit edildi.

**THE EFFECT OF BIRTH INTERVENTIONS ON MET BIRTH EXPECTATIONS  
AND SATISFACTION**

**ABSTRACT**

The aim of this thesis is to examine the effect of birth interventions on met birth expectancy and satisfaction. This study is an analytical-cross-sectional study conducted between September 2021 and September 2022. The population of this study consisted of pregnant women who applied to City Hospital to give birth, and the sample consisted of 422 primiparous pregnant women who applied for normal delivery. “Descriptive Information Form”, “Birth Action Follow-up Form”, “Birth Expectation and Birth Experience Scale” were used to collect the data. Descriptive statistics were used to evaluate the data, Shapiro-Wilk test, Mann Whitney U Test for normality of distribution, and multiple linear regression analysis with stepwise method were used to evaluate the relationship between variables. It was determined that the mean age of the women was  $25.78 \pm 3.95$ , 44.8% of them were high school graduates, 82.7% of them got pregnant voluntarily, and 97.6% of them went to health check-ups during pregnancy. Birth interventions applied to women; continuous electro fetal monitoring (95.7%), episiotomy (90.3%), induction (81.3%), vacuum application (4.0%). In this study, it was determined that the use of analgesics, which is one of the interventions applied at birth, affects the expectation of birth and birth satisfaction positively, and the application of vacuum negatively affects the birth satisfaction. In the study, it was determined that the birth interventions applied to the women affected the fulfilled birth expectations and satisfaction of the women.

**ABSTRACT**

This research delves into exploring the causal relationship between world crude oil prices and the Indian stock market, employing a combination of Granger Causality tests and regression analysis. Data from the West Texas Intermediate (WTI) crude oil prices and the National Stock Exchange (NSE) of India are carefully examined over a ten-year period that includes both short-term volatility and long-term trends. Finding the direction of causation between these factors and assessing the effect of changes in the price of crude oil on the Indian stock market are the main goals. To determine if variations in the price of crude oil cause subsequent movements in the Indian stock market, or vice versa, Granger Causality tests are employed. Regression analysis is also used to measure the strength and importance of this relationship. This study attempts to provide light on the complex dynamics underlying the interaction between global crude oil prices and the Indian stock market by analysing the data at both macro and local levels. These findings provide useful information for politicians devising economic policies, investors navigating the Indian market, and scholars delving further into the complex relationships between the global oil markets and the Indian economy. The study emphasizes how important it is to take the volatility of oil prices into account when making investments and formulating economic policies.

**ABSTRACT**

There are various method used for Vitiligo Scoring in literature. All this methods needs human interventions to calculate the grades. Image Segmentation is an important part of Image Preprocessing where interested region for the images can be taken out for further processing. Image segmentation is used to find the interested region in the image. In the proposed work Image Segmentation algorithm was used to check the effectiveness of Vitiligo treatment for a pateient. Images of same patients are used in different intervals to compare the effectiveness of the treatment. This method was compared with the existing methods and gave more accurate results.

**ABSTRACT**

The goal of this work is to study Capacitive and non-Capacitive charge storage in a symmetric device configuration. This is because the world is searching for new types of bio-materials for storing renewable energy and compost is easily available for its bio-circular economy, in which bio-waste can be easily converted into compost. Despite the complexity of compost this work has used a symmetric two electrode device to explore both faradic and non-faradic processes. These studies are done with different type of compost and current collectors using distilled water as an aqueous media. Generally three main techniques namely Galvanostatic charge-discharge studies (GCD), Cyclic voltammetry (CV) and electrochemical impedance spectroscopy (EIS) are used to evaluate parameters such as charging and discharging time, specific capacitance, specific capacity etc. In addition, chrono-amperometry studies are done to study the stability of the device. Also the efficiency has been significantly affected by electrode material (compost) and electrolytes. The results demonstrate the charge storage's multifunctional behavior in compost as a bio-media. These researches provide the groundwork for novel, environmentally friendly bio-media that can be used to store charge.

**ABSTRACT**

Changes in body shape during pregnancy are an adaptation of the body to the pregnancy process. Shifting the mother's center of gravity to the back of the legs causes the body to experience progressive lordosis, and not infrequently, there is an increase in mobility of the sacroiliac and sacrococcygeal joints, which can cause lower back pain. One relaxation technique to facilitate labor is using a birth ball, which is also commonly known in Pilates exercises as using a birthing ball. This research uses a quasi-experimental design with a pretest-posttest group design approach. A pretest was carried out in the intervention group and control group regarding self-efficacy before carrying out Pilates exercises, and the posttest was carried out for 1 hour. This study also measures the perception of low back pain in the third trimester of pregnancy and will compare the intervention group and the control group. A comparison of the degree of pain before and after the intervention given to the intervention group showed that there was a significant difference ( $p < 0.05$ ). After the intervention was given, the degree of self-efficacy showed that there was a significant difference ( $p < 0.05$ ) in the intervention group, which was classified as high self-efficacy at 94%. It needs to be promoted as an alternative to pregnancy exercise in midwifery service units, especially in basic-level service units, so that complaints of persistent musculoskeletal pain can be prevented and all pregnant women can make maximum use of basic-level services.

**ABSTRACT**

Since its invention, concrete has always been considered the construction material par excellence for civil engineering structures. Concrete's main quality is its excellent compressive strength, but its main drawback is its low tensile strength. Most structures have been, are and will be for a long time built using concrete as their main constituent, but concrete is a relatively fragile material, so concrete constructions experience several problems in their life cycle, which can have a detrimental effect on the construction. A number of steps are required to make good use of the structure, with rehabilitation and reinforcement methods differing according to the nature of the problem. A significant percentage of structures require reinforcement or repair to ensure user safety before they reach the end of their useful life. The strengthening of existing structures, adapted to additional operating constraints, involves the development of new and innovative methods, including the addition of traditional or composite bonded reinforcements. The present article deals with the behavior of a beam strengthened by the addition of bonded composite reinforcements.

**Keywords:** beam, reinforced concrete reinforcement or repair, composite materials (fiberglass, carbon fiber).

**ABSTRACT**

Deoxynivalenol (DON) is one of the most prevalent agricultural contaminants and has devastating effects on the health of animals and humans. Recently, the ability of bioactive compounds to regulate oxidative stress and apoptosis has received much attention. This study

investigates the intestinal-damaging effect of DON and the potential shielding effects of icariin in mice. In this regard, forty-eight mice were randomly assigned into four groups ( $n = 10$ ): 1) Control (CON), 2) 100 mg/kg BW icariin (ICA), 3) 3 mg/kg BW DON (DON), 4) 3 mg/kg DON + 100 mg/kg BW icariin (DON + ICA). The experimental groups were treated with DON or ICA for 11 days. The results showed that DON significantly reduced average daily feed intake, average daily gain and triggered intestinal damage and barrier dysfunction as reflected by decreased TEER and increased DAO activity, as well as down-regulated tight junction proteins (claudin-1 and occludin). However, oral administration of ICA significantly attenuated these changes. ICA significantly alleviated DON-induced oxidative stress by scavenging ROS and MDA generation and increasing the antioxidant enzyme activities (T-SOD, CAT, and GSH-Px). Moreover, ICA markedly up-regulated mRNA and protein expression of Nrf2 and its downstream genes induced by DON. Taken together, ICA may serve as a potential mitigator against DON-induced intestinal injury and could be helpful for the development of novel treatments to combat gut diseases in humans and/or animals.

**ABSTRACT**

There has been growing research to investigate the proportional relationship between higher workload and pregnancy complications. It is hypothesised that occupational stressors that hamper physical and psychological health have detrimental effects on fertility and pregnancy. Over the years evaluation in various female-dominated professions for associated high-risk pregnancies have revealed disturbances in ovulation and complications such as 1. Premenstrual syndrome, 2. Dysmenorrhea, 3. Preeclampsia, 4. Low birth weight, 5. Early pregnancy loss and 6. Hyperemesis gravidarum. In general female workers are more sensitive to stressors such as noise, heat, dust and vibrations in workstations. Exposure to Whole-Body or Hand-Arm vibration (WBV) has been reported to cause abnormal uterus positioning and anomalies in foetal position. Workstations like law firms, nursing assistants etc. that require long-standing, repetitive work result in risks of miscarriage and preterm labour due to restriction in movements. Asynchrony in circadian rhythm is faced by expecting women working in fixed night shifts often resulting in spontaneous abortions. Shockingly evaluation of female employees working in factories formulating oral contraceptives revealed experiencing symptoms associated with hyperestrogenism and episode of intermenstrual bleeding due to elevated levels of plasma ethinyl estradiol, following it occupational exposure of teratogens such as carbon-based organic solvents in workplaces like pharmaceuticals and dry cleaning industry increase the risk for stillbirth and "specific birth defects." Subsequently pregnancy complications are higher in physicians due to chronic stress, exposure to anaesthetic gases and antineoplastic drugs. Although a number of publications indicate that occupational irritants adversely affect stages of pregnancy, more studies are needed to establish their mechanisms and how work stress should be decreased or eliminated during preconception and early pregnancy.

**PRODUCTION OF BIO-PLASTIC AND ITS CHARACTERIZATION USING  
BANANA PEEL**

**Hafsa NAEEM**

Department of Biochemistry, University of Agriculture, Faisalabad.

**Email:** ayesha.batool@outlook.com

**ABSTRACT**

At present the chemical industry is searching for substitute to decrease usage of petroleum-based non-degradable conventional plastics. In spite of their many uses and attractive properties, petroleum based conventional plastics have also many disadvantages such as production problems, landfill disposal, incineration, plastic recycling, and their adverse effect on biodiversity. Bioplastic are plastics derived from renewable biomass sources, composed of cellulose, starches, biopolymers, and a variety of other materials. In this research a starch based substrate banana peel was used and subjected to alkali and acid hydrolysis to convert it into bioplastic film. Synthesis of bioplastic was carried out in two phases. In first stage the process parameters pH and hydrolysis time was changed over a range of values. In this stage the pH of neutral range gave the best results for tensile strength analysis 0.552N/mm<sup>2</sup> with optimum residence time (10 minutes). In the second stage, commonly available plasticizer like glycerin, sorbitol and urea was added and compared. The sorbitol, gave maximum tensile strength (34.310 N/mm<sup>2</sup>) with 41.434 N loads in this comparison. EDS analysis shows that C K was the highest element (6.73%) with 5.32 App conc and 0.7918 intensity concentration present in the biopolymer film.

**Keywords:** Bio-Plastic, Plastic recycling, Banana Peel, pH.

**ABSTRACT**

Medical devices (MD) are a significant source of healthcare associated infections. Therefore, to break this chain, it is crucial to have an effective reprocessing of reusable medical devices (RMD). From this perspective, this study aimed to evaluate the steps of reprocessing RMD in Habib Bourguiba University Hospital (HBUH) as part of a quality improvement project and establish recommendations. This was an exhaustive cross-sectional study conducted during the period between July and September 2023 in all units involved in the sterilization process in HBUH Sfax Southern Tunisia. We used an observational checklist to evaluate the practice of different steps of reprocessing of RMD. We conducted one audit pass for each enrolled unit. This study included 10 operating units and a sterilization unit. The median value of the global conformity score (GCS) was 48/100 (IQR=[43.6-56]). We noted that 7 operating units (70%) had a poor level of conformity and 3 (30%) had a fair level of conformity. For the reprocessing environment evaluation, the median GCS was 30/100 (IQR= [20 – 50]). Seven units (70%) had a poor level of conformity. As for of pre-disinfection, the median GCS was 40/100 (IQR=[40 – 60]). We noted that 7 operating units had a fair level of conformity (70%). The median conformity score of cleaning was 90/100 (IQR= [70 – 92]). All operating units had a high conformity score for the section of cleaning. We noted that the median GCS of HLD was 50/100 (IQR= [45.83 – 75]). The median of GCS of sterilization was 66.6/100 (IQR= [16.6-100]). This audit has highlighted the majority of poor conformance scores that indicate significant flaws in the HBUH 's reprocessing of MD. It has become imperative to implement corrective measures, plan the centralization of the sterilizing unit.

**ABSTRACT**

Healthcare-associated infections (HAIs) are the most common complications in the healthcare delivery process, and they have emerged as a significant public health problem due to their impact on patients and the healthcare system. Our study aimed to investigate the knowledge of nursing students regarding the climate for HAI prevention. We conducted a descriptive study among students from higher nursing institutes between February and March 2021. A pre-established self-administered questionnaire in French language was used for data collection. The data were analyzed using SPSS version 25 software. A total of 150 students responded to the questionnaire. The majority (57.3%) defined HAI as a hospital-acquired infection occurring after at least 48 hours. Only 40% of the students were aware of the different types of HAIs. The most commonly identified type was urinary tract infection (68.3%), and more than half (58.8%) identified staphylococcus as the most frequently implicated pathogen. Almost all students (94%) recognized poor asepsis as a leading cause of HAI development. The main mode of transmission identified was through materials and instruments (46%). The majority of students (90.7%) emphasized the importance of taking preventive measures while handling infected patients, and they acknowledged that standard precautions should be followed for all patient care (66.7%). A minority (12%) reported receiving hygiene training at their institute. The majority (83.3%) and nearly half (47.3%) acknowledged the effectiveness of hand hygiene in preventing HAIs. Additionally, most students were familiar with the types of handwashing and when to perform it. However, less than half (41.3%) indicated that hydro-alcohol friction could

replace simple handwashing. Nurses are required to take multiple precautions to prevent the occurrence and transmission of healthcare-associated infections. Therefore, enhancing their knowledge and skills is crucial in effectively preventing these infections.

**ABSTRACT**

The measures to be taken during septic isolation (SI) aim to avoid the transmission of a pathogenic germ or a multidrug-resistant one from one patient to another. This requires a good level of knowledge of isolation techniques. In this context, we conducted this study to assess the level of knowledge of healthcare professionals (HCP) on SI before and after a training cycle. We conducted a quasi-experimental study among HCP working at the Hedi Chaker University Hospital in Sfax. A self-questionnaire on SI knowledge was completed by the participants before and after a training cycle. Then, a knowledge score was calculated. A total of 106 HCP participated in the study. The participants were female in 50.9% of cases (n=54). The median professional seniority was 7 years (interquartile range (IQR)= [3-13.25]). Fifty-three participants were physicians (50%). Twenty-five health workers received training on septic isolation (23.6%). An isolation room was available in 55 cases (51.9%). The different types of isolation report were available according to the statements of 30 HCP (28.3%). Personal protective equipment was available in the medical departments in 60 cases (56.6%). The declaration of healthcare-associated infections was made in 38 cases (35.8%). According to the sections, 61 HCP thought that sterile gloves should not be worn in the event of contact with an infected patient (57.5%) and 35 HCP stated that a single room was not obligatory in the event of illness transmitted by contact (33%). The median knowledge score on the SI significantly improved after the training (60/100 (IIQ= [53.3-73.3]), versus 66.6/100 (IIQ= [46.6 -60 ]), p=10-3). This improvement was significantly clearer in men compared to women (7.6 (IIQ=[2.3-10.5]) versus 6.6 (IIQ=[0-13.3]), p=10- 3) and clearer among the paramedical staff compared to the medical staff (6.5 (IIQ=[3.5 – 7.8]) versus 4.4 (IIQ=[3.7- 5.9]), p =0.023). This study suggests a significant improvement in HCP knowledge through training. It is part of a

**ABSTRACT**

The scientific community is increasingly focusing on long COVID due to the economic and health challenges it raised. Indeed, it is a new disease whose mechanisms and various manifestations are not yet fully understood. Irritability is one of the psychiatric manifestations of long COVID. The objective of the study is to determine the prevalence of post COVID irritability and to study its predictive factors. This is a cross-sectional study conducted in February 2022 on the Tunisian population infected with COVID-19 between March 2020 and February 2022. A self-administered questionnaire was developed and shared on social networks. Post-COVID irritability is defined as irritability that develops during or after a COVID-19 infection, present for more than twelve weeks. In total, 1887 participants were included. The majority were women (80%) and aged between 30 and 39 (42.2%). The prevalence of Long COVID was 34.4% and the prevalence of post COVID irritability was 33.5%. The majority experiencing post COVID irritability were women (88.5%) and aged 30-39 (46.8%). Multivariate analysis showed that age between 40 and 49 (OR=1.85; 95%CI[1.07-3.19]; p=0.026), initial severity (intensive care hospitalization) (OR =6.48; 95%CI[1.06-39.34]; p=0.042), nausea in the acute episode (OR=1.82; 95%CI[1.17-2.82]; p=0.07), and myalgia (OR=1.49; 95%CI[1.00-2.22]; p=0.048) were the main predictive factors. Irritability is a frequent manifestation of post COVID. In our study, its main risk factors were age between 40-49 years old, the severity of the initial presentation, nausea and myalgia in the acute episode.

**ABSTRACT**

Artistic elements have historically been marginalized, lacking a comprehensive understanding of their contribution to the overall ambiance and educational experience. The identified problem within educational institutions highlights a prevalent undervaluation of the potential benefits and challenges associated with intentionally integrating art into learning spaces. This study addresses a significant gap in recognizing the pivotal role of art within the built environment and its impact on educational enhancement, focusing on the Federal Polytechnic, Ilaro. Utilizing a qualitative analysis approach involving in-depth interviews, observational studies, and document analysis, the research delves into the intricate relationship between art, architecture, and education. This research aims to fill this void by exploring the nuanced influence of artistic interventions within academic institutions. Findings underscore a substantial positive impact resulting from the strategic incorporation of art into the built environment. Beyond aesthetics, art enhances creativity among students, fostering a dynamic and engaging educational setting. The intentional inclusion of artistic elements also cultivates a profound sense of identity within the academic community, creating a more meaningful and inspiring learning atmosphere. However, the study highlights significant challenges, with budget constraints emerging as a critical factor hindering the full realization of art's potential benefits within educational infrastructure. Divergent perceptions regarding the relevance of art in educational contexts pose additional obstacles. In conclusion, this research advocates intentional and holistic approaches to integrate artistic elements into educational infrastructure planning. Emphasizing the intrinsic value of art in elevating the overall educational experience and shaping vibrant learning environments, the study recommends allocating sufficient resources, fostering collaboration, implementing awareness programs, and establishing a sustainable framework for ongoing assessment and adaptation of art installations. Envisioning a future where the integration of art becomes integral and celebrated within educational institutions, the research aims to contribute significantly to the holistic development of students and foster a more inspiring and dynamic learning environment.

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

**Relevance of the Study to the United Nations SDGs**

This study aligns with several United Nations Sustainable Development Goals (SDGs), notably SDG 4 (Quality Education) through art's impact on learning, SDG 11 (Sustainable Cities) by exploring art in the built environment, and SDG 10 (Reduced Inequalities) by fostering inclusivity. It also supports SDGs 9, 13, and 17 through innovation, climate awareness, and collaborative partnerships.

**THERAPEUTIC POTENTIAL OF SAREEHN (*ALBIZIA LEBBECK*) SEEDS  
EXTRACT AGAINST TOXIC EFFECTS OF GRAPHENE NANOSHEETS IN  
MORI (*CIRRHINUS MRIGALA*)**

**ABSTRACT**

This research investigated the therapeutic potential of Sareehn (*Albizia lebeck*) seed extract in alleviating graphene nanosheets (GNS) toxicity in *Cirrhinus mrigala* and addressed concerns about GNS effects on aquatic organisms. For experimental purposes, fish were collected and kept in the lab with all standard aquatic parameters maintained. During Phase I of the experiment, mortality rates were observed after oral GNS doses ranging from 0, 250, 500, 750, 1000, 1250, and 1500 mg/L, monitored at 96-hour intervals, resulting in an LC<sub>50</sub> value of 121.37 mg/L. Three fractions of LC<sub>50</sub> were made, including Fraction 1 (121.37 mg/L), Fraction 2 (60.58 mg/L), and Fraction 3 (40.45 mg/L). The medium fraction was used in Phase II of the experiment. The experimental groups included the Control (A) group with no exposure to GNSs and plant extract, Test Group B exposed to 60.58 mg/L of GNSs with no extract, Test Group C with 60.58mg/L of GNSs + 25 mg/L extract, Test Group D with 60.58mg/L of GNSs + 50 mg/kg extract, and Test Group E with 60.58 mg/L of GNSs + 75 mg/kg extract, with each group observed for 96 hours. Fish organ histology was assessed to show GNS impact: the liver histopathological changes included Pyknotic nuclei or karyomegaly, Atrophy, Acute Cellular swelling, melanomacrophage centers (MMC), hepatic vacuolation, sinusoid dilation, Hydropic degeneration, Necrosis, Perivascular degeneration were observed. However, Intestinal histology shows changes such as intestinal damage (Id), Collapsed Epithelial layer (CL), intestinal interior architecture damage (Ad), atrophy (A), bigger intercellular gaps, and Degenerated Goblet cells (DG). D: shows bigger intercellular space (IS) and kidney histology shows tubular necrosis (Tn), Severe Congestion (SC), tubular dilatation, Bowman capsule dilution (DBS), Destroyed Intestinal Integrity, Glomerulopathy (G), Hemocytic Infiltration (HI), hematopoietic tissue degradation, Vasodilatatio (WL), Constricted NT lumen (CL). The therapeutic effect of *Albizia lebeck* was also noted in mitigating GNS toxicity. High-performance liquid Chromatography (HPLC) analysis identified several bioactive components in *Albizia lebeck*, including Ferulic acid, Chlorogenic acid, Gallic acid, P-coumaric acid, Quercetin, Caffeic acid, Sinapic acid, Kaempferol, oxalic acid, malic acid, Citric acid, Fumaric acid, Succinic acid, with Methylmalonic acid being the most abundant. The findings suggest that *Albizia lebeck* seed extract offers protection against GNS toxicity in *Cirrhinus mrigala*, providing a potential solution for mitigating GNS-related environmental concerns.

**Keywords:** *Albizia lebeck* seeds, Graphene nanosheets toxicity, *Cirrhinus mrigala*, Therapeutic potential

**ÖZET**

Kurumsal iflas ve yeniden yapılanma, işletmelerin yaşam döngüsünde, alacaklılardan çalışanlara ve hissedarlara kadar uzanan paydaşlar için derin sonuçlar doğuran kritik dönemeçleri temsil etmektedir. Bu makale, iflas işlemlerinin ve yeniden yapılandırma çabalarının doğasında bulunan mekanizmalar ve zorluklar hakkında kapsamlı bir anlayış sağlamayı amaçlayan, şirketlerin karşılaştığı mali sıkıntılara yönelik hukuki yaklaşımları ele almaktadır. Bu çalışmanın amacı, kurumsal mali sıkıntının çözümünde kullanılan çeşitli yasal çerçeveleri ve stratejileri analiz etmektir. Doktrinsel hukuki araştırma, iflas yasalarının yargı bölgeleri arasındaki karşılaştırmalı analizi ve örnek olay incelemelerinin bir kombinasyonu yoluyla bu araştırma, kurumsal iflas ve yeniden yapılandırma süreçlerinin inceliklerini aydınlatmayı amaçlamaktadır. Bu çalışmadan elde edilen temel bulgular, kurumsal mali sıkıntının çok yönlü doğasını ve iflas işlemlerinin yönetilmesindeki karmaşıklıkları vurgulamaktadır. Araştırma, iflas, tasfiye, borcun yeniden yapılandırılması ve resmi iflas işlemleri de dahil olmak üzere sıkıntıda olan şirketlerin yararlanabileceği çeşitli yasal mekanizmaları belirliyor. Ayrıca alacaklılar, hissedarlar, çalışanlar ve düzenleyici otoriteler gibi paydaşların iflasın ve yeniden yapılandırma çabalarının sonucunu şekillendirmedeki rolünü araştırıyor. Bu çalışmanın önemi, politika yapıcılar, hukuk uygulayıcıları, şirket yöneticileri ve kurumsal mali sıkıntı sorunlarıyla boğuşan akademisyenler için pratik çıkarımlarda yatmaktadır. İflas ve yeniden yapılandırmaya yönelik hukuki yaklaşımlara ilişkin bilgiler sağlayan bu araştırma, değeri korumayı, paydaşların çıkarlarını korumayı ve ekonomik istikrarı teşvik etmeyi amaçlayan karar alma süreçlerine bilgi sağlar. Ayrıca, alacaklı hakları ile borçlunun rehabilitasyonu arasında bir denge kuran, kurumsal dirençlilik ve büyümeye elverişli bir ortamı teşvik eden sağlam yasal çerçevelerin önemini altını çiziyor.

**Anahtar Kelimeler:** iflas, tasfiye, borçların yeniden yapılandırılması, resmi iflas işlemleri, ekonomik istikrar.

**CORPORATE INSOLVENCY AND RESTRUCTURING: LEGAL APPROACHES TO  
FINANCIAL DISTRESS**

**ABSTRACT**

Corporate insolvency and restructuring represent critical junctures in the life cycle of businesses, with profound implications for stakeholders ranging from creditors to employees and shareholders. This paper delves into the legal approaches to financial distress faced by corporations, aiming to provide a comprehensive understanding of the mechanisms and challenges inherent in insolvency proceedings and restructuring efforts. The aim of this study is to analyze the diverse legal frameworks and strategies utilized in addressing corporate financial distress. Through a combination of doctrinal legal research, comparative analysis of insolvency laws across jurisdictions, and examination of case studies, this research seeks to elucidate the intricacies of corporate insolvency and restructuring processes. Key findings from this study highlight the multifaceted nature of corporate financial distress and the complexities involved in navigating insolvency proceedings. The research identifies various legal mechanisms available to distressed companies, including bankruptcy, liquidation, debt restructuring, and formal insolvency proceedings. Furthermore, it explores the role of stakeholders such as creditors, shareholders, employees, and regulatory authorities in shaping the outcome of insolvency and restructuring efforts. The relevance of this study lies in its practical implications for policymakers, legal practitioners, corporate executives, and scholars grappling with issues of corporate financial distress. By providing insights into legal approaches to insolvency and restructuring, this research informs decision-making processes aimed at preserving value, protecting stakeholders' interests, and promoting economic stability. Moreover, it underscores the importance of robust legal frameworks that strike a balance between creditor rights and debtor rehabilitation, fostering an environment conducive to corporate resilience and growth.

**ABSTRACT**

In this study, the performance of a solar still having pyramid-shaped absorber plate is investigated and compared with the conventional one. The studies were carried out on a uniform basin area of one square meter and a water depth of 1 cm. In addition, the effect of cotton fabric covering the fins on the performance of the solar still is reported. It is concluded that the performance of pyramid shaped absorber plate with cotton cloth on fins display better performance than conventional solar still, due to the capillary effect.

**Keywords:** pyramid-shaped, cotton, solar still

**RESEARCH ON FACTORS AFFECTING THE DEVELOPMENT DIRECTION OF  
INDEPENDENT CLINICAL LABORATORIES IN CHINA IN THE POST EPIDEMIC  
ERA**

**ABSTRACT**

An independent clinical laboratory (or independent medical testing laboratory) refers to a medical institution with independent legal person qualifications that conducts medical testing on specimens from the human body for the purpose of providing relevant information for the diagnosis, management, prevention and treatment of human diseases, or health assessment (Humphries et al., 2023). Independent clinical laboratories started late in China, but during the new coronavirus pneumonia epidemic, independent clinical laboratories grew rapidly, filling the service gaps of public healthcare institutions with socialized professional strength (Reportlinker, 2019). China's independent clinical laboratories played an important role in early diagnosis, early isolation, early treatment and preventing the spread of the epidemic, and made significant contributions to the national epidemic prevention and control efforts (Chen et al., 2021). However, after entering the post-epidemic era, the amount of testing required by the epidemic has dropped significantly, and the development direction of a large number of independent clinical laboratories set up during the epidemic due to the need for prevention and control is faced with the decision of life and death (Rodgers et al., 2021). At the same time, due to reasons such as the speed of development and regional differences, there are great differences in the business model and profit level of individual laboratories (Andreini, Bettinelli, Foss, & Mismetti, 2021). During the large-scale development of independent clinical laboratories, general testing programs have reached the break-even point, despite the huge stock market of general testing programs in healthcare institutions and the large number of routine samples (Kaur et al., 2022). The low profitability of such testing programs, homogenized competition, and low prices for outsourced services have become common in the industry with weak profitability (Azhari et al., 2022). Despite better profit margins for specialized testing programs, such programs require more physical space, equipment and facilities in the laboratory and the level of testing personnel (Pathmanathan et al., 2022). There are still some problems in the development of independent clinical laboratories, such as "price wars" and other vicious competition, costs and other reasons, which increase the risk of declining service quality, and the lack of appropriate standards for long-distance specimen transportation, which expose clinical laboratories to new business risks (Ahmed et al., 2022). These three directions involve corporate profitability, new profit growth points, cost control, etc. And can play a vital role in the survival and development of independent clinical laboratories (Khalil et al., 2023). Therefore, it is very necessary to conduct comprehensive research on these important aspects of independent clinical laboratories (Rahim et al., 2023). In this paper, by reviewing the

academic information and research results of independent clinical laboratories at home and abroad, and by combining the perspectives of medical, sociological, and managerial disciplines, we adopt the literature research method, analytical modeling, and case study as the research methodology of this paper (Aveyard & Bradbury-Jones, 2019). Combined with the analysis of the development status and business models of representative medical laboratories at home and abroad, and the current situation of the institutional reform of domestic medical institutions under the epidemic, the influential factors affecting the development direction of independent clinical laboratories (ICLs) have been deeply excavated, and a suggested operation plan has been put forward (Ramdani, Binsaif, & Boukrami, 2019). This study contributes to advancing the knowledge and practice of ICL business model optimization and provides valuable insights for policy makers, ICL leaders, and stakeholders in the greater healthcare industry (Fei et al., 2024; Osman et al., 2024). It also contributes to the development of faster clinical diagnostics, precision and personalized medicine, and ultimately, to improving the prognosis of patients (Wang & Shi, 2021). In addition, the findings provide policymakers with innovative management decision-making tools to improve the healthcare ecosystem and promote the development of China's large health industry (Wai et al., 2024).

**ABSTRACT**

This study analyses the gender representation in Victor Canache's horror movie, *The Goat and Her Three Kids*, which is based on the fable of Canache's film is based on Ion Creangă's fable of the same name. The fable discusses the importance of obedience in child education and the consequences of its absence. Ion Creangă, a Moldovan/Romanian writer, was a teacher who wrote this fable. The story has very few characters. The protagonist is the mother goat and her 3 little boys. The antagonist is the old wolf, the godfather of the kids. The only female character in the story is the mother who is trying to raise her 3 baby boys in her house in a desolate and secluded land. She is a widow and a lonely woman. While raising her children, she tries to protect them from outside dangers. The adult male character, the wolf, is the danger from outside. The godfather is traditionally supposed to protect the children, but the story shows the opposite. Canache's work is a direct adaptation of this fable. The goats and the wolf are replaced by humans. The story, which mainly deals with the importance of parental obedience with its frightening consequences, also presents a sharp gender representation.

**Keywords:** Gender, Romanian Horror, Victor Canache, Ion Creangă

**ÖZET**

Romatizma tam olarak iyileştirici tedavisi olmayan kronik hastalıklardandır. Ağrı, tutukluk, fonksiyon kaybı gibi belirgin ve ağırlaşan semptomlar, kesin tanı konulmasının zorluğu, ilaç tedavisinin yetersizliği gibi nedenlerden ötürü hastalar alternatif tedavi yöntemlerine yönelmektedirler. Sıcak ve soğuk uygulamalar, akupunktur, kaplıca gibi birçok alternatif tedavi yöntemlerinin yanı sıra Türkiye’de en çok tercih edilen yöntem bitkilerle ve bitkisel ürünlerle tedavidir. Bu alanda bitkisel tedavi amaçlı birçok ürün piyasada bulunmaktadır. Bu çalışmada en çok kullanılan ürünler, ürünlerde yer alan bitkiler ve bu bitkilerin romatizma tedavisinde etkinliği bilimsel olarak incelenmiştir. İnsan yaşamının başlangıcından bu yana, bitki türleri önemli bir ilaç kaynağı olmuştur. Terapötik ilaçların yeni gelişimi için bir kaynak olarak çeşitli bitkiler tanımlanmıştır. Bitkisel ilaçların kapsamı son yıllarda önemli ölçüde artmıştır. Ayrıca, hem gelişmekte olan hem de gelişmiş ülkelerde halkın tıbbi bitkilere olan ilgisi ve kabulü önemli ölçüde artmıştır. Dünya Sağlık Örgütü’ne göre, dünya nüfusunun yaklaşık %80’i temel sağlık ihtiyaçları için tıbbi bitki türlerinden elde edilen bileşikler içeren geleneksel ilaçları kullanmaktadır. Bu nedenle, özellikleri, güvenlikleri ve etkinlikleri hakkında daha iyi bilgi edinmek için bu bitkiler üzerindeki araştırmaları derinleştirmek gerekir. Romatizma tedavisinde medikal tedavi, fizik tedavi yöntemleri, egzersiz vb. yöntemlerin yanı sıra romatizma türüne uygun olarak uygun doz ve sıklıkta bitkisel ürünler de destek tedavi olarak kullanılabilir. Bu çalışmada romatizmada yaygın olarak kullanılan bitkilere değinmeye çalıştık. Bu bitkiler incelendiğinde özellikle *Capsicum annuum*, *Harpagophytum procumbens*, *Rosa canina*, *Nigella sativa*, *Equisetum arvense*, *Sesamum indicum*, *Silybum marianum*, *Brassica oleracea*, *Hypericum perforatum*, *Rosmarinus officinalis* gibi türlerin kullanıldığı görülmektedir. Bu bitkiler üzerine daha çok deneysel ve klinik araştırmalar yapılmıştır. Bu çalışmada 43 bitkiden bahsedilmiştir. İncelenen bitkiler genellikle Asteraceae familyasına aittir. Bu bitkiler genellikle romatizmal, kronik enflamatuvar ve kas-iskelet sistemi hastalıklarının giderilmesinde kullanılmıştır. Bitkilerin farklı kısımları tedavi amacıyla kullanılmaktadır; Rizomları, kökleri, kök sapları, yaprakları, çiçekleri, meyveleri vs.

**Anahtar Kelimeler:** Romatizma, romatizma tedavisi, bitkisel ürün, bitkilerle tedavi

**PLANTS AND HERBAL PRODUCTS FREQUENTLY USED IN THE TREATMENT  
OF RHEUMATIC DISEASES**

**ABSTRACT**

Rheumatism is one of the chronic diseases that does not have a full curative treatment. Patients turn to alternative treatment methods due to reasons such as obvious and worsening symptoms such as pain, stiffness, and loss of function, the difficulty of making a definitive diagnosis, and the inadequacy of drug treatment. In addition to many alternative treatment methods such as hot and cold applications, acupuncture and spa, the most preferred method in Turkey is treatment with plants and herbal products. Many products for herbal treatment in this field are available on the market. In this study, the most commonly used products, the plants included in the products, and the effectiveness of these plants in the treatment of rheumatism were scientifically examined. Since the beginning of human life, plant species have been an important source of medicine. Various plants have been identified as a source for the novel development of therapeutic drugs. The scope of herbal medicines has increased significantly in recent years. Additionally, public interest and acceptance of medicinal plants has increased significantly in both developing and developed countries. According to the World Health Organization, approximately 80% of the world's population uses traditional medicines containing compounds derived from medicinal plant species for their basic health needs. Therefore, it is necessary to deepen research on these plants to gain better knowledge about their properties, safety and effectiveness. Medical treatment, physical therapy methods, exercise, etc. are used in the treatment of rheumatism. In addition to methods, herbal products can also be used as supportive treatment in appropriate doses and frequencies according to the type of rheumatism. In this study, we tried to mention plants commonly used in rheumatism. When these plants are examined, it is seen that species such as *Capsicum annuum*, *Harpagophytum procumbens*, *Rosa canina*, *Nigella sativa*, *Equisetum arvense*, *Sesamum indicum*, *Silybum marianum*, *Brassica oleracea*, *Hypericum perforatum*, *Rosmarinus officinalis* are used. More experimental and clinical research has been conducted on these plants. 43 plants were mentioned in this study. The plants examined generally belong to the Asteraceae family. These plants have often been used to relieve rheumatic, chronic inflammatory and musculoskeletal diseases. Different parts of plants are used for therapeutic purposes; Rhizomes, roots, stems, leaves, flowers, fruits, etc.

**Keywords:** Rheumatism, treatment of rheumatism, herbal product, treatment with plants.

**ÖZET**

Köprüler tarihin uzun dönemleri boyunca kullanılmış olan ve genellikle nehir, vadi veya diğer engelleri geçmek için kullanılan yapılardır. Köprüler uzun açıklıkları birbirlerine bağladığından ve ulaşımı kolaylaştırdıklarından uzun yıllar maruz kaldıkları dış etkenlere karşı dayanmaları amaçlanır. Deprem dayanımları açısından incelendiklerinde köprülerin deprem analizleri doğrudan bina deprem analizleri gibi yapılmaz. Köprüler binaların aksine yatay doğrultuda uzun açıklıklara sahip olacak şekilde tasarlanır. Köprülerin uzun açıklıklara sahip olması durumunda, ayaklarının bulunduğu zemin koşullarında değişkenlik gözükülebilir. Yerel zemin koşulunun değişmesi, ayaklara gelen deprem ivmesinin de farklılaşacağı anlamına gelir. Yerel zemin koşulunun değişmesine bağlı olarak köprü ayaklarında oluşan deprem ivmelerinin farklı büyüklüklere sahip olmasına "değişken zemin etkisi" denir. Bu etkinin olduğu köprüler yapı analiz programlarında doğrudan mod birleştirme yöntemiyle çözülemezler ve daha detaylı analiz aşamaları gerektirir. Analiz yöntemi olarak 3 farklı çözüm yöntemi kullanılabilir. İlk yöntemde değişken zemin etkisi göz önünde bulundurulmaz. Köprü boyunca bulunan yerel zemin sınıflarından en zayıf olanı seçilir ve üniform deprem yer hareketi kabulü yapılır. İkinci yöntemde zaman tanım alanında deplasman analizi yapılır. Belirli bir sayıda deprem yer kayıtları seçilir ve bu kayıtların oluşturduğu deplasmanlar köprünün ayaklarına tekil yükler olarak etki ettirilirlir. Üçüncü yöntem olarak da, değişken zemin etkisi göz önünde bulundurulur mod birleştirme yapılır. Bu son yöntemde modal katkı çarpanları bulunurken köprü ayaklarına birim deplasmanlar etki ettirilerek hesap yapılması gerekmektedir. Her bir ayaktaki zemin sınıfı için tasarım tepki spektrumu çıkartılır ve analizde her bir tepki spektrumunun kullanılması gerekir. Dolayısıyla bu işlem doğrudan yapı analiz programlarında yapılmaz. Bu çalışma kapsamında 3 metod da incelenecek ve yapının elastomer mesnetlerinde meydana gelen deformasyonlar ile köprü ayaklarında meydana gelen kesme kuvveti-moment değerleri birbirleriyle karşılaştırılacaktır.

**Anahtar Kelimeler:** Köprü, Deprem, Değişken Zemin Etkisi, Üniform Deprem Yer Hareketi, Değişken Deprem Yer Hareketi, Zaman Tanım Alanında Deplasman Analizi, Mod Birleştirme Analizi

**SEISMIC ANALYSIS OF BRIDGES WITH PIERS ON DIFFERENT LOCAL SOIL  
CLASSES**

**ABSTRACT**

Bridges are structures that have been used throughout history and are typically used to cross lakes, valleys, or other obstacles. Bridges are designed to withstand external factors for many years as they connect long spans and facilitate transportation. When examined in terms of earthquake resistance, bridges are not analyzed directly like buildings. Unlike buildings, bridges are designed to have long spans horizontally. In cases where bridges have long spans, variability may appear in the ground conditions where the piers are located. The change in local ground conditions means that the earthquake accelerations at the piers will also vary. The varying earthquake accelerations at the bridge piers due to the change in local ground conditions are referred to as "variable ground effect". Three different solution methods can be used as analysis methods. In the first method, the variable ground effect is not considered. The weakest local ground class along the bridge is selected, and uniform earthquake ground motion is assumed. In the second method, displacement time history analysis is performed. A certain number of earthquake ground records are selected, and the displacements generated by these records are applied as unit loads on the bridge piers. As the third method, modal superposition is performed considering the variable ground effect. In this method, modal participation factors are found, and calculations must be made by applying unit displacements to the bridge piers. Design response spectra are produced for each soil class at each pier, and each response spectrum must be used in the analysis. Therefore, this process can not directly performed in structural analysis programs. Within the scope of this study, three methods will be examined, and the deformations occurring at the elastomeric bearings of the structure and the shear force-moment values occurring at the bridge supports will be compared.

**Keywords:** Bridge, Earthquake, Variable Ground Effect, Uniform Earthquake Ground Motion, Variable Earthquake Ground Motion, Displacement Time History, Modal Superposition Method.

**ANALYSIS OF A TRADITIONAL AND A FUZZY LOGIC ENHANCED PERTURB

**ABSTRACT**

This paper presents the results of applying two different methodologies for maximum power point tracking (MPPT) to a photovoltaic (PV) system comprised of five solar panels connected in series. Initially, we considered a traditional Perturb and Observe (P&O) algorithm. Secondly, we integrated a Fuzzy Logic Controller (FLC) that utilizes fuzzy logic principles to enhance the traditional P&O algorithm. Both algorithms were integrated into a boost converter. The main aim of this paper is to study if an artificial intelligence (AI) based maximum power point tracking (MPPT) method can outperform a traditional MPPT method in terms of efficiency, stability, and adaptability under varying environmental conditions such as solar irradiation and temperature and also to analyze their behaviour in steady state conditions. The proposed FLC in this study demonstrated superior performance compared to the controller using the traditional P&O algorithm. This superiority can be attributed to the FLC adaptive step size, which enables it to quickly adapt the photovoltaic system to changing environmental conditions. As a result, the FLC can more rapidly identify the correct maximum power point (MPP) and achieve lower oscillations in steady state conditions. The simulations in this study were performed using MATLAB/Simulink.

**Keywords:** photovoltaic (PV); boost converter; maximum power point (MPP); maximum power point tracking (MPPT); Perturb and Observe (P&O); fuzzy logic controller (FLC)

**SYNTHESIS AND EVALUATION OF SILVER NANOPARTICLES FROM

**ABSTRACT**

In recent science Nanotechnology is a burning field for the researchers. Nanotechnology deals with the Nanoparticles having a size of 1-100 nm in one dimension used significantly concerning medical chemistry, atomic physics, and all other known fields. Silver nanoparticles were synthesized using aqueous extract of *Tridax procumbens* leaves, and silver nitrate. XRD, SEM, FTIR, Optical absorption were measured and analyzed. The synthesized AgNps exhibits lowest energy absorption band at 400 nm. Synthesis of Nanoparticles may involve various routes including physical, chemical and biological approaches. Traditionally these are manufactured by wet chemical methods which require toxic and flammable chemicals. Nanoparticles thus formed are confirmed and characterized by using UV-Visible Spectroscopy, SEM, FTIR, Zeta Analysis, XRD measurements. Further, these green synthesized Nanoparticles showed bactericidal activity against multidrug-resistant human pathogenic bacteria. The AgNps formed were found to have enhanced antimicrobial properties and showed zone of inhibition against isolated bacteria (*Escherichia coli*) from garden soil sample. In totality, the AgNps prepared are safe to be discharged in the environment and possibly utilized in process of pollution remediation. AgNps may also be efficiently utilized in agricultural research to obtain better health of crop plants as shown by our study.

**ABSTRACT**

Very ripening bananas are unsuitable for fresh eating; they are usually thrown away. Even though overripe bananas can still be used and consumed again if they are processed by drying in the sun to become Sale-Pisang sweetened banana chips, apart from reuse, Sale-Pisang has a high shelf life. It will last even longer and become a delicious and nutritious snack if it is further processed, such as frying it in flour. Over-ripe bananas experience an increase in glucose when dried in the sun, so they taste sweeter than fresh bananas. This research was conducted to provide information on the added value of over-ripe banana waste if it is processed into Sale-Pisang (banana sunlight drying) in Tasikmalaya Regency. This quantitative study uses the Hayami Method Added Value analysis of the wet and dry sale-banana production process (wet sale-bananas fried in flour). This research aims to determine the added value of over-ripe banana waste to produce soggy bananas. This research showed that 3,333 kg of overripe bananas cost IDR 2,000 to 1 kg Sale-Pisang, and the price per kilogram is IDR 60,000. Conversion factor 0.3. The added value ratio is 87.44% for the Ambon (Cavendish) banana type. The output value is 18,000 per kg, and the added value is 15,739.25. The rate benefit level is 82.21%. The margin of benefit is IDR 16,000. This result showed that banana sale products provide very significant benefits. From the added value ratio, it can be seen from these two products that the banana sales business is relatively high because the resulting ratio is more excellent than 50%. Processing over-ripe bananas can create business opportunities, increase income and welfare, and resolve environmental problems by reducing banana waste.

**ABSTRACT**

Iron is an important trace element for living organisms as it participates in a range of metabolic processes, such as oxygen transport, energy metabolism, nucleotide synthesis, and electron transport. Although vital, excessive amounts of iron can be toxic, therefore, its concentration needs to be maintained within an ideal range. Iron homeostasis is regulated and maintained by iron metabolism. Thus, iron metabolic homeostasis is required for the optimal functioning of fundamental physiological processes. Iron homeostasis in humans is regulated by balancing iron uptake with intracellular utilization and storage. Dietary iron is absorbed by duodenal enterocytes and binds to transferrin in the plasma. Transferrin limits the production of toxic free radicals and is responsible for ferric-ion delivery into cells. The iron homeostasis system maintains transferrin saturation at physiological levels.

**ABSTRACT**

Thymic hyperplasia could be true thymic or lymphoid hyperplasia. It is usually found incidentally or could present with compressive symptoms or systemic symptoms due to autoimmune disease like myasthenia gravis. The diagnosis is made through a chest CT or MRI. Treatment for symptomatic patients is mostly thymectomy. This activity describes pathophysiology, evaluation, and management of thymic hyperplasia and highlights the role of the interprofessional team in the evaluation and treatment of patients with thymic hyperplasia. The production of functional T-cell is choreographed by thymic epithelial cells that guide them in proliferation, maturation, and survival. The thymic epithelial cells are compartmentalized into two main populations medullary thymic epithelial cells and cortical thymic epithelial cells. These populations are further segregated into distinct subpopulations having specific molecular and functional roles. There are two major etiologies of thymic hyperplasia. It could be congenital or acquired. The congenital thymic hyperplasia can be hypo functioning or hyperfunctioning and is found to be the result of neuroendocrine disturbances, usually within the hypothalamic-hypophyseal system. Thymic hyperplasia with hypo functioning thymus would lead to immune deficiency. Hyperfunctioning thymic hyperplasia could lead to autoimmune diseases, most commonly myasthenia gravis, but the relationship has also been found with graves' disease and collagen vascular disorders. Acquired thymic hyperplasia can also result in hypo functioning or hyperfunctioning thymus.

**ABSTRACT**

Obesity is a critical risk factor for the development of type 2 diabetes (T2D), and its prevalence is rising worldwide. White adipose tissue (WAT) has a crucial role in regulating systemic energy homeostasis. Adipose tissue expands by a combination of an increase in adipocyte size (hypertrophy) and number (hyperplasia). The recruitment and differentiation of adipose precursor cells in the subcutaneous adipose tissue (SAT), rather than merely inflating the cells, would be protective from the obesity-associated metabolic complications. In metabolically unhealthy obesity, the storage capacity of SAT, the largest WAT depot, is limited, and further caloric overload leads to the fat accumulation in ectopic tissues (e.g., liver, skeletal muscle, and heart) and in the visceral adipose depots, an event commonly defined as lipotoxicity. Excessive ectopic lipid accumulation leads to local inflammation and insulin resistance (IR). Indeed, overnutrition triggers uncontrolled inflammatory responses in WAT, leading to chronic low-grade inflammation, therefore fostering the progression of IR. Severe obesity is associated with elevated risks of adverse health consequences. The prevalence of obesity is rising worldwide, and if the trend continues, global prevalence will reach 18% in men and 21% in women by 2025. A positive energy balance between energy intake and energy expenditure results in weight gain and obesity. Many factors, including genetics, epigenetics, and lifestyle factors, have been

implicated in obesity pathogenesis. In most cases, no single factor is exclusively responsible for the development of obesity.

**ABSTRACT**

At the present stage of development of mechanical engineering, the need for the creation of highly efficient transmission oils is growing from year to year. To develop them, it is important to add high-quality additives to base oils that can protect transmission systems from wear, increasing their durability. Such additives include compounds containing sulfur, nitrogen, phosphorus and other elements. The authors of this work synthesized 1,3-isopropylxanthate sulfophenol as an extreme pressure additive for transmission oils. The compound was obtained by reacting phenol bissulfonyl chloride with potassium isopropyl xanthate:

The reaction was carried out in an aqueous medium or isopropyl alcohol at a temperature of 50-600C. The starting compounds for the synthesis of 1,3-isopropylxanthate sulfophenol were obtained by the authors of this work according to the following schemes using a well-known method [1]:

The structure of the synthesized compound was proven by studying the elemental composition and using IR spectroscopy. Extreme pressure properties were studied on a four-ball friction machine (FFM-1). The evaluation of extreme pressure properties was carried out according to the load wear index ( $LW_1$ ), according to the critical load (CL) and according to the welding load (WL). The studies were carried out in comparison with the structurally similar compound 5-methyl-2-phenylcarbonylmethyl ester of diisopropylxanthogenic acid [2] and the well-known extreme pressure additive ethylene bisisopropyl xanthate (Lz-23k) [3]. As follows from the results of the study, 1,3-bisopropylxanthate sulfophenol surpasses known compounds in extreme pressure properties. As a result, it can be used as an extreme pressure additive for transmission oils.

**ABSTRACT**

The role of the adrenal glands in your body is to release certain hormones directly into the bloodstream. Many of these hormones have to do with how the body responds to stress, and some are vital to existence. Both parts of the adrenal glands the adrenal cortex and the adrenal medulla perform distinct and separate functions. Cortisol is a glucocorticoid hormone produced by the zona fasciculata that plays several important roles in the body. It helps control the body's use of fats, proteins and carbohydrates; suppresses inflammation; regulates blood pressure; increases blood sugar; and can also decrease bone formation. This hormone also controls the sleep/wake cycle. It is released during times of stress to help your body get an energy boost and better handle an emergency situation. Adrenal glands produce hormones in response to signals from the pituitary gland in the brain, which reacts to signaling from the hypothalamus, also located in the brain. This is referred to as the hypothalamic pituitary adrenal axis. As an example, for the adrenal gland to produce cortisol, the following occurs: The hypothalamus produces corticotropin-releasing hormone (CRH) that stimulates the pituitary gland to secrete adrenocorticotropin hormone (ACTH). ACTH then stimulates the adrenal glands to make and release cortisol hormones into the blood. Normally, both the hypothalamus and the pituitary gland can sense whether the blood has the appropriate amount of cortisol circulating. If there is too much or too little cortisol, these glands respectively change the amount of CRH and ACTH that gets released. This is referred to as a negative feedback loop. Excess cortisol production can occur from nodules in the adrenal gland or excess production of ACTH from a tumor in the pituitary gland or other source.

**ABSTRACT**

The Hypothalamic-pituitary-adrenal (HPA) axis is comprised of the hypothalamus, pituitary gland, and adrenal glands. It regulates the body's adaptive response to stress. Stress is a huge factor as it can mess up every single hormone. In particular progesterone, one of the most important hormones for fertility and pregnancy, is not only produced by the corpus luteum of the ovary, but is also produced by the adrenal glands. This means that if you are under a lot of stress then your adrenal glands may have shut down your production of progesterone in favour of stress hormones such as cortisol and adrenaline. I really believe this was a huge factor in my fertility journey and is likely to be a major factor with a lot of women in this day and age. When we are under stress our body tends to shut down our reproductive hormones as getting pregnant is not essential for our survival. The stress response serves to prioritise survival over less essential physiological functions, inclusion growth, and reproduction.

**ABSTRACT**

Dill (*Anethum graveolens*) is a plant species traditionally used for culinary and medicinal purposes. This study aims to explore the ecological and medicinal benefits of dill compared to Spirulina (*Arthrospira platensis*). By examining the ecological effects of dill in natural habitats, the plant's impact on habitat diversity and ecosystem health. In addition, focusing on the medical potential of dill, its pharmacological effects such as antioxidant and anti-inflammatory properties were investigated. The possible benefits and therapeutic potential of these effects on human health were evaluated. Compared with Spirulina, the nutritional content and biological properties of dill were analyzed. The use of dill as a potential alternative for human health has been examined, with particular emphasis on its effects on digestive health and metabolic balance. This comprehensive comparative study makes an important contribution to understanding dill's potential for both ecological balance and human health. However, it should be noted that the medicinal use of dill needs further research and clinical studies. In conclusion, this study investigating the potential advantages of *Anethum graveolens* as an alternative source is an important step to promote and evaluate the versatile use of the plant. Dill presents numerous advantages over spirulina. Primarily, dill is widely accessible and can be easily grown in diverse climates, rendering it more sustainable and attainable for widespread utilization. Additionally, dill boasts abundant essential oils such as carvone and limonene, renowned for their antimicrobial attributes and supportive role in digestive wellness. Moreover, dill is a notable source of vitamin C, pivotal for immune function and collagen synthesis, an attribute absent in spirulina. Furthermore, dill's culinary adaptability facilitates its integration into an extensive array of dishes, enriching both taste and aroma, unlike spirulina, which may be limited in culinary applications due to its pronounced taste and scent. Lastly, dill holds a longstanding tradition as a medicinal herb in various cultures, offering potential therapeutic advantages that extend beyond its nutritional composition. In the comparison between dill and spirulina, it is seen that dill is economically more suitable. In addition, the ecological effects of dill have been determined to be more sustainable and less harmful to nature. Medically, dill's traditional uses and health benefits are similar to spirulina.

**ABSTRACT**

Respiration intensity and reducing activity of different concentrations of NaCl, Na<sub>2</sub>SO<sub>4</sub> salts (25-100 mM) in "Garabagh-22", "Dayanatli" genotypes of barley (*Hordeum Vulgare*) and in "Layagatli", "Gobustan" genotypes of wheat (*Triticum durum L.*) have been studied using polarographic method and spectrophotometric method respectively. The amount of oxygen absorption by the roots of 7-day-old barley sprouts is found to be lower than that of wheat sprouts. Although the different plant seedlings germinated in water are differed in the amount of oxygen absorption, the kinetics were similar and were characterized by a single-phase curve. Oxygen absorption was also studied in plants germinated in different concentration salt solutions. It turned out that during the long-term exposure to salts, the weakening of oxygen absorption by roots occurs already at low concentrations (25 mM), and oxygen absorption decreases more sharply in sulfate salinity than in chloride salinity. The studies revealed that the reducing activity in the roots of wheat sprouts was higher than that of barley sprouts, and with the increase in the salt concentration, the reduction activity decreased sharply. According to the reducing activity and the amount of oxygen absorption, plants can be arranged in the following order:

Gobustan > Layagatli > Dayanatli > Garabagh-22. An inverse correlative relationship was determined between salt resistance of plants and respiration intensity and reducing activity. If

to compare the effect of isocationic salts on respiration intensity and reducing activity, the negative effect of  $\text{SO}_4^{-2}$  ion was higher than that of  $\text{Cl}^-$ . It was found out that the stability of the studied plant genotypes is in the Garabagh-22 > Dayanatli > Layagatli > Gobustan sequence and Garabagh-22 and Dayanatli barley genotypes can be planted in weak saline soils. Based on the obtained result, the method of determination of the reducing activity of the root system can be recommended to be used as an express biological test to determine the sale tolerance of the plants.

**Keywords:** oxygen absorption amount, reducing activity, respiration intensity, salt resistance.

**ABSTRACT**

Additive manufacturing (AM) has emerged as a transformative technology, allowing the creation of complex geometries with design freedom. In this study, we study the design optimization and mechanical characterization of lattice structures manufactured using fused deposition modeling (FDM). Lattice structures, known for their lightweight and high-strength properties, offer enormous potential for various engineering applications. This study investigates the impact of lattice unit cell selection, material choices, and topology optimization on the mechanical performance of a produced parts, with evaluation of the influence of varying lattice densities and geometries on the final mechanical properties, such as tensile strength, compressive strength, and stiffness. The methodology adopted includes the use of CAD tools for generating the lattice geometries, pursued by FDM technology using the equipment in laboratory. Material properties of the lattice structures are determined through mechanical testing and validated using simulations to ensure precision. The results obtained reveal important insights into the relationship between lattice design parameters and mechanical behavior. We observe that specific lattice unit cell configurations demonstrate superior mechanical properties compared to conventional solid structures. Additionally, the effects of FDM process parameters and material selection on the global performance of the lattice structures are discussed. This study contributes to the advancement of design for additive manufacturing, providing valuable guidelines for engineers and designers to leverage the full potential of lattice structures in diverse engineering applications.

**ABSTRACT**

Diagnostic determination of immune system biomarkers during COVID-19 is of great importance. The main task of the immune system is to protect the body from allergens, bacteria and virus attacks. At this time, the immune system kills the mutated cells and protects health.

The main manifestations of immune activation during COVID-19 are characterized by an increase in the concentration of neutrophils, IL-6 and C-reactive protein in the blood serum, and a decrease in the concentration of lymphocytes. Our goal is to share our achievements by studying the role of immune system biomarkers in Covid-19 infection. According to the extract epicrisis of the medical history we investigated, on 21.05.2020 (*MediClub Hospital*, M/h No. pc-110457), during the computer tomographic examination of the patient who was admitted to the hospital with the diagnosis "Viral pneumonia of the lungs. Lung respiratory distress syndrome. 80% damage of lung parenchyma, "frosted glass" was found. Looking at the immunological laboratory indicators, it was found that lymphocyte-14%; CRP-461.99 mg/l; IL-6 was 539.0 pg/ml. Concentration of immune system biomarkers in 2 stages: Stage I - when entering the Intensive Care Department; Stage II, was studied on the 5th-7th days of the disease. C-reactive protein, an "acute phase" protein that increases to high concentrations and stimulates the body's immune responses, activates defence systems, has been studied in both phases. Although CRP was 461.99 mg/l in stage I, this indicator decreased sharply by 4.85 times ( $p < 0.01$ ) in stage II but remained 19.1 times higher than the norm. The main protective biomarker of the immune system is lymphocytes, some of which are involved in the synthesis of antibodies, others fight against infection, and some prevent its spread. The last moment enables the formation of an immune response. The concentration of lymphocytes was  $11.2 \pm 0.5\%$  in stage I, and in stage II this indicator increased 1.64 times ( $p < 0.01$ ) and reached the lower limit of the norm and is statistically honest. Assessment of cytokine production in COVID-19 disease, particularly interleukin-6 concentrations as a pro-inflammatory cytokine that enhances the immune response, has also been studied. In stage I, IL-6 was high, 4.28 times ( $p < 0.01$ ) more than the control group. In the II stage, this indicator decreased by 7.51 times ( $p < 0.001$ ) to the level of the control group, the normal range. In the II group, it was very high in the I stage, it was 12.95 times more than the control group, and 3.03 times more than the I group ( $p < 0.01$ ). Although it was 2.8 times more compared to the control group in the II stages, it decreased by 4.63 times ( $p < 0.05$ ) compared to the I stage, but it was 4.91 times more ( $p < 0.001$ ) compared to the I group and it is statistically honest. Even if a person's body overcomes the coronavirus disease, the body is still highly susceptible to various types of infections. This is associated with the weakening of the immune system in the human body. 83% of the patients diagnosed with coronavirus were found to have lymphopenia in the literature we researched. Assessment of cytokine production in COVID-19, particularly interleukin 6 as a pro-inflammatory cytokine that enhances the immune response, was studied, with IL-6 at 10 pg/ml as the norm. In stage I, IL-6 was high - 539 pg/ml, 54 times higher than normal. In stage II, Actemra 8 mg/kg was infused iv to patients and this indicator decreased by 4.63 times ( $p < 0.05$ ); however, it remained 12 times more than the norm ( $p < 0.001$ ) and is statistically honest. According to our results, it is appropriate to use high doses of immunoglobulins to limit the effect of antibodies, determining the severity of the disease based on the concentration of interleukin-6 in the blood of COVID-19 patients. Thus, Anakinra, which has an immunosuppressive activity that blocks interleukin-1 receptors, has a high effect during the use of IVIG drugs during Postcovid syndrome. IL-6 concentration decreased dynamically. Thus, when we compare our results with the research conducted by world scientists, it is known that IL-6 concentration of all immune system biomarkers increased dramatically during COVID-19 disease and lymphopenia was detected. Based on the concentration of these markers, certain considerations can be made about the severity of the disease, the principles of treatment, and the percentage of lethality.

**THE PROBLEM OF COMPETITION FOR CLEAN AGRICULTURAL PRODUCTS  
AND SOLUTION FOR AN INTEGRATED VALUE-ADDED MODEL FOR  
CLEAN AGRICULTURE IN KHANH HOA, VIETNAM**

**Le Thi Hong NHUNG**

Nha Trang University, Vietnam

**Email:**nhunglth@ntu.edu.vn

**ABSTRACT**

Agriculture, Forestry and Fisheries sector accounts for almost 12% of the Vietnamese economic structure in 2023 (General Statistics Office of Vietnam, 2023). The agricultural sector of Khanh Hoa in particular and Vietnam in general is facing several challenges due to the pollution of the production environment as well as serious deterioration of farmers' health due to the heavy use of chemical pesticides, herbicides and other toxicity in the farming process (World Bank, 2023). The number of clean, sustainable agro production farms is still very low. Surprisingly, despite the fact that organic produces have superior safety and quality, there is a heartbreaking reality: the prices of these clean agricultural products in Vietnam in general and Khanh Hoa in particular are still very cheap, compared to those made by counterparts in Thailand, China, etc. This has led to decreasing income and unstable livelihood of clean production farmers (Khanh Hoa Farmers' Association, 2023). Along with that worsening production situation, Vietnamese consumers' confidence has also seriously declined as agro produces are chemically grown everywhere, causing increasing health risks from alarming food safety issues (Vietnam's Ministry of Agriculture and Rural Development, 2023). This article analyzes the root causes of this whole scenario and proposes solutions by using a clean agriculture model that incorporates service agriculture thinking to create added value for Vietnamese agricultural products, and regain the trust from Vietnamese consumers, thereby promoting clean agro products nationwide and proceeding to exportation.

**ABSTRACT**

With the current educational context in Vietnam, there are few educational environments for students to practice and apply what they learn into real life. Therefore, a trend in recent years is that many university graduates are unemployed, while businesses are always having headaches finding quality labor. In addition, society's production and business activities are creating countless serious consequences for the environment, ecosystem and sustainable development of society. This article proposes an experiential education model through projects that create social impact at the local level to solve the above problems, contributing to creating a generation of graduates who actually do what they say, do it effectively and sustainably.

**ABSTRACT**

Despite of its susceptibility to corrosion, carbon steel (CS) is widely used in industry and machinery. It has excellent mechanical properties as well as good physical and chemical characteristics. During the process of steel manufacturing, steel may get into contact with an aqueous solution of hydrochloric acid, causing it to corrode. One effective process for protecting steel from corrosion with hydrochloric acid is by using organic compounds as inhibitors. Large numbers of organic compounds were studied and are being studied to investigate here corrosion inhibition potential. Generally, the inhibitor which possesses many heteroatoms, such as O, S and N atoms, always exhibits better inhibition performance than those that possesses individual O, S or N atoms. But, most of them are highly toxic to human beings and has the potential to degrade the environment. The known hazardous effects of most synthetic organic inhibitors and restrictive environmental regulations have compelled and motivated researchers to focus on the need to develop cheap, non-toxic and environmentally benign natural products as corrosion inhibitors. Three new heterocyclic diazepines (CC-diCl, CC-Cl and CC-F) were synthesized for the first time from the natural product curcumin and evaluated as non-toxic corrosion inhibitors for carbon steel (CS) in 1 M HCl. Polarization curves showed that the three compounds behave as mixed-type inhibitors. EIS spectra exhibit one capacitive loop and confirm the inhibitive ability. A complete thermodynamic study was also performed on the diazepine with the highest efficiency CC-diCl to gain a better understanding of the inhibition process. The adsorption of the diazepines onto CS surface obeyed a Langmuir adsorption isotherm.

**ABSTRACT**

The corrosion of steel is a fundamental academic and industrial concern that has been receiving a considerable amount of attention. The inorganic acids are widely used in many processes such as pickling, cleaning and descaling; therefore corrosion prevention has critical importance. The use of inhibitors is the most practical methods of protection against corrosion, especially in acidic solutions. Large numbers of organic compounds were studied and are being studied to investigate here corrosion inhibition potential. Generally, the inhibitor which possesses many heteroatoms, such as O, S and N atoms, always exhibits better inhibition performance than those that possesses individual O, S or N atoms. Consequently, the 2-hydroxy-1-(2-hydroxy-4-sulfo-1-naphthylazo)-3-naphthoic acid (HHSNNA) is an ordinary organic compound containing O, S and N atoms. In addition it possesses four aromatic rings and multiple bonds, which probably meet certain desirable characteristics of corrosion inhibitors. The corrosion inhibition properties of HHSNNA for C38 steel in HCl 1 M solution were analyzed by electrochemical impedance spectroscopy (EIS), potentiodynamic polarization. Polarization curves showed that the HHSNNA behave as mixed-type inhibitors. EIS spectra exhibit one capacitive loop and confirm the inhibitive ability. The effect of concentration for the inhibitor on the corrosion behavior of carbon steel in 1M HCl was also studied and a Langmuir adsorption isotherm was found. It was found that the presence of HHSNNA hugely decreases the corrosion rate, while its inhibition efficiency (E%) increases with concentration to attain 93.8 % at  $10^{-3}$  M.

**Keywords:** Corrosion, Steel, Inhibitor, HHSNNA, Langmuir.

**SUSTAINABLE URBAN DEVELOPMENT IN PAKISTANI CITIES: CHALLENGES,

**ABSTRACT**

Urbanization is a global phenomenon with profound implications for sustainable development, particularly in rapidly urbanizing countries like Pakistan. This research explores the challenges, opportunities, and policy implications of sustainable urban development in Pakistani cities, focusing on key themes such as population growth, infrastructure development, socio-economic dynamics, and environmental sustainability. The findings reveal that Pakistani cities face significant challenges related to environmental degradation, inadequate infrastructure, and social inequalities, which hinder the progress of sustainable urban development initiatives. Rapid population growth and urban expansion strain existing infrastructure, leading to traffic congestion, air pollution, and inadequate access to basic services such as housing and utilities. Moreover, socio-economic disparities exacerbate social inequalities, limiting access to education, healthcare, and employment opportunities for marginalized communities. Despite these challenges, the research identifies several opportunities for promoting sustainable urban development in Pakistani cities. Policy interventions, such as integrated urban planning and renewable energy initiatives, can enhance the resilience and sustainability of urban infrastructure. Community engagement and participatory development approaches empower local communities and promote inclusive decision-making processes, ensuring that development initiatives are responsive to their needs and priorities. Drawing lessons from successful case studies in Pakistani cities and international best practices, the research provides valuable insights into effective strategies and approaches for sustainable urban development. It emphasizes the importance of adopting holistic, inclusive, and environmentally sustainable approaches to urban planning and development, prioritizing the well-being of urban residents and the long-term sustainability of Pakistani cities. In conclusion, this research contributes to the growing body of knowledge on sustainable urban development and provides practical recommendations for policymakers, urban planners, and stakeholders to promote sustainability in Pakistani cities. By addressing the challenges, leveraging opportunities, and integrating sustainability principles into practice, Pakistani cities can strive towards achieving resilient, inclusive, and sustainable urban futures for all residents.

**ABSTRACT**

Plastic waste has emerged as a serious environmental problem, prompting the creation of novel technologies for its effective management and transformation into valuable resources. Using microwave pyrolysis, this work investigated the in situ catalytic conversion of mixed-density plastics into combustible fuel, providing a feasible method for valuing plastic waste and generating energy. Different mixed-density plastics were pyrolyzed with different catalysts, temperatures, and residence times to yield liquid fuel, syngas, and structured carbon residue. The effect of inputs on the product type, yield and compositions was statistically evaluated using ANOVA, which showed an F value of 4.108 and a p-value of 0.098 (>1.00). FTIR and GC-MS revealed that the oil product consisted of C<sub>13+</sub> fractions in the form of alkanes, alkenes, and aromatics. The microscopic analysis of the residue confirmed the formation of carbon nanotubes along with other amorphous products. The presence of impurities in the solid product was further analyzed through XRD analysis. The pyrolytic liquid fuel revealed the presence of conjugated aromatic structure and carbonyl group in their concentration. In the gaseous product, hydrogen, carbon dioxide, carbon monoxide, and hydrocarbons up to C<sub>4</sub> such as methane, ethane, ethene, propane, propene, butane, and butene were the most common hydrocarbon gases observed. This research demonstrated that the conversion of mixed-density plastics using sodium zeolite, aluminum oxide, and nickel oxide catalysts yields 84% valuable products confirming wasted plastics as a lucrative energy feedstock for the production of hydrogen and high-value carbon compounds.

**ABSTRACT**

Theoretically analysis has been accomplished for the propagating electromagnetic surface waves (EMSWs) at proposed planar interface of ferrite-graphene-ferrite waveguide structure. Different boundary conditions were utilized for the current problem to acknowledge the response of EMSWs. The properties of the materials are determined then used in the Comsol software for the simulation. The properties defined are relative permittivity, relative permeability, and the electrical conductivity. The characteristics curves are analyzed for the normalized phase constant  $Re\left(\frac{\beta}{k_o}\right)$  and attenuation phase constant  $Im\left(\frac{\beta}{k_o}\right)$  against the operating frequency in the terahertz region. The impact of chemical potential, relaxation time, number of graphene layers, and dielectric constant, applied magnetic field and saturation magnetization of ferrite medium were observed on the normalize phase and attenuation phase constant. In response to these parameters the structured waveguide exhibits the convenient propagation of electromagnetic surface waves with minimal propagation loss in the terahertz frequency region. The proposed waveguide avails the position in nanophotonic devices, terahertz filters, highly integrated terahertz devices and the communication systems.

**ABSTRACT**

Due to the fact that water is the most essential natural resource, the quality of water is a major issue for the human race. In contrast, the unplanned expansion of both rural and urban regions in rapidly developed countries such as India is having an adverse effect on the quality of the water. In this research, the Variables that contribute to water pollution of five different water Lakes Which are basically contaminated we are assessed and demonstrated. Principal component analysis (PCA) was used in order to conduct an analysis of the water quality data spanning the beginning in January 2013 and continuing through December 2014, this research was carried out on a monthly basis. Variations in the physicochemical properties of water in Chh. Sambhaji Nagar, both spatially and temporally for 19 parameters are considered for present study. Three of the most important factors affecting the hydro-chemistry of lake water identified by principal component analysis (PCA) which accounts for 99 % of the total variation. The water quality of the Lakes in (Chh. Sambhaji Nagar) has been found to be drastically reduced due to a multitude of human activities, the most prominent of which is agricultural waste runoff.

**ABSTRACT**

Magnetic nanoparticles (MNPs) possess extraordinary magnetic properties and serve as effective adsorbents for heavy metals in wastewater treatment. Coating the surface of magnetic nanoparticles improves their adsorption efficiency, recyclability, and hydrophilicity. The proposed study will be focused different ferrite magnetic nanoparticles efficiently coated with silica chitosan for the elimination of heavy metals in the treatment of wastewater. Superparamagnetic cobalt ferrite, nickel ferrite, and copper ferrite nanoparticles will be synthesized using a simple co-precipitation technique. The magnetic cores of  $\text{CoFe}_2\text{O}_4$ ,  $\text{NiFe}_2\text{O}_4$ , and  $\text{CuFe}_2\text{O}_4$  magnetic nanoparticles will be decorated with a silica shell through tetraethyl orthosilicate (TEOS) hydrolysis. Subsequently, the silica-coated ferrite magnetic nanoparticles will be further coated with chitosan. Atomic adsorption spectroscopy employed to determine the extent of metals removal from the water. The magnetic properties, structure analysis, identification of functional groups, and morphology of the prepared adsorbents analyzed before performing adsorption experiments. The kinetics and adsorption isotherms of the adsorbents examined using different chemical models.

**Keywords:** Magnetic nanoparticles, through tetraethyl orthosilicate

**ABSTRACT**

In this paper, we present the generalized Bessel-Maitland function (EGBMF) by using extended beta function and obtain some interesting properties of it. Then, we show interesting relationships of this function with Laguerre polynomials and Whittaker functions. Further, the Mellin transform of this function is evaluated in terms of generalized Wright hypergeometric function and Euler transform is also evaluated. Finally, we used the Gaussian quadrature and Laguerre-Gauss quadrature method to derive several graphical representations and it was shown that the numerical and theoretical simulations are consistent. Besides, the derived results are applied to find potentially useful in several fields notably physics, applied mathematics and engineering.

**Keywords:** generalized Bessel-Maitland function, extended beta function, fractional derivative, Mellin transform, Laguerre polynomials, Whittaker functions, Wright generalized hypergeometric functions

**SYNTHESIS OF SILVER NANOPARTICLES BY CHEMICAL REDUCTION OF  
AgNO<sub>3</sub> WITH NaBH<sub>4</sub>**

**IQRA ASGHAR**

**ABSTRACT**

Nanoparticles are the center of attraction in field of science and technology from past few years. Nanoparticles show interestingly different properties from respective bulk materials. Silver nanoparticles (AgNPs) gain more attention due to their various physical and chemical properties. In this research work the chemical reduction method was followed for the synthesis of AgNPs. Silver nitrate (AgNO<sub>3</sub>) was used as metal precursor and sodium borohydrate (NaBH<sub>4</sub>) served as a reducing agent. The chemicals contributing in the reaction was taken in measured proportion. Suitable stabilizing agent was used to stabilize the growth process as well as to control agglomeration of AgNPs. The particle size and structure have be characterized by using different techniques such as X-ray diffraction (XRD), Scanning electron microscopy (SEM) and UV-Visible spectroscopy. It was found that size of AgNPs was range from 16.9nm to 19.5nm. in this study the effect of concentration and the method of preparation on size and of AgNPs was studied. XRD analysis shows that the size of particles is slightly effected by both concentration and preparation method. It was observed that the particle size increasing the concentration. UV-Visible spectrum show that the plasmon resonance at 460 to 520.

**Keywords:** Silver nanoparticles (AgNPs), Sodium borohydrate (NaBH<sub>4</sub>), Silver nitrate (AgNO<sub>3</sub>), XRD, SEM, UV-Visible.

**ABSTRACT**

Chimeric antigen receptors (CARs) are designed receptors that target cancer cells by combining an immune cell with a novel specialization. These immune cells could be either natural killer (NK) cells or T lymphocytes. Chimeric antigen receptors (CARs) have proven to be an effective way to amplify and reroute the natural characteristics of both CD8+ and CD4+ T lymphocyte subsets, based on the efficacy of targeting CD19 in B cell malignancies. Dual-signalling CARs allow for the quick production of tumor-specific drugs for each individual cancer patient by reprogramming T cells' effector, metabolic, and survival capabilities in addition to redirecting and activating them. Cell-based therapy has undergone a significant change as a result of this strategy. Rather than relying on the discovery and growth of uncommon naturally occurring T cells with therapeutic potential, it now produces optimal T cell products through genetic engineering. An important part of the immune system, NK cells are essential for innate immunity. For CAR engineering, NK cells provide an alternative to T-cells. NK-cells have the potential to be a source of allogeneic "off-the-shelf" cellular therapy because they do not induce GVHD or other alloimmune or autoimmune toxicities. They can mediate significant anti-tumor effects without causing potentially fatal alloreactivity like GVHD. Researchers are currently investigating the use of CAR-engineered NK cells for the treatment of various haematological and non-haematological malignancies due to the several distinct benefits of NK cells. NK-cells, on the other hand, are only authorized for preclinical studies, in contrast to CAR-Tcells.

**ABSTRACT**

Forests as one of the determinants of the life support system and source of prosperity of the people, have recently experienced shrinkage and are very worrying as a result of deforestation, forestry conflicts, forestry corruption and so on that occur in South Sulawesi Province. Therefore, sustainable and sustainable forest management is needed, one of the efforts made by the government is through the Social Forestry Program. However, unfortunately, the existence of social forestry in South Sulawesi Province is currently not optimal and not in accordance with the target set by the government. This study aims to analyze obstacles in social forestry management so far in South Sulawesi Province and analyze the enforcement of sanctions against perpetrators of social forestry violations. The research method used is normative-empirical research with qualitative and quantitative approaches. The results showed that obstacles in social forestry management in South Sulawesi Province were the lack of budget provided, long and convoluted licensing and administration, errors in setting social forestry targets based on area, difficulty determining land locations, sometimes the land given to the community was very difficult to reach, commodities offered to the community were not economically valuable. Enforcement of sanctions has not been optimal due to the difficulty of obtaining evidence and collusion with law enforcement officials.

**ABSTRACT**

The development of this modern era, which has entered society 5.0, makes it easier for humans to use technology easily. The growth of this technology can be profitable for various purposes that can be done quickly. However, there are negative impacts that will occur if humans use technology to be misused. One example of the negative impact that exists is the opening of someone's privacy that can be tracked only by using today's modern technology systems. Therefore, efforts must be made to prevent the technology system from being used for useful things only. With the development of technology, of course, human intelligence also increases, for this reason, digital literacy or ethics is needed in using anything related to public technology. Behavior and traits that are formed can be from environmental factors or oneself. Prioritize teaching from an early age about the correct and wise use of technology through formal education or learning moral ethics from the people around you.

**ABSTRACT**

The gig economy has arisen as a dynamic and revolutionary force, changing the traditional employer-employee relationship and reshaping the entire environment of work itself, in an era marked by unparalleled technology innovation and shifting paradigms of work. Short-term contracts, freelance work, and the use of online platforms for labour exchange are all characteristics of the gig economy, which has grown in prominence over the past few years. The publication of Gig Economy has grown steadily, and the trends have been increasing consistently. As a result, the study focuses on examining the scientific literature on Gig Economy. The purpose of this study is to evaluate the evolution of the concept. It also aims at analysing which academics, countries, and journals are most interested in this area, the most relevant affiliations and collaborations, and which research has the greatest influence. Based on the “keywords” search results, the Scopus Database was used to compile literature on Gig Economy. This study included 710 papers that were relevant for the analysis from the Scopus Database. The findings revealed that research into Gig Economy has been strengthened during the last few years. This research draws upon findings and current information to give readers a glimpse into the future of Gig Economy research.

**ABSTRACT**

The younger generation is the determinant of progress that will occur in the future... The understanding of the younger generations is very much tied to the surrounding environment in terms of academic, socio-cultural, economic, and even to the realm of regality. Islam is a religion that encompasses everything from the political, social and economic spheres. Especially in terms of Islamic economics, all activities are based on the Qur'an and Hadith. Where it is natural that the Islamic economy prohibits all transactions that are contrary to religious teachings, one of which is usury. This research aims to see how far the understanding and awareness of the younger generation about usury. The research method used in this research is descriptive qualitative method. The data collection techniques used are observation, interview and literature study of the younger generation in Kendal, Indonesia. The results of this study indicate that the younger generation in Kendal, Indonesia still has minimal knowledge and awareness to avoid usury. The percentage of the younger generation uses conventional banks more than Islamic banks.

**Keywords:** Young generation, Usury, Islamic banking, Islamic economics

**ABSTRACT**

The advancement of energy storage technologies like batteries and supercapacitors have considerably aided mankind to fulfil a larger portion of their power needs. The prospering advancement of new energy automobile sector and innovative electrode materials with improved ion kinetics are essential for the effectiveness of hybrid supercapacitors. Metal-organic frameworks (MOFs) are one of the most talked materials due to their multiple structures, suitable functionalities, and similar metal centers resulting in broad applications, such as semiconductors, supercapacitors, catalysts, and energy storage devices. In this research, one pot synthesis method has been used to synthesized Ag-MOF, NiAg-MOF, and CoAg-MOF and further used in battery type electrode in hybrid supercapacitor. X-ray diffraction analysis confirmed the monoclinic structure with P21/c space group of Ag-MOF and also identification of small peaks of metallic nickel and cobalt. FTIR spectra also confirmed the presence of Ag-O, Ni-O and Co-O bonds in the prepared materials. TEM images depicted the agglomerated nanoclusters, non-spherical shape, and hexagonal shape morphology for Ag-MOF, NiAg-MOF, and CoAg-MOF respectively. Chemical state change and surface area analysis is confirmed through XPS and BET analysis. The cyclic voltammetry showed the highest specific capacitance of 1038 C g<sup>-1</sup> at a 5 mV/s scan rate for CoAg-MOF. Galvanostatic charging-discharging results depicted higher energy density is 51.61 Wh Kg<sup>-1</sup> and power density is 7741 W kg<sup>-1</sup> for CoAg-MOF. These electrochemical measurements suggested that CoAg-MOF can be used for pseudocapacitor applications due to the higher discharging time and power density.

**ABSTRACT**

USFDA is a Regulatory body of medical devices in the globe. According to USFDA medical devices are regulated by centre for devices and radiological health (CDRH). Regulatory pathway of medical devices in USA is varies based on intended use. To identify the specific requirements and documentation needed for the approval of elastic bandages as Class I medical devices. To examine the role of regulatory bodies such as the FDA in ensuring the safety and efficacy of elastic bandages. To provide insights and recommendations for stakeholders navigating the regulatory pathway for elastic bandages. Medical devices in USA divided into three classes based on the risk to the patient. Class-1 medical classes are low risk devices. The example of class -1 medical device Elastic Bandage is having different regulatory pathway and approval process. To get FDA Approval of Elastic Bandage is does not require premarket notification 510(k) and PMA (Pre-Market Approval) due to low risk device class, the steps involved in approval from FDA for class-1 devices are device registration, listing, and fee payment, which are must be renewal for every year. Navigating the regulatory pathway for Class I medical devices, including elastic bandages, in the USA requires adherence to stringent standards and thorough documentation. Manufacturers must demonstrate compliance with regulatory requirements related to safety, performance, and labelling.

**ABSTRACT**

This study investigated ternary CdS/g-C<sub>3</sub>N<sub>4</sub>/TiO<sub>2</sub> heterojunction photocatalysts for the degradation of synthetic dyes and hydrogen production from aqueous media through visible-light-initiated photocatalytic reactions. Graphitic carbon nitride, titanium dioxide, and cadmium sulphide were combined in different mass ratios through a simple sol-gel method to create CdS/g-C<sub>3</sub>N<sub>4</sub>/TiO<sub>2</sub> composite photocatalysts. The prepared heterojunction catalysts were studied using XRD, FTIR, EDX, SEM, and UV-visible spectroscopy analysis for their crystal structures, functional groups, elemental composition, microtopography, and optical properties. The rhodamine B dye was then degraded using fully characterized photocatalysts. The maximum dye degradation efficiency of 99.4% was noted in these experiments. The evolution rate of hydrogen from the aqueous solution with CdS/g-C<sub>3</sub>N<sub>4</sub>/TiO<sub>2</sub> photocatalyst remained 2950 molh<sup>-1</sup>g<sup>-1</sup>, which is considerably higher than CdS, g-C<sub>3</sub>N<sub>4</sub>, CdS/g-C<sub>3</sub>N<sub>4</sub> and g-C<sub>3</sub>N<sub>4</sub>/TiO<sub>2</sub> catalyzed reactions. This study also proposes a photocatalytic activity mechanism for the tested ternary CdS/g-C<sub>3</sub>N<sub>4</sub>/TiO<sub>2</sub> heterojunction photocatalyst.

**Keywords:** CdS/g-C<sub>3</sub>N<sub>4</sub>/TiO<sub>2</sub>, ternary photocatalysts, synthetic dyes, hydrogen production, water splitting.

**IMPACT OF THE DIGITAL TRANSFORMATION IN MEDICAL LABORATORIES**

**MSc. Bertina HOXHA LAMI**

Sports University of Tirana

**MSc. Denada RADA (AHMETI)**

Logos University College

**ABSTRACT**

Medical laboratories are transformed by digital revolution as the others sectors of science and business. This article shows the advantages, challenges, and opportunities presented by the digital revolution as they relate to medical laboratories. In laboratory medicine, artificial intelligence is being used to improve and optimize diagnostic processes, support clinical judgment, and boost accuracy and efficacy. Automated algorithms examine extensive datasets comprising patient information, test results, clinical outcomes, and result logs to pinpoint risk factors, forecast the progression of a disease, and inform personalized therapy choices. The aim of this study is to look at how medical laboratories are affected by the digital transformation. For this literature review we have searched databases including PubMed, Research Gate, Web of Science, Scopus, and Google Scholar. We collected data from digital transformation in medical laboratories. Automated algorithms examine extensive datasets comprising patient information, test results, clinical outcomes, and result logs to pinpoint risk factors, forecast the progression of a disease, and inform personalized therapy choices. The paper examines the effects of digital transformation on medical laboratories by an extensive analysis of the literature, case studies, and expert perspectives. Automation algorithms to improve the efficiency and accuracy of diagnosis analyze large datasets, such as patient information and test results. Digital systems must have compliance mechanisms in place since medical laboratories are subject to strict rules on the usage and storage of patient data. Digital platforms offer real-time analytics that facilitate ongoing quality improvement programs, stimulating creativity, and streamlining laboratory procedures. Medical laboratories have been profoundly impacted by the digital revolution, which has brought forth a number of benefits, difficulties, and opportunities. In laboratory medicine, artificial intelligence (AI) has become a potent instrument that can help with diagnosis procedures, support for clinical judgment, and general accuracy and efficacy. AI systems use large-scale datasets, including test results, clinical outcomes, and patient data, to identify risk factors, forecast the course of a disease, and guide individualized therapy choices. Furthermore, a large infrastructure investment and continual training for laboratory personnel are necessary due to the complexity of deploying and maintaining digital systems. The digital revolution has created opportunities for increased production and efficiency through the automation of repetitive operations, better patient outcomes through diagnosis that is more precise and individualized treatment regimens, and the possibility of cost reductions in the delivery of healthcare. The results indicate that the digital transformation has led to numerous benefits in medical laboratories, including improved efficiency, accuracy, and accessibility of diagnostic services. With the aid of extensive data sets that include clinical outcomes, patient records, and laboratory results, it is able to predict patient trajectories and provide tailored treatment plans. Ultimately, the study emphasizes the potential benefits of digital transformation, including improved teamwork, customized healthcare, and anticipatory diagnosis. While it offers unprecedented potential to revolutionize healthcare delivery and improve patient outcomes, careful consideration must be given to the integration

---

of digital solutions into existing workflows and infrastructure. By addressing the identified challenges and leveraging innovative strategies, medical laboratories can harness the full potential of the digital revolution to enhance diagnostic capabilities, optimize resource utilization, and ultimately, provide better care to patients.

**ABSTRACT**

Climate change can be referred as long-term changes in temperature and weather. These fluctuations may be caused by significant volcanic eruptions or variations in the sun's activity. However, human activity has been the primary cause of climate change since the 1800s, mostly as a result of the combustion of fossil fuels like coal, oil, and gas. Most discussions about climate change focus on the dangers it poses to people and the planet, rather on the benefits it could bring to the economy. Proactive methods to mitigate and adapt to climate change, according to this study, can lead to economic development through encouraging innovation, producing new jobs, and opening up new markets. A fundamental component of this strategy is shifting to renewable energy sources like wind and solar power, which may significantly cut down on emissions of greenhouse gases while simultaneously fostering innovation and job growth in the rapidly expanding green economy. To further demonstrate the economic benefits of climate action, investments in green infrastructure and sustainable urban development improve energy efficiency, resilience, and quality of life. This, in turn, attracts more investment and reduces costs associated with climate-related disasters. Additional economic benefits arise from the optimization of resource usage and the generation of new business models brought about by the transition to a circular economy, which prioritizes waste reduction, recycling, and product lifespan. Importantly, this shift has the potential to bring about substantial societal advantages, such as better public health due to less air pollution, which can lead to lower healthcare expenses and higher productivity. The economic benefits from these programs can be more equitably distributed, helping disadvantaged populations, if climate policy takes an inclusive stance. In light of this, the ABSTRACT maintains that combating climate change is not just a moral but also a financial necessity for a more just and sustainable future.

**ABSTRACT**

Thorough guidance on the control of magnetic states in diluted magnetic semiconductors (DMS) is presented, utilizing ab-initio electronic structure calculations with the Korringa-Kohn-Rostoker method and the generalized gradient approximation. To account for disorder effects, the coherent potential approximation was incorporated. The results unveiled the existence of a stable ferromagnetic half-metallic state within these compounds, emphasizing the promising application of DMS in spintronic contexts.

**Keywords:** KKR-CPA, Ferromagnetic, Anti-Ferromagnetic, Double exchange interaction, Half-metallic, Curie temperature.

**ABSTRACT**

This research employs ab initio calculations to investigate the magnetism and electronic structure of ZnTe-based diluted magnetic semiconductors (DMSs). A meticulous examination of the stability of the ferromagnetic state in ZnTe-based DMSs is conducted, accompanied by a proposed materials design strategy for achieving ferromagnetic DMSs. The investigation reveals that V- and Cr-doped systems exhibit half-metallic ferromagnetism, while Mn-doped systems display a spin-glass state. Furthermore, the inquiry into carrier-induced ferromagnetism in ZnTe-based DMSs establishes that their magnetic states can be manipulated by adjusting the carrier density. The analysis of the calculated density of states contributes to a discussion on the mechanism responsible for stabilizing the ferromagnetic state in DMSs. Notably, these findings align with the anticipated characteristics crucial for the advancement of spintronics.

**ABSTRACT**

We employ a first-principles approach to investigate the electronic structure and magnetic properties of dilute magnetic semiconductors (DMS) with multiple impurities. The Korringa-Kohn-Rostoker coherent potential approximation (KKR-CPA) method, coupled with the generalized gradient approximation (GGA), is employed to compute the electronic structure of DMS. Our analysis encompasses III-V and II-VI semiconductors, both doped and diluted with various magnetic ions. This study offers a comprehensive examination of the electronic structure of transition-metal-doped III-V and II-VI semiconductors, highlighting the intricate interplay between electronic structure and impurity-induced magnetic properties. Furthermore, we delve into the underlying mechanism of ferromagnetism in DMSs from an electronic structure perspective, aiming to establish a unified understanding that elucidates the chemical trends influencing magnetism in these materials. Estimations of critical temperatures for different DMS systems are provided and discussed using the mean field approximation. Consequently, by carefully controlling the doping process, we showcase the manipulation of the magnetic behavior of DMSs, resulting in the observation of ferromagnetism in these semiconductors. The challenges associated with achieving high-temperature ferromagnetic semiconductors are also addressed and elucidated.

**Keywords:** KKR-CPA, Ferromagnetic, Antiferromagnetic, Polarisation, Double exchange interaction, Half-metallic, Curie temperature.

**ABSTRACT**

It is well-known that agriculture plays a crucial role in feeding and clothing humanity, as well as providing raw materials for the agricultural industry, and it will continue to maintain its significance. However, the intensification of agriculture brings about problems such as environmental pollution, residues in products, and animal welfare issues. All these factors are the main reasons for turning to unconventional livestock production. As a good practice example, small family farms specializing in rabbit breeding emerge, showcasing fantastic reproductive capabilities, easy maintenance, and nutritionally valuable meat with a refined texture, crucial for the nourishment of convalescents. In line with the recommendations of the European Union, there is an opportunity for small agricultural enterprises to secure additional income by engaging in the breeding of rabbits or other animals within unconventional livestock production. This can contribute to the survival of mini farms, strengthen rural development, sustain smaller communities, and enhance environmental protection.

**Keywords:** unconventional livestock production, rabbits, sustainable development, mini farms, rural development.

**ABSTRACT**

Activated carbons are the oldest adsorbents used in the field of water treatment because of its high adsorption capacity of organic species. The objective of this study is the preparation of activated carbons from jujube kernels in order to remove textile dyes by adsorption in aqueous media. In the laboratory, chemical activation was carried out using phosphoric acid as an impregnating agent followed by a carbonization step. The choice of chemical activation makes it possible to achieve good quality coals with a very large specific surface area. To arrive at our results, several adsorption tests of two dyes (methylene blue and orange methyl) were carried out taking into consideration the influence of some operating parameters. The results showed that under appropriate conditions, the reduction rate is greater than 95% for each of the two dyes. The kinetics modelling follows the pseudo-second-order model and the Langmuir model correctly describes adsorption isotherms. The activated carbons obtained have interesting properties in terms of adsorption in the liquid phase that will allow a new valorization of jujube kernels.

**Keywords:** activated Carbone, adsorption, textile dyes, jujube kernels.

**ABSTRACT**

In a recent study (Ayeni, 2013), asserts that, placement refers to the process of connecting the selected person and the employer in order to establish an ongoing employment relationship. In this step the employee is given the activities he/she needs to perform and is told about his/her duties. Again, according to (Ayra, & Kosterelioglu, 2015), it is a period of supervised work, where you'll have the opportunity to experience working in a specific role with a company. Teachers do well in the right placement. School placements are an integral element in teacher education and commonly, both students and teachers consider placements a critical aspect of initial teacher education. Within this context, the contemporary nature of placements and their success in meeting professional development needs, was investigated. The findings of this research indicate that students and teachers share many views and consequently several key experiences and opportunities emerge. Different priorities are, however, also highlighted. Overall perceptions suggest that school placements must be orientated towards a social constructivist paradigm. Given that they are a significant component of initial teacher education, it is imperative that the purpose and benefit of placements is clearly understood and articulated and that the characteristics and elements of successful placements are known and considered. During the last fifty years, several paradigms for teacher education have been developed and promoted. These can be viewed independently of one another, but there are points of contact and overlap. In practice no one paradigm addresses all aspects of teacher education. Each involves the student engaging in practice on professional placement and emphasises different elements of learning to teach, resulting, thereby, in different placement experiences.

**ABSTRACT**

Corporate insolvency and restructuring represent critical junctures in the life cycle of businesses, with profound implications for stakeholders ranging from creditors to employees and shareholders. This paper delves into the legal approaches to financial distress faced by corporations, aiming to provide a comprehensive understanding of the mechanisms and challenges inherent in insolvency proceedings and restructuring efforts. The aim of this study is to analyze the diverse legal frameworks and strategies utilized in addressing corporate financial distress. Through a combination of doctrinal legal research, comparative analysis of insolvency laws across jurisdictions, and examination of case studies, this research seeks to elucidate the intricacies of corporate insolvency and restructuring processes. Key findings from this study highlight the multifaceted nature of corporate financial distress and the complexities involved in navigating insolvency proceedings. The research identifies various legal mechanisms available to distressed companies, including bankruptcy, liquidation, debt restructuring, and formal insolvency proceedings. Furthermore, it explores the role of stakeholders such as creditors, shareholders, employees, and regulatory authorities in shaping the outcome of insolvency and restructuring efforts. The relevance of this study lies in its practical implications for policymakers, legal practitioners, corporate executives, and scholars grappling with issues of corporate financial distress. By providing insights into legal approaches to insolvency and restructuring, this research informs decision-making processes aimed at preserving value, protecting stakeholders' interests, and promoting economic stability. Moreover, it underscores the importance of robust legal frameworks that strike a balance between creditor rights and debtor rehabilitation, fostering an environment conducive to corporate resilience and growth.

**ABSTRACT**

In this study, we used a pneumatic spray pyrolysis technique at 450°C to deposit  $\text{Sn}_{1-x}\text{Ni}_x\text{O}_2$  thin films ( $0.0 \leq x \leq 0.10$ ) on glass substrates. The influence of doping content on the films structural and optical was investigated. Structural characterization by X-ray diffraction indicated that the rutile phase of  $\text{SnO}_2$  is present in all thin films, and crystallite sizes are estimated to be in the range of 27–47 nm. The optical bandgap energy increases from 3.83 to 4.01 eV as the dopant content increases according to the Burstein-Moss effect. Resistivity is affected by doping and the thickness of thin films.

**Keywords:** Thin films, X-ray diffraction, Optical properties.

**ABSTRACT**

This study is part of the ongoing quest for novel therapeutic substances of natural origin. It focuses on the in-depth exploration of *Pistacia lentiscus L.*, situated in the eastern region of Morocco, with the aim of enhancing our understanding of its medicinal properties. The investigative process involves a meticulous analysis of its chemical composition using UHPLC/LC-MS technology, along with a comprehensive assessment of its aqueous extract, shedding light on its overall antioxidant activity and anti-inflammatory properties. In the anti-inflammatory experiment, Wistar rats were divided into three groups (n=6) and subjected to Carrageenan-induced paw edema. The groups included a Carrageenan Group receiving distilled water, an Aqueous Extract treatment Group administered the extract (400 mg/kg bw), and an Indomethacin treatment Group receiving Indomethacin (20 mg/kg bw). Paw volumes were measured using a plethysmometer at 2, 4, and 6 hours post-carrageenan injection, with the untreated left hind paw serving as a control to calculate the percentage of paw edema. The results from the UHPLC/LC-MS analysis revealed the predominance of catechin gallate and epigallocatechin gallate in the aqueous extract of *Pistacia lentiscus L.*, indicating a significant concentration of these compounds. Additionally, substantial levels of epigallocatechin, gallic acid, quercetin-3-O-glucoside, kaempferol-3-O-hexose dehydrohexose, isorhamnetin-7-O-pentose, and luteolin 7-O-glucoside were detected, expanding our understanding of the phytochemical richness of this plant. The evaluation of the total antioxidant capacity of the

aqueous extract of *Pistacia lentiscus L.* resulted in a significant measurement of 124.82 mg AA/g of extract, highlighting robust antioxidant activity. Furthermore, the results from the anti-inflammatory activity demonstrated a substantial reduction ( $p < 0.05$ ) in inflammation at various time intervals following the administration of a dose of 400 mg/kg of the aqueous extract, comparable to the effect of indomethacin. These findings present promising prospects for the potential utilization of *Pistacia lentiscus L.* in the development of new natural therapies.

**Keywords:** *Pistacia lentiscus L.*; anti-inflammatory; antioxidant; chemical composition.

**ABSTRACT**

Ensuring control safety and reliability in Fly-By-Wire Autopilot UAV/UAS systems necessitates meticulous attention to control units. The cornerstone of reliability lies in the design and implementation of both Active and Passive Control Systems. This study focuses on constructing a robust Control Subsystem for Remote Piloted Aerial Vehicle Systems (RPAVS), emphasizing the critical components and their interconnectivity. It encompasses a comprehensive array of elements, including Flight Management Computer (FMC), Automatic Flight Control System (AFCS/AFGS) consisting of Flight Control Computers (FCC), each serving distinct yet complementary functions. Key entry points in crafting an end-to-end RPAV Control Subsystem include System Overview, Flight Management System (FMS, complex computer system) design, delineating Functional & Non-functional requirements, considerations for Flight Software, and accommodating in situ adjustments. Navigation tasks, critical Guidance systems, software frameworks, and architectural blueprints (CAD or paper) form integral parts, alongside provisions for Backup systems and emergency deployment mechanisms like parachutes. Advanced Ground Control Systems powered by solar-charged battery stations enhance the operational autonomy. Detailed considerations span from circuit board intricacies to component selection, such as the trade-offs in choosing MCUs or MPUs with an OS for primary and Auxiliary Processing Units. Essential sensors, connectors, and power management components populate the FMC PCB stack, emphasizing space optimization (Fritzing/Gerbers) and redundancy. The vital Avionics System integrates FMS (FMC, Navigation by GNSS GPS/Galileo/Glonass and IRS data, AFCS/AFGS, EFIS Instrumentation), Communication, Surveillance, Power Distribution, Health Monitoring, and Mission-specific equipment, ensuring precise operation, safety, and adaptability in autonomous flight. This backbone, with its top-level requirements and critical components, provides a structural framework for seamless integration and high-altitude performance withstanding high-G forces, emphasizing inertial Guidance aided by GNSS, servo control, power supplies, telemetry, and Pyrotechnic systems for payload release and emergency. Navigation relies on a blend of sensors for precision: as well as GNSS, Inertial Navigation Systems (IMU, onboard accelerometers and gyroscopes), Barometric Altitude Sensors, LiDAR (Light Detection and Ranging), Magnetometers, Optical Flow Sensors, Radar Altimeters, RF Transponders, etc. Additionally, provisions for camera gimbal support and advanced camera analysis underscore the versatility and adaptability of the system. Through a unified approach to requirement compilation and iterative design processes, this study underscores the complexity and artistry inherent in hardware integration for autonomous aerial systems.

**Keywords:** Aerospace, Fly-By-Wire, Autopilot, UAV, RPAVS, Flight Management Systems, Flight Management Computer, Automatic Flight Control System, Flight Control Computers, Guidance systems, Avionics System, GNSS, Inertial Navigation Systems, LiDAR, Optical Flow Sensors, Radar Altimeters, RF Transponders.

**ÖZET**

Bu makale, iyileştirme için binaların ve sokakların yeniden inşasını, uluslararası deneyimler ve mimari yaklaşımlarla karşılaştırmalar yaparak ele alıyor. İngiltere'deki mevcut en iyi uygulamaları değerlendiriyor ve Estonyalı mimarların yaşlanan binalarla ilgilenirken kullandığı yerel yeniden yapılandırma ve renovasyon tekniklerini, malzemelerini, araçlarını ve topluluk katılım süreçlerini inceliyor. Değişen iklim koşulları ve renovasyon politikaları göz önüne alındığında, eski ve tarihi binaların yeniden yapılandırılması ve rehabilite edilmesine olan talebin artması muhtemeldir. Bu çalışmanın temel amacı, Girne'deki Alsancak bölgesinde, Girne'nin 9 kilometre batısında yer alan (Merkez Girne) bir vaka çalışması olarak yeniden yapılanma potansiyelini araştırmaktır. Bu alan, çeşitli inşaat dönemlerine ve tiplerine sahip 54 binadan oluşmaktadır. Makale, çoğunlukla teorik niteliktedir ve kentsel ortamlardaki yeniden yapılanma ihtiyaçlarının sonuçlarını anlamayı amaçlamaktadır. Yeniden yapılanma sürecinde sürdürülebilir ve akıllı malzemelerin kullanımının zorluklarını ve fırsatlarını tartışmaktadır. Bulgular, özellikle tarihi öneme sahip alanlarda yeniden yapılanmaya artan bir ilgi ve ihtiyaç olduğunu, ancak finansman, düzenleyici çerçeveler ve topluluk katılımıyla ilgili zorlukların da olduğunu göstermektedir. Çalışma, yeniden yapılanma sürecinde çevresel, kültürel ve ekonomik yönleri dikkate alan bütüncül bir yaklaşımın önemini vurgulayarak sonuçlanmaktadır. Sürdürülebilir kentsel gelişim için yeniden yapılanmada yenilikçi çözümler ve en iyi uygulamaları keşfetmek için daha fazla araştırma önerilmektedir.

**Anahtar kelimeler:** Yeniden yapılanma; Alsancak; Yeniden inşa; Sürdürülebilir malzemeler; Akıllı malzemeler; Binaların rehabilite edilmesi.

**RECONSTRUCTION PRACTICES: A COMPARATIVE STUDY OF LONDON,  
TALLINN AND GIRNE**

**ABSTRACT**

This article examines the concept of reconstructing buildings and streets for rehabilitation, drawing comparisons with international experiences and architectural approaches. It assesses current best practices in the UK and examines examples from Estonian architects dealing with aging buildings, using local restructuring and renovation techniques, materials, tools, and community participation processes. Given evolving climatic conditions and renovation policies, the demand for restructuring and rehabilitating old and historic buildings is likely to increase. The primary aim of this study is to explore the potential for reconstruction in Girne, focusing on the Alsancak area, situated 9 kilometers west of Girne (Central Kyrenia), as a case study. This area comprises 54 buildings of various construction periods and typologies. The article is predominantly theoretical in nature, seeking to understand the implications of reconstruction needs in urban settings. It discusses the challenges and opportunities of utilizing sustainable and smart materials in the reconstruction process. The findings suggest that while there is a growing interest and need for reconstruction, particularly in areas with historical significance, there are also challenges related to funding, regulatory frameworks, and community engagement. The study concludes by emphasizing the importance of a holistic approach that considers environmental, cultural, and economic aspects in the reconstruction process. Further research is recommended to explore innovative solutions and best practices in reconstruction for sustainable urban development.

**Keywords:** Reconstruction; Alsancak; Rebuilding; Sustainable materials; Smart materials; Rehabilitation of buildings.

**ÖZET**

Türkiye, son yıllarda Afrika Boynuzu'ndaki askeri varlığını önemli ölçüde artırmış ve bu çerçevede Somali ile kurduğu stratejik ilişkiler öne çıkan bir örnek teşkil etmektedir. Türkiye'nin Somali'deki askeri angajmanı, insani yardım girişimlerinden stratejik eğitime ve kapasite geliştirmeye kadar geniş bir yelpazede faaliyet göstermektedir. Somali'nin karmaşık güvenlik ortamında, Türkiye, Somali ordusuna yönelik eğitim ve donanım sağlayarak bölgesel istikrara önemli bir katkıda bulunmaktadır. Türk Silahlı Kuvvetleri'nin Somali'deki varlığı, terörle mücadele, güvenlik koordinasyonu ve barış operasyonları gibi farklı alanlarda etkili bir rol oynamaktadır. Türkiye'nin Somali'ye yönelik askeri destekleri, bölgedeki terör tehditleriyle mücadelede ortak bir çabanın güçlendirilmesine katkı sağlamıştır. Ayrıca, Türk askeri birimlerinin Somali'de yürüttüğü eğitim programları, Somali ordusunun savunma kapasitesini artırmada önemli bir rol oynamaktadır. Bu askeri iş birlikleri, Türkiye'nin Afrika Boynuzu'nda stratejik bir partner olarak değerlendirilmesine ve bölgesel istikrara olan katkısına vurgu yapmaktadır. Türkiye'nin Somali deneyimi, sadece güvenlik sorunlarına çözüm odaklı bir strateji değil, aynı zamanda bölgesel iş birliğini ve dayanışmayı güçlendirmeye yönelik stratejik bir hamle olarak da ele alınmaktadır. Bu noktada, 2024 yılının şubat ayında Somali ile gerçekleştirilen askeri ve stratejik iş birliği anlaşması ile Türkiye'nin hem Somali'deki hem de Afrika Boynuzu'ndaki varlığı, kapsamını ve etkisini büyük oranda artırmıştır. Bu bağlamda bu çalışma, Türkiye'nin Afrika Boynuzu olarak adlandırılan önemli bir stratejik bölgedeki artan askeri varlığını Somali örneği üzerinden analiz ederek, Türkiye'nin bölgedeki askeri varlığının ne şekilde güçlendiğinin bir analizini ortaya koyacaktır.

**TURKEY'S STRENGTHENING MILITARY PRESENCE IN THE HORN OF  
AFRICA: THE CASE OF SOMALIA**

**ABSTRACT**

Turkey has significantly increased its military presence in the Horn of Africa in recent years, with its strategic relations with Somalia standing out as a prominent example. Turkey's military engagement in Somalia spans a wide range of activities, from humanitarian aid initiatives to strategic training and capacity-building efforts. In the complex security environment of Somalia, Turkey contributes significantly to regional stability by providing training and equipment to the Somali army. The presence of the Turkish Armed Forces in Somalia plays an effective role in various areas, including counterterrorism, security coordination, and peace operations. Turkey's military support to Somalia has contributed to strengthening a joint effort against terrorist threats in the region. Furthermore, the training programs conducted by Turkish military units in Somalia play a crucial role in enhancing the defense capabilities of the Somali army. These military collaborations underscore Turkey's role as a strategic partner in the Horn of Africa, emphasizing its contribution to regional stability. Turkey's experience in Somalia is not merely focused on addressing security issues; rather, it is regarded as a strategic move to enhance regional cooperation and solidarity. In this context, the military and strategic cooperation agreement with Somalia in February 2024 has significantly expanded Turkey's presence and impact in both Somalia and the Horn of Africa. This study aims to analyze Turkey's increasing military presence in the strategically important region known as the Horn of Africa, using the Somali example as a case study, and will shed light on how Turkey's military presence in the region has evolved.

**ÖZET**

Bursa; farklı medeniyetlerden izler taşıyan, Osmanlıya ilk başkentlik yapmış, “tarihî çarşı ve hanlar bölgesi”, tarihi külliyesi, camileri, mescitleri, türbeleri, farklı dönemlerde gerçekleşen göç hareketleri ile zenginleşen kültürel yapısı, doğal değerleri, tarımı, sanayisi, ticareti, turizmi ile öne çıkan, Türkiye'nin güzide şehirlerinden biridir. Bursa, aynı zamanda bu zenginliğin getirdiği birikimle oluşturulan müzeleri ve müze konusunda yapılan çalışmalarıyla dikkat çekmektedir. Müzeler; geçmiş ve gelecek arasında bir köprü görevi gören, bünyesinde somut ve/veya somut olmayan kültürel miras unsurlarını barındıran, toplumun her kesiminden insanların erişmesine ve çeşitli deneyimler yaşamasına fırsat tanıyan mekânlardır. Bu çalışmanın amacı, ayrıntılı bir literatür incelemesi yaparak Bursa'nın müzelerine ilişkin farklı ve nitelikli bir eser ortaya koymaktır. Bu kapsamda çalışmada sırasıyla müze kavramı açıklanmış, Bursa şehri konusunda bilgi verilmiş, ardından Bursa'nın müzeleri ele alınmıştır. Çalışmada son olarak Bursa'nın müzeleri ile ilgili değerlendirmelerde bulunularak çeşitli öneriler geliştirilmiştir.

**THE CITY OF MUSEUMS: BURSA**

**ABSTRACT**

Bursa is one of the distinguished cities of Türkiye, bearing traces of different civilizations, having been the first capital of the Ottoman Empire, standing out with its “historical bazaar and inns region”, historical complexes, mosques, masjids, tombs, cultural structure enriched by migration movements in different periods, natural values, agriculture, industry, trade and tourism. Bursa also draws attention with its museums created with the accumulation of this richness and the works carried out on museums. Museums are places that serve as a bridge between the past and the future, contain elements of tangible and/or intangible cultural heritage, and allow people from all segments of society to access and experience various experiences. The aim of this study is to present a different and qualified work on Bursa’s museums by conducting a detailed literature review. In this context, the concept of museum has been explained, information about the city of Bursa has been given, and then Bursa’s museums have been discussed. Finally, in the study, various suggestions have been developed by evaluating Bursa's museums.

**ÖZET**

Geçmişte askeri, dini, ticari ve sosyal amaçlarla kullanılan birçok ulaşım güzergâhı, bugün daha çok turistik amaçlarla kullanılan güzergâhlar haline gelmiştir. Ziyaretçilere bünyesinde taşıdıkları özgün kültürel öğeleri ile farklı turizm deneyimleri yaşamasına imkân tanıyan kültür rotalarının yerel, bölgesel, ulusal ve uluslararası boyutları söz konusudur. Türkiye, yüzyıllardır çeşitli medeniyetlere ev sahipliği yapmış olması ile zengin bir kültürel mirasa sahip ülkelerden biridir. Bu çalışmanın amacı, kültür rotalarına odaklanarak Türkiye’nin kültür rotalarına ilişkin farkındalık oluşturmak ve literatüre katkı sunmaktır. Bu kapsamda çalışmada sırasıyla kültür rotası kavramı, kültür rotalarının temel özellikleri ve Avrupa’daki kültür rotaları ele alınmış, ardından Türkiye’nin kültür rotaları ile ilgili kapsamlı bilgiler sunulmuştur. Çalışmanın son kısmında ise Türkiye’nin kültür rotaları ile ilgili değerlendirmeler yapılarak çeşitli öneriler geliştirilmiştir.

## **CULTURE ROUTES OF TURKEY**

### **ABSTRACT**

Many transportation routes which were used for military, religious, commercial and social purposes in the past have become routes used mostly for touristic purposes today. Culture routes which allow visitors to experience different tourism experiences through their unique cultural elements, have local, regional, national and international dimensions. Turkey is one of the countries with a rich cultural heritage, having been home to various civilizations for centuries. The aim of this study is to create awareness about Turkey's culture routes by focusing on culture routes and to contribute to the literature. In the study in this context the concept of culture route, the basic characteristics of culture routes and culture routes in Europe have been discussed, and then comprehensive information about Turkey's culture routes have been presented respectively. In the last part of the study various suggestions have been developed by making evaluations about Turkey's culture routes.

**ÖZET**

Bir bölgenin yemek kültürü içinde bulunduğu bölgenin coğrafi özellikleri, iklim koşulları, yetiştirilen tarım ürünleri ve farklı bölgelerin yemek kültürleri gibi faktörler tarafından şekillenmektedir. Tarihsel süreç içerisinde yaşanan göçler, diğer mutfaklarla iletişim ve etkileşim gibi nedenlerle yemek kültürleri değişikliklere uğramaktadır. Günümüzde dünyada yaşanan savaş, afet ve ekonomik nedenlere bağlı olarak yaşanan insan hareketlilikleri, insanları farklı kültürlerle ve yemek kültürleri ile tanıştırmıştır. Etiyopya mutfağı da zaman içerisinde çeşitli kültürel etkileşimler sonucunda, zengin bir ürün çeşitliliği kazanmıştır. Ancak, yerel lezzetlerin yeteri kadar tanıtılmaması sebebiyle, bu yöresel ürünler zamanla unutulabilmekte ve kaybolma riskiyle karşı karşıya kalmaktadır. Bu doğrultuda çalışmanın amacı; Etiyopya mutfak kültürü, yemekleri ve özel yemek pişirme yöntemleri, kullandıkları araç-gereçler, yiyecek-içecek ritüelleri, yiyecek-içeceklerinin servis şekilleri hakkında bilgi edinmek ve Etiyopya mutfak kültürünü detaylı bir şekilde yansıtmaktır. Nitel araştırma yöntemi benimsenen çalışmada yarı yapılandırılmış görüşme tekniği kullanılmıştır. Kartopu örnekleme yöntemiyle elde edilen veriler betimsel analiz yöntemiyle analiz edilmiştir. Araştırma sonucunda elde edilen en önemli bulgu; Etiyopya mutfak kültürünün yeteri kadar tanıtılmadığıdır. Bununla birlikte Avrupa ve Amerika'da tüketilen yemeklerin çoğunun kökeninin Etiyopya olduğu düşünülmektedir. Etiyopya mutfak kültürünün korunması için gelecek nesillere aktarımının doğru şekilde sağlanması gerektiği çalışmanın diğer sonuçları arasında yer almaktadır. Yapılan bu çalışmanın Etiyopya mutfak kültürünün tanıtılmasına katkıda bulunacağı düşünülmektedir.

**CULTURAL JOURNEY IN THE KITCHEN: ETHIOPIAN CULINARY CULTURE**

**ABSTRACT**

The food culture of a region is shaped by factors such as the geographical characteristics of the region, climatic conditions, agricultural products grown and food cultures of different regions. Food cultures undergo changes due to reasons such as migrations, communication and interaction with other cuisines in the historical process. Today, human mobility due to wars, disasters and economic reasons in the world has introduced people to different cultures and food cultures. Ethiopian cuisine has also gained a rich variety of products as a result of various cultural interactions over time. However, due to insufficient promotion of local flavors, these local products may be forgotten over time and face the risk of being lost. In this direction, the aim of the study is to obtain information about Ethiopian culinary culture, food and special cooking methods, the tools and utensils they use, food and beverage rituals, and the way their food and beverages are served and to reflect the Ethiopian culinary culture in detail. The qualitative research method was adopted and semi-structured interview technique was used in the study. The data obtained by snowball sampling method were analyzed by descriptive analysis method. The most important finding obtained as a result of the research is that Ethiopian culinary culture is not sufficiently promoted. However, most of the dishes consumed in Europe and America are thought to originate from Ethiopia. Among the other results of the study is that in order to preserve the Ethiopian culinary culture, it should be transferred to future generations in the right way. It is thought that this study will contribute to the promotion of Ethiopian culinary culture.

**ABSTRACT**

This study examined the effects of interest rate on credit accessed by maize farmers in Kuje Area Council of Abuja, Nigeria. Two-stage procedure was used to select 84 respondents into maize farming in the study area. Primary data were collected using structured questionnaire complemented with an interview schedule. Data collected were analyzed with descriptive statistics (frequency count, percentages and mean) and inferential statistics (Cobb-Douglas regression). Findings from the study showed that most (72.6%) of the respondents were male and the predominant age bracket was 31– 40 years with a mean of 39 years. This implies that the maize farmers were young which could influence their desire to access loan credit for farming. Also, most (71.4%) of the respondents were married with a mean household size of 8 people. The respondents were experienced farmers with a mean farming experience of 9 years, but has a mean farm size of about one hectare representing small farm holdings. Only few (28.6%) of the respondents had contact with extension agents, while most (65.5%) of them were member of cooperative society. In terms of access to credit, majority (96.4%) of the respondents had access to credit. Sources of credit and mean volume of credit accessed as indicated by the respondents was from microfinance banks (30.9%; ₦266,538) with an interest rate of 7.32%, family and friend (30.9%; ₦266,538) with an interest rate of 3.97% and money lenders (28.6%; ₦266,538) with an interest rate of 11.96% among others. The mean volume of credit obtained by the respondents was ₦298,095. Meanwhile, variables such as household size (0.1612;  $p < 0.10$ ), farm size (0.1785;  $p < 0.01$ ), farm income (0.4705;  $p < 0.01$ ), credit awareness (0.2164;  $p < 0.01$ ) and collateral provision (0.0474;  $p < 0.10$ ) had positive and significant effects on the volume of credit accessed by the respondents. The interest rate (-0.1196;  $p < 0.05$ ) had negative and significant effects on the volume of credit accessed by the respondents. This shows that as the interest rate increases, the volume of credit accessed will decrease. The study recommends that financial institutions especially Bank of Agriculture (BOA) should be adequately funded by the Government to provide credit loans to farmers at low interest rate in order to ensure greater production that will guarantee food security.

**ABSTRACT**

Dandruff, a common scalp condition affecting individuals globally, necessitates effective and natural solutions for its mitigation. This study delves into the formulation and evaluation of an anti-dandruff herbal hair mask, exploring the potential of various natural ingredients in combating this persistent concern. The research focuses on the elegance of herbal remedies, aiming to unravel the intricate relationship between botanical elements and their efficacy in promoting scalp health. The methodology involves a meticulous selection of herbal constituents renowned for their anti-dandruff properties. Ingredients such as neem, tea tree oil, aloe vera, and rosemary are meticulously combined to create a harmonious blend. The formulation process considers not only their benefits but also their synergistic effects, aiming for a comprehensive solution that addresses the multifaceted nature of dandruff. Evaluation of the herbal hair mask involves both qualitative and quantitative assessments. Clinical trials on a diverse group of participants gauge the product's effectiveness in reducing dandruff and improving overall scalp condition. Additionally, laboratory analyses delve into the biochemical aspects, shedding light on the mechanisms through which these herbal ingredients interact with the scalp environment.

**Keywords:** Herbal hair mask, anti-dandruff, natural ingredients, scalp health, botanical remedies, neem, tea tree oil, aloe vera, rosemary, holistic hair care, clinical trials, synergistic effects, biochemical analysis.

## **KALSİYUM BİYİYARARLANIMINDA PROBİYOTİK VE PREBİYOTİKLERİN ROLÜ**

**Mena AZİMİ**

Ondokuz mayıs üniversitesi, lisanüstü eğitim enstitüsü, Beslenme bilimleri, Samsun, Türkiye.

### **ÖZET**

Kalsiyum, insan vücudunda en çok bulunan mineral olup Plazma kalsiyum homeostazı, iskeletin sürdürülmesi, hormonal sekresyonun düzenlenmesi, sinir impulslarının iletilmesi ve vasküler faaliyetler gibi insan yaşamının sürdürülmesinde hayati bir rol oynar. Prebiyotiklerin kalsiyum emilimine etkisi ise alt bağırsağa ulaşan birkaç tür prebiyotik bitki lifi, kısa zincirli yağ asitlerinin üretimi yoluyla bağırsak mikrobiyomunun değişmesine neden olur. Ortaya çıkan düşük pH ortamının, kalsiyum fosfat oluşumu gibi minerallerin kompleksleşmesini azaltır ve böylece, kemik birikimini veya tutulmasını desteklemek için daha fazla kalsiyum emilecektir. Çalışmalara göre probiyotiklerin kemik koruyucu etkisi barsak geçirgenliğini azaltır, kısa zincirli yağ asitlerini artırır, barsaktaki inflamasyonu azaltır, kemikteki proinflamatuvar sitokinlerin seviyesini düşürür ve osteoklastik kemik rezorpsiyonunu azaltır. Bağırsak mikrobiyotasının kemik sağlığını önemli ölçüde etkiler bağırsak mikrobiyotasi Ca emilimini artırabilir ve kemik hücreleriyle etkileşime girdiğine ve kemik metabolizmasını düzenlediğine bağırsak serotonin üretimini module edebilir. Bağırsak mikrobiyomu, konak genetiği, diyet, yaş, coğrafya, konakçı bağışıklık durumu, seyahet bazı ilaçların kullanımı gibi birçok faktörden etkilenen yaşamın ilk aşamasından itibaren insan vücudu ile etkileşime girer. Lif fermantasyonundan SCFA üretimini arttırdığı bilinen cinslerde bağırsak mikrobiyomunda prebiyotik beslemenin neden olduğu değişiklikler, artan fraksiyonel kalsiyum emilimi (insan ve hayvan modelleri) ve kemik yoğunluğu ve gücü (hayvan modelleri) ile önemli ölçüde ilişkilidir osteoporoz riskini potansiyel olarak azaltmak için anlamlı olduğu kar kabul edilen diyet stratejileridir. Probiyotiklerin mineral emilimi üzerindeki olumlu etkisi, bağırsak mikrobiyomunun bileşimi ve metabolizması ile ilgili olarak umut vericidir. Tahılların fermantasyonu ve mahsullerin ıslatılması ve çimlenmesi, hem insan bağırsağı mikrobiyomunu hem de genel sağlığı sürdürebilen uygun doğal mineral takviyeleri sağlama potansiyeline sahiptir. Fermente gıdalar ve içecekler, çözünür ve biyoyararlı mikro besinlerin seviyelerini artırmada yardımcı olabilir ve "besin takviyesi" görevi görebilir.

**Anahtar Kelimeler:** probiyotik , prebiyotik, kalsiyum biyoyararlanimi

**THE ROLE OF PROBIOTIC AND PREBIOTICS IN CALCIUM BIOAVAILABILITY**

**ABSTRACT**

Calcium is the most abundant mineral in the human body and plays a vital role in maintaining human life in such areas as plasma calcium homeostasis, maintenance of the skeleton, regulation of hormonal secretion, transmission of nerve impulses, and vascular activities. The effect of prebiotics on calcium absorption is that several types of prebiotic plant fibers reaching the lower intestine cause changes in the intestinal microbiome through the production of short-chain fatty acids. The resulting low pH environment reduces the complexation of minerals, such as calcium phosphate formation, and thus more calcium will be absorbed to promote bone deposition or retention. According to studies, the bone-protective effect of probiotics reduces intestinal permeability, increases short-chain fatty acids, reduces inflammation in the intestine, reduces the level of pro-inflammatory cytokines in the bone, and reduces osteoclastic bone resorption. The intestinal microbiota significantly affects bone health. The intestinal microbiota can increase Ca absorption and modulate intestinal serotonin production, where it interacts with bone cells and regulates bone metabolism. The intestinal microbiome is affected by many factors, such as host genetics, diet, age, geography, host immune status, travel, and the use of certain medications. interacts with the human body from the first stage of life. Changes caused by prebiotic feeding in the gut microbiome in genera known to increase SCFA production from fiber fermentation are significantly associated with increased fractional calcium absorption (human and animal models) and bone density and strength (animal models) in osteoporosis. Dietary strategies that are considered meaningful can potentially reduce the risk of The positive effect of probiotics on mineral absorption is promising regarding the composition and metabolism of the gut microbiome. Fermentation of grains and soaking and germination of crops have the potential to provide suitable natural mineral supplements that can sustain both the human gut microbiome and overall health. Fermented foods and beverages can help increase levels of soluble and bioavailable micronutrients and act as a “nutritional supplement.”

**Keywords:** probiotics, prebiotics, calcium bioavailability

**KALILA AND DIMNA” AS A SOURCE OF MORAL-DIDACTIC MOTIVES**

**Fidan NASIROVA (ORCID: 0000-0001-8178-7287)**

Azərbaycan Milli Elmlər Akademiyası, Z.M.Bünyadov adına Şərqsünaslıq İnstitutu,  
Bakı, Azərbaycan

**ABSTRACT**

Present research studies the idea-thematic features of the immortal monument of Eastern literature “Kalila and Dimna” and its didactic-educational motives, which were analyzed in the context of moral values. “Kalila and Dimna”, also called “Karataka, Damanaka” in Sanskrit, which is considered as one of the ultimate examples of the semi-didactic-semi-fictional “genre of literature” containing a complex set of humanitarian knowledge of its time, is a written form of stories and narratives that was orally passed down in India from generation to generation. The origin of “Kalila and Dimna” is closely related to “Panchatantra” (five wisdoms, five laws) originating from Indian folklore. However, as it is seen from the name of Panchatantra, there are only five chapters, while “Kalila and Dimna” was extended to 17-18 chapters as a result of the additions by various translators. Compiled by “the head of the Brahmins”, the philosopher Beydaba for the Indian king Dabshalim this work is an invaluable source in terms of reflecting the historical reality, literary norms, and artistic-aesthetic principles of the period in which it was created, in addition to its deep meaning, content, spiritual and humanistic ideas that it preached. The main characters of the work are symbolically two jackals - Kalila, who serves good, and Dimna, who represents evil. The praise of such human qualities as friendship, faithfulness, loyalty, justice, courage and truthfulness, and the exposure of negative aspects such as betrayal, lies, malice constitute the main theme of the work. This work, rich in moral and didactic motives, is read with great interest, “where fun, humor, seriousness, wisdom and philosophy are combined, a vast space for the philosopher, a training ground for the mind, an unforgettable memory for lovers of words, a beautiful book for those who understand the meaning of these all, is a treasure of lessons”. Motifs and plots of “Kalila and Dimna” widely spread in the Muslim East, went through a complex evolutionary path and penetrated the European and world literature. Nowadays it is hard to find a fable, an allegorical story where the parallels with this work are not observed in one form or another.

**Keywords:** “Kalila and Dimna”, “Panchatantra”, ancient Indian legend, literary genre.

**Özet**

Dünyamızı hızla kirletmemiz nedeniyle meydana gelen atıklar için yeni tavsiyeler ve projelerin ihtiyaç olduğu artık herkes tarafından bilinmektedir. Bu projelerden biri de toprak ve bitki kalite ve randımanının artırılmasına yönelik solucan dışkılarının yani solucan gübrelere kullanılmasıdır. Solucan gübresi; özel diye tabir ettiğimiz solucanların toprakta bulunan veya toprağa sonradan katılan organik maddelerin bitkilere faydalı olabilecek formlara değişimini sağlama işlemi neticesinde oluşan ürünlerdir. Solucanlar; toprak strüktürünü, randımanını ve ürün verimini ciddi şekilde pozitif yönde olacak şekilde tesir edebilmektedirler. Bir başka deyişle söyleyebiliriz ki, vermikompost bitki köklerinin gelişim sağlamlarını destekler, kök hastalıklarını önemli bir şekilde sayıca düşürdükleri, çayır ve tarla bitkilerinin randımanını ve bilhassa tahıl kalitesini (örn. protein içeriği) artırdıkları hem laboratuvarda hem de arazide ispatlanmıştır. Sürdürülebilir tarım uygulamaları bilindiği üzere topraklardaki organik maddenin varlığı, kullanımı ve stabilitesi ile doğru orantılı bir şekilde gelişmektedir. Bu sebepten dolayıdır ki toprağın randımanını yükseltmek adına toprağa çeşitli organik gübrelere ilavesinin sağlanması gerekmektedir. Ancak gübreleme programları genellikle kimyasal gübreler ile yapılmakta ve organik gübreler neredeyse hiç kaile alınmamaktadır. Netice itibarıyla, gittikçe çorak hale gelen topraklar geri dönülmez bir kısır döngünün içerisinde canlılıklarını devam ettirmeye çalışmaktadırlar. Öyle ki; Türkiye’de 2022 yılında kullanılan kimyasal gübre miktarı hektar başına 561 kg olarak hesaplanması ve organik gübre ile kıyaslandığında miktar olarak oldukça üst seviyelerde olması, bahsi geçen durumun ne kadar ciddi olduğunu göstermektedir. Bu hususta dikkat edilmeyen bir başka husus ise rakamsal anlamda yüksek olan kimyasal gübrelere çevre kirliliğine sebep olması ve yüksek azot miktarları nedeniyle yeraltı sularının kirlenmeye başlamasıdır. Buradaki önemli husus, solucanların organik atıkların geri dönüşümü ile ilgili olarak atık yönetimi yer aldığı bilinmesidir. Tarımsal alanlarda organik madde miktarının yeterli gelmemesi sebebiyle tüketilen kimyasal gübreler toplumun ihtiyacını karşılamakta zorlanmakta dolayısıyla bu gübrelere bilinçsizce ve hunharca büyük miktarlarda kullanımı yapılan faaliyetin ekonomik olma durumundan çıkmaktadır. Bu bağlamda; organik gübre programlarının düzenlenmesi ihtiyacı doğacağı için söz konusu kimyasalların topraktaki sarfiyat rakamlarını azaltacak ve bitkilerin gübrelere faydalanma düzeyini yükselterek ekonomik gübreleme yapılmış olacaktır. Hem bitki ile toprak sağlığı hem de halk sağlığı açısından değerlendirildiğinde organik gübreleme çalışmalarının akılcı olduğu sonucuna varılmaktadır.

**Anahtar Kelimeler:** Toprak Sağlığı, Organik Madde, Solucan Gübresi, Kimyasal Gübre

**ORGANIC MATTER IN SUSTAINABLE AGRICULTURE AND THE  
RELATIONSHIP BETWEEN EARTHWORMS AND SOIL HEALTH**

**Abstract**

It is now well known that new recommendations and projects are needed for the waste generated by the rapid pollution of our world. One of these projects is the use of vermicomposts, i.e., vermicomposts, to increase soil and plant quality and efficiency. Vermicomposts are the products that are formed as a result of the process of transforming the organic substances in the soil or added to the soil into forms that can be beneficial to plants. Earthworms are able to affect the soil structure, yield and crop yield in a seriously positive way. In other words, vermicompost promotes the growth of plant roots, significantly reduces the number of root diseases, improves the yields of meadow and field crops and especially the quality of cereals (e.g. protein content), which has been proven both in the laboratory and in the field. Sustainable agricultural practices are known to be directly proportional to the presence, utilization and stability of organic matter in soils. For this reason, it is necessary to ensure the addition of various organic fertilizers to the soil in order to increase soil fertility. However, fertilization programs are usually carried out with chemical fertilizers and organic fertilizers are almost ignored. As a result, increasingly barren soils continue their vitality in an irreversible vicious circle. In fact, the fact that the number of chemical fertilizers used in Turkey in 2022 is calculated as 561 kg per hectare and is quite high compared to organic fertilizers shows how serious the situation is. Another issue that is not taken into consideration in this regard is that chemical fertilizers, which are high in terms of numbers, cause environmental pollution and groundwater starts to be polluted due to high nitrogen amounts. The important point here is to know that earthworms are involved in waste management regarding the recycling of organic wastes. Chemical fertilizers consumed due to the insufficient amount of organic matter in agricultural areas have difficulty in meeting the needs of the society, so the unconscious and brutal use of these fertilizers in large quantities makes the activity uneconomical. In this context; since the need to organize organic fertilizer programs will arise, it will reduce the consumption figures of these chemicals in the soil and economic fertilization will be made by increasing the level of utilization of fertilizers by plants. When evaluated in terms of both plant and soil health and public health, it is concluded that organic fertilization studies are rational.

**Keywords:** Soil Health, Organic Matter, Vermicompost, Chemical Fertilizer.

## **1.Giriş**

Yaşadığımız dünyayı hızla kirletiyoruz. Atıklar için yeni öneri ve projelerin gerekliliği tartışılmaz biçimde açığa çıkmıştır. Pazar atıklarını ve evlerimizde meydana gelen meyve-sebze atıkları gibi organik kökenli atıkları artık çöpe atmak yerine vermikompost teknolojisi ile dönüştürmek mümkündür. Solucan gübresini basit bir dille ifade etmek gerekirse, kırmızı Kaliforniya Solucanlarının bitkisel ve hayvansal atıklarını işleme sonucu meydana gelen solucan dışkısıdır. Solucan gübresi; mikro florlar ve özel solucanların organik maddeleri hümkik maddelere dönüştürme işlemi sonucunda meydana gelen bir üründür. Görünüş olarak siyah toprağa benzer ve itici bir kokusu yoktur. Kırmızı solucanlar namı değer Eisenia fetida gübre üretimi için en iyi solucanlardır. Sıradan toprak solucanlarına göre iç içe ve kalabalık bir nüfus yoğunluğunda yaşamayı sevmektedirler ve ayrıca da saklanmazlar. Doğada hemen hemen her toprağın derinliklerine yönelmiş bir kırmızı solucan bulamazsınız (Anonim, 2014).

Sürdürülebilir tarım uygulamaları büyük ölçüde topraklardaki organik madde dengesine bağlıdır (Dostal, 2002). Son zamanlarda, yüksek kaliteli tarım ürünleri elde etmek ve çevreyi tarımsal uygulamalardan korumak amacıyla organik tarımsal atıkların bitkisel üretimde kullanılmasına ilgi artmaktadır (Vavoulidou ve ark., 2004). Bitki büyümesi, çevresel filtreleme, su düzenleme ve depolama gibi çeşitli işlevlerdeki toprakların performansı, bunların kalitesinin göstergesidir (Larson ve Pierce, 1991). Tarımda toprağın kalitesi ve verimliliği önemli faktörlerdir. Başarılı bir ürün yetiştirme sisteminin zorluklarını hafifletmek için yeterli toprak organik maddesine sahip olmak önemlidir; bu nedenle toprağın verimliliğini artırmak için çeşitli organik gübreler tavsiye edilmektedir (Petkova, 2002). Türkiye'nin gayri safi üretiminin büyük bir kısmı tarımsal faaliyetlerden kaynaklanmaktadır. Bilindiği üzere; tarım sektöründe buğday, arpa, tütün ve pamuk ürünleri üretimi önemli miktarda tarımsal atık oluşmasına neden olmaktadır. Normalde bu atıklar ya yakılmakta ya da çürümeye bırakılmaktadır. Atıkların çevre üzerinde önemli bir etkisi vardır ve her iki durumda da söz konusu atıklar kullanılabilir kaynakların yok olmasına neden olmaktadır (Başçetinçelik ve ark., 2005).

Mineral gübre ve böcek ilacı gibi kimyasal maddelerin kullanılmadığı tarım ve organik maddelerin kullanımını içeren organik üretim, "organik tarımın" temel ilkesidir. Yeşil gübre kullanımı, organik tarımda bitki besin gereksinimlerini karşılamak için organik gübrelerin uygulanmasıyla birlikte şiddetle tavsiye edilen bir yöntemdir. Organik gübreler ve yeşil gübreleme topraktaki biyolojik aktiviteyi artıran uygulamalardır (Çengel ve ark., 2009).

İnsan ihtiyaçlarının karşılanmasında ön sıralarda yer alan tarıma dayalı gıda sanayi, son yıllarda yaşanan ekonomik krizlerden, toprağın analiz edilmeden kaynaklanan yanlış gübre

uygulanmasından ve dolayısıyla bu gübre uygulamasının sebep olduğu toprağın tuzlanması ve asitlenmesi gibi tarımsal faaliyetlerden ve kısmen de olsa artık tüm gerçeklikle kabul edilen iklim değişikliğinin olumsuz etkilerini fark ettirmektedir. Tüm bu hatalar nedeniyle tarımsal arazilerimizin verimliliği maalesef gittikçe azalmaktadır (Bellitürk, 2010).

Tarımsal alanlarımızdaki toprakların organik madde bakımından fakir olduğu herkes tarafından bilinmektedir. Ancak potasyum açısından yeterli, fosfor açısından ise kısmen yeterli olan toprağın nadasa bırakılmamasından ve işlenen ürün tarafından kaldırılması nedeniyle üretim yapılan toprakta zamanla fosfor, potasyum ve organik madde bakımından fakirleşme durumunun yaşanabileceği göz önünde bulundurulmalıdır. Ülkemizde birçok tarım ürününde üretimden tüketime kadar çeşitli sıkıntılar ile karşılaşmaktadır. Gübreleme programlarının seçiminde sadece çiftçilerinin gözlemlerinin değerlendirilmesi dolayısıyla gübreleme faaliyetlerinin toprak ve yaprak analizine göre yapılmaması da bu sorunlardan biri sayılmaktadır. Özellikle gübre girdilerinin maliyeti dengeli gübreleme programının uygulanması ile kısmen de azaltılabileceği bilinmelidir. Bunu yapmanın tek yolu vardır; o da ekim yapılması planlanan tarım alanının çiftçi tarafından çok iyi tanınmasıdır. Tanınma işlemi, toprağın kimlik kartını çıkartmak gibidir. İçerisinde ne var ne yok bilinmesidir (Bellitürk, 2009).

Türkiye İstatistik Kurumu'nun düzenli olarak yaptığı veri toplama çalışmalarında, 2022 yılı için Türkiye çapında toplam tarım alanı, 238.639.481 dekar olup bunun 165.096.258 dekarı ekilen alan olarak bildirilmiştir. Yine aynı şekilde, toplam tarım alanı 38.482 bin hektar olarak söz konusu kurum tarafından hesaplanmış olup 20.194 bin hektar alan ise toplam işlenen tarım alanı sınıfına girmektedir. Tekirdağ bazında değerlendirildiğinde; işlenen tarım alanı ise 4.153.674 dekar olarak kayıtlara geçmiştir. 2022 yılında çiftçiler tarafından kullanılan kimyasal gübre miktarı toplamda 11.332.709 ton, bunun azotlu olanı, 7.520.871 ton, fosforlu olanı, 3.550.343 ton ve potaslı olanı ise 261.495 ton olarak bulunmuştur. Dolayısıyla; Türkiye'nin 2022 yılı nüfusu da göz önüne alınarak tüm bu veriler değerlendirildiğinde; kişi başına düşen ekilebilir (işlenebilir) tarım alanı 0,24 ha/kişi olduğu görülür. Diğer bir veri ise; hektar başına kullanılan kimyasal gübre miktarı, 561 kg'dır. Bu oldukça yüksek miktar olup tarım sektöründe organik gübre miktarının da en az kimyasal kadar kullanılması gerektiği fikri bilimsel otoriteler tarafından kabul görmeye başlamıştır (TÜİK, 2022).

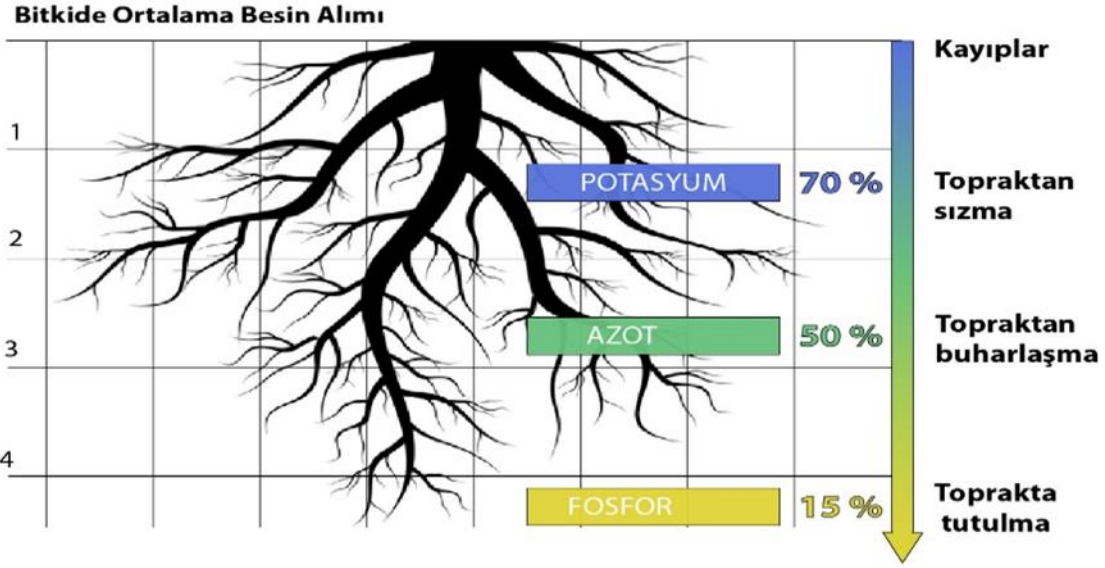

Verimliliği artırıcı tarım yöntemleri arasında kimyasal gübre kullanımı oldukça önemli bir yer tutmaktadır. Ancak hem dünyada hem de ülkemizde verimliliği artırmak amacıyla yaygın ve oldukça fazla miktarda kullanılan bir gübre türü, kimyasal gübreler olarak adlandırılmaktadır.

Özellikle bilinçsiz ve ihtiyaçtan fazlası olacak şekilde uygulanan gübreleme programlarının ekonomik kayıplara yol açması yetmiyormuş gibi aynı zamanda çevre kirliliğine de yol açmaktadır. Bu sebepten azot kirliliği gibi önemli bir çevre kirliliği unsurunun önlenmesi için azotlu gübrenin sızmasını ve birikmesini önleyecek gerekli teknik önlemlerle yani kısacası araziye bilinçli bir şekilde tatbik edilmesi gerekmektedir. Mineral gübrelerin hiç kullanılmaması ya da kullanımının sınırlandırılması tarımsal üretime negatif bir yönde tesir edeceğinden bu gübrelerin hem doğru miktarlarda hem de aşırıya kaçmadan dengeli bir şekilde tüketilmesi ile birlikte bahsedilen problemin çözülmesi sağlanacaktır (Bellitürk, 2004).

Bilindiği üzere, toprakta yeterli derecede bulunmayan bitki besin elementlerinin kültür bitkileri tarafından daha iyi absorplanması için çeşitli gübreleme programlarının uygulanması gerekir. Yine aynı şekilde, bitki besin elementlerinin toprağa katılması organik ve inorganik kökenli gübrelerin kullanılması ile gerçekleşmektedir. Bu bağlamda; tarımda kullanılan inorganik gübrelerden kaynaklanan çevre kirliliğinin ve bu kirliliğin insan ve halk sağlığı üzerindeki negatif tesirleri son yıllarda oldukça fazla gündeme gelmektedir (Bellitürk, 2005). FAO'nun yapmış olduğu açıklamaya göre; Avrupa'da sıkı (kil yapısı büyük bir çoğunlukta olan) ve derin yapılı tarım topraklarında buğday yetiştirmekten elde edilen gelirin 1/7'si gübreleme maliyetini temsil ederken, benzer karakteristik özelliklere sahip Trakya Bölgesi'nde ise gübreleme maliyetinin 1/4'ü karşılanmaktadır. Yani, buğday ekiminden elde edilen toplam gelir, buğday ekiminden elde edilen gelirin 4/4'ü kadar olup, bunun 1'i gübreleme maliyetini temsil etmektedir. Sebebi ise Trakya'da organik gübrelerin kullanılmaması, ülkemizde ise sadece kimyasal gübrelerin kullanılması olduğu söylenmektedir (FAO, 2019). Bu çalışmayla, sürdürülebilir tarımda organik madde ve solucanların toprak sağlığı ile ilişkisinin tarım ve çevre dostu uygulamalar açısından önemi ortaya konmuştur.

## **2. Toprak Organik Maddesine Faydası Olmayan Tarımsal Uygulamalar**

Topraklarda organik maddenin düşük olması yanında, pH değerinin de nötrün çok altında veya üzerinde olması durumlarında bazı ekstrem (örneğin çay bitkisi asit karakterli topraklarda iyi yetişir) bitkilerin dışında birçok bitki sağlıklı olarak yetişmemektedir. Ayrıca toprak organik maddesinin %1 ve altında olması durumunda, özellikle bu tip topraklara uygulanan kimyasal gübrelerdeki N'un yarısı, P'un %70-85'i ve K'un %30 civarı çeşitli sebeplerle bitkiler tarafından alınamamaktadır. Buna ilişkin şekil 1'de verilmiştir.

**Şekil 1.** Organik madde düzeyi düşük olan topraklardaki N, P, K elementlerinin alınabilir oranları

Çay gibi özel bitkilerin dışında, tarımsal amaç için yetiştirilen bitkiler nötr değerinin altında veya üzerinde olan toprak pH'ları varlığında genellikle verim düşüklüğü ortaya çıkartırlar. Bu tip pH bakımından uygun olmayan aynı zamanda düşük organik maddeye sahip tarım topraklarının mutlaka ıslah edilmesi gerekmektedir. Toprak pH değerine göre elde edilen verim oranlarını gösteren örnek Çizelge 1'de sunulmuştur (Halliday ve ark., 1992).

**Çizelge 1.** Bazı tarla bitkileri ile toprak pH değeri arasındaki ilişki (Halliday ve ark., 1992).

Ürün	pH				
	4.7	5.0	5.7	6.8	7.5
	Ortalama Verim (En iyi: 100; En kötü: 0) (%)				
Mısır	34	73	83	100	85
Buğday	68	78	89	100	99
Soya fasulyesi	65	79	80	100	93
Yulaf	77	93	99	98	100
Arpa	0	23	80	95	100
Yonca	2	9	42	100	100
Çayır otu	31	47	66	100	95
Buğday	34	73	83	100	85

Çizelge 1'den de görüldüğü gibi, örneğin buğday bitkisinden %100 verim alınabilmesi için en uygun pH değerinin 6,8 olduğu görülmektedir. Şekil 2'te organik gübrelerin bitkileri besleme görevinin yanında toprakları ıslah ettiği görülmektedir. Buna karşın kimyasal gübreler, sadece bitki ile ilgilenmekte toprak canlılığına herhangi bir katkıları bulunmamaktadır. Toprak içerisinde organik madde artışı dolaylı yoldan topraktaki makro ve mikro elementlerinin de

miktar olarak yükselmesini sağlamaktadır. İlâveten topraktaki faydalı mikroorganizmaların popülasyonu da artmış olmaktadır. Bitki köklerinin beslenmesi faaliyeti her iki gübrenin temel fonksiyonun arasında bulunmakta ancak faydalanma mekanizması açısından değerlendirildiğinde, organik gübrenin daha kapsamlı bir işlevi olduğu görülmekte ve kimyasal gübreye nazaran toprağa çeşitli avantajlar sunmaktadır.

**Şekil 2.** Organik gübre ve kimyasal gübre arasındaki farklar.

### **3. Toprak Organik Maddesine Faydası Olan Tarımsal Uygulamalar**

Solucanlar; toprak yapısını, verimliliğini ve ürün verimini ciddi şekilde etkileyebilmektedirler. Besleyici özellikleri ve galeri açıcı fonksiyonları sayesinde genel toprak yapısını olumlu yönde iyileştirebilmekte, su sızmasını artırabilmekte, yüzeye uygulanan organik madde, kireç ve gübrelere toprağa karışmasını (nüfuz etmesini) hızlandırabilmekte ve toprağın gözenekli yapısını artırabilmektedirler. Ayrıca bitki köklerinin gelişimini destekledikleri, kök hastalıkları sayısını önemli ölçüde azalttıkları, çayır ve tarla bitkilerinin verimini ve özellikle tahıl kalitesini (örn. protein içeriği) artırdıkları hem laboratuvar ortamında hem de arazide kanıtlanmıştır. Bundan başka solucanlar, metabolizmalarının nitrojen (N) içeren ürünlerini ölü dokudaki protein, atık ürünler (idrâr) ve epidermal bezler tarafından salgılanan mukoprotein şeklinde toprağa geri döndürdükleri için toprağın nitrojen döngüsünde önemli bir rol oynadıkları da bilimsel otoriteler tarafından bilinmektedir. Pek çok ülkede toprak asitliği dikkate alınması gereken ciddi bir sorundur. Alınmadığı takdirde tarımsal üretimin devamı söz konusu olamamaktadır. Amonyum temelli azotlu gübrelere kullanımı ve azot bağlayan legüminozlar toprak asitleşmesini önemli bir seviyede arttırdığı kayıt altına alınmıştır. Asitlenmeyi dengelemek için toprak yüzeyine kireç uygulanır. Ancak bu kirecin ihtiyaç duyulan kök bölgesine nüfuzu

genellikle çok yavaştır. Bazı arařtırmalara gre, Yeni Zelanda ve Avustralya gibi lkelerde, bazı solucan trlerinin kirecin topraęa nfuzunu ve dolaylı olarak pH'ını arttırabildięi bildirilmiřtir (Mısırlıoęlu, 2017).

(a)

(b)

**řekil 3.** (a)'da kimyasal gbre (b)'de ise solucan gbresi.

řekil 3 (a)'da bir taban kimyasal gbresi olan DAP (Diamonyum Fosfat) ve řekil 3 (b)'de organik gbre olan solucan gbresi gsterilmiřtir. DAP gbresi, ierdięi fosforun %90'ından fazlası suda eriyebildięinden, topraęa verildikten hemen sonra toprak ierisinde gerekli nem saęlanırsa bitkilerin yararlanabileceęi forma dnřr. Ayrıca ierisinde bulunan azot, bitkilerin erken olgunluęa ulařmasını saęlamaktadır. Ancak, topraęı beslememektedir. Halbuki, organik gbreler tam anlamıyla toprak canlandırıcı ařı gibi davranmaktadır.

Solucanlar, topraęın yapısını, randımanını ve bitki retimini nemli seviyede tesir etmektedirler. Beslenmeleri ve galeri ama faaliyetleri yntemiyle topraęın stabilitesini olumlu ynde deęiřtirebilmektedirler. Suyun topraęın iine sızmasını ve topraęın suyun emme kapasitesini ykseltebilirler, topraęın st kısmına tatbik edilen doęal malzeme, kire ve gbrelerin toprakla karıřımını hızlandırabilirler, topraęın porozitesinin artmasını saęlayabilmektedirler. Bunun yanı sıra bitki kk geliřimini destekledikleri, kk rahatsızlıkları oranını nemli seviyede azalttıkları, ayır ve rn rekoltesi ile tahıl standardını st seviyelere ıkarttıkları gerek laboratuvar gerekse arazi řartlarında oluřturulan alıřmalarla ispatlanmıřtır. Pek ok lkede, topraklara solucanlar enjekte edilmesinin, ayır randımanını %10 ila %75 iinde deęiřen oranlarda, tahıl bitkilerinin geliřimini %39, tohum rekoltesini %35, tohumun azot ierięini %12 nispetinde ykselttięi bildirilmiřtir. İlaveten oluřturulan sera alıřmalarında,

bitki randımanını bariz biçimde etkiledikleri, bunun yanı sıra buğday ve yonca standart seviyesini yükselttikleri ispatlanmıştır. Mesela *Aporrectodea caliginosa*'nın tahıl ve yonca bitkisi biyokütlesini, sırasıyla %39 ve %21 oranında artırdığı görülmüştür. Yine bu tür solucanın tohum rekoltesini %35, tohum azot içeriğini %14 oranında yükselttiği ispatlanmıştır. Bir başka konu ise, toprak solucanlarının topraktaki azot çevriminde önemli rol oynadıkları bilinmektedir (Mısırlıoğlu, 2011; Tomati, 1995).

Arancon ve ark. (2005)'na bakılırsa az oranda toprağa katıldıklarında bile bitkilerin gelişmelerini önemli seviyede yükselten vermikompost hem çiçekçilikte hem de meyve ile sebze yetiştiriciliğinde faal bir biçimde çiftçiler tarafından kullanılmaktadır. Vermikompostun toprak yapısına kazanılmasının sağladığı bitki besin elementleriyle bitkilerin sadece sağlıklı, kaliteli ve bereketli olmalarını sağlamakla kalmaz, hümik asit ve gelişme hormonlarıyla büyümelerini de düzenli hale getirmektedir. Ayrıca, mikrobiyal aktivite ve mikrobiyal biyokütle seviyelerini de yükselterek toprak randıman ve kalite standardının yükselmesini sağlamaktadır. Bundan başka toprak kaynaklı hastalıkların ve zararlıların hasarlarını da engellemektedir.

Vermikompost bitkilerin gelişmeleri için toprakta olması ihtiyaç duyulan bitki besin elementlerini tedarik etmesi ve toprağı daha da verimli hale getirmesiyle birlikte pH, EC, havalanma, su tutma kapasitesi, partikül büyüklüğü, agregatlaşma şeklinde fizyolojik ve kimyasal niteliklerini düzenli hale getirmektedir (Bryan ve Lance, 1991; Gallagher ve Wollenhaupt, 1997; Gouin, 1998).

Bilinmektedir ki; vermikompost, solucanların kendi öz salgıları ile kazanılmış olduğu özellikler vasıtasıyla bitkilerin gelişmesinde önemli rol oynamaktadır (Shobha, 2008). Yürütülen bir araştırmada vermikompost gübresi tatbik edilmiş topraklarda azotu sabitleyen bakteriler, mikorizal mantarlar ve aktinomisetlerin popülasyonunda bir artma görüldüğü, dolayısıyla topraktaki azot miktarının artışa geçtiği bildirilmiştir (Kale, 1992).

Atiyeh ve ark. (2000a), domates ve marul tohumlarının vermikompost gübresi tatbik edilerek çimlendirilmesi ile alakalı araştırma faaliyetlerinde, büyükbaş hayvan gübresi ile vermikompost mukayese edilmiştir. Netice itibariyle; vermikompostun bitki büyümesi ile ilgili olumlu etkileri sayesinde büyükbaş hayvan gübresi ile mukayese edildiğinde çok daha iyi sonuç alındığı gözlemlenmiştir.

#### **4. Vermikompost ve Toprak Saęlığı**

Vermikompostlama, toprak solucanlarının organik madde parçalanması için çok yönlü doğal biyoreaktörler olarak kullanılmasını içeren etkili bir besin geri dönüşüm sürecidir. Solucan gübreleri toprak verimliliğini artırır, bitki büyümesini artırır ve besin zenginliği ve mikrobiyal faaliyetler yoluyla bitki patojenlerinin ve haşere popülasyonlarının çoğalmasını önler. Toprak solucanları mikro ve makro besin maddeleri ve mikrobiyal enzimler açısından oldukça verimli bir kaynak olarak değerlendirilebilir (Lavelle ve Martin, 1992). Toprak solucanları baęırsaklarındaki mikroorganizma miktarını beş kata kadar (Edwards ve Lofty, 1977) ve baęırsaklarından geçerken yutulmuş materyalde bulunan bakteri ve 'aktinomiset' miktarını 1.000 kata kadar artırmıştır (Edwards ve Fletcher, 1988). Benzer bir artış, toprak solucanlarının baęırsaklarından geçerken toplam bakteri, proteolitik bakteri ve aktinomisetlerin plaka sayımlarında da gözlenmiştir (Parle, 1963; Daniel ve Anderson, 1992; Pedersen ve Hendriksen, 1993; Devliegher ve Verstraete, 1995). Mikrobiyal popülasyondaki artışın, toprak solucanının sindirim sisteminde mikropların gelişimi için uygun koşulları ve enerjiyi saęlayan besin maddeleri açısından oldukça verimli olan ve aynı zamanda mikroorganizmaların gelişimi için bir molekölün reaksiyona girmiş hali olarak hizmet eden organik atıkların yutulması nedeniyle mümkün olduęu bildirilmiştir (Tiwari ve ark., 1989). Vermikompost ilavesinin toprak pH'ını, mikrobiyal popülasyonu ve toprak enzim aktivitelerini olumlu yönde etkiledięi (Maheswarappa ve ark., 1999) ve ayrıca olası çevre kirliliğine neden olan suda çözünebilir kimyasalların miktarını önemli ölçüde azalttıęı bilimsel otoriteler tarafından onaylanmıştır (Mitchell ve Edwards, 1997). Vermikompost ilavesi 50-500 µm arasında deęişen makro gözenek alanını genişletmekte, topraktaki hava-su ilişkisini iyileştirmekte ve bitki gelişimini olumlu yönde etkilemektedir (Marinari ve ark., 2000). Ayrıca solucan faaliyetleri toprak yapısını daha iyi bir seviyeye getirmekte ve bu nedenle kimyasalların yüzey sularına akışı azalmaktadır. Solucan kalıntıları yaşlandıkça stabil hale gelir, böylece erozyon riski büyük ölçüde azalmaktadır. Bu bağlamda toprak solucanlarının toprak saęlığı açısından toprak fonksiyonunu olumlu yönde etkiledięi anlaşılmaktadır. Onlar saęlıklı, düzgün işleyen bir toprağın işaretleridir (Farenhorst ve ark., 2000).

Toprak solucanlarının organik atık kalıntılarını parçalayarak mikrobiyal bozulmayı teşvik etmek, toprak verimliliğini daha yüksek seviyelere çıkarmak ve toprak agregasyonu gibi toprağın fiziksel niteliklerini iyileştirmek suretiyle toprak kalitesine fayda saęladığı ve yağmur veya sulama suyunun toprak profili boyunca yerçekimi etkisiyle yüzeyden aşağıya doęru

hareketini kolaylaştırdığı kanıtlanmıştır. Ancak, toprak solucanlarının popülasyonunu sınırlayan en önemli faktör gıdanın bulunabilirliğidir. Ürün artıkları ve örtü bitkileri yoluyla gıda üretmek ve bunları korumalı toprak işleme uygulamaları yoluyla toprak yüzeyinde bırakmak, toprak solucanlarının miktarını artırmak için iyi bir alternatiftir (Donahue, 2001)

Dünyanın artan nüfusu, kapsamlı ve yoğun bir tarımsal üretimin ve daha yüksek verimlilik sunan bir ekim sisteminin benimsenmesi ihtiyacını ortaya koymaktadır (Sadowski ve Baer-Nawrocka, 2018). Bu durum, tarımsal kimyasalların yoğun kullanımını zorunlu kılmakta ve sürdürülebilir olmayan uygulamalara ve tahrip olmuş bir çevreye neden olmaktadır (Chou, 2010). Kimyasal gübrelerin aşırı kullanımı, sürdürülebilir üretim için büyük bir tehdit olan toprak toksisitesine ve besin dengesizliğine neden olmuştur. Son olarak, besin zincirindeki bu mevcut dengesizlikten (Rojas ve ark., 2016) çiftlik hayvanlarının yanı sıra insanların da aynı düzeyde (gıda ürünlerindeki tarımsal kimyasal kalıntılardan etkilendiği tespit edilmiştir (Pimental ve ark., 2018; Rasmussen ve ark., 2016). Küresel olarak, hayvancılık, insan ve bitki faaliyetlerinden kaynaklanan toplam organik katı atık miktarı 38 milyar m<sup>3</sup> 'ten fazladır (Diacono ve ark., 2019). Büyük miktarlarda üretilen ve hayvanlar için yetersiz yem olan pirinç samanı, yüksek silika ve lingo-selüloz içeriğine sahiptir; yönetilmesi veya tamamen ortadan kaldırılması oldukça zordur (El-Dewany ve ark., 2018). Çoğu çiftçi, bu atıkları tarlada ateşle yok ederek duman gibi hava kirliliğine neden olduklarının farkında olamamaktadırlar (Pimonsree ve ark., 2018). Endüstriler ve eğitim kurumları maksimum miktarlarda kâğıt atık üretmekte ve bu atıklar genellikle düzenli depolama sahalarında bertaraf edilmektedir. Uygun tarımsal ve endüstriyel atıkların geri dönüşümü, toprak sağlığının daha da yüksek seviyelere çıkarılmasında önemli bir rol oynayabilmektedir. Ilıman bölgelerdeki topraklarda organik madde katkısı düşüktür, bu nedenle organik madde katkısı toprak niteliklerinin iyileştirilmesi ve verimliliğin korunması için önemli bir bileşen haline gelmiştir (Hijbeek ve ark., 2017).

Vermikompostlama için etkili bir yönetim stratejisi olarak düşünüldüğünde pirinç samanı, inek gübresi ve kâğıt atıkları potansiyel bir substrat olabilir (Sharma ve Garg, 2018). Solucan gübrelemesi, organik katı atıkların yönetimi ve solucanlar ile mikroorganizmalar vasıtasıyla organik maddenin stabilizasyonu için olası bir alternatif olduğu düşünülmektedir (Thomas ve ark., 2019). Solucan gübresi genellikle ortalama %1,5-2,2 N, %1,8-2,2 P ve %1,0-1,5 K değerlerine sahiptir. Organik karbon %9,15 ile %17,98 arasında değişebilmekte ve mikro besin maddelerini içerebilmektedir (Adhikary, 2012). Bitki besin maddelerinin organik kökenlerinin solucanlar tarafından solucan kompostuna dönüştürülmesiyle (çiftlik gübresi (FYM), ürün artıkları, evsel çöpler ve kâğıt atıkları vb) bitki besin kökenlerinin entegre kullanımı

sağlanmakta, böylece sürdürülebilir tarım yani sürdürülebilir bitkisel üretim açısından büyük ilgi görmektedir (Timsina, 2018).

### **5. Vermikompostun Bitki Gelişimi Üzerine Etkileri**

Vermikompost ismi, farklı toprak derinliklerinde yaşayan ve organik atıkları işleyen solucan gübrelerinin organik atık yığınlarını habitatları haline getiren ve gübreleri organik madde bakımından çok daha zengin olan solucan türlerinin yetiştirilmesinden (kültüre alınmasından) ileri gelmektedir. Başka bir deyişle vermikompost, ortamda bulunan solucanların sindirim sisteminden geçişleri sırasında organik maddelerin (bitki ve hayvan artıkları ve atıklar) hızlandırılmış hümifikasyon, detoksifikasyon ve dezenfeksiyon işleminden kaynaklanan solucan dışkısıdır. Solucan kompostunun toprağa eklenmesiyle tarımsal üretim, verimlilik ve toprak sağlığı açısından oldukça önemli olan organik maddeler zenginleştirilmiş toprağa taşınmakta, besin maddelerinin miktarının ve bitkilere alınabilirliğinin artması gibi faydalar sağlanmaktadır. Bitkiler, bitki büyüme düzenleyicileri ile birlikte bitki hastalıklarını önleyici tedbirler ve mikrobiyolojik tedbirler alırlar. Toprak organik maddesi sadece toprak bitkileri için besin kaynağı olmayıp, aynı zamanda toprağın fizikokimyasal ve biyolojik özelliklerini etkileyen son derece etkili bir maddedir. Toprak organik maddesi, toprakta bulunan veya dışarıdan toprağa giren tüm organik maddelerin mikroorganizmaların faaliyeti sonucu ayrışması ve değişim ürünlerinin toprağa karışması sonucu doğal koşullar altında oluşmaktadır. Tüm toprak süreçlerinde olduğu gibi toprağın organik maddesi ile diğer tüm toprak özellikleri arasında birbirine bağlı bir döngü vardır. Toprakta organik madde içeriğinin artması biyolojik süreçleri doğrudan etkileyip yoğunlaştırırken, mikroorganizma popülasyonunun ve aktivitesinin artması da organik maddenin ayrışmasını hızlandırır. Topraktaki organik madde içeriği mikroorganizmaların sayısını ve türünü etkilemektedir. Tarımsal kullanımın yoğun olduğu alanlarda bulunan topraklardaki organik madde miktarı hızla azalmakta, ilave edilmediği takdirde toprağın verimliliği ve sağlığı kaybolmaktadır. Bu kayıplar toprağın biyolojik, kimyasal ve fiziksel yapısını bozarak toprakta aşındırıcı koşulların oluşmasına zemin hazırlamaktadır. Ülkemiz gibi toprak organik maddesinin çok az olduğu tarım alanlarında, organik maddece fakir topraklara organik madde ilavesi yapılmalı, verimliliğin sürekli olarak artması ve toprak sağlığının sağlanması açısından vazgeçilmez ve önemi yadsınamaz bir öneme sahiptir. Topraktaki organik madde miktarının dikkate alınması tarımsal üretimle uğraşanların sorumluluğundadır. Aynı zamanda ülkemizde çiftçilere kimyasal gübre önerilerinin yanı sıra devletin de organik gübre önerileri yöneltmeli ve kullanımı teşvik edilmelidir (Türkyay, 2016).

## **6. Vermikompostun Toprağın Fiziksel, Biyolojik ve Kimyasal Özellikleri Üzerindeki Faydalı Etkisi**

Toprak solucanları karbon döngüsünde, toprak oluşumunda, selüloz ayrışmasında ve humus depolanmasında önemli bir faktör olarak karşımıza çıkmaktadır. Toprak solucanı faaliyetleri ve çalışmaları toprağın fiziksel, kimyasal ve biyolojik niteliklerini derinden etkilemektedir. Toprak solucanları organik atıkların doymak bilmez besleyicileridir ve gelişimleri için bu atıkların sadece küçük bir kısmını alırlar ve bu atıkların çoğunu yarı sindirilmiş bir şekilde vücutlarından atarlar (Edwards ve Lofty, 1977; Kale ve Bano, 1986; Jambhekar, 1992).

Organik madde solucanın taşlığından geçerken ince bir toza dönüştürülür, ardından sindirim enzimleri, mikroorganizmalar ve bağırsakta ayrışmasına yardımcı olan diğer fermente edici maddeler ve son olarak solucan bağırsağıyla ilişkili mikroplar tarafından küfler olgun bir ürün olan "vermikompost "a dönüştürülerek dış ortama salınırlar (Dominguez ve Edwards, 2004).

Toprak solucanı bağırsağı; yükselen organik karbon, toplam organik karbon ve azot ve nem içeriği, hareketli olmayan mikropların aktivitesi ve endosporların çimlenmesi vb. toprak solucanlarının sindirim sisteminden amilaz, selüloz, proteaz, lipaz, kitinaz ve üreaz gibi çok çeşitli sindirim enzimleri için en uygun habitatı sağlamaktadır. Bağırsak mikroplarının selüloz ve mannoz aktivitelerinden sorumlu olduğu bildirilmiştir (Munnoli ve ark., 2010). Toprak solucanları, toprağın alt tabakasını ayrıştırarak mikrobiyal bozulma için yüzey alanını artırır ve böylece solucan kompostunun aktif aşaması başlamış olur. Bu ezilmiş organik madde; bağırsak geçişi sırasında bağırsak mikropları ve sindirim enzimleriyle karışır ve en sonunda kısmen sindirilmiş, ancak tamamen sindirilmemiş bir formda "kalıplar" olarak ortaya çıkar ve bu mikroplar daha sonra evrim aşamasında ek ayrışma sürecini üstlenmektedir (Lazcano ve ark., 2008). Toprak solucanlarının mikroplarla olan bağlantısının karmaşık olduğu kanıtlanmıştır. Bazı mikrop topluluklarının toprak solucanlarının beslenme programının bir parçası olduğu gösterilmiştir ve bu durum bazı mikropların toprak solucanlarının sindirim sisteminden geçerken yok olmasıyla kanıtlanmıştır. Bu bağlamda, çeşitli mayalar, protozoalar ve *Fusarium oxysporum*, *Alternaria solani*, *Drawida calebi* gibi bazı mantar toplulukları toprak solucanları tarafından sindirilmiştir (Edwards ve Fletcher, 1988). Toprak solucanlarının, toprak substratını oksijenlendirirken sıkıştırıp parçaladıkları ve böylece mikrobiyal aktiviteyi ve biyolojik bozunma potansiyelini büyük ölçüde değiştirdikleri için sürecin önemli itici güçleri olduğu vurgulanmaktadır (Fracchia ve ark., 2006; Lazcano ve ark., 2008). Vermikompostlamanın toprak pH'ı, elektriksel iletkenlik (EC), C:N oranı ve diğer besin maddeleri üzerindeki etkileri kanıtlanmıştır. Solucan aktivitesi gübredeki pH ve C:N oranını düşürmüştür (Gandhi ve ark.,

1997; Atiyeh ve ark., 2000b). Kimyasal analizler sonucunda, solucan gübresinin ana materyale kıyasla daha düşük pH, EC, organik karbon (OC) (Nardi ve ark., 1983; Albanell ve ark., 1988; Mitchell, 1997), C:N oranına (Riffaldi ve Levi-Minzi, 1983; Albanell ve ark., 1988) ve daha yüksek miktarda azot, potasyum, toplam fosfor ve mikro besin maddelerine sahip olduğunu göstermiştir (Hashemimajd ve ark., 2004). Vermikompostun pH değerleri geleneksel komposta kıyasla biraz daha düşüktür, azot ve fosfor mineralizasyonu ve organik maddelerin mikrobiyal ayrışma yoluyla ara organik asitlere, fulvik asitlere ve hümik asitlere dönüşümü (Lazcano ve ark., 2008; Albanell ve ark., 1988; Chan ve Griffiths, 1988; Subler ve ark., 1998) ve buna eşlik eden CO<sub>2</sub> üretimi gözlemlenmiştir (Elvira ve ark., 1998; Garg ve ark., 2006). Toprak solucanlarıyla ilgili bakterilerdeki çeşitliliğin faydaları düşünüldüğünde şunlar söylenebilir. Toprak solucanlarında bitki besin maddesi kullanılabilirliğini artırma yeteneğinin muhtemelen toprak solucanı bağırsak mikroflorasının aktivitesine bağlı olduğunu söyleyebiliriz. Toprak solucanları, toprak altlığını ayrışmaya tabi tutarak ve toprak mikroflorasının aktivitesini etkileyerek toprak kimyasal süreç dinamiklerini dolaylı olarak etkilemektedir (Petersen ve Luxton, 1982; Lee, 1985; Edwards ve Bohlen, 1996; Kılback ve ark., 2021).

### **7. Sürdürülebilir Tarımda Vermikompostun Ekonomik ve Çevresel Faydaları**

Maji ve ark. (2017) vermikomposttaki hümik asit zenginliğinin bitki boyunu, taze ağırlığı ve kuru ağırlığı miktar olarak artırdığını bildirmiştir. Ayrıca, kimyasal gübreye kıyasla maksimum mikrop (bakteri, mantar) miktarı ve yoğunluğu rapor edilmiştir. Vermikompost üretmek için farklı solucan türlerinin kullanıldığı bilinmektedir. Sürdürülebilir tarım için değerlendirildiğinde; vermikompost, konveksiyonel tarımdaki kimyasal gübre miktarının azaltılmasını sağlayan çok güçlü bir biyogübredir. Buradaki önemli faktör, solucanların organik atıkların geri dönüşümü ile ilgili olarak atık yönetiminde yer aldığının bilinmesidir (Bhat ve ark., 2017).

Sequeira ve Chandrashekar (2015) evsel gıda, kâğıt, sebze ve bahçe atıkları (çim ve yapraklar) ile inek gübresinin *Eudrilus sp.* tarafından vermikomposta dönüştürülmesinin sağlandığını; kompostun yüksek verime ve bakteriler, mantarlar, aktinomisetler, Pseudomonadlar, P-Solubilizatörler ve N<sub>2</sub> Fiksatorlerinden oluşan faydalı mikrobiyal gruplara sahip olduğunu bildirmiştir. Sentetik kimyasalların gelişigüzel kullanımı tarımsal üretim sisteminde birçok soruna neden olmakta ve kullanım amacı dışında organizmalar üzerinde olumsuz etki yaratmaktadır. Vermikompost, organik atıkların solucanlar aracılığıyla, yararlı bakteri

popülasyonunu tehlikeye atmadan, besin maddeleri açısından oldukça verimli olan komposta dönüştürülmesinde kullanılan önemli bir yöntemdir. Son zamanlarda birçok araştırmacı sürdürülebilir tarım için vermikompost üzerine çalışmalarını sıklaştırmıştır. Bu bağlamda; organik atıkların vermikomposta dönüştürüldüğü ve söz konusu kompostun yüksek azot-fosfor-potasyum, karbon-azot, faydalı mikroorganizma ve büyüme hormonu içeriğine sahip olduğu görülmüştür (Adhikary, 2012).Çiftlik hayvanlarının dışkıları vermikompost adı verilen sürdürülebilir bir yöntemle yönetilmeye başlanması çok yeni bir teknolojidir. Bu geri dönüşüm süreci uygulanmaya başlanmadan önce; geleneksel kompostlamadaki enerji ve kullanılan insan gücü sayısı israf edilebilmekteydi. Ancak solucan kullanımı devreye girdiğinde kompost çok hızlı bir şekilde ayrışmaya başlamakta olduğu görüldü ve geri dönüştürülebilir yüksek miktarda besin ve mikrobiyal biyokütleyle sahip bir hammadde meydana geldiği de ispatlanmıştır (Nasiru ve ark., 2013). Vermikompostlama, hem solucanlara hem de ilgili mikroplara fayda sağlayan ve geleneksel termofilik kompostlamaya göre birçok avantajı olan uygun maliyetli ve çevre dostu bir atık yönetimi teknolojisidir. Vermikompost olarak adlandırılan organik materyaller, mükemmel biyogübre kaynaklarıdır ve bunların eklenmesi tarım toprağının fizyokimyasal ve biyolojik özelliklerini iyileştirmektedir (Koç ve ark., 2021). Mükemmel fiziko-kimyasal özelliklere ve tamponlama yeteneğine sahip olan ve tüm besin maddelerini bitkilerin kullanabileceği formlara getiren vermikompostlar, antagonistik ve bitki gelişimini destekleyen bakterilerle daha üretken hale gelmekte, aynı zamanda toprak ıslahı, toprak verimliliğinin artırılması, bitki gelişimi ve sürdürülebilir tarım için patojen mikroorganizmaları, zararlıları ve nematodları önlemektedirler. Tüm hastalıklar için tedavi görevi gören muhteşem organik materyallerdir (Pathama ve Sakhivel, 2012). Domates fideleri üzerinde 1. Çiğ süt gübresi ve tütün kalıntısı, 2. Bahçe yaprakları, 3. Arıtma çamuru + pirinç kabuğu, 4. Arıtma çamuru + bahçe yaprakları ve çiğ süt gübresinden elde edilen vermikompost ile bir sera denemesi yapılmıştır; Tüm denemeler tanığa göre anlamlı büyüme göstermiştir (Hasheminajs ve ark., 2006). Lim ve ark. (2014) soya fasulyesi kabuğu ve papaya atıklarının atık yönetimi için çeşitli oranlarda *E. eugeniae* ile çalışıldığını bildirmiştir. Çeşitli 1:1 oranlarının vermikompost için en iyi kombinasyon olduğu bildirilmiştir. Vermikompostun *Petroselinum crispum* üzerindeki etkinliği incelenmiş ve sonuçlar vermikompostun yaprak boyutunu, bitki boyunu ve verimi artırdığını göstermiştir (Peyvast ve ark., 2008).Kaouachi ve ark. (2013) zeytin atıklarının *E. andrei* solucanları kullanılarak vermikomposta dönüştürüldüğünü bildirmiştir. Elde edilen vermikompostun azot-fosfor-potasyum, kalsiyum, magnezyum, sodyum ve gerekli EC ve C/N oranını arttırdığı gözlemlenmiştir.Solucan gübresi suyu ile muamele edilen mısır fideleri

normal su ile karşılaştırıldığında, solucan gübresinde bitki büyümesine yol açan hormonların varlığına işaret eden, tüy uzunluğunda belirli bir değişiklik tespit edilmiştir (Nagavallemma ve ark., 2004). Solucan gübresi uygulamasında sorgum (*Sorghum bicolor*) (Patil ve Sheelavantar, 2000), ayçiçeği (*Helianthus annuus*) (Devi ve ark., 1998), domates (*Lycopersicon esculentum*) (Nagavallemma ve ark., 2004), patlıcan (*Solanum melangona*) (Guerrero ve Guerrero, 2006). Bamya (*Abelmoschus esculentus*) (Gupta ve ark., 2008), sümbül fasulyesi (*Lablab purpureas*) (Karmegam ve Daniel, 2008), üzüm (Buckerfield ve Webster, 1998) ve kiraz (Webster, 2005) yetiştiriciliğinde olumlu sonuçlar gözlemlenmiştir. Vermikompost gübresi ile karıştırılmış toprakta yetiştirilen kırmızı yonca ve salatalığın sürgün dokularında Ca, Mg, Cu, Mn ve Zn gibi mineral içeriklerinde artış gözlenmiştir (Sainz ve ark., 1998). Bunun gibi diğer çalışmalara baktığımızda, vermikompostlanmış ördek atıkları, işlenmemiş atıklara kıyasla domates, marul ve biberde daha iyi büyüme ve gelişme sağlamıştır (Wilson ve Carlile, 1989). *P. brassicae*'nin neden olduğu lahana çürüklüğü, lahana köklerinin kil ve vermikompost kokteyline daldırılmasıyla önlenmiştir (Szcech ve ark., 1993). Vermikompostlanmış inek gübresi marul ve domates bitkilerinin büyümesini teşvik ederken, işlenmemiş ana materyal bitki büyümesini teşvik etmemiştir (Atiyeh ve ark., 2000b).

### **Sonuçlar ve Öneriler**

Tarım arazilerinde organik madde miktarının yetersiz olması nedeniyle kullanılan kimyasal gübreler ihtiyacı karşılayamamakta dolayısıyla kimyasal gübre kullanımı artışa geçmekte ve netice itibarıyla ekonomik gübreleme mümkün olmamaktadır. Ancak organik gübre kullanımıyla toprağın organik maddesinin artması, kimyasal gübre kullanımını azaltacak, bitkilerin “gübre faydalanma oranını” daha da üst seviyelere çıkartacak ve ekonomik gübrelemeyi sağlayacaktır. Sadece ekonomik gübreleme sağlanmayacak, aynı zamanda kalite ve verim de artacak, dolayısıyla üreticilerin geliri de artacak, elbette güvenlik artacak ve toprak gelecek nesillere daha verimli ve temiz bir şekilde aktarılacaktır (Bellitürk ve Goldmann Benardete, 2020). Ülkemizde gübrelerin doğru ve sürdürülebilir kullanımını sağlamak için toprak, yaprak ve su analizlerinin yaygınlaştırılması ve kalitesinin iyileştirilmesi gerekmektedir. Bilinçli gübre kullanımının yaygınlaşması ülke ekonomisine önemli katkı sağlayacağı aşikardır. Tarım alanının arttırılmasının mümkün olmaması, nüfusun sürekli değişen ihtiyaçları ve kırsal kesimde yaşayanların sayısının azalması gibi nedenlerden dolayı tüketilen kimyasal gübrelerdeki artışın azaltılmasına yönelik çalışmaların yapılması ayrıca birim alandan daha fazla ürün elde edebilmek için doğru ve bilinçli gübre kullanımının

yaygınlaştırılması gerekmektedir. Aksi halde zamanla kimyasal gübre ve tarım ilaçlarının aşırı ve dikkatsiz bir şekilde sarfiyatı yer altı ve yerüstü su kaynaklarının kirlenmesinde en büyük etken haline gelecektir. Söz konusu kirliliğin insan sağlığına oldukça zararlı olduğunu akıldan çıkartılmamalıdır. Buna göre ülkemizin her bölgesinde iklim ve toprak özelliklerinin farklı olduğu düşünülerek her bölge için bölgenin kendi özelliklerine has (spesifik) araştırmaların yapılmasının gübre kayıplarının ve çevre kirliliğinin önlenmesi açısından şüphesiz yararlı bir yaklaşım olacağı söylenebilir (Bellitürk, 2008).Organik gübrelerin mikro ve makro elementlerinin üzerindeki faydaları görülmektedir. Organik gübreler, toprakta mikrobiyolojik faaliyeti hızlandırarak strüktür, havalanma ve toprakta su tutma kapasitesinin artırılması yanında makro ve mikro besin maddelerini sağlaması gibi toprağa çok yönlü olumlu katkıları vardır.Toprağın oluşması için geçen süre onun meydana gelmesindeki zorluğu gösterir ki yaşamın devamlılığı ve medeniyetin gelişimi için hayati önem taşıyan önemli bir doğal kaynak olmaya devam etmektedir. Ülkemizde “miktar olarak tarlaya ne kadar çok gübre atarsan, o denli randıman alırsın” mantığı ile gübreleme faaliyetleri gerçekleştirilmektedir. Bunun sonucunda çoğu kez topraklarda, yetiştirilen birçok üretimde ve çevrede istenmeyen problemler meydana gelmektedir.Tarımın asıl amacı, karmaşık bir sistem olan toprakta yüksek bereketli ve ekonomik bitki yetiştirmektir. Günümüzde tarımsal üretimde verimliliği çoğaltmak amacıyla kullanılan üretim girdileri kontrolsüz bir halde artmaktadır. Kullanılan kimyasal gübreler bir taraftan randımanın yükselmesini sağlarken, bir taraftan da çevre ve insan sağlığına da negatif açıdan tesir etmektedir. Örneğin toprağa atılan amonyum nitrat gübresinin fazlası, suda çözülerek mühim bir çevre kirleticisi olabilmektedir (Bellitürk, 2012).Ülkemizde toprak üretim randımanının muhafaza edilmesi ve üst seviyelere çıkartmak için acil bir şekilde yerine getirilmesi ihtiyaç duyulan unsurlar aşağıda sıralanmıştır. Bunlar;

- Bilindiği üzere; ürün rotasyonunun (ekim nöbeti) kullanılması faaliyeti, toprak yorgunluğunun önlenmesinde esastır. Yani tarımsal uygulamalarda, ekim nöbeti faaliyetinin kullanılması,
- Toprağın organik madde miktarının muhafaza edilmesi ve miktar olarak yükseltilmesi (zenginleştirilmesi), dolayısıyla kompost ve vermikompost gibi organik gübrelerin kullanımının yaygınlaştırılmasının sağlanması,
- Topraktaki diğer önemli bitki besin maddelerinin korunması ve miktar olarak yükseltilmesi,

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

**April 09-16, 2024 / Lisbon, Portugal**

- Pek çok faydaları ile birlikte toprak erozyonunun da düşürülmesi maksadıyla organik gübre kullanımının teşvik edilmesi ve yaygın duruma getirilmesi,
- Devirmeli toprak işlemenin terk edilmesi,
- Bitki artıklarının yüzeye yakın bir yerde depolanması ve anızların yakılmaması,
- Toprağı az sıkıştırma işlemi yapan tarım iş makineleri ve traktörlerden yararlanılması,
- Aşırı kimyasal gübre sarfiyatına bağlı topraklardaki asitleşme ve tuzluluğun ortadan kaldırılması ile ilgili ıslah faaliyetlerinin gerçekleştirilmesi,
- Asit karakterli topraklarda tarım kirecinden yararlandırılması,
- Tarımda denetlenebilen ve çalışma sahasından elde edilen girdilerin uygulanması üzerinde stabil ve teknolojik yenileşim üzerine kurulu tarımsal politikalar gelişmesinin sağlanması,
- Toprağa uygun üretme-ekme işleminin yapılması (asit topraklarda yaban mersini vb. alternatif ürünler gibi) ve bu üretime uygun gübreden yararlandırılması,
- Problemleri tarım alanlarının saptanması, bu problemlerin halledilmesine ilişkin ihtiyaç olan ıslah faaliyetlerinin gerçekleştirilmesi,
- Bilgi kirliliğinin mâni olmak ve tarım işinde çalışanlara en doğru bilgilerin verilebilmesi amacıyla güncel ve bilimsel bir tarımsal veri tabanının şekillenmesine ilişkin faaliyetlerin gerçekleştirilmesi,
- Modern tarım yöntemleri kullanılırken, profesyonellere danışılması,
- Bitkilerin gübreden faydalanma oranlarının yükseltilebilmesi için; biyoteknolojinin kullanılması suretiyle bitki köklerinde atılan gübredeki bitki besin maddesi emisyonunun yükseltilmesinin sağlanması gerekmektedir (Bellitürk, 2012).

**Özet**

Bu araştırmada, bitkisel kökenli çerezlik ayçiçeği atığı (SW) ve hayvansal kökenli inek dışkısı (CM) atıkları belirli oranlarda karıştırılarak Eisenia fetida yardımıyla laboratuvar koşullarında vermikompost üretilmiştir. Bu amaçla Tekirdağ Namık Kemal Üniversitesi Ziraat Fakültesi Toprak Bilimi ve Bitki Besleme Bölümü'nde bulunan 3 Numaralı laboratuvarında 4 ay süren ve 2 tekerrürlü olarak düzenlenen söz konusu araştırma tamamıyla şansa bağlı deneme planına göre planlanarak yürütülmüştür. Denemede kapaklı özel kaplar kullanılarak 5 farklı uygulama (SW<sub>100</sub>CM<sub>0</sub>; SW<sub>75</sub>CM<sub>25</sub>; SW<sub>50</sub>CM<sub>50</sub>; SW<sub>25</sub>CM<sub>75</sub>; SW<sub>0</sub>CM<sub>100</sub>) ve her bir uygulama için de 20'şer adet Eisenia fetida cinsi solucanlar kullanılmış olup nemlendirme ihtiyacı için saf su kullanılmıştır. Deneme sonunda elde edilen 5 farklı vermikompost örneklerinde; pH, nem, organik madde, toplam N, P, K, Ca analizleri yapılmıştır. Denemenin sonunda aynı zamanda solucan sayıları da belirlenmiş ve geçen süredeki değişim değerlendirilmiştir. Araştırma sonuçlarına göre, ortalama en yüksek N, P, K, Ca, Mg ve Zn içerikleri sırasıyla %1.61; 136.0 mg/kg; 488.90 mg/kg; 515.65 mg/kg, 106.25 mg/kg ve 2.50 mg/kg değerleri ile çerezlik ayçiçeğinin en yüksek oranda olduğu SW<sub>100</sub>CM<sub>0</sub> uygulamasında tespit edilmiştir. Ancak en yüksek Fe ve Cu içerikleri ise inek gübresinin en fazla olduğu (SW<sub>0</sub>CM<sub>100</sub>) vermikompost örneklerinde belirlenmiştir. Bütün parametreler göz önüne alındığında ortalama pH ve nem değerleri sırasıyla 8,58 µS/cm ve %57.73 olarak bulunmuştur. Bütün parametreler içerisinde ortalama en yüksek organik madde miktarı %85.08 ile SW<sub>75</sub>CM<sub>25</sub> uygulamasında saptanmıştır. Elde edilen sonuçlara göre, araştırmanın son günündeki 2 tekerrürün ortalamasına göre solucan sayısı en fazla 74 adet solucan ile SW<sub>75</sub>CM<sub>25</sub> uygulamasında belirlenmiş olup, başlangıca göre sadece 54 adet solucan artışı olduğu gözlemlenmiştir. Proje sonuçları hem tarımsal üretim yapan çiftçiler ve hem de vermikompost üreticileri için önemli bilgiler ortaya çıkarmıştır. **Anahtar Kelimeler:** İnek gübresi, çerezlik ayçiçeği, Eisenia fetida, vermikompost, organik madde

**OBTAINING VERMICOMPOSTING FROM MIXTURE OF SNACK SUNFLOWER  
WASTE AND COW MANURE FOR ZERO WASTE AIM**

**Abstract**

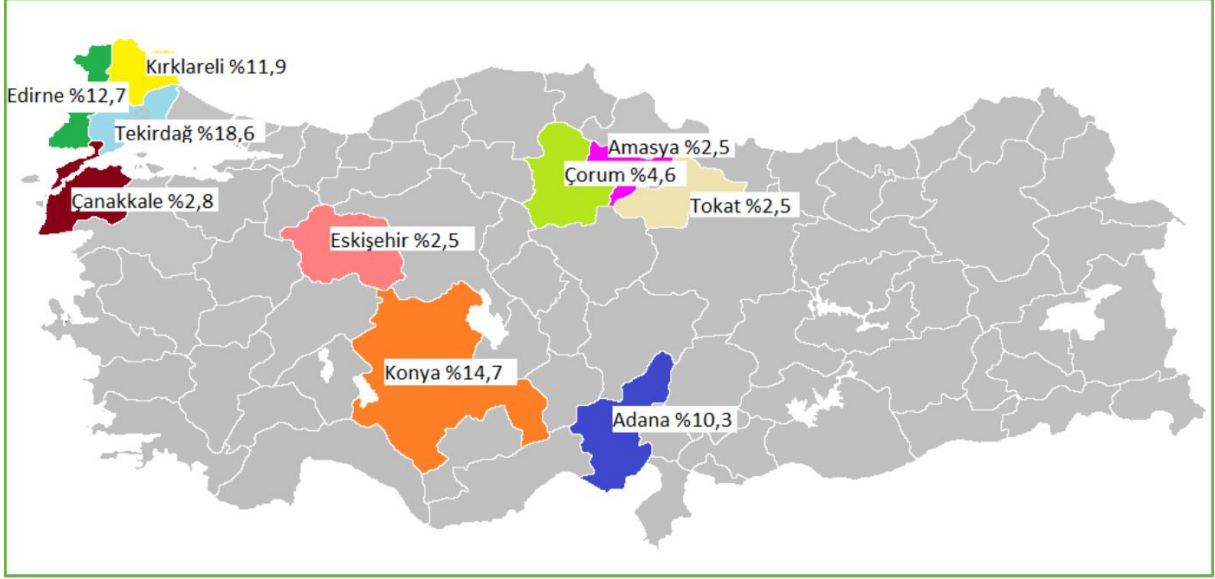

In this research, vermicompost was produced under laboratory conditions with the help of *Eisenia fetida* by mixing plant-based snack sunflower waste (SW) and animal-origin cow feces (CM) waste in certain proportions. For this aim, the research in question, which lasted 4 months and was organized with 2 replications, was planned and carried out completely according to the random trial plan in the laboratory No. 3 in the Soil Science and Plant Nutrition Department of Tekirdağ Namık Kemal University, Faculty of Agriculture. In the experiment, 5 different applications ( $SW_{100}CM_0$ ;  $SW_{75}CM_{25}$ ;  $SW_{50}CM_{50}$ ;  $SW_{25}CM_{75}$ ;  $SW_0CM_{100}$ ) were used using special containers with lids, and 20 *Eisenia fetida* earthworms were used for each application, and pure water was used for humidification. In 5 different vermicompost samples obtained at the end of the experiment; pH, moisture, organic matter, total N, P, K, Ca analyzes were performed. At the end of the experiment, worm numbers were also determined and the change over time was evaluated. According to the research results, the highest average N, P, K, Ca, Mg and Zn contents were determined in the  $SW_0CM_{100}$  application, where cow feces were at a high rate, with values of 1,61%; 136,0 mg/kg; 488,90 mg/kg; 515,65 mg/kg, 106,25 mg/kg ve 2,50 mg/kg respectively, where confectionery sunflower was at the highest rate. However, the highest Fe and Cu contents were determined in vermicompost samples ( $SW_0CM_{100}$ ) where cow manure was the highest. Considering all parameters, average pH and moisture values were found to be 8,58  $\mu$ S/cm and 57,73%, respectively. Among all parameters, the highest average organic matter amount was detected in the  $SW_{100}CM_0$  application with 85,08%. According to the results obtained, according to the average of the 2 repetitions on the last day of the research, the number of worms was determined in the  $SW_{75}CM_{25}$  application with the maximum number of 74 earthworms, and it was observed that there was only an increase of 54 number of earthworms compared to the beginning. The project results have revealed important information for both farmers engaged in agricultural production and vermicompost producers.

**Keywords:** Cow manure, snack sunflower, *Eisenia fetida*, vermicompost, organic matter.

## **1.Giriş**

Hızla artan dünya nüfusunun besin ihtiyacını karşılamak için tarımsal üretimde de artışlar gerçekleştirilmelidir. Fakat bu artış zorunluluğu, daha fazla kimyasal gübre kullanımına sebep olur. Tarımsal uygulamalarda kullanılan kimyasal maddeler birçok riski de beraberinde getirir, bunun sonucunda toprak, çevre, gıda güvenliği ve insan sağlığı açısından sıkıntıların çıkmasına sebep olur. Toprak organik maddesini korumak ve artırmak, sera gazı emisyonlarını azaltmak ve toprak verimliliğinin sürdürülebilirliği için mineral ve kimyasal uygulamaların yanında, organik tarım uygulamalarına da yer verilmesi gerekmektedir. Ayçiçeği üretimi; Türkiye’de 2020/2021 sezonunda ayçiçeği üretim miktarı bir önceki sezona oranla %1.6 oranında azalarak 2 milyon ton olmuştur. Bunun 1.9 milyon tonu yağlık olarak üretilmiştir. 2020 yılı yağlık ayçiçeği üretiminde Tekirdağ (353 bin ton), Konya (278 bin ton), Adana (195 bin ton), Edirne (240 bin ton) ve Kırklareli (226 bin ton) ilk sıralarda yer almıştır. TÜİK verilerine göre 2021 yılı ayçiçeği üretiminin bir önceki yıla göre %14.7 oranında artarak 2.4 milyon ton olacağı tahmin edilmektedir (TEPGE, 2021) (Şekil 1). Ülkemizde olduğu gibi dünyada da çerezlik ayçiçeği, önemli oranda gelir getiren bir ürün olmasına rağmen, genelde dünya literatüründe yağlık ayçiçeği ile birlikte değerlendirilmektedir. Gerçek anlamda ülkesel bazda yağlık ve çerezlik olarak ayrı ayrı nitelendirilmesine rağmen, ülkelerarası tarım organizasyonlarında (OECD, FAO, ISA. vb.) çerezlik istatistiklerine pek yer verilmemektedir. Başlıca çerezlik ayçiçeği üreticisi ülkeler, ABD, Macaristan, Arjantin, İspanya, İsrail, Çin, Türkiye ve Moldova gibi bazı Doğu Avrupa ülkeleridir. Bugün dünyada en fazla çerezlik ayçiçeği üreten ülke ABD’dir. Bu ülkenin toplam ekim alanı 200 bin ha olup üretimi de 300 bin ton civarındadır. Dünyada başlıca çerezlik ayçiçeği alıcısı ülkeler, kabuksuz olarak Almanya, Danimarka, Hollanda, Kanada, Meksika, İngiltere ve Belçika, kabuklu olarak da İspanya, Çin, Türkiye, Ürdün, Kanada, Meksika, İsrail, Almanya ve Japonya’dır (Anonim, 2023b). Ancak çerezlik ayçiçeğinin atığının değerlendirilemediği bilinen acı bir gerçektir. Sıfır Atık Yönetmeliği’nde “hammadde ve doğal kaynakların etkin yönetimi ile sürdürülebilir kalkınma ilkeleri doğrultusunda atık yönetimi süreçlerinde çevre ve insan sağlığının ve tüm kaynakların korunmasını hedefleyen sıfır atık yönetim sisteminin kurulmasına, yaygınlaştırılmasına, geliştirilmesine, izlenmesine, finansmanına, kayıt altına alınarak belgelendirilmesine ilişkin genel ilke ve esasların belirlenmesidir” şeklinde ifade edildiğine göre, bu projenin ilgili yönetmeliği de güzel bir örnek olacağı düşünülmektedir (Anonim, 2023c). Dorrel ve Vick (1997)’e göre, diğer bitkilerde olduğu gibi, ayçiçeği kabuğu taneyi kaplar ve onu dış faktörlerden korur. Yağlık ayçiçeği tanesinin toplam ağırlığın yaklaşık %21-30’u kabuktur.

Çerezlik çeşitlerde bu oran %36-50 arasında değişir. Bununla beraber çerezlik ve yağlık çeşitlerin kimyasal bileşimleri arasında, çerezliklerin biraz daha fazla lif içermesi hariç, çok önemli bir fark yoktur. Ayçiçeği bitkisinde tanedeki kabuk ve yağ oranı arasında ters bir korelasyon mevcuttur. Tanedeki yağ oranı arttıkça kabuk oranı düşer. İyi bir yağlık ayçiçeği hibrit çeşidin tanesindeki yağ oranı %50'nin üzerinde ve kabuk oranı ise, %20 civarında olmalıdır.

**Şekil 1.** Türkiye’de 2020/2021 sezonunda illere göre ayçiçeği üretim yüzdeleri.

Gerek yağlık gerekse çerezlik taneler, yüksek oranda lif (ham selüloz) ve düşük miktarlarda da ham yağ ile kül içerir. Kabuktaki selüloz, lignin, hemi-selüloz miktarları %74-90 olup, geriye kalan kısmı da lipit, protein ve mineral maddelerden ibarettir. Doty (1978) tarafından bildirildiği üzere, ayçiçeği gerek tanesinin tümü gerekse sadece kabuğu, herhangi bir kimyasal maddeyle işlem görmediği sürece, zararlı bir şey içermez. Ancak yakılma işlemi sırasında çıkardığı atmosfere karışan CO<sub>2</sub> ve diğer gazlar, tıpkı diğer yakacak ürünlerinin kullanılmasında olduğu gibidir. Ancak bu ek ürün olarak ortaya çıkan kabuğun, alternatif kullanım alanları da mevcuttur. Ayrıca çerezlik ayçiçeğinde kabuksuz tüketimde ek madde olarak ortaya çıkar. Ancak bu tür tüketim ülkemizde çok yaygın değildir. Kabuk oranı çerezlik ayçiçeği çeşitlerinde yağlıklara nazaran daha fazladır. Yağlık ayçiçeği kabukları çerezlik tiplere nazaran daha yüksek oranda protein ve yağ içerdikleri için, hayvanlar açısından iyi bir yem kaynağı olabilir. Ayçiçeği kabukları büyükbaş hayvan yetiştiriciliğinde saman yerine altlık olarak da kullanılabilir. Çünkü saman ile aynı oranda sıvı emme kapasitesine sahiptir. Ayrıca bu kabuklar kereste endüstrisinde dolgu ve yalıtım maddesi, biyolojik yakıt elde edilmesinde

ve paketlenme materyali olarak da kullanımı mümkündür. Ayrıca, Kanada'da silindir şeklinde preslenerek çıra malzemesi ve Rusya'da da etil alkol ve boya malzemesi elde edilmesinde yaygın olarak kullanılmaktadır. Yapılan bir proje çalışmasında kâğıt elde edilmesinde kullanılmayacak kadar iri olan parçalardan oluşan ayçiçeği kabuklarının kurşun içeren atık suları temizlemek için kullanıldığı bildirilmiştir (Anonim, 2023a). Görüldüğü gibi ayçiçeği kabuğu kerestecilik dahil çok çeşitli alanlarda kullanılabilir. Ancak ülkemizde genellikle yakılarak yok edilme yöntemi uygulanmaktadır. Bu çalışmada, ayçiçeği kabuğunun kompost ve/veya vermikompost değerinin olup olmaması da değerlendirilecektir. Yakın geçmişe kadar tarımsal üretimde en çok tercih edilen ahır gübresinin yabancı ot kontrolünde problemlere sebep olması ve hijyenik olmaması gibi problemlerin ortaya çıkmasıyla, 1970'li yıllardan itibaren bilim insanlarının uğraşlarıyla solucanlar kullanılarak ahır gübresi özel işlemlerden geçirilmiş ve etkisi çok yönlü olan bir yandan bitki besin maddeleri içeren bir yandan toprak ıslah maddesi olarak kullanılan vermikompost ortaya çıkmıştır (Bellitürk, 2017). Kimyasal gübrelerin yerini almak veya kullanımını önemli ölçüde azaltmak için organik gübrelerin kullanılması, sürdürülebilir mahsul üretiminin kalitesinde ve performansında bir artışa yol açar. Vermikompost ve bitki gelişimini teşvik eden bakteriler gibi organik gübrelerin ve biyogübrelerin tarım alanlarında kullanılması, kimyasal gübre uygulamalarının azalmasına neden olmuş ve insan sağlığını tehdit eden kimyasallardan arınmış yüksek kaliteli ürünler elde edilmiştir (Darzi ve ark., 2015). Mevcut organik gübrelerle, kimyasal gübre kullanımı yapmadan, yüksek seviyede verim elde etmek çok zordur. Fakat toprağın sürdürülebilir kullanımı açısından, verimlilik ve devamlılığın organik gübreyle sağlanacağı göz ardı edilmemelidir. Toprağın dengesini bozmadan, durumunun iyileşmesini sağlayacak faktörlerden birisi de vermikompost olarak adlandırılan solucan gübresidir. Solucanlar, sindirim sistemlerinde üretmiş oldukları antibiyotik özellikli maddeleri, aminoasitleri ve vitaminleri dışkılarında karıştırırlar ve oluşan gübrenin biyolojik yapısını iyileştirmektedirler. Ayrıca bileşimlerinde humik ve fulvik asit gibi bitkilerin beslenmesi için önemli derecede etkili olan büyüme düzenleyici maddeler bulunmaktadır. Birçok bitki için faydalı bir materyal olan solucan gübresi, ayrıca değerli bir toprak düzenleyicidir. Solucan gübresinin, ticari gübre olarak üretimi yapılarak çiftçilerin hizmetine sunulması için özel üretim yerlerine ihtiyaç bulunmaktadır. Organik atıkların çürütülmesi veya çiftlik gübresi gibi organik 3 maddelerin kullanılmasıyla solucan gübresi elde edilmektedir (Demir ve ark., 2010; Sarioğlu ve Doğan, 2018).

Küresel ısınma gibi nedenlere bağlı doğanın ve iklimlerin değişmesi neticesinde, tarım toprakları, bitki büyümesindeki etkili olan bitki besin elementlerini tutamaz hale gelmiş ve verimsizleşme sürecine girmiştir. Toprakların bilinçsizce kullanımı sebebi ile toprak organik maddesinin gün geçtikçe azalması ile %1 seviyesinin altına inmiştir. Toprak organik maddesini artırmak için kimyasal gübre kullanımı tek başına yeterli değildir. Toprakta organik madde miktarını arttırmak için solucan gübresi, çöp kompostu, yarasa gübresi, yeşil gübre, termofilik kompost vb. gübrelerin takviyesi ile sürdürülebilir tarım yapmak mümkündür. Organik gübreler içinde ise yıldızı giderek parlayan vermikompostun iyi bilinmesi hem üretiminin hem de tarımda kullanımının yaygınlaştırılması gerekmektedir (Bellitürk, 2016). Genel bir kural olarak hayvansal ve bitkisel atıkların karışımıyla beslenen solucanlardan elde edilen vermikompostun daha iyi kaliteli bir organik gübre olduğu belirtilmektedir (Bellitürk, 2017). Bu araştırmada, çerezlik ayçiçeği kabuklarının farklı oranlarda inek gübresi ile karıştırılması neticesinde elde edilen materyalin *Eisenia fetida* cinsi solucanlara mama olarak yedirilmesi neticesinde organik gübre olarak bilinen vermikompost üretilmiştir. Üretilen bu vermikompostun bazı fiziksel ve kimyasal analizleri yapılarak, gübre değeri ile birlikte organik atıkların tarımsal amaçlı olarak geri dönüşümüne ilişkin bilimsel değerlendirmeler yapılmıştır.

### **1.1. Ayçiçeği Kabuğunun İçeriği ve Değerlendirilme Yöntemleri**

Ayçiçeği kabuğu bütün bitkilerde olduğu gibi taneyi kaplar ve çevresel etmenlerden korur. Yağlık ayçiçeği tanesinin ağırlığının yaklaşık %21-30'u kabuktan oluşmaktadır. Çerezlik çeşitlerde bu oran %36-50 arasında değişir. Kabuktaki selüloz, lignin, hemi-selüloz (çoğunluğu glucuronoxylan) miktarları %74-90 olup geriye kalan kısmı da lipit, protein ve mineral maddelerdir (Dorrel ve Vick, 1997).

**Çizelge 1.** Ayçiçeği kabuğunun besin maddesi kapsamının yüzde değerleri (Park ve ark.,1997).

#### **Ayçiçeği Kabuğunun Besin Maddesi Kapsamı**

Kuru Madde	% 85-92
Ham Protein	% 3.5-9
Sindirilebilir Protein	% 2-4
Sindirilebilir Besin Maddesi Toplamı	% 35-45
Ham Selüloz	% 40-50
Lignin	% 13-16
Kül	% 2-3
Yağ	% 0.05-3
Ca	% 0.37
Mg	% 0.15-0.25
P	% 0.12

Yapılan arařtırmalarda ÷lkemizde ayııeęi iřleyen bazı fabrikalarda kabuk tamamen k÷spe eldesinde kullanılırken bazı fabrikalarda da özellikle yüksek proteinli k÷spe elde edilmek istendięinde, yaklaşık %7-12 aralıęında bir ek ürün olarak çıkmakta, bu durumda da ısıtma kazanlarda enerji ihtiyacını karşılamak için kömür ile karıřtırılarak yakılmaktadır (Kaya, 2024). Ayııeęi gerek tanesinin hepsi gerekse yalnızca kabuęu, herhangi bir kimyasal maddeyle iřlem yapılmadıęı müddetçe, zararlı bir madde içermez. Ancak yakılma iřlemi esnasında çıkardıęı, atmosfere karıřan karbondioksit ve dięer gazlar, aynen dięer yakacak ürünlerinin kullanılmasında olduęu gibidir. Ancak bu ek ürün olarak ortaya çıkan kabuęun, alternatif kullanım alanları da mevcuttur. Ayrıca çerezlik ayııeęinde kabuksuz tüketimde ek madde olarak ortaya çıkar. Fakat bu tür tüketim şekli ÷lkemizde çok yaygın deęildir. Kabuk oranı çerezlik ayııeęi çeřitlerinde yağlıklara göre daha fazla olmaktadır. Yaęlık ayııeęi kabukları çerezlik tiplere kıyasla daha yüksek oranda protein ve yağ içerdiklerinden dolayı hayvanlar için iyi bir yem maddesidir. Ayııeęi kabukları sığır yetiřtiricilięinde saman yerine altlık olarak kullanılabilir. Çünkü saman ile aynı oranda sıvı absorbe kapasitesine sahiptir. Ayrıca bu kabuklar kereste endüstrisinde dolgu ve yalıtım maddesi, biyolojik yakıt eldesinde ve paketleme materyali olarak da kullanılmaktadır. Ayrıca, Kanada'da silindir şeklinde preslenerek çıra malzemesi ve Rusya'da da etil alkol ve boya malzemesi eldesinde kullanılır (Doty, 1978). Ayııeęi kabuęunun bir dięer kullanım alanı da özellikle bazı türlerin kabuęunda içerdigi antociyanin olarak bilinen kırmızı boya maddesi sebebiyle gıdalarda doęal katkılı boya olarak kullanılmasıdır. Bilindięi üzere gıda sektöründe kullanılan sentetik renklendiricilerin yan etkileri üzerine, kırmızı ve pembe renk veren doęal antociyanin kaynakları oldukça önemli olmuřtur. Yine yapılan arařtırmalarda, dana ve sığır besicilięinde %50'ye kadar ayııeęi kabuęu içeren ancak en az %15 ham protein içeren rasyonlarda herhangi bir beslenme bozukluęu gör÷lmemiřtir. Ancak yine %50 ayııeęi kabuęu, %50 üre katkılı mısır silajı ve 1,4 kg/bař arpa tanesi içeren rasyonlarda, hazım zorluęu sebebiyle beslenme periyodu boyunca meydana gelen bazı sığır ölümleri gör÷lmüřtür (Park ve ark.,1997). Bu nedenle aynı arařtırmacılar, herhangi beslenme veya hazım problemi ile karıřlařmamak için besicilikte %30, süt besi rasyonlarında ise ayııeęi kabuęu katkısının % 10'u geçmemesi gerektięini belirtmiřlerdir. Ayııeęi kabuęu yüksek oranda sel÷loz içerir ancak düşük bir besin maddesi kapsamına sahiptir ve sindirimi zor ve tadı güzel deęildir. Yine pelet haline getirilmiř ayııeęi kabuęu briket haline getirilmiř saptan daha yüksek ısı içerięine sahiptir. Ancak bu pelet haline getirilmiř kabuęun yanma sırasındaki aşırı ısınmayı ve fazla dumanı önleyen yeterli hava alım hızı düş÷ktür. Peletlerin ortalama yanma randımanı %62'dir. Kül oranı ve külün dięer

özellikleri odundan farklı değildir. Ancak sap briketinin kül oranı %10,8 iken kabuk peletlerinin ise %3,6'dır (Park ve ark., 1997). Yine ayçiçeği kabuğunun yakıt değeri 8300 - 8500 BTU / pound civarında değişmektedir. ABD'de ayçiçeği işleme tesisleri, okullar gibi bazı kuruluşlar, elde ettikleri bu kabukları fırınlarda yakacak olarak kullanmaktadır. Yine ayçiçeği kabuğundan yapılan briketlerin, ABD'de bazı yerlerde şöminelerde kömür yerine kullanımı oldukça yaygındır (Lilleboe, 1991). ABD'de, ayçiçeği işleyen fabrikaların nakliye maliyetlerinde ayçiçeği kabuğunun belirli bir boyut teşkil ettiğinden, genelde kabuğunun çıkartılması daha tasarruflu olmakta ve ayçiçeği kabuğu yakılarak ısı enerjisi elde edilmesi de tesislere artı bir değer getirmektedir. Ancak fırınlarda yakılması sırasında kabukların fazla miktarda kül bırakması olumsuz bir sonuçtur. Yine bu tür tesislerin yakınlarına kurulan tavukçuluk ve hayvancılık tesislerinde ayçiçeği kabukları hayvanların altlarına serilmektedir (Kaya, 2024). Ayçiçeği kabukları tonu 30\$'a kadar alıcı bulmaktadır (Dorrel ve Vick, 1997). Ayçiçeği kabuğunun değerlendirilmesi konusunda birçok araştırmalar yapılmasına rağmen çok az bir kısmı uygulamaya sokulmuştur. Ligno-selülozik bir madde olarak ayçiçeği kabuğu, fermentasyon yoluyla şeker üretiminde, bazı kimyasallara ve değerli bileşiklere dönüşümde oldukça ekonomik bir kaynaktır. Örneğin ayçiçeği kabuğunun asit veya celulase enzimleriyle hidrolizi, kabukta şeker oranını arttırarak besi değerinin artmasına ve yine maya için gerekli maddelerin oluşumuna yol açmaktadır. Ayçiçeği kabuğunun hücre duvarlarında karbonhidratlarla birlikte bulunan lignin maddesi, enzimlerin bu karbonhidratları şekerlere dönüştürmesini sınırlandırmaktadır. Ancak kabukların sodyum hidroksit ile 1,5 saat 120 °C de muamelesi lignin maddesinin %55 oranında azalmasına ve %39 oranına kadar polisakkaritlerin şekerlere dönüşmesine yol açmaktadır (Kaya, 2024). Ayçiçeği, altı kıtada yetiştirilen ve toplam üretimi 54,42 milyon ton olan bir bitkidir. Türkiye'de 728 bin hektar alanda 2 milyon ton ayçiçeği tohumu üretilmektedir (Anonim, 2024b). Ayçiçeği üretiminin %40-65'ini oluşturan ayçiçeği kabuğu, tarımsal bir yan üründür (Perea-Moreno ve ark., 2018). Ayçiçeği kabuğunun geri kazanımında başlıca yöntemler, yakıt amaçlı ayçiçeği kabuğundan pelet üretimi ve kıyılmış olarak samanın yerine hayvan yeminde kullanılması karşımıza çıkmaktadır (Binboğa, 2019; Bala-Litwiniak, 2020).

### **1.2. İnek Gübresi ile İlgili Yapılan Çalışmalar**

Köse (1998), 1996-1997 yıllarında mineral gübrelemeye alternatif olarak organik gübrelemenin (mikoriza, kompost ve ahır gübresi) biber bitkisinin besin elementi alımı üzerindeki etkilerini

araştırmak üzere, Çukurova Bölgesinde 2 yıl boyunca yaptığı çalışmasında her iki yılda da mikorizal inokülasyon, kompost ve ahır gübresi uygulamasının, mineral gübreleme ve kontrole göre yaklaşık 2 kat daha fazla artış sağladığını belirtmiş, biber veriminin ilk yılda kompost, ikinci yılda ise mikoriza parsellerinde yüksek olduğunu belirtmiştir. Besin elementi içerikleri yönünden ise kompost, mikoriza ve ahır gübresi uygulanmış parsellerde P, Mn, Cu, Fe ve Zn, içeriklerinin mineral gübre uygulamasına göre genelde daha yüksek olduğunu bulmuştur. Camberato ve ark. (1996) tarafından ahır gübresinin arazide uygulanması üzerine yapılan bir çalışmada, katı gübrenin gereken önlemler alınmadan ve yağmur suyu ile yıkanmaya maruz bırakılmış bir şekilde depolandığında, gübre içinde bulunan N ve K<sub>2</sub>O miktarının azalmasına neden olduğunu bulmuşlardır. Ayrıca yanlış depolanan gübreden N'in süzülmesinin yüzey ve yeraltı sularında kirliliğe sebep olduğunu, bundan dolayı işlenmek ve araziye uygulanmak üzere depolanan gübrenin gerekli önlemler alınarak korunması gerektiğini belirtmişlerdir. Karaman (2005), tarafından Tokat yöresinde hayvancılık işletmelerindeki barınaklardan kaynaklanan çevresel etkiler ve ilgili yapıların özelliklerini incelemek, yeterliklerini ve geliştirilebilirliklerini saptamak amacı ile farklı yapı ve teknik özelliklere sahip değişik kapasiteli ahırlara sahip 76 işletmede yapılan çalışmada, işletmelerin %87'sinde katı atıklar tarım alanlarına serilerek, %5'inde komşu çiftliklere verilerek, %7'inde satılarak değerlendirilmektedir. Gübreliği bulunmayan işletmelerin %98'inde gübre araziye yığılmaktadır. Gübre bu işletmelerin %3'ünde taş döşeme üzerine, diğerlerinde toprak zemine yığılmakta, iki işletmede ise doğrudan nehre boşaltılmaktadır. Elde edilen gübrenin değerlendirme şekli bakımından 1-5 baş hayvanı olan tesislerin %15 inde gübrenin tezek olarak kullanıldığı, %45'inin kendi arazisinde biriktirdiği, %28'inin sattığı, %12'sinin ise yol kenarları veya boş alanlara rastgele attığı, 6-10 baş hayvana sahip işletmelerde ise %45'inin sattığı, %33'ünün kendi arazisinde biriktirdiği, %2'sinin boş araziye attığı, 11 baş ve üstü işletmelerde ise %40'ının kendi arazisinde biriktirdiği, %60'ının sattığı saptanmıştır. Gübrenin bekletilme süresi ise tüm gruplarda 2 ay ile 1 yıl arasında olduğu belirlenmiştir. Son yıllarda hayvan gübresine uygulanan işlemlerle (havalandırma, biogaz üretimi, kompost yapma ve kurutma) çevreye daha az zarar vermesi ve tarlada organik gübre olarak daha etkin olması olanakları oluşturulmaktadır. Nitekim belirtilen işlemlerle çevreye yayılan pis koku azaltılmakta, hastalık etkenleri öldürülmekte, atık madde, hidrojen içeriği belirli düzeyde tutulmakta veya düşürülmekte, gübre ağırlığı ve hacmi bakımından anlamlı bir azalma sağlanmaktadır (Ergül, 1989). Hayvansal üretim hem insan beslenmesinin gereklerinden hem de tarımın vazgeçilmezlerindedir. Fakat yapılan her tarımsal faaliyet gibi hayvansal üretimde çevre kirliliğine neden olmaktadır.

Hayvansal üretim sonucu ortaya çıkan gübre ve idrar atıkları, gaz, koku, toz, ölen hayvanların cesetleri, kesimhane atıkları çevreye ve insana zarar oluşturabilmektedir. Hayvansal üretim sonucu çevreye olumsuz etkisi olan başlıca etmenler aşağıda ifade edilmiştir. Hayvancılık faaliyetine bağlı olan çevre kirliliğinde başlıca atıklar hayvanlardan doğrudan kaynaklanan sıvı (idrar) ve katı (gübre) atıklardır. Bu atıklar işletmelerde kaldırılmalı, depolandıktan belli bir zaman sonra tarım arazilerinde kullanılmaktadır (Parlakay ve ark., 2015).

### **1.3. Kompost ve Vermikompost İle İlgili Yapılan Çalışmalar**

Geleneksel tarım yöntemi daha fazla ürün elde etme esasına dayanır. Yapılan çalışmalar göstermiştir ki; bu anlayışla gerek gübrelerin gerekse tarımsal ilaçların bilinçsizce kullanımı, bitkisel üretimde miktar artışının yanında kalitesiz ve insan sağlığını tehdit edecek ürünlerin ortaya çıkmasına neden olmaktadır. Sanayileşmeden kaynaklanan çevre kirliliğinin de etkisiyle soframıza gelen tarımsal ürünlerin doğallığı ve güvenilirliği neredeyse kalmamıştır. Son yıllarda günümüz tarımında kullanılan kimyasal ilaçların ve gübrelerin neden olduğu çevre kirliliği ve bu kirlenmenin insan sağlığı üzerindeki etkileri yoğun bir biçimde tartışılmaktadır (Bellitürk, 2005; Bellitürk, 2008; Bellitürk ve ark., 2015; Shrestha ve ark., 2019). Hızlı nüfus artışı, plansız kentleşme, plansız endüstrileşme, doğal kaynakların ölçsüz kullanılması kirliliğin en önemli faktörleridir. Doğal çevreyi oluşturan toprak, su ve havanın kimyasal özelliklerinin canlıların hayati faaliyetlerini ve aktivitelerini olumsuz yönde etkileyecek biçimde bozulması “kimyasal kirlenme”dir. Çevremizde ne kadar çok kimyasal madde varsa sağlığımız o ölçüde tehlikeye girmektedir. Çeşitli fabrika katı ve sıvı atıklarının verimli tarım arazilerine veya akarsu ve nehirlere boşaltılması söz konusu tarım topraklarının, akarsu ve göllerinin zararlı ağır metallerle kirlenerek kimyasal kirlenmeye maruz kaldığını gösterir (Özsavaş, 2015). İnsan sağlığını etkileyen tüm ekosistem düşünüldüğünde çevre kirliliğinin hava, toprak ve su kirliliği olarak üçlü bir kombinasyonda ele alınarak yapılacak çalışmaların bu doğrultuda ele alınması gerekir (Çağlarımak ve Hepçimen, 2010). Sürekli artan dünya nüfusu ile ters orantılı olarak tarım topraklarının azalması insanoğlunu açlık gibi büyük bir tehditle karşı karşıya getirmiştir. Artan besin ihtiyacımızı karşılamak amacıyla, tarımsal uygulamalarda bilinçsizce kullanılan kimyasal gübre ve kimyasal ilaçlar, tarım topraklarımızın sürdürülebilir verimliliğini olumsuz etkilemekle birlikte doğal dengeyi de bozmaya başlamıştır. Bu sorunlar karşısında tarımı sadece topraktan yararlanarak her türlü kimyasal gübre ve ilacı kullanarak üretim yapmak yerine, doğaya zarar vermeden, toprağın sürdürülebilir verimliliğini

ve doğal dengeyi koruyarak, insan sağlığını tehdit etmeyen, çevreyle dost olan organik ürünlerin kullanımını hedefleyen tarımsal üretim sistemlerini uygulanmalıdır. Organik gübreler; hayvan atıklarından ve benzer doğal yollarla oluşan maddelerden üretilerek, hiçbir kimyasal madde ile etkileşim içerisinde olmadan elde edilir. Bunun en güzel örneklerinden birisi solucan gübresidir. Vermikompost, belirli bir solucan türü kullanılarak, organik atık ve artıkların kısa sürede elde edilen yüksek kaliteli bir biyoteknolojik kompost çeşitidir. Ticari ve ekolojik açıdan yüksek değere sahip ürünler elde ettiğimiz vermikompost tekniği yoğun olarak tüm dünyada uygulanmaktadır. Ürün kalitesi olarak termofilik kompost ürünlerine göre vermikompost ürünleri fiziksel, kimyasal ve biyolojik özellikleriyle daha üstün niteliktedir ve ekonomiktir. Son ürününde vermikompostun insan sağlığını tehdit edecek patojenler olmadığı için uygulayıcılar vermikomposta çıplak elle dokunabilir (Erşahin Yılmaz, 2007). Bellitürk ve ark. (2018)'nin bildirdiğine göre, Türkiye'de son yıllarda zeytin bahçelerinin gübrenmesinde kullanılan kimyasal gübrelere ilaveten vermikompost, çöp kompostu, yosun gübresi gibi organik gübrelerin de ilave edilmesi, bu konuya verilen önemin farklı bir göstergesidir. Kimyasal gübrelerle yapılacak gübrelemenin etkinlik derecesi, diğer faktörlerin yanında toprağın organik madde içeriği ile pH değerine de bağlı bulunmaktadır. Zeytin yetiştiriciliğinde tam başarının sağlanabilmesi için belli esaslara dayalı olarak kimyasal gübrelerin organik gübreler ile desteklenmesi gerekmektedir (Bellitürk ve ark., 2015). Vermikompost tek başına iyi bir organik gübre olmasının yanında, kimyasal gübreler ile birlikte kullanıldığında hem kimyasal gübrenin etkinliğini artırmakta ve hem de miktarının azalmasına sebep olarak üretim maliyetlerinin azalmasına sebep olmaktadır. Bunun dışında vermikompost çevreyle dost ve üretilen ürünlerin kalitesinin artırılmasına büyük katkı sağlayan organik tarımda kullanımı kabul edilen iyi bir organik gübredir. Solucanların kullanılmasıyla kompost elde edilmesi, açık alanlarda basit yığınlarda, kasalarda ya da otomasyonlu kompleks kapalı sistemlerde gerçekleştirilmektedir (Edwards, 2004). Üretimde yararlanılan solucanların optimum koşullarda yaşatılması, vermikompost verimliliğini ve kalitesini etkileyen en önemli faktörlerdendir (Neuhauser ve ark., 1998). Üretim aşamasındaki vermikompost için pH, sıcaklık, ışık, koku, nem, karbondioksit, oksijen, yatakların derinliği gibi parametrelere dikkat edildiği durumda, kaliteli bir solucan gübresi elde edilebilir ve solucan kültürünün sürdürülebilirliği sağlanır (Li, 2011).

**Şekil 2.** Solucanın morfolojik yapısı ve vücut anatomisi.

Vermikompost için belirlenen kalite parametreleri yüksek tuz içeriği halinde bitkide toksik etkiye neden olur, besin değerinin belirlenmesi durumunda Ca, Mg, SveB elementlerinin önemli olduğu belirtilmektedir (Hepşen Türkay, 2016). Vermikompost içeriğinde bulunan besin elementlerinin %97' si ve özellikle N, P ve K gibi besin elementleri büyüme esnasında bitki tarafından doğrudan alınabilir formdadır (Barley, 1961). (Bellitürk ve ark., 2015; Bellitürk, 2018; Aslam ve ark., 2020; Aslam ve ark., 2021a; Aslam ve ark., 2021b; Kılıbacak ve ark., 2021; Koç ve ark., 2021). Vermikompost üretiminde birçok bitkisel ve hayvansal atık kullanıldığı bilinmektedir (Bellitürk ve ark., 2014; Bellitürk, 2016). Çeşitli organik atıklar kullanarak vermikompostlar elde ederek solucanlara verilen besin maddesinin vermikompost içeriği üzerine etkisinin önemli olduğunu belirtmiştir. Solucanlara verilen besin maddesi haricinde, vermikompostun üretildiği ortam şartları ve solucan türü de önemli faktörler arasındadır (Bellitürk, 2016). Zaller (2007) yaptığı bir çalışmada, Eisenia fetida türü solucanlara pamuk ve yemek artıkları verilerek üretilmiş olan vermikompostu, torf ile %0, 20, 40, 60, 80, 100 (v/v) oranları ile karıştırmıştır. Sera koşullarında yapılan çalışmada, domates (*Lycopersicon esculentum* Mill.) tohumlarının çimlenmesine, büyüme ve biyokütleyle olan etkisine, araziye aktarılmış olan fidelerin domates verimi ve kalitesi, domates çeşitleri arasındaki etkiler değerlendirilmiştir. Vermikompost etkisi, domates çeşitlerinin tamamında çimlenme ve fide gelişimini önemli derecede etkilemiştir. Amerika Birleşik Devletleri, Çek Cumhuriyeti ve Japonya gibi ülkelerde yapılan vermikompost uygulaması sonucunda buğday veriminde %15-20, patates veriminde %50-80, yaprakları yenen pancar veriminde %15-20, mısır veriminde %30-50, hıyar, domates ve biber verimlerinde %20-30, üzüm ve şeftali verimlerinde %80-100, çilek veriminde %30-35 oranında artışlar olduğu tespit edilmiştir (Anonim, 2013).

## **2. Materyal ve Yöntem**

### **2.1. Materyal**

**2.1.1. Deneme Kullanılan Materyaller**Denemede bitkisel kaynaklı ayçiçeği atıkları (SW), hayvansal kaynaklı inek gübresi (CM), Kırmızı Kaliforniya Solucanı olarak bilinen Eisenia fetida türü solucanlar, saf su, plastik kilitli kaplar kullanılmıştır (Şekil 5 ve Şekil 6).

### **2.1.2. Denemenin Planlanması ve Yürütülmesi**

Bu projede kullanılan çerezlik ayçiçeği atıkları, Manisa ili Kırkağaç ilçesi merkezinden temin edilecek ve Tekirdağ Namık Kemal Üniversitesi, Ziraat Fakültesi, Toprak Bilimi ve Bitki Besleme Bölümü'ne ait olan Vermikültür Laboratuvarı'nda ön fermentasyon işlemi yapılmıştır. Denemede kullanılan hayvansal kökenli olan inek gübresi (CM) üniversitemiz hayvancılık işletmesinden temin edilecek ve ön fermentasyonu da gübrenin temin edileceği işletmenin uygun alanında kontrollü koşullarda yapılmıştır.

**Şekil 4.** Deneme analizinin planlanması ve yürütülmesi ile ilgili süreci.

İnek gübresinin toplam N'u %1, pH değeri 8.55, organik madde içeriği ise % 33 olarak analiz edilmiştir. Denemede Toprak Bilimi ve Bitki Besleme Bölümü'nde özel olarak yetiştirilen *Eisenia fetida* cinsi gübre kırmızı Kaliforniya solucanları kullanılmıştır. Deneme kurulduktan sonra vermikompost üretilmesi için gerekli olan süre 2 ay (60 gün) olarak tamamlanmıştır (Dominguez ve Edwards, 2004). Deneme 3 litrelik, özel olarak delikler açılmış kapaklı plastik kaplarda kurulmuştur (Şekil 5). Deneme (5 uygulama x 2 tekrerr) 10 adet plastik kaplarda yapılmıştır. Denemede ayçiçeği (SW) ve inek gübresi (CM) atıklarının farklı dozları tesadüf blokları deneme desenine göre kurulmuş ve yürütülmüştür.

**Şekil 5.** Deneme deseni.

Denemede parametreleri (uygulamalar) aşağıdaki gibi planlanarak yürütülmüştür:

1. %25 İnek Gübresi (CM) + %75 Çerezlik Ayçiçeği Atığı (SW) + 20 ad. solucan (*Eisenia fetida*) x 2 tekrerr
2. %50 İnek Gübresi (CM) + %50 Çerezlik Ayçiçeği Atığı (SW) + 20 ad. solucan (*Eisenia fetida*) x 2 tekrerr
3. %100 İnek Gübresi (CM) + %0 Çerezlik Ayçiçeği Atığı (SW) + 20 ad. solucan (*Eisenia fetida*) x 2 tekrerr
4. %0 İnek Gübresi (CM) + %100 Çerezlik Ayçiçeği Atığı (SW) + 20 ad. solucan (*Eisenia fetida*) x 2 tekrerr
5. %75 İnek Gübresi (CM) + %25 Çerezlik Ayçiçeği Atığı (SW) + 20 ad. solucan (*Eisenia fetida*) x 2 tekrerr

Şekil 6. Her bir uygulamada kullanılan materyallerin detayları.

Denemenin kurulduğu odanın ve kaplarda bulunan solucanların beslenme ortamı sıcaklık kontrolü haftalık olarak kontrol edilerek kaydedilmiştir. Bu amaçla proje bütçesi ile alınan seyyar termometreler kullanılmıştır. Deneme süresince, kaplar içerisinde azalan nem oranı, %70 civarına getirilerek saf su ile tamamlanmıştır.

## **2.2. Yöntem**

### **2.2.1. Yapılan Fiziksel ve Kimyasal Analiz Yöntemleri**

Deneme başlangıcında çerezlik ayçiçeği atığı (SW) ile inek gübresi (CM) numunelerinin ayrı ayrı olacak şekilde (fermente edildikten sonra) bazı analizleri (pH, organik madde, N, P, K, Ca, Mg, Fe, Zn, Cu) yapılmıştır. Projeye ilişkin deneme sonrasında elde edilen olan vermikompost örneklerinde yapılan analizlere ilişkin detaylı bilgiler aşağıdaki şekildedir:

**pH:** TS 9104'e göre 3 g kompost örneği üzerine 50 ml saf su konularak yarım saat beklenir ve pH metre cihazı ile belirlenmiştir (TSE, 1991).

**Nem:** Örnekler 60°C'de 24 h bekletilerek nem değerleri belirlenmiştir (Sağlam, 2012).

**Organik Madde:** TS 9103'e göre 5 g kompost örneği kül fırınında 650 C°'de 4 saat yakılarak gravimetrik olarak belirlenmiştir (TSE, 1991).

**Toplam Azot:** Makro Kjeldahl Metodu ile belirlenmiştir (Kacar ve İnal, 2008; Sağlam, 2012).

**Yarayışlı Diğer Makro (P, K, Ca, Mg) ve Mikro (Fe, Zn, Cu) Element Analizleri:** Kompost örnekleri H<sub>2</sub>O<sub>2</sub> + HNO<sub>3</sub> ile mikro dalga yakma cihazında yakılıp elde edilen süzükte ICP-OES cihazı ile belirlenmiştir (Zarcinas ve ark., 1987).

## **3. Bulgular ve Tartışma**

### **3.1. Vermikompost Analiz Sonuçları**

Denemeden elde edilen vermikompost örneklerine ait pH, EC, Nem, Organik Madde, N, P, K, Ca, Mg, Fe, Zn ve Cu analiz değerleri, 1. tekerrür, 2. tekerrür ve ortalama değerler Çizelge 2 ve Çizelge 3'te topluca gösterilmiştir.

Çizelge 2. Üretilen vermikompostun pH, EC, nem ve organik madde içerikleri.

Uygulama	Tekerrür	pH	EC (%)	Org. Mad. (%)	Nem (%)
SW <sub>100</sub> CM <sub>0</sub>	1	9,46	0,82	80,87	34,51
	2	9,46	0,84	80,93	34,39
	Ortalama	9,46	0,83	80,90	34,45
SW <sub>75</sub> CM <sub>25</sub>	1	8,81	0,57	85,04	60,68
	2	8,81	0,56	85,12	60,76
	Ortalama	8,81	0,57	85,08	60,72
SW <sub>50</sub> CM <sub>50</sub>	1	8,63	0,55	82,27	66,32
	2	8,63	0,55	82,19	66,46
	Ortalama	8,63	0,55	82,23	66,39
SW <sub>25</sub> CM <sub>75</sub>	1	8,49	0,65	81,61	65,35
	2	8,49	0,67	81,53	65,40
	Ortalama	8,49	0,66	81,57	65,37
SW <sub>0</sub> CM <sub>100</sub>	1	7,55	0,73	79,25	61,83
	2	7,55	0,74	79,35	61,66
	Ortalama	7,55	0,74	79,30	61,74

Çizelge 2'ye göre inek gübresi olmayıp sadece ayçiçeği atıklarının bulunduğu kaplardaki (SW<sub>100</sub>CM<sub>0</sub>) pH oranı ortalama 9.46 olarak bulunmuştur ve bunun deneme kaplarındaki en yüksek pH değeri olduğu görülmüştür. Dominguez ve Edwards (2011)'e göre ideal bir vermikompostun pH değerinin 5 ve 9 arasında olması gerekmektedir. Deneme sonunda elde edilen SW<sub>100</sub>CM<sub>0</sub> haricindeki tüm örneklerin ortalama değerlerinin izin verilen değerler arasında olduğu görülmektedir. Organik gübrelerden özellikle vermikompost gübresinin pH değerinin 7.5 değerinin üzerinde olduğu bildirilmektedir (Edwards, 2004; Bellitürk, 2017). Bu projede pH değeri açısından 7.5 değerine en yakın sonuç "SW<sub>0</sub>CM<sub>100</sub>" uygulamasından elde edilmiştir. Deneme sonunda vermikompost örneklerinde, en yüksek ve en düşük tuz

değerlerinin sırası ile %0,83 ve %0.55 olarak ölçülmüştür. Tüm örneklerin ortalaması ise %0.66 olarak hesaplanmıştır. Vermikompost örneklerinin tuz içerikleri %1 değerinin altında bulunmuştur. Bellitürk ve Soytürk (2020) fındık kabuğu ve inek dışkısından elde ederek ürettiği vermikompost çalışmasında en düşük %0.02 ve en yüksek %0.3 tuz değerini elde etmişlerdir. Dolayısıyla yapılan bu çalışma ile vermikompost örneklerinin tuz içerikleri açısından benzerlik olduğu anlaşılmaktadır. Deneme sonunda vermikompost örneklerindeki tekerrür ortalamalarının değerleri dikkate alındığında en yüksek organik madde içeriği SW<sub>75</sub>CM<sub>25</sub> uygulamasında %85.08 olup en düşük organik madde içeriği ise SW<sub>0</sub>CM<sub>100</sub> uygulamasında %79,30 olarak belirlenmiştir. Tarımda kullanılan organik ve mineral içerikli gübrelere dair yönetmelik taslağındaki değerlere göre vermikompostun en az %20 düzeyinde organik madde içermesi gerekmektedir (Anonim, 2024a). Bu durumda proje kapsamındaki denemeden elde edilen tüm vermikompost örneklerinin ilgili yönetmeliğe uygun olduğu görülmektedir. Bellitürk ve Soytürk (2020) tarafından fındık kabuğu ile yapılan benzer bir çalışmada en yüksek organik madde miktarı %41,11 olarak bulunmuştur. Dolayısıyla her iki çalışma karşılaştırıldığında, ayçiçeği atıklarının fındık kabuğu atıklarına göre vermikompostun organik madde içeriğini daha fazla artırdığı görülmüştür. Bu durumda vermikompost üreticileri solucanları beslemek için rahatlıkla ayçiçeği kabuğunu kullanabilir ve yüksek organik maddeli vermikompost üretebilirler. Çalışma sonucu elde edilen vermikompostlarda SW<sub>100</sub>CM<sub>0</sub>'nin nem oranı yaklaşık %35, diğer örneklerin ise %60-66 aralığında nem oranı çıkmıştır. Fakat Tarımda kullanılan organik ve mineral içerikli gübrelere dair yönetmelik taslağındaki değerlere göre vermikompostun nem değeri maksimum %35 olmalıdır (Anonim, 2024a). Bu sebeple ayçiçeği atıkları ile yapılan vermikompost çalışmalarından elde edilen ürünlerin nem miktarlarının ideal yüzdeye ulaşabilmesi için kurutulmaları gerektiği görülmüştür. Edwards (2004) tarafından bildirildiğine göre solucanların gübre üretirken en verimli olduğu nem değeri %70 civarında sabit tutulmalıdır. Ancak üretilen ve paketlenerek pazara gitmesi gereken organik gübrenin nem içeriği kurutma yöntemine göre düşürülmelidir. Bu projede üretilen gübre, pazarlanacak olsaydı nem içeriğinin düşürülmesi gerekirdi. Ancak bu derecede yüksek oranda nem içeriğine sahip vermikompost, satış amaçlı değil, araştırma amaçlıdır. Dolayısıyla araştırma sonucunda üretilen vermikompost, kurutma aşamasından geçmemiştir.

Şekil 7. Üretilen vermikomposttaki pH, EC, nem ve organik madde içerikleri

Elde edilen vermikompostlarda yapılan analizler sonucunda en yüksek azot içeriğinin %1,61 ortalama ile SW100CM0 uygulamasında, en düşük azot yüzdesinin ise %0,62 ortalama ile SW25CM75 uygulamasında olduğu görülmüştür. Bu sonuçlar, ayçiçeği atık oranı arttıkça azot içeriğinin de arttığını göstermektedir Arancon ve Edwards (2011)'ın yaptığı bir çalışmaya göre inek gübresi vermikompostunun toplam %N değeri %1,9 olmalıdır. Organik atıklarla vermikompost üretiminde azot elementi hedef alındığında, bu atıkların başarılı bir şekilde kullanılabilmesi görülmektedir. Bellitürk ve ark. (2015a) tarafından yapılan bir başka çalışmada kağıt atıkları ile inek gübresi karışımı kullanılmış olup, bu çalışmada

vermikompostun ortalama N değeri %1,11 olarak bulunmuştur. Lange (2005), gıda ve bahçe atıkları karışımı ile vermikompost üretmiş ve ortalama N değerini %1,81 olarak bulmuştur. Bu ve benzeri birçok çalışmada elde edilen vermikompost örneklerinin ortalama N düzeyi %1,0 civarında tespit edilmiş olup, bu değer artmasının gübrenin kalitesini de artırdığı anlaşılmaktadır.

**Çizelge 3.** Üretilen vermikompost örneklerindeki N, P, K, Ca, Mg, Fe, Zn ve Cu içerikleri.

Uygulama	Tekerrür	N	P	K	Ca	Mg	Fe	Zn	Cu

Tarım ve Orman Bakanlığı (eski adı Gıda, Tarım ve Hayvancılık Bakanlığı)'na ait "Tarımda Kullanılan Organik, Mineral ve Mikrobiyal Kaynaklı Gübrelere Dair Yönetmelik"te belirtildiği üzere, ülkemizde kullanılan solucan gübresinin toplam N içeriği en az %0,5 olmalıdır (Resmi Gazete, 2018). Deneme sonucunda elde edilen vermikompostların azot değerlerinin tümünün yönetmelikte geçen %0,5 oranını geçtiği görülmektedir. Bu da üretilen vermikompostların yönetmeliğe uygun olarak kullanıma uygun olduklarını göstermektedir. Yapılan vermikompost

çalışmasında elde edilen analiz sonuçlarına göre en yüksek fosfor miktarı ortalaması 136 mg/kg olarak SW100CM0 uygulamasında, en düşük fosfor miktarı ortalaması ise 63,25 mg/kg olarak SW75CM25 uygulamasında ölçülmüştür. Bellitürk ve Soytürk (2020) %90 fındık kabuğu+ %10 inek gübresi karışımından elde ettikleri karışımın vermikompostunda 126,28 mg/kg civarında bir P değeri elde etmişlerdir. Yani her iki çalışmanın da yüksek bitkisel atık+düşük miktarda hayvansal atık karışımlarına ait vermikompostta belirlenen P değeri açısından benzerlik taşıdığı görülmektedir. Vermikompost örneklerindeki Potasyum miktarları incelendiğinde; potasyum miktarı en yüksek olarak 488,90 mg/kg ortalama ile SW100CM0 uygulamasında, en düşük değer olarak da 133,15 mg/kg ortalama ile SW0CM100 uygulamasında bulunmuştur. Yapılan analiz sonuçları göz önüne alındığında vermikompost üretimimizdeki ayçiçek atık miktarı arttıkça potasyum miktarı artmaktadır. Buradan da anlaşılacağı üzere ayçiçek atığı, vermikompost üretiminde potasyum miktarını artırmak için kullanılabilir. Lange (2005) tarafından yapılan benzer nitelikli başka bir çalışmada gıda+bahçe atığından elde edilen vermikompost örneklerindeki ortalama K miktarı %1,04 düzeyinde bulunmuştur. Arancon ve Edwards (2011) ise, inek gübresiyle besledikleri Eisenia fetida türü solucanların ürettiği vermikompostun K değerinin %1,4 civarında bulunduğunu ifade etmişlerdir. Bellitürk ve arkadaşları (2015a) tarafından kağıt+inek gübresi karışımından elde edilen atıklardan üretilen vermikompost örneklerinde elde edilen K değeri ise %0,32 düzeyinde bulunmuştur. Görüldüğü gibi atık türü değiştikçe elde edilen vermikompost örneklerindeki K değerindeki farklılık açık olarak göze çarpmaktadır. Analiz edilen vermikompost örneklerinin Ca ve Mg içerikleri incelendiğinde, en yüksek değer K elementinde olduğu gibi SW100CM0 uygulamasında olduğu bulunmuştur. İnek gübresini solucanlara yem olarak veren Arancon ve Edwards (2011) tarafından yapılan benzer sayılabilecek nitelikteki bir çalışmadan elde edilen vermikompost örneklerinin Ca değeri 23,25 mg/kg, Mg değeri ise 5802 mg/kg olarak bulunmuştur. Ayçiçeği kabuğu+inek dışkısının yem olarak kullanıldığı bu çalışmadan elde edilen Ca ve Mg elementi için en yüksek değer sırasıyla “SW100CM0” uygulamasında 515,65 mg/kg ve 106,25 mg/kg olarak bulunmuştur.

Mikro element içerikleri bakımından vermikompost örnekleri ele alındığında; yayarışlı Cu ve Fe içeriği söz konusu olduğunda en yüksek değer SW0CM100 uygulamasında olduğu ortaya çıkmıştır. En yüksek yayarışlı Fe içeriği “SW0CM100” uygulamasında ve 30,10 mg/kg olarak bulunmuştur. Bu değere göre, ayçiçeği çekirdeği atığı, Fe içeriği üzerine fazla bir etki yapmamıştır. Lange (2005) tarafından yapılan başka bir çalışmada atık olarak gıda atıkları+bahçe atıkları karışımı kullanılmış olup, ortalama Fe değeri 1440 mg/kg olarak

bulunmuştur. Aynı çalışmada tespit edilen yarayışlı Zn değeri ise 387,2 mg/kg olup, Bellitürk ve ark. (2015a) tarafından kağıt atıkları+inek gübresi atıklarıyla beslenen solucanlardan elde ediline vermikompostun değeri 48,8 mg/kg olmuştur. Ayçiçeği atıklarının kullanıldığı bu çalışmadan elde edilen yarayışlı Zn için en yüksek değer SW100CM0 uygulamasında 2,50 mg/kg olarak tespit edilmiştir. Dolayısıyla burada inek gübresinden ziyade ayçiçeği atıklarının yarayışlı Zn üzerinde daha fazla etkili olduğu görülmektedir. Fındık kabukları ve inek dışkısının atık olarak kullanıldığı başka bir çalışmadan elde edilen ortalama yarayışlı Fe, Mn, Zn ve Cu içerikleri sırasıyla 482,71 mg/kg, 61,95 mg/kg, 40,41 mg/kg ve 19,73 mg/kg olarak bulunmuştur (Bellitürk ve Soytürk, 2020). Epigeic tür olan Eisenia fetida türü solucanların farkı organik atıkları yeme ve ürettiği vermikomposta elementel içerik açısından etki etme açısından gösterdiği tepkiler farklı olmakla birlikte, her koşulda bu atıkları rahatlıkla yedikleri görülmektedir (Lange, 2005; Bellitürk ve ark., 2015a; Arancon ve Edwards, 2011; Bellitürk ve Soytürk, 2020). Önemli olan sadece tek tip hayvansal veya sadece bitkisel atık değil, bu atıkları uygun oranlarda karıştırarak uygun koşul ve özellikteki yemler ile solucanları besleyerek vermikompost üretmektir (Bellitürk, 2016). Bu çalışmalar sayesinde hem organik atıklar solucan yemi olarak kullanılabilen ve hem de çeşitli makro ve mikro element ile organik madde düzeyine sahip topraklar üzerine olumlu etki etme özelliğinde vermikompost üretebilmektir.

Şekil 8. Üretilen solucan gübresindeki N, P, K, Ca, Mg, Fe, Zn ve Cu içerikleri.

### 3.2. Solucan ve Kokon Sayıları

Deneme süresince kaplardaki solucanların firar ederek kaçması sorunu hiç yaşanmamış olup, solucanlar bu çalışmada kullanılan ayçiçeği atıklarını yeme konusunda pozitif davranış göstermişlerdir. Deneme sonrasında her kapta belirlenen solucan ve kokon sayıları Çizelge 4'te gösterilmiştir. Çizelge 4'ten de görüldüğü gibi başlangıçta (deneme kurulumunda) 20'şer adet *Eisenia fetida* cinsi solucanların deneme sonucundaki sayılarında her kapta farklılıklar olduğu görülmektedir. Genel bir değerlendirme ile en fazla solucan artışının 74 ortalama ile SW75CM25 uygulamasında (%75 ayçiçeği kabuğu+%25 inek dışkısı) olduğu görülmektedir. Solucanların ayçiçeği kabuğunu yemeleri ve sayıca artmaları, ayçiçeği kabuklarının ilerideki benzer nitelikli akademik çalışmalarda ve vermikompost (solucan gübresi) sektöründe atık olarak rahatlıkla kullanılabilmesini ortaya çıkarmıştır. Deneme sonundaki kokon (yumurta) sayısı açısından en fazla artışın SW100CM0 uygulamasında olduğu görülmektedir. Bu sonuçlar ile, ayçiçeği kabuğunun solucan sayısını artırmak için rahatlıkla kullanılabilmesi ortaya çıkmıştır. Bellitürk ve Soytürk (2020) tarafından fındık kabuğu ile inek dışkısının kullanıldığı başka bir benzer çalışmada ise solucan sayılarında önemli bir değişiklik olmadığı bulunmuştur. Ancak ayçiçeği atıklarının bu çalışma sayesinde rahatlıkla solucan popülasyonlarını çoğaltmak amacıyla kullanılabilmesi anlaşılmaktadır. Nemli zamanlarda ve nem sorunu yaşamayan tüm topraklarda *Eisenia fetida* türü solucanlar yaşatılabilir.

Çizelge 4. Deneme sonrasında belirlenen solucan ve kokon sayıları.

Uygulama	Tekerrür	<i>Eisenia fetida</i> Türü Solucan Sayısı	Kokon Sayısı
SW <sub>100</sub> CM <sub>0</sub>	1	41	101
	2	73	126

	Ortalama	74	78
SW <sub>50</sub> CM <sub>50</sub>	1	54	17
	2	40	8
	Ortalama	47	13
SW <sub>25</sub> CM <sub>75</sub>	1	49	0
	2	42	2
	Ortalama	46	1
SW <sub>0</sub> CM <sub>100</sub>	1	35	8
	2	25	12
	Ortalama	30	10

Bu solucanlar, atıklardan gübre üretme yanında, toprakları havalandırma görevleri açısından da önemli canlılardır. Özellikle killi ve su geçirgenliği düşük, yapışkan nitelikteki smektit türü killerce zengin topraklarda yaşanan havalanma problemi hem kök gelişmesini etkileyerek verim miktar ve kalitesini azalttığı için, bu tip topraklara nem sorunu yok ise solucan bırakılması oldukça faydalı çalışmalar sayılmaktadır. Bu çalışma sayesinde solucan üretme amacıyla ayçiçeği atıklarının solucanlara yem olarak verilebileceği ortaya çıkmıştır.

Şekil 9. Deneme sonrasında belirlenen solucan ve kokon sayılarının grafik ile gösterimleri.

#### 4. Sonuçlar ve Öneriler

Ülkemizde bitkisel ve hayvansal kaynaklı olarak ortaya çıkan çok çeşitte ve yüksek miktarlarda organik atıklar bulunmaktadır. Ancak maalesef çoğunlukla bu organik atıklar, diğer atıklarla karışık olarak genellikle yerel yönetimler tarafından toplandığı için tam olarak geri dönüşüm açısından gübre niteliğinde değerlendirilememektedir. Bu projenin amaçları arasında, organik atıkların kompost veya vermikompost değerinin ortaya konulması yanında bu sektörde ticari faaliyet gösteren firmaların büyük sorunlarından bir tanesi olan solucan maması bulmalarına yardımcı olacak bilgileri üretmektir. Proje sonuçlarından da görüldüğü gibi özellikle çerezlik ayçiçeği atıklarının hem solucan sayısını artırmada hem de solucan maması olarak kullanılabilir nitelikte olduğu ortaya çıkmıştır. Vermikompost üretiminde başarılı bir şekilde kullanılan *Eisenia fetida* türü solucanların sayılarının artırılması, vermikompost sektörüne yatırım yapan işletmeciler için oldukça önemlidir. Bunun dışında bu türdeki solucanların

çoğaltılıp ülkemizin nemli bölgelerindeki arazilerine bırakılması, toprak sağlığının korunması açısından da son derece önemlidir. Çerezlik ayçiçeği üreticileri bugüne kadar atıkları bazen hayvan yemi olarak kullanmakta ve bazen de yakacak olarak kullandıkları için tam olarak değerlendirememektedirler. Bu proje sayesinde bu atıkların kompost veya vermikompost yapımında kullanılabilirliğinin ortaya konulması, organik gübre üreticileri için önemli bir bilgi niteliğindedir. Çiftlik hayvanlarından inek dışkılarının da tam olarak kompost yapılamaması gibi sorunlar olduğu bilinmektedir. Ayrıca inek dışkıları doğru yöntemde kompost yapılmadan arazilere organik gübre olarak uygulandığında, yabancı ot problemleri ortaya çıkmaktadır. Bu proje ile inek dışkılarının vermikompost yapımında başarıyla kullanılabilmesi bir kez daha ortaya konulmuş olup, çerezlik ayçiçeği atığı ile karıştırılarak kullanılması durumunda önemli avantajlar elde edildiği de ortaya konulmuştur. Organik atıkların değerlendirilmeleri ile ilgili önemli bilgilerin elde edildiği bu projelerin sayı ve nitelik olarak artırılması, döviz ile gübre girişi olan ülkemiz üreticilerinin “gübre girdi maliyetlerini” düşürerek tarımsal üretim yapmaları ve ayrıca kendi atıklarını gübreye dönüştürüp girdi maliyetlerini azaltmaları açısından da önem taşımaktadır. Daha önce zeytin budama atıkları, fındık kabuğu, saman, çim atıkları, üzüm çöpü, kâğıt atıkları, badem ve ceviz kabukları gibi bitkisel kökenli atıklarla yapılan benzer çalışmalarda da bitki besleme ve toprak bilimine katkı sağlayan bilgiler ortaya konulmuştur. Bu çalışma da önceki benzer çalışmalarda olduğu gibi çerezlik ayçiçeği atıklarının vermikomposta dönüştürülebileceğinin ortaya konulması açısından değerli bir kaynak olarak kullanılabilir niteliktedir.

**Özet**

Ölüm ve mutluluk birbirine hiç yakışmayacak iki kavram olarak değerlendirilebilir. Ancak her ne kadar durum bu yönde olsa da bazı durumlar ve şartlar ise bu iki kavramın birlikteliğini de beraberinde getirebilmektedir. Özellikle üniversitede öğrenim gören ve bir anlamda kendi hayatını şekillendirmeye çalışırken, diğer anlamda da bu duyguları yaşamış olan bireyler için bu durum daha karmaşık bir hal de alabilmektedir. Bu düşünceler altında araştırmada 6 Şubat'ta Türkiye'de yaşanan ve pek çok kişinin ölümü ile sonuçlanan Kahramanmaraş depremini yaşamış olan üniversite öğrencilerinin ölüm ve mutluluk algısının belirlenmesi amaçlanmıştır. Araştırmada nitel ve nicel yöntemler birlikte kullanılmıştır. Araştırmanın nicel boyutunda tarama yöntemi nitel boyutunda ise görüşme tekniği kullanılmıştır. Erzurum Atatürk Üniversitesi Fen Edebiyat Fakültesi bölümünde öğrenim gören ve Kahramanmaraş depreminde bölgede olan 300 üniversite öğrencisi ile çalışılmıştır. Araştırmada veriler "Genel Bilgi Formu", "Yarı Yapılandırılmış Görüşme Formu" "Ölüm Algısı Ölçeği" ve "Mutluluğa Aşırı Değer Verme Ölçeği" ile toplanmıştır. Araştırma sonucunda, öğrencilerin depremden önce ve sonra ölüm ve mutluluk algılarında değişimler yaşandığı belirlenmiştir. Ayrıca ölümü direk olarak yaşayan öğrencilerde mutluluk algısının yok olduğu ve birtakım sorunların yaşandığı sonucuna ulaşılmıştır. Araştırmada elde edilen bir diğer sonuç ise öğrencilerin depremde yakınlarını kaybetmemiş olsalar bile, ölümle ilgili eskiden düşündüklerinden daha farklı kavramlar elde ettikleridir. Araştırmadan elde edilen sonuçlara yönelik deprem gibi bir felaketi yaşayan ya da yaşamayan tüm öğrencilere psikososyal destek sağlanması ve bu öğrencilerin yakından takiplerinin gerçekleştirilmesi önerilebilir.

**Anahtar Kelimeler:** Ölüm, Mutluluk, Üniversite öğrencisi, Deprem, Psikososyal destek

**Bu çalışmanın yapılmasında emeği olan ve aramızdan zamansız ve erken ayrılan Doç. Dr. Rıdvan KÜÇÜKALİ anısına ithaf edilmiştir.**

**INVESTIGATION OF UNIVERSITY STUDENTS' PERCEPTIONS OF DEATH AND  
HAPPINESS AFTER KAHRAMANMARAŞ EARTHQUAKE**

**Abstract**

Death and happiness can be considered as two concepts that do not suit each other at all. However, although this is the case, some situations and conditions may bring about the coexistence of these two concepts. This situation can become more complicated, especially for individuals who are studying at university and who, in one sense, are trying to shape their own lives and who, in another sense, have experienced these emotions. Under these considerations, the aim of the study was to determine the perception of death and happiness of university students who experienced the Kahramanmaraş earthquake in Turkey on February 6, which resulted in the death of many people. Qualitative and quantitative methods were used together in the research. Screening method was used in the quantitative dimension of the research and interview technique was used in the qualitative dimension. The study was conducted with 300 university students studying at Erzurum Atatürk University, Faculty of Arts and Sciences, and who were in the region during the Kahramanmaraş earthquake. In the research, data were collected with the "General Information Form", "Semi-structured Interview Form", "Death Perception Scale" and "Overvaluing Happiness Scale". As a result of the research, it was determined that there were changes in the students' perceptions of death and happiness before and after the earthquake. In addition, it was concluded that the perception of happiness disappeared in students who directly experienced death and some problems were experienced. Another result obtained in the research is that even if the students did not lose their relatives in the earthquake, they acquired different concepts about death than they used to think. Based on the results obtained from the research, it may be recommended to provide psychosocial support to all students, whether they have experienced a disaster such as an earthquake or not, and to closely monitor these students.

**Keywords:** Death, Happiness, University student, Earthquake, Psychosocial support

## **Giriş**

İnsanoğlunun hayatı doğum ile başlayıp ölümle sona ermektedir. Ancak durum her ne kadar bu kadar basit bir şekilde ifade edilmeye çalışılsa da aslında durumun bu kadar basit olmadığı da görülmektedir. Genellikle yenidoğana gelme eylemi olarak ifade edilen doğum mutluluğun başlangıcı olarak da ifade edilebilmektedir. Durumun bu boyutta olması ise insanın sürekli bir mutluluk ve üzüntü duygu durumlarını yaşamalarına da yol açabilmektedir. Üstelik bu duygu durumları sanıldığından daha da farklı bir boyut alabilmektedir. Ölüm ise herkesin uzak durmaya çalıştığı adı bile anıldığında kişileri mutsuz etmeye yetecek özellikleri bünyesinde barındırabilen bir duygu durumu olarak da ifade edilebilir (Alver, 2017; Çetin, 2017; Kim, 2013; Lee vd., 2015; Testoni vd., 2019; Türkdoğan ve Duru, 2012). Bu kapsamda ölüm ve mutluluk birbirinden uzak olsa da bir o kadar da günlük yaşamda karşılaşılabilecek olgular olarak ele alınabilir. Ölüm hayatın sonu olarak düşünüldüğünden ve bu yöndeki beklentilerden dolayı genellikle pek düşünülmeyen bir olgudur. Daha doğrusu belirli bir yaş grubuna ithaf edilen bir durum olarak görülmektedir. Aslında ölümün o kadar da uzak olmadığı da aşikârdır. Toplumlarda yaşanan birtakım olay ve olgular ölümle birlikteliği daha da erken gündeme getirebilmektedir. Üstelik insanın kendisi yaşamasa da etrafında karşılaşılabileceği bu tür durumlar da benzer duygusal ifadelerle yol açabilecektir (Arslan, 2019; Ayten, 2009; Byeon ve Park, 2017; Genç, 2018; Lee vd., 2019; Meffert vd., 2015; Şahin, 2018). Türkiye’de bu kapsamda son zamanlarda yaşanan ve asrın felaketi olarak ifade edilen pek çok kişinin ölümüyle sonuçlanan Kahramanmaraş merkez üslü olan deprem mutluluk ve ölüm kavramlarının bir arada yaşanmasıyla sonuçlanmıştır. 6 Şubat 2023 tarihinde merkez üssü Kahramanmaraş olan depremde pek çok insan hayatını kaybetmiş ve pek çok insan da yaralanmıştır. Bu kayıpların yanında pek çok kişinin maddi kayıplara da uğradığı depremde sayısız hasarlar da beraberinde gelmiştir. Özellikle üniversitelerin kapalı olduğu dönemde, pek çok gencin ailesinin yanında olması sonucunda üniversitede öğrenim gören gençler de bu durumdan fazlasıyla etkilenmiştir. Pek çoğu akrabalarını, arkadaşlarını kaybetmiş, pek çoğunun geleceğe yönelik hedef ve planları sekteye uğramıştır. Elbette bu durum gencin içinde bulunduğu durumu daha da kötüleştirebilmiştir (İmik ve Aydoğdu, 2023; Sarıgül, 2023). Üniversitede öğrenim gören gençlerin ifade edilen deprem felaketinden etkilenmelerinde hem yaşadıkları kayıpların hem de içerisinde buldukları dönemin özellikle etkili olduğu ifade edilebilir. Üniversitede öğrenim gören gençler normalde geleceklerine yönelik endişeleri de oldukça fazla taşıyan bireylerdir. Aldıkları eğitimle iyi bir iş sahibi olmak onların en büyük kaygıları arasındadır. Mezun olduktan sonra hayatlarını karşılayıp karşılamayacakları durumu

onlar için endişe ve stres kaynağı olabilmektedir. Özellikle ailelerinden ayrı yaşamaya başlayan, bağımsızlığını kazanan üniversite gençliğinin bu anlamda okulu bitirdikten sonra kendi hayatını kuramayacak durumda olması ya da bu durumla karşı karşıya kalma düşüncesi bile onları büyük bir kaosun ortasında bırakabilmektedir. İfade edilen bu duygu durumuna sahip olan üniversite gençliğinin, deprem felaketini yaşaması ve bu felakette maddi ya da manevi kayıplar yaşamaları ise onların daha fazla psikolojik ya da davranışsal sorunlar yaşamalarını da beraberinde getirebilecektir (Çakır vd., 2023; Telli ve Altun, 2023). Böyle bir durumda ise bu gençlerin tespit edilerek onlara psikososyal destek sağlanması gerekecektir. Psikososyal destek, bireyin baş edemediği ve baş etme mekanizmasının sınırlarının aşıldığı durumlarda bireylere sağlanan destek olarak tanımlanabilir (Aksoy ve Kabasakal, 2023; Türk ve Kaya, 2023). Bu kapsamda deprem felaketini yaşayan üniversite öğrencilerinin belirlenmesi ve psikososyal destek mekanizmalarının devreye alınması onların incinebilirliklerini de azaltabilecektir. Yapılan araştırmalarda üniversite gençliğine yönelik yaşanan deprem felaketinde hissettiklerine yönelik sınırlı sayıda araştırmaya rastlanmıştır (İmik ve Aydoğdu, 2023; Kaplan ve Taşar, 2023; Sarıgül, 2023; Yıldız ve Öztürk, 2023). Bu kapsamda araştırmada 6 Şubat Kahramanmaraş depremini yaşayan üniversite öğrencilerinin ölüm ve mutluluk özelinde hissettiklerini belirlemek amaçlanmıştır.

### **Yöntem**

6 Şubat Kahramanmaraş depreminden sonra üniversite öğrencilerinin mutluluk ve ölüm algılarını belirlemek amacıyla gerçekleştirilen araştırmanın modeli, çalışma grubu, veri toplama araçları, veri toplama yöntemi ve verilerin analizi kısımlarına bu bölümde yer verilmiştir.

### **Araştırma Modeli**

Araştırmada nicel araştırma yöntemlerinden tarama modeli kullanılmıştır. Tarama modeli, geçerlik ve güvenilirliği kanıtlanmış ölçme araçlarıyla geniş bir örneklem grubundan bilgi almayı sağlayan bir yöntemdir (Büyüköztürk vd., 2016). Araştırmada üniversite öğrencilerinin Kahramanmaraş depremine yönelik mutluluk ve ölüm algılarını belirlemek amacıyla tarama modeli kullanılmıştır.

### **Çalışma Grubu**

Araştırma Erzurum Atatürk Üniversitesi Fen Edebiyat Bölümüne devam eden ve 6 Şubat Kahramanmaraş depreminde bu bölgede olan ve araştırmaya gönüllü olarak katılmayı kabul eden öğrencilerle gerçekleştirilmiştir. Araştırmaya dâhil edilen öğrencilerin %82'si kadın, %18'i erkektir. Öğrencilerin %66'ı 18-21 yaş grubunda, %61'i il merkezinde yaşamakta, %88,3'ü ikinci sınıf öğrencisi, %90,7'sinin anne- babası hayatta, %54,3'ünün annesi,

%36,7'sinin babası ilköğretim mezunudur. Öğrencilerin %53,3'ü depremde birinci derece akrabalarını kaybetmiş, %46,7'si ise kaybetmemiştir.

### **Veri Toplama Araçları**

Araştırmada veriler “Genel Bilgi Formu”, Demirci, Ekşi ve Ekşi (2018) tarafından Türkçeye uyarlanan “Mutluluğa Aşırı Değer Verme Ölçeği” ve Topuz (2013) tarafından Türkçeye uyarlanan “Ölüm Algısı Ölçeği” ile toplanmıştır.

**Genel Bilgi Formu:** Araştırmada yer alacak öğrencilerin sosyodemografik özelliklerini belirlemek amacıyla geliştirilmiş olan formdur. Formda öğrencilerin cinsiyetleri, yaşları, anne-baba hayatta olma durumu, anne-baba öğrenim durumu, Kahramanmaraş depreminde birinci derece yakınlarını kaybedip kaybetmediklerine yönelik sorular bulunmaktadır.

**Mutluluğa Aşırı Değer Verme Ölçeği:** Mauss ve arkadaşları (2011) tarafından bireylerin mutluluğa yönelik algılarını belirlemek amacıyla geliştirilen ölçek, Demirci, Ekşi ve Ekşi (2018) tarafından Türkçeye uyarlanmıştır. 7 madde ve tek boyut olarak değerlendirilen ölçek 7'li likert tipindedir. Ölçeğin uyarlama çalışması sırasında Cronbach Alfa değeri .80 olarak bulunmuştur. Araştırma kapsamında Cronbach alfa değeri ise .70 olarak değerlendirilmiştir.

**Ölüm Algısı Ölçeği:** Spilka ve arkadaşları (1977) tarafından geliştirilen ve bireylerin ölüm algılarını belirlemeyi amaçlayan ölçek, Topuz (2013) tarafından Türkçeye uyarlanmıştır. 24 madde dördümlü likert tipinden oluşan ölçek, beş alt boyuttan oluşmaktadır. Türkçeye uyarlama çalışmasında Cronbach Alfa değerleri, Ahirette Ödüllendirme alt boyutu için .82, Bakmakla Yükümlü Olduklarını Terk Etme alt boyutu için .72, Başarısızlık alt boyutu için .75, Cesaret alt boyutu için .69, Bilinmeyen alt boyutu için .67, Acı Çekme alt boyutu için .73 ve tüm ölçek için .81 olarak bulunmuştur. Araştırma kapsamında Cronbach alfa değerleri Ahirette ödüllendirme alt boyutu için .68, Bakmakla Yükümlü Olduklarını Terk Etmek alt boyutu için .75, Başarısızlık alt boyutu için .79, Cesaret alt boyutu için .70, Bilinmeyen alt boyutu için .64, Acı Çekme alt boyutu için .81 ve tüm ölçek için .72 olarak bulunmuştur.

### **Veri Toplama Yöntemi**

Araştırmada Erzurum Atatürk Üniversitesi Fen Edebiyat Fakültesinde öğrenim gören öğrencilere araştırmanın amacı hakkında bilgi verilmiştir. Araştırmaya gönüllü olarak katılım sağlamak isteyen öğrencilere onam formu doldurulmuş ve veriler araştırmacı tarafından yüz yüze uygulanmıştır.

### **Verilerin Analizi**

Araştırmada öğrencilerin verdikleri cevaplar SPSS 26.0 IBM istatistik programına aktarılmıştır. Öğrencilerin sosyodemografik özellikleri için betimsel istatistikler kullanılmıştır. Öğrencilerin

ölçeklere vermiş oldukları cevapların normal dağılım gösterip göstermediğini belirlemek için örneklem sayısının 50 üstünde olmasından dolayı Kolmogorov Smirnov test sonuçları ile Skewness ve Kurtosis değerleri incelenmiştir. Mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait normallik analiz dağılım sonuçlarında öğrencilerin vermiş oldukları cevapların normal dağılım göstermediği belirlenmiştir. Bu nedenle analizlerde Kruskal Wallis t Testi, Mann Whitney U testi ve Spearman Korelasyon analizi kullanılmıştır.

### **Bulgular**

Kahramanmaraş depremini yaşayan üniversite öğrencilerinin mutluluk ve ölüm algılarını belirlemek amacıyla yapılan araştırmanın bulgularına aşağıda yer verilmiştir.

Tablo 1’de üniversite öğrencilerinin cinsiyetlerine göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait ortalamalar ve Mann Whitney U test sonuçları görülmektedir. Tabloda da görüldüğü gibi öğrencilerin cinsiyetlerine göre ölüm algısı ölçeği alt boyutlarından cesaret ( $U=4972$ ;  $p<.05$ ) ve bilinmeyen alt boyutlarında ( $U=5394$ ;  $p<.05$ ) anlamlı farklılık bulunmuştur. Cesaret alt boyutunda erkek öğrencilerin sıra ortalaması ( $x=181,43$ ), kız öğrencilerin sıra ortalamasından ( $x=143,71$ ) yüksek bulunmuştur. Bir başka ifadeyle erkek öğrenciler ölüme yönelik daha fazla cesarete sahiptirler. Bilinmeyen alt boyutunda ise kız öğrencilerin sıra ortalaması ( $x=155,57$ ) erkek öğrencilerin sıra ortalamasına ( $x=127,39$ ) göre daha yüksektir. Yani kız öğrenciler erkek öğrencilere oranla ölüm hakkında daha fazla bilinmezlik taşımaktadırlar.

Tablo 2’de üniversite öğrencilerinin yaşlarına göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait ortalamalar ve Mann Whitney U test sonuçları görülmektedir. Tabloda da görüldüğü gibi öğrencilerin yaşlarına göre ölüm algısı ölçeği alt boyutlarından ahirette ödüllendirilme ( $U=8312$ ;  $p<.05$ ) ve başarısızlık ( $U=8057,50$ ;  $p<.05$ ) alt boyutları arasında anlamlı farklılık bulunmuştur. Ahirette ödüllendirilme alt boyutunda 22 ve üstü yaş grubunda olan öğrencilerin sıra ortalaması ( $x=168,01$ ), 18-21 yaş grubunda olan öğrencilerin sıra ortalamasına göre ( $x=141,48$ ) yüksek bulunmuştur. Yani 22 ve üstü yaş grubunda olan öğrenciler ahirette ödüllendirileceklerini düşünmektedir. Başarısızlık alt boyutunda 18-21 yaş grubunda olan öğrencilerin sıra ortalaması ( $x=160,81$ ), 22 ve üstü yaş grubunda olan öğrencilerin sıra ortalamasına ( $x=130,50$ ) göre yüksek bulunmuştur. Bir başka ifadeyle 18-21 yaş grubunda olan öğrenciler ölüm hakkında daha fazla başarısızlık hissetmektedir.

Tablo 3’de üniversite öğrencilerinin doğum yerlerine göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait ortalamalar ve Kruskal Wallis test sonuçları görülmektedir. Tabloda da görüldüğü gibi öğrencilerin doğum yerlerine göre mutluluğa aşırı

değer verme ölçeği arasında anlamlı farklılık bulunmuştur ( $x^2=46,32$ ;  $p<0,05$ ). Buna göre köyde dünyaya gelen öğrencilerin sıra ortalaması ( $x=270,39$ ), ilçede ( $x=134,81$ ) ve ilde ( $x=144,23$ ) dünyaya gelen öğrencilerin sıra ortalamasına göre daha yüksektir. Bir başka ifadeyle köyde dünyaya gelen öğrenciler, ilçe ve ilde dünyaya gelen öğrencilere oranla daha mutludur. Öğrencilerin doğum yerlerine göre ölüm algısı ölçeği alt boyutlarından ahirette ödüllendirilme ( $x^2=25,34$ ;  $p<0,05$ ), bakmakla yükümlü olduklarını terk etme ( $x^2=17,69$ ;  $p<0,05$ ) ve cesaret alt boyutlarında ( $x^2=10,78$ ;  $p<0,05$ ) anlamlı farklılık bulunmuştur. Ahirette ödüllendirilme alt boyutunda ilçede dünyaya gelen öğrencilerin sıra ortalaması ( $x=185,52$ ), köyde ( $x=107,86$ ) ve ilde ( $x=137,45$ ) dünyaya gelen öğrencilerin sıra ortalamasından daha yüksektir. Yani ilçede dünyaya gelen üniversite öğrencileri ahirette ödüllendirileceğine daha fazla inanmaktadır. Bakmakla yükümlü olduklarını terk etme alt boyutunda ilçede dünyaya gelen öğrencilerin sıra ortalaması ( $x=181,15$ ), ilde dünyaya gelen öğrencilerin sıra ortalamasından ( $x=137,19$ ) yüksek olarak bulunmuştur. Yani ilçede dünyaya gelen öğrenciler ölümle bakmakla yükümlü olduklarını terk edeceklerini düşünmektedirler. Cesaret alt boyutunda köyde dünyaya gelen öğrencilerin sıra ortalaması ( $x=197,91$ ), ilçede ( $x=160,11$ ) ve ilde ( $x=139,81$ ) dünyaya gelen öğrencilerin sıra ortalamasına göre yüksek bulunmuştur. Yani köyde dünyaya gelen öğrenciler ölüm konusunda daha cesaretli oldukları söylenebilir. Tablo 4’de üniversite öğrencilerinin sınıf düzeylerine göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait ortalamalar ve Kruskal Wallis test sonuçları görülmektedir. Tabloda da görüldüğü gibi üniversite öğrencilerinin sınıf düzeyleri ile mutluluğa aşırı değer verme ölçeği arasında anlamlı farklılık bulunmuştur ( $x^2=25,57$ ;  $p<0,05$ ). Bu duruma göre birinci sınıfta bulunan öğrencilerin sıra ortalaması ( $x=48,50$ ), ikinci sınıf ( $x=147,25$ ), üçüncü sınıf ( $x=194,67$ ) ve dördüncü sınıf ( $x=243,00$ ) öğrencilerine göre düşük bulunmuştur. Yani birinci sınıf öğrencileri mutluluğa daha az değer vermektedir. Öğrencilerin sınıf düzeylerine göre ölüm algısı ölçeğinin tamamında ( $x^2=24,77$ ;  $p<0,05$ ), Ahirette ödüllendirilme alt boyutunda ( $x^2=8,86$ ;  $p<0,05$ ); başarısızlık alt boyutunda ( $x^2=25,68$ ;  $p<0,05$ ), cesaret alt boyutunda ( $x^2=13,77$ ;  $p<0,05$ ), bilinmeyen alt boyutunda ( $x^2=26,36$ ;  $p<0,05$ ) ve acı çekme alt boyutunda ( $x^2=13,77$ ;  $p<0,05$ ) anlamlı farklılık bulunmuştur. Ölüm algısı ölçeğinin tamamında birinci sınıf öğrencilerinin sıra ortalaması ( $x=268$ ), ikinci sınıf ( $x=148,36$ ), üçüncü sınıf ( $x=173,33$ ) ve dördüncü sınıf öğrencilerinin ( $x=45,50$ ) sıra ortalamasından yüksek bulunmuş, ikinci sınıf öğrencilerinin sıra ortalaması ( $x=148,36$ ), dördüncü sınıf öğrencilerinin sıra ortalamasından ( $x=45,50$ ) yüksek bulunmuştur. Yani birinci ve ikinci sınıf öğrencileri daha fazla ölüm algısına sahiptir. Ahirette ödüllendirme alt boyutunda üçüncü sınıf öğrencilerinin sıra ortalaması ( $x=175,83$ ), birinci sınıf öğrencilerinin

( $x=207,50$ ) ve dördüncü sınıf ( $x=207,50$ ) öğrencilerinin sıra ortalamasından düşük bulunmuştur. Bir başka ifadeyle ikinci sınıf öğrencileri ahirette ödüllendirileceklerine daha az inanmaktadır. Başarısızlık alt boyutunda birinci sınıf öğrencilerinin sıra ortalaması ( $x=244,00$ ), ikinci sınıf öğrencilerinin ( $x=153,87$ ), üçüncü sınıf ( $x=117,17$ ) ve dördüncü sınıf öğrencilerinin ( $x=29,50$ ) sıra ortalamasından yüksek, dördüncü sınıf öğrencilerinin sıra ortalaması ( $x=29,50$ ), ikinci sınıf öğrencilerinin ( $x=153,87$ ) ve üçüncü sınıf öğrencilerinin ( $x=117,17$ ) sıra ortalamasından düşük bulunmuştur. Yani birinci sınıf öğrencileri ölüme başarısızlık duygusunu daha fazla yaşamaktayken, dördüncü sınıf öğrencileri daha az oranda yaşamaktadır. Cesaret alt boyutunda birinci sınıf öğrencilerinin sıra ortalaması ( $x=258,00$ ), ikinci sınıf ( $x=148,58$ ), üçüncü sınıf ( $x=156$ ) ve dördüncü sınıf ( $x=99$ ) öğrencilerinin sıra ortalamalarından daha yüksek bulunmuştur. Yani ölüme karşı birinci sınıf öğrencileri daha fazla cesur davranmaktadır. Bilinmeyen alt boyutunda ise dördüncü sınıf öğrencilerinin sıra ortalaması ( $x=7,00$ ), birinci sınıf ( $x=199,50$ ), ikinci sınıf ( $x=155,82$ ), üçüncü sınıf öğrencilerinin ( $x=114,83$ ) sıra ortalamasından düşük; üçüncü sınıf öğrencilerinin sıra ortalaması ( $x=114,83$ ), birinci sınıf öğrencilerinin ( $x=199,50$ ) ve ikinci sınıf ( $x=155,82$ ) öğrencilerinin sıra ortalamasından düşük bulunmuştur. Yani üçüncü ve dördüncü sınıf öğrencileri ölüm karşısında daha fazla bilinmezlik hissetmektedir. Acı çekme alt boyutunda ise birinci sınıf öğrencilerinin sıra ortalaması ( $x=215,00$ ), ikinci sınıf öğrencilerinin sıra ortalamasından ( $x=144,11$ ) ve dördüncü sınıf öğrencilerinin ( $x=169,50$ ) sıra ortalamasından yüksek, üçüncü sınıf öğrencilerinin sıra ortalaması ( $x=203,33$ ), ikinci sınıf öğrencilerinin ( $x=144,11$ ) sıra ortalamasından yüksek olarak bulunmuştur. Bir başka ifadeyle birinci ve üçüncü sınıf öğrencileri ölümü daha fazla oranda acı çekme olarak düşünmektedirler. Tablo 5’de üniversite öğrencilerinin anne-baba hayatta olma durumuna göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait ortalamalar ve Mann Whitney U test sonuçları görülmektedir. Tabloda da görüldüğü gibi öğrencilerin anne-baba hayatta olma durumuna göre mutluluğa aşırı değer verme ölçeği arasında anlamlı farklılık bulunmuştur ( $U=2659,50$ ;  $p<.05$ ). Buna göre anne-babası hayatta olan öğrencilerin sıra ortalaması ( $x=154,72$ ), anne-babası hayatta olmayan öğrencilerin ( $x=109,48$ ) sıra ortalamasına göre yüksek bulunmuştur. Yani anne babası hayatta olan öğrenciler mutluluğa daha fazla değer vermektedir. Öğrencilerin anne-baba hayatta olma durumuna göre ölüm algısı ölçeğinin tamamında ( $U=1975$ ;  $p<.05$ ), başarısızlık alt boyutunda ( $x=2418$ ;  $p<.05$ ), bilinmeyen alt boyutunda ( $x=2579$ ;  $p<.05$ ) ve acı çekme alt boyutlarında ( $x=1805,50$ ;  $p<.05$ ) anlamlı farklılık bulunmuştur. Ölüm algısı ölçeğinin tamamında anne-babası hayatta olmayan öğrencilerin sıra ortalaması ( $x=215,96$ ),

anne-babası hayatta olan ( $x=143,76$ ) öğrencilere oranla yüksek bulunmuştur. Yani anne-babası hayatta olmayan öğrenciler daha fazla ölüm algısı hissetmektedir. Başarısızlık alt boyutunda anne-babası hayatta olmayan öğrencilerin sıra ortalaması ( $x=200,14$ ), anne-babası hayatta olan öğrencilerin sıra ortalamasına ( $x=145,39$ ) göre, bilinmeyen alt boyutunda anne-babası hayatta olmayan öğrencilerin sıra ortalaması ( $x=194,39$ ), anne-babası hayatta olan öğrencilerin sıra ortalamasına ( $x=145,98$ ) ve acı çekme alt boyutunda anne-babası hayatta olmayan öğrencilerin sıra ortalaması ( $x=222,02$ ), anne-babası hayatta olan öğrencilerin sıra ortalamasına ( $x=143,14$ ) yüksek bulunmuştur. Bir başka ifadeyle anne-babası hayatta olmayan öğrenciler, anne-babası hayatta olan öğrencilere oranla ölümden sonra başarısızlık, bilinmeyen ve acı çekme duyguları yaşamaktadır. Tablo 6'da üniversite öğrencilerinin anne öğrenim durumuna göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait ortalamalar ve Kruskal Wallis test sonuçları görülmektedir. Tabloda da görüldüğü gibi öğrencilerin anne öğrenim durumlarına göre mutluluğa aşırı değer verme ölçeği arasında anlamlı farklılık bulunmuştur ( $x^2=15,76$ ;  $p<.05$ ). Annesi ilköğretim mezunu olan öğrencilerin sıra ortalaması ( $x=167,89$ ), annesi ortaokul ( $x=120,35$ ) ve annesi lise mezunu olan ( $x=136,02$ ) öğrencilerin sıra ortalamasından yüksektir. Yani annesi ilköğretim mezunu olan öğrenciler daha fazla mutluluk hissetmektedir. Öğrencilerin anne öğrenim durumlarına göre ölüm algısı ölçeğinin tamamı ( $x^2=21,97$ ;  $p<.05$ ), ahirette ödüllendirilme alt boyutunda ( $x^2=35,31$ ;  $p<.05$ ), bakmakla yükümlü olduklarını terk etme alt boyutunda ( $x^2=18,62$ ;  $p<.05$ ), başarısızlık alt boyutunda ( $x^2=27,05$ ), cesaret alt boyutunda ( $x^2=22,98$ ;  $p<.05$ ) ve acı çekme alt boyutunda ( $x^2=13,99$ ;  $p<.05$ ) anlamlı farklılık bulunmuştur. Ölüm algısı ölçeğinin tamamında annesi üniversite mezunu olan öğrencilerin sıra ortalaması ( $x=257,15$ ), annesi ilkokul ( $x=144,12$ ), annesi ortaokul ( $x=138,68$ ) ve annesi lise ( $x=156,16$ ) mezunu olan öğrencilerin sıra ortalamasından yüksek bulunmuştur. Yani annesi üniversite mezunu olan öğrenciler daha fazla ölüm algısı çekmektedir. Ahirette ödüllendirilme alt boyutunda annesi lise mezunu olan öğrencilerin sıra ortalaması ( $x=204,66$ ), annesi ilköğretim ( $x=131,94$ ), annesi ortaöğretim ( $x=137,81$ ) mezunu olan öğrencilere oranla yüksek bulunmuştur. Yani annesi lise mezunu olan öğrenciler ahirette ödüllendirileceklerini düşünmektedir. Bakmakla yükümlü olduklarını terk etme alt boyutunda, annesi ortaokul mezunu olan öğrencilerin sıra ortalaması ( $x=108,48$ ), annesi ilkokul mezunu olan öğrencilerin ( $x=164,56$ ) ve annesi lise mezunu ( $x=153,95$ ) olan öğrencilerin sıra ortalamasına göre düşük bulunmuştur. Yani annesi ortaokul mezunu olan öğrenciler ölümden sonra bakmakla yükümlü olduklarını daha az oranda terk ettiklerini düşünmektedir. Başarısızlık alt boyutunda annesi ilkokul mezunu olan öğrencilerin sıra ortalaması ( $x=131,64$ ), annesi ortaokul ( $x=167,98$ ),

annesini lise ( $x=163,15$ ), annesi üniversite mezunu olan öğrencilerin ( $x=244,00$ ) sıra ortalamasına göre düşük; annesi üniversite mezunu olan öğrencilerin sıra ortalaması ( $x=244,00$ ), annesi ortaokul ( $x=167,98$ ) ve annesi lise ( $x=163,15$ ) mezunu olan öğrencilerin sıra ortalamasına göre yüksek bulunmuştur. Bir başka ifadeyle annesi ilkököl mezunu olan öğrenciler ölüm karşısında daha az başarısızlık hissederken, annesi üniversite mezunu olan öğrenciler daha fazla başarısızlık hissetmektedir. Cesaret alt boyutunda annesi üniversite mezunu olan öğrencilerin sıra ortalaması ( $x=258,00$ ), annesi ilkököl ( $x=148,81$ ), annesi ortaokul ( $x=149,67$ ) ve annesi lise ( $x=133,75$ ) mezunu olan öğrencilerin sıra ortalamasına göre yüksek bulunmuştur. Yani annesi üniversite mezunu olan öğrenciler ölüm karşısında daha fazla cesaret hissetmektedir. Acı çekme alt boyutunda annesi üniversite mezunu olan öğrencilerin sıra ortalaması ( $x=204,38$ ), annesi ilkököl ( $x=149,46$ ), annesi lise ( $x=124,48$ ) mezunu olan öğrencilerin sıra ortalamasına göre yüksek ve annesi ortaokul mezunu olan öğrencilerin sıra ortalaması ( $x=169,40$ ), annesi lise mezunu olan öğrencilerin sıra ortalamasına ( $x=124,48$ ) göre yüksek bulunmuştur. Bir başka ifadeyle annesi üniversite mezunu olan ve annesi ortaokul mezunu olan öğrenciler daha fazla oranda ölüm karşısında acı hissetmektedir. Tablo 7’de üniversite öğrencilerinin baba öğrenim durumuna göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait ortalamalar ve Kruskal Wallis test sonuçları görülmektedir. Tabloda da görüldüğü gibi öğrencilerin baba öğrenim durumuna göre mutluluğa aşırı değer verme ölçeği arasında anlamlı farklılık bulunmuştur ( $x^2=30,79$ ;  $p<.05$ ). Babası üniversite mezunu olan öğrencilerin mutluluğa aşırı değer verme ölçeği sıra ortalamaları ( $x=84,87$ ), babası ilkököl ( $x=170,98$ ), babası ortaokul ( $x=132,01$ ), babası lise ( $x=169,17$ ) mezunu olan öğrencilerin sıra ortalamasına göre düşük bulunurken, babası ortaokul mezunu olan öğrencilerin sıra ortalaması ( $x=132,01$ ), babası ilkököl ( $x=170,98$ ) ve babası lise ( $x=169,17$ ) mezunu olan öğrencilerin sıra ortalamasına göre düşük bulunmuştur. Bir başka ifadeyle babası üniversite ve ortaokul mezunu olan öğrenciler mutluluğa daha az değer vermektedir. Üniversite öğrencilerinin baba öğrenim durumlarına göre ölüm algısı ölçeğinin tamamında ( $x^2=15,03$ ;  $p<.05$ ); bakmakla yükümlü olduklarını terk etme alt boyutunda ( $x^2=21,31$ ;  $p<.05$ ), cesaret alt boyutunda ( $x^2=12,43$ ;  $p<.05$ ) ve bilinmeyen alt boyutunda ( $x^2=8,96$ ;  $p<.05$ ) anlamlı farklılık bulunmuştur. Ölüm algısı ölçeğinin tamamında babası ilkököl mezunu olan öğrencilerin sıra ortalaması ( $x=164,83$ ), babası ortaokul ( $x=138,70$ ) ve lise ( $x=127,70$ ) mezunu olan öğrencilerin sıra ortalamasına göre yüksek, babası üniversite mezunu olan öğrencilerin sıra ortalaması ( $x=187,28$ ), babası ortaokul mezunu ( $x=138,70$ ) ve babası lise ( $x=127,70$ ) mezunu olan öğrencilerin sıra ortalamasına göre yüksek bulunmuştur. Yani babası

ilkokul mezunu ve üniversite mezunu olan öğrenciler daha fazla oranda ölüm algısı hissetmektedir. Bakmakla yükümlü olduklarını terk etme alt boyutunda babası lise mezunu olan öğrencilerin sıra ortalaması ( $x=113,19$ ), babası ilkokul mezunu ( $x=172,86$ ), babası ortaokul ( $x=155,49$ ) ve babası üniversite ( $x=143,42$ ) mezunu olan öğrencilerin sıra ortalamasına göre düşük bulunmuştur. Yani babası lise mezunu olan öğrenciler bakmakla yükümlü olduklarını terk etme konusunda daha az endişe hissetmektedir. Cesaret alt boyutunda babası üniversite mezunu olan öğrencilerin sıra ortalaması ( $x=197,90$ ), babası lise ( $x=139,94$ ), babası ortaokul ( $x=137,90$ ) ve babası ilkokul ( $x=154,57$ ) mezunu olan öğrencilerin sıra ortalamasına göre yüksek bulunmuştur. Bir başka ifadeyle babası üniversite mezunu olan öğrenciler daha fazla oranda ölüm karşısında cesaret hissetmektedir. Bilinmeyen alt boyutunda babası ortaokul mezunu olan öğrencilerin sıra ortalaması ( $x=130,68$ ), babası ilkokul ( $x=164,82$ ) ve babası üniversite mezunu ( $x=166,63$ ) olan öğrencilerin sıra ortalamasına göre düşük bulunmuştur. Yani babası ortaokul mezunu olan öğrenciler daha az oranda bilinmezlik hissetmektedir. Tablo 8’de üniversite öğrencilerinin Kahramanmaraş depreminde yakınını kaybetme durumuna göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait ortalamalar ve Mann Whitney U test sonuçları görülmektedir. Tabloda da görüldüğü gibi üniversite öğrencilerinin Kahramanmaraş depreminde yakınını kaybetme durumuna göre mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutları arasında anlamlı farklılık bulunmamıştır ( $p>.05$ ). Tablo 9’da mutluluğa aşırı değer verme ölçeği ile ölüm algısı ölçeği ve alt boyutlarına ait Spearman korelasyon analiz test sonuçları görülmektedir. Tabloda da görüldüğü gibi mutluluğa aşırı değer verme ölçeği ile ahirette ödüllendirme alt boyutu arasında negatif yönde zayıf ( $r=-.23$ ;  $p<.05$ ); başarısızlık alt boyutunda negatif yönde ve zayıf ( $r=-.19$ ;  $p<.05$ ) anlamlı ilişki bulunmuştur. Yani mutluluğa aşırı değer verdikçe ahirette ödüllendirme ve başarısızlık duyguları azalmaktadır.

### **Tartışma**

6 Şubat Kahramanmaraş depreminden sonra üniversite öğrencilerinin mutluluk ve ölüm algılarını belirlemek amacıyla gerçekleştirilen araştırma sonucunda öğrencilerin cinsiyetlerine göre erkek öğrencilerin ölüme karşı daha fazla cesaret sergilerken, kız öğrencilerin bilinmezliğe sahip oldukları görülmektedir. Elde edilen bu sonucu kız ve erkek öğrencilerin yetiştirilme ve gelişimsel niteliklerine bağlanarak açıklamak mümkündür. Erkek öğrenciler toplumun kendine yüklediği misyon ve vizyona bağlı olarak genelde daha fazla risk alma potansiyeline sahiptir. Erkeklerin bu özelliğinden dolayı ölüme karşı da daha fazla cesaretli olmaları beklendik bir özellik olarak ele alınabilir. Nitekim erkeklerin güçlü olmak istemeleri ve ağlamalarının bile

uygun olarak görülmediği durumlarda elde edilen sonuca yönelik olarak da cesaretleri daha fazla olabilmektedir. Buna karşılık kızların daha fazla oranda empati duyguları ile yetişmesi de benzer şekilde bilinmezlik duygularının yoğunluğunu gerektirebilecektir. Çünkü ölüm algısı aslında bilinmezliklerle dolu bir durum olarak ifade edilebilir. (Ayten, 2009; Sezer ve Saya, 2009). Yapılan araştırmalarda da araştırma sonucuna benzer şekilde kız ve erkek öğrenciler arasında erkek öğrencilerin daha fazla cesarete sahip oldukları ve kızların daha bilinmezlik duygularıyla hareket etmelerine yönelik elde edilen bulgular araştırma sonucunda elde edilen bulguları desteklemektedir (Kutlu, Çavuşoğlu ve Uygun, 2018; Pinzon- Segura vd., 2022). Araştırma sonucunda 22 yaş ve üstünde olan öğrencilerin ahirette daha mutlu olduklarını düşündükleri ve 18-21 yaş arasındaki öğrencilerin ölüm karşısında daha fazla başarısız hissettikleri sonucuna ulaşılmıştır. 22 yaş ve üstünde bulunan öğrencilerin soyut anlamda olaylara daha farklı bir perspektifte bakabilme durumları ile 18-21 yaş arasındaki öğrencilerin henüz istediklerini elde edememe durumlarını yaşadıklarından dolayı sonucun bu yönde çıktığı düşünülmektedir. Çünkü 18-21 yaşında kişinin genelde istekleri ve beklentileri, geleceğini kurma, iyi bir işe sahip olma ve iyi bir şekilde yaşama şansı olarak özetlenebilir. Böyle bir durumda ise 18-21 yaş grubundaki öğrenciler henüz üniversite hayatının da başında olduklarından dolayı başarısızlık hissedebilirler. Öte yandan 22 yaşında genelde ifade edilenlerin elde edildiğini düşünmekle birlikte, öğrencilerin yaşayabilecekleri ve elde edemedikleri durumlar ise onların ahirette mutlu olacaklarını düşünmelerine neden olabilmektedir (Bolat ve Artan, 2022; Karakuş, Öztürk ve Tamam, 2012). Araştırma sonucunda köyde dünyaya gelen öğrencilerin, ilçe ve ilde dünyaya gelen öğrencilere göre daha mutlu oldukları bulunmuştur. Köyde yaşam genel anlamda insanların daha geniş aile topluluklarında yaşadıkları ve bir arada oldukları bir durum olarak ifade edilebilir. Böyle bir durumda öğrenciler stresten uzakta ve doğa ile iç içe bir yaşamla büyümektedir. Öğrencilerin köyde yaşamaları bir başka ifadeyle ilçe ve ilin sınırlarını ortadan kaldırarak çok erken yaşlardan itibaren psikolojik sağlamlığın da güçlü olmasını sağlayabilir. Böyle bir durum ise mutluluğa daha fazla değer verilmesini beraberinde getirebilir (Aksoy, Aytar ve Kaytez, 2018; Keleş, Keskin ve Ertek, 2018). İlçede dünyaya gelen öğrencilerin daha fazla oranda ahirette ödüllendirileceklerine inandıkları aynı zamanda bakmakla yükümlü olduklarını terk edeceklerini düşündükleri ve köyde dünyaya gelen öğrencilerin ölüm hakkında daha fazla cesarete sahip oldukları sonucuna ulaşılmıştır. Bu durumu ilçe ve köyün sosyoekonomik yapısına bağlayarak açıklamak mümkündür. İlçe ve ilde genel anlamda ölüme verilen algı oldukça farklı olabilmektedir. Kırsal kesimde ölümlerle hayatın son bulmadığı ve bu dünyada

yaptığı iyiliklerin karşılığını bir şekilde alacakları düşünülmektedir. Bu durum ise kişilerin ölüme yönelik daha cesaretli davranmalarını beraberinde getirebilmektedir (Alptekin, 2018; Coşkun, 2010; Çınar ve Akgümüş, 2023; Güven, 2019). Ancak buna karşılık olarak da bakmakla yükümlü olduklarını terk etme ve bundan dolayı da endişenin yoğun olarak yaşanması da söz konusu olabilmektedir (Dağ ve Alkar, 2022; Marti- Garcia vd., 2017). İfade edilen bu durumların ise araştırma bulgularını desteklediği düşünülmektedir. Araştırmada birinci sınıf öğrencilerinin mutluluğa daha az değer verdikleri bulunmuştur. Bu durumu üniversitenin başlangıcında öğrencilerin yaşayabilecekleri duygu durumuna bağlı olarak açıklamak mümkündür. Üniversitenin ilk dönemi genelde çevreye, derslere uyum sağlama çabalarıyla ilerlemektedir. Ancak öğrencilerin ilk senede genelde etrafa uyum sağlayamamaları, derslerin yoğunluğu ve sorumluluklarını daha fazla hissetmeleri onların mutsuz olmalarını da beraberinde getirebilmektedir (Özer ve Deniz, 2014; Sevinç ve Gizir, 2014). Ölüm algısı ve ölüme ait düşüncelerde sınıf düzeyine göre de farklılıklar bulunmuştur. Bu kapsamda sınıf düzeyi düştükçe, ölüme yönelik daha fazla korku, kaygı yaşama, ancak buna koşut olarak da daha fazla cesur davranışlar gösterdikleri bulunmuştur. Bu durumu yine birinci sınıf öğrencilerinin gelişimsel özelliklerine bağlayarak açıklamak mümkündür. Genelde üniversite birinci sınıf öğrencileri ergenlik döneminden yeni çıkmış ve çıkmakta olan bireylerdir. Ergenlerin ise genelde daha fazla risk alma davranışlarına sahip oldukları bilinmektedir. Bununla birlikte ergenler aynı zamanda ölümsüz olduklarını düşünmekte ve ölüme yönelik büyük oranda kaygı ve korku hissedebilmektedir. Böyle bir durum ise bu dönemdeki bireylerin daha cesur olmalarını beraberinde getirdiği gibi, aynı zamanda korku ve kaygı durumunu da beraberinde getirebilecektir (Çubuk, 2020; Sekiz Öz ve Kargın, 2021; Tatlıoğlu, 2012). Araştırmada anne-babası hayatta olan öğrencilerin daha fazla mutlu oldukları, buna karşılık anne-babası hayatta olmayan öğrencilerin ölüm algılarının daha yüksek olduğu sonucuna ulaşılmıştır. Anne-baba her yaşta bireyin en önemli sosyal sermayesidir. Sadece ekonomik anlamda değil, anne-baba çocuğuna da psikolojik destek veren önemli bir güçtür. Bu kapsamda anne-babanın hayatta olması, kişilerin mutlu olmasını da sağlamaktadır (Ekşi vd., 2020; Kumcağız, Orak ve Şahin, 2018; Yıldırım ve Sezer, 2018). Ancak anne ya da babadan birinin kaybı bireyin sadece mutsuz olmasını değil, bazı durumlarda anne-babaya kavuşma isteğini ortaya çıkarabilmekte, bazen de ölüme yönelik korku ve kaygıyı güçlendirebilmektedir (Annor vd., 2023). Böyle bir durum sonucunda ise öğrencilerin anne-babalarının yaşaması onlar için bir mutluluk nesnesi olurken, olmaması ise ölüme yönelik araştırma sonuçlarının ortaya çıkmasını sağlayabilmektedir.

Araştırma sonucunda annesi ilköğretim mezunu olan üniversite öğrencilerinin daha fazla mutluluk hissettikleri bulunmuştur. Annenin ilköğretim mezunu olması, çocuğuyla daha yakın ilişki kurmasını beraberinde getirebilir. Böyle bir durum anne-çocuk arasında kurulan kaliteli ilişkinin çok erken zamanlardan beri kurulacağını ve bunun sonucunda da çocukların yetişkin olduklarında da bu güven hissiyle mutlu olmalarını sağlayabilir (Arslanargun, Bozkurt ve Sarioğlu, 2016; Şanlı ve Öztürk, 2012). Buna karşılık, annenin öğrenim düzeyinin yükselmesinin, öğrencilerin ahirette mutlu olacaklarını düşünmelerini, bakmakla yükümlü olduklarını terk etme, daha fazla başarısızlık yaşama ve acı çekme davranışlarını birlikte getirdiği yönünde sonuçlara ulaşılmıştır. Annenin öğrenim durumunun yükselmesi, çocuğuyla kuracağı iletişim ve etkileşimin daha farklı bir hal almasını da beraberinde getirebilir. Bir başka ifadeyle çocuğun sürekli ailesinin yanında olmasını isteme nedeni olabilir. Böyle bir duygu durumu ile bir arada büyümek ise ölüm karşısında daha fazla başarısızlık duygusunu beraberinde getirebileceği gibi, bu dünyada istediklerini alamadıkları için ahirette alacaklarını düşünmelerine de neden olabilir (Uslu ve Çağdaş, 2014; Zajac ve Boyatzis, 2021). Araştırma sonucunda babası üniversite ve ortaokul mezunu olan öğrencilerin mutluluğa daha az değer verdikleri, daha fazla ölüm algısı hissettikleri, babanın öğrenim düzeyinin artması ile ölüme yönelik farklı duyguların olduğu, bilinmezlik ve cesaret hissettikleri sonucuna ulaşılmıştır. Babanın öğrenim düzeyinin yüksek olması, çocuğuyla olan iletişim ve etkileşimini sınırlandırabilmektedir. Bu kapsamda çocuğun babasıyla olan ilişkisinin istendik yönde olmaması sonucunda, yetişkinliğinde de anne öğrenim düzeyine benzer şekilde duygusal anlamda rahat edememe ve bu durumla bağlantılı olarak da mutsuzluğu beraberinde getirebilir (Gözübüyük ve Özbey, 2020; Mert ve Kahraman, 2018 ). Yine babanın öğrenim düzeyinin yükselmesi sonucunda babayla yaşanamayan ilişki ve etkileşimler, anne öğrenim düzeyinde olduğu gibi ölüm algısına aktarılabilir. Böyle bir durumun da araştırmada elde edilen bulguları desteklediği düşünülmektedir. Araştırma sonucunda, öğrencilerin Kahramanmaraş depreminde yakınlarını kaybetmeleri ile mutluluk durumu ve ölüm algıları arasında anlamlı farklılık bulunmamıştır. Ancak bununla birlikte yakınlarını kaybedenlerin mutluluk puanlarının düşük, ölüm algılarının ise yüksek olduğu bulunmuştur. Kahramanmaraş depremi gibi ani olarak gelişen, kestirilemeyen ve pek çok yıkımın yaşandığı durumlarda, bireylerin öncelikle şok yaşadıkları ve sonrasında gelişen duruma uyum sağlamaya çalıştıkları bir süreçten geçtikleri bilinmektedir. Böyle bir durum ise yakınını kaybeden ya da kaybetmeyen her bireyi derinden etkilemiştir. Özellikle medyada yer alan görüntüler ve insanların çaresizliği depremi deneyimlemeyen bireylerin bile depremi deneyimlemiş olarak algılamalarına yol açabilmiştir

(Gören, 2023; Koçyiğit, 2023; Şeker, 2023; Tüccar ve Yavuz, 2023; Yelboğa, 2023). Böyle bir durumun ise araştırma sonucunda olduğu gibi anlamlı farklılığı ortaya çıkarmadığı düşünülmektedir. Araştırma sonucunda ulaşılan son bulgu, mutluluğa aşırı değer verme ölçeği ile ahirette ödüllendirme ve başarısızlık alt boyutlarında negatif yönde ilişkinin olmasıdır. Mutluluk ve ölüm birbirine zıt iki kavram olarak değerlendirilebilir. Birinde daha pozitif duyguların olması, diğesinde daha negatif duyguların olmasını gerektirir (Akalin, 2020; Karakuş, Öztürk ve Tamam, 2012; Kurtulan ve Kararımak, 2016). Bu kapsamda ele alındığında mutluluğun artması ile ölüm algısı arasında bir zıtlığın olması beklenen bir durum haline gelmektedir.

### **Sonuç ve Öneriler**

Araştırmada elde edilen sonuçlara yönelik olarak aşağıdaki önerilerde bulunmak mümkündür.

- Üniversite öğrencilerinin yaşadıkları ortama uyumu ve entegrasyonunu sağlayacak çalışmaların yapılması,
- Öğrencilerin özellikle ölüme ilişkili algılarında farklı değişkenlerin ele alınarak inceleneceği çalışmaların planlanması,
- Deprem ya da doğal bir afet yaşama durumunda psikososyal desteğin hemen sağlanması
- Öğrencilerin görüşlerinin de ele alındığı karma yöntem çalışmalarının gerçekleştirilmesi önerilebilir.

**Özet**

İlkokul döneminde çocuklar, gelişim görevlerinde yeni sorumluluklarla karşı karşıyadır. Özellikle içinde bulunduğu bazı şartlar da çocuğun bocalamasına ve gelişim görevlerini yerine getirirken zorlanmasına neden olabilmektedir. Bunlardan biri ise Covid-19 pandemisi olarak ifade edilebilir. Covid-19 pandemisinde okulun eve taşınması çocuğun akademik becerileri kazanmasında, arkadaşlık becerilerinin sınırlandırılmasına yol açabilmektedir. Ancak böyle bir durum içinde bulunulan dönemin özellikleri ile bağlantılı olarak çocuklarda problemleri davranışların da ortaya çıkmasına neden olabilmektedir. Bu düşüncelerden hareketle araştırmada Covid-19 pandemisinde ilkökullü çocuklarının akran ilişkilerini destekleyerek, sosyal becerilerinin devamını sağlamak amaçlanmıştır. Araştırmada nicel araştırma yöntemlerinden yarı deneysel desen kullanılmıştır. Araştırmada örneklem seçimine gidilmemiştir. Türkiye’de ikamet etmekte olan ve 7-12 yaş arasındaki çocuklarla çalışılmıştır. Araştırmada araştırmacılar tarafından geliştirilen sosyal beceri eğitim programı online olarak uygulanmıştır. Çocukların sosyal becerilerini ve akran ilişkilerini belirlemek için Kaner (2000) tarafından geliştirilen “Akran İlişkileri Ölçeği” ve Sezgin ve Akman (2014) tarafından geliştirilen “6-12 yaş Türk çocukları için Sosyal Beceri ve Uyum Ölçeği” kullanılmıştır. Araştırma sonucunda çocukların ön test-son test sonuçları arasında son test sonuçları lehine anlamlı düzeyde farklılık olduğu ve çocukların sosyal beceri uyumlarının arttığı sonucuna ulaşılmıştır. Araştırmadan elde edilen verilere dayanarak, çocukların akran ilişkilerinin geliştirilmesi için daha uzun ve yüz yüze eğitimlerin yapılması gerektiği önerilebilir.

**Anahtar Kelimeler:** İlkokul dönemi, akran, sosyal gelişim, arkadaşlık ilişkileri, Covid-19 pandemisi

**INVESTIGATION OF THE EFFECT OF THE SOCIAL SKILLS TRAINING  
PROGRAM PREPARED FOR PRIMARY SCHOOL CHILDREN DURING THE  
PANDEMIC PERIOD ON CHILDREN'S SOCIAL DEVELOPMENT AND  
FRIENDSHIP SKILLS**

**Abstract**

During the primary school period, children face new responsibilities in their developmental tasks. Particularly, some conditions may cause the child to hesitate and have difficulty in fulfilling his/her developmental tasks. One of these can be expressed as the Covid-19 pandemic. Moving school to home during the Covid-19 pandemic may limit the child's ability to gain academic skills and limit their friendship skills. However, such a situation may also cause problematic behaviour in children, depending on the characteristics of the current period. Based on these thoughts, the research aimed to ensure the continuation of the social skills of primary school children by supporting their peer relationships during the Covid-19 pandemic. A quasi-experimental design, one of the quantitative research methods, was used in the research. No sample selection was made in the research. It was studied with children between the ages of 7 and 12 who reside in Turkey. Children were reached through the information given to schools. In this context, 50 children whose families gave consent constituted the study group of the research. In the study, the social skills training program developed by the researchers was applied online. To determine children's social skills and peer relationships, the "Peer Relations Scale" developed by Kaner (2000) and the "Social Skills and Adaptation Scale for 6–12-year-old Turkish children" developed by Sezgin and Akman (2014) were used. As a result of the research, it was concluded that there was a significant difference between the children's pre-test and post-test results in favor of the post-test results and that the children's social skill adaptation increased. Based on the data obtained from the research, it can be suggested that longer and face-to-face education should be provided to improve children's peer relationships.

**Keywords:** Primary school period, peer, social development, friendship relations, Covid-19 pandemic

## **Giriş**

İlkokul dönemi, hayatın önemli ancak gizli kalmış bir dönemi olarak ifade edilebilir. Bu dönemde çocuğun gerçekleştirmek zorunda olduğu yeni gelişim görevleri ile karşı karşıya kalması, formal olarak okula başlaması, okul sorumluluklarını alması ve aynı zamanda etrafıyla uyumlu etkileşim içinde bulunması gerekmektedir. Çocuğun ilkokula başlaması ile artık çocuktan okuma-yazma ve matematik becerilerini kazanması istenmektedir. Çocuğun akranlarından geri kalması istenmemekte, bunun için daha çok çalışması ve bir an önce akademik olarak yetkinliğini elde etmesi istenmektedir. Bu dönemde çocuğun oyuncakları ve oyunları yasaklanmakta ve çocuk adeta yetişkin biri gibi sorumluluklarıyla karşı karşıya kalmaktadır. İlkokul döneminde çocuklar için ailesi hala oldukça önemli olsa da, okulu ve akranları ön plana geçmeye başlamaktadır (Malik ve Marhawa, 2018; Özen, 2018; Tatlılıoğlu ve Korkmaz, 2015; Tümkiye ve Türkmenoğlu, 2021). Adeta öğretmenin gözdesi olmak için çaba vermektedir. Akranlarıyla olan arkadaşlıkları ise onun yeni bir dünyaya açılmasında önemlidir. Çocuk için okulda başarılı olamaması, öğretmeni, akranları ve ailesinden olumsuz geri dönütler alması onun spor ya da sanat gibi alanlarda başarılı olma isteğini de beraberinde getirebilmektedir (Crisogen, 2016; Sopa, 2014; Theiman, 2016; Türker ve Erhan, 2021). Ancak bazı durumlarda böyle bir imkân da bulunmayabilmektedir. Günümüzde bu kapsamda yaşadığımız ve ilkokul dönemindeki çocuklar başta olmak üzere tüm bireyleri zorlayan bir etken Covid-19 pandemisi olmuştur. Covid-19, Çin'in Vuhan kentinde 2019 yılının sonlarında ortaya çıkan ve sadece bulunduğu bölgede değil, dünyanın büyük bir çoğunluğunda ölümlere yol açan ve bu nedenle de kısa bir süre sonra pandemi ilan edilmesine neden olan bir durumdur. Covid-19 pandemisinde yaşanan hızlı bulaşın engellenebilmesi için tüm Dünyada gereken önlemler alınmıştır. Alınan önlemler ise kısa bir süre sonra Türkiye'de de yaşanmaya başlanmıştır. Bu önlemler okulların kapatılması, sokağa çıkmanın yasaklanması, derslerin çevrim içi sürece evrilmesi olarak ifade edilebilir. Elbette böyle bir durum tüm bireyleri etkilediği gibi ilkokul dönemindeki çocukların da etkilenmesine neden olmuştur. Okulların kapanması ve derslerin çevrim içi yapılması sonucunda çocuklar eve kapanmışlardır. Ancak aynı zamanda bu durum birtakım eşitsizliklerin olmasına neden olmuştur (Duban ve Şen, 2020; Fauzi ve Khusuma, 2020; Nuraini vd., 2020; Okatan ve Tagay, 2021; Putri vd., 2020; Yavuz ve Toprakçı, 2021; Yıldız vd., 2020). Çevrim içi eğitim imkanına sahip olmayan ya da yeterli teknik bilgiye sahip olmayan çocuklar bu kapsamda oldukça zor bir süreci yaşamışlardır (İnci Kuzu, 2020; Rasmitadlia vd., 2020; Scarpelini vd., 2021). Dahası çocukların evden çıkmalarına getirilen kısıt çocukların hayatlarında çok önemli olan öğretmeni ve akranlarıyla olan

ilişkilerini de sınırlandırabilmiştir (Demiryürek, 2022). Böyle bir durum sonucunda ise zaten oldukça zor şartları olan Covid-19 pandemisine bir de psikolojik problemler eklenebilmiştir (Anggraeni, Alpian ve Kodariah, 2021; Çalışkan, 2020; Siachpazidou vd., 2021).Çocukların içinde buldukları durumdan kurtularak rahatlatılmaya çalışılması ise bu anlamda oldukça önemli bir toplum sorunu haline gelmiştir (Hamilton ve Gross, 2021). Bu nedenle farklı yaş gruplarında bulunan çocuklara yönelik birtakım programlar yine çevrim içi olarak hazırlanmaya ve uygulanmaya başlanmıştır. Ancak yapılan bu programların belirli bir kesime yönelik olduğu ve genelleşmesinde sorunların da olduğu görülmüştür (Aral vd., 2021; Gözeler ve Özbek, 2023; Lestari ve Sukmawati, 2022; Nurjanah vd., 2022). Yapılan literatür taramasında ilkökul dönemindeki çocuklara yönelik pandemi döneminde hazırlanan ve uygulanan sosyal becerilerini ve akran ilişkilerini desteklemeye yönelik sınırlı sayıda araştırmaya rastlanmıştır (Nur'Aini vd., 2022; Oliveria Major vd. 2023). Bu nedenle araştırmada ilkökul döneminde bulunan çocuklara yönelik olarak hazırlanan sosyal beceri eğitim programının çocukların sosyal beceri ve akran ilişkileri üzerindeki etkisinin belirlenmesi amaçlanmıştır.

### **Yöntem**

Bu bölümde, araştırma modeli, çalışma grubu, veri toplama araçları, veri toplama yöntemi ve verilerin toplanması bölümlerine yer verilmiştir.

### **Araştırma Modeli**

Araştırmada nicel araştırma yöntemlerinden biri olan zayıf deneysel tek grup ön test- son test deneysel desen kullanılmıştır. Zayıf deneysel desenlerden tek grup ön test- son test deseninde deneysel işlem bir tek grup üzerinden gerçekleştirilmektedir (Büyüköztürk vd., 2016). Araştırmada kontrol grubu seçilmemiştir. Covid-19 pandemisinde çocukların yaşamış oldukları problemler göz önüne alınarak hazırlanan programın tüm gruplar üzerinde uygulanması ve tüm çocukların bu süreçten yararlanabilmesi için kontrol grubu seçilmemiştir. Ayrıca Türkiye’de yer alan tüm çocukların bu programa katılım sağlayabilmesi açısından eşleştirme gerçekleştirilmemiştir.

### **Çalışma Grubu**

Araştırmanın çalışma grubu Türkiye’de ikamet etmekte olan 8-11 yaş arasındaki çocuklardan oluşmaktadır. Bu kapsamda Covid-19 pandemisinde üniversitelerin de uzaktan eğitime geçmeleri sonucunda, Türkiye’de farklı illerde memleketlerine giden üniversite öğrencilerinin ulaşabildikleri ilköğretim öğrencileri araştırmaya dâhil edilmiştir. Araştırmada 50 çocukla çalışılmıştır. Çocukların sosyodemografik özelliklerinin dağılımı Tablo 1’de verilmiştir.

Tablo 1’de arařtırmaya dâhil edilen çocukların sosyodemografik özelliklerinin dağılımı görülmektedir. Tabloda da görüldüğü gibi çocukların %54’ünün erkek, %46’sının kız olduđu, %32’sinin 10 yař grubunda ve %46’sının 6. Sınıfa devam ettiđi; çocukların annelerinin %44’ünün ilkokul, babalarının %48’inin üniversite mezunu olduđu ve çocukların %52’sinin ilçe, %48’inin ise ilde yařadığı belirlenmiştir.

### **Veri Toplama Araçları**

Arařtırmada veriler, “Genel Bilgi Formu”, Sezgin ve Akman (2014) tarafından geliştirilen “6-12 Yař Türk Çocukları için Sosyal Uyum ve Beceri Ölçeđi” ve Kaner (2000) tarafından geliştirilen “Akran İliřkileri Ölçeđi” ile toplanmıştır. Ayrıca arařtırmacılar tarafından geliştirilen ve on hafta devam eden “Sosyal Beceri Eğitim Programı” uygulanmıştır.

**Genel Bilgi Formu:** Arařtırmaya dâhil edilen çocukların sosyodemografik özelliklerini belirlemek için arařtırmacılar tarafından geliştirilen formdur. Formda, çocukların cinsiyeti, yaşı, devam ettikleri sınıf, anne ve baba öğrenim düzeyleri ve çocukların nerede yařadıklarına yönelik sorular bulunmaktadır.

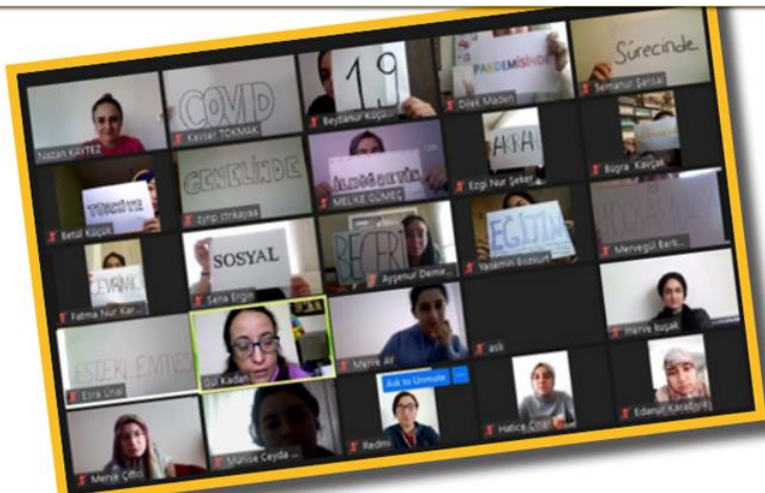

**6-12 Yař Türk Çocukları için Sosyal Uyum ve Beceri Ölçeđi:** Sezgin ve Akman (2014) tarafından annelerin çocuklarının sosyal uyumlarını deđerlendirebilmeleri amacıyla geliştirilen ölçektir. Ölçek 59 madde ve 7 alt boyuttan oluşmaktadır. 3’lü likert tipinde deđerlendirilen ölçekte ters kodlanan madde bulunmamaktadır. Ölçeğin geliştirilme aşamasında Cronbach Alfa deđerleri, tüm ölçek için .94, Dürtüsellik alt boyutu için .83, Engellenme eřiđi alt boyutu için .62, Dikkat/Hareketlilik alt boyutu için .74, Sosyal İliři alt boyutu için .84, Duygu Durumu alt boyutu için .68, Onay İhtiyacı alt boyutu için .78 ve İçe Dönüklük alt boyutu için .67 olarak hesaplanmıştır. Arařtırma kapsamında Cronbach Alfa deđerleri ise tüm ölçek için .90, Dürtüsellik alt boyutu için .80, Engellenme eřiđi alt boyutu için .69, Dikkat/Hareketlilik alt boyutu için .79, Sosyal İliři alt boyutu için .80, Duygu Durumu alt boyutu için .75, Onay İhtiyacı alt boyutu için .78 ve İçe Dönüklük alt boyutu için .81 olarak belirlenmiştir. Ölçek deđerlendirilirken, alt boyutlardan alınan puanların düşük olması gerekmektedir. Bir başka ifadeyle alt boyutlardan alınan düşük puanlar çocukların o becerilerde yetkin olduđunu göstermektedir.

**Akran İliřkileri Ölçeđi:** Çocukların akranlarıyla olan iliřkilerini belirlemek amacıyla Kaner (2000) tarafından geliştirilmiştir. 5’li likert tipi olarak deđerlendirilen ölçek, 18 maddeden ve dört alt boyuttan oluşmaktadır. Ölçeğin geliştirilme aşamasında Cronbach Alfa deđerleri tüm ölçek için .90, Bađlılık alt boyutu için .85, Güven ve Özdeřim alt boyutu için .87, kendini açma alt boyutu için .85 ve Sadakat alt boyutu için .88 olarak belirlenmiştir. Arařtırma kapsamında

Cronbach Alfa deęerleri tm lek iin .85, Baęlılık alt boyutu iin .80, Gven ve zdeřim alt boyutu iin .80, Kendini Ama alt boyutu iin .82, Sadakat alt boyutu iin .79 olarak belirlenmiřtir. Boyutlardan alınacak yksek puanlar ocukların arkadaşlık iliřkilerinde bařarılı oldukları řeklinde deęerlendirilmektedir.

**Sosyal Beceri Eęitim Programı:** Arařtırmacılar tarafından geliřtirilen program 10 hafta devam etmiřtir. Programda ocukların bireysel zelliklerinden yararlanılmıřtır. Bu kapsamda program oluřturulurken felsefi yapısını pragmatizm ve yeniden kurmacılıktan, psikolojik temellerini ise Ralph Taylor'ın grřlerinden almıřtır. İfade edilen kuram ve yaklařımlarda eęitim ortamına etkin katılımın saęlanmasının nemi zerinde durulmakta ve kk adımlarla alıřmanın neminden bahsedilmektedir. Ayrıca bireysellięin n plana alınması gerektięine vurgu da yapılmaktadır (Demirel, 2017). Bu dřnceler altında programda ocukların aktif yer alacakları etkinlikler gerekleřtirilmiřtir. Ayrıca ocukların sevdikleri aktivitelerden yararlanılmıřtır. Programda yer verilen oturumlar hafta sonu bir saat evrim ii olarak gerekleřtirilmiřtir. Programda niversite ęrencileri aktif rol almıřlardır. Programlara ait bilgilere ařaęıda yer verilmiřtir.

- **1. Oturum: Tanıřma ve Program Tanıtımı:** Oturumda amalanan ocuklarla ve ebeveynlerle tanışılmasıdır. Tanıřma etkinlięi gerekleřtikten sonra ocuklarla program hakkında konuřulmuřtur. Programın neden gerekleřtirildięi, programla nelerin amalandığı ve bu sreten ocuklardan beklentilerin neler olduęu zerinde durulmuřtur. Tanıřma oturumunda ayrıca Covid-19 pandemisinin ne olduęu, virsten nasıl korunulması gerektięine ynelik bilgilendirmeler yapılmıř ve animasyon filmler izlenmiřtir. ocuklarla birlikte programda parmak oyunları, kelime kartları oyunları oynanmıřtır.

- **2. Oturum: Virüste Neymiş:** Oturumun amacı, çocukların pandemi nedeniyle yaşamış oldukları kaygıları fark etmelerini sağlayarak, bu kaygıdan sağlıklı baş etme yöntemleri ile kurtulmalarının sağlanmasıdır. Bu kapsamda da nefes ve rahatlama egzersizlerine yönelik etkinlikler gerçekleştirilmiştir. Ayrıca çocuklarla dans edilmiş ve çocukların biriken enerjilerini boşaltmaları konusunda destek de sağlanmıştır.

- **3. Oturum: Arkadaşlık Sadece Yakın Mesafe Değildir, Arkadaşlık Uzun Mesafelerde de Bir Olabilmektir:** Oturumun amacı çocukların Türkiye'nin farklı bölgelerinde de olsalar bir arada olabileceklerini ve kendilerini üzen, mutlu eden anıları paylaşabileceklerini fark etmelerinin sağlanmasıdır. Bu kapsamda oturumda Türkiye'nin farklı bölgelerini tanıtmaya yönelik geziler sanal ortamda düzenlenmiş, birlikte halk oyunları oynanmış, o bölgede yaşayan çocukların kendilerinin de aktif olarak ev sahipliği yaptıkları programlar yedi bölgenin güzellikleri ve özellikleri boyutunda sürdürülmüştür.

- **4. Oturum: Zenginliklerimizle Varız ve Var Olacağız:** Oturumun amacı çocuklar arasındaki iletişim ve etkileşimin artırılmasıdır. Birlikte nesi var oyunu oynanan oturumda origami etkinliklerine yer verilmiştir. Aynı zamanda çocukların yaşlarına ve gelişimlerine uygun olan bir kitap ekrana yansıtılmış ve çocuklarla birlikte etkileşimli kitap okuma etkinliği gerçekleştirilmiştir. Çocukların birbirlerine duygu ve düşüncelerini anlatmaları da sağlanmıştır.

- **5. Oturum: Duymazsak da Anlaşabiliriz:** Oturumun amacı çocukların farklılıklara yönelik bakış açısı geliştirmelerinin sağlanmasıdır. Burada ilk olarak çocuklarla günlük sohbetler gerçekleştirilmiştir. Çocukları üzen ya da mutlu eden günlük olaylar konusunda sohbetler gerçekleştirilmiştir. Daha sonra araştırmacılar tarafından sessiz sinema şeklinde bir animasyon getirilmiş ve bu filmde ne anlatıldığını anlayıp anlamadıkları sorulmuştur. Çocukların tamamının görüşleri alınmıştır. Ayrıca pandomim gösterisi sunulmuştur. Pandomim gösterisi hakkında sohbet edilmiştir.

- **6. Oturum: Duygularımız Bizim Neyimizdir?** Oturumun amacı, çocukların duygularını tanımlarını ve bunu uygun şekilde ifade edebilmelerinin sağlanmasıdır. Bu nedenle duygularımız oyunu oynanmıştır. Duygularımızı uygun şekilde ifade ettiğimizde ya da edemediğimizdeki durumlarla ilgili oyunlar oynanmıştır. Sonrasında ise çocuklarla beraber duygu ayraçları yapılmıştır.

- **7. Oturum: Sihirli Güç, İşbirliği:** Oturumun amacı çocukların işbirliğinin neden önemli olduğunu fark etmelerini sağlamaktır. Oturumda, “Bir elin nesi var, iki elin sesi var” adındaki hikaye canlandırmalarla işlenmiştir. Çocuklarla etkileşimli kitap okuma etkinliği

gerçekleştirilmiş ve çocuklara işbirliğinin neden önemli olduğuna yönelik sorular yöneltilmiştir. Oturum çocuklar tarafından çok sevilen hareketli şarkılarla devam etmiş ve çocukların oynaması ve dans etmesi sağlanmıştır.

- **8. Oturum: Empati Becerisi Nedir?** Oturumda amaçlanan empati becerisinin ne olduğunu çocukların algılaması ve empatik iletişim örnekleri sergilemelerinin sağlanmasıdır. Bu amaçla çocuklara farklı durumlar yansıtılmış ve çocuklar bu farklı durumlarda ne yapmalarının ya da ne yapmamalarının uygun olacağı üzerinde durmuşlardır. Empatinin neden önemli olduğuna yönelik çocuklara sorular yöneltilmiş ve çocukların kendini başkasının yerine nasıl koyabileceği üzerinde durulmuştur.

- **9. Oturum: Siber Zorbalık ve Akran Zorbalığı:** Oturumda amaçlanan siber zorbalığın ve akran zorbalığının ne olduğu üzerinde durulmasıdır. Bu kapsamda çocuklara siber zorbalığın ne olduğu ve nasıl karşılaşılabileceğine yönelik bilgiler verilmiş, böyle durumlarda ne yapılması gerektiği örnekler üzerinde anlatılmıştır. Siber zorba bir kuklanın başına gelenlere yönelik kuklanın ağzından düşünceleri alınmıştır.

- **10. Oturum: Neler Yaptık, Neler Yaşadık?** Oturumun amacı on haftalık süreç içerisinde çocuklarla yapılan etkinliklerin gözden geçirilmesidir. Bu kapsamda yapılanlara yönelik hazırlanan slayt gösterisi çocuklarla birlikte izlenmiştir. Oturumun sonunda çocuklarla birlikte gevşeme teknikleri ve nefes egzersizleri çalışılmıştır.

### **Veri Toplama Yöntemi**

Araştırma Covid-19 pandemi salgınından sonra üniversitelerin ve okulların kapatılması döneminde gerçekleştirilmiştir. Bu nedenlerle üniversiteden memleketlerine dönen öğrencilere, buldukları illerde/ilçelerde yaşayan ve 8-11 yaş aralığında çocuğu olan ebeveynlere araştırma hakkında bilgi vermeleri istenmiştir. Öğrenciler aracılığıyla ailelere ulaşılmış ve araştırma hakkında araştırmacılar tarafından tekrar bilgilendirme yapılmıştır. Araştırmaya katılmayı kabul eden ebeveynlere aydınlatılmış onam formları yine öğrenciler aracılığıyla ulaştırılmıştır. Çocuklarla ve ailelerle çevrim içi bir araya gelinmiştir. Bu süreçte çocuklarla tanışılmış ve onların güveni kazanılmıştır. Ailelere “Google Form” aracılığıyla ölçme araçları gönderilmiş ve ön test uygulamaları tamamlanmıştır. Ön test uygulamalarının tamamlanmasından sonra on hafta sürecek eğitimlere başlanmıştır. Eğitimlerin tamamlanmasından sonra ailelere tekrar “Google Form” aracılığıyla ulaşılmış ve son test çalışmaları gerçekleştirilmiştir.

### **Verilerin Analizi**

Araştırmada elde edilen veriler SPSS 26.0 IBM istatistik paket programına alınmıştır. Çocukların ve ailelerin sosyodemografik özelliklerine yönelik betimsel analizler uygulanmıştır. Ailelerin ölçme araçlarına vermiş oldukları cevaplara yönelik normallik analizleri gerçekleştirilmiştir. Örneklem sayısının 50 olması nedeniyle Shapiro Wilk test sonuçları ile Kurtosis ve Skewness değerleri incelenmiştir. Normallik testi sonuçları Tablo 2’de verilmiştir. Tablo 2’de araştırmaya dâhil olan ebeveynlerin çocuklarına ait Arkadaşlık ilişkileri Ölçeği ve 6-12 Yaş Türk Çocukları için Sosyal Beceri Uyum Ölçeğine verdikleri cevaplara yönelik normallik analiz sonuçları görülmektedir. Tabloda da görüldüğü gibi ebeveynlerin vermiş oldukları cevapların normal olmayan dağılım gösterdikleri belirlenmiştir. Bu nedenle çocukların ön test- son test sonuçlarını değerlendirmek için nonparametrik analizlerden Wilcoxon İşaretli Sıralar test sonuçları incelenmiştir.

### **Bulgular**

Covid-19 pandemi döneminde ilköğretim çocuklarına yönelik uygulanan Sosyal beceri eğitiminin çocukların akran ilişkileri ve sosyal beceri uyumları üzerinde etkisinin olup olmadığını belirlemek amacıyla gerçekleştirilen araştırmanın bulgularına aşağıda yer verilmiştir. Tablo 3’de ilköğretim çocuklarının akran ilişkileri ölçeği alt boyutlarına ait ön test-

son test sonuçlarına ait ortalamalar ve Wilcoxon İşaretli Sıralar Test Sonuçları görülmektedir. Tabloda da görüldüğü gibi çocukların son test sonuçlarının bağıllık, güven ve özdeşim ve kendini açma alt boyutlarında anlamlı derecede yüksek olduğu ve ön test sonuçlarına oranla etki büyüklüğü Cohen (d) (1998) kriterlerine göre yüksek oranda arttığı görülmektedir. Bir başka ifadeyle çocuklara uygulanan sosyal beceri eğitim programının çocukların akran ilişkilerinde sadakat alt boyutu haricinde anlamlı etkide bulunduğu ifade edilebilir.

Tablo 4’de ilköğretim çocuklarının sosyal beceri uyum ölçeği alt boyutlarına ait ön test- son test sonuçlarına ait ortalamalar ve Wilcoxon İşaretli Sıralar test sonuçları görülmektedir. Tabloda da görüldüğü gibi çocukların sosyal beceri uyum ölçeği alt boyutlarında son test puanları ön test puanlarına oranla Cohen d(1998) etki büyüklüğüne göre anlamlı oranda azalmıştır. Bir başka ifadeyle uygulanan sosyal beceri eğitim programı çocukların sosyal becerilerine etki etmiş ve çocuklarda istenen sosyal beceri özelliklerinin ortaya çıkmasına neden olmuştur.

### **Tartışma**

Covid-19 pandemi döneminde ilköğretim dönemindeki çocuklara yönelik uygulanan sosyal beceri eğitim programının çocukların akran ilişkileri üzerinde sadakat alt boyutu haricinde anlamlı etki yaptığı belirlenmiştir. Bu durumu çocukların on hafta boyunca almış oldukları eğitime bağlayarak açıklamanın mümkün olduğu düşünülmektedir. Çocuklara uygulanan eğitimde farklılıklara saygı, empati ve arkadaşlık ilişkileri, üzerinde durulan konular arasındadır. Eğitimde çocukların aktif olarak yer alması ve problem durumlarına kendilerinin çözüm yolu bulması istenmiştir. Bu nedenle çocuklar farklılıklara saygı ve akran ilişkilerinin önemini yaparak yaşayarak öğrenmişlerdir. Bu durumun ise araştırma sonuçlarına yansıdığı görülmektedir. Nitekim çocukların akran ilişkilerini kazanmalarında önemli olan noktalardan biri, etrafındaki yetişkinlerin varlığıdır denilebilir. Çocuklar gelişimsel özellikleri nedeniyle özellikle bu dönemde kendisinden farklı olan akranlarına karşı acımasız davranışlar içerisine girebilmektedir. Böyle bir durumda çocukların doğru yönlendirilmesi ise bu durumların önlenmesine katkı sağlayabilmektedir (Calp, Karaman ve Çavuşoğlu, 2018; Carroll, 2011; Erol ve Erol, 2020; Hargreaves, Buchanan ve Quick, 2022). Özellikle içinde buldukları ve sokağa çıkamadıkları bu dönemde çocuklara uygulanan eğitimle çocukların arkadaşlık ilişkilerinin de bu yönde gelişmesi beklenen bir sonuç olarak değerlendirilebilir. Ancak çocukların sadakat alt boyutunda anlamlı farklılık elde edememesini sadakatin daha üst düzey bilişsel ve sosyal becerilere dayanmasından olduğu düşünülmektedir. Sadakat karşındaki kişiyle fiziksel teması gerektirebilen bir yetidir (Doğruyol ve Yetim, 2019; Erden ve Yılmaz, 2016) Çocuklar her ne

kadar çevrim içi ortamda bir araya gelmiş olsalar da bu sürenin yeterince uzun olmaması ve bağlantı sorunlarının yaşanması çocukların akranlarına dokunamamasına neden olmuştur. Böyle bir durum ise sadakat alt boyutunda farklılaşmayı engelleyebilmiştir. Araştırma sonucuna benzer şekilde çocuklarla yapılan sosyal beceri eğitimlerinin çocukların akran ilişkilerini desteklediğine (Battistich, 2003; Kabasakal ve Çelik, 2010; Roh vd., 2018; Samancı ve Uçan, 2017; Uz Baş, 2010) yönelik bulgular ise araştırma sonucunu desteklemektedir.

Araştırmada uygulanan eğitim sonucunda çocukların sosyal becerilerinde istenen davranış özelliklerini kazandıkları bulunmuştur. Özellikle pandemi döneminde çocukların evde kalmak zorunda olmaları onlarda dürtüsellik, dikkatle ilgili problemlerin yaşanmasına neden olabilmıştır. Çocuklar bu dönemde gelişim alanlarındaki olgunlaşmamışlıkla paralel olarak engellenmelere karşı aşırı hassasiyet göstermişler ve bunun sonucunda duygusal ve davranışsal birtakım problemler de yaşanabilmıştır. Dahası bu çocukların pandemiden bağımsız olarak onay arama ihtiyaçları ise gelişimsel dönem özellikleri arasında yer almaktadır (Arısoy ve Özer, 2023; Buchanan, Hargreaves ve Quick, 2023; Contini vd., 2021; Dallalio vd., 2022; Duban ve Şen, 2020; Matiz vd., 2022; Stevanus ve Gita, 2022; Talu ve Kurt, 2022). Çocuklara uygulanan eğitim programında nefes egzersizlerine ve gevşeme tekniklerine yer verilmesinin, içinde bulunulan durumun çocuklara farklı örneklerle anlatılmasının, çocukların duygularını paylaşan başka akranlarını görmelerinin onlarda ifade edilen durumlara yönelik farklı bir bakış açısı getirdiği ve sonuçta da son test puanlarının istenen düzeyde çıkmasına neden olduğu düşünülmektedir. Çocuklarla gerçekleştirilen sosyal beceri eğitim programlarında çocukların dikkat ve dürtüsellik başta olmak üzere istenmeyen problem davranışlarının azalmasına yardımcı olduğuna yönelik sonuçlar (Beier, 2021; Kabasakal ve Çelik, 2010; Ni ve Jia, 2023; Uz Baş, 2010; Wardana vd., 2022) ise araştırmada ulaşılan sonuçları doğrulamaktadır.

### **Sonuç ve Öneriler**

Covid-19 pandemi döneminde ilköğretim dönemindeki çocuklara uygulanan sosyal beceri eğitim programının çocuklarda akran ilişkilerini desteklediği ve sosyal becerilerinde de istenen yönde gelişim sağladığı sonucuna ulaşılmıştır. Araştırmadan elde edilen sonuçlara dayanarak aşağıdaki önerilerde bulunmak mümkündür.

- Araştırma ilköğretim dönemindeki çocuklarla uygulanmıştır. Farklı yaş ve gelişim özelliklerine sahip olan çocuklara da benzer programlar uygulanabilir.
- Pandemi nedeniyle program 10 hafta devam etmiştir. Bu nedenle çalışmaların daha uzun süreli gerçekleştirilmesi sağlanabilir.

- İlkokul dönemindeki çocuklara yönelik arkadaşlık ilişkileri ve sosyal becerilerini destekleyecek eğitim programları yüz yüze uygulanabilir.
- Toplumda kriz durumlarına yönelik bu tarz eğitim programlarının taslaklarının hazırlanması ve uygulamaya hazır hale getirilmesi önerilebilir.

**Katkı ve Teşekkür**

Araştırmacıların her ikisinin de katkısı %50'dir. Araştırmada yer alan üniversite öğrencileri, çocuklar ve ebeveynlerine teşekkür ederiz.

**Abstract**

Previous studies have shown that physical activity may play a significant role in the management and control of gestational diabetes mellitus. However, few studies have been conducted to evaluate the effectiveness of a structured program of moderate physical activity in women with gestational diabetes. This pilot study aimed to determine the effectiveness of such a program in reducing glucose levels. The study emphasized a positive correlation between physical activity during pregnancy and a reduced risk of gestational diabetes. Pregnant women who engaged in regular exercise routines showed a lower likelihood of developing gestational diabetes compared to those with lower levels of physical activity. This finding indicates that physical activity during pregnancy plays a significant role in the management and prevention of gestational diabetes, a condition that can have serious consequences for both the mother and the fetus. Stabilizing blood sugar levels and the positive impact on metabolic control are potential mechanisms that explain this connection. For pregnant women, this discovery can be interpreted as an additional reason to incorporate physical activity into their daily routine, thereby creating a healthier environment for themselves and the well-being of their future offspring.

**Keywords:** physical activity: Pregnancy, Gestational diabetes, Risk, Blood sugar leve

## **Introduksion**

Në këtë artikull, ne shqyrtojmë lidhjen midis aktivitetit fizik gjatë shtatzënisë dhe rrezikut të diabetit gestacional. Diabeti Gestacional është një problem shëndetësor serioz për shëndetin e nënës dhe të foshnjës dhe studimet tregojnë se aktiviteti fizik mund të ketë një ndikim pozitiv në parandalimin e tij. Studimet tregojnë se egziston një lidhje mes aktivitetit fizik stilit të jetes se gruas shtatzane dhe diabetit Gestacional. Ne fillim me një shqyrtim të literaturës për të identifikuar synimet kryesore dhe pastaj analizuam të dhënat e mbledhura në qendrat e shëndetit të gras. Kërkimi bazohet në të dhëna konkrete të mbledhura në fillim të javës së 28 të grave shtatzana kur dhe është risku për të shfaqur ky lloj diabeti dhe matja e glicemisë çdo javë me futjen e programit fizik dhe dietës ushqimore të pershtatshme.

2.2.1 Përkufizimi i diabetit gestacional Diabeti gestacional i referohet vetëm diabetit tek gratë që kurrë nuk kishin diabet më parë dhe zhvillojnë glukozë të lartë të gjakut gjatë shtatzënisë (Ogden 2011)

2.2.2 Klasifikimi i diabetit në gestacional. Klasifikimi më i njohur dhe më i përdorur gjerësisht i diabetit në shtatzëni është klasifikimi i WHITE. Ky sistem bazohet në moshën e pacientit dhe kohëzgjatjen e sëmundjes. Nga pikëpamja e trajtimit është më e dobishme për të grupuar pacientët në tre grupe funksionale: 1. Diabeti Gestacional (pacientët që zhvillojnë diabet për herë të parë gjatë shtatzënisë) 2. Diabeti i paraprak pa pasoja diabetike (si varësia e insulinës ashtu edhe diabeti i pavarur nga insulina). 3. Diabeti paraprak me sëmundje serioze diabetike (nefropatia, retinopatia e avancuar neuropatia autonome ose sëmundja e arterieve koronare) (Mishell 1994).

Figure 3. Klasifikimi i diabetit Gestacional (clinicalgate.com)

2.2.3 Diagnostifikimi i diabetit gestacional. Kriteret diagnostike të diabetit të shtatzënisë janë të shumta, por nuk ka konsensus të plotë për këto kritere. Kriteret diagnostike: 9 -Diagnoza e diabetit vendoset nëse glicemia është në dy matje gjendet mbi 126 g/l (7.0mmol/l). Depistimi i parë mund të realizohet lehtë duke dhënë në çfarëdo moment të ditës 50 g glukozë nga goja pa marrë parasysh ushqimin e mëparshëm. Nëse glicemia 1 orë pas dhënies së glukozës është mbi 1.40 g/l duhet të realizohet prova e hiperglicemisë së provokuar orale (HGPO). Për HGPO përdoren dy metoda: kriteret e përcaktuara nga OBSH-ja dhe kriteret e propozuara nga O'Sullivan dhe Mahan. Përkufizimi i OBSH-së: Përkufizimi i intolerancës ndaj karbohidrateve të gruaja shtatzënë është i njëjtë me atë të tolerancës jashtë shtatzënisë. Prova e HGPO bëhet me dhënie të 75 g glukozë. Ka intolerancë ndaj karbohidrateve nëse glicemia është midis 1.20 g/l dhe 1.40 g/l, dhe glicemia 2 orë pas ngarkesës me glukozë midis 1.40 dhe 2.0 g/l. Kriteret e O'Sullivan dhe Mahan për diagnozën e diabetit të shtatzënisë: Prova e HGPO bëhet me 100 g glukozë nga goja, të dhënë në mëngjes pas 8 ose 14 orë është, pa kufizim paraprak të

glucideve. Gjaku venoz për glicemi të merret esëll, pastaj çdo 1, 2 dhe 3 orë pas marrjes së glukozës. (Ylli 2010). Dy glicemi të paktën duhet të jenë mbi vlerat e mëposhtme: Koha në orë:

0	1	2	3	Glicemia në g/l
1.05(5.8)	1.90 (10.6)	Tek kush duhet kërkuar diabeti i shtatzënisë?	1.65(9.2)	
1.40 (7.80)				

Nuk ka konsensus as për këtë çështje. Të gjitha gratë shtatzëna duhet të përfitonin nga depistimi midis javës 24 dhe 28 të shtatzënisë. Për këtë arsye praktike dhe ekonomike, depistimi në fillim të shtatzënisë u rezervohet vetëm grave me rrezik. Te këto gra, depistimi i dytë (nëse i pari ka qenë negativ) duhet të bëhet në mes të javës së 24-tët dhe 28-të të shtatzënisë. Në planin mjeko-ligjor glukozuria (edhe pse nuk ka të njëjtën vlerë si jashtë shtatzënisë) është e detyrueshme të bëhet në çdo konsultim obstetrical kur ajo është pozitive, është e rëndësishme të bëhet glicemia esëll dhe 2 orë pas ngrënies. Faktorët e rrezikut për të zhvilluar diabet në shtatzëni: Obeziteti Diabeti Gestacional është një nga problemet më të zakonshme shëndetësore në shtatzëninë e vajzave. Ndërsa predispozicioni gjenetik luan një rol kyç në shfaqjen e tij, faktorë të tjerë si stili i jetesës dhe aktiviteti fizik gjithashtu kanë një ndikim të rëndësishëm. Në këtë artikull, ne kërkojmë të analizojmë lidhjen midis aktivitetit fizik gjatë shtatzënisë dhe rrezikut të diabetit gestacional. Studimi theksoi një ndërlidhje pozitive midis aktivitetit fizik në shtatzëni dhe zvogëlimit të rrezikut të diabetit gestacional. Gratë shtatzënë që përfshiheshin në rutina të rregullta të ushtrimeve shfaqën një shans më të ulët për të zhvilluar diabet gestacional krahasuar me ato që kishin një nivel më të ulët të aktivitetit fizik. Kjo zbulim tregon se aktiviteti fizik në shtatzëni ka një rol të rëndësishëm në menaxhimin dhe parandalimin e diabetit gestacional, një gjendje që mund të ketë pasojat e rënda për nënën dhe fetusin. Stabilizimi i niveleve të sheqerit në gjak dhe ndikimi pozitiv në kontrollin metabolic janë mekanizma të mundshëm që shpjegojnë këtë lidhje. Për gratë shtatzënë, ky zbulim mund të interpretohet si një arsye shtesë për të përfshirë aktivitetin fizik në rutinën e tyre të përditshme, duke krijuar kështu një mjedis shëndetësor më të favorshëm për veten dhe të ardhmen e tyre të re. Studimi ka për objekt të kryejë një analizë të thelluar mbi ndikimin e aktivitetit fizik në shëndetin e grave shtatzënë, me një përqendrim të veçantë në zvogëlimin e rrezikut të diabetit gestacional. Për të arritur këtë objektiv, studimi përfshin një numër të madh të pjesëmarrësve shtatzënë dhe regjistrime të rregullta të nivelit të aktivitetit fizik që ata kryejnë gjatë periudhës së shtatzënisë.

**Symimet e studimit përfshijnë:**

Analizën e të dhënave të Aktivitetit Fizik: Përmes pyetësorëve dhe regjistrimeve të aktivitetit fizik, do të analizohen nivelet dhe llojet e aktivitetit të kryer nga pjesëmarrësit në studim gjatë çdo trimestri të shtatzënisë. Vlerësimin e Shëndetit të Pjesëmarrësve: Symimet përfshijnë monitorimin e shëndetit të grave shtatzënë, duke përfshirë kontrollin e peshës, tensionin arterial, dhe nivelin e sheqerit në gjak për të identifikuar ndonjë ndryshim apo rregullim në shëndetin e tyre. Identifikimin e Rasteve të Diabetit Gestacional: Duke analizuar të dhënat e rezultateve të testeve të glukozës, studimi synon identifikimin e rasteve të diabetit gestacional ndër pjesëmarrësit dhe krahasimin e tyre me nivelet e aktivitetit fizik. Krahasimin me Grupa Kontrolle: Pjesëmarrësit do të ndahen në grupe bazuar në nivelin e aktivitetit fizik, duke përfshirë një grup kontrol pa ndonjë ndërhyrje të veçantë, për të vlerësuar ndryshimet në rrezikun e diabetit gestacional sipas niveleve të aktivitetit. Ky plan i hulumtimit synon të ofrojë një kuptim më të thellë të lidhjes midis aktivitetit fizik në shtatzëni dhe shëndetit të grave, duke përqëndruar veçanërisht në rrezikun e diabetit gestacional. Metodologjia e këtij studimi është strukturuar nëpërmjet një seri hapat e përcaktuara për të siguruar një analizë të saktë dhe të detajuar të ndikimit të aktivitetit fizik në shëndetin e grave shtatzënë, duke thelluar përqendrimin në rrezikun e diabetit gestacional. Këtu janë hapat kryesorë të metodologjisë: Seleksioni i Pjesëmarrësve: Pjesëmarrësit janë zgjedhur në mënyrë që të përfaqësojnë një grup reprezentativ të grave shtatzënë. Kriteret e përfshirë përfshijnë moshën, indeksin e masës trupore, dhe historinë e shëndetit shtatzanë. Krijimi i Pyetësorëve dhe Regjistrimeve të Aktivitetit Fizik: Është zhvilluar një pyetësor i strukturuar dhe një sistem regjistrimi për të matur nivelin dhe llojet e aktivitetit fizik të kryer nga pjesëmarrësit gjatë çdo trimestri të shtatzënisë. Monitorimi i Shëndetit të Pjesëmarrësve: Shëndeti i grave shtatzënë është monitoruar duke përfshirë kontrollin e peshës, tensionin arterial, dhe nivelin e sheqerit në gjak në periudhën e përcaktuar gjatë shtatzënisë. Identifikimi i Rasteve të Diabetit Gestacional: Rezultatet e testeve të glukozës janë regjistruar dhe analizuar për të identifikuar rastet e diabetit gestacional midis pjesëmarrësve. Analiza e të Dhënave: Të dhënat janë analizuar duke përdorur mjetet statistikore të përshtatshme për të vlerësuar lidhjet dhe ndryshimet në nivelet e aktivitetit fizik dhe rrezikun e diabetit gestacional. Krahasimi me Grupa Kontrolle: Pjesëmarrësit janë ndarë në grupe bazuar në nivelin e aktivitetit fizik, duke përfshirë një grup kontrol, për të bërë krahasime dhe vlerësime më të saktë të ndikimit të aktivitetit fizik në rrezikun e diabetit gestacional. Kjo metodologji është projektuar për të siguruar një përcaktim të saktë të lidhjeve midis aktivitetit fizik në shtatzëni dhe shëndetit të grave, duke ofruar një bazë të qëndrueshme

për vlerësimin e rrezikut të diabetit gestacional. Objekti i këtij artikulli është të vlerësojë lidhjen midis aktivitetit fizik gjatë shtatzënisë dhe rrezikut të diabetit gestacional. Metodologjia e këtij studimi përfshin një shqyrtim sistematik të literaturës për të identifikuar studimet e rëndësishme dhe rezultatet e tyre në lidhje me aktivitetin fizik gjatë shtatzënisë dhe diabetin gestacional. Një analizë meta-sintetike është zhvilluar për të përpiluar dhe vlerësuar të dhënat nga këto studime të përfshira, duke përdorur metoda statistikore për të vlerësuar forcat dhe lidhjet e mundshme midis variablave të interesit. Në përfundim, synimet e këtij studimi janë të ofrojnë një kuptim më të thellë dhe të qëndrueshëm të ndikimit të aktivitetit fizik në rrezikun e diabetit gestacional dhe të kontribuojnë në literaturën ekzistuese për këtë temë

### **Metodologjia**

Metodologjia jonë përfshin një shqyrtim sistematik të literaturës për të identifikuar studimet e rëndësishme të kryera në këtë fushë. Nuk u gjet nje nr I konsidetueshem programesh stervitore te ketj target grupi por ne bashkepunim me instuktore fitnesi dhe mjek endokrinolog hartam programin tone per 13 jave

### **Metodologjia**

Metodologjia jonë përfshin një shqyrtim sistematik të literaturës për të identifikuar studimet e rëndësishme të kryera në këtë fushë. Nuk u gjet nje nr I konsidetueshem programesh stervitore te ketj target grupi por ne bashkepunim me instuktore fitnesi dhe mjek endokrinolog hartam programin tone per 13 jave Përdorimi i kriterëve të përcaktuara për përzgjedhjen e studimeve të përfshira siguron një analizë të plotë dhe të besueshme të informacionit kryesisht teorik. Pastaj, për studim tonëpërfshirë, vlerësojmë metodologjinë dhe të dhënat e përdorura për të përcaktuar forcën dhe kufizimet e rezultateve. Pjesëmarrësit ishin 50 nga te cilat 25 prej tyre aplikuan programin tone dhe djeten e shendetshme tone gra me diabet të shtatzënisë, të cilat u nënshtrohën një programi 13-javor të aktivitetit fizik të moderuar nders ne 25 te tjerat beme vetem matje te glicemise pa aplikuar metodologjine. Pjesa tjetër e grupit kontrollit mori informacion standarde në lidhje me diabetin e shtatzënisë dhe rrezikun e tij. Një analizë u bë për të krahasuar ndryshimet në nivelin e glukozës dhe aktivitetit fizik midis dy grupeve. Matjet e para te glivemise ishin ne vlera 130 esell deri 200 per grupin e pare dhe ne te njejtet vlera per te dytin . pas aplikimit te programit tone si me poshte Java 1 program U vune re ndryshime te vogla ne vlerat e larta 200 ra ne vlera 180 Dhe ndryshimet me te medha u vune re ne javen e 5 dhe 6 qe parametrat shkuan gati ne norme Natyrisht dhe diets se personalizuar pershtatur me kalorazhin e arxhuar. Përdorimi i kriterëve të përcaktuara për përzgjedhjen e studimeve të përfshira siguron një analizë të plotë

dhe të besueshme të informacionit kryesisht teorik. Pastaj, për studim tonepërfshirë, vlerësojmë metodologjinë dhe të dhënat e përdorura për të përcaktuar forcën dhe kufizimet e rezultateve. Grupi 2 nuk pati asnje ndryshim te dukshem ne vlera te glicemise dhe as ne javet ne vazhdim .

- luan një rol të rëndësishëm në trajtimin dhe menaxhimin e diabetit tip 2. Ai
- përmirëson ndjeshmërinë ndaj insulinës, duke përmirësuar kontrollin e glicemisë dhe ndihmon në
- humbjen në peshë. Ne personat me diabet që i nënshtrohen ushtrimeve fizike rregullisht, ka patur
- një ulje të mortalitetit gjatë 12-14 vjetëve. Kryerja e aktivitetit të rregullt parandalon fillimin e
- diabetit tip 2 në personat me risk të lartë.
- · Qëllimi i aktivitetit fizik është që personat me diabet të kryejnë çdo javë rreth 150 minuta ushtrime
- aerobike me intensitet mesatar (50-70% e rrahjeve maksimale të zemrës). Kjo përfshin aktivitete si
- ecje e shpejtë, ecje me biçikletë, punë shtëpie, pastrim kopshti, etj.
- për forcimin e muskulaturës duhen inkurajuar të paktën dy herë në javë, sidomos për
- grupet e muskujve të mëdhenj të këmbëve, trungut, krahëve, shpatullave. Programi i aktivitetit
- fizik, përshtatet sipas moshës së personit, gjendjes së tij ekonomike e sociale, nivelit të tij kulturor,
- gjendjes fizike.

- Në rast se pacienti është shumë simptomatik ose ka nivele të rritura të glukozës në gjak, dieta dhe
  - modifikimi i stilit të jetesës kanë pak të ngjarë të bëjnë që të arrihen vlerat e synuara të kontrollit
  - glicemik. Në këtë rast, duhet filluar pa vonesë terapia farmakologjike. Trajtimi medikamentoz duhet
  - të shtohet vetëm në rast se dieta, aktiviteti fizik dhe edukimi i pacientit nuk kanë arritur dot objektivat
  - Fillimi/diagnostikimi i parë në tremujorin e parë - gjysmën e parë të tremujorit të dytë;
  - Për të vendosur, kryhet prova standarde OGTT - pas nje nate pa ngrene (8-14 h) jepen 75 g glukozë
  - në 250 ml uje; matet glukozja plazmatike esëll dhe pas 2 orësh.
  - Riklasifikohet 6 javë pas lindjes ose më vonë me një prove tjetër OGTT me 75g glukozë.
  - Të marra më vete, vlerat e glukozës në gjak nuk kanë vlerë për klasifikimin e diabetit.
- Edhe
- ketoacidoza, e cila zakonisht shihet si shenjë e diabetit tip 1, ndonjëherë ndodh edhe në diabetin tip 2.
  - Disa ekspertë madje mund të hasin vështirësi në klasifikimin fillestar të një pacienti.
  - Klasifikimi është i vështirë në adultët me moshë të re, pasi si diabeti tip 1 edhe diabeti tip 2 apo
  - diabeti latent autoimun në adultë (LADA) janë pothuaj njëloj të shpeshtë. LADA fillimisht ka disa
  - karakteristika të diabetit tip 2, por progredon në një diabet që duhet trajtuar me insulinë brenda pak
  - muajsh apo vitesh. Edhe pse diabeti tip 2, karakterizohet nga fillimi pas moshës 50 vjeç, gjithnjë e më
  - tepër është po rritet prevalenca e fillimit të tij në moshën 20-30 vjeçare, madje po vihen re gjithnjë e
  - më shpesh rastet të zbulimit të tij në femije dhe preadoleshente.
  - individualë të përcaktuar që më parë.

- Të gjitha femrat me potencialitetin për të mbetur shtatzanë kanë nevojë për kujdes të mirë që përpara
- konceptimit për të përjashtuar riskun për keqformim fetal dhe humbje të fëmijës në fillim të
- shtatzanisë. Kjo përfshin:
  - Këshillim pre-konceptional, që përfshin depistim të komplikacioneve dhe aty ku është nevoja
  - këshillim për kontracepsion deri sa të arrihen objektivat glicemikë të paracaktuar;
  - Kontroll sa më optimal të glicemisë;
  - Fillimin e mjekimit me suplement folatesh (5 mg/ditë);
  - Ndalimin e mjekimit me statina dhe rishikimin e mjekimit me antihipertensivë;
  - Zëvendësimi i antidiabetikëve oralë me terapi insulinike sa më shpejt që të jetë e mundur;
- Gratë që nuk janë diagnostikuar më parë me diabet tip 2, kur mbeten shtatzënë kanë risk më të rritur
- për të patur fëmijë me malformacione. Depistimi për diabet gestacional do të zbulojë këto gra, si dhe
- do të reduktojë ndjeshëm rrezikun e dëmtimeve perinatale. Gjatë shtatzanisë kërkohet një ekuilibër
- shmë i mirë glicemik dhe monitorim obstetrikal, me një ndërhyrje më të hershme (që në javën e 38)
- kur është e nevojshme. Për kontroll optimal të diabetit:
  - Të gjitha gratë diabetike duhet ta kontrollojnë glicemine katër herë në ditë, përsëritë dhe matjen pas
  - vakteve të marra. Objektivi është që glicemia esëll dhe preprandiale të jetë <100mg/dl (5.5 mmol/l)
  - dhe postprandiale më pak se 126mg/dl (7.0 mmol/l);
  - Nevojat për insulinë duhen përshtatur sipas pacientit, ku pjesa më e madhe e pacienteve duhet të
  - jetë në terapi me 4-5 injeksione
  - në ditë.
  - Nevojat për insulinë janë më të
  - ulura në tremestrin e parë dhe

- mund të bien në tremestin e tretë,
- prandaj kërkohet monitorim e
- modifikim i terapisë insulinike
- sipas rezultateve të vetëkontrollit.
- Analogët e insulinës me
- veprim të shkurtërjane të
- sigurtë në shtatzani, ndërkohë
- që nuk ka të dhëna për analogët
- me veprim të gjatë të saj, që
- duhen evituar në shtatzani;
- Agjentët oralë hypoglicemikë
- nuk rekomandohen për t'u
- përdorur në shtatzani;
- Sytë duhen kontrolluar për
- praninë e retinopatisë dhe
- perparimin e saj në çdo
- trimester;
- Kontrolli ekografik i
- diabetikeve gjatë shtatzanisë
- duhet të jetë i shpeshtë (çdo 4-
- 6 javë);
- Diabet Mellitus Gestacional
- (DMG) quhet çdo intolerance
- ndaj glukozës që zbulohet për
- herë të parë në shtatzani. Në
- shumicën e rasteve GDM zhduket
- pas lindjes. Rreth 7% e shtatzanive komplikohen me GDM. Strategjitë për
- depistimin/diagnostikimin
- për GDM paraqiten në tabelën 16.5.
- Që në vizitën e parë prenatale, femrat me risk të lartë për GDM,
- depistohen për diabet.
- **Kriteret për risk të lartë:**
- Obezitet

- i shkallës së rëndë (BMI >35 kg/m<sup>2</sup>)
- Ekzistenca
- e mëparshme e GDM ose lindje të mëparshme
- të fëmijëve me peshë të madhe.
- Prezenca
- e glukozurisë.
- Raste
- të diagnostikuara më parë me Sindromin e Ovarit
- Policistik (PCOS).
- Histori
- familjare pozitive për diabet tip 2.
- **Situata me risk të ulët:**
- Mosha
- nën 25 vjeç.
- Peshë
- normale para shtatzanisë.
- Pa
- histori pozitive për Diabet Mellitus në të afërm të gradës
- së parë.
- Pa
- histori çrregullimesh të tolerancës së glukozës.
- Pa
- histori për komplikacione në shtatzanitë e mëparshme.
- **Diagnoza e GDM kërkon të paktën dy nga vlerat e**
- **mëposhtme të glukozës në plazëm:**
- Glicemia
- esëll  $\geq 95$ mg/dl ( $\geq 5.3$  mmol/l)
- 1
- orë  $\geq 180$  mg/dl ( $\geq 10.0$  mmol/l)
- 2
- orë  $\geq 155$  mg/dl ( $\geq 8.6$  mmol/l)
- 3
- orë  $\geq 140$  mg/dl ( $\geq 7.8$  mmol/l)

## Diabet tipi 2

Rezultatet: Në fund të 13 javëve, 70% e grave që morën pjesë në programin e aktivitetit fizik të moderuar raportuan një reduktim të nivelit të glukozës. Ndërkaq, grupi kontroll 2 nuk tregoi ndonjë ndryshim të konsiderueshëm në nivelin e glukozës. Qellimi është mbajtja e niveleve të glicemive esell dhe para vakteve në nivelet  $<110$  mg/dl ( $<6.0$  mmol/l); me pas monitorohen glicemite postprandiale. Mbeshtetja duhet të ofrohet nga personeli mjekësor deri sa të arrihen nivelet target të glicemive. Rezultatet e këtij studimi pilot sugjerojnë se një program i strukturuar i aktivitetit fizik të moderuar mund të jetë efektiv në reduktimin e nivelit të glukozës në grave me diabet të shtatzënisë. Megjithatë, nevojiten hulumtime të mëtejshme për të vlerësuar këtë ndikim në një grup më të madh dhe për një periudhë kohore më të gjatë. Diskutojmë rezultatet në kontekstin e metodologjisë së përdorur dhe shqyrtojmë implikimet e tyre për praktikën klinike dhe për të ardhmen e kërkimeve në këtë fushë. Por dhe Rezultatet e analizës së literaturës tregojnë një asociacion të rëndësishëm dhe të qëndrueshëm midis aktivitetit fizik gjatë shtatzënisë dhe rrezikut të diabetit gestacional. Nëpërmjet një shqyrtimi të thellë të studimeve të përfshira, është evidentuar se nivelet e aktivitetit fizik kanë një ndikim të qartë në parandalimin dhe menaxhimin e diabetit gestacional. Studimet e përfshira në analizë ofrojnë një gamë të gjerë të të dhënave, duke përfshirë analiza meta-sintetike dhe studime epidemiologjike të mëdha. Për shembull, një numër i studimeve kanë raportuar një lidhje të fortë midis nivelit të aktivitetit fizik dhe rrezikut të diabetit gestacional, ku gratë që kanë praktikuar aktivitet fizik të rregullt kanë pasur një rrezik më të ulët të zhvillimit të kësaj gjendjeje krahasuar me ato që kanë qëndruar më pak aktive gjatë shtatzënisë. Diskutimi i rezultateve është i rëndësishëm për

të kuptuar kontekstin dhe implikimet e tyre për praktikën klinike dhe për të ardhmen e kërkimeve në këtë fushë. Në këtë analizë, është theksuar rëndësia e inkurajimit të aktivitetit fizik si një mjet efektiv për parandalimin dhe menaxhimin e diabetit gestacional në popullacionin e grave shtatzëna. Gjithashtu, është bërë vëmendje në nevojën për më shumë hulumtime për të kuptuar me saktësi mekanizmat përmes të cilëve aktiviteti fizik ushtron ndikim në shëndetin gjatë shtatzënisë dhe në zhvillimin e diabetit gestacional.

Kjo analizë kontribuon në rritjen e kuptimit tonë të lidhjes midis aktivitetit fizik dhe rrezikut të diabetit gestacional dhe ofron udhëzime të rëndësishme për praktikën klinike dhe për të ardhmen e kërkimeve në këtë fushë. Përmes vlerësimit të metodologjisë dhe interpretimit të rezultateve, është evidentuar se aktiviteti fizik gjatë shtatzënisë mund të jetë një mjekim efektiv për të zvogëluar rrezikun e diabetit gestacional dhe për të mbështetur shëndetin e nënës dhe foshnjës. Implikimet praktike të kësaj analize janë të rëndësishme për shëndetin e publikut dhe praktikën klinike. Rezultatet e gjetura në këtë studim sugjerojnë se përfshirja e aktivitetit fizik gjatë shtatzënisë mund të jetë një strategji efektive për të parandaluar ose zvogëluar rrezikun e diabetit gestacional. Rezultatet e analizës së literaturës tregojnë një asociacion të rëndësishëm dhe të qëndrueshëm midis aktivitetit fizik gjatë shtatzënisë dhe rrezikut të diabetit gestacional. Nëpërmjet një shqyrtimi të thellë të studimeve të përfshira, është evidentuar se nivelet e aktivitetit fizik kanë një ndikim të qartë në parandalimin dhe menaxhimin e diabetit gestacional. Studimet e përfshira në analizë ofrojnë një gamë të gjerë të të dhënave, duke përfshirë analiza meta-sintetike dhe studime epidemiologjike të mëdha. Për shembull, një numër i studimeve kanë raportuar një lidhje të fortë midis nivelit të aktivitetit fizik dhe rrezikut të diabetit gestacional, ku gratë që kanë praktikuar aktivitet fizik të rregullt kanë pasur një rrezik më të ulët të zhvillimit të kësaj gjendjeje krahasuar me ato që kanë qëndruar më pak aktive gjatë shtatzënisë. Diskutimi i rezultateve është i rëndësishëm për të kuptuar kontekstin dhe implikimet e tyre për praktikën klinike dhe për të ardhmen e kërkimeve në këtë fushë. Në këtë analizë, është theksuar rëndësia e inkurajimit të aktivitetit fizik si një mjet efektiv për parandalimin dhe menaxhimin e diabetit gestacional në popullacionin e grave shtatzëna. Gjithashtu, është bërë vëmendje në nevojën për më shumë hulumtime për të kuptuar me saktësi mekanizmat përmes të cilëve aktiviteti fizik ushtron ndikim në shëndetin gjatë shtatzënisë dhe në zhvillimin e diabetit gestacional. Kjo analizë kontribuon në rritjen e kuptimit tonë të lidhjes midis aktivitetit fizik dhe rrezikut të diabetit gestacional dhe ofron udhëzime të rëndësishme për praktikën klinike dhe për të ardhmen e kërkimeve në këtë fushë. Përmes vlerësimit të metodologjisë dhe interpretimit të rezultateve, është evidentuar se aktiviteti fizik gjatë shtatzënisë mund të jetë

një mjekim efektiv për të zvogëluar rrezikun e diabetit gestacional dhe për të mbështetur shëndetin e nënës dhe foshnjës.

### **Konkluzioni dhe Implikimet Praktike**

Në përfundim, ne konkludojmë se aktiviteti fizik gjatë shtatzënisë ka një ndikim pozitiv në zvogëlimin e rrezikut të diabetit gestacional. Kjo përfshin rekomandime për praktikën klinike dhe politikat shëndetësore për të inkurajuar aktivitetin fizik si një mjet për parandalimin e komplikacioneve shtatzënë. Këto rezultate janë të rëndësishme për shëndetin e nënës dhe foshnjës dhe për shëndetin publik në përgjithësi.

Kjo revistë ofron një përfundim të detajuar të literaturës së tanishme dhe synon të ndriçojë rrugët për punën e ardhshme në fushën e aktivitetit fizik dhe diabetit gestacional.

**Konkluzioni:** Ky studim sugjeron se inkorporimi i një programi të strukturuar të aktivitetit fizik mund të jetë një mjet i rëndësishëm në menaxhimin e diabetit të shtatzënisë. Nëse rezultatet e këtij studimi verifikohen në hulumtime më të mëdha, kjo mund të ofrojë një strategji të efektshme dhe të ulë kostot për menaxhimin e kësaj sëmundjeje në gratë shtatzëna.

Rezultatet dhe Diskutimi Rezultatet e analizës së studimit tregojnë një asociacion të qëndrueshëm midis aktivitetit fizik dhe rrezikut të diabetit gestacional. Rezultatet: Në fund të 13 javëve, 70% e grave që morën pjesë në programin e aktivitetit fizik të moderuar raportuan një reduktim të nivelit të glukozës. Ndërkaq, grupi kontroll 2 nuk tregoi ndonjë ndryshim të konsiderueshëm në nivelin e glukozës. Qellimi është mbajtja e niveleve të glicemive esell dhe para vakteve në nivelet <110 mg/dl ( <6.0 mmol/l); me pas monitorohen glicemite postprandiale. Mbeshtetja duhet të ofrohet nga personeli mjekësor deri sa të arrihen nivelet target të glicemive.

Rezultatet e këtij studimi pilot sugjerojnë se një program i strukturuar i aktivitetit fizik të moderuar mund të jetë efektiv në reduktimin e nivelit të glukozës në grave me diabet të shtatzënisë. Megjithatë, nevojiten hulumtime të mëtejshme për të vlerësuar këtë ndikim në një grup më të madh dhe për një periudhë kohore më të gjatë. Diskutojmë rezultatet në kontekstin e metodologjisë së përdorur dhe shqyrtojmë implikimet e tyre për praktikën klinike dhe për të ardhmen e kërkimeve në këtë fushë.

Por dhe Rezultatet e analizës së literaturës tregojnë një asociacion të rëndësishëm dhe të qëndrueshëm midis aktivitetit fizik gjatë shtatzënisë dhe rrezikut të diabetit gestacional. **Abstract**

This scientific article examines and explores the role of pharmacists during health crises, with a particular emphasis on managing the Covid-19 pandemic. During this challenging period, pharmacists play a crucial role in providing healthcare services, including patient education, counseling, and ensuring the provision of necessary medications. Pharmacists, as frontline healthcare professionals, have a critical duty in educating the public about preventive measures, possible symptoms, and the use of medications. They play a leading role in explaining the importance of adhering to health authority guidelines and preventing the spread of infection. In addition to education, pharmacists provide specialized advice on the use of medications in treating and alleviating pandemic-related symptoms. They are actively involved in monitoring and managing medication stocks, ensuring that patients have continuous access to their treatment. This article also examines the challenges and opportunities pharmacists face during health crises and proposes possible measures to improve their preparedness for such situations in the future. To achieve effective pandemic management, close collaboration between healthcare professionals and pharmacists is essential, improving coordination and information exchange. This article aims to raise awareness of the pharmacist's contribution to pandemic management and serve as a source of information for those interested in improving the role and effectiveness of pharmacy during health emergencies. By identifying the successes and challenges of pharmacists in pandemic management, the study aims to provide a basis for discussions and recommendations for improving pharmacist preparedness and role in health emergency situations. With this goal in mind, it is intended to contribute to improving efficiency and cooperation between healthcare professionals and pharmacists in protecting public health.

**Keywords:** pharmacist, pandemic management, health education, medication provision, healthcare role.

**Introduction:** The recent Covid-19 pandemic has highlighted the crucial role of pharmacists in managing health emergencies (2). In this context, this scientific study specifically analyzes the responsibilities and contributions of pharmacists in the fight against the pandemic, delving into aspects of patient education, specialized counseling, and ensuring the availability of necessary medications (1). Pharmacists, as part of the healthcare workforce, are at the forefront of assistance for patients and the community during health crises (3). Their role in patient education is closely linked to the transmission of important information regarding preventive measures, symptoms, and medication usage (6). In this regard, pharmacists serve as significant sources of education, conveying current and reliable information to the community (7). Their specialized counseling helps patients manage illness and minimize health risks for themselves and others. Additionally, the role of pharmacists includes ensuring the availability of necessary medications. They are responsible for monitoring stock and ensuring that patients have continuous access to their treatment (5). In this way, pharmacists play an essential role in supporting the healthcare system and ensuring appropriate care for patients during emergency situations. This article aims to convey the pharmacist's intervention in pandemic management from a scientific perspective, identifying challenges and achievements, as well as suggesting possibilities for improving their preparedness and response in the future (3). By thoroughly analyzing the pharmacist's contribution during challenging health crises, we aim to assist in enhancing their role and awareness of their significance in global health (9).

**The objective of this study**, in an inductive manner, is the readiness and educational role of the pharmacist in pandemic management. Specifically, the focus of this study is on the Educational Role of the Pharmacist: Counseling and Assistance for Patients: 100 questionnaires were distributed to 100 pharmacies, with 7 questions each. They were distributed through "Geca," and data were collected over a 2-month period.(8,9)The aim is to examine how pharmacists provide specialized advice and assistance to patients in managing symptoms, using medications, and generally treating them during health emergencies. Descriptive studies are part of a simple situation announcement and do not aim to uncover causes of events or establish causal relationships. This study provides a detailed description of reality at a specific moment in time, such as the entire pandemic period, aiding in understanding the context and characteristics of a specific phenomenon to achieve our goal.(7.)This was conducted indirectly through questionnaires. In this descriptive study, the aim is to present and describe solely their role in this unprecedented situation and the process of managing and supplying necessary medications.(5) In this specific case, a methodology and plan used to understand the situation

and ensure the preparation and distribution of medications in a specific period and context are described, using a questionnaire as a tool to gather necessary information.

**The study aims to analyze** and focus on the role and contribution of pharmacists in the treatment and managerial aspect during the pandemic, including their specific responsibilities in patient education and counseling. Specifically, it aims to analyze the pharmacist's responsibility in ensuring the availability of necessary medications and managing stock during Covid-19. This includes monitoring the availability of essential medications and ensuring that patients have continuous access to those medications needed during the pandemic.

Additionally, it aims to identify specific challenges that pharmacists may face during pandemics and draw lessons that can be used to improve their preparedness and response in the future. This includes assessing the problems and challenges pharmacists have faced during the Covid-19 pandemic and proposing measures to address them in the future. Furthermore, it seeks to understand how pharmacists' activities in pandemic management impact public health and improve the healthcare system overall. This includes the pharmacist's role in educating the public about the pandemic, explaining preventive measures, symptoms, and health risks. In this way, it aims to understand how pharmacists are involved in enhancing public awareness and contribute to improving the overall response to the pandemic and healthcare system.

**Methodology:** We reviewed and scheduled foreign and Albanian literature related to the pandemic, its consequences, and management. We identified the issues and developed questionnaires related to our hypothesis. We distributed the questionnaires to 10 pharmacies with the help of distributor GeC and allowed sufficient time to collect the data. We analyzed and reached respective conclusions regarding the focus of our study.

**Experiment:** This study is a descriptive exploratory study, and we chose experimental forms of questionnaires to achieve our aim. The questionnaires were designed with a focus on our goal to highlight the role of the pharmacist in whether they were adequately educated or not during this unprecedented situation. The questionnaire was distributed to several pharmacies through distributor GeCa s one, and the distributor of medications or tools for the treatment or protection of patients with COVID-19 had their access. The subjects recruited were random without age or gender restrictions, all above 18 years old who completed the questionnaire anonymously and without our presence. Ideally, this questionnaire will be used as a tool to collect important information that will help in developing appropriate strategies and ensuring the necessary supply for the treatment of patients with COVID-19.

**Analysis and Discussion:** The study described above, which deals with the use of a questionnaire to organize the preparation and distribution of medications related to the treatment of patients with COVID-19, appears to be more of a descriptive study. In a descriptive study, the aim is to present and describe the characteristics, features, and processes in a clear and suitable manner. In the specific case, a methodology and plan used to understand the situation and to ensure the preparation and distribution of medications in a specific period and context are described, using a questionnaire as a tool to collect important information. Descriptive studies are part of a simple announcement of the situation and do not aim to uncover the causes of events or establish causal relationships. They provide a detailed description of reality at a specific point in time and help in understanding the context and characteristics of a specific phenomenon. The study aims to examine the role of the pharmacist during health crisis periods, including pandemic management as a case study. In this analysis, questionnaires distributed to 100 pharmacies through distributor GeC were used to gather pharmacists' perspectives on their contribution during the pandemic. Regarding the pharmacist's educational role, the results show that the majority of pharmacists are involved in providing necessary information to patients regarding preventive measures and medication use. This involvement is valued as a key contribution to public awareness and minimizing infection risks. In terms of counseling and assistance for patients, pharmacists indicated they are available to offer their specialized advice on symptom treatment and medication use. This represents an important aspect of their engagement in improving healthcare during emergency situations. However, the analysis also indicates some challenges and opportunities for improvement in pharmacist preparation and role during the pandemic. The main challenge lies in medication availability and stock management, where some pharmacists reported issues in this aspect. This finding highlights the need for coordination and improvement of logistic processes to ensure continuous access to medications for patients. To enhance the pharmacist's role during the pandemic, it is important to address specific challenges identified through the analysis and propose concrete measures for improvement. The findings of this study can serve as a basis for recommendations and further research in the field of pharmacist preparation and role in managing health emergencies.

**Graph 1**

After the research, it was reported that a majority of 70% of participants assessed that they received significant and necessary contributions from pharmacists during the pandemic. They emphasized that pharmacists provided valuable advice and ensured the necessary medications, distributing important information on preventive measures and the treatment of COVID-19-related symptoms. Participants also appreciated the availability and readiness of pharmacists to offer personalized assistance and advice according to their individual needs during this difficult health period. These assessments serve as support for the critical role of pharmacists in improving healthcare and assisting in pandemic management.

**2. Were there any shortages of medications or any preparations during the pandemic?**

**Graph 2**

Researchers reported that 92% of participants did not experience shortages of medications or any necessary preparations during the pandemic period. This indicates that the majority of individuals had continuous and permanent access to their medications and medical products

during this difficult health period. This availability of medications may have helped in managing symptoms and maintaining appropriate healthcare during the pandemic.

**3. Were there adequate availability of medications and protective equipment for you?**

**Graph 3**

From the data processing regarding the above question, it was reported that 32% of participants stated that they did not have access to or availability of necessary medications and protective equipment during the pandemic. On the other hand, 68% of participants stated that they were provided with and had access to the necessary medications and protective equipment. This data indicates a difference in responses, thus reflecting a division between those who had access and those who did not have full access to medications and protective equipment during the pandemic period. This may reflect different challenges that individuals faced in securing their healthcare needs during this difficult period.

**4. Did you experience any issues with any medication or protective equipment regarding stock or expiration dates?**

**Graph 4**

From the survey research, it was reported that 74% of participants did not experience any issues with any medication or protective equipment regarding stock or expiration dates. In this case,

the majority of individuals reported having sufficient access to the medications and protective equipment they needed, without encountering problems with their availability or expiration dates. On the other hand, 26% of participants stated that they experienced problems with some medication or protective equipment regarding stock or expiration dates. This may indicate challenges and obstacles that individuals faced in improving their availability in due time or in storing medications with mainly had to do with the quality of the masks. This result emphasizes the importance of good stock management and efficient coordination to ensure that patients have continuous access to their treatment during health emergencies.

**5. Did you receive accurate and up-to-date information on preventive measures, such as social distancing, hand hygiene, and mask-wearing? Guidance on possible symptoms of COVID-19 and instructions for home care.**

### **Graph 5**

From the researchers' report, 88% of participants stated that they received accurate and up-to-date information on preventive measures, including social distancing, hand hygiene, and mask-wearing. This indicates that the majority of individuals had access to and benefited from regular and updated information regarding preventive measures to protect themselves and others from COVID-19. On the other hand, 12% of participants reported that they did not receive accurate and up-to-date information on preventive measures. This may reflect the need for improvements in providing and communicating health information in some cases. This result highlights the importance of providing accurate and up-to-date information by healthcare professionals, including pharmacists, to assist in raising awareness and implementing preventive measures by the public during the pandemic.

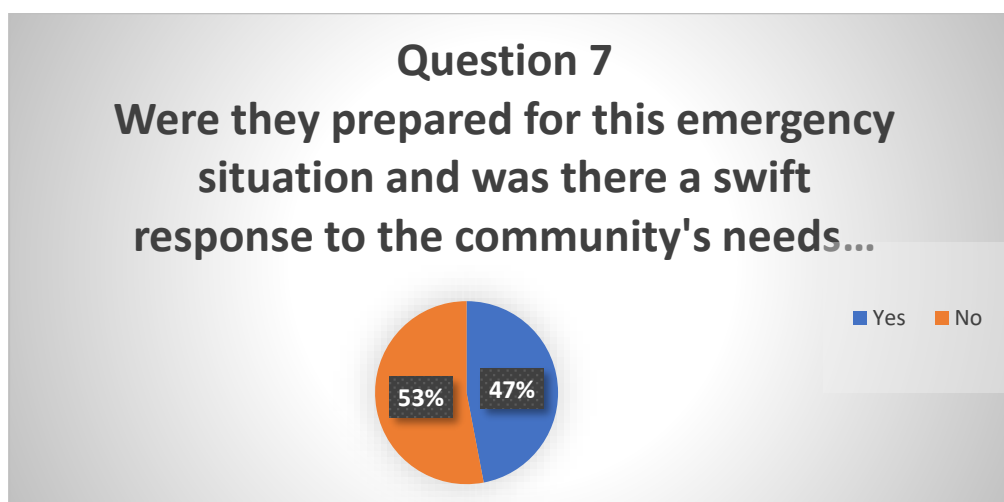

**6. Did you receive counseling on possible medication effects and assistance in minimizing the risks of side effects?**

**Graph 6**

Researchers reported that 96% of the participants stated that they received advice on the possible effects of medications and assistance in minimizing the risks of side effects. This indicates that the majority of individuals had access to specialized information and advice from pharmacists regarding the potential effects of medications and ways to reduce the risks of side effects during treatment. On the other hand, 4% of the participants stated that they did not receive advice on the possible effects of medications and minimizing the risks of side effects. This may indicate the need for improvement in providing information and advice from healthcare professionals, especially for those who may have concerns or contraindications regarding the use of medications. This result emphasizes the importance of the pharmacist's role in providing personalized advice to patients regarding the use of medications and minimizing the potential risks of side effects.

**7. Were they prepared for this emergency situation and did they react promptly to the community's needs for medication and healthcare?**

### **Graph 7**

Researchers reported that 53% of participants stated that they were prepared for this emergency situation and reacted promptly to the community's needs for medications and healthcare. This indicates that a significant portion of individuals had a level of preparedness and readiness to respond to the health emergency situation, including ensuring the provision of medications and healthcare for the community. On the other hand, 47% of participants said they were not prepared for this emergency situation and did not react promptly to the community's needs for medications and healthcare. This may indicate challenges and difficulties that some individuals faced in responding to the pandemic and preparing for such emergency situations. This result emphasizes the importance of individual and community preparedness for health emergency situations, as well as the need to strengthen the capacity for response at the community and individual levels.

### **Conclusion**

This study extensively examines the role and contribution of pharmacists during the COVID-19 pandemic. In this analysis, the results of a survey conducted in 100 pharmacies in Tirana are included, involving questionnaires to gauge pharmacists' perspectives on their contribution during this challenging health crisis. Overall, the results of our study indicate that the majority of pharmacists have played a significant role in public education regarding preventive measures, symptom management, and ensuring access to necessary medications. They have provided specialized advice and assistance to patients, ensuring they receive proper treatment and healthcare. Additionally, the results show that the majority of patients have had continuous access to their medications during the pandemic, while a small portion reported some challenges in the availability of medications and protective equipment. This underscores the importance of proper stock management and efficient coordination to ensure patients have continuous access to their treatment. Regarding the information and advice provided by pharmacists, the results demonstrate a high level of accuracy and timeliness of the information offered, including advice on the possible effects of medications and minimizing the risks of side effects. In conclusion, this study confirms the importance of the pharmacist's role in pandemic management and suggests several measures for improving their preparedness and response in the future. These include the need for better coordination in ensuring medication availability and addressing potential challenges pharmacists may face during health emergencies.

**Abstract**

Domestic and foreign authors make great contributions to action research and provide a spectrum of ideas and possibilities for their application in pedagogical work. In this paper, we want to present the relevance of the popularization of STEM activities in the first cycle of compulsory education through the application of action research. Guided by contemporary recent literature, we will present: the role of teachers in improving teaching and extracurricular activities by applying action research with a focus on the popularization and implementation of the STEM concept in working with students. We will also present proposals for practical activities that teachers and parents can use in order to investigate natural phenomena and processes, as well as an example of good practice that shows us the positive effects and impacts that STEM activities have on children's engagement, curiosity and creativity. At the very end, we will present ideas for future action research that will unite teachers, students, and parents in the interest of popularizing STEM activities in the first cycle of primary education.

**Keywords:** action research, STEM, reflective practice, partnership.

## **INTRODUCTION**

One of the recommendations of modern educational work that would overcome the weaknesses of subject-class teaching is the integration of content that enables students to acquire better quality and long-lasting knowledge (Miletić, Golubović-Ilić & Cekić-Jovanović, 2020). In many educational systems, there are different strategies for the integration of teaching subjects, and one of the „most famous concepts applied in the American educational system is STEM” (Blagdanić & Bandur, 2018: 281). As the STEM (Science, Technology, Engineering and Math) integrative educational concept is based on the study and connection of different teaching areas into one whole, which contributes to the development of cross-curricular competencies, in the paper we focus on the usefulness and relevance of action research in the function of popularizing the STEM learning concept . What makes this concept different from traditional teaching is that it includes „all educational activities during all developmental periods, in a formal but also informal sense” (Milošević, 2018: 180). Also, the STEM concept implies „acquiring knowledge about the functioning of natural, scientific and technical laws and rules and acquiring skills that involve solving problems, analytical way of thinking, developing and making logical conclusions and acquiring practical knowledge” (Ilić, Škorić & Subotin., 2020: 84) which represents an essential component of 21st century education. In order to apply the mentioned concept in the first cycle of basic education and upbringing, it is necessary for teachers to be motivated and competent, because most subject outcomes are achieved through the direct research activity of students with the continuous support of teachers (*Pravilnik o programu nastave i učenja za prvi razred osnovnog obrazovanja i vaspitanja*, 2018). Aggravating circumstances for the application of the STEM educational concept are „insufficiently flexible class schedule, formal teacher education - the concept of separate teaching methods for different subjects and the reluctance of a certain number of teachers to change their own methodological paradigms“ (Blagdanić & Bandur, 2018: 282). However, regardless of the aforementioned aggravating factors, research shows that teachers recognize the importance of the STEM concept and are ready for its implementation (Filipović, 2023). What teachers need, in order to apply the STEM concept in teaching in a better way, is professional development in the form of seminars, round tables or gatherings where examples of good practice will be exchanged. Since one of the goals of the *Education Development Strategy in Serbia until 2030* is to improve the system of professional training that will contribute to the application of what has been learned in everyday work, improve the quality of teaching, and therefore the quality of student learning, one of the topics should also be the

possibilities and ways of applying STEM concept in the first cycle of basic education and upbringing. By representing the STEM concept, school practice can be improved, and the knowledge gained through this integrative model provides an opportunity for students to learn in an original and creative way. For this reason, in this work we point to the application of action research in the function of popularizing the STEM concept. „It is considered that action pedagogical research is the most effective, the most direct and the most natural way of simultaneously changing and improving (improving) educational practice“ (Knežević Florić & Ninković, 2012: 101). Accordingly, „the educator - action researcher, organizes activities, identifies the existing situation and problems that he strives to innovate, by introducing certain changes in the educational process and re-analyzes and evaluates the achieved results and the effects of the implemented changes“ (Dedaj, 2019: 88). Many researches based on implemented action research show positive outcomes (e.g. Osmanović & Mihajlović, 2014; Maksimović, Milanović & Osmanović Zajić, 2022; Milanović, 2023), which indicates the need for their more frequent representation in school practice in the context of its innovation, improvement and modernization. Research in the field of upbringing and education indicates the importance of involving parents (e.g. Polovina, 2011; Tokić, 2015; Milanović, 2021). „It is expected that the parent, as a partner in educational work, actively participates in various school activities“ (Kuveljić & Jović, 2013: 122), whereby parents can apply the STEM concept at home and actively participate in STEM activities at school. With this theoretical paper, we point to the practical application of action research in the aspect of popularizing the STEM concept and improving school practice through the active participation and engagement of parents and students.

### **TEACHERS AND PARENTS IN THE WORLD OF STEM CONCEPTS**

Authors in our country and abroad (e.g. Elliot, 1991; Maksimović, 2010; Maksimović & Cenić, 2013; Laudonia, Mamlok-Naaman, Abels, & Eilks, 2018) present different and very interesting topics about action research. By focusing on that „conducting quality researches does not only inform teaching and learning but empowers teachers to become more reflective of their roles and responsibilities in the classroom, and for schools to improve the delivery of quality education for the students“ (Barcelona, 2020: 517). In this part, we will present some examples that can serve as an idea for modernizing school practice with action research through the popularization of the STEM concept of learning through the participation of parents. As most subject outcomes are realized through the research activity of children and the support of teachers, it is desirable,

whenever possible, to include interaction with parents, who, in accordance with their knowledge and capabilities, can contribute to the realization of teaching and extracurricular activities. According to the Law on Basic Education and Upbringing (2023), the school is obliged to implement extracurricular activities, and one of them is in the field of science in order to strengthen the educational activity of the school, encourage individual interests and inclinations of children, but also meaningful and purposeful use of free time. The law provides for a program of cooperation with the family, which represents the organization of an open school day every month, when parents can attend educational work and thus get involved in the realization of the STEM concept. Acquaintance and participation of parents in such activities will give them the opportunity to realize these activities with their children at home. As part of such activities, the students' parents would come and create STEM materials together, learn and collaborate. This gathering is also an opportunity for parents to present STEM activities, games and toys that they have realized and constructed with their children at home. Students, on the open day, can demonstrate certain experiments, point out their importance and present what they have learned, what knowledge and skills they have developed, and teachers can present new examples, games and toys for exploring some other natural phenomena and processes using of STEM concepts. Teachers can survey or interview parents and students about participation in activities and workshops, in order to get feedback on their impressions and opinions about the preparation of materials and the application of STEM learning concepts, because feedback and suggestions. Analysis of the Rulebook on the teaching and learning program for the first, second, third and fourth grade of primary education (*Pravilnik o programu nastave i učenja za prvi razred osnovnog obrazovanja i vaspitanja, 2018; Pravilnik o programu nastave i učenja za drugi razred osnovnog obrazovanja i vaspitanja, 2018; Pravilnik o programu nastave i učenja za treći razred osnovnog obrazovanja i vaspitanja, 2019; Pravilnik o programu nastave i učenja za četvrti razred osnovnog obrazovanja i vaspitanja, 2019*) it can be seen that there is a lot of power for the application of the STEM concept, because with the amendment of the Rulebook, the contents do not have the character of prescribed, but recommended contents, so it depends on the competence, motivation and creativity of the teacher whether and in what way they will apply the STEM concept in their work. In the paper, we specifically consider examples related to content about movement, magnetic and electrical properties of materials, after which concrete solutions will be offered for connecting related content as a whole, because the teacher's role is to enlighten students and create a complete picture, not to teach interprets the contents as biological, geographical, historical and other contents (*Pravilnik o programu*

*nastave i učenja za prvi razred osnovnog obrazovanja i vaspitanja, 2018*). The content on movement in the Teaching and Learning Programs for the first cycle of basic education and upbringing is viewed as a physical phenomenon about which students have significant knowledge, but the task of the teacher is to make experiential knowledge a function of a better understanding of the world that surrounds them (*Pravilnik o programu nastave i učenja za prvi razred, 2018*). As the contents of movement are studied in all four grades within the first cycle of basic education and upbringing, they are distributed and developed according to a spiral-ascending model, in accordance with the age characteristics of the children, which means that the same topic is expanded and deepened from grade to grade.

Content about movement can be classified into three units:

- basic determinants of movement as a phenomenon;
- factors affecting body movement;
- different forms of body movement (Blagdanić & Bandur, 2018: 181).

All three units are suitable for the application of STEM learning concepts, but we will refer to some of them in the paper. In the realization of the STEM activity, in order for the students to explore different forms of movement of the body according to the path (straight and curvilinear), they used a base on which they poured salt and shaped the paths (picture 1) and thus observed rectilinear and curvilinear movement. They expanded the research by using objects of different shapes that they tried to move on the surface of the same name and examined which factors influence the movement of the body. In order to determine the direction and direction in which the movement takes place, as well as different ways to start and stop the body, they used a polygon with different obstacles (picture 2).

**Picture 1.** Straight and curvilinear movement

**Picture 2.** Determining the direction and direction in which the movement takes place

In contrast to the content about movement, students examine the magnetic properties of materials (natural magnets, the possibility of magnetizing the body and the properties they then manifest) in the fourth grade of the first cycle of basic education and upbringing. As the understanding of these phenomena is demanding for students of this age, because they are not immediately accessible to the senses (*Pravilnik o programu nastave i učenja za četvri razred, 2019*) recommends that one should dwell on the manifestations of magnetism in everyday life through trials or experiments. At an early age, children gain experience in using magnetic toys and applying magnets in everyday life, but it is important that through research STEM activities, we point out to students the material error *that magnets attract all metals* (Blagdanić & Bandur, 2018). In order not to make such a generalization, students have different metals at their disposal in order to independently conclude that a magnet attracts objects made of only some metals (picture 3). One of the STEM activities that the students had was to create toys from the offered metals and magnets and in this way they also investigated what they could use to create a magnetic toy (picture 4). Also, in this way, they gained knowledge about other ways of applying magnets in everyday life.

**Picture 3.** Objects made of which materials are attracted to a magnet?

**Picture 4.** Constructing magnetic toys

In order to investigate the effect of magnets through different substrates, the students had certain problem tasks (some of them are: how can you, using the given objects, move Santa Claus without touching him, how can you write a name or draw something on the substrate, and to

add salt...) and using substrates prepared from different materials, examined one of the properties of the magnet (picture 5).

**Picture 5.** Through which materials does the magnet work? In order to investigate the poles of magnets and to observe that different poles attract, and those with the same name repel, we used magnetic sticks, a substrate that was compressed for researching content about movement, and magnetic cars - the students made using cars and magnets (picture 6).

**Picture 6.** Magnet attraction and repulsion

In the first cycle of basic education and upbringing, students study and research the electrical properties of materials in the fourth grade. The recommendation of the Rulebook on the teaching and learning program for the fourth grade (2019) is to test the electrical conductivity of materials using a simple circuit with a battery and a light bulb, and in this way students gain knowledge about the flow of electric current, parts of the circuit (source, conductor, consumer electric currents) but also about the reasons why cables are made of metal and coated with plastic and/or rubber (conductors/insulators of electric current). In this way, students research and acquire knowledge about the electrical conductivity of materials that they can apply in everyday life, because it „represents the basis for understanding the safety risks of using electricity, using the examples of handling electrical appliances in the household” (*Pravilnik o programu nastave i učenja za četvrti razred, 2019: 45*). The pictures show examples that children, in cooperation with students, teachers, and parents, realized through STEM activities in order to examine the electrical properties of materials.

**Picture 7.** Electrical conductivity of materials

The teacher, depending on the outcome he wants to achieve, should encourage students to engage in various activities that involve individual senses or multiple senses at the same time. It needs to empower students to research and analyze natural phenomena and processes, which the STEM concept encourages.

The presented examples open opportunities for modern teachers to improve teaching in school practice by applying action research, cooperate with parents, improve the relationship and encourage active learning in children.

### **CONCLUSION**

The presented topic opens up many ideas for further research that would focus on the practical application of action research in the field of popularizing the STEM concept through the participation of teachers, parents and students. Organizing workshops based on the STEM concept through the involvement of psychologists, pedagogues, school teachers, STEM subject teachers, parents and students opens another practical idea. Certainly, the volunteer participation of students, future educators and teachers can be of great benefit both to them in terms of empowerment and preparation for the professional role of a pedagogical worker, as well as to other participants. Action research, extracurricular activities, popularization of the STEM concept of learning and the involvement of parents is another idea that would improve school practice, bring interesting things, innovations and strengthen family-school relations. A very interesting paper points to the popularization of science and STEM concepts in the school library (Radovanović & Duković, 2020), which opens up the possibility of improving work in this aspect as well through action research. The development of teachers' professional competences, through the application of action research, the popularization of STEM learning and partnership with parents open up ideas for practitioners to implement activities in practice. Certainly, the improvement of the existing practice with the presented examples opens a window to modern practitioners for ideas that they can apply in their daily work and make the school a place of joy, happiness, fun - a place that children adore.

**ÖZET**

Günümüzde fosil yakıtların talebi ve tüketimi, ülkelerin kalkınma hızlarıyla aynı oranda artmaktadır. Dizel motorlar yüksek verimlilikleri ve dayanıklılıkları sayesinde endüstri, tarım, havacılık ve demiryolu gibi birçok alanda yaygın olarak kullanılırlar. Dizel motorlar, azot oksit (NO<sub>x</sub>), hidrokarbon (HC), karbon monoksit (CO), karbon dioksit (CO<sub>2</sub>) ve duman yoğunluğu gibi egzoz emisyonlarının oluşmasının ana nedenlerinden biridir. Bu çalışmanın amacı, dizel motorlarda motorin ve metanol karışımlarının üçlü karışım (%5, %10, %15) olarak kullanılmasının egzoz emisyonları üzerindeki etkisini araştırıp optimum değerleri Yanıt Yüzey metodolojisi ile elde etmektir. Deneyler 4 zamanlı 6 silindirli turboşarjlı dizel motorda gerçekleştirilmiştir. Yanıt Yüzey Metodolojisi (YYM) modeli, deneysel veriler kullanılarak geliştirilmiştir. Giriş parametreleri olarak metanol oranı ve motor hızı seçilirken, yanıt parametreleri olarak azot oksitleri (NO<sub>x</sub>), karbon monoksit ve hidrokarbon emisyonları seçilmiştir. Giriş parametrelerinin optimum değerleri, sırasıyla %15 metanol oranı ve 1667 rpm motor hızı olarak bulunmuştur. Bu optimum değerlere karşılık gelen NO<sub>x</sub>, CO ve HC yanıtları sırasıyla 890.7 ppm, 77,21 ppm ve 20.4 ppm dir. Geliştirilen matematiksel modelin, motor emisyonlarını etkili bir şekilde tahmin etmek için etkin bir biçimde kullanılabileceği bulunmuştur.

**Anahtar Kelimeler:** Metanol, dizel motor, emisyonlar, optimizasyon, YYM

**OPTIMIZATION OF EXHAUST EMISSIONS OF A DIESEL ENGINE USING  
DIFFERENT PROPORTIONS OF ALCOHOL DIESEL FUEL BLENDS**

**ABSTRACT**

In today's world, the demand for and consumption of fossil fuels are increasing in line with the pace of countries' development. Diesel engines are widely used in many fields such as industry, agriculture, aviation, and railways due to their high efficiency and durability. Diesel engines are one of the main causes of exhaust emissions such as nitrogen oxides (NO<sub>x</sub>), hydrocarbons (HC), carbon monoxide (CO), carbon dioxide (CO<sub>2</sub>), and smoke density. The aim of this study is to investigate the effect of using blends of diesel and methanol in diesel engines as ternary mixtures (5%, 10%, 15%) on exhaust emissions and to obtain optimum values using Response Surface Methodology. Experiments were conducted on a 4-stroke 6-cylinder turbocharged diesel engine. The Response Surface Methodology (RSM) model was developed using experimental data. Methanol ratio and engine speed were selected as input parameters, while nitrogen oxides (NO<sub>x</sub>), carbon monoxide, and hydrocarbon emissions were selected as response parameters. The optimum values of the input parameters were found to be 15% methanol ratio and 1667 rpm engine speed, respectively. The corresponding NO<sub>x</sub>, CO, and HC responses to these optimum values are 890.7 ppm, 77.21 ppm, and 20.4 ppm, respectively. It was found that the developed mathematical model can be effectively used to predict engine emissions.

**Keywords:** Methanol, diesel engine, emissions, optimization, RSM

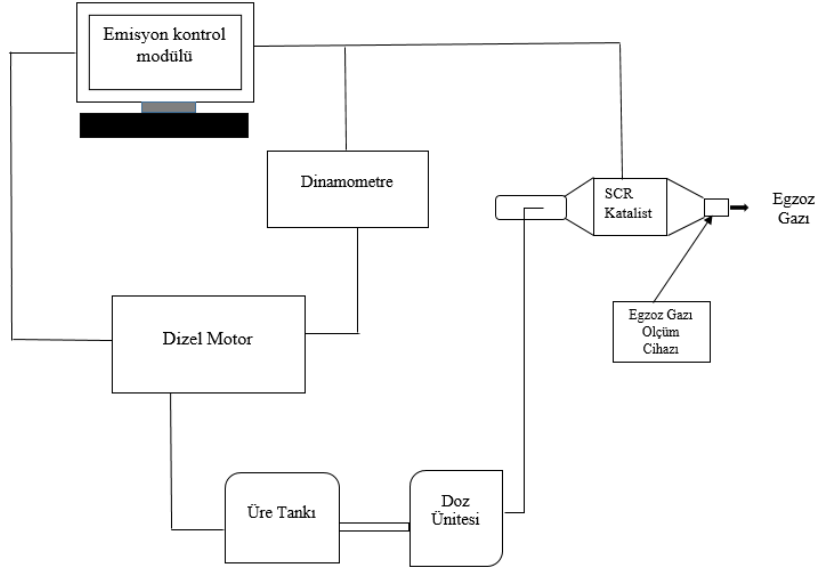

## **GİRİŞ**

Günümüzde taşımacılık, sanayi ve kentsel sektörlerdeki hızlı büyüme ile enerji ihtiyaçları küresel olarak aynı hızda artmaktadır (Dubey ve ark,2023). Fosil yakıtlar, dünyanın enerji taleplerini karşılamak için önemli kaynaklardır (Asokan ve ark, 2019). Sıkıştırılmalı ateşlemeli (CI) motorlar, taşımacılık, tarım ve enerji üretimi uygulamalarında sürekli olarak kullanılmaktadır (Atmanlı ve Yılmaz 2021). Son dönemde artan küresel enerji talebi, azalan petrol rezervleri ve dünya politikasındaki istikrarsızlık, fosil yakıt piyasasını önemli ölçüde etkilemiştir. Fosil yakıtların içten yanmalı motorlarda yakılması, egzoz emisyonlarına bağlı olarak küresel ısınma, iklim değişiklikleri ve sera gazlarının etkileri gibi büyük olumsuzluklara neden olur (Baranitharan, 2019). Hidrokarbon (HC), azot oksit (NO<sub>x</sub>) ve karbon monoksit (CO) emisyonlarının salınımının çevreye olumsuz etkiler vardır (Shadrack ve ark. 2023). Bu faktörler, araştırmacıları ve motor üreticilerini çevre dostu, kolayca temin edilebilen ve stabil motor işletmesi sağlayan alternatif yakıtları aramaya yönlendirmiştir (Hasan ve ark., 2021).Biyokütle kaynaklarından biyokimyasal süreçlerle elde edilen alkoller, yenilenebilir ve temiz yanma özelliğine sahip karbon temelli yakıtlara doğru bir yol sunma potansiyeline sahiptir (At-manlı ve ark, 2015). Alkol yakıtları, bol miktarda üretim avantajına, yüksek oksijen içeriğine, atmosfer sıcaklığında ve basıncında sıvı halde bulunma özelliğine ve ekonomik avantajlara sahip olarak, en umut vaat eden alternatif yakıtlardan biri olarak kabul edilmiştir (Chen ve ark, 2022). Özellikle etanol ve metanol, uzun yıllardır alternatif yakıtlar olarak değerlendirilmektedir (Yao ve ark, 2010).Optimizasyon yöntemleri deneme sayısını azaltır, matematiksel optimizasyon modelleri geliştirir ve cevapları tahmin eder (Dubey ve ark. 2022). Yanıt yüzey metodolojisi pek çok alanda karmaşık süreçleri geliştirmek, iyileştirmek ve optimize etmek için kullanılır (Betiku ve ark, 2014). Yanıt yüzey metodu çok sayıda araştırmacı tarafından test sayısını azaltmak için seçilmiştir (Uslu, 2020). Bu çalışmayı yürütmek için, egzoz gazı emisyonları, Yanıt Yüzey Metodolojisi (RSM) kullanılarak modellenmiştir. Bu modelleme yöntemi, yeterli deneysel veri sağlandığında tercih edilen çıkış değişkenlerini değerlendirir. YYM, sayısal bir optimizasyon tekniği ve işlemleri ve ürün tasarımlarını optimize etmek için istatistiksel bir tasarımın bir seçkisidir (Patel ve ark. 2018)Giriş parametrelerini tasarlamak ve egzoz emisyonları ile ilgili analizleri yapmak için yüzey yanıt metodolojisi kullanılmıştır. Deney Tasarımı (DoE) kavramı, minimum deneme sayısı ile maksimum varyasyon aralığını değerlendirmek için sunulur.Literatür incelendiğinde, birçok araştırmacının dizel motorun egzoz emisyonları üzerinde alkol kullanımının etkilerini araştırdığı görülmektedir. Ancak, sadece birkaç araştırmacının, alkol ve yakıt karışımlarının

egroz emisyonları üzerindeki etkilerini analitik olarak değerlendirmek için yüzey yanıt metodolojisini kullandığı gözlemlenmiştir. Bu çalışmanın amacı, metanol dizel yakıt karışımlarının Yüzey yanıt metodolojisine dayalı merkezi kompozit modeli kullanarak egzoz emisyonlarını ( $\text{NO}_x$ , CO, HC) optimize etmek ve egzoz emisyonlarını minimize etmektir.

### **MATERYAL VE METOD**

Bu çalışmada kullanılan motor, Türkiye'de üretilen Netfren hidrolik dinamometre üzerinde çalıştırılan, 6 silindirli, turboşarjlı ve şarj hava soğutmalı bir dizel motordur. Motor torku, hidrolik dinamometrenin yardımıyla ölçülmüştür. Tablo 1 dinamometrenin teknik özelliklerini göstermektedir.

**Şekil 1.** Deney düzeneğinin resmi

**Tablo 1.** Dinamometre teknik özellikleri

Tork aralığı	250-2200 Nm
Hız aralığı	0-4500 rpm
Ağırlığı	45 kgf
Bağlantı uzunluğu	400-750 mm
Tork kolu uzunluğu	350mm

### **Yanıt Yüzey Methodu**

Bu çalışmada Minitab (Deneme Sürümü) yazılımı kullanılarak deneysel değerlerin istatistiksel analizi için yanıt yüzeyi metodolojisi kullanılmıştır. Optimizasyon işlemi için yanıt yüzey metoduna dayalı merkezi kompozit modeli kullanılmıştır. Toplam da 13 deney gerçekleştirilmiştir. Merkezi kompozit modelinde metanol oranı (A) ve motor hızı (B) dâhil

olmak üzere 2 adet giriş parametresinin etkileri incelenmiştir. Tablo 2’de kullanılan giriş parametreleri ve onların değerleri verilmiştir. Oluşturulan modelde tepki faktörü olan egzoz emisyonlarının (NO<sub>x</sub>, CO, HC) seçilen giriş parametreleriyle olan ilişkileri değerlendirilmiştir. Yanıt yüzey metodolojisi yanıt yüzeyini tahmin etmek için eşitlik 1 ‘de verilen 2. dereceden polinom modelini kullanır.

$$Y = \beta_0 + \sum_{i=1}^n \beta_i x_i + \sum_{i=1}^n \beta_{ii} x_i^2 + \sum_{i>j}^n \sum_j \beta_{ij} x_i x_j + e \quad (1)$$

Burada; Y değeri tahmin edilen Egzoz emisyon değerini, n değeri faktör sayısını,  $\beta_0$  sabit,  $\beta_i$ ,  $\beta_{ii}$ ,  $\beta_{ij}$  doğrusal, dördü ve etkileşim katsayılarını belirtmektedir.

**Tablo 2.** Giriş parametreleri ve değerleri

Sembol	Değişken	Birim	Seviye		
			-1	0	+1
A	Metanol Oranı	%	5	10	15
B	Motor Hızı	Rpm	1400	1800	2200

## **SONUÇLAR VE TARTIŞMA**

İki bağımsız değişken (işlem faktörü) ile minimum egzoz emisyon değerlerini bulmak için Merkezi kompozit deneysel tasarımı kullanılmıştır ve sonuçlar Tablo 3’te gösterilmiştir. Egzoz emisyon deneylerini tasarlamak ve tepkime koşullarını optimize etmek için Minitab yazılımı kullanılmıştır. Gerçek motor egzoz emisyon değişkenlerini belirlemek için 2-4 numaralı denklemler kullanılmıştır.

**Tablo 3.** Egzoz Emisyonları için Gerçek ve Tahmini Değerler

Deney No	Deneysel			Tahmini

#### Varyans Analizi (ANOVA)

İki bağımsız faktörün (metanol oranı ve motor hızı) egzoz emisyon değerleri (NO<sub>x</sub>, CO, HC), üzerindeki etkileri ANOVA analizi kullanılarak belirlenmiştir. Sonuçlar Tablo 4'te gösterilmiştir. ANOVA analizine göre, model terimleri için p-değerleri 0.05'ten küçük olduğunda anlamlıdır. Belirleme katsayısı R<sup>2</sup>, uyumlu modellerin kalitesini belirlemede kullanılmıştır. Memnuniyet verici bir model uyumu elde etmek için R<sup>2</sup>'nin 1.0'a yakın olması gerekmektedir (Singh ve ark. 2019). Ayrıca, modelin uygunluğu, regresyon katsayısı (R<sup>2</sup>),

düzeltilmiş regresyon katsayısı (Ayarlanmış  $R^2$ ) ve tahmin edilen çoklu belirleme katsayısı (Tahmini  $R^2$ ) kullanılarak test edilmiştir. NO<sub>x</sub>, CO ve HC emisyonları için  $R^2$  değerleri Tablo 5'e göre sırasıyla 0.9996, 0.9999 ve 0.9992 olarak bulunmuştur. Modelin regresyon katsayısı  $R^2$  değerlerinin oldukça yüksek olduğu gözlemlenmiştir. Bu, modelde kullanılan ikinci dereceden regresyonun deneysel tasarımdaki herhangi bir değişkendeki yanıt faktörlerini hesaplamak için uygun olabileceğini göstermiştir.  $R^2$  ve ayarlanmış  $R^2$  değerlerinin birbirine yakın olması, önerilen modellerin deneysel verilerle uyumlu olduğunu göstermiştir (Aygün ve ark. 2019).

## Emisyonlarının Analizi

### NO<sub>x</sub> Emisyonu

Şekil 2, NO<sub>x</sub> emisyonları üzerinde metanol karışım oranı ve motor hızının etkileşimini gösteren 3 boyutlu tepki yüzeyi grafiğini göstermektedir. Metanol içeren dizel yakıt karışımlarında, saf dizel yakıtla kıyasla azot oksit (NO<sub>x</sub>) emisyonlarında bir azalma görülmektedir. Bu azalma, karışımdaki alkol yüzdesi ile artmaktadır. Bu durumun, alkolün (daha düşük kalorifik değere sahip olması nedeniyle) sıcaklığı düşürme etkisinden kaynaklanabileceği düşünülmektedir. Bu etki, alkolün oksijen içeriği ve daha düşük setan sayısının (ve dolayısıyla daha uzun yanma gecikmesinin) karşıt etkisini neredeyse dengelemektedir. Bu da olası olarak, karışımın ön

karışımli yanması sırasında daha yüksek sıcaklıklara ve dolayısıyla NO üretimine yol açabilir (Rakopoulos ve ark., 2008).

**Şekil 2.** Metanol karışım oranı ve motor hızı karşısında NOx emisyonları için 3 boyutlu yüzey grafiği

### CO Emisyonu

Motor işletme değişkenlerinin CO emisyonu üzerindeki etkileri Şekil 3'te gösterilmektedir. Alkol karışımı yakıtların CO emisyon değerleri, saf dizel yakıtına kıyasla azalmıştır. CO emisyonun azalma sebebi, alkol yakıtlarının dizel yakıtına kıyasla daha yüksek oksijen içeriğine sahip olmalarıdır. Ayrıca, alkol-dizel yakıt karışımları, dizel yakıtına kıyasla daha düşük stokiometrik A/F oranına sahiptir; karışımların stokiometrik A/F oranları, dizel yakıtınınkinden daha düşüktür. Sonuç olarak, test edilen karışımlar daha düşük CO emisyonu vermektedir (Rakopoulos ve ark., 2008).

**Şekil 3.** Metanol karışım oranı ve motor hızı karşısında CO emisyonları için 3 boyutlu yüzey grafiği

### **HC Emisyonu**

Alkol yakıtlarının HC emisyon değerleri, saf dizel yakıtına kıyasla artmıştır. Alkol eklenmesiyle HC emisyonlarında artışın nedeni, alkol karışımlarının daha yüksek buharlaşma ısısı nedeniyle buharlaşmanın daha yavaş olması ve bu nedenle daha yavaş ve daha kötü yakıt-hava karışımı sağlanması, artan sprey penetrasyonunun istenmeyen şekilde odacık duvarlarına yakıt çarpmasına (ve bu nedenle alevin sönmeye) ve halka boşluk bölgelerinde yumuşama ve yastıklanmaya neden olmasına bağlanabilir (Rakopoulos ve ark., 2008).

**Şekil 4.** Metanol karışım oranı ve motor hızı karşısında HC emisyonları için 3 boyutlu yüzey grafiği

### **Model Doğrulama Deneyleri**

YYM yaklaşımı, dizel motorun en iyi istenen emisyonlarına dayalı olarak yakıt hazırlığındaki metanolün optimal karışım oranının belirlenmesi için kullanılmıştır. Giriş değişkenleri ve yanıt değişkenleri için sayısal optimizasyon Şekil 5'te gösterilmiştir. Bu tahmin değerleri NO<sub>x</sub>, CO ve HC emisyonlarını minimize etmek için optimal çözümü temsil eder. Grafikte, %15 metanol oranında ve 1666.7 rpm motor hızında, kombinasyonlu istenen faktörde en yüksek pikin yaklaşık %62,85 olduğu gözlemlenmiştir. Onay testleri optimal çözümün sonuçlarını test etmek için 3 deneme gerçekleştirilmiştir ve ortalama sonuçlar Tablo 6'da sunulmuştur. Önerilen optimal nokta için gözlemlenen maksimum hata %5,5 ve minimum hata %0,92 olarak belirlenmiştir.

**Tablo 6.** Gözlemlenen ve tahmin edilen değerler için karşılaştırmalar

	NO <sub>x</sub>	CO	HC
Optimal şart	890.7	77.03	20.36
Deneysel test	882.5	76.15	21.48
% Hata	0.92	1.14	5.5

**Şekil 5.** Giriş parametrelerinin egzoz emisyonları üzerindeki etkilerinin optimizasyonu

## SONUÇLAR

Bu çalışmada, motorin ve metanol karışımlarının üçlü karışım (%5, %10, %15) olarak hazırlanarak 4 zamanlı 6 silindirli dizel motorda emisyon değerlerindeki değişimler ölçülmüş olup egzoz emisyon değerlerini (NO<sub>x</sub>, CO, HC) belirlemede metanol karışım ve motor hızının tahmini ve optimizasyonu yanıt yüzey metodu başarıyla uygulanmıştır. Elde edilen sonuçlar aşağıda verildiği şekildedir:

- İstatistiksel analiz, motorların emisyon özelliklerini en çok etkileyen önemli parametreleri belirlemekte çok yararlıdır. En az deneysel test sayısı ile en doğru sonuçları elde etmek için sağlanır.
- NO<sub>x</sub>, CO ve HC emisyonları için R<sup>2</sup> katsayısı sırasıyla 0.9996, 1.00 ve 0.9992 olarak belirlenmiştir.
- En iyi yanıtlar NO<sub>x</sub>, CO ve HC için sırasıyla 890.7 ppm, 77.03 ppm ve 20.36 ppm olarak hesaplanmıştır.
- NO<sub>x</sub>, CO ve HC için hata oranı sırasıyla %0,92, %1.14 ve %5,5 olarak bulunmuştur.
- Elde edilen sonuçlar, RSM tasarımının motor işletim parametrelerinin optimizasyonunda etkili bir şekilde kullanılabileceğini göstermektedir.

**Abstract**

Engineering properties are essential in delivering a high-quality product and a basic understanding of groundnut kernel is necessary for the development and improvement of technology for its processing. This study investigates some selected physical, chemical and mechanical properties of groundnut kernel. Groundnut kernels at 8.50% moisture content were used for the study. One hundred sample of groundnut kernels were used to determine some of the selected physical properties of groundnut kernels using standard equations and formulae. The groundnut kernel was tested for their strength properties under compression when loaded under an INSTRON Universal Testing Machine while the chemical properties were determined using recommended standard equations and formulae. The data obtained were subjected to statistical analysis using Microsoft Excel package. The length, width, thickness, geometric diameter, arithmetic mean diameter, sphericity, surface area, aspect ratio, true density, bulk density and porosity of  $1.28 \pm 0.18$  cm,  $0.81 \pm 0.12$ cm,  $0.87 \pm 0.12$  cm,  $0.96 \pm 0.10$  cm,  $0.99 \pm 0.09$  cm,  $0.76 \pm 0.10$  %,  $2.92 \pm 0.58$  cm,  $0.64 \pm 0.13$  %,  $1.08 \pm 0.21$  g/cm<sup>2</sup>,  $0.569$  g/cm<sup>2</sup> and 45.42 % were obtained respectively. On four different surfaces, static coefficient of friction varied from 0.29 to 0.36, while the angle of repose was  $25^{\circ} \pm 4^{\circ}$ . The stress at break of  $130.40 \pm 232.5$  MPa, strain at break of  $2.16 \pm 0.68$  mm/mm, deformation at break of  $25.34 \pm 7.94$  mm, force at break of  $11.29 \pm 20.10$  kN and energy to break of  $20.99 \pm 41.70$  J were obtained respectively. The mineral compositions obtained include sodium, potassium, magnesium, calcium, phosphorus, iron, and zinc content of  $60.75 \pm 0.07$  ppm,  $98.0 \pm 1.41$  ppm,  $5.34 \pm 0.02$  ppm,  $71.55 \pm 0.07$  ppm,  $1.10 \pm 0.005$  ppm,  $1.80 \pm 0.35$  ppm, and  $60.15 \pm 0.21$  ppm respectively. Ash, fat, crude fibre, crude protein and carbohydrate content of  $1.97 \pm 0.02\%$ ,  $42.69 \pm 0.46$  %,  $3.90 \pm 0.03$  %,  $38.38 \pm 0.18\%$ , and  $5.37 \pm 0.26\%$  were gotten respectively. The physicochemical characteristics of free fatty acid, peroxide value, saponification value and iodine value of  $1.99 \pm 0.03$  mg/kOH/g,  $0.02 \pm 0.001$  Meq/kg,  $253.73 \pm 1.81$ mg/kOH/g, and of  $36.68 \pm 0.8$  g/100g respectively. This study has provided information on some engineering properties of groundnut kernel for designing improved agricultural machinery for planting, harvesting, processing and storage of groundnut.

## **INTRODUCTION**

Groundnut (*Arachis hypogaea* L.) is a multi-purpose legume crop widely cultivated in sub-Saharan Africa (SSA) (Abady *et al.*, 2019). Groundnut otherwise known as *Arachis hypogaea* is regarded as one of the most important protein- rich and it occupies the fifth position as oilseed crop globally (El-Sayed *et al.*, 2001). It is grown as annual crop on about 19 million hectares of land in tropical regions and the warmer areas of temperate regions of the world (Adejumo *et al.*, 2005; Davies, 2009). Groundnut is cultivated on 26.4 million ha with production of 37.10 million metric tons worldwide. Developing countries constitute 97% of the global area and 94% of the global production of this crop (FAOSTAT, 2008). The manual processing of groundnut are time consuming and laborious, the condition prevalent at this level is generally unsanitary and inherent unhygienic conditions. The knowledge of physical and mechanical properties of groundnut like any other biomaterial is fundamental because it facilitates the design and development of equipment for harvesting, handling, conveying, cleaning, delivering, separation, packing, storing, drying, mechanical oil extraction and processing of agricultural products, their physical properties have to be known (Mohsenin, 1980; Aviara *et al.*, 2013). Presently, the equipment used in processing groundnut have been generally designed without taken into cognizant the physical properties of groundnut which include the size, mass, bulk density, true density, sphericity, porosity, coefficient of static friction, angle of repose and resultant systems leads to reduction in working efficiency and increase in product losses (Manuwa and Afuye, 2004). Researchers around the world has published various results and findings with respect to groundnut. Although, some focused on the mechanical, some researched on aerodynamics properties while some emphasized the micro and macro nutrients to make it fit for storage purposes. According to Firouzi *et al.* (2009) who posits that physical properties of a material is proportional to the available moisture content of that biomaterials. He emphasized that the static friction, surface area, angle of repose and dimensions are all subjected to the moisture content of the material. The findings of Firouzi *et al.* (2009) are similar to that of Aydin (2007) but there was a disparity when comparing it to the works of Olajide and Igbeka (2003). Meanwhile, Bagheri *et al.* (2011), worked on the mechanical and rheological properties of groundnut. His research indicated that the rupture force has an upward trend from initial moisture content to a certain amount of moisture content, whereas after that moisture content the rupture force have a decent tendency after subjecting the groundnut to various stress and strain. He concluded that when the moisture content exceeds the moisture content value, the type of rupture converts to a doughy rupture progressively, for all of the tested varieties.

The result obtained was consistent with that of Braga et al. (1999) who also did same study on macadamia nut. In addition, the chemical properties of the groundnut were investigated by various researchers which include proximate analysis, physicochemical properties and mineral compositions. It was observed that the moisture content was 5.80%, ash content 3.08%, crude fibre 3.70%, crude protein 38.61%, fat content 47% and carbohydrate (by difference) 1.81%. The fat, protein and ash contents are similar to the reports of Nelson and Carlos (1995) which indicated the fat content among 29 cultivars range between 47.0%- 50.1%, protein 26.3%- 30.9%, and ash 2.4-2.7%. The moisture content and crude fibre content agreed with that of NAS (1980) of 5.0% and 3.0% respectively. Furthermore, the saponification value, of 193.20mgKOH/g agreed with Pearson's (1981), 187-196mgKOH/g. The saponification value makes it useful in soap making. Iodine value 38.71g/100g indicates low degree of unsaturation and classified the oil as non-drying oil (80-100g/100g) as recorded for most edible oil Pearson (1981). Acid value of 5.99mgKOH/g which was close to Arachis (4.0mgKOH/g) by Pearson (1981) and Soyabean 4.279mgKOH/g (Akanni *et al.*, 2005). The free fatty acid was 3.0mgKOH/g, this indicates some percentage of fatty acid present in the oil and that the oil may likely undergo oxidation. The basic engineering properties exhibited by agricultural materials which include mechanical, rheological, physical, thermal, electrical and electromagnetic properties. The ever-increasing importance of agricultural products together with the complexity of modern technology for their production, processing and storage need a better knowledge of their engineering properties so that machines, processes and handling operations can be designed for maximum efficiency and the highest quality of the final end products (Mohsenin, 1970). Adequate information is not available for the physical, mechanical and chemical properties of some varieties of groundnut kernel. This research aims to properly determine and evaluate the physical, chemical, proximate and mineral constituent of the groundnut for efficient designing of its processing materials by the Agricultural engineer and food processors.

## **METHODOLOGY**

### **2.1 Raw Materials, Equipment and Machine Used**

The material (groundnut kernel) was obtained from a local market in Akure, Ondo State, Nigeria, sub-Saharan Africa. The kernels were sorted visually for size, maturity level and physical damage. Aside from the bio-materials sourced, other items, equipment and machines used during the experiments includes: vernier calliper, measuring cylinder, electronic weighing

balance, oven, cans, plywood, mild steel, stainless steel and galvanized steel, INSTRON 3369 Universal testing machine, water, adjustable inclined plane, protractor.

## 2.2 Determination of Physical and Mechanical Properties

The physical properties of the groundnut kernels were determined using standard formulae and equations as presented in Table 1 prior to the determination of the mechanical properties of the groundnut kernels. The mechanical properties of groundnut kernels were carried out utilizing INSTRON 3369 Universal testing machine. The groundnut kernels were subjected to compression test at loading rate of 30 mm/min (Adetola *et al.*, 2020). The mechanical properties determined include the stress at break in MPa, strain at break in mm/mm, deformation at break in mm, force at break of in kN and energy to break in J.

**Table 1: Determination of Physical Properties of Cassava Tubers**

Property	Method or equation for determining of physical properties	Reference
L (cm)	Measuring tape	Olukunle and Akinnuli, 2012
W (cm)	Digital vernier caliper	Olukunle and Akinnuli, 2012
T (cm)	Measuring three different segments of the cassava tubers using digital vernier caliper	Olukunle and Akinnuli, 2012.
$D_g$ (cm)	$D_g = (LWT)^{1/3}$	Ozguven and Vursavus, 2005; Akaaimo and Raji, 2006.
$D_a$ (cm)	$D_a = \frac{LWT}{3}$	Mohsenin, 1986
$R_a$ (%)	$R_a = W/T100\%$	Burum, 2004.
$S_a$ (cm <sup>2</sup> )	$S_a = \pi D_g^2$	Yalcin <i>et al.</i> , 2007 and Olukunle and Akinnuli, 2012.
$S_p$ (cm)	$S_p = \frac{(LWT)^{1/3}}{L} 100\%$	Yalcin <i>et al.</i> , 2007 and Olukunle and Akinnuli, 2012.
$\epsilon$ (%)	$\epsilon = (1 - \frac{\rho_b}{\rho_t}) \times 100$	Akaaimo and Raji, 2006.
Mt (kg)	A digital weighing balance 10 kg was used in weighing each of the cassava tubers	Yalcin <i>et al.</i> , 2007 and Olukunle and Akinnuli, 2012.
Vt (m <sup>3</sup> )	By putting a known mass of a (unit) sample into a cylindrical container of water, change in level of the liquid in the cylinder gives the unit volume	Ozguven and Vursavus, 2005.
$\rho_t$ (kg/m <sup>3</sup> )	$\rho_t = \frac{W_t}{V_t}$	Akaaimo and Raji, 2006) and Yalcin <i>et al.</i> , 2007.
$\alpha$ (°)	The apparatus consisting of plywood box with a fixed stand attached with a protractor and an adjustable plate at the surface	Tabatabaefar, 2003.
$\mu$	$\mu = \tan \alpha$	Yalcin <i>et al.</i> , 2007 and Olukunle and Akinnuli, 2012.

Source: Adetola *et al.*, 2020.

Where L is the length in cm, W is the width in cm, T is the thickness in cm,  $D_g$  is the size in cm,  $D_a$  is the arithmetic diameter in cm,  $R_a$  is the aspect ratio in %,  $S_a$  is the surface area in cm<sup>2</sup>,

$S_p$  is the sphericity in cm,  $\epsilon$  is the porosity in %,  $M_t$  is the true mass in kg,  $V_t$  is the true volume in  $m^3$ ,  $\rho_t$  is the true density in  $kg/m^3$ ,  $\alpha$  is the angle of repose in  $^\circ$  and  $\mu$  is the coefficient of static friction.

### **2.3 Determination of Chemical Properties**

#### **2.3.1 Proximate composition**

The proximate composition such as moisture content, ash, fibre, fat and protein content were determined according to the official method of analysis described by AOAC, 2005.

##### ***2.3.1.1 Determination of moisture content***

The moisture content was determined by oven drying method. The percentage moisture was calculated using equation 1 as described by the Association of Official and Analytical Chemist (AOAC, 2005). Each sample of 5g was weighed using analytical balance into previously weighed Petri-dishes. The weighed sample in the petri dish was allowed to dry in an oven at 100- 105  $^\circ C$  for 3 hours. The sample was removed and cooled in desiccators to room temperature and the weight was noted, then it was returned into the oven at 105  $^\circ C$  for 30min until a constant weight was obtained for each sample. The differences in weight between each Petri-dish and dried residue was recorded as the percentage of the initial sample.

$$mc = \frac{w_1 - w_2}{w_s} \times 100\% \quad (1)$$

Where  $mc$  is the moisture content in %,  $w_1$  is the final weight of the crucible + sample in g,  $w_2$  is the initial weight of crucible + sample in g and  $w_s$  is the weight of sample in g.

##### ***2.3.1.2 Determination of protein content***

The crude protein content was determined using Equations 2 and 3 as recommended by AOAC, 2005. A finely grounded sample of 0.5g was weighed into a digestion flask and kjeldahl catalyst tablet was added, 10 ml of concentrated.  $H_2SO_4$  was added and digested for 4 hours until a clear solution was obtained (blue green color). The digest was cooled and transferred into 100 ml volumetric flask and made up to mark with distilled water. 20 ml of boric acid was dispensed into a conical flask and 5 drops of indicator and 75 ml of distilled water was added to it. 10 ml of the digest was dispensed into Kjeldahl distillation flask, the conical and the distillation flask were fixed in place and 20 ml of 2% NaOH was added through the glass funnel into the digest. The steam exit was closed and timing started when the solution of the boric acid and indicator turned green. The distillation was done for 15 minutes and the distillate was titrated with 0.05NHCl solution till the appearance turned to pink colour. A blank was also run through all

steps as above. Therefore, the crude protein content was determined by multiplying percentage Nitrogen by a constant factor of 6.25.

$$pc = nx6.25 \quad (2)$$

Where,  $pc$  is the crude protein content in %,  $n$  is the percentage total nitrogen

$$n = \frac{tv \times amn \times nHcl}{x4} \quad (3)$$

Where,  $n$  is the total nitrogen in %,  $amn$  is the atomic mass of nitrogen in g,  $nHcl$  is the normality of hydrochloric acid used in moles.

### **2.3.1.3 Determination of fat content**

Fat was determined by the ether extract method using the Soxhlet apparatus as described by the AOAC, 2005 (Equation 4). Fat was determined by ether extract method using Soxhlet apparatus. 1g of dried sample was weighed and wrapped in filter paper, placed in fat free thimble plugged lightly with cotton wool and extracted with petroleum ether (N-Hexane) in soxhlet apparatus set up for 5 hours. Water and heater were turned on to start extraction. After 4-6 siphoning, ether was allowed to evaporate and beaker was disconnected before the last siphoning. Extract was transferred into clean glass dish with ether washing and evaporated ether on water bath. The residue extract in dish was then placed in an oven at 105°C for 2 hours and cooled in a desiccator and weighed.

$$fc = \frac{(w_{fp} + w_s) - w_r}{s_w} \times 100\% \quad (4)$$

Where,  $fc$  is the of fat content in %,  $w_{fp}$  is the weight of filter paper in g,  $w_s$  is the weight of sample in g and  $s_w$  is the sample weight in g.

### **2.3.1.4 Determination of ash content**

The percentage ash was calculated using (AOAC, 2005) as presented in Equation 5. Clean empty crucible was placed in a muffle furnace at 600°C for an hour, cooled in desiccator and weighed ( $w_1$ ). One gram of each sample was weighed in crucible ( $w_2$ ). The sample was ignited over a burner with the help of blowpipe until it is charred. Then the crucible was placed in a muffle furnace set at 550 °C and left for 12-24hrs. The appearances of gray white ash indicated complete oxidation of all organic matter in the sample. The crucible with the sample was cooled and weighed ( $w_3$ ).

$$ac = \frac{w_3 - w_1}{w_2} \times 100\% \quad (5)$$

Where  $ac$  is the ash content in %,  $w_3$  is the weight of the sample with crucible before ashing in g,  $w_1$  is the weight of the sample in g and  $w_2$  is the weight of the sample with crucible after ashing in g.

### **2.3.1.5 Determination of crude fibre content**

The crude fibre content was determined using Equation 6 as recommended by AOAC, 2005 and Adetola *et al.*, 2021. The sample 5g was accurately weighed into flask, 200 ml of running water and 1.25 ml H<sub>2</sub>SO<sub>4</sub> was added. The mixture was heated under reflux for 30 minutes. The hot mixture was filtered through a fibre muslin cloth. The obtained filtrate was thrown off and the residue was returned to the fibre flask of which 200 ml of running water and 1.25g NaOH was added and heated for another 30 minutes. The residue was removed using N-hexane and ethanol and finally transferred into already weighed crucible. The crucible and the residue were oven dried at 105°C overnight to drive off the moisture. The oven dried crucible containing the residue was cooled in a desiccator and later weighed to obtain the  $W_1$ . The crucible with  $W_1$  was transferred to the muffle furnace for ashing at 550 °C for 4 hours.

$$cfc = \frac{w_1 - w_2}{w_s} \times 100\% \quad (6)$$

Where  $cfc$  is the crude fibre content in %,  $w_1$  is the oven dried crucible containing the residue in g,  $w_2$  is the crucible containing white or grey ash (Free of carbonaceous materials) in g and  $w_s$  is the weight of sample in g.

### **2.3.1.6 Determination of carbohydrate content**

The total carbohydrate was determined by difference method using Equation 7 as described by AOAC, 2005. The sum of percentages moisture, ash, crude lipid, crude protein and crude fibre was subtracted from 100%.

$$Cbh = 100 - (mc + pc + fc + ac + cfc) \quad (7)$$

Where  $Cbh$  is the total carbohydrate in %,  $mc$  is the moisture content in %,  $pc$  is the protein content in %,  $fc$  is the fat content in %,  $ac$  is the ash content in %, and  $cfc$  is the crude fibre content in %.

## **1.4 Determination of Physico-chemical characteristics**

The Physico-chemical characteristics such as free fatty acids, iodine value, peroxide value, and saponification value were determined according to the official method of analysis described by AOAC, 2005.

#### **1.4.1 Determination of acid value or free fatty acids (FFA)**

The free fatty acid was determined by mixing twenty-five ml diethyl ether with twenty-five ml alcohol and 1ml phenolphthalein solution (1percent) and carefully neutralize with 0.1M KOH. The oil or melted fat of 1.10g was dissolved in the mixed neutral solvent and titrate with aqueous 0.1M KOH shaking constantly until a pink colour which persists for fifteen seconds is obtained

#### **1.4.2 Determination of Iodine Value**

The iodine value was determined by pouring the oil into a small beaker. A small rod was added and weigh out a suitable quantity of the sample by difference into a dry glass stoppered bottle of about two 50ml capacity. The approximate weight in g of the oil to be taken was calculated by dividing 20 by the highest expected iodine value. Carbon tetrachloride of 10ml was added to the oil or melted fat and dissolve. 20ml of Wiji's solution was added, the stopper was inserted (previously moistened with potassium iodine solution) and allow to stand in the dark for 30minutes. 15ml of potassium iodide solution (10percent) was added and 100ml water mixed and titrated with 0.1M thiosulphate solution using starch as indicator just before the end point. A blank was carried out at the same time commencing with 10ml of carbon tetrachloride.

#### **1.4.3 Determination of peroxide value**

The peroxide value was determined by weighing out 1g of oil or fat into a clean dry boiling tube and while still liquid 1g powder of potassium iodide was added and 20ml of solvent mixture (2 vol. glacial acetic acid + 1 vol. chloroform). The tube was placed in boiling water so that the liquid boils within 30seconds and it was allowed to boil vigorously for not more than 30 seconds. The content was poured quickly into a flask containing 20ml of potassium iodide solution (five percent). The tube was washed twice with twenty-five ml of water and titrated with 0.002M sodium thiosulphate solution using starch. A blank was performed at the same time.

#### **2.4.4 Determination of saponification value**

The saponification value was determined by weighing 2g of the oil or fat into a conical flask and adding exactly twenty-five ml of the potassium hydroxide solution. A reflux condenser was attached and heat the flask in boiling water for 30 seconds. 1ml of phenolphthalein (1percent) solution was added and titrated hot the excess alkali with 0.5M hydrochloric acid (titration). A blank was carried out at the same time (titration).

## **1.5 Mineral composition**

The mineral contents of the test samples were determined by the dry ash extraction method following each specific mineral element as described by AOAC (2000). 2g of the samples was burnt to ash on a muffle (as in ash determination and the resulting ash was dissolved in 20ml of dilute hydrochloric acid (1MHCl) and 20 ml of nitric acid, then diluted to 400ml volumetric flask using distilled water. The solution was used for the various analysis of mineral.

### **1.5.1 Determination of sodium content**

The sodium content of the samples was determined by photometric method. The instrument was set up according to the manufacture's instruction. The equipment was switched on and allowed to stay for about 10min. The gas and air inlets were opened as the start knob was turned on. The equipment being self-igniting, the flame was adjusted to a non-luminous level until a blue colour was obtained. Meanwhile a standard Sodium solution was prepared and was diluted to concentrations of 2, 4, 6, 8, 10 ppm. Starting with the least concentration of 2 ppm, all the standard solution were sucked into the instrument and caused to spray over the non-luminous flame. The readings were recorded and later plotted into a standard curve and used to extrapolate to Sodium level in the sample. After the standard, the sample solutions were siphoned in turns into the instrument with their reading recorded. The concentration of the test mineral in the sample was calculated with reference to the curve and obtained with reference to Equation 8.

$$Na_{100g}^{mg} = 100Vt XDW \quad (8)$$

Where Na is the sodium content, Vt is the total extract volume, X is the concentration of Sodium from the graph, D is the dilution factor, and W is the weight of sample used.

### **2.5.2 Determination of magnesium, iron and calcium content**

Magnesium, iron and calcium were determined by Flame Atomic Absorption spectrophotometer, as described by AOAC, (2005). About 0.5ml of each sample was digested in 20 ml each of acid solution of HNO<sub>3</sub>, H<sub>2</sub>SO<sub>4</sub>. The corresponding solution was heated until white fumes appeared. The clear solution was diluted up to 50 ml with distilled water and filtered with Whatman filter paper no.1. The standard working solutions of elements of interest were prepared to make the standard calibration curve. Absorption for a sample solution uses the calibration curves to determine the concentration of particular element in that sample. Cathode lamps used as radiation source. Air acetylene gas was used for all the experiments. This method provides both sensitivity and selectivity since other elements in the sample will not generally

absorb the chosen wavelength and thus, will not interfere with the measurement. Triplicate experiments were performed for each sample.

### **2.6 Statistical Analysis**

The data obtained was analysed using the Microsoft Excel package 2019. The average value, standard deviation, minimum value and maximum value of the collected data were determined using the package.

## **3. RESULTS AND DISCUSSION**

The results obtained for groundnut kernel at 8.5% moisture content wet basis are presented in Tables 2, 3 and 4 respectively.

### **3.1 Physical Properties**

The measured parameters are average length, width, thickness. The derived parameters are geometric mean diameter, arithmetic mean diameter, surface area, aspect ratio, sphericity and porosity. At the moisture content level of 8.5% wb, Table 2 shows that the average length, width, thickness, geometric mean diameter and arithmetic mean diameter are  $(1.28 \pm 0.18)$  cm,  $(0.81 \pm 0.12)$  cm,  $(0.87 \pm 0.12)$  cm,  $(0.96 \pm 0.10)$  cm and  $(0.99 \pm 0.09)$  cm respectively. The results are found to have a slight difference to that of Firouzi *et al.* (2009). The reliance on the three primary dimensions of length, width and thickness of the seed may be the cause of the increase in geometric property values. When assessing the projected area of a particle traveling through a turbulent or nearly turbulent region of an air stream, the geometric mean diameter is helpful. As a result, it is a helpful parameter to have when designing systems to separate seeds from other materials (Gharibzahedi *et al.*, 2010). Olajide and Igbeka (2003) obtained the average groundnut kernel length, width, and thickness at 4.6% d.b., of 8.54, 3.55, and 6.93 mm, respectively. Corresponding values were 65.4, 41.3, and 13.7 mm for oilbean seeds (Oje and Ugbor, 1991) and 31.50, 23.70, and 22.00 mm for shea kernel (Olajide *et al.*, 2000). As a result, groundnut kernels are smaller than shea kernels and oilbean seeds. Recently, Omobuwajo *et al.*, 1999) emphasized the significance of these and other characteristic axial dimensions in determining aperture sizes and other parameters in machine design. When developing seed sizing, grading, and equipment for separating it from undesired materials (Ogunjimi *et al.*, 2002), the values of these physical dimensions would be crucial factors to take into account. The results show that surface area, aspect ratio, sphericity and porosity are  $(2.92 \pm 0.58)$  cm<sup>2</sup>,  $(0.64 \pm 0.13)$  %,  $(0.76 \pm 0.10)$  % and  $(45.42 \pm 10.24)$  % respectively. The aspect ratio and sphericity of any grain or fruit determines its ability to roll or slide. The sphericity values indicate that the seed is almost spherical in shape and rolls easily on surfaces, particularly

in hoppers and dehulling machinery. Elevated sphericity and aspect ratio suggest that the seeds are heading toward a spherical form. These characteristics are helpful when designing equipment for dehulling.

The true density of each kernel was derived from the ratio of true mass to true volume which constitute an important consideration for material selection, machine component design and design of groundnut processing machine. The result of sphericity obtained by Firouzi *et al.* (2009) is in contrary to that obtained from this finding. The average true mass and volume of groundnut kernel are  $(0.49 \pm 0.12)$  g and  $(0.47 \pm 0.13)$  cm<sup>3</sup> while the true density is  $(1.08 \pm 0.21)$  g/cm<sup>3</sup>. True density is useful in figuring out how to separate food products from unwanted ingredients because, as noted by Fellow (2000), leaning is a crucial step in the food processing process. Grain and kernel samples can be subjected to the sinking and floating method since the densities of all the food products (fruits, seeds, nuts, and kernels, among others) are higher than those of water. This is in contrary to the result obtained by Firouzi *et al.* (2009). The bulk mass and volume of the groundnut kernel are 41.27g and 72.50 cm<sup>3</sup> while the bulk density is 0.569 g/cm<sup>3</sup>. The bulk density as reported by Firouzi *et al.* (2009) ranges from 0.539 g/cm<sup>3</sup> to 0.435 g/cm<sup>3</sup> which is slightly in contrary to result obtained from findings.

**Table 2:** Physical Properties of Groundnut Kernel

<b>Properties</b>	<b>Mean</b>	<b>SD</b>	<b>Min</b>	<b>Max</b>
L (cm)	1.28	0.18	0.72	1.96
W (cm)	0.81	0.12	0.14	1.01
T (cm)	0.87	0.12	0.19	1.08
D <sub>g</sub> (cm)	0.96	0.10	0.51	1.16
D <sub>a</sub> (cm)	0.99	0.09	0.75	1.20
R <sub>a</sub> (%)	0.64	0.13	0.10	1.10
S <sub>a</sub> (cm <sup>2</sup> )	2.92	0.58	0.83	4.20
S <sub>p</sub> (cm)	0.76	0.10	0.36	1.04
ε (%)	45.42	10.24	5.13	75.25
Mt (kg)	0.49	0.12	0.22	0.86
Vt (m <sup>3</sup> )	0.469	0.13	0.10	1.00
ρ <sub>t</sub> (kg/m <sup>3</sup> )	1.08	0.21	0.60	2.30

Where L is the length in cm, W is the width in cm, T is the thickness in cm, D<sub>g</sub> is the size in cm, D<sub>a</sub> is the arithmetic diameter in cm, R<sub>a</sub> is the aspect ratio in %, S<sub>a</sub> is the surface area in cm<sup>2</sup>, S<sub>p</sub> is the sphericity in cm, ε is the porosity in %, Mt is the true mass in kg, Vt is the true volume in m<sup>3</sup>, ρ<sub>t</sub> is the true density in kg/m<sup>3</sup>.

### **3.2 Coefficient of Friction and Angle of Repose**

The average values of coefficient of static friction of groundnut kernel for different surfaces as shown in Table 3 as  $0.29 \pm 0.12$  for wood,  $0.32 \pm 0.15$  for stainless steel,  $0.37 \pm 0.18$  for mild steel and  $0.32 \pm 0.15$  for glass. This information is useful in designing components such as the hopper, shaft etc and determination of machine performance evaluation parameters such as efficiency, throughput capacity, percentage broken seed etc. The angle of repose ranges from  $4^\circ$  to  $33^\circ$ . As reported by Bagheri *et al.* (2011) the result obtained from the coefficient of static friction of groundnut on different surfaces is in contrary to that obtained from findings. According to Olajide and Igbeka (2003), the average static coefficients of friction against plywood that had grain perpendicular to the direction of motion, galvanized steel, and both were 0.47, 0.54, and 0.57, respectively. The angle at which chutes must be positioned to achieve a consistent flow of material through the chute is determined using the static coefficient of friction.

**Table 3:** Coefficient of Static Friction of Groundnut Kernel

<b>Coefficient of Static Friction</b>	<b>Mean</b>	<b>SD</b>	<b>Min</b>	<b>Max</b>
Wood	0.29	0.13	0.07	0.65
Stainless Steel	0.32	0.14	0.12	0.81
Mild Steel	0.37	0.18	0.11	1.00
Glass	0.32	0.15	0.07	0.78

### **3.3 Mechanical Properties**

The values of the result obtained from the determination of mechanical properties of groundnut kernel are shown in the Table 4. The measured parameters are compressive force, toughness (strain energy) and Young's modulus. The compressive force is needed to cause crop to rupture. The force required to rupture the groundnut kernel was about  $11.28 \pm 20.13$  kN. Toughness or strain energy is defined as the energy absorbed by the groundnut kernel prior to the kernel rupture per unit volume (Burubai *et al.*, 2008). Results showed toughness of the groundnut kernel as  $20.99 \pm 41.69$  J. This is the measure of the stiffness and rigidity of the specimen. In other word it shows how easily the kernel surface can be deformed. The result obtained showed the value to be  $531.56 \pm 862.35$  MPa. Comprehending the properties of agricultural materials in terms of stress, strain, and deformation is crucial for the development of equipment and

machines used in processing and handling, as well as for comprehending the material's response to applied force.

**Table 4:** Mechanical Properties of Groundnut Kernel

Mechanical properties	Mean	SD	Min	Max
Force (KN)	11.28	20.13	0.43	47.23
Energy (J)	20.99	41.69	1.49	95.57
Young Modulus (MPa)	531.56	862.35	1.85	1992.26

### 3.4 Chemical Properties

The values of the result obtained from the determination of chemical properties of groundnut kernel are presented in Tables 5, 6 and 7. The measured parameters are the proximate composition, physico-chemical characteristics and mineral composition of groundnut kernel.

#### 3.4.1 Proximate composition

The mean values of the result obtained from proximate composition were as follows: Moisture Content ( $7.70 \pm 0.01$ ) %, Ash content ( $1.97 \pm 0.02$ ) %, Fat Content ( $42.69 \pm 0.46$ ) %, Crude fibre ( $3.90 \pm 0.03$ ) %, Crude protein ( $38.38 \pm 0.18$ ) %, and Carbohydrate content ( $5.37 \pm 0.26$ ) %. From the perspective of nutrition and textural quality, the total oil and protein content are significant. The prepared products' nutritional value and textural quality are crucial factors in determining their general acceptability (Sahadeva, 2014). The result for moisture content, crude fibre, crude protein and carbohydrate is slightly higher while the ash content and fat content is lower than that reported by Atasié *et al.* (2009).

**Table 5:** Proximate Composition of Groundnut Kernel

Proximate Composition	Mean	SD	Min	Max
Moisture Content (%)	7.70	0.01	7.695	7.712
Ash content (%)	1.97	0.02	1.954	1.977
Fat content (%)	42.69	0.46	42.360	43.014
Crude fibre (%)	3.90	0.03	3.876	3.921
Crude protein (%)	38.38	0.18	38.250	38.500
Carbohydrate content	5.37	0.26	5.188	5.553

### 3.4.3 Physico-chemical characteristics

The physico-chemical characteristics are as follows; free fatty acid ( $1.99 \pm 0.03$ ) mg/kOH/g, peroxide value ( $0.02 \pm 0.001$ ) Meq/kg, Saponification ( $253.73 \pm 1.81$ ) mg/kOH/g, and iodine value ( $36.68 \pm 0.8$ ) g/100g. The physico-chemical characteristics discussed by Atasié *et al.* (2009) differs from that in findings.

**Table 6: Physico-chemical characteristics of Groundnut Kernel**

Physico-chemical characteristics	Mean	SD	Min	Max
Free fatty acid (Mg/kOH/g)	1.99	0.03	1.96	2.01
Peroxide Value (Meq/kg)	0.02	0.00	0.02	0.02
Saponification (mg/kOH/g)	253.73	1.81	252.45	255.01
Iodine value (g/100g)	36.68	0.80	36.11	37.24

### 3.4.3 Mineral composition

From the results obtained, the sodium content is ( $60.75 \pm 0.07$ ) ppm, potassium ( $98.0 \pm 1.41$ ) ppm, magnesium ( $5.34 \pm 0.02$ ) ppm, calcium ( $71.55 \pm 0.07$ ) ppm, iron ( $1.10 \pm 0.005$ ) ppm, zinc ( $1.80 \pm 0.35$ ) ppm, and phosphorus content ( $60.15 \pm 0.21$ ) ppm. The result of mineral composition of groundnut obtained by Atasié *et al.* (2009) is in contrary to that obtained in findings. Zhao (2012) reported that each kilogram of shelled peanut kernels contained 35–45 g of peanut skin. A significant quantity of antioxidants found in peanut skins are beneficial to overall health. To reap the health benefits, the peanut skins are also added when making peanut butter. As a result, when the peanut butter with skins is prepared, the values in this study will aid in estimating the quantity of skins that may be present.

**Table 7: Mineral Composition of Groundnut Kernel**

Mineral Content	Mean	SD	Min	Max
Sodium, Na (ppm)	60.75	0.0707	60.7	60.8
Potassium, K (ppm)	98.0	1.4142	97.0	99.0
Phosphorus, P (ppm)	60.15	0.2121	60.00	60.30
Magnesium, Mg (ppm)	5.3435	0.0148	5.333	5.354
Calcium, Ca (ppm)	71.55	0.0707	71.5	71.6
Iron, Fe (ppm)	1.1035	0.0049	1.100	1.107
Zinc, Zn (ppm)	1.80	0.3536	1.50	2.00

#### **4.CONCLUSIONS**

The physical, mechanical and chemical (proximate, physico-chemical and nutrient content) properties of groundnut kernel purchased from a local market were determined. It is proposed that the effect of moisture content on the properties measured should be investigated. The engineering properties determined in this study constitute an important baseline data for the scientific design and development of various machines for handling and processing of the groundnut kernel.

**Abstract**

Nursing is a profession inherently linked to teamwork. Collaboration and coordination among nursing team members impact the quality of care provided in healthcare institutions. This review aimed to analyze and discuss the influence of nursing teamwork on the quality of care. It is an integrative review. The search for original articles of primary research was conducted in the second week of February 2024, in the Scopus database. The review was guided by the following question: “What is the literature’s perspective on the influence of nursing teamwork on the quality of care?” The terms used were: “nursing,” “teamwork,” and “care.” Original research articles published in English in scientific journals within the last 10 years, including nurses as participants, whose full texts were available online, and that met the review’s objectives were included. Initially, 14 articles were found, of which six were included in this review. The selected articles were assessed using the Mixed Methods Appraisal Tool (MMAT). It was identified that the way nursing teams work varies according to the department; however, nursing teamwork always impacts the quality of care, regardless of the sector. It was also observed that role and function ambiguities, difficulties in adapting to changes, exhausting work schedules, poor communication, professional training failures, inadequate leadership styles and nursing shortages are among the obstacles to forming cohesive nursing teams. In conclusion, nursing professionals should receive education to work as a team. Additionally, nurse managers play fundamental roles in developing healthy work environments that promote the formation and maintenance of cohesive nursing teams. It is important to note that the leadership styles adopted by nurse managers guide the attitudes of other team members, as nurse managers are role models for their followers. Thus, collaboration, effective communication, and coordination among nursing team members are strongly influenced by nurse managers.

**Keywords:** health management, leadership, nurse administrators, nursing, quality of health care, teamwork

## **Introduction**

Due to rapid population growth, extended life expectancy, increased public awareness of health, and the dissemination of advanced technologies in the field, the demand for healthcare services has gradually risen. Additionally, intense competition within the sector has heightened the importance of the concept of quality in healthcare, which is widely discussed nowadays (Alzoubi et al., 2023; García-Moyano et al., 2019). In the pursuit of quality in healthcare services, teamwork emerges as a fundamental element (Bhowmik, 2021; Monalisa et al., 2023). In this context, the role of the nursing team, which represents the largest professional group in healthcare institutions, holds a prominent position (Alzoubi et al., 2023; Bıyık & Türe, 2020; Sahputra et al., 2021). The quality in healthcare services goes beyond the mere execution of technical procedures; it is intrinsically linked to the ability to address not only the physical but also the psychosocial needs of patients and the community (Sahputra et al., 2021). Thus, quality nursing care is based on a holistic approach that recognizes the uniqueness of each individual. This approach encompasses empathy, effective communication, and attention to the cultural and emotional characteristics of individuals (Frisch & Rabinowitsch, 2019). As members of the nursing team are consistently close to patients, they play fundamental roles in ensuring the quality of healthcare in addition to acting as important links between other healthcare workers and patients (Supri et al., 2019; Yang et al., 2022). Nursing care is a complex process so in its quality assessment, various factors are involved. The analysis of health indicators is commonly used as a technique in evaluating nursing care. These indicators include infection rates, patient falls, pressure ulcers, incorrect medication administration, hospital readmissions, and patient satisfaction, among others (Bıyık & Türe, 2020). Additionally, the qualification and training of the nursing team, the availability of necessary resources and equipment, as well as the overall working environment conditions are considered (Sahputra et al., 2021; Vituri et al., 2015). It is understood, therefore, that adequate infrastructure is fundamental for the team to work cohesively and provide efficient and safe care (Bhowmik, 2021). The evaluation of nursing professionals, including factors related to teamwork, effective communication, and interprofessional cooperation, is essential to ensure a collaborative approach in healthcare institutions (Zhao et al., 2021). Nursing is a profession intrinsically linked to teamwork. Nursing team members work based on interdependence and collaboration. For the nursing team to provide comprehensive and effective care, they must share knowledge and experiences and have common goals (Campbell et al., 2020; Olsen et al., 2020). Thus, the attitudes of nursing managers and the leadership styles they adopt should be emphasized, as management plays a

crucial role in forming and maintaining cohesive and collaborative nursing teams (Bhowmik, 2021; Campbell et al., 2020). The interrelation between nursing teamwork and the quality of care is indisputable (Bhowmik, 2021; Campbell et al., 2020). Nursing team members, through collaboration and integrated efforts, enhance their ability to identify and address patient needs. The exchange of information among nurses through effective communication leads to well-informed decisions, ensuring a more coordinated, productive, and effective workflow (Zhao et al., 2021). In this context, the importance of exploring the synergy between nursing teamwork and the delivery of quality care becomes evident. Thus, the objectives of this literature review were to analyze and discuss the influence of nursing teamwork on the quality of care.

### **Materials and Methods**

This is an integrative review conducted based on the five stages proposed by Whittemore and Knafl (2005). Firstly, the research problem was formulated. Subsequently, searches were conducted to access relevant literature. The gathered information was then analyzed and evaluated in detail, and finally, the data were reported. The following question guided the review: “What is the literature perspective on the influence of nursing teamwork on the quality of care?” The search for articles took place during the second week of February 2024, using the Scopus database. Articles were sought based on their titles. The terms used were: “nursing,” “teamwork,” and “care”. Original research articles published in English in scientific journals within the last 10 years, including nurses as participants, whose full texts were available online, and that met the review’s objectives were included. A total of 14 articles were found. After initial analysis, three articles were excluded because they were not conducted with nurses, two others were discarded as they were not original research articles, and one article was excluded because the full text was not available online. After reading the full texts, two more articles were excluded for not meeting the review’s objectives. Following these exclusions, the remaining six articles underwent a methodological assessment using the Mixed Methods Appraisal Tool (MMAT; Hong et al., 2018). It was observed that the articles had high methodological quality, and none of them were excluded after the assessment. However, in two studies, a reduced number of participants limited the representativeness of the studied population. The research flowchart is shown in Figure 1. After the methodological analysis, the information obtained from the included articles was organized and appropriately interpreted, allowing for critical considerations on the topic. Important characteristics of the included articles are presented in Table 1. Ethical standards followed the principles of accuracy of

information and attribution of authorship for the utilized studies, which were cited and referenced according to established guidelines.

**Figure 1.** Research flowchart

### **Findings and Discussion**

Of the six articles included in the review, two are cross-sectional studies, two are qualitative research, one is a correlational study, and one is a mixed-methods study. The articles were published in five different journals between the years 2019 and 2023. The number of participating nurses ranged from 16 to 992. Two articles were conducted in Iran, one in the Netherlands, one in South Korea, one in Sweden, and one in the United Kingdom.

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

Sandelin et al. (2019)	Sweden	Qualitative Study/ 16 Nurses	In the absence of teamwork, patient safety may be compromised

**Table 1.** Synthetic compilation of the included articles

All six articles pointed to the relevance of nursing teamwork for the effective and efficient delivery of care (Anderson et al., 2019; Baek et al., 2023; Beiboer et al., 2023; Ghezeljeh et al., 2021; Nobahar et al., 2023; Sandelin et al., 2019). Anderson et al.'s (2019) study emphasized the importance of the nursing team's adaptability to different day-to-day situations, as variations in work processes and factors inherent to the external environment influence teamwork and, consequently, the quality of care. According to the study, in addition to nursing teamwork being threatened by communication failures and role ambiguities, issues related to adapting to changes are also challenges that hinder teamwork among nursing team members. Therefore, leadership and coordination are important for the team to work in harmony (Anderson et al., 2019). It was determined through the studies included in this review that when there is interaction and collaboration among nursing team members, including nurse managers, the team provides care more efficiently and effectively (Anderson et al., 2019; Sandelin et al., 2019). Various factors can challenge teamwork in nursing. A previously conducted systematic review highlighted similar points to those identified in this integrative literature review, emphasizing that lack of communication, human resource shortages, role conflicts, and leadership styles can be obstacles to nursing teamwork (Zhao et al., 2021).

The relevance of coordination and collaboration among nursing team members became even more evident in Beiboer et al.'s study (2023), where it was highlighted that the fact that some nurses work in pairs and others work individually impacts teamwork. In another study, it was determined that, in the case of operating room nurses, the best experiences of safe and efficient work were perceived when two colleagues collaborated during surgery, with one acting as the scrub nurse and the other as the circulating nurse. This underscores how teamwork impacts the quality of care (Sandelin et al., 2019). The influence of the number of members in the nursing team and the dynamics of teamwork on the quality of care, i.e., how nursing team members collaborate with each other, and its impact on patient outcomes were also identified in another literature review, reinforcing the results of the present review (Zhao et al., 2021). Therefore, it is evident that nursing teamwork is an important strategy in promoting patient-centered care (Baek et al., 2023). Studies conducted in different departments such as wards (Beiboer et al., 2023), emergency rooms (Ghezeljeh et al., 2021), and intensive care units (Nobahar et al., 2023) indicated a negative relationship between nursing teamwork and the occurrence of missed nursing care. In other words, the more cohesive the nursing team, the fewer the care omissions. Nursing teamwork is even more crucial in surgical centers, where effective dialogue is essential to ensure mutual understanding of intraoperative procedures. Therefore, the presence of committed managers on the front lines is also crucial (Sandelin et al., 2019). Consequently, clinical leadership is essential for the quality of nursing care (Beiboer et al., 2023). A previous integrative review highlighted the need for nursing management to implement measures to encourage the formation of productive and efficient nursing teams, thus avoiding errors and missing care (Campbell et al., 2020). A systematic review conducted in 2023 identified the importance of teamwork, with an emphasis on effective communication, to prevent the incidence of missing nursing care (Monalisa et al., 2023). Thus, it is understood that literature reviews conducted earlier support the current review, emphasizing the importance of leadership for nursing teamwork, and the relevance of collaboration among nursing professionals for the provision of quality care. There is a noticeable need to develop educational programs that address practical methods to promote constructive teamwork and the delivery of quality nursing care (Baek et al., 2023; Beiboer et al., 2023; Ghezeljeh et al., 2021). Furthermore, the commitment of healthcare institutions' administrators, including nurse managers, in creating favorable work environments can facilitate the improvement of teamwork and, consequently, patient-centered care (Baek et al., 2023; Ghezeljeh et al., 2021). Among the efforts of health institutions' managers to promote favorable work environments, strategies related to the

formation and maintenance of a skilled nursing team (Baek et al., 2023), establishment of appropriate work schedules (Baek et al., 2023; Ghezeljeh et al., 2021), allocation of well-defined roles and tasks, setting common goals (Anderson et al., 2019), implementation of appropriate regulations, facilitation of processes, improvement in interpersonal relationships, and development of activities that stimulate motivation (Ghezeljeh et al., 2021) should be present. It is evident that factors directly related to nursing management, such as coordination and leadership, are crucial for the maintenance of cohesive nursing teams (Campbell et al., 2020). Additionally, teamwork should be emphasized from graduation and reinforced through continuous education programs in healthcare institutions (Olsen et al., 2020; Zhao et al., 2021). Despite this literature review providing valuable insights into the studied theme, some limitations should be highlighted. The fact that articles were searched only by titles and in a single database is a significant weakness of the review. Another limitation to be considered is that only articles published in English were included, potentially excluding important studies published in other languages. Therefore, in future research, it is recommended that more comprehensive searches be conducted.

### **Conclusion and Recommendations**

This review aimed to analyze and discuss the influence of nursing teamwork on the quality of care. It was identified that collaboration and coordination among members of nursing teams impact the quality of care. It was also observed that there are many obstacles to the formation of cohesive nursing teams, such as poor communication, role and function ambiguities, difficulties in adapting to changes, exhaustive work schedules, deficiencies in professional training, inappropriate leadership styles, and nursing shortages. Educators should pay attention to the development of practical teaching methods that encourage nursing teamwork from the first years of education of these professionals. The crucial role of nurse managers in creating healthy work environments that support the formation and maintenance of cohesive teams should also be emphasized. It is important to note that the leadership styles adopted by nurse managers will guide the attitudes of other team members since nurse managers act as role models for their followers. Thus, collaboration, effective communication, and coordination among the members of the nursing team are strongly influenced by nurse managers.

**Özet**

Afet, "Tehlikeli olayların maruziyet, savunmasızlık ve kapasite koşullarıyla etkileşime girdiği herhangi bir ölçekte bir toplumun işlevselliğinin ciddi şekilde bozulmasına, insan, malzeme, ekonomik ve çevresel kayıplara neden olan olay" olarak tanımlanmaktadır. Afetler genellikle uyarı olmaksızın gerçekleşir ve ölüm, yaralanma, travmatik stres gibi önemli olumsuz etkilere neden olur. Coğrafi yapısı ve iklim özellikleri nedeniyle Türkiye, özellikle depremler olmak üzere çeşitli afet türlerinin sıkça yaşandığı bir konumda bulunmaktadır. Türkiye'deki afetlerden kaynaklanan can kaybının yaklaşık %60'ı depremlerden kaynaklanmış olup, can ve mal kaybına neden olan depremler ortalama olarak beş yılda bir meydana gelmektedir. Toplum düzeyinde felaketlere hazırlık, kişisel koruyucu davranışlar olarak tanımlanabilir ve bireyleri öngörülemez durumlardan korumayı amaçlar. Tüm felaket yönetimi modelleri, beklenmedik durumlar için hazırlıklı olmanın önemini vurgulamaktadır. Afetlere hazırlık konusundaki çoğu çalışma, fiziksel veya malzeme hazırlıkları içermektedir. Oysa ki afetler için psikolojik hazırlık da en az diğer hazırlıklar kadar önemlidir. Özellikle sağlık alanında eğitim gören öğrenciler, meslekleri gereği afet durumlarında önemli bir rol üstlenirler ve bu nedenle psikolojik olarak hazırlıklı olmaları gerekir. Söz konusu öğrencilerin meslekleri nedeniyle afet sırasında hızlı ve etkili bir şekilde müdahale etmek için gerekli becerilere ve kaynaklara sahip olmaları gerekmektedir. Psikolojik hazırlık, onlar için bu tür stresli ve travmatik durumlarla başa çıkmalarına yardımcı olabilir. Psikolojik hazırlık düzeylerinin belirlenmesi, bu öğrencilerin afet öncesi, sırası ve sonrasında yaşayabilecekleri duygusal ve psikolojik tepkileri anlamamıza ve bunlara uygun destek ve kaynakları sağlamamıza yardımcı olabilir. Sağlık alanında eğitim gören öğrenciler, çalışma hayatında afet sonrası toplumların rehabilite edilmesi ve sağlık hizmetlerinin yeniden sağlanması gibi kritik görevlerde yer alırlar. Bu nedenle, sağlık öğrencilerinin psikolojik olarak sağlam bir zeminde olmaları, etkili bir şekilde görevlerini yerine getirmelerine ve topluma destek olmalarına yardımcı olacaktır. Önerilen çalışma kapsamında İstanbul'da faaliyet gösteren bir devlet üniversitesinde öğrenim gören 3667 sağlık alanı öğrencisine afet tehdidi için psikolojik hazırlık ölçeği aracılığıyla sorular sorulmuş ve Kişinin Duygusal ve Psikolojik Tepkisinin Yönetimi, Sosyal Çevrenin Yönetimi, Dış Durumsal Çevre Bilgisi ve Yönetimi alt boyutları incelenmiştir. Bu alt boyutlardan Kişinin Duygusal ve Psikolojik Tepkisinin Yönetimi alt boyutunda cinsiyete göre farklılaşma tespit edilmiştir. Ayrıca ölçeğin alt boyutları incelendiğinde öğrencilerin öğrenim gördükleri fakültele göre sonuçların farklılaştığı tespit edilmiştir.

**Anahtar Kelimeler:** Afet, acil durum, psikolojik hazırlık, sağlık

**EVALUATING THE PSYCHOLOGICAL PREPAREDNESS LEVELS FOR  
DISASTERS AMONG HEALTH FIELD STUDENTS**

**Abstract**

Disaster is defined as an event that significantly disrupts the functionality of a society at any scale due to the interaction of exposure to hazardous events with conditions of vulnerability and capacity, leading to human, material, economic, and environmental losses. Disasters often occur without warning and result in significant negative impacts such as death, injury, and traumatic stress. Due to its geographical structure and climatic characteristics, Turkey is situated in a location where various types of disasters, especially earthquakes, frequently occur. Approximately 60% of the fatalities resulting from disasters in Turkey are due to earthquakes, and earthquakes that cause loss of life and property occur on average every five years. Preparedness for disasters at the societal level can be defined as personal protective behaviors aimed at protecting individuals from unforeseen circumstances. All disaster management models emphasize the importance of being prepared for unexpected situations. Most studies on disaster preparedness focus on physical or material preparations. However, psychological preparedness is equally important for disasters. Particularly, students undergoing education in the healthcare field play a significant role in disaster situations due to their professions and thus need to be psychologically prepared. These students must have the skills and resources necessary to intervene rapidly and effectively during disasters due to their professions. Psychological preparedness can help them cope with such stressful and traumatic situations. Determining the levels of psychological preparedness can help us understand the emotional and psychological responses these students may experience before, during, and after disasters, and provide appropriate support and resources accordingly. Students in healthcare education play critical roles in tasks such as rehabilitating post-disaster communities and re-establishing healthcare services in their professional lives. Therefore, ensuring that healthcare students are psychologically resilient will help them perform their duties effectively and support the community. In the presented paper, questions were asked to 3667 healthcare students studying at a state university in Istanbul using a psychological preparedness scale for disaster threats, and the sub-dimensions of Management of one's Emotional and Psychological Response, Management of One's Social Environment, Knowledge and Management of the External Situational Environment were examined. Differentiation was observed in the sub-dimension of Managing Emotional and Psychological Response by gender. Additionally, when the sub-dimensions of the scale were examined, it was found that the results varied according to the faculties in which the students were enrolled.

**Keywords:** Disaster, emergency, psychological preparedness, health

## **GİRİŞ**

Afet, "Tehlikeli olayların maruziyet, savunmasızlık ve kapasite koşullarıyla etkileşime girdiği herhangi bir ölçekte bir toplumun veya bir toplumun işlevselliğinin ciddi bir şekilde bozulması, insan, malzeme, ekonomik ve çevresel kayıplara ve etkilere neden olan olay" olarak tanımlanmaktadır (AFAD,2018). Afetler genellikle uyarı olmaksızın gerçekleşir ve ölüm, yaralanma, travmatik stres gibi önemli olumsuz etkilere neden olur. Coğrafi, topoğrafik yapısı ve iklim özellikleri nedeniyle Türkiye, özellikle depremler olmak üzere çeşitli afet türlerinin sıkça yaşandığı bir konumda bulunmaktadır (AFAD,2020). Türkiye'deki afetlerden kaynaklanan can kaybının yaklaşık %60'ı depremlerden kaynaklanmış olup, can ve mal kaybına neden olan depremler ortalama olarak beş yılda bir meydana gelmektedir (Clode,2010). Toplum düzeyinde felaketsel hazırlık, kişisel koruyucu davranışlar olarak tanımlanabilir ve bireyleri beklenmedik, öngörülemeyen durumlardan korumayı amaçlar. Tüm felaket yönetimi çerçeveleri ve modelleri, beklenmedik durumlar için hazırlıklı olmanın önemini vurgular (Malkina ve Pykh,2015). Tarihsel olarak, müdahale kurumları insanları ve ailelerini ölümden veya yaralanmadan korumak, mali ve ekonomik kayıpları önlemek veya en aza indirmek için yapılması gereken fiziksel veya malzeme hazırlıklarına odaklanmışlardır (McLennan vd., 2022). Bu nedenle, felaketsel hazırlık konusundaki çoğu çalışma, bu tür fiziksel veya malzeme hazırlıkları içermektedir. Daha yakın zamanda, felaket araştırmacıları, fiziksel ve malzeme hazırlığın yanı sıra psikolojik veya zihinsel hazırlığın önemine de dikkat çekmişlerdir. Clode (2010); McLennan, Reynolds ve Trigg (2019); Malkina-Pykh ve Pykh (2013); Roudini vd. (2017); Suhaimi ve Marzuki (2016) gibi araştırmacılar, felaket tehdidine karşı psikolojik hazırlığın fiziksel/malzeme hazırlık kadar önemli olduğunu savunmuşlardır (McLennan,2020; Roudini,2017; Suhaimi ve Marzuki ,2016). Sağlık alanında eğitim gören öğrenciler, afet durumlarında önemli bir rol üstlenirler ve bu nedenle psikolojik olarak hazırlıklı olmaları gerekir. Öğrenciler, afet sırasında hızlı ve etkili bir şekilde müdahale etmek için gerekli becerilere ve kaynaklara sahip olmalıdır. Psikolojik hazırlık, bu tür stresli ve travmatik durumlarla başa çıkmalarına yardımcı olabilir. Psikolojik hazırlık düzeyleri, bu öğrencilerin afet öncesi, sırası ve sonrasında yaşayabilecekleri duygusal ve psikolojik tepkileri anlamamıza ve bunlara uygun destek ve kaynakları sağlamamıza yardımcı olabilir. Sağlık alanında eğitim gören öğrenciler, afet sonrası toplumların rehabilite edilmesi ve sağlık hizmetlerinin yeniden sağlanması gibi kritik görevlerde yer alırlar. Bu nedenle, psikolojik olarak sağlam bir zeminde olmaları, etkili bir şekilde görevlerini yerine getirmelerine ve topluma destek olmalarına yardımcı olabilir. Çalışmanın motivasyonu bu alanda derinlemesine bir araştırma

gerçekleştirmektedir. Afet teriminin literatürde çeşitli kurumlar ve farklı kaynaklar tarafından yapılmış tanımlamaları mevcuttur. Uluslararası yayınlarda ve birçok kaynakta ortak tanım olarak UNISDR tarafından 2009 yılındaki raporda geçen tanım kullanılmaktadır. Söz konusu tanımlamada afet: “Maruz kalma, korumasızlık ve sığa koşullarıyla etkileşime giren ve tehlikeli olaylar nedeniyle herhangi bir ölçekte bir topluluğun veya toplumun işleyişinin ciddi şekilde bozulması: insan, malzeme, ekonomik ve çevresel kayıplar ve etkiler” olarak belirtilmiştir (UNDRR,2009). Ülkemizin Afet ve Acil Durum Yönetmeliği Başkanlığının (AFAD) verilerinde afet, toplumun genelini veya toplumun bir kesimi için ekonomik, fiziksel ve sosyal kayıplar ortaya çıkaran günlük hayat akışını ve çeşitli insan aktivitelerini devamlılığını engelleyen veya durduran, maruz kalan toplumun kaynaklarının yetemediği doğa, teknoloji veya insan merkezli olay olarak tanımlanmaktadır (AFAD,2014). Afet türleri en genel ayırım ile doğal afetler ve insan kaynaklı afetler olmak üzere ikiye ayrılmaktadır. Doğal afetler toplumlar ve yaşam alanlarında tahribata ve yıkıma neden olur. Afet sonucu ortaya çıkan kaos ortamı yaralanmalara, can kayıplarına, çeşitli salgınlara sebebiyet verir. Yerleşim yerlerine verdiği zarar sonucu bölge planlamasında ve yatırım planlarında gerileme gerçekleşir (Ergünay, 2000). Ülkemizde en sık görülen doğal afet depremdir. Heyelanlar ve su baskınları depremden sonra ülkemizde en sık görülen doğal afetlerdir (Ergünay, 2007). İnsan kaynaklı afetler ihmalkarlık ve art niyet sonucu insanlığı direkt veya direkt olmayan yollarla etkileyen afetlerdir. Terör eylemleri, biyolojik silahlar, siber saldırılar, kimyasal ve endüstriyel saldırılar, salgınlara, besin zehirlenmeleri, tehlikeli maddelerin taşınması sonucu meydana gelen kazalarda bu kategoride değerlendirilir (Altun, 2018).Afetler söz konusu olduğundan doğal olarak afet yönetimi kavramı ortaya çıkmaktadır. Afet yönetiminin amacı, afet sonucu meydana gelen olayların engellenmesi ve afet sonucu olaylarda ve durumlarda en az hasarı almak için afet öncesinde, afet anında ve afet sonrasında gereken faaliyetlerin gösterilmesi, afet sonucu zararı azaltılmasıyla iyileştirme ve müdahale çalışmaları için gerekli düzenlemelerin yapılması ile yönlendirme faaliyetleriyle gerekli amaçlarla yönetilmesidir. Afet yönetimi dört basamaktan oluşmaktadır. Zararı azaltma, hazırlıklı olmak, müdahale ve iyileştirme çalışmalarıdır (Kadioğlu ve Özdamar, 2008). Afet yönetimi döngüsünde zararı azaltmak ve hazırlık afet öncesi basamaklar iken müdahale ve iyileştirme afet sonrası basamaklardır.Zararı Azaltmak: Bu basamak, uzun vadede risk yaratacak durumları belirlemeyi ve bu tehlikelere karşı kaybın azaltılması için önceden önlem almayı içerir. Bu faaliyetler bölgesel yerleşim, bölge yapısının incelenmesi, afet sonrası yerleşkelerin belirlenmesini organize etmek ve risk durumlarını değerlendirmektir (Altay ve Green, 2005).

Hazırlıklı Olmak: Bu basamak acil durum sırasında yetki ve görevlerin belirlenmesini, kaynakların organize edilmesini içerir. Acil durum sırası yüküm ve sorumlulukların belirlendiği, kaynak ve materyallerin önceden hazırlandığı basamaktır. Bu basamakta acil durum programları yapılmalı, yapılan programlarla ilgili çeşitli eğitimler verilmeli ve iletişim altyapıları geliştirilmelidir (Altıntaş ve ark. 2012).Müdahale: Afete sebebiyet veren olay ve buhran anında oluşan mal ve can kaybını engellemek veya en azda tutmak için yapılan çalışmalardır (kurtarma faaliyetleri). Görevli sağlık çalışanların psikolojisi ve emniyetinin sağlanması, ilk yardım ve travma bakımları, gıda güvenliği, salgınlar, cinsel ve üreme sağlığı ve ruhsal sağlık hizmetleri gibi ilk düzey sağlık hizmetleri afet tıbbının uygulamaları arasındadır (Copolla, 2007).İyileştirme: Bu basamak afetten etkilenen her türlü vatandaşların günlük hayatlarına yeniden entegre olmalarını içeren çalışmalar bütünüdür. Müdahale çalışmalarından sonra başlar ve afetin yarattığı etkinin büyüklüğün göre devam eder (Copolla,2007).Afetlerin insan yaşamında ve toplum içinde oluşturduğu felaket kaynaklı psiko-sosyal tesirleri vardır. Bu tesirleri psikolojik açıdan konulara ayırmak anlaşılabilirliği açısından önemlidir. Afet öncesi, anında ve sonrasında psikolojik etkileri birbirinden farklılık göstermektedir (Swanson ve Smith, 2013). Afetlerin psiko-sosyal olarak bireyleri etkilemesi afet öncesi hazırlığa yönelimi sağlar. Bireyler bu durumda olası afet korkularını arttıracığı fikriyle afete yakalanacağı düşüncesini görmezden gelmeye çalışarak yatışmaya çalışırlar (Çorbacıoğlu, 2005). Afetlere yönelik psikolojik hazırlığı bireyin afete dönük psikolojik ve duygu içerikli davranışlarını idare etme özelliği kazandırması ile ilişkilendirilmektedir (Boylan,2016). Roudini ve ark. (2017) bireylerinin büyük bir kısmının afetlerin bireylerde yarattığı negatif psikolojik etkilerinden habersiz olduğunu belirtmişlerdir. Afetlere hazırlıkta genellikle daha temel ve acil fiziksel ihtiyaçlar temin edilmekte, kişileri afetlere psikolojik yönden hazırlamak görmezden gelinmekte ve buna yönelik faaliyetler arka plana atılmaktadır (Roudini vd., 2017). Tam tersine afetlerin gerçekleşmesi kesin olmasa bile bireyler ve toplumlar afetlere psikolojik yönden hazır olmaları, olası afetler gerçekleştiğinde onları daha bilinçli davranmaya itecektir ve bunun sonucu kritik yaralanma ve ölümler azalacaktır. Bu nedenle olası afetlerden önce psikolojik yönden afetlere hazır olmayı arttıracak eğitimler ve bilgiler, bu alanda işlevselliğin devamı için önemlidir (Oflaz, 2008). Demirbilek ve Gökkaya'nın yaptığı (2022) acil yardım ve afet yönetimi öğrencilerinin afetlere hazırlık durumları ile psikolojik sağlamlık durumlarının ilişkisinin inceledikleri araştırma sonucu acil durum afet yönetimi lisans öğrencilerinin aldığı eğitimin öğrencilerde pozitif bir etkide olduğu öğrencilerde afete hazırlık ve öz yeterliliklerini geliştirdiği söylenmektedir. Bu veriler doğrultusunda diğer

bölümlerdeki öğrencilerin müfredatlarına afet eğitimi konulmasının öğrencilerin psikolojik sağlamlıklarına katkı sağlayabileceği ön görülmüştür (Demirbilek ve Gökkaya,2022). Karakış (2019) hemşirelerle yaptığı çalışmasında psikolojik sağlamlık arttıkça hemşirelerde afetlere karşı hazırlanma düzeyinin de arttığı tespit etmiştir (Karakış,2019). Afet eğitimlerinin hedefi, bireylerin afetlere karşı dayanıklılıklarını güçlendirmek ve onları afetlere hazırlayarak iyileşme süreçlerinin etkinliğini artırmaktır (Ronan ve Towers, 2014). Afet eğitimlerinin bir diğer hedefi de bireylerin, kurumların vb. doğru bilgiye erişmesi ve bunu uygun zamanlama ile etkili bir şekilde kullanmasını sağlamaktır (Mızrak, 2018). Dünyada yapılan afet eğitimlerine “acil durum eğitimi”, “karmaşık durumlarda eğitim”, “hassas durumlar ve eğitim”, “eğitim ve krizler”, “eğitim ve kriz sonrası geçiş” ve “eğitim ve doğal afetler” gibi isimleri kullanılmaktadır (Mangione vd., 2013). Afet eğitimlerinde öğrenme ve öğretme tekniklerini çeşitlendirmek; tahliye alanlarını, barınma yerlerini, afetlerde hayatlarını kaybedenlerin mezarlarını ziyaret etmek gibi etkinlikler afet risk azaltma çalışmalarında amaca hizmet edebilir ve bireylerin farkındalıklarını arttırabilir (Adiyoso ve Kanegae, 2012). Okulda, ailede ya da kendi çabalarıyla afet eğitimi almış bireylerin afet sırasında bilgi ve becerilerini kullanmada, afet sonrasında ise hayatta kalma davranışlarına bakılan çalışmalarda eğitimlerin hem teorik hem de pratik olarak uygulandığında daha etkili olduğu ortaya görülmektedir (Codreanu vd., 2014). Afet eğitimlerinin hedeflerine ulaşabilmesi için, uzman ve deneyimli eğitmenler tarafından gerekli olan doğru bilgi, uygun teknikler ve etkili uygulamalarla bireylere aktarılmalıdır. Aksi halde bireyler yanlış bilgiler öğrenebilirler ve konuya ilgilerini kaybedebilirler (Mızrak, 2018). Afetlere hazırlık aşamasında kullanılan yazılımlar çalışmaları verimli hale getirebilir. Eğitimlerde Sanal Gerçeklik (Virtual Reality/VR) ve Artırılmış Gerçeklik (Augmented Reality / AR) gibi uygulamaların kullanılması, gerçeğe yakın deneyim yaşatacağından, etkinliği geliştirebilir (Acar ve Çağdaş, 2019).

## **MATERYAL VE YÖNTEM**

Afet tehditlerine karşı psikolojik olarak hazırlıklı olmak, insanların acil uyarı döneminin ve tehlikenin etkileriyle başa çıkabilme yeteneklerini artırabilir. Bu durum, insanların kendilerini daha güvende hissetmelerine, daha kontrollü davranmalarına ve daha iyi hayatta kalma kararları almalarına yardımcı olabilir. Ayrıca, bireyleri psikolojik olarak afetlerin etkilerine hazırlamak, ev halkını afet kaynaklı travmanın yol açabileceği zararlı psikolojik sıkıntılardan ve uzun vadeli ruh sağlığı sorunlarından koruyarak afetlerin olumsuz zihinsel etkilerini azaltabilir (Roudini ve ark., 2017; Zakur, 2023). Bu nedenle, kriz öncesi psikolojik hazırlık, insanların duygularını

öngörmelerine, tanımalarına ve kontrol etmelerine yardımcı olarak daha iyi başa çıkmalarını sağlayabilir. Belirli bir risk altındaki topluluklarda psikolojik hazırlığın bir parçası olarak değerlendirilmesi gereken unsurlar, o topluluğun karşılaşabileceği doğal tehlike tehditlerinin yanı sıra pratik ve maddi yerel ihtiyaçlarını ve mevcut kaynaklarını da göz önünde bulundurmalıdır. Bu unsurların tümü, kültürel olarak kabul edilebilir olmalıdır. Bu nedenle, belirli topluluklardaki bireylerin, karşılaşabilecekleri felaket türleriyle başa çıkmak için psikolojik olarak nasıl hazırlıklı olacaklarını belirlemek için araştırmalara ihtiyaç vardır. Önerilen çalışma kapsamında İstanbul'da faaliyet gösteren bir devlet üniversitesinde öğrenim gören 3667 sağlık alanı öğrencisine afet tehdidi için psikolojik hazırlık ölçeği aracılığıyla sorular sorulmuştur. Çalışmada Görgün vd. tarafından Türkçe versiyonunun geçerlik ve güvenilirliği çalışılan 26 maddelik Avustralya Afet Tehditlerine Psikolojik Hazırlık Ölçeği kullanılmıştır (Görgün vd., 2023). Anket (soru onam formu) iki bölümden oluşmaktadır. 1. Sosyodemografik veri formu: Sosyodemografik veri formunun kullanım amacı uygulanan anketlere katkı sağlayan bireyler hakkında detaylı bilgi edinmektir. Anket ve belirli formları pekiştirmek, istenilen verileri tamamlamak üzere sorular oluşturulmuştur. Yaş, cinsiyet, gibi bilgilere bu şekilde ulaşılmaktadır. 2. Afet Tehdidi İçin Psikolojik Hazırlık Ölçeği envanteri: Bu form Zulch tarafından 2019 yılında geliştirilmiştir. Örgün vd. tarafından 2023 yılında Türkçeye uyarlanmıştır. Ölçeğin orijinali 26 ifadeden oluşmaktadır ve cronbach alfa değeri 0,93 tür. Türkçe 'ye uyarlanması ise 21 sorudan oluşmakta ve cronbach alfa değeri 0,95'tir. Söz konusu değerler 0,6 üzerinde olduğundan ölçeğin güvenilir olduğu kabul edilmektedir.

**Afet Tehdidi için Psikolojik Hazırlık Ölçeği**

	Kesinlikle Katılmıyorum	Katılmıyorum	Kısmen Katılıyorum	Kesinlikle Katılıyorum
1.Şiddetli deprem, sel, orman yangını veya salgın hastalık gibi doğal afet durumlarında ne yapacağımı ve hangi önlemleri alacağımı bilirim.	1	2	3	4
2.Deprem, sel, orman yangını veya salgın hastalık gibi doğal afet uyarısı durumunda hazırlık malzemelerinin yerini kolayca bulabilirim.	1	2	3	4
3.Deprem, sel, orman yangını veya salgın hastalık gibi yaklaşan doğal afet dönemi için evimi nasıl yeterince hazırlayacağımı biliyorum.	1	2	3	4
4.Deprem, sel, orman yangını veya salgın hastalık gibi doğal afetler için kullanımına sunulan hazırlık malzemelerine aşinayım.	1	2	3	4
5.Çok şiddetli bir deprem, sel, orman yangını veya salgın hastalık gibi doğal afet durumunda güvende kalmak için hangi ev hazırlık önlemlerinin alınması gerektiğini biliyorum.	1	2	3	4
6. Deprem, sel, orman yangını veya salgın hastalık gibi yaklaşan bir doğal afetin belirtilerini tanıyorum	1	2	3	4
7.Deprem, sel, orman yangını veya salgın hastalık gibi doğal afetlere ilişkin acil bir durum gelişmesi halinde, evimde ve iş yerimde nelere dikkat etmem gerektiğini biliyorum.	1	2	3	4
8.Deprem, sel, orman yangını veya salgın hastalık gibi aşırı doğal afet olayları için kullanılan afet uyarı sistemi mesajlarını tanıyorum.	1	2	3	4
9. Çok şiddetli deprem, sel, orman yangını veya salgın hastalık gibi doğal afetlerin evim üzerindeki etkileri hakkında bilgi sahibiyim	1	2	3	4
10.İçinde bulunabileceğim stresli durumlarla başa çıkabilme yeteneğime oldukça güveniyorum	1	2	3	4
11.Şiddetli bir deprem, sel, orman yangını veya salgın hastalık gibi doğal afet durumunda endişe ve korkuyla başa çıkabilirim.	1	2	3	4
12.Zor durumlarda duygularımı oldukça iyi yönetebildiğimi düşünüyorum.	1	2	3	4
13.Gerektiğinde zorlu durumlarda kendimle konuşabilirim.	1	2	3	4
14.En zor durumlarda soğukkanlı ve sakin gözükürüm	1	2	3	4
15.Şiddetli bir deprem, sel, orman yangını veya salgın hastalık gibi doğal afet durumunda kendimi sakinleştirmek için hangi stratejileri kullanabileceğimi biliyorum	1	2	3	4
16.Kendimi deprem, sel, orman yangını veya salgın hastalık gibi bir doğal afetin içinde bulsaydım, duruma karşı tepkimi nasıl yöneteceğimi bilirdim	1	2	3	4
17. Çevremdekilerin/başkalarının sıkıntıda olup olmadığını kolaylıkla anlayabilirim	1	2	3	4
18. Başkaları sıkıntıda, onları nasıl sakinleştireceğimi bilirim	1	2	3	4
19. Şiddetli bir deprem, sel, orman yangını veya salgın hastalık gibi doğal afet uyarısı durumunda, başkalarını sakinleştirmek için hangi stratejileri kullanabileceğimi biliyorum.	1	2	3	4
20. Zorlu durumlarda duygularımı oldukça iyi tanımlayabilirim	1	2	3	4
21. Genellikle zor veya stresli olabilecek durumlara zihinsel olarak hazırlanırım	1	2	3	4

Verilerin analizi SPSS 25 paket programı kullanılarak gerçekleştirilmiştir. Kategorik değişkenler için yüzde ve frekans değerleri; nicel değişkenler için ise normal dağılıma uygunluk durumlarına göre aritmetik ortalama ve standart sapma ya da medyan, minimum ve maksimum değerleri sunulmuştur. Kategorik değişkenlerle nicel değişkenlerin karşılaştırılmasında; öncelikle verilerin normal dağılıma uygunlukları Shapiro-Wilk testi kullanılarak sınanmıştır. İki kategori içeren kategorik değişkenlerle nicel değişkenlerin karşılaştırılmasında bağımsız örneklem T testi, ikiden çok kategori içeren değişkenlerle nicel değişkenlerin karşılaştırılmasında tek yönlü varyans analizi (ANOVA) kullanılmıştır. Araştırma ile ilgili yapılan Power analizine göre %5 hata payı %80 güç ile gerekli örneklem büyüklüğü 689 olarak hesaplanmıştır; buna göre bu çalışma için minimum gerekli örneklem sayısı 689 olarak belirlenmiş olup çalışmada 3667 kişiye ulaşılmıştır.

## BULGULAR

Önerilen çalışma kapsamında İstanbul'da faaliyet gösteren bir devlet üniversitesinde öğrenim gören 3667 sağlık alanı öğrencisine afet tehdidi için psikolojik hazırlık ölçeği aracılığıyla sorular sorulmuş ve araştırmaya 2824 kız öğrenci ve 843 erkek öğrenci katılmıştır. Kişinin Duygusal ve Psikolojik Tepkisinin Yönetimi, Sosyal Çevrenin Yönetimi, Dış Durumsal Çevre Bilgisi ve Yönetimi alt boyutları incelenmiştir. Çalışmadan elde edilen bulgulara göre; bu alt boyutlardan *Kişinin Duygusal ve Psikolojik Tepkisinin Yönetimi* alt boyutunda cinsiyete göre farklılaşma tespit edilmiştir. Bu alt boyutta elde edilen sonuçlara göre erkek öğrencilerde duygusal ve psikolojik tepki yönetimi daha başarılı olarak tespit edilmiştir. İlgili sonuçlar Tablo 1'de verilmiştir.

Tablo 1. Cinsiyet & Kişinin Duygusal ve Psikolojik Tepkisinin Yönetimi İlişkisi

	N	Ortalama	Standart Sapma	Maksimum	Minimum	Medyan	F1	F2	F3

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

Ayrıca ölçeğin alt boyutları detaylı incelendiğinde öğrencilerin öğrenim gördükleri fakülterele göre sonuçların farklılaştığı tespit edilmiştir. *Dış Durumsal Çevre Bilgisi ve Yönetimi* (F1) alt boyutu, *Kişinin Duygusal ve Psikolojik Tepkisinin Yönetimi* (F2) alt boyutu ve *Kişinin Sosyal Çevresinin Yönetimi* (F3) alt boyutuna göre; tıp fakültesi öğrencileri daha iyi farklılaşma gösterirken ilgili boyutlardan F1 alt boyutu için uluslararası tıp fakültesi öğrencilerinin, F2 ve F3 alt boyutları için eczacılık fakültesi öğrencilerinin daha düşük farklılaşma gösterdikleri tespit edilmiştir. İlgili sonuçlar Tablo 2, Tablo3 ve Tablo 4’te ifade edilmiştir.

## SONUÇ VE ÖNERİLER

Afetlerle mücadelede öncesi ve sonrası olarak yapılan gruplandırmalarda gerek afet öncesinde alınacak önlemlerde gerekse afet sonrası yapılacak işlemlerde süregelen geleneksel yaklaşım çoğunlukla fiziksel hazırlık veya önlemlerden bahsetmektedir. Yapıların, yaşam alanlarının afetlere dayanıklı oluşturulması, şehir planlamaları, tatbikatlar, sigortalamalar vb. uygulamalar afetlere fiziksel hazırlıkları içermektedir. Oysa günümüzde afetlere karşı psikolojik hazırlık en az fiziksel hazırlık kadar önem arz etmektedir. Her türlü afetle mücadelede her aşamada etkin rol alacak sağlık profesyonellerinin afetlere karşı psikolojik hazırlık düzeylerinin belirlenmesi bu noktada oldukça önemli hale gelmektedir. Bir sağlık profesyoneli, insanlara sistematik bir şekilde önleyici, iyileştirici veya rehabilite edici sağlık hizmeti sunan kişi olduğundan bu kişilerin psikolojik dayanıklılık seviyeleri, beklenmedik olaylar karşısındaki tepkileri, kendilerini toparlama süreçleri ve gerek kendileri gerekse içinde buldukları çevre için kriz yönetebilme kabiliyetleri afetlerin başarılı yönetimi hususunda önemlidir. Afetlerde aktif olarak görev alacak sağlık profesyonelleri, etkilenen nüfusun demografik özelliklerini bilen, sosyal becerileri gelişmiş, iletişim yetenekleri güçlü, afetin farklı evrelerini, yas süreçlerini ve stresin doğasını anlama becerisine sahip olmalıdır. Ayrıca, kendileri ve diğer çalışanlar için stres yönetimi tekniklerini bilmeleri gerekmektedir. Gerektiğinde topluluklara etkili bir şekilde hitap etmek, medya ile iş birliği yapmak, toplu bakım merkezlerinde yönetimi sürdürmek, toplum liderleriyle iletişim kurmak ve bu ilişkiyi sürdürmek, organizasyonun dinamiklerini ve politik süreçlerini anlamak da sağlık profesyonelleri için hayati önem taşımaktadır. İfade edilen gerekçelerden dolayı sağlık profesyonelleri için henüz mesleklerini öğrendikleri öğrencilik

yıllarından itibaren afet yönetimi eğitimi hakkında teorik ve uygulamalı eğitimler almalarının faydalı olacağı düşünülmektedir.

Sağlık profesyonellerinin öğrencilik döneminden itibaren afet yönetimi eğitimi almaları, onların afetlere karşı psikolojik hazırlık seviyelerini önemli ölçüde artıracaktır. Bu eğitimler, sağlık profesyonellerine afetlerin farklı evreleri, etkileri ve yönetimi konularında derinlemesine bilgi sağlar. Özellikle afetlerin psikososyal etkileri ve insan davranışları üzerine odaklanan eğitimler, sağlık profesyonellerinin afet sırasında daha etkili ve duyarlı bir şekilde hareket etmelerini sağlayabilir. Bu şekilde, sağlık profesyonelleri afet anında karşılaşılabilecekleri stres, belirsizlik ve travma gibi durumlarla daha iyi başa çıkabilirler. Ayrıca, afet yönetimi eğitimi alan profesyoneller, toplumların afet öncesi, sırası ve sonrasında ihtiyaç duyduğu sağlık hizmetlerini daha etkin bir şekilde planlayabilir ve uygulayabilirler. Bu sayede, sağlık profesyonelleri için afetlerin insan sağlığı üzerindeki etkilerini en aza indirme ve toplumların daha hızlı bir şekilde iyileşmesine katkıda bulunma potansiyellerinin artacağı düşünülmektedir.

**Özet**

Bitkiler içerdikleri droglar nedeniyle geleneksel tıpta hastalıkların tedavisi için kullanılabilir. Günümüzde mevcut modern tıp uygulamalarında yer alan tedavi etkinliği gösterilmiş ilaçlar genellikle aktif madde içeriği zengin olan bitki türlerinden saflaştırılarak veya biyoteknolojik uygulamalarla laboratuvar ortamında üretilmiş saf etken maddeleri kapsamakla birlikte tedavi aşamasında karşılaşılabilen yan etkiler nedeniyle yeni ve etkili ajanların veya destekleyici detavi ajanlarının kullanımını gerektirmektedir. *Harpagophytum procumbens*'in zengin glikozid, triterpenoid, fitosteroller, aromatik asit ve flavonoidler gibi biyoaktif madde içeriğinden dolayı, geleneksel tıpta kan hastalıkları, ateş, dispepsi, idrar yolu enfeksiyonları, yara ve yanık iyileşmesi ve birçok deri hastalığının tedavisi için kullanımı bildirilmiştir. Literatürde, hücre canlılığını koruyucu etkisi rapor edilmiş olan *Harpagophytum procumbens*'in yara iyileşmesi üzerinde potansiyel etkilerini fibroblast hücrelerinde araştırmış bir çalışmaya henüz rastlanmamıştır. Bu çalışmada fare fibroblast hücreleri (NIH/3T3) kullanılarak oluşturulmuş *in vitro* yara modelinde *Harpagophytum procumbens*'in potansiyel yara iyileştirici etkisi ışık mikroskopi tekniği kullanılarak değerlendirilmiştir. Çalışma sonuçlarında bu bitkinin yapay skar alanını konsantrasyon ve zamana bağlı olarak onardığı gösterilmiştir. Bu doğrultuda *Harpagophytum procumbens* bitkisinin yara iyileşmesinin tetikleyici veya kolaylaştırıcı etkisinin daha ileri mekanistik çalışmalar ve *in vivo* yara modellerinde araştırılması, ekstre içerisinde bulunan etken maddelerin ayrı ayrı izole edilerek ve farklı konsantrasyonlar halinde kombinlenerek uygulandıklarında hücre içinde etkileştiği hedef moleküllerin saptanması ve ilgili etkileşimlerin moleküler mekanizmalarının aydınlatılması için yüksek potansiyel taşıdığı düşünmekte ve bu konuda farmasötik ve farmakokinetik araştırmalar için *Harpagophytum procumbens* bitkisini önermekteyiz.

**Anahtar Kelimeler:** Harpagophytum procumbens, yara iyileşmesi, hücre proliferasyonu

**EVALUATION OF EFFECTS OF HARPAGOPHYTUM PROCUMBENS ON  
WOUND HEALING: AN IN VITRO STUDY**

**Abstract**

Plants can be used in traditional medicine for the treatment of diseases due to the drugs they contain. Today, drugs with proven treatment effectiveness in current modern medical practices generally include pure active substances purified from plant species rich in active substances or produced in the laboratory environment with biotechnological applications, but they require the use of new and effective agents or supportive detoxification agents due to the side effects that may be encountered during the treatment period. Due to the rich content of bioactive substances such as glycosides, triterpenoids, phytosterols, aromatic acids and flavonoids, *Harpagophytum procumbens* has been reported to be used in traditional medicine for the treatment of blood diseases, fever, dyspepsia, urinary tract infections, wound and burn healing and many skin diseases. In the literature, no study has yet been found that has investigated the potential effects of *Harpagophytum procumbens* on wound healing in fibroblast cells, whose protective effect on cell viability has been reported. In this study, the potential wound healing effect of *Harpagophytum procumbens* was evaluated using light microscopy technique in an *in vitro* wound model on mouse fibroblast cells (NIH/3T3). The study results have shown that this plant repairs the artificial scar area in concentration and time dependent manner. In this regard, further mechanistic studies and investigation of the triggering or facilitating effect of *Harpagophytum procumbens* plant on wound healing in *in vivo* wound models, to determine the target molecules with which the active substances of the extract interact in the cell when administered separately and combined in different concentrations, and to elucidate the molecular mechanisms of the relevant interactions are required. We think that it has high potential and we recommend the *Harpagophytum procumbens* plant for pharmaceutical and pharmacokinetic research on this subject.

**Keywords:** Harpagophytum procumbens, wound healing, cell proliferation

## **Giriş**

Bitkiler drog içerdiklerinden dolayı geleneksel tıpta tedavi amaçlı kullanılabilir. Günümüzde kullanılan modern tıp uygulamalarında tedavi etkinliği gösterilmiş ilaçlar yer almaktadır. Bu ilaçlar genellikle aktif madde içeriği zengin olan bitki türlerinden saflaştırılarak ya da biyoteknolojik uygulamalarla laboratuvar ortamında üretilmiş saf etken maddelerden oluşmaktadır. Tedavi için kullanımları sırasında karşılaşılabilen yan etkiler nedeniyle yeni ve etkili maddelerin veya destekleyici tedavi ajanlarının kullanımına ihtiyaç doğmuştur. Susam familyasının (Pedaliaceae) bir üyesi olan Güney Afrika bitkisi *Harpagophytum procumbens*'in genel bilinen adı Şeytan pençesi'dir. Son zamanlarda *H. procumbens* ikincil kök ekstraktları, çoğunlukla Avrupa'da kronik hastalıklar olmak üzere çeşitli hastalıklara geleneksel bir ilaç potansiyeli sunmaktadır. Avrupa Fitoterapi Bilimsel Kooperatifi (ESCOP), ağrılı osteoartrit semptomatik tedavisinde, bel ağrısının, iştah kaybının ve hazımsızlığın hafifletilmesinde *H. procumbens* kullanımını önermiştir (Brendler, Gruenwald, Ulbricht, & Basch, 2006). Bitkisel Tıbbi Ürünler Komitesi (HMPC), geleneksel kullanıma dayalı olarak hafif eklem ağrısı ve hafif sindirim bozukluklarının tedavisine yönelik endikasyonlarda kullanıma yönelik tartışma taslağı yayınlamıştır (Brendler et al., 2006). Klinik çalışmalarda *H. procumbens* içeren ürünlerin bel ağrısı veya osteoartrit tedavisindeki etkinliği test edilmiştir (Brien, Lewith, & McGregor, 2006; Denner, 2007). Steroid olmayan antiinflamatuvar ilaçlar (NSAID) ile eşdeğerlik ve üstün tolere edilebilirlik de dahil olmak üzere etkinlik ve iyi tolere edilebilirlik kanıtları literatürde rapor edilmiştir (Chrubasik, 2004). Klinik çalışmalarda kullanılan farklı çözücüler ile hazırlanmış ekstraktların Vioxx® ve Voltaren® resinat ile benzer etkinliğe sahip olduğu, ancak bu standart ilaçlardan daha yüksek tolere edilebilirliğe sahip olduğu gösterilmiştir (Lienert, Ruetten, Kuhn, & Wartenberg-Demand, 2005). Başka bir çalışmada, bilek, dirsek, omuz, kalça, diz ve sırt ağrısı için ortalama ağrı skorlarında istatistiksel olarak anlamlı azalmalar olduğu ve yaşam kalitesi ölçümlerinin başlangıç çizgisine kıyasla anlamlı bir artış gösterdiği rapor edilmiştir. Bu ekstraktların kullanıldığı zamanlarda eş zamanlı ağrı kesici ilaçların kullanımının durdurulması rapor edilmiştir (Grant, McBean, Fyfe, & Warnock, 2007). *Harpagophytum procumbens*'in sekonder yumrularındaki zengin glikozid, triterpenoid, fitosteroller, aromatik asit ve flavonoidler gibi biyoaktif madde içeriğinden dolayı, geleneksel tıpta kan hastalıkları, ateş, idrar yolu enfeksiyonları, yara ve yanık iyileşmesi ve birçok deri hastalığının tedavisi için kullanımı bildirilmiştir (Anauate, Torres, & de Mello, 2010). Literatürde, hücre canlılığını koruyucu etkisi rapor edilmiş olan *H. procumbens*'in yara iyileşmesi üzerinde potansiyel etkilerini fibroblast hücrelerinde araştırmış bir çalışmaya henüz rastlanmamıştır.

**Figür 1.** *Harpagophytum procumbens* kökleri (Stewart & Cole, 2005)

Bu çalışmada fare fibroblast hücreleri (NIH/3T3) kullanılarak oluşturulmuş *in vitro* yara modelinde *Harpagophytum procumbens*'in yara iyileştirici potansiyelinin ışık mikroskopi tekniği kullanılarak değerlendirilmesi amaçlanmıştır.

## **Materyal ve Metod**

### **Hücre kültürü**

Çalışma kapsamında NIH/3T3 fare fibroblast hücreleri serum (%10, Fetal Bovine Serum/FBS) ve penisilin/streptomisin (%1) ile hazırlanmış Dulbecco's Modified Eagle Medium (DMEM) besi ortamında steril hücre kültürü inkübatöründe (37 °C, %5 CO<sub>2</sub>) çoğaltılmıştır. Her 3 günde hücreler pasajlanmış ve konfluent hücreler yara deneyi oluşturulmasında kullanılmıştır (Sahinturk, Kacar, Vejselova, & Kutlu, 2018).

### **Yara iyileşmesi deneyi**

NIH/3T3 fare fibroblast hücreleri serum (%10, Fetal Bovine Serum/FBS) ve penisilin/streptomisin (%1) içeren Dulbecco's Modified Eagle Medium (DMEM)'da standart şartlar altında (37°C, %5 CO<sub>2</sub>) uygun nem içeren inkübatörde 6 kuyulu flaskların içine ekilmiş ve taban hücreler tarafından kaplanana dek inkübasyon yapılmıştır. Konfluent hücrelerin üzerinden besi ortamı uzaklaştırılmış ve 100 µL'lik steril pipet ucu kullanılarak yara boşluğu oluşturulmuştur. Deney sıfırinci saati olarak bu aşamada oluşturulan yara boşlukları ışık mikroskobunda görüntülenmiştir. Bunun ardından her bir kuyuya 200 µg/mL *H. procumbens* içeren besi yeri eklenerek plakalar 24, 48, 72 ve 96. saatlerde ışık mikroskobunda görüntülenmiştir (Rodriguez, Wu, & Guan, 2005).

### **Bulgular ve Tartışma**

Yara iyileşmesi deneyinde elde edilen bulgular 0, 24, 48, 72 ve 96. saatlerde elde edilen ışık mikroskobu görselleri ile Figür 2-6'da sırasıyla hem kontrol hem de *H. procumbens* uygulanmış deney grubu için gösterilmiştir.

**Figür 2.** Kontrol grubu (A) ve *H. procumbens* uygulanmış deney grubuna (B) ait 0. saat ışık mikroskobu görüntüleri (10X).

**Figür 3.** Kontrol grubu (A) ve *H. procumbens* uygulanmış deney grubuna (B) ait 24. saat ışık mikroskobu görüntüleri (10X).

**Figür 6.** Kontrol grubu (A) ve *H. procumbens* uygulanmış deney grubuna (B) ait 96. saat ışık mikroskobu görüntüleri (10X).

Yara iyileşmesi sürecinin birçok farklı etmene bağlı olduğu literatürde belirtilmiştir. Anjiyogenez yara iyileşmesi, menstruasyon döngüsü gibi fizyolojik şartlarda katkı sağlarken, anjiyogenezin aksaması kalp krizi, ateroskleroz, kanser ve metastaz gibi sağlık sorunlarına neden olmaktadır (Devasagayam et al., 2004). *H. procumbens* köklerinden elde edilen tozun yara iyileştirici ajan olarak kullanımı literatürde bildirilmiştir (Von Koenen, 1996). *H. procumbens* ana bileşenlerinden harpagositin osteoblast hücrelerinde proliferasyonu tetiklediği rapor edilmiştir (Chung et al., 2016). *H. procumbens* ekstraktlarının sıçan aortunda 5 günlük uygulama süresinde anjiyogenezi anlamlı bir şekilde inhibe ettiği rapor edilmiştir (Abdulhussein, HattabMutlag, Khamees, Sahib, & Ghazi, 2018). Vasküler endotelial faktör sentezlenmesinin serbest radikaller varlığı sebebiyle engellenmesi aynı zamanda da *H. procumbens*'in metanol ektrelerinde yer alan sekonder metabolitler tarafından da engellenebildiğinden anjiyogenezin baskılandığı rapor edilmiştir. Aynı çalışmada, *H.*

*procumbens* ekstraktlarında bulunan flavonoidler nedeniyle antioksidan özellik göstererek serbest radikalleri uzaklaştırdığı rapor edilmiştir (Abdulhussein et al., 2018). Başka bir çalışmada, *H. procumbens* etil asetat fraksiyonunun sıçan beyin korteksi parçalarında hücre canlılığını koruduğu ve bu hücre canlılığının antioksidan özelliğe bağlı olduğu belirtilmiştir (Schaffer et al., 2013). Bu çalışmada doza ve zamana bağlı olarak fibroblast hücre proliferasyonunun arttığı bulunmuştur. *In vitro* ortamda oluşturulan yara iyileşmesinin de proliferasyon artışının gözlemlendiği konsantrasyonlarda artmış olduğu saptanmıştır. Literatüre benzer olarak değerlendirildiğinde, bu proliferasyon artışının *H. procumbens*'in içeriğinde bulunan sekonder metabolitlerin antioksidan özelliğine bağlanabileceği aynı zamanda da farklı konsantrasyonlarda bu etkinin farklılık gösterebileceği yorumlanmıştır. Yapay skar alanının kapanması (yara iyileşmesi) ve hücre proliferasyonunun artışının ayrıntılı moleküler mekanizmasının aydınlatılabilmesi için daha ileri farmakolojik ve farmakokinetik etkinliklerin ekstre içeriğindeki etken maddeler özelinde çalışmalar yapılması gerektiği kanaatindeyiz ve bu konuda *H. procumbens*'i önermekteyiz.

### **Sonuç ve Öneriler**

Çalışma sonuçlarında *H. procumbens*'in yapay skar alanını konsantrasyon ve zamana bağlı olarak onardığı gösterilmiştir. Bu doğrultuda *H. procumbens* bitkisinin yara iyileşmesinin tetikleyici veya kolaylaştırıcı etkisinin daha ileri mekanistik çalışmalar ve *in vivo* yara modellerinde araştırılması, ekstre içerisinde bulunan etken maddelerin ayrı ayrı izole edilerek ve farklı konsantrasyonlar halinde kombinlenerek uygulandıklarında hücre içinde etkileştiği hedef moleküllerin saptanması, ilgili etkileşimlerin moleküler mekanizmalarının aydınlatılması için yüksek potansiyel taşıdığını düşünmekte ve bu konuda farmasötik ve farmakokinetik araştırmalar için *Harpagophytum procumbens*'i önermekteyiz.

**Email:** mustafacengizogu@gmail.com

**Özet**

Şeytan pençesi Pedaliaceae familyasına ait, birçok biyoaktif madde içeren bir bitkidir. En çok Güney Afrika'da yayılım gösteren Şeytan pençesi geleneksel tıpta toz halinde, çay şeklinde veya topikal uygulamalarda geniş uygulamalara sahiptir. Geleneksel tıpta antiromatizmal, ağrı kesici ve antiinflamatuvar etkinlikleri sebebiyle çokça kullanılan Şeytan pençesinin birçok deneysel çalışmada da antiinflamatuvar, antiromatizmal ve analjezik gibi farmasötik özellikleri Alzheimer, romatoid artrit, osteoporoz, diyabet gibi hastalıkla bağlantılı olarak rapor edilmiştir. Bununla birlikte anjiyogenezini inhibe ederek antikanser ve antimetastatik özellik gösterdiğinden dolayı alternatif kanser tedavisinde kullanılabilmesi ve kanser hücrelerinde sitotoksik etki gösterdiği bilinmektedir. Ayrıca, farklı hücrelerde gerçekleştirilen çalışmalarda antioksidan özelliği nedeniyle serbest radikalleri azaltarak hücre canlılığını koruma özelliğinin olduğu farklı Şeytan pençesi ekstresi formları için belirtilmiştir. Ancak, fibroblast hücrelerinde Şeytan pençesinin sitotoksitesisi veya proliferasyona etkisini gösteren bir çalışmaya henüz rastlanmamıştır. Bu nedenle bu çalışmada, fare fibroblast hücrelerinde (NIH/3T3) farklı konsantrasyonlar ve zaman aralıklarında Şeytan pençesi bitkisinin sitotoksitesinin olup olmadığı MTT kolorimetrik testi kullanılarak araştırılmıştır. Elde edilen deney sonuçlarından Şeytan pençesi bitkisinin NIH/3T3 hücrelerinde sitotoksitesiteye neden olmadığı aksine hücre proliferasyonunu zamana ve konsantrasyona bağlı olarak indüklediği saptanmıştır. Bu proliferasyon indükleyici özellik nedeniyle Şeytan pençesi bitkisini hücre canlılığını koruma potansiyelinin ve potansiyel hücre bölünmesini hızlandırıcı etkisinin ortaya moleküler mekanizmalarıyla birlikte konulması gerektiğini düşünmekte, proliferasyonu indükleyici mekanizması, hücre içerisinde etkileştiği hedef moleküller ve etkileşim şekilleri aydınlatılmak üzere daha ileri araştırmalar için önermekteyiz.

**Anahtar Kelimeler:** Şeytan pençesi, fibroblast, sitotoksitesite

**EVALUATION OF THE CYTOTOXICITY OF DEVIL'S CLAW PLANT ON MOUSE  
FIBROBLAST CELLS**

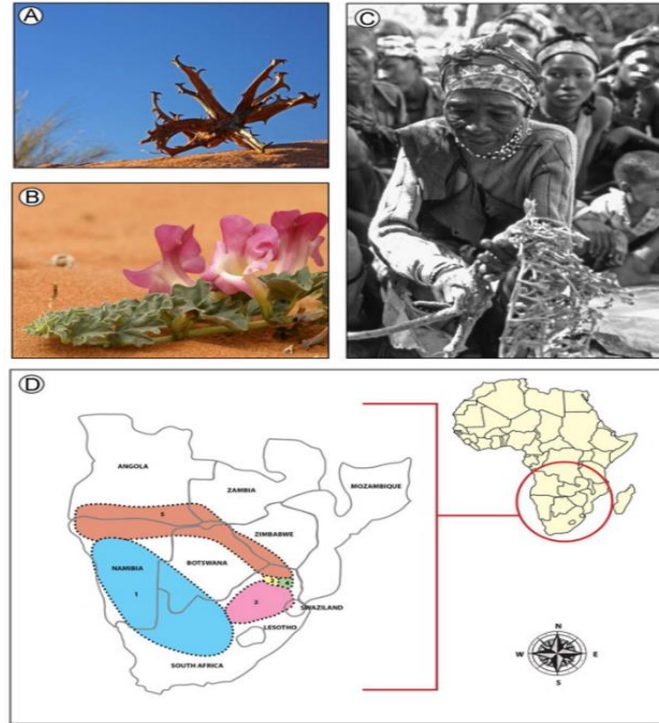

**Abstract**

Devil's claw is a plant belonging to the Pedaliaceae family, containing many bioactive substances. Devil's claw, which is most common in South Africa, has wide applications in traditional medicine in powder form, tea form or topical applications. Devil's claw, which is widely used in traditional medicine due to its antirheumatic, analgesic and anti-inflammatory activities, has also been reported in many experimental studies in connection with diseases such as Alzheimer's, rheumatoid arthritis, osteoporosis and diabetes. However, it is known that it can be used in alternative cancer treatment because it shows anticancer and antimetastatic properties by inhibiting angiogenesis and has a cytotoxic effect on cancer cells. Additionally, in studies conducted on different cells, it has been stated for different forms of Devil's claw extract that it has the ability to protect cell viability by reducing free radicals due to its antioxidant properties. However, no study has yet been found showing the cytotoxicity or proliferation effect of Devil's claw on fibroblast cells. Therefore, in this study, whether the Devil's claw plant has cytotoxicity in mouse fibroblast cells (NIH/3T3) at different concentrations and time intervals was investigated using the MTT colorimetric test. From the experimental results obtained, it was determined that Devil's claw plant did not cause cytotoxicity in NIH/3T3 cells, on the contrary, it induced cell proliferation depending on time and concentration. Due to this proliferation-inducing feature, we think that the potential of the Devil's claw plant to protect cell viability and its potential cell division accelerating effect should be revealed together with its molecular mechanisms, and we recommend it for further research to elucidate its proliferation-inducing mechanism, the target molecules it interacts with in the cell and the interaction patterns.

**Keywords:** Devil's claw, fibroblast, cytotoxicity

## Giriş

Harpagophytum procumbens subsp. procumbens (Burch.) Pedaliaceae familyası üyesi, Güney Afrika'nın Kalahari bölgesinde yetişen önemli bir şifalı bitkidir. Kullanımı Güney Afrika'nın yerli San ve Khoi halkı arasında öne çıkmış olup daha geniş kitlelerce benimsenmiştir (Gxaba & Manganyi, 2022; Mncwangi, Chen, Vermaak, Viljoen, & Gericke, 2012). Etnobotanik kullanımlarından bazıları ateş, diyabet, ishal ve kan hastalığıdır. *H. procumbens*'in ikincil yumrularının ekstraktlarının dejeneratif romatoid artrit, osteoartrit, tendinit, böbrek iltihabı, kalp hastalığı, hazımsızlık, iştah kaybı ve yara iyileşmesinin tedavisinde etkili olduğunu göstermektedir (Clarkson, Campbell, & Smith, 2003; McGregor et al., 2005). *H. zeyheri* ve *H. procumbens* bitkileri Şeytan pençesi olarak bilinmektedir ve bu isimle kullanılmaktadır. *H. zeyheri*'de *H. procumbens*'e kıyasla daha düşük oranda biyolojik olarak aktif bileşen bulunmaktadır. *H. procumbens* genellikle tercih edilen ticari üründür ve katkı maddesi olarak ürünlere ilave edilmektedir (Georgiev, Alipieva, & Orhan, 2012; Ncube et al., 2021). Örneğin; *H. procumbens*, Namibiya'da ticari açıdan önemli bir bitki türü olup milli gelire yüksek katkı sağlamaktadır. Küresel satışlar değerlendirildiğinde ise yalnızca Almanya için yaklaşık 30 milyon Euro değerinde bir kümülatif satış hacmi rapor edilmiştir (Mncwangi et al., 2012; Soulimani, Younos, Mortier, & Derrieu, 1994).

**Figür 1.** *H. procumbens* görüntüsü ve yayıldığı coğrafya (Mncwangi et al., 2012)

Şeytan pençesi geleneksel tıpta toz halinde, çay şeklinde veya topikal olarak (merhem olarak) geniş uygulamalara sahiptir. Geleneksel tıpta antiromatizmal, analjezik ve antiinflamatuvar etkinlikleri sebebiyle çokça kullanılan Şeytan pençesinin birçok deneysel çalışmada da antiinflamatuvar, antiromatizmal ve analjezik gibi farmasötik özellikleri Alzheimer, romatoid artrit, osteoporoz, diyabet gibi hastalıklarla bağlantılı olarak rapor edilmiştir. Şeytan pençesi anjiyojenezi inhibe ederek antikanser ve antimetastatik özellik gösterdiğinden dolayı alternatif kanser tedavisinde kullanılabileceği ve kanser hücrelerinde sitotoksik etki gösterdiği rapor edilmiştir. Farklı hücre hatları üzerinde gerçekleştirilen çalışmalarda antioksidan özelliği nedeniyle serbest radikalleri azaltarak hücre canlılığını koruma özelliğinin olduğu farklı Şeytan pençesi ekstresi formları için belirtilmiştir (Ahmed, Afifi, & Hamdy, 2005; Gyurkovska et al., 2011). Şeytan pençesinin iki ana bileşeni harpagosid ve iridoid glikozittir. Ayrıca, harpagit ve prokumbit de Şeytan pençesinin içeriğinde yer almaktadır. Köklerinde ise iridoid glikozitler (Qi et al., 2006), şekerler, triterpenoitler (oleanolik ve ursolik asit), fitosteroller, aromatik asitler ve flavonoitler (luteolin ve kamferol) gibi temel kimyasal bileşikler bulunmaktadır (Anauate, Torres, & de Mello, 2010).

**Figür 2.** *H. procumbens* ana etken maddesi Harpagosid'in kimyasal yapısı (Peruru et al., 2020)

Literatürde, Şeytan pençesinin biyolojik aktivitelerinin lenfosit ve makrofaj hücrelerinde araştırılıp konsantrasyon ve zamana bağlı sitotoksik etkilerinin olduğu gösterilmiştir (Gyurkovska et al., 2011; Ncube et al., 2021). Ancak, fibroblast hücrelerinde Şeytan pençesinin sitotoksitesisi veya proliferasyona etkisini gösteren bir çalışmaya henüz rastlanmamıştır. Bu nedenle, mevcut çalışmada, Şeytan pençesi bitkisinin sitotoksitesisinin farklı zaman

aralıklarında fare fibroblast (NIH/3T3) hücrelerinde farklı konsantrasyonlar deneyerek MTT kolorimetrik testi ile araştırılması amaçlanmıştır.

### **Materyal ve Metod**

#### **Hücre kültürü**

Bu çalışmada kullanılan NIH/3T3 fare fibroblast hücreleri %10 serum (Fetal Bovine Serum/FBS) ve %1 penisilin/streptomisin içeren Dulbecco's Modified Eagle Medium (DMEM) besi yerinde standart hücre kültürü şartlarında (37°C, 5% CO<sub>2</sub>) uygun nem içeren inkübatörde çoğaltılmıştır. Hücreler 3 günlük periyotlarla pasajlanmış ve tüm flaş tabanını kaplayan konfluent hücreler deneylerde kullanılmıştır (Sahinturk, Kacar, Vejselova, & Kutlu, 2018).

#### **MTT kolorimetrik testi**

NIH/3T3 hücreleri 96 kuyulu plakalara (5x10<sup>3</sup>/kuyu) ekilmiştir. Şeytan pençesi DMSO'da çözülmüş ve 200 µg/mL konsantrasyondan seri dilüsyonu seyreltilerek kuyulara dağıtılmıştır. Plakalar standart hücre kültürü şartlarında 24, 48, 72 ve 96 saat süre ile inkübe edilmiştir. Süre sonunda kuyucuklara 20 µL MTT (5mg/mL) ilave edilerek, 37 °C'de 4 saat daha inkübe edilmiştir. İnkübasyon sonunda 200 µL/kuyu DMSO ilavesi yapılarak Synergy HTX (Bio-Tek, USA) plaka okuyucusunda 564 nm dalga boyunda absorbanslar okunmuştur. Elde edilen absorbans değerlerinden kontrol kuyusu absorbansına kıyasla yüzde canlılık değerleri hesaplanmıştır. Yüzde canlılık değerlerinden IC<sub>50</sub> değerleri hesaplanmıştır (Sahinturk et al., 2018).

#### **İstatistiksel analiz**

Deneylerden elde edilen bulgular ortalama ± standart hata olarak belirtilmiştir. GraphPad 6.0 programı ile tek yönlü varyans analizi (ANOVA) kullanılarak değerlendirilmiş ve anlamlılık değerleri saptanmıştır. p<0.5 değerinin altında olanlar istatistiksel olarak anlamlı kabul edilmiştir.

#### **Bulgular ve Tartışma**

Farklı zaman dilimlerinde NIH/3T3 hücrelerine uygulanan farklı *H. procumbens* konsantrasyonlarının hücre canlılığına etkileri Figür 3-6'da gösterilmiştir.

**Figür 3.** NIH/3T3 hücre canlılığı üzerine *H. procumbens*'in 24 saatlik inkübasyon süresindeki etkileri.

**Figür 4.** NIH/3T3 hücre canlılığı üzerine *H. procumbens*'in 48 saatlik inkübasyon süresindeki etkileri.

Figür 5. NIH/3T3 hücre canlılığı üzerine *H. procumbens*'in 72 saatlik inkübasyon süresindeki etkileri.

Figür 6. NIH/3T3 hücre canlılığı üzerine *H. procumbens*'in 96 saatlik inkübasyon süresindeki etkileri.

*In vitro* çalışmalarda makrofaj hücrelerine uygulanan Şeytan pençesi bitkisinin su, etanol ve dietil asetat ekstraktlarının diklofenaka kıyasla farklı sitotoksik etki gösterdiği raporlanmıştır (Ncube et al., 2021). Literatürde Şeytan pençesinin TH1 (lenfosit) hücrelerinde konsantrasyona bağlı sitotoksositeye neden olduğu belirtilmiştir (Hostanska, Melzer, Rostock, Suter, & Saller, 2014). Bu çalışmada, literatürde yer alan sitotoksosite bulgularının aksine, NIH/3T3 hücreleri üzerine *H. procumbens*'in proliferasyonu tetikleyici etkisinin konsantrasyona ve zamana bağlı olarak mevcut olduğu gösterilmiştir. Bu proliferasyonu indükleyici etkinin deneylerde kullanılan hücre türüne, konsantrasyon aralığına, *H. procumbens* türü ve ekstre elde edilen bitki kısmına bağlı olabileceği değerlendirilmiştir.

### **Sonuç ve Öneriler**

Elde edilen deney sonuçlarından Şeytan pençesi bitkisinin NIH/3T3 hücrelerinde sitotoksositeye neden olmadığı, aksine hücre proliferasyonunu zamana ve konsantrasyona bağlı olarak indüklediği saptanmıştır. Bu proliferasyon indükleyici özellik nedeniyle Şeytan pençesi bitkisini hücre canlılığını koruma potansiyelinin ve potansiyel hücre bölünmesini hızlandırıcı etkisinin ortaya moleküler mekanizmalarıyla birlikte konulması gerektiğini düşünmekte, proliferasyonu indükleyici mekanizması, hücre içerisinde etkileştiği hedef moleküller ve etkileşim şekilleri aydınlatılmak üzere daha ileri araştırmalar için önermekteyiz.

**ABSTRACT**

There is a growing interest in integrating social sustainability along with environmental and economic impacts to tourism analysis and planning. Hence, social sustainability of Osun festival in a UNESCO World heritage site, Nigeria was assessed to harness the host communities' perceptions of tourism's social sustainability. Fourteen host communities in Osogbo and Olorunda Local Government Area were selected for the study, three hundred and eighty-four (384) copies of questionnaires were administered to residents within ages 18 years and above. Data obtained were analyzed using descriptive statistics and Pearson's correlation. Findings from the study revealed that 54.5% of the respondents were male, 53.9% were married, Secondary School education was highest (50.8%) and 51.6% were self-employed. Overall, 57.3% of the respondents were actively involved in Osun festival while 37.0% were attendees. Perception that Osun festival is the most important event in the community was highest with mean value of 4.39, the festival contributes to communities cultural enrichment (mean = 4.38) and preservation of cultural heritage in the community is positively influenced by Osun festival had a mean value 4.25. Moreover, residents' positive perception of tourism sustainability was enhanced by the economic benefits of the festival. Furthermore, the festival has been socially sustainable in the region because the preservation and promotion of local culture and traditions promotes tourism (mean=4.45), the empowerment program (4.37), and community participation in decision making improve tourism social sustainability (4.44). There is a significant relationship between the residents' involvement in Osun festival and their year of residency, origin and religion ( $p < 0.05$ ). The study concluded that community residents' ideology and opinions are critical for promoting and improving tourism social sustainability and it is recommended that the management of the Osun Osogbo World Heritage site develop long-term collaborative initiatives with host communities and various stakeholders to foster commitment to the adoption of sustainability practices.

**Keywords:** Tourism, Social sustainability, Community, Festival, UNESCO

## **1. INTRODUCTION**

Globally, tourism is regarded as an effective tool and contributor to reduce the rate of poverty in addition to aiding the economic development of some locals and communities around the world. Mondal & Samaddar (2021) revealed that the environment, local community and economy are the three pillars of sustainability, which are also the essential part of responsible tourism. Sustainable tourism encompasses the economic, social and environmental sustaining, which aligns with the United Nations' Sustainable Development Goals (SDGs). Sustainable tourism plays an important role by promoting and increasing the economic growth of a tourism destination, which helps to attain economic sustainability. Within the process of developing a sustainable tourism sector, the local community is the key element, as it is directly affected by its evolution (Eshliki & Kaboudi, 2017). Della et al. (2019) observed that involvement of local businesses and communities whilst ensuring that the economic benefits is equally share among all stakeholders is one of the many roles and functions embedded and carried out in sustainable tourism. Therefore, the notion of social sustainability acknowledges the relevance of communities' attitudes and support for tourist development in achieving long-term effects (Muresan et al., 2016). Social sustainability, a key element in sustainable tourism promote equitable development among the people, preservation of cultural heritage and improving the quality of life. Rastegar & Ruhanen (2021) provide an insight on the empowerment of the local communities and preservation of their cultural traditions and heritage through sustainable tourism with exchange of local knowledge. In alignment with SDGs 11, Sustainable tourism aims to enhance the quality of life for both residents and visitors. This is also achievable together with sustainable tourism practices within the destination (Ivars-Baidal et al., 2021).

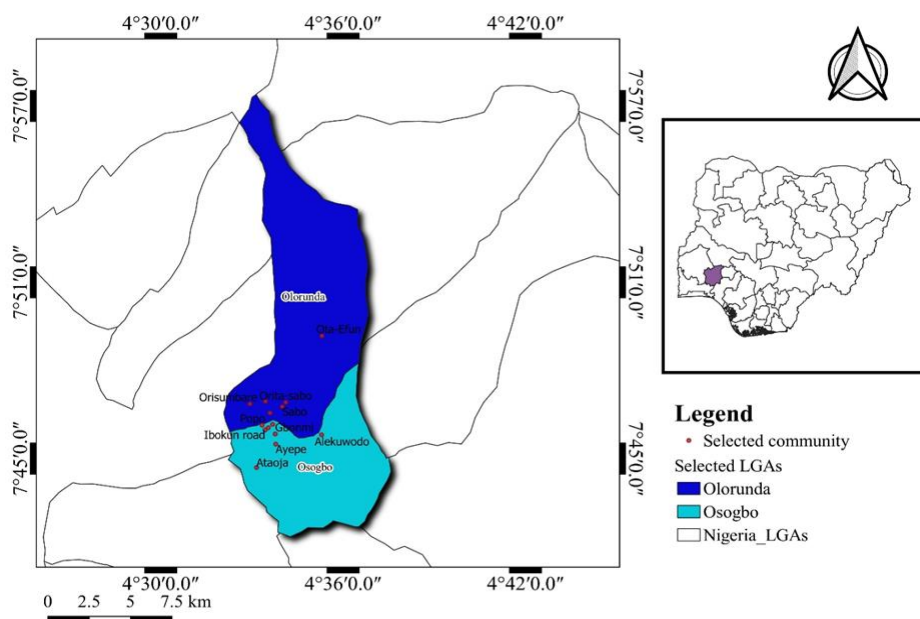

The substantive aspect of social sustainability is concerned with the needs, rights, and general well-being of the local community, whereas the procedural dimension is concerned with the means of achieving those substantive aspects, such as improving information access, decision-making roles, empowerment, and democratic governance. In this context, understanding residents' perception of tourism social sustainability is crucial to Identify areas of concern and opportunities for improvement. For the sustainability of tourism destination and long term viability, responsible tourism practices and local community participation are essential for promoting equitable development among the people, preservation of cultural heritage and improving the quality of life are ways by which sustainable tourism helps to support social sustainability while it mitigates the negative impacts of tourism on the environment and also help to conserve the natural resources.

Festivals are notable occasions set aside either annually or occasionally to commemorate significant events in people's and communities lives and this include coronation, worship of god(s), rites of passage, history of origins, start of planting season, and many others (Ezenagu, 2016). Festivals have some benefits it contributes to tourism by attracting visitors, increasing local economies, and improving the overall tourist experience. However, festivals have a widespread economic impacts and can offer unique cultural experiences by allowing visitors to interact with local culture and immerse themselves in the host community's traditions and customs. In lieu of this, tourism stakeholders and investors must understand the significance of festivals and fully realize their potential for attracting tourists and contributing to long-term tourism growth. The Osun Festival is an annual cultural celebration that takes place in Osogbo, the capital city of Osun State in southwestern Nigeria. The festival is dedicated to Osun, the Yoruba goddess of fertility and water. It has deep historical and religious significance for the people of Osogbo and has been celebrated for centuries. The two weeks festival celebration takes place in August, begins, and ends in the town palace of Ataoja. On the 12th day, the entire Osogbo population undertakes a procession into the World Heritage Sacred Grove in Osogbo. The votary maid (Arugba), the Ataoja, leads the procession of devotees, supported by high chiefs, to the Osun courtyard, which is located around the first palace within the grove, the point of offering on the riverbank (NCMM, 2023). The Osun Festival is culturally significant which attracts tourists from different parts of the world, exposing them to the rich cultural heritage of the Yoruba people. It showcases various aspects of Yoruba cultural practices, including music, dance, art, and religion. Through participation in the festival, residents of Osogbo metropolis are able to reconnect with their cultural roots and maintain a sense of identity and belonging (Elizabeth, 2014). The residents are able to reinforce their cultural identity and strengthen their sense of belonging to the community. This connection to heritage is crucial for maintaining a cohesive and sustainable society (Olatumile, 2019). Exploring residents' perceptions of the festival's impact on their community and cultural identity will provide insights into the role of cultural festivals in enhancing social sustainability of tourism at the site. This study is based on three objectives: (i) to assess residents' involvement in Osun Osogbo festival, (ii) assess the residents' perception of the social impacts of Osun festival tourism on the local community and (iii) explore the factors influencing residents' perceptions towards tourism social sustainability of Osun Osogbo festival. The study aims to analyze the residents' perception of tourism social sustainability of the Osun festival and recommend strategies for promoting socially sustainable tourism. Moreover, the research will fill gaps in the existing literature and contribute to the

broader discourse on social sustainability of tourism for promoting sustainable tourism practices and community engagement in tourism planning.

## 2. MATERIALS AND METHODS

**Study Area:** The study was carried out in Osogbo. Osogbo is the capital of Osun State, Nigeria and it is located between 6° 55' to 8° 15'N and 4° 10' to 5° 10'E. Osogbo has a total area of 250 Km<sup>2</sup>. It is bound in the north by Olorunda Local Government Area, in the south by Ede North and Atakumosa Local Government Areas, in the east by Obokun and Boripe Local Government Areas, and in the west by Egbedore Local Government Area. Osun Osogbo Sacred Grove (OOSG) is 75 hectares of undisturbed rainforest and the World Heritage Site is located in Osogbo Local Government Council, State of Osun, Nigeria, at 7° 45' 20" N /4° 33' 08"E and the main venue of Osun Osogbo festival (Procession to OOSG Plate 1). Osun State lies on a relatively flat plain of about 250 m above sea level within the western Nigeria plains. The climatic condition of Osogbo in Osun State, Nigeria, is characterized by a tropical climate, specifically falling under the Aw (Tropical savanna) climate classification according to the Köppen climate classification system. Osogbo falls within the lowland tropical rainforest vegetation characterized by multiple canopies and lianas, most of which have since been given to secondary forest and derived savannah due to intensive cultivation and bush burning for several years (Ogunfolakan et al., 2016).

**Figure 1: Map showing the selected communities in Osogbo, Osun State, Nigeria**

**Plate 1:** Procession into the Osun Osogbo World Heritage Sacred Grove

### **2.1 Data Collection**

The study adopted quantitative method of data collection. Data were obtained through administration of structured questionnaire with the residents of Osogbo to assess their perception of tourism social sustainability. Fourteen (14) host communities in Osogbo and Olorunda Local Government Areas were selected for the study. Krejcie and Morgan sample size table cited in Abdullateef & Olajide (2013) was used to determine a population sample size of three hundred and eighty-four (384). Likert scale questionnaire was administered to 384 residents within ages 18 years and above (201 respondents in Osogbo and 183 respondents in Olorunda Local Government areas).

### **2.2 Data Analysis**

The data were analyzed using descriptive statistics of frequencies, percentages, means and standard deviation, and inferential statistics. Inferential statistics tools used was Pearson's correlation for hypothesis testing. The variables on residents' perceptions of tourism's social sustainability of Osun Osogbo festivals at the heritage site were measured using Sözen (2019) five-point Likert scale, anchored from 1 (Strongly Disagree) to 5 (Strongly Agree). The mean of each statement was determined and used to categorize the responses as SA (4.21 - 5.00), A (3.41 - 4.20), Neutral (2.61 - 3.40), D (1.81 - 2.60), and SD (1.0 - 1.80).

## **3. RESULT AND DISCUSSION**

The findings on the socio-demographics characteristics of the respondents revealed that 54.5% were male, 53.9% were married and 51.0% were between 26-45 years. This is in conformity with Adetola & Osanyinleye (2016) which had 55.0% as males and 59.5% married respondents in their study on tourism acceptability in the host communities of Osun Osogbo Sacred Groove.

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

In addition, 50.8% of the respondents had secondary school education and 48.7% practiced Christianity this compliments the work of Oladeji et al. (2021) with 48.3% as Christians in Osun Osogbo communities and contradicts Aleshinloye (2015) that had 36.8% of Secondary education in the study area. Furthermore, respondents with more than 20 years of residency were higher (34.1%), which is consistent with the findings of Ige et al. (2017), who discovered that the majority of residents in the Osogbo metropolis had lived there for more than 20 years.

**Table 1: Socio-demographic characteristics of the respondents**

<b>Variables</b>	<b>Frequency (N=384)</b>	<b>Percentage (%)</b>
<b>Gender</b>

### 3.1. Residents' Involvement in Osun Festival

Residents' involvement in Osun Osogbo festival in the world heritage site was high as 37.0% attested to being attendees to witness the traditional rituals and other activities (Figure 2). This is in agreement with McCartney & Ip Si Kei (2018) that attendance is key factor in determining festival success. Levels of involvement was also high as Food/Market place vendors (20.8%) and 18.8% as performers and artists while only 5.7% were indifferent (Figure 3 and Plate 2). Tao et al. (2020) asserted that community members could participate in the festival as audience/spectators, performers, vendors, organizer/planners who are indispensable in the production of the festival.

**Figure 2: Are you involved in Osun Osogbo Festival?**

**Figure 3: Residents Involvement in Osun Festival**

**Plate 2: Residents participate as market place vendors in the Osun Osogbo Festival.**

### **3.2. Residents Perception of Osun Festival**

The mean value of residents' perception of Osun festival ranges from 4.39-4.25. Opinions that Osun festival is an important event in the community had the highest mean (4.39), followed by Osun festival provides opportunities for residents to participate in cultural activities (4.36) while Osun festival enhances the community's sense of belonging had the least mean value of (4.25) indicating their strong agreement as shown in Table 2. Huong & Lee (2017) discovered that local residents with strong ties to their community had positive perceptions of tourism's impacts in terms of social, environmental, economic, and local benefits, resulting in increased support for tourism development. Also, Savinovic et al. (2012) reported that festival offers residents and visitors the opportunity to participate and witness festival rituals and activities. This helps to boost the region's tourism attractiveness and provide the residents and tourists with immersive experience.

**Table 2: Residents Perception of Osun Festival**

Residents Perception	SA %	A %	N %	D %	SD %	Mean	St. D	Remarks
Osun Osogbo festival is an important event in the community	57.0	33.3	3.9	3.1	2.6	4.39	0.90	SA
State of community involvement in Osun festival is satisfactory	44.0	41.4	12.2	0.8	1.6	4.25	0.81	SA
Osun Osogbo festival promote the positive image of the community	45.1	43.2	7.0	2.3	2.3	4.26	0.87	SA
Osun festival provides opportunities for residents to participate in cultural activities	50.0	39.8	7.6	1.6	1.0	4.36	0.77	SA
Osun festival enhances the community's sense of belonging	43.2	45.8	6.3	2.3	2.3	4.25	0.85	SA

### 3.3. Social Impacts of Festival

Most of the respondents strongly agreed that festival tourism in Osun Osogbo world heritage site contributes to the community's cultural enrichment, the festival positively influenced the state of cultural preservation in the community, Osogbo festival fosters social interaction between the residents and tourist with mean scores of 4.38, 4.25, 4.21 respectively (Table 3). This is in agreement with Liu et al. (2019) that festival provide opportunities for individuals to engage in cultural interaction and contributes to community cultural enrichment. The results also reflects the findings of Olatunmile (2019) that connection to heritage is crucial for maintaining a cohesive and sustainable society, reinforce their cultural identity and strengthen their sense of belonging. Woosnam et al. (2015) assert that the festival strengthens social cohesion and enhances community relationships as this encourages and fosters togetherness among the residents as they celebrate their cultural heritage.

**Table 3: Social Impacts of Festival Tourism**

Social Impacts	SA %	A %	N %	D %	SD %	Mean	St. D	Remarks
Osogbo festival encourages residents to engage in cultural dialogue with tourist	33.3	49.5	13.8	1.3	2.1	4.10	0.83	A
Osogbo festival fosters social interaction between the residents and tourist	37.8	42.9	10.9	1.3	0.8	4.21	0.75	SA
Osun Osogbo festival promotes cultural exchange between residents and tourists	36.5	44.5	15.6	0.8	2.6	4.11	0.88	A
The state of cultural preservation in the community is positively influenced by the Osun Osogbo festival	51.0	34.1	5.2	8.3	1.3	4.25	0.97	SA
Osun Osogbo festival contributes to the community's cultural enrichment	46.9	47.7	2.9	1.8	0.8	4.38	0.70	SA
The state of social cohesion in the community is improved due to Osun festival	34.4	48.2	9.4	3.1	4.9	4.03	1.00	A

### 3.4 Factors Influencing Tourism Social Sustainability

Economic benefits influence residents' perceptions of the social sustainability of tourism at the Osun festival (4.22), the level of community involvement in the festival's planning and organization (3.97), and disharmony between residents and tourists can affect tourism sustainability (3.89) as revealed in table 4. This is in agreement with Muresan et al. (2016) that the residents perceived economic benefits and its impacts on their lives influence tourism social sustainability. Likewise, the level of community involvement in the planning and organization of the festival affects residents' perception of its social sustainability was enunciated and supported by the findings of Surjadi et al. (2022) which revealed that by involving local community in planning and decision making will encourage them to promote sustainability and attain positive sustainable residency.

**Table 4: Factors Influencing Tourism Social Sustainability**

Factors	SA %	A %	N %	D %	SD %	Mean	Std.D	Remark
Actions and behavior of tourists during the festival impact residents' perception.	36.5	36.2	14.8	2.6	9.9	3.86	1.22	A
Level of community involvement in the planning and organization of the festival affects residents' perception of its social sustainability.	33.3	45.3	12.8	2.6	6.0	3.97	1.05	A
Residents perception of tourism sustainability is influenced by economic benefits	45.6	40.9	7.8	2.3	3.4	4.22	0.93	SA
Disharmony between residents and tourists can affect tourism sustainability	42.4	34.9	5.5	3.9	13.3	3.89	1.35	A

### 3.5 Enhancement of Tourism Social Sustainability

Table 5 presents the respondents opinion on the enhancement of Tourism Social Sustainability with mean values ranging from 4.50-3.89. Residents in the host community of Osun Osogbo Sacred Grove (OOSG) emphasized and strongly agreed that the preservation and promotion of local culture and traditions with mean value (4.45), empowerment programs (4.44) and agreed to safety and security in the host community of tourist destination as keys for enhancement of social sustainability of tourism at the groove. This corroborates with the findings of Vu Hoang (2021) that there is a close relationship between the conservation and promotion of cultural heritage and tourism development. Also, Bozdoglar (2023) reported that Empowerment programs play a crucial role in promoting tourism social sustainability. This is also consistent with the findings of Bello (2021) that emphasized on the importance of empowerment programs

and training of the residents as it can create employment and entrepreneurship opportunities for them.

**Table 5: Enhancement of Tourism Social Sustainability**

Enhancement of tourism social sustainability in OOSG	SA %	A %	N %	D %	SD %	Mean	St. D	Remark
Local community involvement in decision making helps to promote tourism sustainability	45.8	44.6	6.8	0.8	2.3	4.30	0.82	SA
Empowerment programs enhance tourism social sustainability	52.9	41.1	3.9	1.3	0.8	4.44	0.70	SA
Maximized economic benefits of tourism for the local residents promote tourism	50.8	40.6	5.5	1.8	1.3	4.37	0.78	SA
Preservation and promotion of local culture and traditions promote tourism	56.5	35.7	5.5	0.8	1.6	4.45	0.76	SA
Safety and security in the host community of tourist destination	33.1	45.3	9.4	2.3	9.9	3.89	1.18	A

Furthermore, results of the correlation between resident's involvement in Osun Festival and their socio-demographics characteristics show that there is a significant relationship between the resident's involvement and their religion, origin and years of residency (table 6). This is supported by the findings of the Wang et al., (2021) which emphasizes the influence of religious festival marketing on devout believers and tourists, highlighting the retention of religious rituals' essence and spirit in festivals. Woosnam & Aleshinloye (2015) emphasized the role of the relationship between residents and tourists in explaining perceived impacts of festivals, indicating a potential connection to residents' years of residency.

**Table 6: Relationship between resident's involvement in Osun Osogbo Festival and their socio-demographic characteristics**

Variables	Correlation Value (r)	(Sig; 2-tailed)	Remark
Gender	-0.061	0.236	Not significant

$p < 0.05$

#### **4. CONCLUSION**

The findings of this study add to the existing literature on social sustainability in tourism by investigating the social sustainability perception of the Osun Osogbo festival at Nigeria's World Heritage site. It was found out that Osun Festival is an important event in the communities, which encourage and promote the participation of the residents in the event. Perceptions of the festival's social impacts is high as it contribute to community cultural enrichment and encourage interaction between visitors, residents and management of the grove. The study further revealed that economic benefits and their level of involvement influenced the perception of the residents towards tourism social sustainability. To ensure that this is sustained, the benefits derived from tourism must improve the overall quality of life for residents and have positive economic impact. Preservation and promotion of local culture and traditions, capacity of residents, as well as enlightening them to actively participate more in and benefit from tourism activities can lead to more sustainable practices among residents and improve tourism's social sustainability.

### **Özet**

Spor tesislerini stadyumlar, spor salonları, yüzme havuzları, tenis kortları, bilardo salonları ile bireylerin egzersiz yapmak ve spor müsabakalarını da izlemek üzere bir araya geldiği yerlerden oluşan alanlar olarak tanımlayabiliriz. Bu araştırmanın amacı Türk sporunda spor tesisleri sorununun incelenmesidir. Araştırmada nitel araştırma yöntemlerinden doküman analizi yöntemi tercih edilmiştir. Araştırmada ilk olarak Türk sporunda spor tesisleri sorunu ile ilgili akademik makeleler, tezler, dergiler, gazeteler ve kitap dokümanlarına ulaşıldı ve orijinalikleri kontrol edildi. Daha sonra ayrıntılı inceleme yapılarak araştırma ile alakalı yayınlar belirlendi. Belirlenen dokümanlar okunarak yorumlanmıştır. Spor tesisleri, barındırdıkları yoğun aktivitelerden dolayı yüksek oranda aşınma ve yıpranma yaşamaktadır. Bununla birlikte aydınlatma, havalandırma, ısıtma, soğutma, yetersiz otopark alanları, spor tesislerinin tasarımı, personel yetersizliği ile tesislerin işletilmesinin doğru yapılmaması hem tesislere hem de sporculara ve seyircilere zarar verebilmektedir. İnsanlar spor tesislerini kullanırken hem spor hem de sağlık amaçlı tesislere yönelmektedirler. Ancak teknolojik gelişmelerin tesislerde istenilen şekilde yer almaması, tesislerin yerleşim yerlerinden uzak yapılması, spor tesislerindeki dağılımının adil bir şekilde olmaması, temizlik ve hijyen durumunun yetersiz olması, tesislerde kütüphane, kantin, ilk yardım odaları vb. olanaklarının yetersiz olduğu belirlenmiştir. Son yıllarda ülkemizde devletimizin katkılarıyla önemli spor tesisleri yapılmış ve birçok sporcunun yetiştirilmesine katkı sağlanmıştır. Ancak, tesis sayısının artması, antrenör ve yönetici görevlendirilmesinin yapılmasına rağmen tesislerin planlanması, işletilmesi ve kullanılmasında istenilen seviyeye ulaşamamıştır. Spor kulüpleri de tesisleşmede yetersiz kalmaktadır. Sonuç olarak; spor tesislerinin eksikliği bazı bölgelerdeki bireylerin spor aktivitelerine katılamaması, sportif becerilerinin geliştirilememesi ve bu bireylerin dezavantajlı duruma düşmeleri anlamına gelmektedir. Spor tesislerinin azlığı ve ayrılan bütçenin eksikliği bu alanda daha fazla devlet ve özel sektör yatırıma ihtiyaç olduğunu söyleyebiliriz.

**Anahtar Kelimeler:** Spor, Tesis, Spor Tesisi

## **SPORTS FACILITIES PROBLEM IN TURKISH SPORTS**

### **Abstract**

We can define sports facilities as areas consisting of stadiums, gyms, swimming pools, tennis courts, billiard halls and places where individuals come together to exercise and watch sports competitions. The aim of this research is to examine the sports facilities problem in Turkish sports. Document analysis method, one of the qualitative research methods, was preferred in the research. In the research, firstly, academic articles, theses, magazines, newspapers and book documents related to the problem of sports facilities in Turkish sports were accessed and their originality was checked. Then, a detailed review was conducted and publications relevant to the research were identified. The specified documents were read and interpreted. Sports facilities experience high levels of wear and tear due to the intense activities they host. However, illumination, ventilation, heating, cooling, insufficient parking areas, design of sports facilities, lack of personnel and improper operation of the facilities can harm both the facilities, the athletes and the spectators. When people use sports facilities, they turn to facilities for both sports and health purposes. However, it was determined that technological developments were not included in the facilities as desired, the facilities were built far from residential areas, the distribution of the sports facilities was not fair, the cleaning and hygiene conditions were inadequate, and the facilities such as libraries, canteens, first aid rooms, etc. were insufficient. In recent years, important sports facilities have been built in our country with the contributions of our state and contributed to the training of many athletes. However, despite the increase in the number of facilities and the appointment of coaches and managers, the desired level has not been reached in the planning, operation and use of the facilities. Sports clubs are also inadequate in terms of facilities. In conclusion; The lack of sports facilities means that individuals in some regions cannot participate in sports activities, their sports skills cannot be developed, and these individuals become disadvantaged. We can say that there is a need for more state and private sector investments in this area due to the scarcity of sports facilities and the lack of allocated budget.

**KeyWords:** Sports, Facility, Sports Facility

## **GİRİŞ**

Spor ülkemizde milyonlarca vatandaşın hayatında önemli bir rol oynamaktadır. Gerek spor salonlarında, stadyumlarda, okullarda gerekse televizyon kanallarında, gazetelerde ve sosyal medya aracılığı ile insanların önemli bir kısmı sporu takip etmekte ya da spor aktivitelerine katılım sağlamaktadır. İnsanların hem spor aktivitelerine katılım sağlaması hem de sporu takip etmeleri için spor tesislerine ihtiyaç vardır. Spor tesislerinin olmadığı yerlerde birçok spor aktivitesi yapılamamaktadır. Spor tesisleri bireylerin sağlıklı olması, fiziksel aktivitelere katılım sağlaması ve sosyalleşmesinde önem arz etmektedir. Sporda başarıyı etkileyen en önemli faktörlerden biride iyi şekilde yapılan spor tesisleridir. Spor ancak tesis, eğitim, donanım ve spor organizasyonundan oluşan temel faktörlerin bir arada bulunduğu bir ortamda var olur ve gelişir. Spor tesisi denilince akla sadece antrenman veya müsabakaların yapıldığı spor alanı gelmemelidir. Spor tesisi terimi; eğitim tesisleri, beslenme ve dinlenme sosyal tesisleri, yaralanma ve tedavilerde kullanılacak ilk yardım ve rehabilitasyon merkezleri ile eğitim için gerekli film, video, kütüphane gibi salonları da içerir. Diğer bir deyişle spor tesisi, her türlü spor ve gençlik faaliyetlerinin yapıldığı kapalı veya açık sosyal hizmet amaçlı yapılmış spor tesisi olarak anlaşılmalıdır. Ayrıca spor tesislerinin sporcular için yeterli ve uygun olması, daha fazla ve daha iyi spor tesislerinin yapılması, daha fazla aktivite ve gelişim anlamına gelir (İntegralgroup, 2022). Bir ülkenin sporda başarılı olması eğitim, bilim ve teknolojik gelişmelerin yanında toplumun gelişmişliği ve izlenen politikalarla da ilişkilidir. Bu nedenle ülkeler spora daha fazla eğilerek sporda başarılı olmak için gerekli tedbirleri almalıdır (Yaman Yılmaz ve Algün Doğu, 2021). Spor tesisleri ve yapımı teknolojinin ilerlemesine paralel olarak gelişip değişmektedir (Bilgin, 1990). Spor tesislerinin dünyada yayılması ile birlikte ihtiyaçların artması ve bunun doğal sonucu olarak çok amaçlı işletmelerin yapımı, verimli kullanım açısından kaçınılmaz olmuştur. İnsanlar hem spor hem de sağlık amaçlı tesislere yönelirken, aynı işletme içinde farklı bireysel ve toplumsal ihtiyaçların giderilmesi gereği ortaya çıkmaktadır (Ceyhun, 2008). Nacar (2011) 'a göre; sporun toplumda önem kazanması ve yayılması bununla birlikte devamlı başarıların elde edilmesinde sahip olunan tesislerin işletilmesi, nitelikleri, nicelikleri yeterlilik ve doğru politikalara da bağlıdır. Spor eğitimi veren kurumlar, spor tesislerinin planlanması ve kapasitelerinin artırılması, şüphesiz ki spor eğitim kalitesini artıracaktır. Spor eğitimi veren kurumlarda, spor tesislerinin varlığı o kurumun performansında önemli bir yer tutar. Ayrıca spor tesisleri bir kurumun toplum karşındaki imajını belirler. Bu nedenle tesisleşmenin kulüpler ve sporcular üzerindeki etkisinin büyük önem taşıdığı ve ülkelerin sporcu yetiştirmek için yaptığı yeniliklerin tesisleşme ile başladığı

sonucuna varılmaktadır. Günümüzde her ilde ve ilçede futbol sahaları bulunmaktadır. Bunların elbette ki kapasitesi ve kalitesi tartışılabilir. Ancak diğer spor dallarında bu kadar yaygın bir tesis yapılanması yoktur. Futboldaki tesis yapılanması konusunda ise kapasite ve kalite konusunda sorunlar bulunmaktadır. Avrupa'da çok büyük kapasiteli ve kaliteli stadyumlar bulunurken, Türkiye'deki kapasitesi yüksek ve kaliteli stadyumların sayısı bir elin parmaklarını geçmeyecek kadar azdır. Ancak onlarda da sorunlar yok değildir. Futbol tesislerinde devlet yardımları yapılmaktadır. Anadolu kulüpleri olarak tabir edilen küçük takımların spor tesislerinde devlet yardımı ile son yıllarda modern tesisleşmeye sağlanmaya başlanmıştır. Tesislerin kapasitesinin yüksek olması ve kalitelerinin iyi olması, futbol izleme keyfini artıracığı gibi güvenlik açısından ve şiddet olaylarının önlenmesi açısından da önemlidir. Dünya kupası müsabakalarına talip olan Türkiye'nin bu noktada nicelik ve nitelik olarak yetersiz olan başta stadyumları olmak üzere tüm spor dallarındaki tesislerin iyileştirilmesi gerekmektedir (Gürsoy, 2014). Bu araştırmanın amacı Türk sporunda spor tesisleri sorununun incelenmesidir.

## **MATERYAL VE METOT**

Araştırmada nitel araştırma yöntemlerinden doküman analizi yöntemi tercih edilmiştir. Araştırmada ilk olarak Türk sporunda spor tesisleri sorunu ilgili akademik makaleler, tezler, dergiler, gazeteler ve kitap dokümanlarına ulaşıldı ve orijinallikleri kontrol edildi. Daha sonra ayrıntılı inceleme yapılarak araştırma ile alakalı yayınlar belirlendi. Belirlenen dokümanlar okunarak yorumlanmıştır.

## **BULGULAR**

Bugün tesisleşme anlamında kulüpler önemli adımlar atmaktadırlar. Bir kulübün varlıkları açısından böylesine yatırımlar, uzun vadede önemli menfaatler sağlayacaktır. Sportif amaçlı komplekslerle ilgili olabileceği gibi (stadyum, spor sahası, antrenman sahası, kamp tesisleri vb.), sosyal ve idari amaçlı (dernek binaları, yönetim merkezleri, sosyal tesisler vb.) da olabilmekte. Ancak başta yeni stadyumların inşası ve renovasyonu olmak üzere uzun yıllara yayılan ve büyük bütçeler gerektiren bu tür projeler, beraberinde ciddi bir ek finansman ihtiyacını getirmektedir. Operasyonel gider bütçesinde iki yakası bir araya gelmeyen, faiz ve kur farkı gibi finansal giderlerin ağır yükünü taşıyan, gelir projeksiyonlarında işlerin sık sık beklendiği kadar rayında gitmeyebildiği bir ortam oluşturmaktadır (Sezgin, 2016).

Özen ve ark. (2012), arařtırmalarında Türk spor yönetiminde yerel yönetimlerin spora tesis ve malzeme olarak katılımlarının oldukça az olduđu, sporu yaygınlařtırma çalıřmaları için yeterli olanaklara sahip olunmadığı, Berkant ve Hekimođlu (2021), arařtırmalarında sporcu yetiřtirilmemesinin en önemli nedenlerinin tesis yetersizliđi ve malzeme eksikliđi olduđunu, Özer ve Dikmen, (2020), arařtırmalarında bireylerin tesislerden yeterince yararlanamadığını, Güler ve Ekinci (2021), spor tesislerinin temininde sorunlar yařandığını, Tekin ve ark. (2020), tesislerin olmamasının fiziksel aktivitelere katılıma engel durumların olduđunu ifade etmişlerdir. Spor tesisleri ile ilgili bir diđer sorun ise Devletin mülkiyetindeki spor saha ve tesislerinin talepte bulunulması halinde isteyen yahut daha güçlü olan spor kulübüne tahsis edilmesi, kiralanması, kullanım hakkının uzun süreli devredilmesi, aynı spor branřında faaliyet gösteren diđer kulüpleri zor durumda bırakmaktadır. Zira kullanım hakkını eline geçiren kulüp diđer kulüplerin bu spor saha ve tesislerinden yararlanmasına izin vermemekte ya da işin ticaretini yaparak ve tesis bakımından tekelleřerek devletin belirlediđi meblađdan daha yüksek kullanım bedeli istenmektedir (İmamođlu ve ark., 2007). Bu durum ise spor tesisleri olmayan spor kulüplerini sıkıntıya sokabilmektedir. Ayrıca, farklı kamu kurumlarına ait spor tesislerinin ortak kullanımı ve mesai saatleri dışında hizmet verilmemesinde de sıkıntılar yařanmaktadır. Bu nedenle, spor tesislerinin bölgesel ve branřlar bazında dengeli dađılımını ve etkin kullanımını sađlayacak tesis politikalarının geliřtirilmesi ihtiyacı bulunmaktadır (T. C. Kalkınma Bakanlığı, 2014). Demiröz (2009), tesislerde yapılan sportif organizasyonların, işletmecilik boyutları ve yönetim fonksiyonları açısından, planlama, organize etme, yürütme, denetim ve kontrol süreçlerinin antrenör ve sporcuların beklenti ve ihtiyaçlarına cevap veremediđi, spor tesislerinde aktivite yapılması için verilen sürenin ve kişilerin boş zamanlarında spor yapma isteđi ile tesislerin gün içinde açık kalma ve uygun ortam oluřturabilme uyumunun yetersiz olduđunu belirlemiřtir. Çiçek (2022), arařtırmasında tesislerin kütüphane, internet, kantin, tv odası, yönetici, sađlık görevlisi, masör, sađlık kabini, ilk yardım odaları vb. olanaklarının ise yetersiz olduđunu belirlemiřtir. Çelik (2018), arařtırmasında temizlik ve hijyen durumunun, saha ve zeminin, spor malzemelerinin, sađlık kabini ve ilk yardım odalarının, sosyal aktivite alanlarının ve engelli sporculara yönelik tesislerin yeterliliđinin antrenör ve sporcuların beklenti ve ihtiyaçlarını karřılamadığı belirlenmiştir.

## **TARTIŞMA VE SONUÇ**

Sporu oluşturan bileşenlerden biri de spor tesisleridir. Toplumla en iyi şekilde spor hizmeti verilmesinde spor tesislerinin niteliği önemli bir kriterdir. Sporun yaygınlaştırılmasında spor tesislerinin sayısı ve çeşitliliğinin, toplumun spora ilişkin beklenti ve ihtiyaçlarının belli bir politika çerçevesinde ele alınması gerekmektedir (Karataş ve ark., 2011).

Ülkemizde alt yapıdan sporcu yetişememesinin temel nedeni olarak tesisleşme yetersizliği olduğu görülmektedir. Antrenman yapılacak tesislerin azlığı, var olanların da yeterli düzeyde olmadığını söyleyebiliriz (Çevik ve Onağ, 2019). Halkın ilgi duyduğu halde spor yapmasına engel teşkil eden faktörlerin başında yeterli spor tesisinin olmamasının geldiği tespit edilmiştir (Karataş ve ark., 2011). Ünal (2001), Çanakkale’de yaptığı çalışmada, Şahin (2007), Karaman ilindeki yaptığı çalışmada, sporu yapmak istediğiniz halde spor yapmaya mani olan haller nelerdir sorusuna bölgede istenilen branşa ait tesisinin bulunmamasının neden olduğu cevabı verilmiştir. Yavaş ve ark. (2017); Günakan ve Ataçocuğu (2021), ülkemizdeki tesis sayısı ihtiyacı karşılamada yetersiz olduğunu belirlemişlerdir. Kubat ve Yıldız (2022), antrenörlerin kulüplerin tesislerine ilişkin tesisleşme ile ilgili problem yaşadıkları ve çözüm olarak fonksiyonel tesisler inşa edilmesini, tesislerde beslenme ve barınma imkânlarının sağlanmasını, tesislerin içinde sporcuların öğrenim görecekları okulların açılmasını önermişlerdir. Spor tesisleri sayısının artması, planlı bir şekilde organize edilmesi ile sporcu sayılarında da artış olacaktır. Örnek olarak; Türkiye Tenis Federasyonu Başkanı Cengiz Durmuş lisanslı sporcu sayısı 2013'te 27 bin civarında iken 2023'te 102 bin 352'ye kadar yükseldiğini, Türkiye Tenis Federasyonu tarafından 600'u ulusal, 200'ün üzerinde turnuva düzenlenirken, ülke genelinde oteller, kulüpler, belediyelerin tesisleriyle amatör ve profesyonel olarak binlerce kort bulunduğunu belirtmiştir (Zeyrek, 2023). Ülkemizde sporun şimdiye kadar yeterince yaygınlaştırılmamasındaki faktörlerden birisi, spor tesislerindeki dağılım ve kalite eksikliği ile bunların optimal ölçülerde kullanılmamasıdır. Tesisler planlanırken bölgelerarası nüfus artışı, coğrafi konum, iklim ve demografik yapıyı dikkate alan ulusal düzeyde spor tesis politikaları oluşturulmadığından bölgesel ve spor branşları bazında dengesizlikler ortaya çıkmıştır (T. C. Kalkınma Bakanlığı, 2014). Sonuç olarak; ülkemizde Devletimizin katkılarıyla son zamanlarda önemli spor tesisler yapılmış ve birçok milli sporcu, profesyonel sporcu ve amatör sporcunun yetiştirilmesine katkı sağlanmıştır. Tesis sayısının artması ile birlikte vatandaşlarımızda bu tesislerde spor yapma imkânına kavuşmuştur. Tesis sayısının artması, antrenör ve yönetici görevlendirilmesi yapılmasına rağmen tesislerin planlanması, işletilmesi ve kullanılmasında

istenilen seviyeye ulařılamamıřtır.Tesisler inřa edilirken, tek tip projeler ile řehirlerin ihtiyaçları dūřunūlmeden tasarlanması, tesislerin yeterli donanıma sahip olmaması, teknolojik geliřmelerin tesislerde istenilen řekilde yer almaması, özellikle yerel yōnetimlerin istekleri dođrultusunda yapılan tesislerin çođunun dođru planlanmadıđı (bōlgede ihtiyaç olmamasına rađmen bir birine çok yakın yerlerde 3 tane yūzme havuzunun yapılması gibi), yapılan tesislerin yerleřim yerlerinden uzak yapılması, tesis yōneticilerinin çođunluđunun spor eđitimi alanında uzman olmaması nedeni ile tesisleri kullanan vatandaşların memnuniyet dūzeylerinin azalmasına ya da tesislerin kullanmamasına neden olmaktadır.Kamu kurumları, yerel yōnetimler, spor kulūpleri, spor kuruluřları spor tesisleri planlamalarını yaparken birbirleriyle iletiřim halinde olmaları, projeler üzerinde fikir alıveriřinde bulunmaları tesislerin kullanımı ve her vatandaşın spor faaliyetlerine katılım sađlamaları açısından önem arz etmektedir.

### **Özet**

Spor kulüpleri, sürdürülebilirliklerini ve uzun vadeli başarılarını sağlamak, diğer kulüplerle rekabet edebilmek ve mali açıdan kâr elde edebilmek için kurumsallaşmaya ihtiyaç duyarlar. Kurumsallaşma, kulüplerin daha profesyonel bir yönetim anlayışı benimsemesini sağlar, kulüplerin işletme süreçlerini daha etkin bir şekilde yürütmesine ve daha etkili kararlar almasına olanak tanır. Bu araştırmanın amacı, ülkemiz futbol kulüplerindeki kurumsallaşmanın mevcut durumunun incelenmesidir. Araştırmada nitel araştırma yöntemlerinden doküman analizi yöntemi tercih edilmiştir. Araştırmada ilk olarak Türk futbolunda kurumsallaşma ile ilgili akademik makeleler, tezler, dergiler, gazeteler ve kitap dokümanlarına ulaşıldı ve orijinallikleri kontrol edildi. Daha sonra ayrıntılı inceleme yapılarak araştırma ile alakalı yayınlar belirlendi. Belirlenen dokümanlar okunarak yorumlanmıştır. Ülkemiz futbol kulüplerindeki kurumsallaşmanın mevcut durumu incelendiğinde, kulüp yönetimlerindeki kişilerin alanlarında uzmanlaşmamış, görev, yetki ve sorumluluk alanları ile ilgili bilgiye sahip olmadıkları, kişiye bağlı yönetimlerin yaygınlaştığı, hukuki, mali ve yönetsel sorunların olduğu, kulüplerin gelişimi için sistemli bir planlamanın olmadığı, altyapıya yeterli önemin verilmediği, Türkiye Futbol Federasyonu tarafından alınması gereken tedbirlerin zamanında alınmadığı, sorunların çözümünde futbolun tüm paydaşları ile fikir alışverişinde bulunulmadığı bu sebeplerden kaynaklı futbol kulüplerinin kurumsallaşma çabalarının ideal standartlarda olmadığı belirlenmiştir. Sonuç olarak, Türkiye'deki futbol kulüplerinin kurumsallaşma sürecinde başarılı oldukları söylenemez. Futbol kulüplerinin uzun vadede rakipleriyle mücadele etmesi ve güçlü bir kurumsal yapı için futbol kulüplerinde profesyonel bir yönetim anlayışının benimsenmesi gerekmektedir.

## **INSTITUTIONALIZATION IN FOOTBALL CLUBS**

### **Abstract**

Sports clubs need institutionalization to ensure their sustainability and long-term success, to compete with other clubs and to make financial profits. Institutionalization enables clubs to adopt a more professional management approach, allowing clubs to carry out business processes more effectively and make more effective decisions. The purpose of this research is to examine the current status of institutionalization in football clubs in our country. Document analysis method, one of the qualitative research methods, was preferred in the research. In the research, firstly, academic articles, theses, magazines, newspapers and book documents related to institutionalization in Turkish football were accessed and their originality was checked. Then, a detailed review was conducted and publications relevant to the research were identified. The specified documents were read and interpreted. When the current state of institutionalization in football clubs in our country is examined, it can be seen that the people in club management are not specialized in their fields, do not have knowledge about their areas of duty, authority and responsibility, personal management has become widespread, there are legal, financial and managerial problems, there is no systematic planning for the development of the clubs, and sufficient importance is not given to infrastructure. It has been determined that the institutionalization efforts of football clubs are not at ideal standards due to these reasons, that the required measures are not taken by the Turkish Football Federation in a timely manner, that there is no exchange of ideas with all stakeholders of football in solving the problems. As a result, it cannot be said that football clubs in Turkey are successful in the institutionalization process. In order for football clubs to compete with their rivals in the long term and to have a strong corporate structure, a professional management approach must be adopted in football clubs.

**Keywords:** Football, Institutionalization, Management, Club Management.

## **GİRİŞ**

Futbol, sosyal etkisi ve gençliğe aktardığı kayda değer katkıdan ötürü, bir oyundan daha fazla anlam taşımaktadır. Futbol milyonlarca kişinin ilgisini çekerken, futbol kulüplerinin yönetimleri ise, milyonları temsil etmektedir. Bu nedenle, futbol kulüplerini yönetenlerin, bu kulüpleri en yüksek standartlarda yönetme sorumluluğu bulunmaktadır. Özellikle 1990'lı yılların başından itibaren endüstriyel sürece doğru yönelen futbol, kulüpleri de sportif organizasyonların yanı sıra ekonomik organizasyonlara dönüştürmektedir. Futbolun bu değişen yapısı, kulüplerde “kurumsal yönetim” uygulamalarını zorunlu hale getirmiştir. Kurumsal yönetimin sağlanabilmesi ise; kurum içi hiyerarşisi doğrultusunda doğru planlama, doğru iş bölümü, çalışanlara sağlanacak rahat çalışma ortamı ve onlara verilecek değerle birlikte oluşacak örgüt kültürüne bağlıdır (Yıldız, 2017).Günümüzde futbol oyunu tüm dünyada herhangi bir ticari sektör gibi serbest pazar norm ve kurallarına tabi görülmektedir. Gelecek dönemlerde gerek yönetsel gerekse de ekonomik olarak ayakta kalabilir olmayan herhangi bir spor kulübü futbol dünyası içinde varlığını sürdürmekte güçlük çekecektir. Bu bağlamda, spor kulüpleri çağdaş işletmeciliğin başarı getiren yöntemlerini yürütmek ve kurumsal yönetimin gereklerini uygulamak konumundadırlar (Katırcı ve Uztuğ, 2009).Spor kulüpleri, başka kulüplerle rekabet düzeyinde var olabilmek ve kâr elde edebilmek için kurumsallaşmaya ihtiyaç duymaktadırlar. Kurumsallaşma, işletmelere, çevrede meydana gelen değişimlere uyum sağlamakta kolaylık sağlayabilmektedir. Aynı zamanda kurumsallaşma, işletmenin içyapısında yer alan faktörlere de etki edebilmektedir. Bu faktörler arasında örgütsel bağlılık, örgütsel performans ve iş tatmini de yer alabilmektedir (Kekül ve Genç, 2023). Kurumsallaşmayı sağlamak için gerek duyulan bazı temel ilkeler mevcuttur. Kurumsallaşmayı oluşturan unsurlar profesyonelleşme, formalleşme, otonomi, kültürel güç, saydamlık, sosyal sorumluluk ve tutarlılıktır (Apaydın, 2007).Kurumsallaşma, işletme yapısının belirli ilke ve standartlara göre yeniden yapılandırılması, yönetici ve çalışanların işin ehli kişilerden olması ve işletmenin bilgiye dayalı bir anlayış içinde çalışması demektir (Uzunçarşılı vd., 2000, akt. Şahman ve ark., 2008). Kurumsallaşmada kişilerden çok tüzel kişilik ön plana çıkmaktadır. Diğer bir ifadeyle amaç; bireylere göre bir işleyiş değil, tamamen bireylerden bağımsız olacak şekilde, modern yapıda bir iş ve işleyiş bilinciyle hareket etmek ve bu sistemli organizasyon yapısını; yönetim, tedarik, üretim, insan kaynakları, finans vb. işletmenin fonksiyonlarına yayarak, sistemin tüm organizasyona hâkim kılınmasını sağlamaktır (Taş ve Akdemir, 2005, akt. Kekül ve Genç, 2023).

Spor kulüplerinin idari, mali ve hukuki pek çok sorunu olduğu düşünüldüğünde kulüp yönetiminde yönetişimin geliştirilmesi de bu sorunların çözülmesinde önemli bir yaklaşım olacaktır. Bu, aynı zamanda kulüplerin kurumsallaşması yönünde de atılmış önemli bir adım olacaktır. Kulüpte yönetişim ve kurumsal yönetim ilkelerinin uygulanması, kulüp idaresindeki aksaklıkların hemen tespitinin ve Yönetim Kurulunun harekete geçmesinin sağlanması yanında, oluşan zarar ve ziyanın belirlenmesi, kulübün pay sahiplerinin, paydaşlarla, taraftar/tüketiciyle olan ilişkilerinin koordine edilmesi, yönetim kurulu üyelerinin ve yöneticilerin performans değerlendirmesi, diğer kulüp çalışanlarının kariyer planlaması ve ödüllendirilmesi ile ilgili işlevlerin yerine getirilmesinde önemli sonuçlar doğuracaktır. (T.B.M.M., 2011). Bu araştırmanın amacı, ülkemiz futbol kulüplerindeki kurumsallaşmanın mevcut durumunun incelenmesidir.

## **MATERYAL VE METOT**

Araştırmada nitel araştırma yöntemlerinden doküman analizi yöntemi tercih edilmiştir. Araştırmada ilk olarak ülkemiz futbol kulüplerindeki kurumsallaşmanın mevcut durumu ile ilgili akademik makeleler, tezler, dergiler, gazeteler ve kitap dokümanlarına ulaşıldı ve orijinalikleri kontrol edildi. Daha sonra ayrıntılı inceleme yapılarak araştırma ile alakalı yayınlar belirlendi. Belirlenen dokümanlar okunarak yorumlanmıştır.

## **BULGULAR**

Spor kulüplerinin kuruluş statüleri, farklı üst yapılara karşı sorumluluklarının olması, yapısal ve yasal sorunlar, kulüpler arasında haksız rekabet ve gelir eşitsizliğinden kaynaklanan sorunlar, kurumsallaşma anlayışındaki sorunlar, kişiye bağlı yönetimden kaynaklı sorunlar, maddi gelir elde etmede yaşanan sorunlar ve sportif sonuçlara endeksli olmaktan kaynaklanan sorunlar gibi başlıca nedenlerden dolayı kurumsallaşma sürecinde bir takım sıkıntılar yaşadıkları ortaya çıkmaktadır. Ayrıca UEFA kriterlerinin uygulanması ile başlayan spor kulüplerinde yeniden yapılanma çalışmalarına spor kulüplerine özgü yasal ve kanuni düzenlemeler ile katkı sağlanması gerektiği, kurumsallaşmayı yasalara bağlayarak kulüpler için zorlayıcı bir özellik olarak oluşturulması, spor kulüplerinde görev alacak kişilerin alanlarında uzmanlaşmış, bilgi ve deneyim sahibi olması gerektiği ve başkan veya yönetim kurulunun maddi gücüne dayalı olan kulüp yönetim sistemi yerine sürdürülebilir bir yönetim sisteminin spor kulüplerinde var olması gerektiği görülmüştür (Sönmezoğlu, 2013). Çöten (2007), Türkiye Süper Lig kulüplerini örnek alarak profesyonel futbolun idari ve teknik yapılanmasını analiz

ettiğinde Süper Lig kulüplerinin yönetim etkinliklerini ideal standartlarda olmadıklarını belirlemiştir. Kulüp idari ekibinde yer alan elemanların görev, yetki ve sorumluluk alanları ile ilgili bilgiye sahip olmamalarının örgütte iletişim güçlüklerine yol açtığı, sorumluluk alanlarının ve görev dağılımının açık şekilde belli olmaması sistemli bir işleyişin olmadığını, kulüplerin profesyonel yöneticiler tarafından idare edilmediğini, kulüplerin sistematik bir şekilde planlaması yapılmış amaçlar doğrultusunda hareket etmediğine, kulüp yöneticilerinin görev yaptığı alanlarda uzman olmadıklarını belirlemiştir Ülkemizde de spor kulüpleri kurumsallaşamama nedeniyle hukuki, mali ve yönetsel birçok sorunla karşı karşıya kalmıştır. Birçok spor branşında gelir kaynağı bulmakta sıkıntılar yaşanmakta, amatör düzeyde destek bulmakta zorluklar çekilmesi nedeniyle de halkın spora aktif katılımı sağlanamamaktadır. Bireysel yetkinlik ve kuruluş kalitesi dolayısıyla rekabet açısından eksiklikler ortaya çıkmakta bu nedenle de spor kulüpleri ciddi sıkıntılar yaşamaktadır (T.B.M.M., 2011) Türkiye profesyonel liglerinde yer alan futbol kulüplerinin yönetsel, organizasyon, idari, teknik, sağlık, eğitim, destek kadroları yetersiz oldukları için çok ciddi sorunlar yaşamaktadırlar. Bu sorunlar ise işin nihayetinde sportif boyutta saha içine yansımakta ve başarısız sonuçlar ortaya çıkmaktadır (Öz, 2020).Avşar ve Kurtipek (2024), Galatasaray spor kulübü ile ilgili araştırmalarında başarı için kişilerin öne çıkarılmasından ziyade kurumsallaşmaya yönelik sistemin oluşması gerektiği, kulüp yönetiminde finansal ve yönetsel açıdan kurumsallaşmanın sağlanamadığı sonucuna ulaşmışlardır. Üye sayısının artmasıyla seçilecek bir yönetimin, sorumlulukları tüzükle belirlenmiş ve maaşları genel kurulda açıklanan profesyonel yöneticilerin ve kulüp öz kaynaklarından çıkacak sporcularla elde edilecek katma değeri yüksek sportif başarıların Galatasaray'ın kurumsallaşması için önemli görülmektedir (Avşar ve Kurtipek, 2024).Taştan (2021), araştırmasında profesyonel futbol kulüp yöneticilerinin sportif ve finansal başarısızlıklarının nedenleri ile ilgili yaptıkları açıklamalara ilişkin içerik analizi incelendiğinde katılımcılar, profesyonel futbol kulüplerinin sportif ve finansal başarısızlıklarının nedenlerini sırasıyla %26,52 ile kulüp yöneticilerini, %23,48 ile kulüplerin ekonomik yönetimlerini, %16,67 ile altyapı ihtiyacını ve altyapıdan oyuncu yetiştirmeyi, %14,39 ile Türkiye Futbol Federasyonu tarafından yapılması beklenen ekonomik tedbirleri ve kulüplerin mali denetimlerini, %12,12 ile transferler ile yaşlı ve pahalı transferleri, %5,30 ile sonuncu sırada devlet desteği olarak sıralanmıştır.Biçer ve ark. (2022), araştırmalarında profesyonel futbol kulüplerinin oyuncular, altyapı, menajerler, teknik direktörler, kulüpler ve taraftarlarla sorunlarının olduğu tespit etmişlerdir. Türkiye'deki futbol kulüp yöneticilerinin

başarılı olabilmeleri için sportif başarının yanında birçok unsuru göz önünde bulundurması ve futbolun tüm paydaşları ile sorunlarını en iyi şekilde çözmesi gerekmektedir.

Kurumsallaşmanın ülkemizde ve dünyadaki önemine yapılan vurgu farklı sektörleri de içine alarak her geçen gün artmaktadır. Çünkü kurumsallaşma örgütlerin kendilerini geleceğe taşımalarında ve yer aldıkları sistem içerisinde kendilerini kabul ettirmede önemli bir rol oynamaktadır. Örgütler kurumsallaşarak meşruluk, tahmin edilebilirlik ve istikrar kazanmakta, ayrıca işletme kaynaklarını artırarak çevreye uyum sağlamaktadırlar. Örgütlerin kurumsallaşma sürecinin temelinde, 'biçimsel faaliyet yapısı', 'biçimsel organizasyon yapısı', 'profesyonelleşme', 'yetki devri', 'kültürel güç', 'kurumsal çevreye uyum', 'kurumsal sosyal sorumluluk', 'toplumsal değer ve normlara uyum', 'şeffaflık ve hesap verebilirlik' ve 'biçimsel yapıya uyum' esasları bulunmaktadır. Tarım, sanayi, hizmet vb. sektörlerdeki örgütlerde çıktı; ürün, performans göstergesi; kâr ya da bir buluş, varlıklar; entelektüel sermaye, know-how, şerefiye gibi değerler olurken, spor sektöründe bu unsurlar nispeten farklılaşmaktadır. Sporda çıktı sportif başarıdır. Sportif başarı içinse finansal güç, varlığın sürdürülmesinde gerekli kaynakları elde etmek için faaliyetlerin kârlılıkla sonuçlanması, örgüte bağlı ve uzmanlık sahibi çalışan/yönetici ve sporcuların varlığı gereklidir (Dağlı Ekmekçi ve İrmiş, 2015).

## **TARTIŞMA VE SONUÇ**

Kurumsal sürdürülebilirlikte, futbol kulüpleri sürdürülebilirlik performanslarının artırılması için sürdürülebilirliğin ekonomik, çevresel ve sosyal etkenlerinin tüm stratejik ve operasyonel süreç ve karar mekanizmalarına dâhil etmeleri gereklidir. Ancak, futbol kulüplerinin ekonomik, sosyal ve çevresel kaynakları nasıl kullandıklarını, ne kadar verimli kullandıklarını ya da olumsuz etkileri bertaraf etmek için ne gibi önlem aldıklarını söylemek mümkün değildir (Darama, 2021). Kulüpler, birbirlerine benzeme eğilimi göstererek kurumsallaştıklarını düşünmektedirler. Ancak kulüplerin kurumsallaştıklarını düşünmelerine rağmen finansal durumlarının zararda olması, kurumsallaşma ilkelerini yerine getirmediği sonucunu ortaya çıkarmaktadır. Kulüplerin finansal ve sportif başarısının artırılması için bir iktisadi örgütün yapması gereken kurumsallaşma ilkelerini, kişisellikten uzak, profesyonel kurumsal yönetim anlayışı ile kararlılıkla uygulaması gerektiği değerlendirilmektedir (Taştan ve Donuk, 2021). Kurumsallaşabilen yapı, ortak aklın yönetim ve denetimine giren; sistematik yönetimin hâkim yönetim yapısı hâline geldiği; şeffaflığın, hesap verebilirliğin ve katılımıcılığın ana eksenini olduğu yönetsel örgütlenmeyi tanımlamaktadır. Sporda kamu, federasyonlar, kulüpler, teknik direktörler, sporcular, hakemler, taraftarlar ve medya gibi pek çok aktör ve paydaş

bulunmaktadır. Bunların tamamının fikirlerini aktarabileceği bir üst yönetim mekanizması geliştirilmesi, bütün sorunların yansıtılması yanında; birlikte çözüm bulunması açısından da önem taşımaktadır (T.B.M.M., 2011).

Kulüplerin kurumsal yönetim yapılarını bir an önce oluşturmaya başlamaları gerekir. Kurumsal yönetimin yerleşmesi bir süreçtir. Bu uygulama ile kulüplere etkinlik, şeffaflık, hesap verebilirlik, açıklık, devamlılık gelecektir. Kurumsallaşmanın yolu şirketleşmeden değil, yönetimde evrensel ilkelerin uygulanmasından geçmektedir. Futbol kulüplerinin arzulanan sportif ve mali başarısının elde edilebilmesinin temel şartı futbol kulüplerinin profesyonel yöneticiler tarafından yönetilmesi ve kulüplerin kurumsallaşmasıdır (Uluyol, 2014).Günümüz dünyasında en yaygın spor branşı olarak kabul edilen futbolun, geniş kitlelerin katılımıyla bu varlığını sürdüreceği tüm otoriteler tarafından kabul görmektedir. Futbol yönetim ve organizasyonlarının bilimsel metotlar ışığında, futbol yönetimi uzmanları ve kuruluşları ile birlikte, günümüz şartlarına uygun, geniş katımlı ve paylaşımcı ortamlarda ele alınarak “Modern Futbol Yönetimine” uygun planlanıp değerlendirilmesi, futbolunun gelişerek, yaygınlaşmasının yanı sıra, uluslararası rekabet şansını artırarak, verimlilik esasına dayalı, istihdam ve katma değer yaratarak, kitlelere ulaştırılması gerekmektedir (Devecioğlu ve ark., 2014)Kulüpler, kurumsal değerlerini arttırmak, varlıklarının sürdürülebilirliği sağlamak ve endüstriyel futbolun sağladığı maddi ve manevi yararlardan uzun süreler yararlanabilmek için bu rekabetçi düzen içerisinde öncelikle organizasyon yapılarını sağlamlaştırmak ve rekabete uygun bir hale getirmek zorundadır. Bu nedenle kulüpler verimli ve etkin bir biçimde işleyen iç denetim mekanizmaları oluşturmak ve oluşturulan bu iç denetim mekanizmalarının sağlıklı, verimli ve etkin bir biçimde işletilmesini sağlamak zorundadırlar (Tanış, 2015). Sonuç olarak; Türkiye’deki futbol kulüplerinin kurumsallaşma sürecinde başarılı oldukları söylenemez. Ülkemizdeki futbol kulüplerinde spor yönetimini bilmeyen yöneticilerin çoğunlukta olması nedeniyle kulüp içi çatışmalar yaşanmakta kulüplerin kötü yönetilmesine, etkili kararların alınamamasına ve kurumsal yapılarının zayıflamasına neden olmaktadır. Türkiye'deki birçok futbol kulübü sağlıklı bir kurumsallaşma yapısı oluşturamaması nedeniyle gelir kaynaklarını çeşitlendirememekte ve mali açıdan sorunlar yaşamaktadırlar. Çoğu kulüp harcamalar hakkında üyelerini şeffaf bir şekilde bilgilendirmediği için kulübün imajı olumsuz etkilenmektedir. Kulüplerin altyapılarında sporcu yetişmemesi, hukuki sorunlar, kulüp tüzüklerinin güncelliğini yitirmesi ya da tüzük maddelerinin uygulanmaması, kulüp yöneticilerinin siyasilerin etkisinde kalması da futbol kulüplerinin kurumsallaşma sürecini olumsuz etkilemektedir. Futbol

kulüplerinin uzun vadede rakipleriyle mücadele etmesi ve güçlü bir kurumsal yapı için futbol kulüplerinde profesyonel bir yönetim anlayışının benimsenmesi, finansal denetimlerin ve altyapı yatırımlarının artırılması gerekmektedir.

### **Özet**

Günümüzde inşaat sektörü dünya genelinde trilyon doları bulan önemli bir hacme sahiptir. Bu sektörde, çalışan sayılarının çok yüksek olduğu büyük şirketlerle birlikte, çalışan sayılarının daha az olduğu orta ve düşük ölçekli firmalarda bulunmaktadır. Özellikle orta ve düşük ölçekli şirketler incelendiğinde, yönetim organizasyonlarında ve stok takiplerinde ajanda, not defteri veya excel gibi geleneksel sayılabilecek yöntemlerle yürüttükleri görülmektedir. Bu geleneksel yönetim yaklaşımı günümüzdeki bilişim teknoloji çözümlerinin çok uzağında kalmaktadır. Bu çalışma kapsamında literatür ve piyasadaki ürün olarak kullanılabilen uygulamalar incelenmiştir ve inşaat firmalarıyla ihtiyaç analizi için görüşmeler yapılmıştır. Mevcut kullanılan uygulamalar incelenirken depo stok takibinin tutulması için inşaatta kullanılan yüzlerce malzemenin sisteme tek tek elle tanımlanmasının oldukça zahmetli olduğu gözlemlenmesine rağmen bu problemi çözmek adına derin öğrenme destekli bir uygulamaya rastlanmamıştır. Bu çalışmada orta ve düşük ölçekli firmalar için herhangi bir sistem odası, sunucu gibi bir planlamaya ihtiyaç olmaksızın web uygulaması üzerinden hizmet alıp firmalarını yönetebilecekleri, ayrıca stok takibini derin öğrenme desteğiyle fotoğraf çekerek hızlı bir şekilde sisteme aktarabilecekleri bir uygulama geliştirilmiştir. Geliştirilen sistemde veri tabanı olarak Firebase kullanılmıştır. Ara yüz Bootstrap kütüphanesi kullanılarak kullanıcı dostu olarak geliştirilmiştir. Stok takibi için geliştirilen derin öğrenme modelinin eğitiminde Python programlama dili ve YOLO-V8 kütüphanesi kullanılmıştır. Web uygulaması fotoğraf eklendiğinde anlık olarak fotoğraftaki demirleri adet bilgisiyle birlikte veri tabanına işlemektedir. Bu sayede malzemelerin tek tek sayılma işlemi için gereken iş gücünün azaltılması sağlanmıştır.

**Anahtar Kelimeler:** İnşaat Otomasyonu, Derin Öğrenme, YOLO-V8, Görüntü İşleme

**CONSTRUCTION MANAGEMENT AND IMAGE PROCESSING BASED  
INVENTORY TRACKING AUTOMATION**

**Abstract**

In Today, the construction sector holds a significant volume worldwide, reaching trillions of dollars. Within this sector, there are large companies with high numbers of employees as well as medium and small-scale firms with fewer employees. Particularly when examining medium and small-scale companies, it is observed that they manage their management organizations and inventory tracking using methods that could be considered traditional, such as agendas, notebooks, or Excel. This traditional management approach falls far behind the current information technology solutions. In this study, applications that can be used as literature and in the market were examined, and discussions were held with construction companies for needs analysis. While examining the existing applications, it was observed that manually defining hundreds of materials used in construction for inventory tracking is quite laborious, yet no deep learning-supported application has been encountered to solve this problem. In this study, an application has been developed for medium and small-scale firms, where they can manage their businesses via a web application without the need for any infrastructure like a system room or server. Additionally, they can quickly transfer inventory tracking data to the system by taking photos with deep learning support. Firebase was used as the database in the developed system, and the interface was developed to be user-friendly using the Bootstrap library. Python programming language and the YOLO-V8 library were used for training the deep learning model developed for inventory tracking. When a photo is added to the web application, it instantly processes the rebars in the photo along with the quantity information into the database. This reduces the manpower required for counting materials individually.

**Keywords:** Construction Automation, Deep Learning, YOLO-V8, Image Processing

## **GİRİŞ**

Endüstri 4.0 ilk olarak 2011 yılında Hannover fuarında ortaya atılmıştır. Bu tarihte n iki yıl sonra, 2013 yılında Almanya’da stratejik girişim alanı olarak belirlenmiştir(L. Da Xu vd., 2018). Dördüncü sanayi devrimi olarak adlandırılan bu gelişme ile endüstrinin farklı alanlarında Endüstri 4.0’a olan ilgi artmıştır. Endüstri 4.0 temel olarak bilişim teknolojileri ile endüstriyi bir araya getirmeye hedef almaktadır. Bu kapsamda 3d yazıcılar(Uygunoğlu vd., 2019), IOT cihazları(UYGUNOĞLU & TOPÇU, 2020), giyilebilir teknolojiler(Akçamete GÜNGÖR, 2018), artırılmış gerçeklik(Shirazi & Behzadan, 2014), yapay zeka(Y. Xu vd., 2022), ve genel olarak yazılım teknolojilerinin endüstri içerisinde sektörüne uygun şekilde kullanılması, endüstrideki farklı sektörler ile bilişim sektörünü bir araya getirmektedir. Bu yenilikçi teknolojilerin kullanılmasıyla birlikte insan gücüne olan ihtiyacın azalması ve verimliliğin artırılması amaçlanmaktadır(Maskuriy vd., 2019). Verimliliğin artırabilmek için ilk olarak endüstrinin dijital bir dönüşüme ihtiyacı olduğu görülmektedir. Günümüzde bazı sektörlerde bu dönüşüme hızlı bir şekilde adapte olabilirken özellikle inşaat sektörü gibi sektörler bu dönüşüme hızlı adapte olamamışlardır(Betül AKBAY vd., 2023). İnşaat sektörü içerisinde birbirini takip eden birçok alt iş sürecini barındıran yönetimsel anlamda takibinin yapılması oldukça karmaşık bir yapıya sahiptir[atıf]. Türkiye ekonomisinde önemli bir yere sahip olan inşaat sektörü günümüz dünyasındaki teknolojinin gerisinde kalmaktadır. Özellikle orta ve düşük ölçekli firmalar kağıt üzerinde veya excel tablolarında kayıt tutmak gibi geleneksel yöntemler kullanarak işletmelerini sürdürürken, etkin bir süreç yönetimi gerçekleştirememektedirler(Betül AKBAY vd., 2023). Etkin bir süreç yönetimi için sektöre ihtiyaçlarına uygun şekilde hazırlanmış otomasyon yazılımlar kullanılması, burada oluşan verimsizliğin önüne geçebilecektir. İnşaat sektöründe işletme süreçlerini etkin bir şekilde yönetebilmek için üretilmiş ücretli yazılımlar bulunmaktadır. Ürün olarak satılan PirCloud(Pir, t.y.), Yapıtaşı Erp(Yapıtaşı Bilgi CRM, t.y.), Imperium(Imperium - İnşaat Yönetim Yazılımı, t.y.), Tekprosis(İnşaat Yazılımı - Tekprosis, t.y.), İnşaat Erp(İnşaat ERP - Uyumsoft, t.y.) ve OPwire(Opwire App, t.y.) yazılımları incelenmiştir. Bu alan yapılmış birçok uygulama olmasının yanında reel sektörde kullanım oranının düşük olması, yapılan literatür araştırmalarında, adaptasyon zorlukları, teknolojik becerilerin zayıf olması, bilişim yatırımının düşük olması gibi sebeplerden kaynaklandığı öne sürülmüştür(Maskuriy vd., 2019). Bu durumda sektör çalışanlarındaki dijital beceri ve adaptasyonun artması için, inşaat sektörü için geliştirilecek uygulamaların kullanıcı dostu ara yüzler ve yapay zeka desteğiyle kullanım kolaylığı sağlaması gerekmektedir. Bu çalışma kapsamında inşaat sektörün ihtiyaçları ve

mevcut yazılımların zayıf olduğu yönleri tespit edilerek, kullanıcı dostu ara yüzlere sahip ve yapay zeka desteğiyle insan iş gücünü maliyetlerini düşürmeyi hedefleyen bir otomasyon yazılımı geliştirilmiştir. Geliştirilen yazılım projelerin gelişiminin raporlanması, ustaların performanslarının izlenmesi, maaşlar, sigorta bilgileri, bütçe yönetimi gibi tüm sürecinin takip edilmesini sağlamaktadır. Web uygulaması olarak geliştirilen bu yazılım NextJS, TypeScript, JavaScript HTML dillerini kullanmaktadır. Ayrıca stok takibi yapılırken gelen inşaat malzemelerinin tespit ve sayım işlemlerinin kayıt altına alınabilmesi için derin öğrenme yöntemleri kullanılmıştır. Günümüzde nesne tespiti için oldukça yaygın kullanılan YOLOv8 kütüphanesi prototip olarak demir bağları için eğitilmiş ve anlık olarak uygulama üzerinden bir fotoğraf yüklenmesiyle resimde bulunan demir bağlarının kaç tane olduğu bilgisini hesaplayıp uygulamadaki stoka ekleyebilmektedir(Hussain, 2023). Bu sayede şantiyeye gelene malzemelerin stok takibi sadece fotoğraf çekilerek hızlı bir şekilde yapılabilecektir.

### **METOT**

Bu çalışmada sektörde faaliyet gösteren cemde inşaat firması ile görüşmelere yapılarak ihtiyaç analizi oluşturulmuştur. Belirlenen analiz ile stok takibi, işçi yönetimi, maaş avans işlemleri, sigorta işlemleri, günlük puantaj, proje yönetimi gereksinimlerinin olduğu tespit edilmiştir. Bu gereksinimleri karşılamak için bir web uygulama geliştirilmiştir. Web uygulaması geliştirilirken backend için NextJs programlama dili frontend için HTML, JavaScript, Css, Bootstrap programlama dilleri ve kütüphaneleri kullanılmıştır. Stok takibi modülünde geliştirilen görüntü işleme işlemleri için Python dili ile YOLO v8 kütüphanesi kullanılmıştır. Geliştirilen uygulamanın mimarisi Şekil 1’de sunulmuştur.

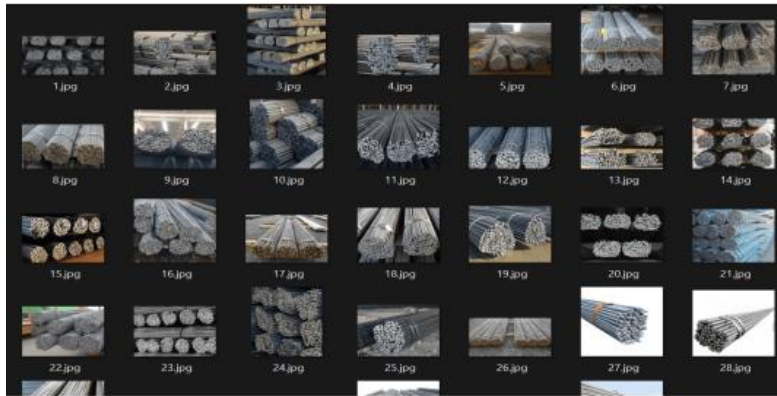

**Şekil 1.** Web uygulama mimarisi

Web uygulamasını mimarisi incelendiğinde oluşturulan web sayfaları backend ile haberleşmektedir. Backend kısmında ise veri tabanı olarak firebase üzerinde veri depolama ve veri okuma işlemlerini gerçekleştirmektedir. Stok takibi modülünden görüntü işleme için bir resim yüklendiğinde, backend kısmından farklı bir port üzerinde python tabanlı çalışan flask uygulamasına resim verisini göndermektedir. Burada önceden eğitilmiş olan model resim üzerinde nesne tespiti yapıp, tespit ettiği nesnelere işaretleyip geri döndürmektedir. Geri dönen resimde tahmin yüzdesi 50'den büyük olanlar saydırılarak ekrana yazdırılmaktadır. Kullanıcı yapay zeka tarafından yapılan sayımı güncelleyebilmektedir. Görüntü işleme akış şeması aşağıdaki Şekil 2'de sunulmuştur.

**Şekil 2.** Görüntü işleme süreç akışı

Görüntü işleme için model eğitimini, web uygulamasında hariç olarak Google Colab platformu üzerinde YOLO V8 kütüphanesi kullanılarak gerçekleştirilmiştir. Eğitim için Google görsellerden bir demir bağı fotoğrafları indirilerek bir veri seti oluşturulmuştur. Oluşturulan veri setinin örnek görselleri Şekil 3'te sunulmuştur.

**Şekil 3.** Örnek veri seti

Toplam 50 tane resim ile oluşturulan veri setinin %270 'i eğitim %30'u test için ayrılmıştır. Model eğitimi 100 epoc sürdürülmüştür. Yaklaşık iki saat süren eğitim sonucunda %99.4'lük

bir başarıml elde edilmiştir ve eğitim loss, percision, recall grafikleri aşağıdaki Şekil 4'te verilmiştir.

**Şekil 4.** Yapay zeka eğitim grafikleri

Çalışmanın devam eden bölümlerinde uygulamanın detayları kullanıcı ara yüzleriyle birlikte anlatılmıştır. Sonrasında sonuçlar ile birlikte değerlendirme yapılmıştır.

### **GÖRÜNTÜ İŞLEME DESTEKLİ İNŞAAT YÖNETİM OTOMASYONU: AKBARET**

Akbaret; inşaat sektöründeki işletme süreçleri etkin bir şekilde yönetilmesine yardımcı olmayı hedefleyen yapay zeka destekli bir web uygulamasıdır. Uygulama kullanılabilirliğini arttırmak için mümkün olduğunca sade ve kullanıcı dostu bir tasarım uygulanmıştır. Uygulama dashboard, kasa, proje, stok ve şantiye modüllerinden oluşmaktadır.

Yönetici uygulamaya giriş yaptığında Şekil 5'te görünen panel ekranıyla karşılaşmaktadır. Bu ekran çalışan sayısı, usta sayısı, şantiye sayısı ve günlük haftalık olarak seçenekleri olan üretim raporlarının bulunduğu özet bilgi veren bir sayfadır.

Şekil 5. Yönetici giriş ekranı

Firmanın finansal olarak bilgilerinin yönetildiği kısım kasa modülüdür. Bu modülde toplam hakediş, toplam gider, toplam kar bilgileri sayfanın üst bölümünde yer alırken, alt kısımda ise bu verilerin girilip yönetildiği alt paneller bulunmaktadır. Oluşturulan ara yüz aşağıdaki Şekil 6'da sunulmuştur.

Şekil 6. Kasa modülü

Uygulamada projelerin yönetildiği ekranda yeni proje ekleme, düzenleme ve silme gibi işlemler yapılabilmektedir. Burada eklenen projeler diğer kasa, usta, dashboard gibi ekranlarda projeye bağlı yönetim süreçleri takip edilebilmektedir. Proje ekranı Şekil 7'de sunulmuştur.

no	ad	şirket	adet	demir kg	fiyat kg	beton m³	fiyat m³	İşlemler
1	kolon	cedde	5	2000 KG	30.000 TL	4000 m³	90.000 TL	Görüntüle
2	25x30 çelik	cedde	120	500 KG	900 TL	200 m³	1000 TL	Görüntüle
3	19x25 çelik	cedde	20	600 KG	8000 TL	500 m³	9000 TL	Görüntüle
4	50 lik köprü kirişi	cedde	200	4000 KG	90.000 TL	4000 m³	90000 TL	Görüntüle
5	70 lik köprü kirişi	cedde	23	400 KG	700 TL	400 m³	900 TL	Görüntüle

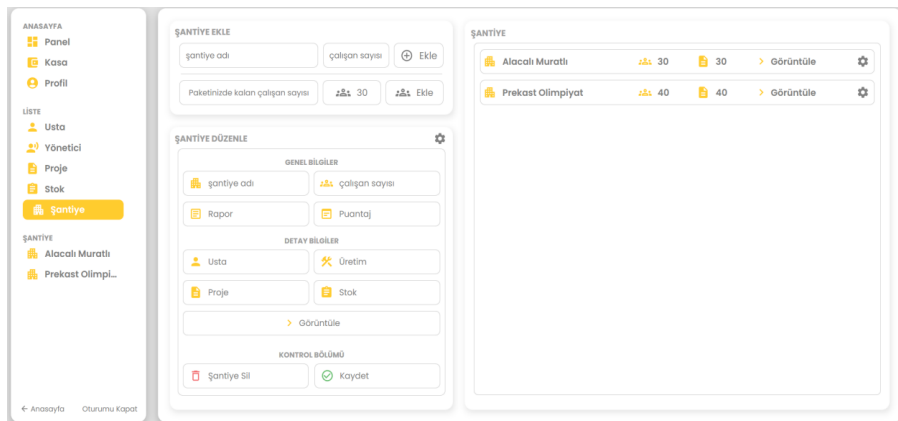

Şekil 7. Proje modülü

Bu çalışmanın ortaya koyduğu en önemli yenilik stok takibi modülünde yapılmıştır. Şekil 8’de sunulan stok takibi modülü kullanıcının eklediği resimdeki demir bağlarını sayarak veri tabana yazmaktadır. Sayılan adetler liste şeklinde kullanıcıya gösterilerek herhangi bir hata olması durumunda tekrar düzenleme olanağı sağlanmıştır.

Şekil 8. Stok takip modülü

Sektörde çalışan firmalar birden fazla şantiyede faaliyet gösterebilmektedirler. Bu sebeple projeler farklı şantiyeler altında yönetilebileceği bir şantiye modülü eklenmiştir. Şantiye ekle, sil, güncelle gibi işlemlerin yapılabildiği şantiye yönetim modülü Şekil 9’da gösterilmektedir.

Şekil 9. Şantiye modülü

Çalışmanın devam eden bölümünde sonuçlar ve gelecekte yapılabilecek çalışmalar için öneriler verilmektedir.

## **SONUÇ**

Bu çalışmada inşaat sektörüne özel günlük ve haftalık puantaj, proje yönetimi, stok takibi, ve şantiye yönetimi, işçi yönetimi için bir web uygulaması geliştirilmiştir. Uygulama sektörden alınan ihtiyaç analiziyle birlikte literatürdeki inşaat sektörünün dijital dönüşüme adaptasyonunun eksikleri değerlendirilmiştir. Sektör çalışanlarının geleneksel yöntemlerden vazgeçip dijital bir yönetim uygulama adapte olmalarını kolaylaştırmak için kullanıcı dostu bir ara yüz tasarımı gerçekleştirilmiştir. Uygulama geliştirilirken NextJs, TypeScript, Html, JavaScript, Css teknolojileri ve veri tabanı olarak firebase kullanılmıştır.

Şantiyede birçok çeşitte mal geldiği ve bu malların stok takibinin yapılması oldukça önemli bir adımdır. Gelen ürünlerin tek tek sayılması, gelen ürün sayısının çok fazla olduğu düşünüldüğünde zahmetli bir iş olmaktadır. Burada oluşan sayma işlemi hızlandırmak için yapay zekadan faydalanılmıştır. Demir bağları tespiti ve sayımı için bir veri seti oluşturulmuştur. Oluşturulan veri seti YOLO V8 ile eğitilmiş ve %99.4 başarımla elde edilmiştir. Eğitilen modelle web uygulaması üzerinden fotoğraf yüklenerek tahmin ve saydırma işlemi yapılabilmektedir. Sayılan demir adetleri kullanıcı onayı ile otomatik olarak veri tabanına yazılarak stok takip işlemi kolaylaşmaktadır.

Çalışmada prototip olarak oluşturulan veri seti sadece demir bağlarını kapsamaktadır. İnşaatta stok takibi yapılan birçok çeşitte ürün vardır. Bu sebeple stok takibi tüm ürünler için yapay zeka desteği sağlayamamaktadır.

Gelecekte yapılacak çalışmalarda veri seti inşaatta kullanılan tüm ürünler için genişletilip YOLO ile tekrardan eğitilirse tüm stok takibi sürecinde yapay zekadan faydalanılabilir. Böylelikle stok sayımı için harcanan iş yükü maliyetleri düşürülebilir.

**Özet**

Monte Carlo benzetimi, Çok sayıda tekrarlanan rastgele örneklemelerle, bir takım nümerik sonuçlar elde etmeye yarayan ve bilimin birçok alanında yaygın olarak kullanılan bir sayısal hesaplama algoritmaları sınıfıdır. Bilgisayar programları, geçmiş verileri analiz etmek ve bir eylem seçimine dayalı olarak bir dizi gelecekteki sonucu tahmin etmek için bu yöntemi kullanır. Yüksek Öğretimde başarılı olmanın önemli kriterlerinden birisi final sınavlarında alınacak notların düzeyidir. Bu çalışmada Düzce Üniversitesi İnşaat Mühendisliği Bölümü'nü kazanan bir öğrencinin meslek derslerinden ne kadar başarılı olabileceği araştırılmıştır. Bu amaca yönelik olarak mezuniyet durumuna gelmiş 20 bölüm öğrencisine, 22 adet meslek dersleri final sınavlarından bekledikleri notlar ile aldıkları notlar arasındaki farkların yüzdeleri sorulmuştur. Alınan yanıtların (+) ve (-) olmak üzere ortalamalarını almıştır. Bu değerler beklenen değerlerden artı ve eksi yönlerde maksimum sapma oranlarına karşılık gelmektedir. Monte Carlo Yöntemi kullanarak Üçgen Dağılım için ayrı, PERT Dağılımı için ayrı olmak üzere iki ayrı simülasyon yapılmıştır. Böylece sınavlardan beklenen notlara ulaşmanın ne oranda mümkün olabileceği istatistiki olarak belirlenmeye çalışılmıştır. Buna ek olarak bir öğrencinin ilgili dersleri aldığı final sınavından beklediği puan tahminlerini tutturma ihtimalleri her bir ders ve dağılım için belirlenmiştir. Sonuç olarak beklenenden daha fazla sapma yaşanan derslere daha çok önem ve süre vererek çalışılması gerektiği, öngörülen sınav sonuçlarının hangi oranda gerçekleşebileceği değerlerine ulaşılmıştır. Benzer değerlendirmeler her bölüm ve ders için yapılabilir. Daha doğruya yakın değerlere ulaşabilmek için daha çok veri üzerinden çalışılması gerektiği açıktır.

**Anahtar Kelimeler:** İnşaat Mühendisliği Öğrenimi, Monte Carlo Simülasyonu, Başarı Düzeyi

**A MODEL FOR DETERMINING THE ACHIEVEMENT LEVEL IN CIVIL  
ENGINEERING EDUCATION**

**Abstract**

Monte Carlo simulation is a class of numerical computation algorithms that are widely used in many fields of science and are used to obtain a number of numerical results with a large number of repeated random samplings. Computer programs use this method to analyze past data and predict a set of future outcomes based on a choice of action. One of the important criteria of being successful in higher education is the level of grades to be taken in the final exams. In this study, it was investigated how successful a student from Düzce University Civil Engineering Department can be in vocational courses. For this purpose, 20 department students, who have graduated, were asked about the percentages of the differences between the grades they expected from the final exams of 22 vocational courses and the grades they received. The averages of the responses received were (+) and (-). These values correspond to the maximum deviation rates in the positive and negative directions from the expected values. Using Monte Carlo Method, two different simulations were made for the Triangular Distribution and separately for the PERT Distribution. Thus, it has been tried to determine statistically how much it is possible to reach the expected grades in the exams. In addition, the probability that a student will meet the score predictions expected from the final exam when he/she takes the relevant courses has been determined for each course and distribution. As a result, it has been reached the values that it is necessary to study by giving more importance and time to the courses with more deviations than expected, and at what rate the predicted exam results can be realized. Similar evaluations can be made for each department and course. It is clear that more data should be studied in order to reach more accurate values.

**Keywords:** Civil Engineering Education, Monte Carlo Simulation, Level of Success

## **Giriş**

Bir üniversitenin temel görevleri; araştırma yapmak, bilim üretmek, üst düzeyde eğitim sağlamak, üretime, uygulamaya ve gelişen teknolojiye uyum sağlayabilecek insan gücünü hazırlamak şeklinde özetlenebilir. Ayrıca, evrensel ve ulusal kültürü ve insani değerleri özümseyen, uygar ve demokrat bireyleri yetiştirmek de bir üniversitenin görevleri arasındadır. Üniversitenin bu yöndeki eğitimi, yalnız günümüz koşullarına uymakla kalmayıp, gelecekteki ilerleme ve gelişmeleri de kapsayacak şekilde oluşturulmalıdır. Üniversiteler özgür düşünen, duyarlı, öğrenen, çağını yakalayıp aşmaya çalışan, üreten, değişime ve gelişmelere açık, uygar ve demokrat bireylerin ve meslek adamlarının yetiştirilmesini sağlamak durumundadırlar. [1] Mühendislik eğitiminde amaç, tasarım yeteneklerinin geliştirilmesi ve tasarım sorunlarının çözülmesidir. Mühendislik, analizden başlayarak toplumun ihtiyaçlarını karşılayan senteze uzanan bir yol olarak görülmelidir. Mühendislik eğitiminin temel ölçüsü, mühendislik kariyeri süresince sürekli üretken olabilen ve gelişmelere açık profesyonel mezunlar yetiştirebilmektir. Mühendislik eğitiminde ana hedef, toplumun ihtiyaçlarına çözüm oluşturabilecek niteliklere sahip elemanlar yetiştirmektir.[2]Mühendisliğin temeli, analiz edilen konunun incelenerek problem yapısının belirlenmesi ve gelişen teknoloji desteğiyle daha önce üzerinde inceleme yapılmamış özgün çalışmaların ortaya konması felsefesi üzerinedir.[3]Mühendislik eğitiminde ana prensip, mühendislik kariyeri boyunca sürekli üreten ve her türlü gelişime açık mezunlar yetiştirmektir. Mühendislik eğitimindeki amaç, toplumun ihtiyaçlarına çözüm oluşturabilecek niteliklere sahip mezunların topluma kazandırılmasıdır.[4]Modern mühendislik eğitiminde, öğrenciye dar kapsamlı teknik bilgi kazandırmak yeterli değildir. Değişen ve gelişen teknoloji toplumunun felsefesi; sadece teknik problemlere yönelip bu problemleri çözme yeteneğine sahip mühendisler yetiştirmek yerine, soruna bir bütün olarak bakabilen mühendisler yetiştirmeye doğru gitmektedir. Mühendislik eğitimi, öğrencinin ufkunu açmalı ve temel problemlerin ve çözüm metotlarının ortaya konmasını gerektirmektedir. Modern mühendislik eğitiminde hedeflenen mühendislik esaslarını ve bu esaslar dahilinde öğrenmeyi öğretmektir.[5]2002 yılında Avustralya’da, Queensland University of Technology’e başlayan öğrencilerin 2006 yılı sonunda akademik başarı durumlarını inceleyen araştırma sonuçları, öğrencilerin sadece % 20’sinin dört yıl sonunda mühendis olarak mezun olduklarını bulmuştur. Aynı gruptaki öğrencilerin % 60’ının ise mühendislik eğitimlerini yarım bıraktıkları ortaya çıkmıştır.[6] Bunun yanında İngiltere’de yapılan bir araştırmanın sonuçlarına göre; mühendislik öğrencilerinin %18’i üniversitedeki ilk yılın sonunda mühendislik eğitimini bırakmaktadırlar. Aynı çalışmada, mühendislik fakültesindeki öğretim üyelerinin %38’inin

mühendislik öğrencilerinin bu başarısızlıklarını, öğrencilerin yetersiz matematik bilgilerine bağladıkları bulunmuştur.[7]Özcan ve diğerleri, Kocaeli Üniversitesi Mühendislik Fakültesinden Bologna Süreci'ne dahil olarak mezun olmuş 3984 öğrencinin veriler üzerinden istatistikî analizler yapmışlardır. Elde edilen bulgulara göre mezunların fakülte ortak ders başarısı ve mezuniyet başarıları, ilişkili ve anlamlı derecede farklıdır. Bölümler arasında fakülte ortak derslerdeki başarı düzeyi farklılık göstermektedir. Mezunların genel mezuniyet başarısının her bölüm için bölüme giriş şekli, cinsiyet, öğretim türü, mezuniyet dönemi gibi değişkenlere bağlı olarak farklı olduğu sonucuna ulaşılmıştır.[8]Güner ve Çomak, Destek Vektör Makineleri yöntemini kullanarak riskli öğrencileri tahmin etmiştir. 2007 yılında Pamukkale Üniversitesi mühendislik fakültesine başlayan 434 öğrencinin üniversiteye giriş sınavı sonuçlarına ait verilerin kullanıldığı araştırma sonuçlarına göre; öğrencilerin matematik, fen bilimleri, Türkçe testlerinin sonuçları ile lise mezuniyet başarı puanlarının, matematik I dersindeki başarılarını tahminde önemli rol oynadığı bulunmuştur.[9]Hasan Burak Ağır ve arkadaşlarının yaptığı çalışmada, Kahramanmaraş Sütçü İmam Üniversitesi Ziraat Fakültesi öğrencilerinin öğrenim başarısını etkileyen faktörlerin belirlenmesi hedeflenmiştir. Öğrencilere yapılan anket çalışmasından elde edilen veriler değerlendirilip, lojistik regresyon analizi kullanılarak başarıyı etkileyen faktörler incelenmiştir. Yapılan incelemelerden elde edilen sonuçlara göre öğrencilerin başarısını etkileyen faktörlerin cinsiyet, mezun olunan lise türü, daha önce bitirilen yüksekokul programı ve annenin çalışma durumu olarak belirlenmiştir.[10] Günümüzde bilgisayar teknolojisinin ve programlarının gelişmesinin bir sonucu olarak, üniversite öğrencilerinin akademik başarılarını etkileyen parametreleri ve riskli öğrencileri belirleyebilmek için son yıllarda yapılan çalışmalarda, makine öğrenmesi yöntemi ve karar destek sistemleri oldukça yoğun olarak kullanılmıştır. Örneğin, iki farklı çalışmada Vandamme vd., [11] Belçika'da, Kovacic [12] Yeni Zellanda'daki üniversite öğrencilerinin akademik performanslarını tahminde belirleyici olan faktörleri "Veri Madenciliği" yöntemini, Chourdury [13] ise "Çoklu Regresyon" yöntemini kullanarak belirlemeye çalışmışlardır. Affendey vd. [14], Bilgisayar Mühendisliği öğrencilerinin akademik performanslarının tahmininde "Naive Bayes" yöntemini kullanarak, ilk dönem alınan bilgisayar yazılım programı dersinin en belirleyici etmen olduğunu bulmuşlardır.Çağıltay ve Tokdemir, yaptıkları çalışmada, farklı öğrenme stillerine sahip kişilerin mühendislik eğitimindeki başarı durumlarını incelemiştir. Çalışmada Atılım Üniversitesi Bilgisayar Mühendisliği Bölümü birinci sınıf öğrencileri ile yapılan bir durum değerlendirmesi yapılmaktadır. Çalışmanın sonuçlarının mühendislik eğitimi veren birimlere, gerek eğitimlerinin genel başarısını artırıcı ve gerekse

öğrencilerin kişisel başarılarını artırıcı yönlendirici bilgiyi sağlaması hedeflenmiştir. Bu çalışmanın sonuçlarına göre, araştırmaya katılan öğrenciler içinde derste başarılı olanların büyük bir kısmının (% 85) David Kolb tarafından mühendislik alanındaki başarı oranının yüksek olduğu belirlenen iki öğrenme stilinden birisine sahip oldukları gözlenmiştir. Oysaki dersin genel başarı oranı % 43'dür. Bu durum David Kolb tarafından belirlenen öğrenme stilleri ile paralellik göstermektedir.[15] Bir kişinin kendi performansı hakkındaki algısını üstbilmiş becerileri bağlamında açıklayan araştırmalarda "kalibrasyon" terminolojisinden yararlanılmıştır. Bir kişinin bir görevi tamamlarken performansına ilişkin başarı tahmini ile gerçekte ortaya koyduğu performans arasındaki uyum derecesi kalibrasyon olarak tanımlanmaktadır.[16-18] Monte Carlo simülasyonu, belirsiz bir olayın olası sonuçlarını öngören matematiksel bir tekniktir. Monte Carlo simülasyonu, tahmininde bir belirsizlik veya rastgelelik unsuru içerebilen olasılık temelli bir modeldir. Monte Carlo simülasyonu, her birinin olasılığı büyük bir rastgele veri örneği havuzundan gelecek şekilde birden fazla olası sonuç sunar. Belirleyici bir tahminden daha net bir resim sağlar. Makine öğrenimi (ML), girdi ve çıktı verileri arasındaki ilişkiyi anlamak üzere yazılımı eğitmek için büyük bir girdi ve çıktı (G/Ç) veri örneği kullanan bir bilgisayar teknolojisi. Monte Carlo simülasyonu ise bir sistemde meydana gelen olası sonuçları tahmin etmek için girdi verisi örneklerini ve bilinen bir matematiksel modeli kullanır.[19]

### **Amaç ve Yöntem**

Bu çalışmada Düzce Üniversitesi İnşaat Mühendisliği Bölümü'nü kazanan bir öğrencinin meslek derslerinden ne kadar başarılı olabileceği araştırılmıştır. Bu amaca yönelik olarak mezuniyet durumuna gelmiş 20 bölüm öğrencisine, 22 adet meslek dersleri final sınavlarından bekledikleri notlar ile aldıkları notlar arasındaki farkların yüzdeleri sorulmuştur. Alınan yanıtların (+) ve (-) olmak üzere ortalamalarını almıştır. Bu değerler beklenen değerlerden artı ve eksi yönlerde maksimum sapma oranlarına karşılık gelmektedir. Monte Carlo Yöntemi kullanarak Üçgen Dağılım için ayrı, PERT Dağılımı için ayrı olmak üzere iki ayrı simülasyon yapılmıştır. Böylece sınavlardan beklenen notlara ulaşmanın ne oranda mümkün olabileceği istatistik olarak belirlenmeye çalışılmıştır. Buna ek olarak bir öğrencinin ilgili dersleri aldığı final sınavından beklediği puan tahminlerini tutturma ihtimalleri her bir ders ve dağılım için belirlenmiştir.

### **Bulgular ve Tartışma**

20 öğrencinin 22 adet meslek dersi için belediklerinden en az ne kadar eksik not aldıkları ve en fazla ne kadar fazla not aldıklarına dair verilerin birleştirilmesi ile oluşturulan sınır değerleri içeren tablo aşağıda Tablo1.'de verilmiştir.

**Tablo 1.** Simülasyonda kullanılacak minimum ve maksimum uç değerler

<b>En az (-)</b>	<b>Dersler</b>	<b>En çok (+)</b>

Tablo 2.'deki beklenen değerler ve Tablo 1.'deki dağılım uç noktaları esas alınarak yapılan Monte Carlo Simülasyonları sonucu elde edilen sonuçlar aşağıdaki gibidir.

**Statik dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 62 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %11,9 dur. Öğrenci %88,1 ihtimalle beklediği notun %19,9 eksisini alacaktır. Bu durumda öğrencinin alacağı not 50 olacaktır.

**Statik dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 62 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5 dir. Öğrenci %95 ihtimalle beklediği notun %19,9 eksisini alacaktır. Bu durumda öğrencinin alacağı not 50 olacaktır.

**Mukavemet 1 dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 73 tür. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,2 dir. Öğrenci %52,7 ihtimalle beklediği notun %22,5 eksiğini, %42,1 ihtimalle beklediği notun %14,4 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 56 olacaktır.

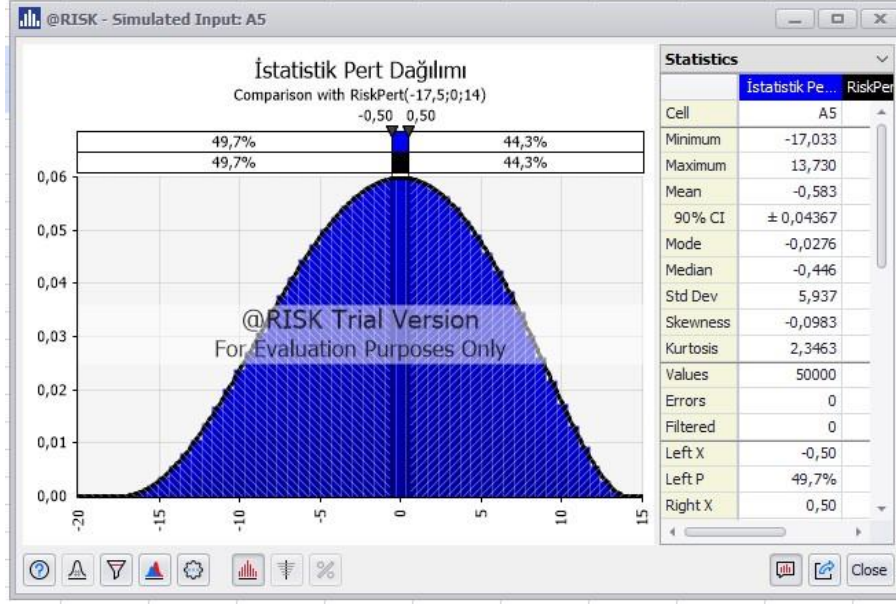

**Mukavemet 1 dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 73 tür. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,3 tür. Öğrenci %58,3 ihtimalle beklediği notun %22,5 eksiğini, %36,4 ihtimalle beklediği notun %14,4 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 56 olacaktır.

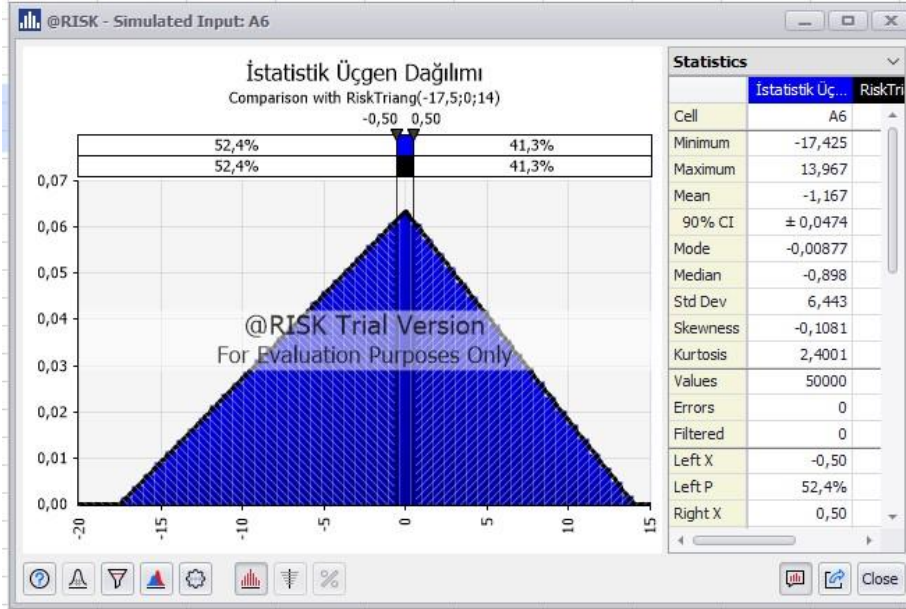

İstatistik dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

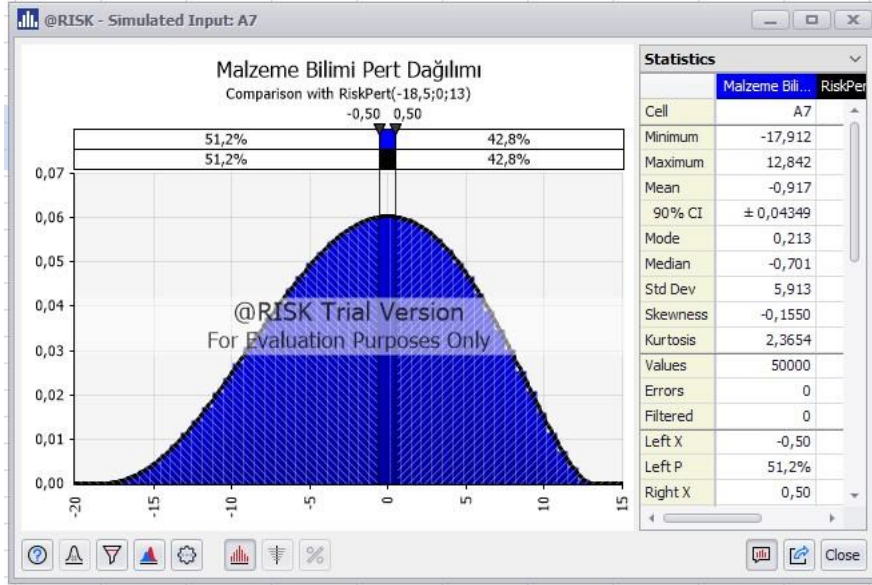

Öğrencinin bu dersten beklediği not 88 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %6 dır. Öğrenci %49,7 ihtimalle beklediği notun %17,5 eksliğini, %44,3 ihtimalle beklediği notun %14 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 73 olacaktır.

İstatistik dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

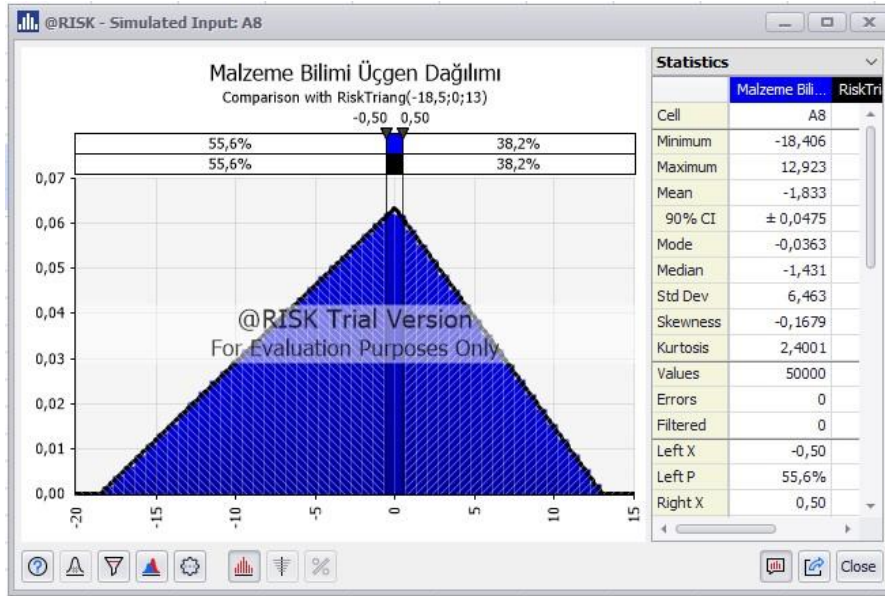

Öğrencinin bu dersten beklediği not 88 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %6,3 tür. Öğrenci %52,4 ihtimalle beklediği notun %17,5 eksliğini, %41,3 ihtimalle beklediği notun %14 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 73 olacaktır.

Malzeme Bilimi dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 80 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %6 dır. Öğrenci %51,2 ihtimalle beklediği notun %18,5 eksisini, %42,8 ihtimalle beklediği notun %13 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 65 olacaktır.

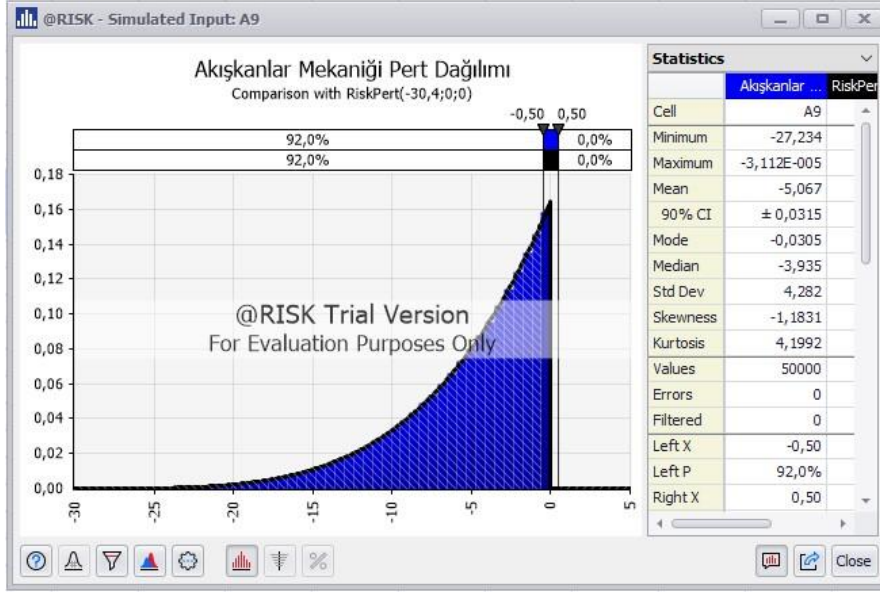

Malzeme Bilimi dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 80 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %6,2 dir. Öğrenci %55,6 ihtimalle beklediği notun %18,5 eksisini, %38,2 ihtimalle beklediği notun %13 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 65 olacaktır.

**Akışkanlar Mekaniği dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 61 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %8 dir. Öğrenci %92 ihtimalle beklediği notun %30,4 eksisini alacaktır. Bu durumda öğrencinin alacağı not 42 olacaktır.

**Akışkanlar Mekaniği dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;**

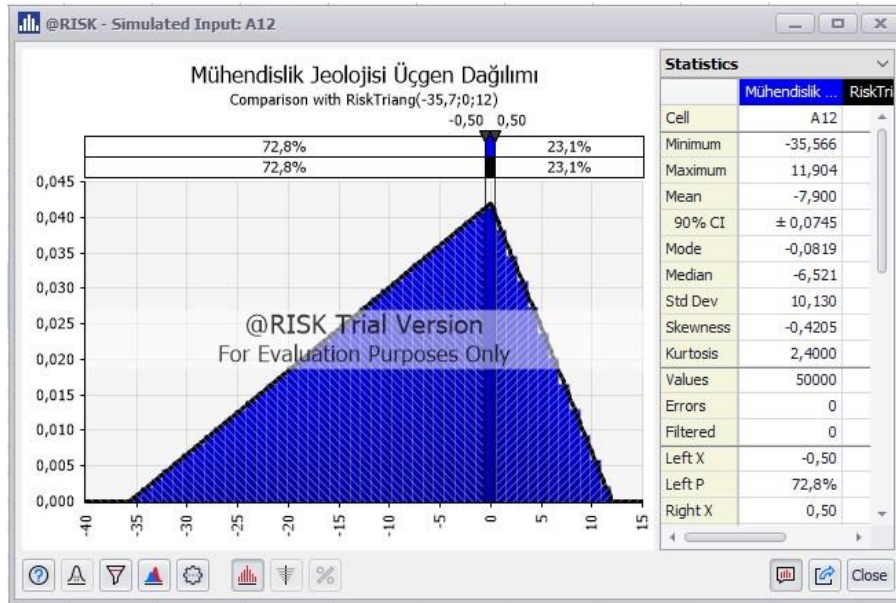

Öğrencinin bu dersten beklediği not 61 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %3,3 tür. Öğrenci %96,7 ihtimalle beklediği notun %30,4 eksisini alacaktır. Bu durumda öğrencinin alacağı not 42 olacaktır.

Mühendislik Jeolojisi dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 48 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %4,4 tür. Öğrenci %61 ihtimalle beklediği notun %35,7 eksikliğini, %34,6 ihtimalle beklediği notun %12 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 31 olacaktır.

Mühendislik Jeolojisi dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 48 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %4,1 dir. Öğrenci %72,8 ihtimalle beklediği notun %35,7 eksikliğini, %23,1 ihtimalle beklediği notun %12 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 31 olacaktır.

Yapı Statiği 1 dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 79 dur. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,1 dir. Öğrenci %45,3 ihtimalle beklediği notun %16,7 eksiğini, %49,6 ihtimalle beklediği notun %20 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 95 olacaktır.

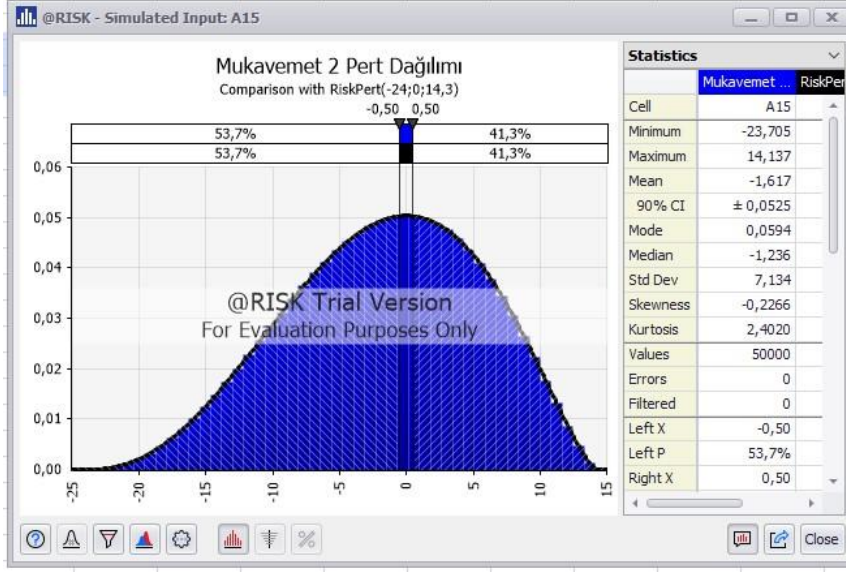

Yapı Statiği 1 dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 79 dur. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,4 tür. Öğrenci %42,8 ihtimalle beklediği notun %16,7 eksiğini, %51,8 ihtimalle beklediği notun %20 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 95 olacaktır.

**Mukavemet 2 dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;**

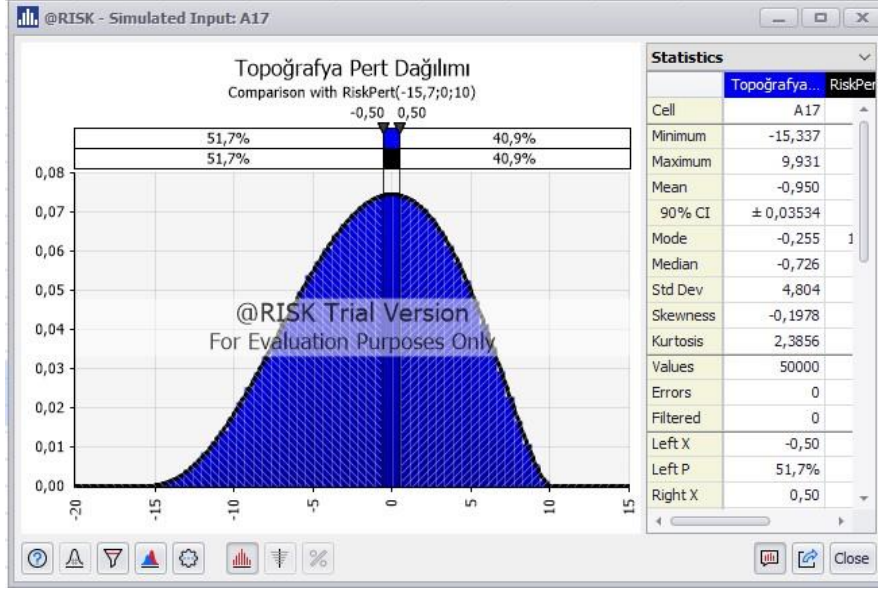

Öğrencinin bu dersten beklediği not 61 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5 dir. Öğrenci %53,7 ihtimalle beklediği notun %24 eksisini, %41,3 ihtimalle beklediği notun %14,3 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 46 olacaktır.

**Mukavemet 2 dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;**

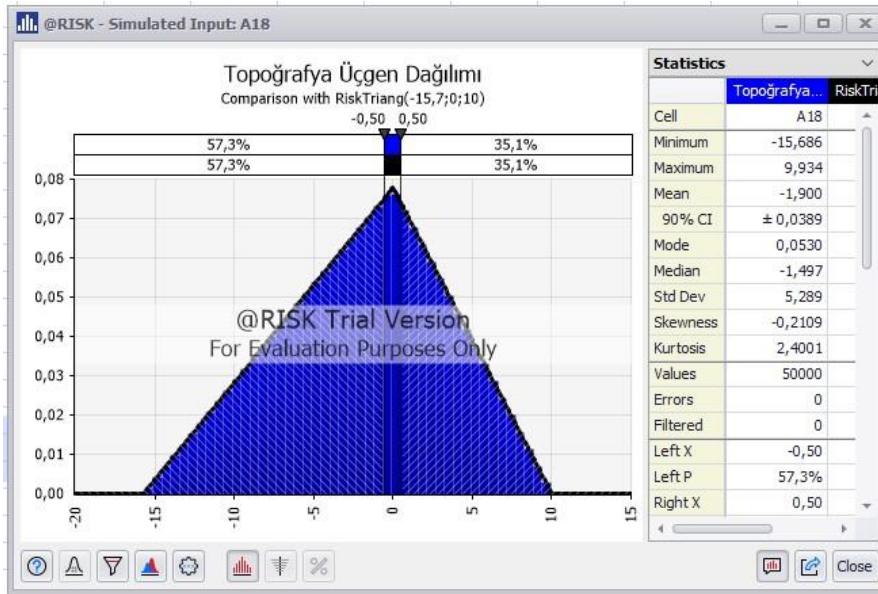

Öğrencinin bu dersten beklediği not 61 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,1 dir. Öğrenci %60,1 ihtimalle beklediği notun %24 eksisini, %34,8 ihtimalle beklediği notun %14,3 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 46 olacaktır.

Topoğrafya dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 58 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %7,4 tür. Öğrenci %51,7 ihtimalle beklediği notun %15,7 eksiğini, %40,9 ihtimalle beklediği notun %10 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 49 olacaktır.

Topoğrafya dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

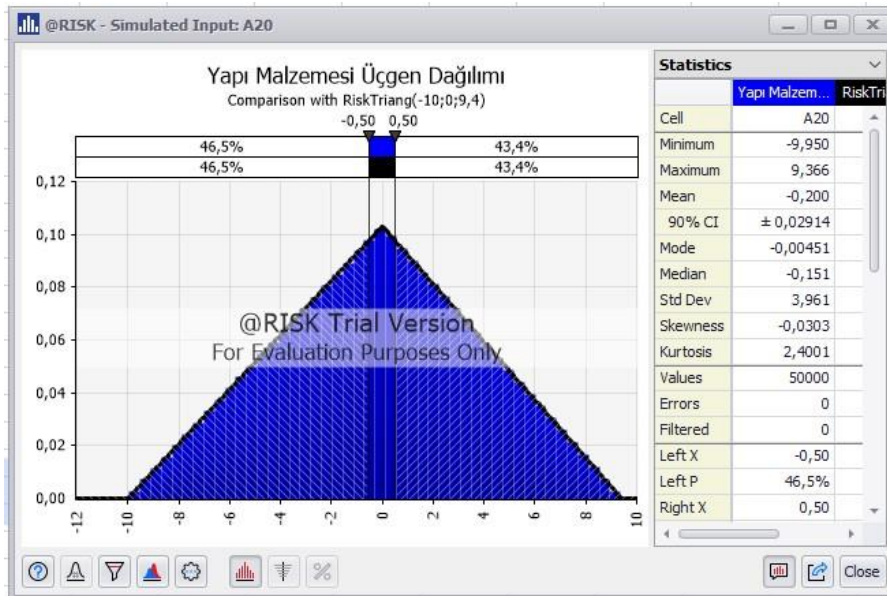

Öğrencinin bu dersten beklediği not 58 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %7,6 dir. Öğrenci %57,3 ihtimalle beklediği notun %15,7 eksiğini, %35,1 ihtimalle beklediği notun %10 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 49 olacaktır.

Yapı Malzemesi dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 57 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %9,7 dir. Öğrenci %45,9 ihtimalle beklediği notun %10 eksisini, %44,4 ihtimalle beklediği notun %9,4 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 51 olacaktır.

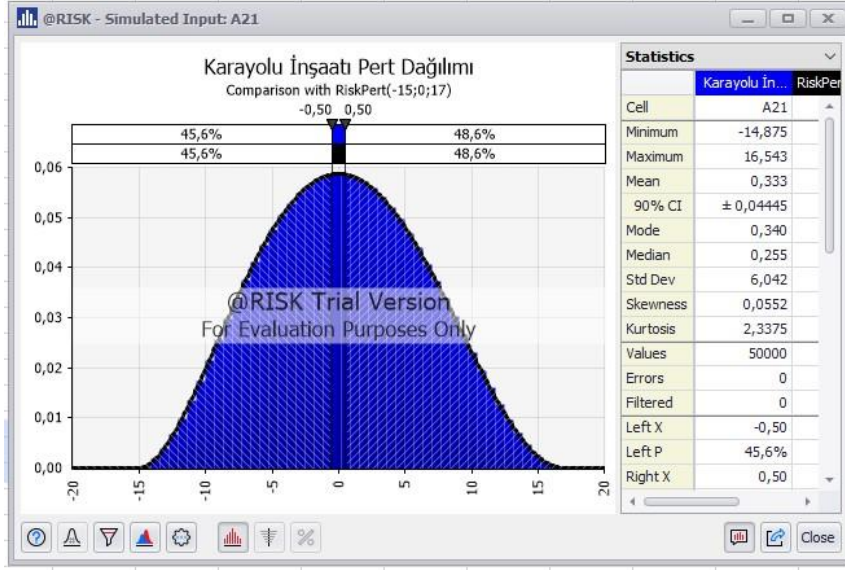

Yapı Malzemesi dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 57 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %10,1 dir. Öğrenci %46,5 ihtimalle beklediği notun %10 eksisini, %43,4 ihtimalle beklediği notun %9,4 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 51 olacaktır.

**Karayolu İnşaatı dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 66 dır. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,8 dir. Öğrenci %45,6 ihtimalle beklediği notun %15 eksliğini, %48,6 ihtimalle beklediği notun %17 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 77 olacaktır.

**Karayolu İnşaatı dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 66 dır. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %6,2 dir. Öğrenci %43,8 ihtimalle beklediği notun %15 eksliğini, %50 ihtimalle beklediği notun %17 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 77 olacaktır.

Yapı İşletmesi dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 65 tir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %6,4 tür. Öğrenci %35,7 ihtimalle beklediği notun %9 eksisini, %57,9 ihtimalle beklediği notun %22,6 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 80 olacaktır.

Yapı İşletmesi dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 65 tir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %6,2 dir. Öğrenci %25,4 ihtimalle beklediği notun %9 eksisini, %68,4 ihtimalle beklediği notun %22,6 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 80 olacaktır.

Hidrolik ve Hidroloji dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

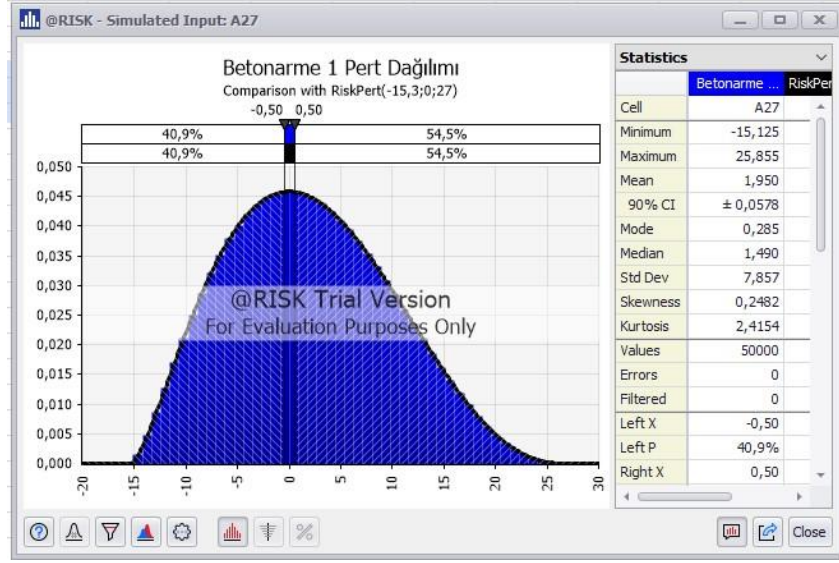

Öğrencinin bu dersten beklediği not 58 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,7 dir. Öğrenci %58,5 ihtimalle beklediği notun %25,6 eksisini, %35,8 ihtimalle beklediği notun %10 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 37 olacaktır.

Hidrolik ve Hidroloji dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

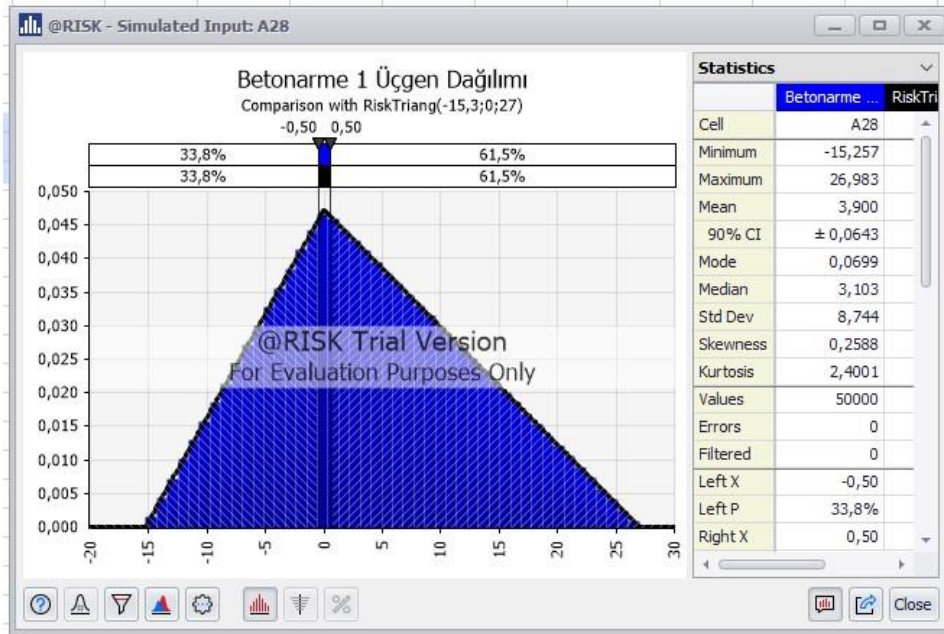

Öğrencinin bu dersten beklediği not 58 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,5 dir. Öğrenci %69,1 ihtimalle beklediği notun %25,6 eksisini, %25,4 ihtimalle beklediği notun %10 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 37 olacaktır.

Betonarme 1 dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 69 dur. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %4,6 dir. Öğrenci %40,9 ihtimalle beklediği notun %15,3 eksisini, %54,5 ihtimalle beklediği notun %27 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 88 olacaktır.

Betonarme 1 dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 69 dur. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %4,7 dir. Öğrenci %33,8 ihtimalle beklediği notun %15,3 eksisini, %61,5 ihtimalle beklediği notun %27 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 88 olacaktır.

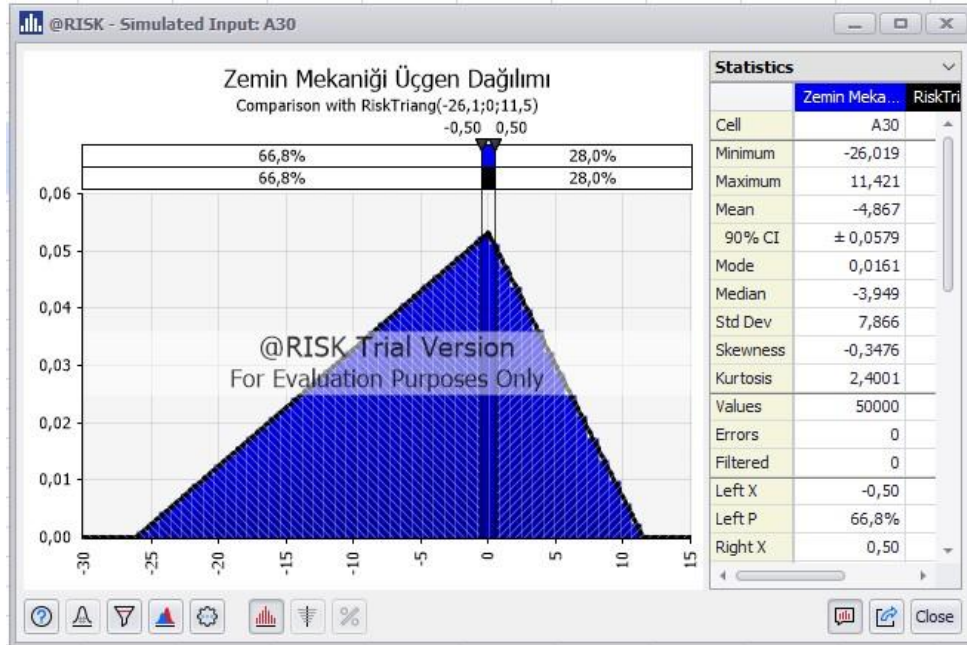

Zemin Mekaniği dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 37 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,3 tür. Öğrenci %57,2 ihtimalle beklediği notun %26,1 eksikliğini, %37,5 ihtimalle beklediği notun %11,5 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 27 olacaktır.

Zemin Mekaniği dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

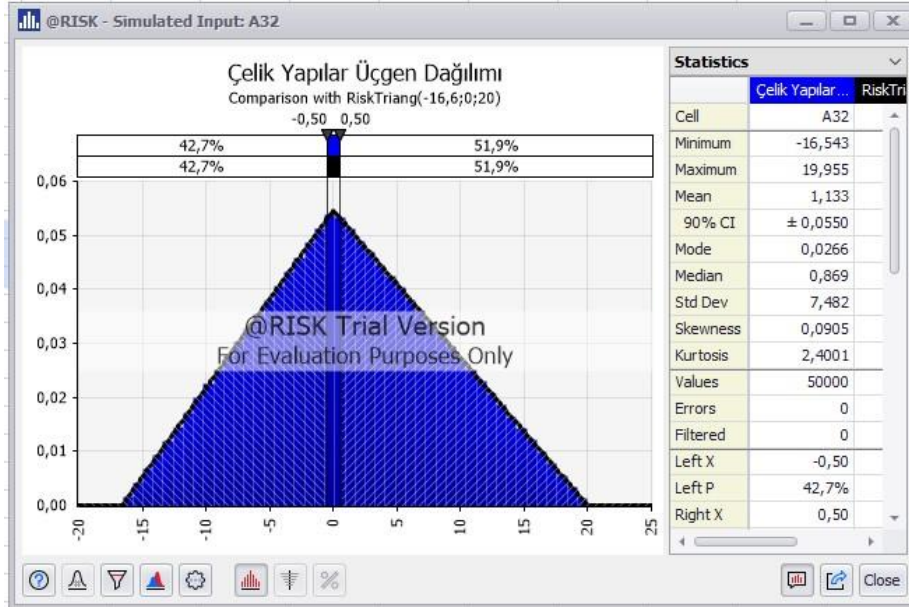

Öğrencinin bu dersten beklediği not 37 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,2 dir. Öğrenci %66,8 ihtimalle beklediği notun %26,1 eksikliğini, %28 ihtimalle beklediği notun %11,5 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 27 olacaktır.

Çelik Yapılar dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 42 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,1 dir. Öğrenci %45,2 ihtimalle beklediği notun %16,6 eksisini, %49,7 ihtimalle beklediği notun %20 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 50 olacaktır.

Çelik Yapılar dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

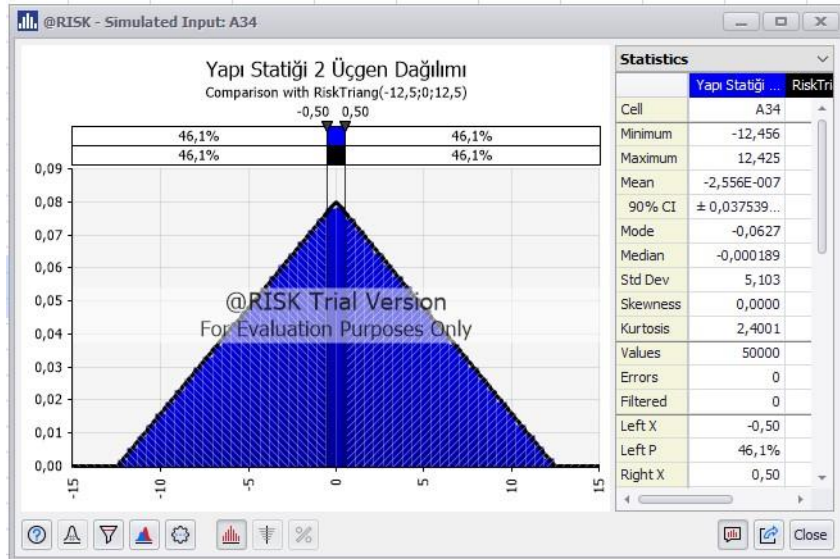

Öğrencinin bu dersten beklediği not 42 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,4 tür. Öğrenci %42,7 ihtimalle beklediği notun %16,6 eksisini, %51,9 ihtimalle beklediği notun %20 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 50 olacaktır.

**Yapı Statiği 2 dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 55 tir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %7,4 tür. Öğrenci %46,3 ihtimalle beklediği notun %12,5 eksikliğini, %46,3 ihtimalle beklediği notun %12,5 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 48 ya da 62 olacaktır.

**Yapı Statiği 2 dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;**

Öğrencinin bu dersten beklediği not 55 tir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %7,8 dir. Öğrenci %46,1 ihtimalle beklediği notun %12,5 eksikliğini, %46,1 ihtimalle beklediği notun %12,5 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 48 ya da 62 olacaktır.

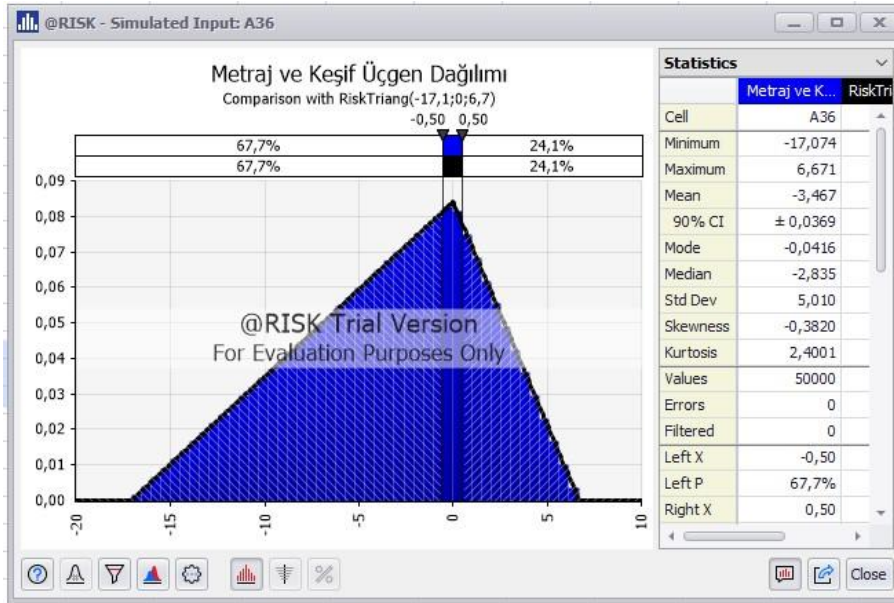

Metraj ve Keşif dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 81 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %8,6 dır. Öğrenci %57 ihtimalle beklediği notun %17,1 eksliğini, %34,4 ihtimalle beklediği notun %6,7 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 67 olacaktır.

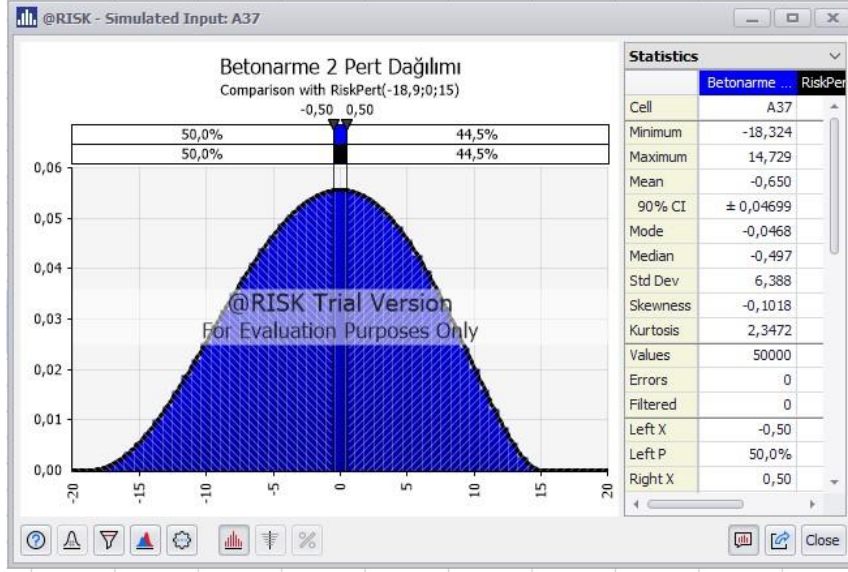

Metraj ve Keşif dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 81 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %8,2 dir. Öğrenci %67,7 ihtimalle beklediği notun %17,1 eksliğini, %24,1 ihtimalle beklediği notun %6,7 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 67 olacaktır.

Betonarme 2 dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

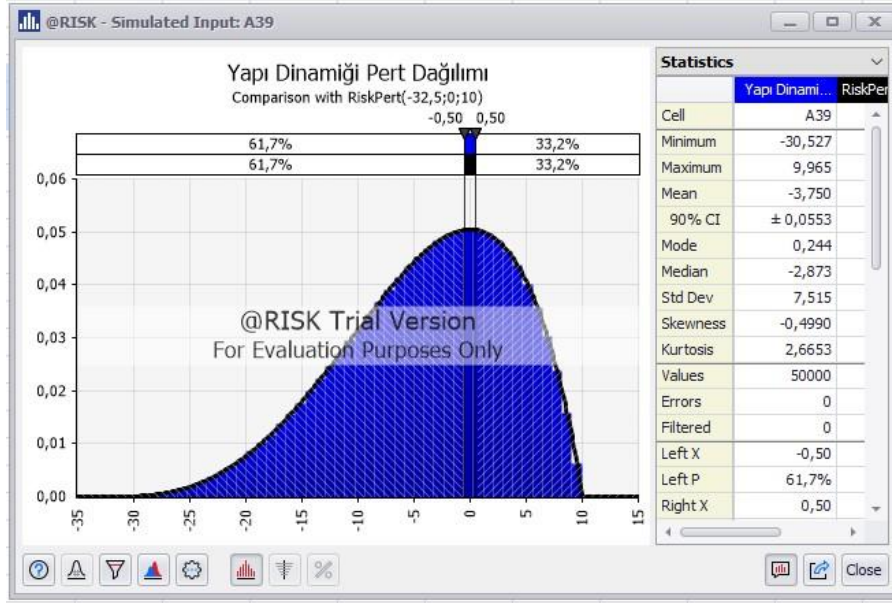

Öğrencinin bu dersten beklediği not 64 tür. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,5 dir. Öğrenci %50 ihtimalle beklediği notun %18,9 eksisini, %44,5 ihtimalle beklediği notun %15 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 52 olacaktır.

Betonarme 2 dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

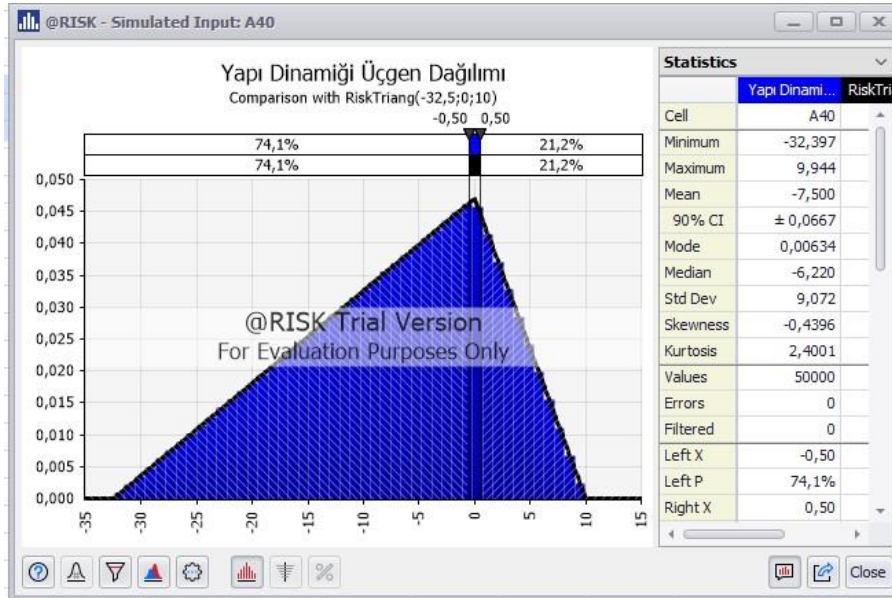

Öğrencinin bu dersten beklediği not 64 tür. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,9 dur. Öğrenci %52,8 ihtimalle beklediği notun %18,9 eksisini, %41,3 ihtimalle beklediği notun %15 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 52 olacaktır.

Yapı Dinamiği dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

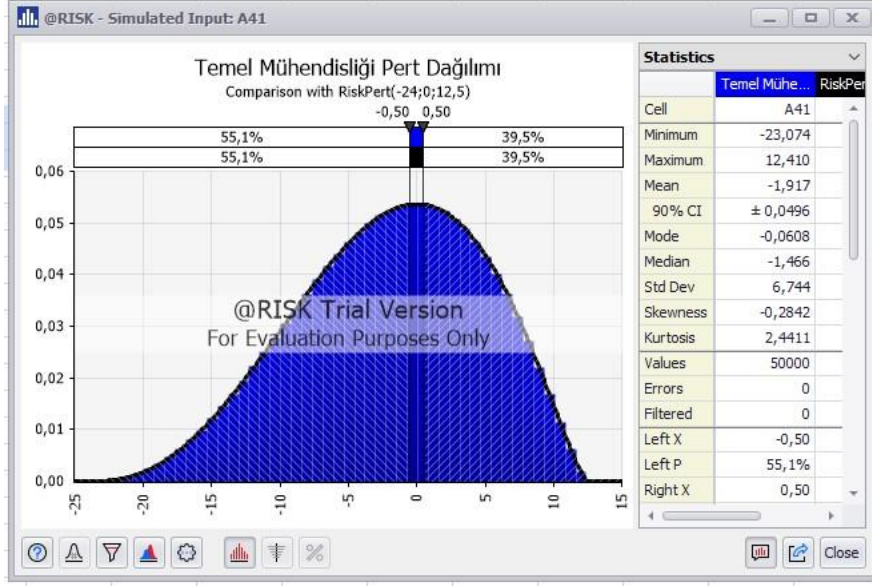

Öğrencinin bu dersten beklediği not 38 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,1 dir. Öğrenci %61,7 ihtimalle beklediği notun %32,5 eksiğini, %33,2 ihtimalle beklediği notun %10 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 26 olacaktır.

Yapı Dinamiği dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 38 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %4,7 dir. Öğrenci %74,1 ihtimalle beklediği notun %32,5 eksiğini, %21,2 ihtimalle beklediği notun %10 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 26 olacaktır.

Temel Mühendisliği dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 59 dur. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,4 tür. Öğrenci %55,1 ihtimalle beklediği notun %24 eksisini, %39,5 ihtimalle beklediği notun %12,5 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 45 olacaktır.

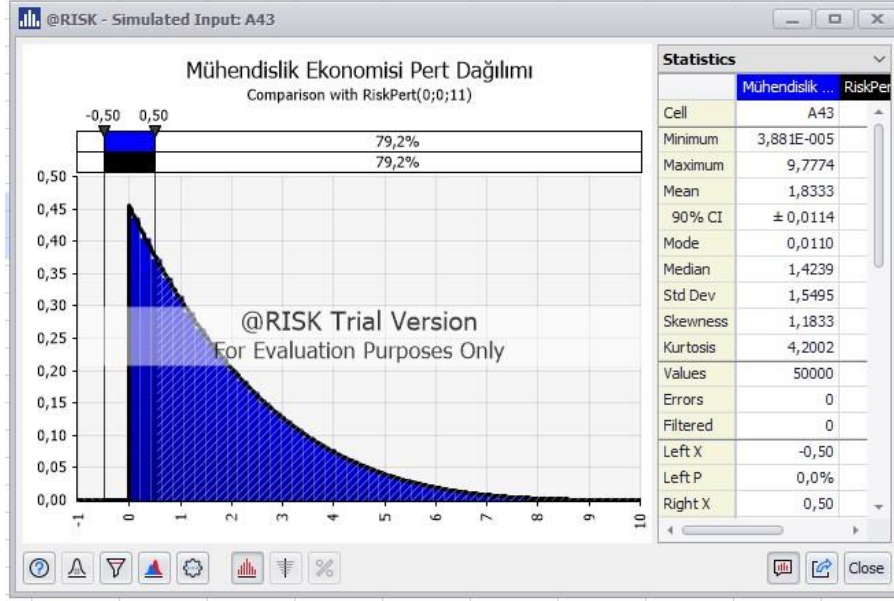

Temel Mühendisliği dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 59 dur. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %5,4 tür. Öğrenci %63 ihtimalle beklediği notun %24 eksisini, %31,6 ihtimalle beklediği notun %12,5 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 45 olacaktır.

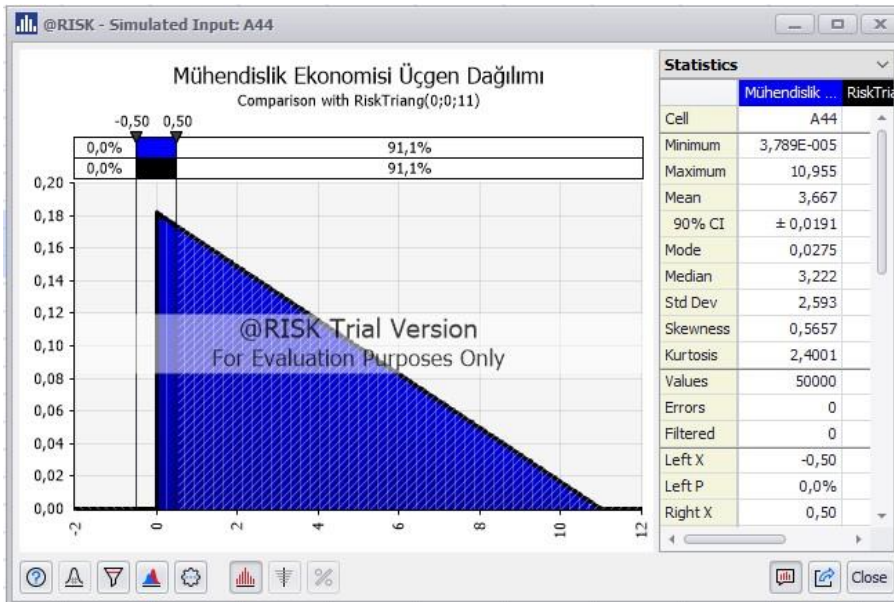

Mühendislik Ekonomisi dersi için monte carlo simülasyonu PERT dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 62 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %20,8 dir. Öğrenci %79,2 ihtimalle beklediği notun %11 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 69 olacaktır.

Mühendislik Ekonomisi dersi için monte carlo simülasyonu ÜÇGEN dağılımı sonucu aşağıdaki gibidir;

Öğrencinin bu dersten beklediği not 62 dir. Bu grafiğe göre öğrencinin beklediği notu alma ihtimali %8,9 dur. Öğrenci %91,1 ihtimalle beklediği notun %11 fazlasını alacaktır. Bu durumda öğrencinin alacağı not 69 olacaktır.

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

Sonuç olarak beklenenden daha fazla sapma yaşanan derslere daha çok önem ve süre vererek çalışılması gerektiği, öngörülen sınav sonuçlarının hangi oranda gerçekleşebileceği değerlerine ulaşılmıştır. Benzer değerlendirmeler her bölüm ve ders için yapılabilir. Daha doğruya yakın değerlere ulaşabilmek için daha çok veri üzerinden çalışılması gerektiği açıktır.

**Özet**

Bu çalışmada öğrencilerin basınç konusuna olan ilgi ve isteklerini artıracak açık hava deneyleri ile daha verimli bir öğrenmenin sağlanabilmesi amaçlanmıştır. Çalışma grubunu, 2021-2022 eğitim öğretim döneminin birinci döneminde Afyonkarahisar Halımoru merkez köyünün Bozdoğan Halımoru Ortaokulunun 8-A şubesindeki 9 tane sekizinci sınıf öğrencisinden bir grup oluşturmaktadır (n=9). Uygun örnekleme yöntemi kullanılmıştır. Katılımcıların da aktif olduğu bu çalışmada duruma uygunluğu nedeniyle nitel araştırma yöntemlerinden eylem araştırması yöntemi tercih edilmiştir. Araştırmacılardan biri tarafından bir eylem planı hazırlanmış ve uygulanarak bu eylem araştırmasının başarısına bakılmıştır. Bu çalışma hem nicel hem nitel deseni içeren karma desende bir yapıdadır. Veri toplarken nicel ve nitel araçlar kullanılmıştır. Çalışmanın nicel kısmında 20 soruluk çoktan seçmeli basınç başarı testi ölçeği ön ve son test olarak uygulanmıştır, nitel kısmında ise araştırmacılar tarafından hazırlanan beş açık uçlu soruluk görüşme formu ön ve son görüşmede kullanılmıştır ve uygulama sonunda tutulan öğrenci günlükleri kullanılmıştır. Verilerin analizinde Mann-Whitney U Testi ve betimsel analiz kullanılmıştır. Görüşme ve günlük verileri içerik olarak yorumlanarak değerlendirilmiştir. Çalışmada uygulama öncesi duruma göre istendik pozitif yönde önem arz edecek bir anlamlılık düzeyinde artış olmamıştır. Yapılan çalışmanın kısmen başarılı olmasından dolayı yeni önerilerde bulunulmuştur.

**AN ACTION RESEARCH ON USING “OUTDOOR EXPERIMENTS” ON  
“PRESSURE” SUBJECT IN 8TH GRADE SCIENCE TEACHING**

**Abstract**

It was aimed to solve the problem and provide a more efficient learning with outdoor experiments that would increase the interest and desire of the students on the subject of pressure. The study group consists of 9 eighth grade students in 8-A branch of Bozdoğan Halimoru Secondary School in Afyonkarahisar Halimoru central village in the first semester of the 2021-2022 academic year (n=9). Convenient sampling method was used. In this study, in which the participants were also active, the action research method, one of the qualitative research methods, was preferred due to its suitability for the situation. An action plan was prepared and implemented by one of the researchers, and the success of this action research was checked. This study has a mixed design structure that includes both quantitative and qualitative designs. Quantitative and qualitative tools were used while collecting data. In the quantitative part of the study, the multiple-choice pressure achievement test scale with 20 questions was applied as a pre-test and post-test. In the qualitative part, an interview form with five open-ended questions prepared by the researchers was used in the pre- and post-interview. And student diaries kept at the end of the application were used. The pressure achievement test was analyzed using the Mann-Whitney U Test, one of the nonparametric tests. Interview and diary data were interpreted as content and evaluated. In the study, there was no increase in the level of significance that would be of positive importance compared to the situation before the application. Due to the partial success of the study, new suggestions were made.

**Keywords:** Outdoor Experiments, Outdoor Pressure, Solid Pressure, Liquid Pressure, POE Strategy

## **Introduction**

People are living in an era where there are constant changes and developments in many fields in terms of the production, utilization, and transmission of knowledge. Educators also strive to create conducive environments and make efforts to ensure more effective learning/teaching processes in order to actively engage today's students in the learning process. In this regard, various methods, techniques, environments, etc., are being explored from different perspectives, and continuous efforts are being made across a wide spectrum. The evolving technology and the pandemic conditions we are experiencing have led people to confine themselves within four walls, even isolating themselves from outdoor spaces. In this era of rapid scientific advancements and technological progress, the monotonous flow of life and lessons can appear dull to students, failing to capture their interest effectively. By enriching learning environments with diverse content, enhancing their quality, fostering children's curiosity, and preparing them for learning, we can make this process more productive. In our era of continuous change and development, teachers should aim to cultivate individuals who can research, analyze, and utilize scientific methods. Instead of directly imparting knowledge, they should equip students with the skills to access information. To achieve this, teachers must create learning environments where children can satisfy their curiosity, question, express their ideas, and establish cause-and-effect relationships. However, schools are typically designed with a focus on the idea that 'learning occurs within the classroom.' As a result, they often prioritize activities and resources within the classroom environment. Thus, the design of outdoor spaces in schools is often overlooked, and the potential of utilizing non-classroom areas as educational environments is neglected (Celep & Bacanak, 2013; Cited in: Civelek, Özyılmaz Akamca, 2017). However, outdoor spaces are equally important in education. Sometimes, teaching conducted in outdoor environments through hands-on experiences can be more engaging, effective, and stimulating, as it arouses curiosity. Children feel less constrained, which can directly or indirectly enhance teaching and learning. Teaching in outdoor environments is predominantly utilized in the literature within the scope of school gardens, excursion sites, and nature education settings. It can host important learning contexts while increasing motivation. Various definitions can be made about learning in outdoor environments. Ford (1986) defines it as the portion of the educational process that takes place outside the classroom, while according to Lewis (1975), it involves the utilization of all five senses in the learning process (Cited in: Brookes, 2004). Priest (1986) argues that in outdoor learning, all

senses are utilized, and experimental methods take precedence. The main characteristics of outdoor learning include education taking place outside the classroom, students being able to participate in activities, the use of real objects in education, the utilization of different senses in the learning process instead of rote memorization, and as a result, the activities capture students' interest (Tsai, 2006; Cited in: Tepe, Sarı & Ocak, 2020). Elliott and Davis (2009), in a study on activities conducted outdoors and in natural environments, expressed that students experienced a renewal and increase in their mental attention levels, as well as a decrease in stress levels and a sense of relaxation. They also noted that such activities fostered curiosity and a sense of inquiry (Cited in: Aynal Öztürk, 2013; Cited in: Tepe, Sarı & Ocak, 2020). Outdoor experiments can provide opportunities for students to actively participate and learn by doing, thereby facilitating experiential learning. The knowledge gained through outdoor experiments can be more meaningful and enduring in long-term memory. Outdoor experiments are often conducted with a focus on measuring interest and attitude, particularly with preschool students.

Studies on science education, which include plenty of examples from daily life, have shown that students struggle with certain aspects. It can be said that there are difficulties, especially in teaching the relationship between pressure and force, and this situation also affects daily life (Çepni, 2012; Cited in: Akgün, Tokur, Özkara, 2013). It is a topic that students find interesting and directly witness in their lives (She, 2002; Cited in: Akgün, Tokur, Özkara, 2013). Mengi and Emrahoğlu (2012) stated that the level of complete transfer of eighth-grade students' science and technology topics to daily life context is quite low. It is particularly noticeable that students struggle with transferring knowledge, especially in the topic of "Pressure." The reason for this is seen as the insufficient concretization of the topic. There are numerous studies indicating that the best achievement in science education is achieved through experiential learning (Akdeniz, Çepni, & Azar, 1999; Aycan & Yumuşak, 2002; Demirci, 1993; Ergin, Şahin-Pekmez, & Öngel-Erdal, 2005; Gürdal & Yavru, 1998; Hofstein & Lunetta, 1982; Odubunni & Balagun, 1991; Önen, 2005; Cited in: Sadıç, 2016). Güven and Gürdal (2002), in their study examining the effects of experiments on learning in high school physics classes, found that quality science education in educational institutions is possible through conducting experiments in classes. They observed that students who actively engage in experiments during lessons enjoy the classes more and that learning is more enduring. The most distinctive features that set apart science lessons from other subjects are providing opportunities for experimentation, observation, exploration, and the development of cognitive thinking through

the use of scientific process skills (Taşkın, 2008). Sadıç (2016) mentions that the frequent use of abstract expressions in science lessons often leads to students having difficulty in comprehension. He suggests that making expressions more concrete with appropriate methods and techniques tailored to the lesson can simplify learning. Using the prediction-observation-explanation (POE) method in practical applications of science experiments provides students with the opportunity to apply what they have learned, enabling them to relate scientific knowledge to the natural phenomena they encounter in their daily lives (White & Gunstone, 1992; Cited in: Şahin & Çepni, 2012). In the prediction stage of POE, students are prompted to think about the causes of events, activating their prior knowledge (Şahin & Çepni, 2012). In the observation stage of POE, students are given the opportunity to make observations related to their predictions (Şahin & Çepni, 2012). In the explanation stage of TGA, students are asked to combine their observations with their predictions to provide explanations. This allows the underlying reasons behind students' thoughts to be uncovered (White & Gunstone, 1992; Cited in: Şahin & Çepni, 2012). Studies in science education have shown that hands-on learning through experimentation plays a significant role. Based on research in this field, it has been determined that students encounter difficulties in understanding the concept of pressure. In the literature review regarding the topic of pressure, various instructional approaches have been employed, including the 5E instructional model, STEM model, four-stage diagnostic tests, modeling activities, problem-solving tasks, review strategies supported by constructivist learning approach, prediction-observation-explanation (POE) activities, V diagrams, activities based on scientific argumentation, concept cartoons, and the development of tests aimed at measuring student understanding. Efforts have been made to identify and address students' misconceptions about the topic, their ability to relate it to daily life, their domain knowledge, and the errors they make in problem-solving. Studies in this field also address aspects such as the impact on achievement, attitudes, and higher-order cognitive skills development. Despite numerous studies conducted in the relevant area, it is observed that the problems have not been fully resolved and certain difficulties persist. This study is important in terms of contributing to students' more meaningful and enduring learning of the pressure topic. While outdoor experiments are mostly conducted with preschool students, conducting this study with middle school students is also important in that regard. Unlike previous studies on the topic of pressure, this study opted for an action research method using outdoor experiments. In this study, the difficulties encountered by 8th-grade students in learning the topic of pressure in science lessons have been taken into account. The aim is to address these issues by utilizing outdoor

experiments to increase students' interest and enthusiasm for the topic of pressure, thereby achieving more effective learning. In this context, the research problem statement is determined as "Does the use of outdoor experiments contribute to alleviating the learning difficulties experienced by 8th-grade students in the topic of pressure?"

### **Sub-problems:**

1-Is there a significant difference in the level of learning of the topic of pressure before and after the use of outdoor experiments among male and female students?

2-What are the students' opinions, interests, and enthusiasm regarding conducting experiments on the topic of pressure outdoors?

### **Limitations**

The study is limited to conducting outdoor experiments on the topic of "3rd Unit: Pressure" within the scope of Science lessons with 9 eighth-grade students at Bozdoğan Halımoru Middle School in Halımoru Village, located in Afyonkarahisar province, during the first semester of the school year.

### **Method**

The study employs a mixed-methods approach, incorporating both quantitative and qualitative research methods. Specifically, action research, a qualitative research method, is utilized to address the problem of increasing the interest and enthusiasm of 8th-grade students in the topic of pressure in Science lessons through outdoor experiments, aiming to achieve more effective learning. In action research, a group of individuals identifies a problem, takes action to address it, evaluates the effectiveness of their actions, and if the solution is deemed insufficient, they attempt to address the problem again (O'Brien, 2001). In the quantitative part of the study, a 20-item achievement test developed by Özcan, Koca, and Söğüt (2019) was used as both pre-test and post-test measures. In the qualitative part of the study, pre- and post-interviews consisting of open-ended questions developed by the researchers, as well as student journals (Appendix-5), were included.

### **Study Group**

The study group consisted of a total of 12 eighth-grade students enrolled in the 8-A class of Bozdoğan Halımoru Middle School, a state school located in a village in the central district of

Afyonkarahisar province, during the first semester of the 2021-2022 academic year. However, 3 students who could not participate in all the activities were excluded from the study group, resulting in a revised study group of 9 students ( $n_{\text{Total}} = 9$ ). The study was conducted with a single group consisting of 6 female and 3 male students. The study group was selected using an appropriate sampling method, considering the study's structure, and was easily accessible in terms of opportunities, time, money, location, workforce, and other relevant factors. This selection method involved non-random sampling techniques tailored to the research design.

### **Data Collection Tools**

In this study, a 20-item achievement test developed by Özcan, Koca, and Söğüt (2019) was used as a pre-test and post-test measure for teaching the topic of pressure. Additionally, a semi-structured interview form consisting of 5 open-ended questions prepared by the researchers was used for both pre-interviews and post-interviews. Researchers and students also kept journals at the end of the lessons.

### **Data Analysis**

The validity and reliability of the achievement test used as pre-test and post-test measures were tested using the KR-20 internal consistency analysis. Additionally, due to the sample size ( $n < 30$ ) and non-normal distribution of the data, the Mann-Whitney U Test, a non-parametric analysis method, was preferred to evaluate the data according to gender. Content analysis method was employed for analyzing the qualitative data of the study. The data obtained from semi-structured pre-interview and post-interview forms were analyzed by two separate individuals who are experts in the field. Student journals were interpreted and evaluated at the end of the study.

### **Temporary Plan Draft of the Study:**

- The purpose, significance, methodology, problems, etc. of the research are determined.
- First, students are informed about what will be done in the lesson at a level they can understand. For example, by bringing experiment materials to students and informing them that experiments will be conducted outdoors, attention is drawn to students' interest and curiosity about the study.
- A semi-structured open-ended preliminary interview is conducted with students about the topic of pressure. This interview measures students' prior knowledge, preparedness,

perceptions, and approaches before the study.

- A pre-test on the topic of pressure is administered to the students.
- An experiment in the outdoor environment is conducted with the POE model, and data are recorded.
- A semi-structured open-ended interview is conducted with students regarding the topic of pressure.
- Students are administered the post-test on the topic of pressure.
- The outdoor experiments focusing on the core topic of pressure are conducted appropriately within six class periods.
- The acquired data is recorded.
- The data is analyzed by experts in the field, discussed, and the results are interpreted.
- At the end of each session, students maintain student diaries while researchers keep researcher diaries.

### **Implementation**

Before the implementation, a preliminary semi-structured interview was conducted, and a pre-test was administered using a validated and reliable pressure achievement test. The activities were conducted in an outdoor environment (within the school garden context) with 9 students, utilizing the POE (Predict, Observe, Explain) method. Six different pressure experiments were carried out within 2 class hours. In the initial stage of the activities, students were provided with necessary preliminary information. Predictions were obtained from each student individually and recorded.

SOLID PRESSURE:

EXPERIMENT: "Traces on the card and on the ground."

EXPERIMENT: "How many cardboard cups can you carry?"

EXPERIMENT: "Spaghetti - Balloon"

The experiments were then conducted with the participation of students, and they were asked to interpret their predictions and observations based on the deductions made from their observations. Subsequently, researchers took notes. Necessary explanations were provided to the students within the framework of the activity. The students kept a daily journal. Researchers also kept a journal on each working day. The responses given by the students after the POE study were categorized into themes based on their proximity to each other.

(NOT: Due to the melting snow on the day of the experiment, only raised soil and very lightly moistened mud were used in the first experiment with snow and soil.) After the application, a final semi-structured interview was conducted, and the post-test was administered using the validated and reliable pressure achievement test.

### **Findings Pre-test and Post-test Findings**

In this study, the test developed by Özcan, Koca, and Söğüt (2019) titled 'A Study on Developing a Test to Measure Middle School Students' Understanding of the Concept of Pressure' was used as both the pre-test and post-test.

**Table 1.** Details about Gender

Gender	n	f(%)
Female	6	66,7
Male	3	33,3
Total	9	100,0

Table 1 provides the numbers and percentage frequencies of female and male participants among the 8th-grade students involved in the study. It is observed that there were 6 female and 3 male students, totaling 9 students, participating in the study.

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

Table 3 illustrates the frequency and percentage distributions of correct and incorrect answers in the post-test. It indicates how many individuals provided correct or incorrect answers for each question.

**Table 4.** Average Scores of Students' Pre-test and Post-test Results

	The mean of pre-test	The mean of post-test
1st student	0,50	0,60
2nd student	0,75	0,85
3rd student	0,70	0,80
4th student	0,80	0,80
5th student	0,65	0,50
6th student	0,45	0,45
7th student	0,40	0,60
8th student	0,40	0,55
9th student	0,60	0,60
Total	0,58	0,63

Table 4 displays the average scores of students' pre-test and post-test results. While there may not be an increase in the desired direction for every student, an overall positive difference is observed when looking at the general averages.

**Table 5.** Results of Mann-Whitney U Test for pre-test and post-test scores by gender

	Gender	N	F %	Mean	Mean	Std. Deviation	P	$\bar{x}$
Pre-test	Female	6	66,7	6,17	,5833	,15207	,070	,58
	Male	3	33,3	2,67				
Post-test	Female	6	66,7	5,33	,6389	,14313	,598	,63
	Male	3	33,3	4,33				

Table 5. Percentile frequencies and significances of Mann-Whitney U Test results for pre-test and post-test scores by gender. There is no significant difference between pre-test and post-test scores by gender ( $p > 0.05$ ); however, it appears that females answered more questions correctly than males in both pre-test and post-test. When comparing the pre-test and post-test scores, it is observed that the number of correct answers in the post-test is higher than in the pre-test. Although significant results were not obtained, there are slightly productive outcomes.

### **Pre-Interview and Post-Interview Findings**

1- When asked about pressure, what comes to your mind?

In the pre-interview, students made definitions by associating pressure with concepts such as force and weight, indicating that they had some misconceptions about the topic, but they were able to indirectly describe pressure even if not directly. In the post-interview, students responded with descriptions such as "leaving a mark with a wheel on the ground, pricking a board with a pin, the pressure of a vertical force acting on a surface, the difference between stepping with one foot and two feet, pressure exerted on a surface, and the pressure exerted on the ground when sitting down." Although not all answers were entirely correct, they were able to describe what pressure is, even if indirectly. Compared to the pre-interview, they provided more accurate responses in the post-interview.

2- When asked about conducting experiments outdoors, what comes to your mind?

In the pre-interview, students initially confused outdoor experiments with outdoor pressure and provided answers in that direction. They mentioned experiments that couldn't be done in a classroom setting, outdoor experiments, and weather-related experiments in the schoolyard. In the post-interview, students talked about the experiments they conducted in the schoolyard as part of this study. It is evident from their responses that they now have a better understanding of what outdoor experiments mean, as they began to talk about experiments they conducted in their own backyard or in the schoolyard. They mainly mentioned the balloon experiment.

3- In which topics of science would you like to conduct outdoor experiments?

In the pre-interview, students provided answers related to pressure, acid-base reactions, friction, mirrors, and light. They mainly thought about topics covered in the eighth grade. In the post-interview, students gave more diverse responses compared to the pre-interview, mentioning topics such as recycling, movements of the sun-earth-moon system, shadows, sound, climate and weather, locating elements on the periodic table, meiosis-mitosis, speed, and parachute experiments.

4- Have you ever conducted experiments outdoors before? If so, what do you remember?

In the pre-interview, students mostly mentioned the vinegar-baking soda experiment and the recycling experiment with bottles that they had done with their teachers before. In the post-interview, students mentioned experiments related to pressure, balloon-spaghetti, recycling for a cat's nest, vinegar-baking soda, angles of sunlight, friction, and parachute experiments. It is evident that students remember what they learned better through conducting experiments.

5- How does conducting experiments outdoors make you feel?

In the pre-interview, students confused outdoor experiments with outdoor pressure, but in the post-interview, they mentioned feeling better because they got fresh air, understood

better, and had fun outside, making them happy. So, it can be understood that there are positive effects.

**Findings of the pressure concept's TGA experiments conducted in outdoor environments:**

**Experiment 1: "Traces on Snow and Soil"**

**Prediction Stage:** What changes might occur on the surface of the soil when you throw the same flat stone vertically onto the ground, first on its side and then upright? (What changes might occur on the surface of the soil when you drop the same water-filled bottle vertically onto the ground, first on its side and then upright?)

**Student Predictions:**

*"The side with a larger surface area will leave less of a mark because as the surface area increases, the pressure decreases."*

*"The side with a smaller surface area will sink more, but I don't know why."*

*"The side with the cap will leave more of a mark because the weight is concentrated there, but I don't know why."*

*"Since the weights are the same, there won't be any change."*

**Student Observations:** When asked about their observations, the most common responses from students were: *"The side with the larger surface area sank less"* and *"The side with the smaller surface area sank deeper."*

**Comparison of Student Predictions and Observations:**

*"I correctly predicted the outcome of the experiment and its reason."*

*"I correctly predicted the outcome of the experiment but did not know that it was due to pressure."*

*"I correctly predicted the outcome of the experiment, but I did not know that pressure changes according to the surface area."*

*"I thought there would be no change because the weights were the same, but pressure varies according to the surface area."*

**Experiment 2: "How Many Cardboard Cups Can You Carry?"**

**Prediction stage:** If there are 3 cardboard cups on one side and 17 cardboard cups on the other side, and we step on them with a board placed on top, do you think these cups will carry us? What changes do you expect in the cups? What are your predictions?

**Student predictions:**

*"Fewer cups will be more crushed and broken."*

*"Cardboard cups won't carry us, and the cups on both sides will be equally crushed. There won't be any difference in crushing because they are all cardboard cups."*

*"The cups on the side with more cardboard will gradually crush."*

**Student observations:** When asked about their observations, the most common responses from students were: *"The cups on the side with fewer cardboard cups immediately crushed and didn't carry us, but the cups on the side with more cardboard cups didn't crush and carried us."* and *"On the side with more cups, since the surface area is greater, less pressure was applied, and it carried us."*

Comparison of Student Predictions and Observations:

*"I correctly predicted the outcome of the experiment."*

*"I correctly predicted the outcome of the experiment, but I didn't know that the reason was pressure."*

*"I correctly predicted the outcome of the experiment, but I didn't know that pressure changes according to surface area."*

*"I thought there wouldn't be any changes in the experiment, but it turns out that pressure varies according to surface area."*

Experiment 3: "Spaghetti - Balloon"

**Prediction Stage:** Does the number of spaghetti noodles affect the bursting time of the balloon?

Prediction stage: There are two setups with one placed on a styrofoam base and the other with 25 spaghetti noodles inserted into styrofoam. There are two identical balloons inflated to the same degree. When you gently press the balloons on these setups sequentially, do you think these balloons will burst? If they burst, which setup do you think the balloon will burst more easily in? Why? What are your predictions?

**Student predictions:**

*"The balloon will burst more quickly on the side with fewer spaghetti noodles. But I don't know why."*

*"Increasing the number of spaghetti noodles will increase the surface area, applying less pressure to the balloon and causing it to burst more slowly."*

*"In the setup with many spaghetti noodles, the balloon will burst more quickly because it is pierced on all sides."*

*"Both setups will cause the balloons to burst immediately because the spaghetti noodles have sharp ends."*

**Student observations:** When asked about their observations, students mostly responded with: "On the side with more spaghetti noodles, the surface area increased, causing the pressure to decrease and the balloon to burst more slowly."

Comparison of student predictions and observations:

*"My prediction and observation for the experiment matched."*

*"I correctly predicted the outcome of the experiment but didn't know the reason behind it."*

*"I thought there would be no difference in the experiment, but it turns out that pressure varies according to surface area."*

Experiment 4: "The Depth-Distance Relationship"

**Prediction stage:** What would be the distance sequence of the water coming out from the points marked A, B, and C on the water bottle when pierced with a thumbtack? Why? What are your predictions?

**Student predictions:**

*"The water coming out of point C will travel the longest distance, followed by B, and the shortest distance will be from point A because the pressure is higher at the bottom."*

*"The water coming out of point C will travel the longest distance, followed by B, and the shortest distance will be from point A, but I don't know why."*

*"The water coming out of point A will travel the longest distance, followed by B, and the shortest distance will be from point C because the pressure is higher at the top."*

**Student observations:** When asked about their observations, the most common responses from students were: "The water from point C travels the longest distance, followed by point B, and the shortest distance is from point A. This is because the pressure is greater at depth."

Comparison of student predictions and observations:

*"My prediction and observation from the experiment matched."*

*"I correctly predicted the outcome of the experiment but didn't know the reason. I"*

*"I incorrectly predicted the outcome of the experiment; it turns out pressure is directly proportional to depth."*

Experiment 5: "Water Depth and Balloon Inflation"

**Prediction Stage:** What changes do you anticipate in the balloons when one end of the syringe tube, which has a balloon at each end, is immersed in a bucket of water filled with water? What are your predictions?

**Student Predictions:**

*“The balloon pressed into the water-filled bucket will shrink because there is more pressure at depth.”*

*“The balloon outside will inflate, but I don't know why.”*

*“There won't be any change in the inflation of the balloons because there is air inside them.”*

*“I have no idea, I don't know.”*

**Student Observations:** When asked about their observations, the most common response from the students was: "The balloon pressed into the water-filled bucket shrinks because there is more pressure at depth."

Comparison of student predictions with observations:

*“I correctly predicted the outcome of the experiment.”*

*“I correctly predicted the outcome of the experiment but did not know the reason.”*

*“I thought there would be no change in the experiment, but the pressure changes according to the depth of the water. Would you like me to help with anything else?”*

Experiment 6: “Cherry Juice in the Bottle”

**Prediction stage:** There is a jar containing some cherry juice with a candle placed inside. When we close the jar with the candle inside so it remains in the jar, what change will occur? What would happen if we light the candle and close the jar so it remains inside? What are your predictions?

**Student predictions:**

*“When the bottle is closed over the burning candle, the candle inside the bottle may extinguish. I don't have any other ideas.”*

*“The level of cherry juice remains the same, unchanged. I don't have any other ideas.”*

*“I have no idea, I don't know.”*

**Student observations:** When asked about their observations, the most common responses from the students were: "When the bottle was closed over the burning candle, the cherry juice rose and filled the bottle." and "The candle inside the bottle extinguished when the air inside ran out."

Comparison of student predictions with observations:

*“I correctly predicted that the candle would extinguish, but I did not know that the cherry juice would rise. This experiment is very interesting and fascinating.”*

*“I incorrectly predicted the outcome; I did not know that the cherry juice would rise. This experiment is very interesting and fascinating.”*

*“I couldn't predict the outcome. The liquid rose inside the bottle when the air inside was consumed by the candle. I didn't know this beforehand. This experiment is very interesting and fascinating.”*

**Findings from Student Journals**

Upon examining the student journals, it was evident that they were particularly surprised by the lack of crushing even when there were many cardboard cups stacked, as well as by the rising of the cherry juice even though they understood the experiments well and had a lot of fun

conducting them. They also mentioned feeling a bit chilly due to the cold weather. The majority of students recounted the experiments conducted during the session individually and reflected on the enjoyable time they had. Overall, it can be understood that students comprehended the experiments correctly, and they could be memorable and effective.

### **Discussion and Conclusion**

In this study, a single-group pretest-posttest design was analyzed and interpreted using the SPSS 25 software package. In this study, due to the sample size being less than 30 and the distribution not being normal, as well as the need to evaluate the data according to gender, the nonparametric analysis method of Mann-Whitney U Test was preferred. As seen in Table 5, there is no significant difference between pre-test and post-test scores according to gender ( $p > 0.05$ ). However, it appears that girls answered more questions correctly than boys in both pre-test and post-test. When comparing the pre-test and post-test, it is observed that there are more correct answers given in the post-test compared to the pre-test. Although significant results were not obtained, some productive outcomes have been achieved. Therefore, it can be said that the study was moderately successful. In interviews conducted with students using five open-ended questions, it was observed that students were able to express themselves more accurately and logically in the final interview compared to the initial one. The study has yielded positive differences. Students have become familiar with and enjoyed outdoor experiments. It can be said that the study has been productive. Upon reviewing the student journals, it is evident that the experiments have captured the students' interest and attention, and they have learned while having fun. The students have provided positive feedback in their journals.

In this study, aimed at addressing the difficulties 8th grade students face in learning the pressure topic in Science class and enhancing their interest and enthusiasm in the subject through outdoor experiments, the study has been partially successful. The absence of significant differences in quantitative data does not necessarily indicate that the study is entirely neutral; small but desired differences can still be observed. Conducting experiments using the POE method in an outdoor environment has proven to be beneficial in learning about pressure. The research has provided answers to its sub-problems. Aşkar (2002) mentions the effectiveness of outdoor activities in the evaluation of preschool education program materials in parallel with this study. The study by Uludağ and Erkan (2020), which examines the impact of a science education program containing activities in out-of-school learning environments on the scientific process skills of 60-72-month-old children, indicates a positive effect on cognitive process skills. The effectiveness of using outdoor environments parallels our study.

This study could be conducted over a longer period, with the learning environment and materials enriched, and interest and attitude scales could be used to make it more comprehensive. Conducting studies on other topics in outdoor environments could facilitate students' learning. Exploring the topic of pressure in outdoor settings using different methods could also be attempted. It would be beneficial to compare at least two different methods of studying pressure in outdoor environments with at least two groups. In future studies, having a larger number of participants in the study group and conducting the study with both experimental and control groups could provide more reliable and meaningful results. More emphasis should be placed on conducting outdoor activities with middle school students.

03.01.2022

Bugün yine materyaller ile Halımoru Ortaokuluna gittik. Çocuklar yanımıza gelmeden önce küçük hazırlıkları yapmak için işe koyulduk. Birinci deneyde katı basıncının gözlenmesinde kullanmayı hayal ettiğim karlar eridiği için ben de bir çubuk bularak toprağı kabartmaya başladım, bir çubuk da çalıřma arkadaşımaya verdim ve birlikte toprağı kabarttık. Toprakta iz bırakacak uzun, yeřsi vb. farklı şekillerde 3 farklı taş buldum. Daha sonra bir serum hortumunun ucuna balon şiřirip taktım ve solmaması için bağladım, ardından diđer ucuna da balon şiřirip taktım ve ilk şiřirdiđim balonun ipini çözdüm, balonlardaki hava biraz dengelendi. Daha sonra getirdiđim şeffaf kabin iđerisine bir mumu eritip akıttım ve mumu sabitledim, sonra da kabin yanısına kadar viřne suyu doldurdum. Plastik şiřenin üzerine CD kalemi ile A, B ve C noktalarını yazdım. Tahta, strafor köpük, su şiřesi, bardak, spađetti ile A, B ve C noktalarını yazdım. Tahta, strafor köpük, su şiřesi, bardak, spađetti makarna, cam şiře, balon, roptiye, maket bıçađı vb. malzemeleride kenardaki bir bankın üzerine koydum. Öğrenciler tenefüs bitiminde yanımıza gel-diler. Önce merhabalařıp 8n bilgilendirme yaptım. Ne yapacađımızı ana hatları ile kısaca açıkladım. TGA (Tahmin- Gözlem- Açıklama (POE)) yöntemini nasıl kullanacađımızı örnekler vererek açıkladım. Daha sonra "1. Deney": gerçekleř-tirmek üzere önceden kabarttığımız toprađın başına gittik. Ellerine önceden bulduđum taş, su şiřesi vb. materyalleri verdim, bir kaç cümle ile sorular so-rup öğrenci tahminlerini aldım ve defterime not ettim. Daha sonra öğrenci-ler materyalleri düşey (konumda toprađa dik ađıyla) taşın / şiřenin farklı yönleriyle sırayla attılar onlara rehberlik edecek sorular sorarak onlardan gözlemlerini alıp not ettim. Bir yandan da ara ara fotođraflarını telefonumla çektim. Eř zamanlı hareket etmem biraz zorlarsa da kolaylıkla üstesinden gelebildim. Sonra açıklama yapmalarına rehberlik ettim ve aldığım cevapları ters olarak tim. Daha sonra düz beton bir zemin üzerine karton bardakları ters olarak dizdim ve tahtayı üzerlerine koydum ve "2. Deney": de yine "1. Deney"deki gibi rehberlik ederek yönlendirdim, fotođraflayıp, not ettim. Diđer arařtırmaçı arkadaşım ve kendim adımla tüm deneylerde verileri kaydettim. 3., 4. 5. ve 6. deneyler de bu yöntem ve bu adımlarla gerçekleřti. "Kardaki ve topraktaki izles", "Seni kař karton bardak taşır", "Spađetti-Balon", "Su derinliđi ile balon şiřmesi", "Derinlik-uzaklık iliřkisi", "Şiředeki viřne suyu" deneyleri iđerisinde çocukları en çok şařırtanların başında ilk olarak "6. Deney: Şiředeki viřne suyu"nda viřne suyunun şiře iđerisinde yük-selmesi oldu, ikinci olarak "su derinliđi ile balon şiřmesi" adlı 4. deneyde balon ne kadar çok suyun dibine bastırılırsa balonun o kadar çok şiřmesi oldu, üçüncü olarak da "2. Deney: Seni kař karton bardak taşır"da iki kiřinin karton bardaklar üzerinde bulunan tahtaya birlikte çıkmalarına rağmen karton bardakların ezilmemesi oldu. Çocukların hepsi deneylerde aktif olarak rol oynadı. Çocukların en çok eđlendiđi deney ise "Spađetti-Balon" adlı ikinci deneyde onlara balon dađıt-mam ve şiřirip sırayla spađetti batırıldıkları strafor üzerine bastırıp partlat-maya çalıřmaları oldu. Hatta bana başka balon yok mu diye sordular. Beni çok sevdiklerini yine deneyler yapmaya gelmemizi istediler.

Öğrencilerden biri bana "Ben de büyüünce senin gibi olmak istiyorum." dedi ve bu beni çok mutlu etti. Çocuklar ilk güne göre daha sıcakkanlı ve rahattı. Uygulama sonrası günlük tutturduk, yine daha önce kullandıkları kod adları ile yazdılar. Bugün yapılan çalıřmanın verimli geçtiđini düşünüyorum. Öğrencilerden alınan cevaplar bunu destekler niteliktedir. Umarım son test verilerinde bu deđiřimi görebiliriz.

**ABSTRACT**

Positron emission tomography (PET) is a molecular imaging method used in the diagnosis, staging, evaluation of response to treatment, radiotherapy planning and prognosis determination of various malignancies. Its working principle is based on the formation of gamma annihilation photons with an energy of 511 keV. Before the PET scan, radiopharmaceuticals, which are a source of  $\beta^+$  (positron) rays, are given to the body. Radioactive elements <sup>18</sup>F (Fluorine) and <sup>68</sup>Ga (Gallium) are commonly used. <sup>18</sup>F, which is most commonly used in PET/CT imaging of oncological studies, has a half-life of 109.8 minutes. Glucose metabolism appears to be increased in tumor cells compared to healthy cells. The tumor imaging technique of (<sup>18</sup>F) labeled Fluorodeoxyglucose (FDG) is based on this. Thus, using (<sup>18</sup>F)-FDG, most malignant tumors can be imaged noninvasively by increasing glucose metabolism. The structural formula of (<sup>18</sup>F)-FDG is written as C<sub>6</sub>H<sub>11</sub>O<sub>5</sub>F<sub>18</sub>. Maximum effective dose equivalent: 0.11 rem/mCi (0.019 mSv/MBq). In this research, ionizing electromagnetic radiation (EMR) interaction parameters namely mass attenuation coefficients ( $\mu_p$ ), effective atomic number ( $Z_{eff}$ ) and electron densities ( $N_{e1}$ ) of C<sub>6</sub>H<sub>11</sub>FO<sub>5</sub> compound have been computed in the energy range 1 keV–100 GeV. EMR interaction parameters evaluated in this work could be beneficial in radiation dosimetry and therapy.

**Keywords:** Effective atomic number, Electron densities, Fluorodeoxyglucose, Mass attenuation coefficients

## **INTRODUCTION**

Positron emission tomography (PET) is a molecular imaging method used in the diagnosis, staging, evaluation of response to treatment, radiotherapy planning and prognosis determination of various malignancies. PET/CT applications, which are created by combining images obtained from computerized tomography (CT) with PET scanners, have become significantly widespread. Its working principle is based on the formation of gamma annihilation photons with an energy of 511 keV. Before the PET scan, radiopharmaceuticals, which are a source of  $\beta^+$  (positron) rays, are given to the body. Radioactive elements  $^{18}\text{F}$  (Fluorine) and  $^{68}\text{Ga}$  (Gallium) are commonly used.  $^{18}\text{F}$ , which is most commonly used in PET/CT imaging of oncological studies, has a half-life of 109.8 minutes. Glucose metabolism appears to be increased in tumor cells compared to healthy cells. The tumor imaging technique of ( $^{18}\text{F}$ ) labeled Fluorodeoxyglucose (FDG) is based on this. Thus, using ( $^{18}\text{F}$ )-FDG, most malignant tumors can be imaged noninvasively by increasing glucose metabolism (Kısaarslan, 2022). The structural formula of ( $^{18}\text{F}$ )-FDG is written as  $\text{C}_6\text{H}_{11}\text{O}_5\text{F}_{18}$ . Maximum effective dose equivalent: 0.11 rem/mCi (0.019 mSv/MBq) (Moltek, 2016). When a substance is subjected to EMR, some parameters that characterize the interaction of photons with the substance need to be determined. The mass attenuation coefficient ( $\mu_p$ ) is an important parameter that characterizes the penetration effect of ionizing EMR into the substance. The values of  $\mu_p$  are used to derive other EMR interactions parameters namely effective atomic number ( $Z_{\text{eff}}$ ) and electron densities ( $N_{\text{el}}$ ).  $Z_{\text{eff}}$  and  $N_{\text{el}}$  are important coefficients used to determine the EMR penetration of a multi-element substance in medical radiation dosimetry.  $Z_{\text{eff}}$  provide correct information about the substance which exposed to EMR and  $Z_{\text{eff}}$  values of multi-element substance are used to calculate the absorbed dose for radiotherapy. (Aktas et. al., 2019). A lot of research has been done on the radioprotective effect of chemical substances. Isikli and Oto (2017) calculated some EMR shielding parameters such as mass attenuation coefficient ( $\mu_p$ ), effective atomic number ( $Z_{\text{eff}}$ ), electron density ( $N_{\text{el}}$ ) for different antioxidants. More et al. (2016) investigated the effective atomic number ( $Z_{\text{eff}}$ ), the effective electron densities ( $N_{\text{eff}}$ ), the total atomic cross-section and the total electronic cross-section for some amino acids. Kacal et al., (2017) investigated the  $\mu_p$ ,  $Z_{\text{eff}}$  and  $N_{\text{el}}$  of different enzyme inhibitors in the photon energy range from 1 keV up to 100 GeV. Kumar (2016) computed the effective  $Z_{\text{eff}}$  and  $N_{\text{el}}$  of nucleobases in DNA for the total and partial photon interaction processes in the energy range of 1 keV–100 GeV. Sayyed et al., (2017) studied the radioprotective effects of different analgesic and anti-inflammatory drugs for total photon interaction in the energy range of 1 keV–100 MeV using

WinXCom. Oto et al., (2020) investigated the interaction of gamma radiation with drugs used in cholinergic medications. In the present research, we calculated some important EMR interaction parameters namely  $\mu_\rho$ ,  $Z_{eff}$ ,  $N_{el}$  of  $C_6H_{11}FO_5$ . To perform these calculations, the data obtained from WinXCom computer program were used. WinXCom program calculates photon interaction cross-sections and attenuation coefficients for any element, compound or mixture, at energies from 1 keV to 100 GeV (Gerward et al., 2001).

### **MATERIALS AND METHODS**

The attenuation of EMR passing through a substance could be determined theoretically utilizing WinXCom code. This code is based on the mixture rule (Gerward et al., 2004),

$$\mu_\rho = \sum w_i (\mu_\rho)_i \quad (1)$$

where  $(\mu_\rho)_i$  is the mass attenuation coefficient and  $w_i$  is the fractional weight of the  $i$ th constituent element. The mass attenuation coefficient  $(\mu_\rho)$  is a measure of penetration of EMR for a substance. The obtained  $\mu_\rho$  values were used to compute the effective atomic numbers and electron density of the investigated materials. Effective atomic number ( $Z_{eff}$ ) is a beneficial parameter in determining interaction of EMR with a substance. The effective atomic number ( $Z_{eff}$ ) for total photon interaction is given by (Manohara et al, 2008):

$$Z_{eff} = \frac{\sum_i f_i A_i (\mu/\rho)_i}{\sum_j f_j \frac{A_j}{Z_j} (\mu/\rho)_j} \quad (2)$$

where  $f_i$  is the mole fraction,  $Z_i$  is the atomic number,  $A_i$  atomic mass and  $(\mu/\rho)_i$  is the mass attenuation coefficient of the  $i$ th element in the substance. Electron density,  $N_{el}$  (the number of electrons per unit mass, electron/g) could be derived from (Manohara et al, 2008):

$$N_{el} = N_A Z_{eff} \frac{1}{\langle A \rangle} \quad (3)$$

where  $\langle A \rangle$  is the mean atomic mass of the substance.

### **RESULT AND DISCUSSION**

In the present work, the mass attenuation coefficients of  $C_6H_{11}FO_5$  were calculated using WinXCom computer program and the outcomes were presented in Fig. 1.

Fig. 1. The mass attenuation coefficients versus gamma energy.

There are three energy zones: i) low energy zone (0.001 MeV-0.1 MeV), ii) intermediate energy zone (0.1 MeV-10 MeV), iii) high energy zone (10 MeV and beyond). It has been observed that mass attenuation coefficients have large values in the low energy region, where the probability of photoelectric effect occurring is high. The reason of this result is that the cross section of photoelectric absorbing effect depends on atomic number as  $Z^{4-5}$ . It can be seen that in the medium energy region, the values of the mass attenuation coefficients decrease due to the linear dependence between the cross-section of Compton scattering and the atomic number  $Z$ . The probability of pair production effect increases in the high energy zone, and since the cross section is proportional to  $Z^2$  the mass attenuation coefficient also increases. The effective atomic numbers ( $Z_{\text{eff}}$ ) and the electron densities ( $N_{\text{el}}$ ) were derived using the mass attenuation coefficients computed from WinXCom computer program. The variations of  $Z_{\text{eff}}$  and  $N_{\text{el}}$  with EMR energy for  $\text{C}_6\text{H}_{11}\text{FO}_5$  are demonstrated in Figs. 2-3. It can be seen from the drawn figures that the highest values of  $Z_{\text{eff}}$  and  $N_{\text{el}}$  are found at low energies, and the  $Z^{4-5}$  dependence of the photoelectric effect cross-section contributes greatly to the values of  $Z_{\text{eff}}$  of the examined compound. The lowest  $Z_{\text{eff}}$  and  $N_{\text{el}}$  values are observed at intermediate energies where Compton scattering is dominant. It was observed that as the EMR energy increased towards higher energies, the effective atomic number values also increased. This may be due to the  $Z^2$  dependence of pair production.

Fig.2. The values of effective atomic number versus gamma energy.

Fig.3. The values of electron density versus gamma energy.

## CONCLUSIONS

The current study, the EMR interaction parameters of the compound  $\text{C}_6\text{H}_{11}\text{FO}_5$  were examined theoretically.  $\mu_{\rho}$  values in the energy range of 1 keV – 100 GeV were calculated using the WinXCom computer program.  $Z_{\text{eff}}$  and  $eN_{\text{el}}$  parameters of the compound were derived with the use of the values of  $\mu_{\rho}$ . It was observed how the radiation interaction parameters of the radiopharmaceutical changed with the energy values.

**ABSTRACT**

The purpose of the article is to improve the approach to software configuration of automated control systems. The subject of the study is experimental-static models used in this process. The work was carried out using the theory of relations, graphs and matrices. As a result, a universal method for machine synthesis of corresponding models was obtained. The algorithm implemented on its basis allows you to automate the process of configuring control systems for distributed technological objects. The development of modern metallurgical production is accompanied by the intensive introduction of automated process control systems (APCS) in all its areas. A special class of tasks is represented by the automation of centralized control of distributed technological objects (mainly on a territorial basis). Such facilities include both main production units (sinter plants, converter shops, mines, etc.) and industrial energy, telecommunications and transport systems and networks. The latter play an important role in the technological cycle of metallurgical, mining and coke-chemical enterprises [1 – 3]. The basis for the functioning of automated process control systems are mathematical models of production facilities and processes. Most modern automated process control systems are based on program logic, which determines the unity of the basic core software (software) of the systems themselves and experimental models for their research. However, complex distributed automation objects of a single series are characterized by different configurations of specific technical solutions. In this regard, it is necessary to adapt the software to a specific technical project, which is a separate stage in the design of the system itself [1, 4]. Traditionally, this task is solved using configuration files created in xml, txt, cfg, dll, ini, etc. format. Their direct compilation requires highly qualified designers, incl. certain knowledge and skills in the field of programming. To simplify and speed up this procedure, multiple tools and computer-aided design (CAD) systems have been developed for such files, which are based on experimental-static models (ESM) of the corresponding objects [1, 4 – 6]. However, a significant drawback of most of these CAD systems is the lack of their unification in relation to heterogeneous process control systems. Another disadvantage is the limitation of the dimensions of the designed objects due to the limited capabilities of the visualization tools for the user interface, the accumulation of analyzed information, etc. The goal of this work is to develop universal methods for synthesizing input ESMs for process control systems of large-dimensional objects on a computer.

**Keywords:** software configuration, automated control system, experimental-static model, machine synthesis, algorithm, distributed technological object.

## INTRODUCTION

A distributed technological object can be characterized by a set, where A, U and Z are, respectively, subsets of local management and control objects, their functional properties and logical connections between them. This set can be constructed in such a way that each element corresponds to a single element that connects it with the element, as well as a subset that specifies its properties that reproduce its functions. Based on this, each of the subsets of Y defines relations on its other subsets or external sets [7]:

$$\left\{ \begin{array}{l} (\forall a_i \in A) \rightarrow (\exists! z_{i,i+1} \in Z) : a_i(z_{i,i+1}) a_{i+1} \\ (\forall a_i \in A) \rightarrow (\exists \{u_{ij}\} \in U) : a_i(u_{ij}) \{f_{ij}\} \end{array} \right. \rightarrow \left\{ \begin{array}{l} A \subset Z \times Z \wedge U \times U \\ U \subset A \times F \\ Z \subset A \times A \end{array} \right.$$

where  $F = \{f_{ij}\}$  is the set of functions of the element  $a_i$ , specified by its properties  $\{u_{ij}\} \in U$ .

The set F is a characteristic of the dynamic component of the process control system or its test model and is uniquely determined by the set U onto which it is bijectively mapped ( $F \leftrightarrow U$ ). The relationship in formula (1), which must be embedded in the source code of the application software, connects the input ESM with the system itself. Therefore, the input model may not include the set F.

Based on expression (1), the set Y can be uniquely displayed by a connected, mixed and weighted  $p \times q$  graph for which , where  $\Delta U$  is an additional subset of the proper properties of vertices  $v_i$  and edges  $e_j$  in the graph  $G_Y$  to identify its elements. The correspondence  $G_Y \leftrightarrow Y$  is reproduced in one of the following ways:

$$\left\{ \begin{array}{l} A \leftrightarrow V \\ Z \leftrightarrow E \\ U = U^G / \Delta U \end{array} \right. \vee \left\{ \begin{array}{l} A \leftrightarrow E \\ Z \leftrightarrow V \\ U = U^G / \Delta U \end{array} \right. \vee \left\{ \begin{array}{l} A \leftrightarrow G_Y^{T_h} \\ Z \subset V \times E \\ U = U^G / \Delta U \end{array} \right. \vee \left\{ \begin{array}{l} A_1 \leftrightarrow V_1 \wedge A_2 \leftrightarrow G_Y^{T_p} \\ Z \subset V \times E \\ U = U^G / \Delta U \end{array} \right.$$

where are the trees of the graph  $G_Y$ ;

- subsets reproduced by the vertices and trees of the graph  $G_Y$  ( , ), respectively.

The relation in formula (2) determines the incidence between the corresponding vertices and edges of the graph  $G_Y$ . Given that graph trees are always limited to vertices, matching is impossible [7].

Linking ESM with application software requires an analytical interpretation of the  $G_Y$  graph. An approach based on the direct use of topological matrices is not acceptable in this case for large-dimensional objects. The solution to this problem was found in the initial formation of

ordinary blocks of a matrix of vector elements, which reproduces both topological and parametric (weight) properties of the graphical model.

Such a matrix is called a complex topological matrix (CTM). Blocks are created on the basis of components formed by cuts and adjacent to the reference vertices: . Each component must have structural completeness, which consists of maintaining the integrity of each element when it is reproduced by trees. The developed procedure for forming CFT blocks is as follows [7, 8]:

1. Determining the direction of analysis of the graph  $GY=(V, E)$  and numbering its elements in such a way that any of its components, obtained by an arbitrary cut, has a continuous (continuous) end-to-end numbering of vertices and edges.

2. Unification of the powers of sets specified by vectors ( , ), by supplementing them with zero elements to the power of the most powerful vector: 3. Defining a set of ordered subsets of support vertices  $V'=\{V't\}$  for partitioning the graph into components as follows:

- numbering of  $t$  sets is performed in the direction of graph analysis;

- each subset must form, according to the principle of contiguity with respect to its elements (vertices), two simple cuts  $E't$  and  $E''t$ ;

- provided or supporting vertices are selected in such a way that they enclose the corresponding trees.

4. Determination of cuts  $E'=\{e'i\}$  and  $E''=\{e''i\}$ , the corresponding elements  $e'i, e''i$  of which are adjacent relative to the vertices  $v'i$  according to the following principles:

- for support vertices of sets with odd numbers, edges  $e''i$ , incident to the vertices, are assigned first in the direction of analyzing the graph relative to the support vertices, and edges  $e'i$  - second;

- for support vertices of sets with even numbers - on the contrary, edges  $e'i$  are assigned first in the direction of graph analysis relative to the corresponding support vertices, and edges  $e''i$  are assigned second.

The above rules can be expressed by the following relations  $f_{\pm 1}, \varphi_{1,2\pm 1}$ :

$$f^1(E'_t, E''_t) = f^{-1}(E'_t, E''_t) = [(e'_i \in E'_t) \wedge (e''_i \in E''_t)] \updownarrow [v'_i \in V'_t]$$

$$\varphi_1^1(V'_t) = \varphi_1^{-1}(E'_t) = \begin{cases} (e'_i \in E'_t) \downarrow (v'_i \in V'_t), \text{ если } t = x \\ (e'_i \in E'_t) \uparrow (v'_i \in V'_t), \text{ если } t = y \end{cases}$$

$$\varphi_2^1(V'_t) = \varphi_2^{-1}(E''_t) = \begin{cases} (e''_i \in E''_t) \uparrow (v'_i \in V'_t), \text{ если } t = x \\ (e''_i \in E''_t) \downarrow (v'_i \in V'_t), \text{ если } t = y \end{cases}$$

where  $x, y$  are, respectively, even and odd values of the number (index)  $t$ ;

“ $\updownarrow$ ” is a conventional symbol of contiguity;

“ $\downarrow$ ” is a conventional symbol of the incidence of an edge “to” the support vertex;

“ $\uparrow$ ” is a conventional symbol for the incidence of an edge “after” the support vertex.

5. Partitioning the graph into two ordered sets of components  $\{GE^k\}$  and  $\{GE^k\}$ , the elements of which have properties (3). The number  $k$  is assigned to them in the order in which the graph is analyzed, starting from one.

6. Compilation of CFT blocks for components  $GE^u$  and  $GE^w$ , where  $u$  and  $w$  are even and odd values of index  $k$ , respectively:

$$|M_{\kappa m m_k}| = \begin{matrix} \overline{m_{11}^k} & \overline{m_{12}^k} & \dots & \overline{m_{1c}^k} \\ \overline{m_{21}^k} & \overline{m_{22}^k} & \dots & \overline{m_{2c}^k} \\ \dots & \dots & \dots & \dots \\ \overline{m_{d1}^k} & \overline{m_{d2}^k} & \dots & \overline{m_{dc}^k} \end{matrix} \begin{matrix} i = \overline{1, c}, p \geq r \\ j = \overline{1, d}, d \geq r \\ \overline{m_{ij}^k} = \langle n_e, n_v, u_\chi^e, u_\psi^v, \theta \rangle \end{matrix}$$

where are topological-parametric vectors;

$i, j$  are the numbers, respectively, of the edges and vertices of the complete CFT, which correspond to the row and column in which the element is located;

$u_\chi^e, u_\psi^v$  – weight parameters for the corresponding element of the edge and vertex (indices  $\chi$  and  $\psi$  determine the numbers of these elements in the weight vectors);

$\theta$  is a topological property of the corresponding edge and vertex element.

The values of the elements are assigned according to the following rule:

$$u_\chi^e = \begin{cases} u_1^e, \text{ если } j = 1 + rh \\ u_2^e, \text{ если } j = 2 + rh \\ \dots \\ u_r^e, \text{ если } j = r + rh \end{cases}, u_\psi^v = \begin{cases} u_1^v, \text{ если } i = 1 + rs & h = 0, 1, \dots, \left\lfloor \frac{c}{r} \right\rfloor \\ u_2^v, \text{ если } i = 2 + rs \\ \dots \\ u_r^v, \text{ если } i = r + rs & s = 0, 1, \dots, \left\lfloor \frac{d}{r} \right\rfloor \end{cases}$$

Based on formula (5), the minimum dimension of each matrix in formula (4), ensuring coverage of all vector elements for each vertex and edge of the graph, should be  $r \times r$ :  $c_{min}=r, d_{min}=r$ .

The topological property  $\theta = 0 \pm 1$  is determined by the type of matrices and corresponds to direct or indirect relationships between the elements of the graph. The most obvious way is to use the incidence property.

Given the unity of the basic software of objects of the same type, machine synthesis of the ESM and its integration with the software is carried out according to the following scheme (Fig.1)

Rice. 1. Functional diagram of machine synthesis of ESM

## CONCLUSION

The proposed method of ESM synthesis has the following advantages: universality of application for process control systems of any distributed objects, ease of implementation from the position of qualified designer (who has sufficient knowledge of the operating technology of the control object and its properties, encoded in the form of weight vectors), the ability to localize spatial areas of the object at different stages design, the ability to form test models only for a certain part of a large object.

At the same time, the main disadvantage of the method should be considered the presence of a minimum threshold for the dimension of CFT blocks, which, in the presence of multiple properties in the elements of a technological object, can lead to an excessive size of individual local areas. This drawback can be eliminated by superposition of local and global objects, which can be interpreted by the nested and outer matrices, respectively. The implementation of this approach requires additional research in this direction.

**HERMITE-BELL TABANLI APOSTOL-BERNOULLI POLİNOMLARI**

**Doç. Dr. Uğur DURAN (ORCID: 0000-0002-5717-1199)**

İskenderun Technical University, Faculty of Engineering and Natural Sciences, Department  
of Basic Sciences of Engineering, Central Campus, TR-31200, Hatay-Türkiye

**Email:** ugur.duran@iste.edu.tr

**Özet**

Son zamanlarda Duran ve ark. ikinci türden Bell tabanlı Stirling polinomlarını dikkate aldı. Bell polinomları ve ikinci türden Stirling sayılarıyla ilgili bazı toplama formülleri de dahil olmak üzere bazı yararlı ilişkiler ve özellikler verdiler. Daha sonra yüksek mertebeden Bell tabanlı Bernoulli polinomlarını tanıttılar ve bazı toplama formülleri ve türev özelliklerini içeren çok çeşitli formülleri araştırdılar. Ayrıca, umbral analizde daha yüksek dereceli Bell tabanlı Bernoulli polinomları için uygulamalar sağladılar. Daha sonra ikinci türden Hermite-Bell tabanlı Stirling polinomları ve  $\alpha$  mertebesinden Hermite-Bell tabanlı Bernoulli polinomları tanımlanarak bazı özellikleri incelenmiştir. Yukarıdaki çalışmadan motive ve ilham alarak, bu çalışmada, ikinci türden Hermite-Bell tabanlı Apostol-Stirling polinomlarını ele alıyoruz ve Bell polinomları, Hermite polinomları ve Stirling sayısı ile ilgili bazı toplama formülleri dahil olmak üzere bazı yararlı ilişkiler ve özellikler elde ediyoruz. Daha sonra,  $\alpha$  mertebesinden Hermite-Bell tabanlı Apostol-Bernoulli polinomlarını tanıtıyoruz ve bazı toplama formülleri ve türev özelliklerini içeren çok çeşitli formülleri araştırıyoruz. Ayrıca,  $\alpha$  mertebeden Hermite-Bell tabanlı Apostol-Bernoulli polinomları için çeşitli kapalı toplam formülleri ve simetrik özdeşlikler elde ediyoruz.

**Anahtar Kelimeler:** Bernoulli polinomları, Bell polinomları, karışık tip polinomlar, ikinci tür Stirling sayıları, Hermite polinomları, toplam formülleri.

**THE HERMITE-BELL-BASED APOSTOL-BERNOULLI POLYNOMIALS**

**Abstract**

Recently, Duran et al. (Axioms 2021, 10(1), 29; <https://doi.org/10.3390/axioms10010029>) considered Bell-based Stirling polynomials of the second kind and derived some useful relations and properties including some summation formulas related to the Bell polynomials and the Stirling numbers of the second kind. Then, they introduced Bell-based Bernoulli polynomials of higher order and investigated multifarious correlations and formulas including some summation formulas and derivative properties. Moreover, the authors attained several interesting formulas of Bell-based Bernoulli polynomials of higher order arising from usual umbral calculus. Then, Hermite-Bell-based Stirling polynomials of the second kind and Hermite-Bell-based Bernoulli polynomials of order  $\alpha$  were defined and some of their properties were investigated. Motivated and inspired by the above work, in this study, we consider Hermite-Bell-based Apostol-Stirling polynomials of the second kind and derive some useful relations and properties including some summation formulas related to the Bell polynomials, the Hermite polynomials, and Stirling number of the second kind. Then, we introduce Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$  and investigate multifarious correlations and formulas including some summation formulas and derivative properties. Also, we acquire diverse implicit summation formulas and symmetric identities for Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$ .

**Keywords:** Bernoulli polynomials, Bell polynomials, mixed-type polynomials, Stirling numbers of the second kind, Hermite polynomials, summation formulas.

**Introduction**

Special polynomials and numbers possess much importance in multifarious areas of sciences, such as physics, mathematics, applied sciences, engineering, and other related research fields covering, differential equations, number theory, functional analysis, quantum mechanics, mathematical analysis, mathematical physics, so on, *cf.* [1-14] and see also each of the references cited therein. Some of the most significant polynomials in the theory of special polynomials are the Bell, Euler, Bernoulli, Hermite, and Genocchi polynomials. Recently, the aforesaid polynomials and their diverse generalizations have been densely considered and investigated by many physicists and mathematicians, *cf.* [1-14] and see also the references cited therein. In this study, we consider Hermite-Bell-based Apostol-Stirling polynomials of the second kind and derive some useful relations and properties including some summation formulas related to the Bell polynomials and Stirling number of the second kind. Then, we introduce Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$  and investigate multifarious correlations and formulas including some summation formulas and derivative properties. Also, we acquire diverse implicit summation formulas and a symmetric identity for Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$ . Moreover, we analyze some special cases of the results. Throughout this paper, the familiar symbols  $C, R, Z, N$  and  $N_0$  are referred to the set of all complex numbers, the set of all real numbers, the set of all integers, the set of all natural numbers, and the set of all non-negative integers, respectively.

The Stirling polynomials  $S_2(n, k : x)$  and numbers  $S_2(n, k)$  of the second kind are given by the following exponential generating functions (*cf.* [1-3,6-11]):

$$\sum_{n=0}^{\infty} S_2(n, k : x) \frac{t^n}{n!} = \frac{(e^t - 1)^k}{k!} e^{tx} \quad \text{and} \quad \sum_{n=0}^{\infty} S_2(n, k) \frac{t^n}{n!} = \frac{(e^t - 1)^k}{k!}. \quad (1.1)$$

In combinatorics, Stirling number of the second kind  $S_2(n, k)$  counts the number of ways in which distinguishable objects can be partitioned into  $k$  indistinguishable subsets when each subset has to contain at least one object. The Stirling numbers of the second kind can also be derived by the following recurrence relation for  $\zeta \in N_0$  (*cf.* [2,4,9,14,16]):

$$x^n = \sum_{k=0}^n S_2(n, k)(x)_k, \quad (1.2)$$

where  $(x)_n = x(x-1)(x-2)\cdots(x-(n-1))$  for  $n \in N$  with  $(x)_0 = 1$  (see [1-3,6-11]).

Also, the Apostol-Stirling polynomials  $S_{2,\lambda}(n, k : x)$  and numbers  $S_{2,\lambda}(n, k)$  of the second kind are given by the following exponential generating functions (cf. [1,6,12-14]):

$$\sum_{n=0}^{\infty} S_{2,\lambda}(n, k : x) \frac{t^n}{n!} = \frac{(\lambda e^t - 1)^k}{k!} e^{tx} \quad \text{and} \quad \sum_{n=0}^{\infty} S_{2,\lambda}(n, k) \frac{t^n}{n!} = \frac{(\lambda e^t - 1)^k}{k!}. \quad (1.3)$$

The bivariate Bell polynomials are defined as follows:

$$\sum_{n=0}^{\infty} Bel_n(x; y) \frac{t^n}{n!} = e^{y(e^t-1)} e^{xt}. \quad (1.4)$$

When  $x=0$ ,  $Bel_n(0; y) := Bel_n(y)$  called the classical Bell polynomials (also called exponential polynomials) given by means of the following generating function (cf. [2-5,8-11]):

$$\sum_{n=0}^{\infty} Bel_n(y) \frac{t^n}{n!} = e^{y(e^t-1)}. \quad (1.5)$$

The Bell numbers  $Bel_n$  are attained by taking  $y=1$  in (1.5), that is  $Bel_n(0;1) = Bel_n(1) := Bel_n$  and are given by the following exponential generating function:

$$\sum_{n=0}^{\infty} Bel_n \frac{t^n}{n!} = e^{(e^t-1)}. \quad (1.6)$$

The Bell polynomials considered by Bell [4] appear as a standard mathematical tool and arise in combinatorial analysis. Since the first consideration of the Bell polynomials, these polynomials have been intensely investigated and studied by several mathematicians, cf. [2-5,8-11] and see also the references cited therein.

The usual Bell polynomials and Stirling numbers of the second kind satisfy the following relation

$$Bel_n(y) = \sum_{m=0}^n S_2(n, m) y^m. \quad (1.7)$$

The Apostol-Bernoulli polynomials  $B_{n,\lambda}^{(\alpha)}(x)$  of order  $\alpha$  are defined as follows (cf. [1,6,12]):

$$\sum_{n=0}^{\infty} B_{n,\lambda}^{(\alpha)}(x) \frac{t^n}{n!} = \left( \frac{t}{\lambda e^t - 1} \right)^\alpha e^{xt} \quad (|t + \ln \lambda| < 2\pi; 1^\alpha := 1). \quad (1.8)$$

Setting  $x=0$  in (1.8), we get  $B_{n,\lambda}^{(\alpha)}(0) := B_{n,\lambda}^{(\alpha)}$  known as the Apostol-Bernoulli numbers of order  $\alpha$ . We remark that when  $\lambda=1$  in (1.8), the polynomials  $B_{n,\lambda}^{(\alpha)}(x)$  and numbers  $B_{n,\lambda}^{(\alpha)}$  reduce to the classical Bernoulli polynomials  $B_n^{(\alpha)}(x)$  and numbers  $B_n^{(\alpha)}$  or order  $\alpha$ . We also note that

when  $\alpha = 1$  in (1.8), the polynomials  $B_n^{(\alpha)}(x)$  and numbers  $B_n^{(\alpha)}$  reduce to the classical Bernoulli polynomials  $B_n(x)$  and numbers  $B_n$ . We remark that  $B_{n,\lambda}^{(1)}(x) := B_{n,\lambda}(x)$  and  $B_{n,\lambda}^{(1)} := B_{n,\lambda}$ .

The generating function for the Hermite polynomials  $H_n(x, y)$  is given by [7]:

$$e^{xt+yt^2} = \sum_{n=0}^{\infty} H_n(x, y) \frac{t^n}{n!}. \quad (1.9)$$

The Hermite-Bell mixed polynomials are given by (see [9])

$$\sum_{n=0}^{\infty} HB_n(x, y, z) \frac{t^n}{n!} = e^{xt+yt^2+z(e^t-1)}, \quad (1.10)$$

which reduce to usual Hermite polynomials (1.9) when  $z = 0$  and familiar Bell polynomials (1.5) when  $y = 0$ .

Recently, the Hermite-Bell-based Stirling polynomials of the second kind and the Hermite-Bell-based Bernoulli polynomials of order  $\alpha$  have been defined and some of their multifarious correlations and formulas including summation formulas, derivation rules, and correlations have been derived in [9].

**Definition 1** *The Hermite-Bell-based Stirling polynomials of the second kind are introduced by the following exponential generating function:*

$$\sum_{n=0}^{\infty} {}_{HB}S_2(n, k; x, y, z) \frac{t^n}{n!} = \frac{(e^t - 1)^k}{k!} e^{xt+yt^2+z(e^t-1)}. \quad (1.11)$$

**Definition 2** *The Hermite-Bell-based Bernoulli polynomials of order  $\alpha$  are defined by the following exponential generating function:*

$$\sum_{n=0}^{\infty} {}_{HB}B_n^{(\alpha)}(x; y, z) \frac{t^n}{n!} = \left( \frac{t}{e^t - 1} \right)^\alpha e^{xt+yt^2+z(e^t-1)}. \quad (1.12)$$

### **Hermite-Bell-Based Apostol-Stirling Polynomials of the Second Kind**

In this section, we introduce the Hermite-Bell-based Apostol-Stirling polynomials of the second kind and analyze their elementary properties and relations.

Here is the definition of the Hermite-Bell-based Apostol-Stirling polynomials of the second kind as follows.

**Definition 3** *The Hermite-Bell-based Apostol-Stirling polynomials of the second kind are*

introduced by the following generating function:

$$\sum_{n=0}^{\infty} {}_{HB}S_{2,\lambda}(n, k : x, y, z) \frac{t^n}{n!} = \frac{(e^t - 1)^k}{k!} e^{xt + yx^2 + z(e^t - 1)}. \quad (2.1)$$

**Remark 1** Replacing  $\lambda = 1$  in (2.1), we attain Hermite-Bell-based Stirling polynomials  ${}_{HB}S_2(n, k : x, y, z)$  of the second kind in (1.11).

**Remark 2** Replacing  $x = 0$  in (2.1), we attain extended Apostol-Bell-Stirling polynomials  ${}_{HB}S_2(n, k : y, z)$  of the second kind, which are also a new generalization of the usual Stirling numbers of the second kind in (1.1) as follows:

$$\sum_{n=0}^{\infty} {}_{HB}S_{2,\lambda}(n, k : y, z) \frac{t^n}{n!} = \frac{(\lambda e^t - 1)^k}{k!} e^{yt^2 + z(e^t - 1)}. \quad (2.2)$$

**Remark 3** Replacing  $x = y = 0$  in (2.1), we obtain Apostol-Bell-Stirling polynomials  ${}_{Bel}S_{2,\lambda}(n, k : z)$  of the second kind, which are also a new generalization of the usual Stirling numbers of the second kind in (1.1), as follows:

$$\sum_{n=0}^{\infty} {}_{Bel}S_{2,\lambda}(n, k : z) \frac{t^n}{n!} = \frac{(\lambda e^t - 1)^k}{k!} e^{z(e^t - 1)}.$$

We now ready to give some properties of the  ${}_{HB}S_{2,\lambda}(n, k : x, y, z)$  without their proofs.

**Proposition 1** The following correlation

$${}_{HB}S_{2,\lambda}(n, k : x, y, z) = \sum_{u=0}^n \binom{n}{u} S_{2,\lambda}(u, k) HB_{n-u}(x; y, z) \quad (2.3)$$

holds for non-negative integer  $n$ .

**Proposition 2** The following relations

$${}_{HB}S_{2,\lambda}(n, k : x, y, z) = \sum_{l=0}^n \binom{n}{l} {}_{HB}S_{2,\lambda}(l, k : y, z) x^{n-l} \quad (2.4)$$

and

$${}_{HB}S_{2,\lambda}(n, k : x, y) = \sum_{l=0}^n \binom{n}{l} {}_{Bel}S_{2,\lambda}(l, k : z) H_{n-l}(x, y) \quad (2.5)$$

hold for non-negative integers  $n$  and  $k$  with  $n \geq k$ .

**Proposition 3** The following summation formulae for Hermite-Bell-based Apostol-Stirling polynomials of the second kind

$${}_{HB}S_{2,\lambda}(n, k : x_1 + x_2, y, z) = \sum_{u=0}^n \binom{n}{u} {}_{HB}S_{2,\lambda}(u, k : x_1, y, z) x_2^{n-u} \quad (2.6)$$

and

$${}_{HB}S_{2,\lambda}(n, k : x, y, z_1 + z_2) = \sum_{u=0}^n \binom{n}{u} {}_{HB}S_{2,\lambda}(u, k : x, y, z_1) {}_{HB}B_{n-u}(z_2) \quad (2.7)$$

hold for non-negative integers  $n$  and  $k$  with  $n \geq k$ .

**Proposition 4** *The following relation*

$${}_{HB}S_{2,\lambda}(n, k_1 + k_2 : x, y, z) = \frac{k_1!k_2!}{(k_1 + k_2)!} \sum_{u=0}^n \binom{n}{u} {}_{HB}S_{2,\lambda}(u, k_1 : x, y, z) S_{2,\lambda}(n-u, k_2) \quad (2.8)$$

is valid for non-negative integer  $n$ .

**Proposition 5** *The following relation*

$$S_{2,\lambda}(n, k) = \sum_{u=0}^n \binom{n}{u} {}_{HB}S_{2,\lambda}(u, k : x, y, z) {}_{HB}B_{n-u}(-x, -y, -z) \quad (2.9)$$

holds for non-negative integer  $n$ .

### **Hermite-Bell-Based Apostol-Bernoulli Polynomials of Order $\alpha$**

In this section, we introduce Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$  and investigate multifarious correlations and formulas including summation formulas, derivation rules, and correlations with the Hermite-Bell based Apostol-Stirling numbers of the second kind.

We now consider Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$  as follows.

**Definition 4** *The Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$  are defined by:*

$$\sum_{n=0}^{\infty} {}_{HB}B_{n,\lambda}^{(\alpha)}(x; y, z) \frac{t^n}{n!} = \left( \frac{t}{\lambda e^t - 1} \right)^\alpha e^{xt + yt^2 + z(e^t - 1)} \quad (3.1)$$

for  $|t + \ln \lambda| < 2\pi$  and  $1^\alpha := 1$ .

Some special cases of the Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$  are analyzed below.

**Remark 4** *In the special case  $\lambda = 1$  in (3.1), we acquire the extended Hermite-Bell-based Bernoulli polynomials of order  $\alpha$  in (1.12).*

**Remark 5** *In the special case  $x = 0$  in (3.1), we acquire the extended Apostol-Bell-Bernoulli*

polynomials of order  $\alpha$ , which are also new extensions of the Bernoulli numbers of order  $\alpha$  in (1.8), as follows:

$$\sum_{n=0}^{\infty} {}_{HB}B_{n,\lambda}^{(\alpha)}(y,z) \frac{t^n}{n!} = \left( \frac{t}{\lambda e^t - 1} \right)^\alpha e^{yt^2+z(e^t-1)}. \quad (3.2)$$

**Remark 6** In the special case  $x=0$  in (3.1), we acquire Apostol-Bell-Bernoulli polynomials  ${}_{HB}B_{n,\lambda}^{(\alpha)}(y)$  of order, cf. [8], as follows:

$$\sum_{n=0}^{\infty} {}_{Bel}B_{n,\lambda}^{(\alpha)}(z) \frac{t^n}{n!} = \left( \frac{t}{\lambda e^t - 1} \right)^\alpha e^{z(e^t-1)}.$$

**Remark 7** In the special case  $z=0$  in (3.1), we acquire Bell-based Apostol-Bernoulli polynomials  ${}_{Bel}B_{n,\lambda}^{(\alpha)}(x; z)$  of order, cf. [8], as follows:

$$\sum_{n=0}^{\infty} {}_{Bel}B_{n,\lambda}^{(\alpha)}(x; z) \frac{t^n}{n!} = \left( \frac{t}{\lambda e^t - 1} \right)^\alpha e^{xt+z(e^t-1)}.$$

**Remark 8** In the special case  $z=0$  in (3.1), we acquire Hermite-based Apostol-Bernoulli polynomials  ${}_{HB}B_{n,\lambda}^{(\alpha)}(y)$  of order, cf. [7], as follows:

$$\sum_{n=0}^{\infty} {}_HB_{n,\lambda}^{(\alpha)}(x; y) \frac{t^n}{n!} = \left( \frac{t}{\lambda e^t - 1} \right)^\alpha e^{xt+yt^2}.$$

We also note that

$${}_{HB}B_{n,\lambda}^{(1)}(x; y, z) := {}_{HB}B_{n,\lambda}(x; y, z)$$

which we call the Hermite-Bell-based Apostol-Bernoulli polynomials.

We now perform to derive some properties of the Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$  and we provide the following theorems without their proofs that can be done by using (3.1) and series manipulation methods.

**Theorem 1** Each of the following summation formulae

$${}_{HB}B_{n,\lambda}^{(\alpha)}(x; y, z) = \sum_{k=0}^n \binom{n}{k} B_{k,\lambda}^{(\alpha)} {}_{HB}B_{n-k}(x, y, z) \quad (3.3)$$

$${}_{HB}B_{n,\lambda}^{(\alpha)}(x; y, z) = \sum_{k=0}^n \binom{n}{k} B_{k,\lambda}^{(\alpha)}(x; y) {}_{Bel}B_{n-k}(z) \quad (3.4)$$

$${}_{HB}B_{n,\lambda}^{(\alpha)}(x; y, z) = \sum_{k=0}^n \binom{n}{k} {}_{HB}B_{k,\lambda}^{(\alpha)}(y, z) x^{n-k} \quad (3.5)$$

hold for  $n \in \mathbb{N}_0$ .

We provide an implicit summation formula for the Hermite-Bell-based Apostol-Bernoulli polynomials by the following theorem.

**Theorem 2** *The following relationship*

$${}_{HB}B_{n,\lambda}^{(\alpha_1+\alpha_2)}(x_1+x_2; y_1+y_2, z_1+z_2) = \sum_{k=0}^n \binom{n}{k} {}_{HB}B_{k,\lambda}^{(\alpha_1)}(x_1; y_1, z_1) {}_{HB}B_{n-k,\lambda}^{(\alpha_2)}(x_2; y_2, z_1) \quad (3.6)$$

is valid for  $n \in \mathbb{N}_0$ .

One of the special cases of Theorem 2 is given below:

$${}_{HB}B_{n,\lambda}^{(\alpha)}(x+1; y, z) = \sum_{k=0}^n \binom{n}{k} {}_{HB}B_{k,\lambda}^{(\alpha)}(x; y, z), \quad (3.7)$$

which is a generalization of the well-known formula for usual Apostol-Bernoulli polynomials given by

$$B_{n,\lambda}(x+1) = \sum_{k=0}^n \binom{n}{k} B_{k,\lambda}(x) \text{ (cf. [12]).}$$

We now provide derivative operator properties for the polynomials  ${}_{HB}B_n^{(\alpha)}(x; y, z)$  as follows.

**Theorem 3** *The difference operator formulas for the Hermite-Bell-based Bernoulli polynomials*

$$\frac{\partial}{\partial x} {}_{HB}B_{n,\lambda}^{(\alpha)}(x; y, z) = n {}_{HB}B_{n-1,\lambda}^{(\alpha)}(x; y) \quad (3.8)$$

and

$$\frac{\partial}{\partial z} {}_{HB}B_{n,\lambda}^{(\alpha)}(x; y, z) = {}_{HB}B_{n,\lambda}^{(\alpha)}(x+1; y, z) - {}_{HB}B_{n,\lambda}^{(\alpha)}(x; y, z). \quad (3.9)$$

hold for  $n \in \mathbb{N}$ .

A recurrence relation for the Hermite-Bell-based Apostol-Bernoulli polynomials is given by the following theorem.

**Theorem 4** *The following summation formula*

$${}_{HB}B_n(x; y, z) = \frac{\lambda {}_{HB}B_{n+1,\lambda}(x+1; y, z) - {}_{HB}B_{n+1,\lambda}(x; y, z)}{n+1} = \frac{\lambda}{n+1} \sum_{k=0}^n \binom{n+1}{k} {}_{HB}B_{k,\lambda}(x; y, z) \quad (3.10)$$

holds for  $n \in \mathbb{N}_0$ .

**Remark 9** *The result (3.10) is an extension of the well-known formula for the Apostol-Bernoulli polynomials given by*

$$x^n = \frac{\lambda B_{n+1,\lambda}(x+1) - B_{n+1,\lambda}(x)}{n+1} \quad (\text{cf. [12,13]}).$$

An explicit formula for the Hermite-Bell-based Apostol-Bernoulli polynomials is given by the following theorem.

**Theorem 5** *The following explicit formula*

$${}_{HB}B_{n,\lambda}(x; y, z) = \sum_{k=0}^{\infty} \sum_{l=0}^{k-1} y^k \binom{k-1}{l} (-1)^{k-l-1} \frac{H_{n+1}(l+x, y)}{n+1}$$

holds for  $n \in \mathbb{N}_0$ .

We give the following theorem.

**Theorem 6** *The following formula including the Hermite-Bell-based Apostol-Bernoulli polynomials of higher-order and Stirling numbers of the second kind*

$${}_{HB}B_n(x; y, z) = \frac{n!k!}{(n+k)!} \sum_{l=0}^{n+k} \binom{n+k}{l} {}_{HB}B_{l,\lambda}^{(-k)}(x; y, z) S_{2,\lambda}(n+k-l, m) \quad (3.11)$$

is valid for  $n \in \mathbb{N}_0$  and  $k \in \mathbb{N}$ .

Here, we present the following theorem including the Hermite-Bell-based Apostol-Bernoulli polynomials and the Apostol-Stirling polynomials of the second kind.

**Theorem 7** *The following correlation*

$${}_{HB}B_{n,\lambda}^{(\alpha)}(x; y, z) = \sum_{l=0}^n \sum_{k=0}^{\infty} \binom{n}{l} (x)_k S_2(l, k) {}_{HB}B_{n-l,\lambda}^{(\alpha)}(y) \quad (3.12)$$

holds for non-negative integers  $n$ .

A correlation including the Hermite-Bell-based Apostol-Bernoulli polynomials of order  $\alpha$  and the Hermite-Bell-based Apostol-Stirling polynomials of the second kind is stated below.

**Theorem 8** *The following summation formula*

$${}_{HB}B_n(x_1 + x_2, y_1 + y_2, z_1 + z_2) = \frac{n!k!}{(n+k)!} \sum_{l=0}^{n+k} \binom{n+k}{l} {}_{HB}B_{l,\lambda}^{(k)}(x_2; y_2, z_2) {}_{HB}S_{2,\lambda}(n+k-l, k; x_1, y_1, z_2) \quad (3.13)$$

holds for non-negative integers  $k$  and  $n$  with  $n \geq k$ .

We note that the following series manipulation formulas hold (cf. [8,9]):

$$\sum_{N=0}^{\infty} f(N) \frac{(x+y)^N}{N!} = \sum_{n,m=0}^{\infty} f(n+m) \frac{x^n}{n!} \frac{y^m}{m!} \quad (3.14)$$

and

$$\sum_{k,l=0}^{\infty} A(l, k) = \sum_{k=0}^{\infty} \sum_{l=0}^k A(l, k-l). \quad (3.15)$$

We give the following theorem.

**Theorem 9** *The following implicit summation formula*

$${}_{HB}B_{k+l,\lambda}^{(\alpha)}(x; y, z) = \sum_{n,m=0}^{k,l} \binom{k}{n} \binom{l}{m} (x-\omega)^{n+m} {}_{HB}B_{k+l-n-m,\lambda}^{(\alpha)}(\omega; y, z) \quad (3.16)$$

holds.

*Proof.* Upon setting  $t$  by  $t+u$  in (3.1), we derive

$$\left( \frac{t+u}{\lambda e^{t+u}-1} \right)^{\alpha} e^{y(t+u)^2+z(e^{t+u}-1)} = e^{-\omega(t+u)} \sum_{k,l=0}^{\infty} {}_{HB}B_{k+l,\lambda}^{(\alpha)}(\omega; y, z) \frac{t^k}{k!} \frac{u^l}{l!}.$$

Again replacing  $\omega$  by  $x$  in the last equation, and using (3.14), we get

$$e^{-x(t+u)} \sum_{k,l=0}^{\infty} {}_{HB}B_{k+l,\lambda}^{(\alpha)}(x; y, z) \frac{t^k}{k!} \frac{u^l}{l!} = \left( \frac{t+u}{\lambda e^{t+u}-1} \right)^{\alpha} e^{y(t+u)^2+z(e^{t+u}-1)}$$

By the last two equations, we obtain

$$\sum_{k,l=0}^{\infty} {}_{HB}B_{k+l,\lambda}^{(\alpha)}(x; y, z) \frac{t^k}{k!} \frac{u^l}{l!} = e^{(x-\omega)(t+u)} \sum_{k,l=0}^{\infty} {}_{HB}B_{k+l,\lambda}^{(\alpha)}(\omega; y, z) \frac{t^k}{k!} \frac{u^l}{l!},$$

which yield

$$\sum_{k,l=0}^{\infty} {}_{HB}B_{k+l,\lambda}^{(\alpha)}(x; y, z) \frac{t^k}{k!} \frac{u^l}{l!} = \sum_{n,m=0}^{\infty} (x-\omega)^{n+m} \frac{t^n}{n!} \frac{u^m}{m!} \sum_{k,l=0}^{\infty} {}_{HB}B_{k+l,\lambda}^{(\alpha)}(\omega; y, z) \frac{t^k}{k!} \frac{u^l}{l!}.$$

Utilizing (3.15), we acquire

$$\sum_{k,l=0}^{\infty} {}_{HB}B_{k+l,\lambda}^{(\alpha)}(x; y, z) \frac{t^k}{k!} \frac{u^l}{l!} = \sum_{k,l=0}^{\infty} \sum_{n,m=0}^{k,l} \frac{(x-\omega)^{n+m} {}_{HB}B_{k+l-n-m,\lambda}^{(\alpha)}(\omega; y, z)}{n!m!(k-l)!(l-m)!} t^k u^l,$$

which implies the asserted result (3.16).

**Corollary 1** *Letting  $k=0$  in (3.16), the following implicit summation formula holds:*

$${}_{HB}B_{l,\lambda}^{(\alpha)}(x; y, z) = \sum_{m=0}^l \binom{l}{m} (x-\omega)^m {}_{HB}B_{l-m,\lambda}^{(\alpha)}(\omega; y, z).$$

**Corollary 2** *Upon setting  $k=0$  and replacing  $x$  by  $x+z$  in (3.16), we attain*

$${}_{HB}B_{l,\lambda}^{(\alpha)}(x+\omega; y, z) = \sum_{m=0}^l \binom{l}{m} x^m {}_{HB}B_{l-m,\lambda}^{(\alpha)}(\omega; y, z).$$

Now, we give the following theorem.

**Theorem 10** *The following symmetric identity*

$$\sum_{k=0}^n \binom{n}{k} {}_{HB}B_{n-k,\lambda}^{(\alpha)}(bx; y, z) {}_{HB}B_{k,\lambda}^{(\alpha)}(ax; y, z) a^{n-k} b^k = \sum_{k=0}^n \binom{n}{k} {}_{HB}B_{k,\lambda}^{(\alpha)}(bx; y, z) {}_{HB}B_{n-k,\lambda}^{(\alpha)}(ax; y, z) a^k b^{n-k} \tag{3.17}$$

holds for  $a, b \in \mathbb{R}$  and  $n \geq 0$ .

*Proof.* Let

$$\Upsilon = \left( \frac{t^2}{(\lambda e^{at} - 1)(\lambda e^{bt} - 1)} \right)^\alpha e^{2abxt + y(at)^2 + y(bt)^2 + z(e^{at} - 1) + z(e^{bt} - 1)}.$$

Then, the expression for  $\Upsilon$  is symmetric in  $a$  and  $b$ , and we derive the following two expansions of  $\Upsilon$ :

$$\begin{aligned} \Upsilon &= \sum_{n=0}^{\infty} {}_{HB}B_{n,\lambda}^{(\alpha)}(bx; y, z) \frac{(at)^n}{n!} \sum_{n=0}^{\infty} {}_{HB}B_{n,\lambda}^{(\alpha)}(ax; y, z) \frac{(bt)^n}{n!} \\ &= \sum_{n=0}^{\infty} \sum_{k=0}^n \binom{n}{k} {}_{HB}B_{n-k,\lambda}^{(\alpha)}(bx; y, z) {}_{HB}B_{k,\lambda}^{(\alpha)}(ax; y, z) a^{n-k} b^k \frac{t^n}{n!} \end{aligned}$$

and similarly

$$\Upsilon = \sum_{n=0}^{\infty} \sum_{k=0}^n \binom{n}{k} {}_{HB}B_{k,\lambda}^{(\alpha)}(bx; y, z) {}_{HB}B_{n-k,\lambda}^{(\alpha)}(ax; y, z) a^k b^{n-k} \frac{t^n}{n!},$$

which gives the desired result (3.17).

### Conclusions

In the present paper, we have considered Hermite-Bell based Apostol-Stirling polynomials of the second kind and derived some useful relations and properties including some summation formulas related to the Hermite polynomials, the Bell polynomials and Stirling number of the second kind. Then, we have introduced Hermite-Bell based Apostol-Bernoulli polynomials of order  $\alpha$  and investigated multifarious correlations and formulas including some summation formulas and derivative properties. Also, we have acquired diverse implicit summation formulas and symmetric identities for Hermite-Bell based Apostol-Bernoulli polynomials of order  $\alpha$ . Moreover, we have analyzed some special cases of the results. The results obtained in this paper are generalizations of the many earlier results, some of which are involved related references in [1-14]. For future directions, we will consider that the polynomials introduced in this paper can be examined within the context of monomiality principle and umbral calculus to

have alternative ways of deriving our results.

### **Özet**

Kesik üstel polinomlar, olağan üstel fonksiyon için Mac Laurin serisinin ilk  $(n + 1)$  terimidir. Özel polinom ailesinde son yıllarda polinomların kesik formları çeşitli matematikçiler tarafından üzerinde çalışılmış ve incelenmiştir. Özel fonksiyonların çarpımlarını içeren integrallerin değerlendirilmesinde hayati önem taşıyan üst düzey kesik polinomlar tanıtılmış ve bu polinomlar Appell ailesi ve Laguerre ailesi daha genel bağlamında tartışılmıştır. İki değişkenli kesik Fubini polinomları ve sayıları tanımlanır ve ardından toplama formülleri, yineleme ilişkileri, türev özelliği ve ikinci türden kesik Stirling sayılarıyla, ikinci türden Apostol tipi Stirling sayılarıyla korelasyonlar dahil olmak üzere çok çeşitli ilişkiler ve formüller, Kesik Bernoulli polinomları ve kesik Euler polinomları araştırıldı. Kesilmiş Bernoulli polinomları dikkate alındı ve çeşitli özellikler verildi. Kesikli Euler polinomları tanımlandı ve kesik Bernoulli polinomlarının bazı özellikleri ve ilişkileri sağlandı. Kesik üstel tabanlı Apostolik tip polinomlar analiz edilmiş ve bunların bazı örtülü toplama formüllerini ve simetrik özdeşlikleri kapsayan çeşitli özellikleri keşfedilmiştir.

Bu çalışmada dejenere kesik üstel polinomların tanımını ve ardından bazı özellikleri ve ilişkileri verilmiştir.

**THE 2-VARIABLE TRUNCATED DEGENERATE EXPONENTIAL POLYNOMIALS  
OF ORDER  $\alpha$**

**Abstract**

The truncated exponential polynomials are the first  $(n + 1)$  terms of the Mac Laurin series for the usual exponential function. In the family of special polynomials, in recent years, the truncated forms for polynomials have been worked on and investigated by various mathematicians. The higher-order truncated polynomials which play a role of crucial importance in the evaluation of integrals involving products of special functions were introduced and these polynomials were discussed within the more general context of the Appell family and the Laguerre family. The two-variable truncated Fubini polynomials and numbers are defined and then multifarious relations and formulas including summation formulas, recurrence relations, derivative property, and correlations with the truncated Stirling numbers of the second kind, Apostol-type Stirling numbers of the second kind, the truncated Bernoulli polynomials, and truncated Euler polynomials were investigated. The truncated Bernoulli polynomials were considered, and several properties were given. The truncated Euler polynomials were defined and some properties and relations with the truncated Bernoulli polynomials were provided. The truncated-exponential-based Apostol-type polynomials were analyzed and their various properties covering some implicit summation formulas and symmetric identities were discovered. In this study, the definition of the 2-variable truncated degenerate exponential polynomials of order  $\alpha$  and then provide some of their properties and relations.

**Keywords:** truncated exponential polynomials, special polynomials, generating functions

**Introduction**

Throughout this paper, the familiar symbols  $C$ ,  $R$ ,  $Z$ ,  $N$  and  $N_0$  are referred to the set of all complex numbers, the set of all real numbers, the set of all integers, the set of all natural numbers and the set of all non-negative integers, respectively.

The truncated exponential polynomials  $e_n(x)$  are the first  $(n+1)$  terms of the Mac Laurin series for the function  $e^x$  (cf. [2-4,6,12]), that is

$$e_n(x) = \sum_{k=0}^n \frac{x^k}{k!}. \tag{1.1}$$

This polynomial has the following integral representation:

$$e_n(x) = \sum_{k=0}^n \frac{x^k (n-k)!}{k! (n-k)!} = \frac{1}{n!} \int_0^\infty e^\beta (x+\beta)^n d\beta. \tag{1.2}$$

The classical generating function of the truncated exponential polynomials is as follows (cf. [2-4,6,12])

$$\sum_{n=0}^\infty e_n(x) t^n = \frac{e^{tx}}{1-t}. \tag{1.3}$$

Using the aforesaid generating function, one can easily get the following derivative relations:

$$e_{n+1} = \left[ 1 + \frac{x}{n+1} \left( 1 - \frac{d}{dx} \right) \right] e_n(x) \tag{1.4}$$

and

$$e_{n-1}(x) = \frac{d}{dx} e_n(x). \tag{1.5}$$

For more detailed information about the truncated exponential polynomials, see [2-4,6,7,12-14] and also the references cited therein.

The traditional Pochhammer symbol  $(x)_n$  (sometimes called the descending factorial, falling sequential product, falling factorial, or lower factorial) is defined by (see [1,5,8-11])

$$(x)_{n,1} := (x)_n = \begin{cases} x(x-1)(x-2)\cdots(x-(n-1)), & n \in \mathbb{N} \\ 1 & n = 0. \end{cases} \tag{1.6}$$

The  $\lambda$ -extension of the usual Pochhammer symbol  $(x)_{n,\lambda}$  is given by (see [1,5,8-11])

$$(x)_{n,\lambda} = \begin{cases} x(x-\lambda)(x-2\lambda)\cdots(x-(n-1)\lambda), & n \in \mathbb{N} \\ 1 & n = 0. \end{cases} \tag{1.7}$$

Note that  $(x)_{n,1} := (x)_n$ .

The  $\Delta_\lambda$  difference operator of a function is defined by (see [1,5,8-11])

$$\Delta_\lambda f(x) := \Delta_{\lambda;x} f(x) = \frac{1}{\lambda} (f(x+\lambda) - f(x)), \quad \alpha \neq 0. \quad (1.8)$$

The following difference rule holds (cf. [1,5,8-11]):

$$\Delta_\lambda^k (x)_{n,\lambda} = \frac{n!}{(n-k)!} (x)_{n-k,\lambda}, \quad 0 \leq k \leq n, \quad (1.9)$$

where the notation  $\Delta_\lambda^k$  denotes the  $k$  times applying the  $\Delta_\lambda$  difference operators.

Let  $\lambda \in \mathbb{R} / \{0\}$ . The degenerate exponential function  $e_\lambda^x(t)$  is defined by (cf. [1,5,8-11])

$$e_\lambda^x(t) = (1 + \lambda t)^\frac{x}{\lambda} \text{ and } e_\lambda^1(t) = e_\lambda(t). \quad (1.10)$$

It is readily seen that  $\lim_{\lambda \rightarrow 0} e_\lambda^x(t) = e^{xt}$ . From (1.10), we obtain the following relation

$$e_\lambda^x(t) = \sum_{n=0}^{\infty} (x)_{n,\lambda} \frac{t^n}{n!}, \quad (1.11)$$

which satisfies the following difference rule

$$\Delta_\lambda e_\lambda^x(t) = t e_\lambda^x(t). \quad (1.12)$$

By (1.11), we can write

$$e_\lambda^x(t) = \sum_{n=0}^{\infty} (1)_{n,\lambda} \frac{t^n}{n!} = 1 + (1)_{1,\lambda} \frac{t}{1!} + (1)_{2,\lambda} \frac{t^2}{2!} + (1)_{3,\lambda} \frac{t^3}{3!} + \dots$$

In the family of special polynomials, in recent years, the truncated forms for polynomials have been worked on and investigated by various mathematicians cf. [2-9,11-14], and see also the references cited therein. Dattoli et al. [2] introduced the higher-order truncated polynomials which play a role of crucial importance in the evaluation of integrals involving products of special functions and discussed them within the more general context of the Appell family and the Laguerre family. Duran et al. [4] considered the two-variable truncated Fubini polynomials and numbers and then investigated multifarious relations and formulas including summation formulas, recurrence relations, derivative property, and correlations with the truncated Stirling numbers of the second kind, Apostol type Stirling numbers of the second kind, the truncated Bernoulli polynomials and truncated Euler polynomials. Hassen et al. [6] defined the truncated Bernoulli polynomials and derived several properties. Komatsu et al. [12] considered the truncated Euler polynomials and presented their properties and relations with the truncated Bernoulli polynomials. Srivastava et al. [13] examined the truncated-exponential-based Apostol-type polynomials and derived their various properties covering some implicit

summation formulas and symmetric identities.

While the truncated exponential polynomials  $e_n(x)$  (1.1) are the first  $(n+1)$  terms of the Mac Laurin series for usual exponential function  $e^x$ , the truncated degenerate exponential polynomials are introduced as the first  $(n+1)$  terms of the Mac Laurin series expansion of the degenerate exponential function  $e_\lambda(t)$  in (1.11) as follows:

**Definition 1** *The truncated degenerate exponential polynomials (the Detr-exponential polynomials) are introduced as the first  $(n+1)$  terms of the Taylor series expansion of  $e_\lambda(t)$  in (1.11) at  $t=0$ :*

$$e_{n,\lambda}(t) = \sum_{k=0}^n (1)_{k,\lambda} \frac{t^k}{k!}. \quad (1.13)$$

**Remark 1** *When  $\lambda \rightarrow 0$ , the Detr-exponential polynomials  $e_{n,\lambda}(t)$  (1.13) reduce to the truncated exponential polynomials  $e_n(t)$  in (1.1).*

**Proposition 1** *For  $|z| < 1$ , we have*

$$\sum_{n=0}^{\infty} e_{n,\lambda}(t) z^n = \frac{e_\lambda(zt)}{1-z}. \quad (1.14)$$

**Proposition 2** *The following difference operator rule holds:*

$$\Delta_{\lambda} e_{n,\lambda}(t) = t e_{n-1,\lambda}(t). \quad (1.15)$$

**Proposition 3** *The following recurrence relation*

$$e_{n+1,\lambda}(t) = (n+1) \sum_{k=0}^n \left( (1)_{k+1,\lambda} \frac{t^{k+1}}{k!} + e_{k,\lambda}(t) \right) \quad (1.16)$$

is valid for  $n \in \mathbb{N}_0$ .

## Main Results

In this chapter, we define the 2-variable truncated degenerate exponential polynomials of order  $\alpha$  and then investigate some of their properties.

We now consider the 2-variable truncated degenerate exponential polynomials of order  $\alpha$ , therefore we give the following definition.

**Definition 2** *The 2-variable truncated degenerate exponential polynomials of order  $\alpha$  are*

introduced by the following explicit expression:

$$e_{n,\lambda}^{(\alpha)}(x, y) = \sum_{k=0}^{\lfloor \frac{n}{\alpha} \rfloor} \frac{(x)_{n-k\alpha,\lambda} y^k}{(n-k\alpha)!}, \quad (2.1)$$

where  $\lfloor \cdot \rfloor$  means the greatest integer function.

We choose to call the 2VTD-exponential polynomials as well as the 2-variable truncated degenerate exponential polynomials of order  $\alpha$ .

We now examine a special case of the aforementioned polynomials as follows.

**Remark 2** When  $\alpha = 1$ , the 2VTD-exponential polynomials  $e_{n,\lambda}^{(\alpha)}(x, y)$  (2.1) reduce to the 2-variable truncated degenerate exponential polynomials  $e_{n,\lambda}(x, y)$ , which are the new extension of the exponential polynomials in (1.1), given by

$$e_{n,\lambda}(x, y) = \sum_{k=0}^n (x)_{n-k,\lambda} \frac{y^k}{(n-k)!}. \quad (2.2)$$

**Remark 3** When  $y = 1$ , the 2VTD-exponential polynomials  $e_{n,\lambda}^{(\alpha)}(x, y)$  (2.1) reduce to the truncated degenerate exponential polynomials  $e_{n,\lambda}^{(\alpha)}(x)$  of order  $\alpha$ , which are the new extension of the exponential polynomials in (1.1), given by

$$e_{n,\lambda}^{(\alpha)}(x) = \sum_{k=0}^{\lfloor \frac{n}{\alpha} \rfloor} (x)_{n-k\alpha,\lambda} \frac{1}{(n-k\alpha)!}. \quad (2.3)$$

**Remark 4** When  $x = 1$ , the 2VTD-exponential polynomials  $e_{n,\lambda}^{(\alpha)}(x, y)$  (2.1) reduce to the truncated degenerate exponential polynomials  $e_{n,\lambda}^{(\alpha)}(1, y)$  of order  $\alpha$ , which are the new extension of the exponential polynomials in (1.1), given by

$$e_{n,\lambda}^{(\alpha)}(1, y) = \sum_{k=0}^{\lfloor \frac{n}{\alpha} \rfloor} \frac{(1)_{n-k\alpha,\lambda} y^k}{(n-k\alpha)!}. \quad (2.4)$$

**Remark 5** When  $y = 1 = \alpha$ , the 2VTD-exponential polynomials  $e_{n,\lambda}^{(\alpha)}(x, y)$  (2.1) reduce to the truncated degenerate exponential polynomials  $e_{n,\lambda}(x)$ , which are the new extension of the exponential polynomials in (1.1), given by

$$e_{n,\lambda}(x) = \sum_{k=0}^n (x)_{n-k,\lambda} \frac{1}{(n-k)!}. \quad (2.5)$$

**Remark 6** When  $\lambda \rightarrow 0$ , the 2VTD-exponential polynomials  $e_{n,\lambda}^{(\alpha)}(x, y)$  (2.1) reduce to the 2-variable truncated exponential polynomials  $e_n^{(\alpha)}(x, y)$  of order  $\alpha$ , given by

$$e_n^{(\alpha)}(x, y) = \sum_{k=0}^{\lfloor \frac{n}{\alpha} \rfloor} \frac{x^{n-k\alpha} y^k}{(n-k\alpha)!}.$$

**Remark 7** When  $y = \alpha = x = 1$ , the 2VTD-exponential polynomials  $e_{n,\lambda}^{(\alpha)}(x, y)$  (2.1) reduce to the degenerate truncated exponential polynomials  $e_{n,\lambda}(t)$  in (1.13).

**Remark 8** When  $y = \alpha = x = 1$  and  $\lambda \rightarrow 0$ , the 2VTD-exponential polynomials  $e_{n,\lambda}^{(\alpha)}(x, y)$  (2.1) reduce to the truncated exponential polynomials  $e_n(t)$  in (1.1).

The classical generating function of the 2VTD-exponential polynomials is given by the following theorem.

**Theorem 1** For  $|t| < \sqrt[\alpha]{\frac{1}{|y|}}$ , we have

$$\sum_{n=0}^{\infty} e_{n,\lambda}^{(\alpha)}(x, y) t^n = \frac{e_\lambda^x(t)}{1 - yt^\alpha}. \quad (2.6)$$

*Proof.* Using (2.1) and

$$\sum_{n=0}^{\infty} \sum_{k=0}^{\infty} A(k, n) = \sum_{n=0}^{\infty} \sum_{k=0}^{\lfloor \frac{n}{\alpha} \rfloor} A(k, n - \alpha k) \quad (\text{see [5]})$$

for  $|t| < \sqrt[\alpha]{\frac{1}{|y|}}$ , we consider

$$\begin{aligned} \sum_{n=0}^{\infty} e_{n,\lambda}^{(\alpha)}(x, y) t^n &= \sum_{n=0}^{\infty} \sum_{k=0}^{\lfloor \frac{n}{\alpha} \rfloor} \frac{(x)_{n-k\alpha, \lambda} y^k}{(n-k\alpha)!} t^n \\ &= \sum_{n=0}^{\infty} (x)_{n,\lambda} \frac{t^n}{n!} \sum_{k=0}^{\infty} y^k t^{k\alpha} \\ &= \frac{e_\lambda^x(t)}{1 - yt^\alpha}, \end{aligned}$$

which implies the assertion (2.6).

We remark that using (2.6), the classical generating function of the polynomials in (2.2), (2.3), (2.4) and (2.5), respectively, can be given as follows:

$$\sum_{n=0}^{\infty} e_{n,\lambda}(x, y) t^n = \frac{e_{\lambda}^x(t)}{1-yt},$$

$$\sum_{n=0}^{\infty} e_{n,\lambda}^{(\alpha)}(x) t^n = \frac{e_{\lambda}^x(t)}{1-t^{\alpha}},$$

$$\sum_{n=0}^{\infty} e_{n,\lambda}^{(\alpha)}(1, y) t^n = \frac{e_{\lambda}(t)}{1-yt^{\alpha}},$$

$$\sum_{n=0}^{\infty} e_{n,\lambda}(x) t^n = \frac{e_{\lambda}^x(t)}{1-t}.$$

**Theorem 2** *The following difference operator rule holds:*

$$\Delta_{\lambda;x} e_{n,\lambda}^{(\alpha)}(x, y) = e_{n-1,\lambda}^{(\alpha)}(x, y). \tag{2.7}$$

*Proof.* Using (2.1), we observe

$$\begin{aligned} \sum_{n=0}^{\infty} \Delta_{\lambda} e_{n,\lambda}^{(\alpha)}(x, y) t^n &= \frac{\Delta_{\lambda} e_{\lambda}^x(t)}{1-yt^{\alpha}} \\ &= \frac{te_{\lambda}^x(t)}{1-yt^{\alpha}} \\ &= \sum_{n=0}^{\infty} e_{n,\lambda}^{(\alpha)}(x, y) t^{n+1}, \end{aligned}$$

which gives the claimed result (2.7) by comparing the coefficients of the first and the last series with respect to  $t$ .

We provide the following recurrence formula.

**Theorem 3** *The following recurrence relation*

$$e_{n+1,\lambda}^{(\alpha)}(x, y) = e_{n-u,\lambda}^{(\alpha)}(x, y) \sum_{u=1}^{\infty} \frac{(-1)^{u+1}}{u} \lambda^{u-1} + \sum_{k=0}^{\lfloor \frac{n+1}{\alpha} \rfloor} e_{n-(k+1)\alpha+1,\lambda}^{(\alpha)}(x, y) \frac{y^{k+1}}{(n-(k+1)\alpha+1)!} \tag{2.8}$$

is valid for  $n \in \mathbb{N}_0$ .

*Proof.* By (2.1), we observe that

$$\sum_{n=0}^{\infty} e_{n,\lambda}^{(\alpha)}(x, y) \frac{d}{dt} t^n = \frac{d}{dt} \left( \frac{e_{\lambda}^x(t)}{1-yt^{\alpha}} \right)$$

$$\begin{aligned}
 &= \frac{(1-yt^\alpha) \frac{d}{dt} e_\lambda^x(t) - e_\lambda^x(t) \frac{d}{dt} (1-yt^\alpha)}{(1-yt^\alpha)^2} \\
 &= \frac{1}{(1-yt^\alpha)^2} \left( (1-yt^\alpha) e_\lambda^x(t) \frac{\log(1+\lambda t)}{\lambda} + e_\lambda^x(t) yt^{\alpha-1} \right) \\
 &= \left( \frac{e_\lambda^x(t)}{1-yt^\alpha} \sum_{u=1}^{\infty} \frac{(-1)^{u+1}}{u} \lambda^{u-1} t^u + (1-yt^\alpha) \frac{e_\lambda^x(t)}{1-yt^\alpha} yt^{\alpha-1} \right) \\
 &= \left( \sum_{n=0}^{\infty} e_{n,\lambda}^{(\alpha)}(x,y) t^n \sum_{u=1}^{\infty} \frac{(-1)^{u+1}}{u} \lambda^{u-1} t^u + \sum_{n=0}^{\infty} y^{n+1} t^{n\alpha} \sum_{n=0}^{\infty} e_{n,\lambda}^{(\alpha)}(x,y) t^n t^{\alpha-1} \right) \\
 &= \left( \sum_{n=0}^{\infty} \sum_{u=1}^{\infty} e_{n,\lambda}^{(\alpha)}(x,y) \frac{(-1)^{u+1}}{u} \lambda^{u-1} t^{u+n} + \sum_{n=0}^{\lfloor \frac{n}{\alpha} \rfloor} \sum_{k=0}^{\lfloor \frac{n}{\alpha} \rfloor} \frac{e_{n-k\alpha,\lambda}^{(\alpha)}(x,y) y^{k+1}}{(n-k\alpha)!} t^{n+\alpha-1} \right)
 \end{aligned}$$

which gives

$$\begin{aligned}
 e_{n+1,\lambda}^{(\alpha)}(x,y) &= e_{n-\alpha,\lambda}^{(\alpha)}(x,y) \sum_{u=1}^{\infty} \frac{(-1)^{u+1}}{u} \lambda^{u-1} \\
 &+ \sum_{k=0}^{\lfloor \frac{n-\alpha+1}{\alpha} \rfloor} e_{n-(k+1)\alpha+1,\lambda}^{(\alpha)}(x,y) \frac{y^{k+1}}{(n-(k+1)\alpha+1)!},
 \end{aligned}$$

which means the asserted result (2.8).

**Abstract**

The general course of consumption behaviour and shopping behaviour has undergone a significant change following the Industrial Revolution. Towards the end of the 19th century, when production was prioritised, consumption became the main paradigm, and practices that encourage consumption and create new needs became widespread. The culture industry, which has become dominant thanks to mass media, has prioritised the creation of new needs, and this has led to the formation of a sector called fashion. Fashion, which was previously only in a narrow framework and for those with high socio-economic opportunities, has become a phenomenon that shapes and directs the consumption behaviour of the masses through mass media. The most characteristic feature of fashion, which determines the creation of new needs and the way these needs are met, is change. Change is a value glorified by today's dominant mentality. Clothes, automobiles, houses, mobile phones, white goods, furniture, physical appearance and even people, friendships, values, emotions, beliefs, which are indicators of an individual's tastes and material power, are the objects of change. Therefore, fashion is about everything. In the context of all these, fashion, in the shortest terms, is what is temporary. Something becomes fashionable only for a certain/limited period of time and then quickly becomes obsolete. Essentially, the process of becoming obsolete begins with something becoming fashionable. The idea of obsolescence is what enables something to be fashionable and unfashionable, that is, the rapid change that takes place in this process, in other words, the fashion trend to start the next trend. With this research, the semantic change, formation and functioning of the concept of fashion will be discussed.

**Keywords:** Fashion, Obsolescence, Obsolescence, Consumption.

## **Introduction**

*Capitalism, culture industry, consumer culture, fashion, advertising...* all these are situations and phenomena that have a direct and strong relationship with each other. They have enveloped individual and collective mentalities and all areas of individual and social life. Capitalism represents the most dominant phenomenon among them all. The others fulfil their functions under the influence and control of capitalism in a cause-and-effect relationship or in support of each other. To make a statement on fashion, the subject of this chapter, *fashion* cannot exist in its present meaning and function without *capitalist* mentality and practices. The *culture industry*, which is a sub-element of capitalism, makes use of *advertising* while creating and popularising fashion. The ultimate goal of all these is *the culture of consumption*. *Consumption culture* motivates *capitalist* mentality and practices.

## **Fashion And Consumption**

Now we can ask our main question: *What is fashion?* There is no standard definition of fashion that is accepted by everyone. Because it can have different definitions according to its scope and function. For this reason, many definitions have been made. New definitions continue to be made. The meaning and function of fashion may differ in different social structures according to the dominant mentality and lifestyles there. For example, socioeconomic status and situations can significantly change the meaning and function attributed to fashion. Similarly, changes in the acceptance and understanding of "consumption" can lead to changes in the meaning and function of fashion. Nevertheless, by taking into account the common features and commonly accepted meanings of the definitions, some determinations can be made about what fashion is, even in a general sense. Fashion, in the most general sense, refers to what is accepted and/or used by a certain group of people at a certain time and in a certain place. For this reason, the definition of *style and form in force* in dictionaries is meaningful. The determination of the *rule that temporarily regulates the use and shapes of ornaments, clothing, furniture, etc.* expressed by another definition expresses one of the common views on the scope of fashion. Many more definitions can be expressed based on different dictionaries and encyclopaedias. The origin of the word fashion can be seen as the right starting point to determine the meaning of fashion in order to reach the result in a short way without wandering between definitions. According to the common opinion, the origin of fashion is *mod*, which is a statistical term. *Mode refers to the most repeated number among the numbers in a certain sequence*. Therefore, fashion refers to the *most repeated thing, the common thing*. It is important

that fashion expresses the state of "prevalence". While a work, behaviour or appearance that is done by a person or a few people in a society and is out of the ordinary may be considered strange, the fact that that thing *becomes widespread and* is done/adopted by many people can lead to the normalisation of that thing. This situation points to fashion. Of course, there are some important criteria that shape the transformation of something from being considered strange to being liked and widely adopted. Personalities who are respected by the society/mass and therefore are models are the most important tools of this transformation. For this reason, *the culture industry*, since it is the shortest and easiest way to include a product in the consumption process, first of all produces model personalities or "star" individuals with popular nomenclature, and through these, it puts its products on the consumption market. The product is easily accepted through "stars". There are significant differences between being a person respected by society in the traditional sense and being a "star", which is a phenomenon of modern times. In traditional society, reputation is a requirement of being an exceptional personality that is appreciated and admired by the members of the society in line with the value judgements of the society. For example, a person can be a respected artist of the society with his/her long-standing and outstanding achievements. In the traditional mentality and society, being an artist is a characteristic that is a combination of special talent, great labour and outstanding achievement. Today, however, being a "star" does not require special talent, labour and success. When mass media advertise a person as a "star", it is possible to become a "star". In fact, most of the time, a person with no special talent, labour and achievement can suddenly be remembered as a "musician", "singer", "voice artist", "model", "mannequin" .... However, this in no way means that the "artist" or other titles of that person will have a long-lasting continuity. A person can shine in one moment and fade away in the next. For example, a person chosen by the culture industry can become a "star" with a song and then disappear after fulfilling the functions expected of him/her by the culture industry. As no one knew before, no one remembers him/her after he/she fades out. This "star's" being remembered and continuing his/her "stardom" is related to and limited to what the culture industry expects from him/her.

There is a linear relationship between the role of the culture industry in producing "stars" and fashion, which is the most important motivational tool of consumption that capitalism wants to make uninterrupted. Because there is a strong relationship between *fashion* and *being widespread*. However, although the fact that something is preferred by many people is important for it to be fashionable, this feature may not be enough to ensure that what is desired

to be widely consumed is fashionable. An example of this is the torn/worn jeans that are in fashion today. When the blouse was first invented in the USA, it was used by mine workers. The blousins used by the workers and worn out during long periods of hard labour were not considered fashionable in any way. Moreover, despite the fact that they were worn by a large mass of workers. However, as relatively high status groups, especially young people, began to dress more widely, the torn jeans became fashionable. This was done through "star" personalities who were modelled. Through them, young people and even non-young people started to wear torn/worn jeans and this became a widespread consumption behaviour. People could be directed to the desire of owning torn/worn jeans by paying more for them than for the good ones. A similar situation can be said for "old" clothes. In the old times, the torn, worn, partially dismantled clothes that the poor had to wear were not fashionable although they were worn by the poor on a mass level. This condition of those items was a result of unfavourable economic conditions. Today, however, torn, frayed and partially dismantled clothes have become fashionable through role models and individuals with high socio-economic conditions have been made to wear torn and dismantled clothes. Perhaps patched clothes will soon face a similar situation. Of course, if the people or businesses who decide what is fashionable decide to do so. If one of the important references in determining the meaning of fashion is "mod", the other is *modus*, which means "unformed border" in Latin. *Modus* contributes to understanding the meaning of fashion as well as its function. As it is known, fashion is something that changes easily and does not remain fixed/the same in any way. In the shortest terms, fashion is something that is temporary. Something becomes fashionab/e only for a certain/limited period of time and then quickly becomes *obso/ete*. In fact, when something becomes fashionable, the process of becoming obsolete also begins. The idea of *obso/escence* is what enables a thing to become fashionable and unfashionable, that is, the rapid change that takes place in this process, in other words, the fashion trend to start the next trend. For example, objects physically wear out over time depending on their qualities and usage. This is an expected and familiar situation. However, the traditional mentality and the modern mentality's understanding of *obso/escence* do not refer to the same meaning. From the point of view of the traditional mentality, the obsolescence of an object is due to the fact that it is physically unable to fulfil its basic function and deteriorates. However, from the point of view of this mentality, the obsolescence of an item does not require that the item be immediately thrown away or considered as "rubbish". The *old* item can be repaired and used again and again. Understandings that control consumption, such as *waste* and *saving* with the limited means available, can contribute to transforming the *worn-*

*out* item and maintaining its functionality, even if it has completed its actual useful life. In this respect, some familiar examples are clothes that are patched and worn, furniture that is repaired and sweaters that are dismantled and put back into use by mopping. It is understandable for elderly individuals with a traditional mentality to continue to keep any item that has lost its function with the understanding that "it will be needed one day". Because from the point of view of this mentality, throwing away items that can be repaired or throwing away objects that have economic value is considered as "rubbish" and is considered as *waste*. Waste is a behaviour that should be avoided. Therefore, according to this view, every item, even if *it is old*, has a use value. This is the requirement of the mentality in which *consumption* is not a value, instead *saving is recognised* as a value. On the other hand, the meaning attributed to "obsolescence" by the modern mentality, which represents the transition from the *old* to the *new* and makes *change* a fundamental value in this context, is completely different from the meaning attributed by the traditional mentality. In the modern mentality, it is not the case that things lose their physical function, wear out and become unusable. The meaning attributed to *obsolescence* by the modern mentality is directly related to the course of development of the capitalist mentality. In the early 20th century, as a result of the replacement of the principle of *production* with the principle of *consumption*, "spending" rather than "saving" or "preserving" was encouraged, while values such as "frugality" began to be perceived as *stinginess*. The thrifty, wasteful individuals of the past have been replaced by individuals with the mentality of "*I consume, therefore I exist*" and the masses formed by these individuals. Instead of *stability*, *permanence* and *order*, transience and *change* have become the basic principle. The idea of *impermanence* and *disposability* has been developed and reinforced through adverts that manifest themselves at every corner of daily life with calls to *bring the old and take the new*. Being "disposable" and "discontinuous", which comes with the idea of *obsolescence*, has become a feature that reveals itself in its full form not only in clothes, household appliances, cars, accessories, furniture and houses, but also in human relations and preferences. The minds are now dominated by a distinction between what is appropriate and inappropriate for the times and conditions. When this idea is engraved in the consciousness with the concepts of "new" and "change", individuals who are motivated by the discourses of infinite *freedom of choice can*, for a small reason, remove friends, people or relationships that they do not like or that are no longer useful from their agenda and minds, and continue their lives as if they had never happened by opening a new page. As in the Greek philosopher Heraclitus' statement that the

*only thing that does not change is change itself, change/abandonment is at the centre of the mentality of today's individuals and life in today's societies.*

### **Fashion And Change**

*Change* is a value glorified by today's dominant mentality. Clothes, automobiles, houses, mobile phones, white goods, furniture, physical appearance and even people, friendships, values, emotions, beliefs, which are indicators of the individual's tastes and material power, are objects of change. For today's individual, none of these have the importance and meaning to deserve to stay for a long time. Fashion is an important motivational tool that manages the process. Fashion keeps the desire for change alive through the understanding of *obsolescence* in a way that can be called continuous. Sociologist Roland Robertson (1938-2022) considered the adoption and spread of fashion as a five-stage process supported by social motivations. These stages consist of the following:

- 1) The adoption of what will become fashionable by agents, i.e. change leaders,
- 2) Social visibility and communicability,
- 3) Harmony within and between social systems,
- 4) Social cohesion and the market,
- 5) Becoming obsolete with the emergence of new fashion alternatives.

In addition, fashion represents the logic of planned obsolescence. Fashion is not only a necessity for the survival of the capitalist market, but also an important tool for the expansion of capital. Werner Sombart (1863-1941), who analysed the economic dimension of fashion within the capitalist system, defined fashion as the *favourite child of capitalism* in his work *Economy and Fashion* (Wirtschaft und Mode) published in 1902. According to him, fashion is a necessity to offer new fields and products to the capitalist market. It is a highly functional mechanism for making profit by making things, ideas, values, lifestyles, attitudes and behaviours, personalities, identities... constantly "obsolete". Within the scope of all these, the main characteristics of the fashion sector can be expressed under five headings:

*Being short-lived:* Fashion products are generally short-lived. The life of a fashion product is expressed in weeks or months. Fashion is recognised as a temporary and cyclical phenomenon. For this reason, it is known that the life curve of fashion clothing products is shorter than other

industries. *High variability*: The demand trend for fashion products is rarely constant or linear. Fashion products can be affected by seasons, famous people, trends. *Low predictability*: Due to the variability of demand, it is difficult to make sales and demand projections. *Highly motivated buying tendency*: Most of the purchasing decisions of consumers are made at the point of purchase. When the consumer encounters the product, he/she is encouraged to buy it. *Being similarising*: Today, although the fashion industry is multidimensional, multicultural, multicoloured and multivocal, as a result of globalisation, clothing and fashion culture has evolved into a similar structure among countries. In this respect, brands such as Zara, Berschka, Pull&Bear, H&M, Stradivarius, Mango, Vero Moda, TopShop, Koton and Batik function as actors of similarity of appearance. Attitudes and behaviours, preferences and tendencies that can be considered within the scope of fashion have been one of the unchanging features of social life. In all societies, senior executives and the people around them, especially family members, members of the socio- economically high class, and especially women have had different and variable preferences from the majority of the society. Fashion is a sociological phenomenon related to power holders and rich people before the 19th century. In the first quarter of the 20th century, it gained a mass character with a form and scope unprecedented in history. Class fashion has been replaced by consumer fashion. Instead of a single type of fashion determined by the upper classes, a fashion understanding that tends to include all layers of society has emerged. In the 20th century, developments in mass communication technologies led fashion to become widespread and prestigious in a way never seen in any period of history. In the 20th century, the phenomenon of dressing has covered the whole social life in a way that goes beyond culture and has become a part of the material and spiritual dimension of consumer culture. Through mass media, it has become an element that mobilises social change as well as a mirror of social life. However, in addition to fashion shows, fashion blogs and fashion magazines, other channels that are as effective as them have emerged in the dissemination of fashion. One of these channels is fashion magazines. In addition, the internet and social media platforms have assumed important functions in terms of the opportunity to spread fashion trends rapidly and to deliver visual images to wider audiences. Fashion influencers and celebrities who are effective on platforms such as Instagram, YouTube and TikTok popularise a certain body type, clothing style and beauty standards in a short time and have a strong influence on their followers to adopt these idealised images.

### **Scope of Fashion**

The most basic expression of fashion is recognised as *clothing, dress* and *ornamentation*. Clothes are the most classic and basic product of fashion. Being a manifestation of people's personality and character, clothes are an observable form of behaviour. However, although clothes are the most visible form of fashion, fashion is a broader phenomenon. It is related to many different material and non-material contexts. The most important tool and even lever of fashion is advertising. Every day people are bombarded by visual advertisements that encourage them to buy certain products or services, which in turn creates and popularises fashion. However, these images also function as factors that influence attitudes, values, beliefs and behaviour. Fashion is inherently related to material contexts (furniture, architecture and automobiles, etc.) as well as non-material contexts (child-rearing techniques, art appreciation, etc.). In essence, fashion is not only concerned with the appearance of a person's body, but also with their behaviour, thoughts, feelings, emotions, knowledge, speech, agenda, interests... in short, the way they present themselves. For example, making personality analyses based on horoscopes, using slang words or gesticulating while speaking under the influence of some TV series and films can be things that are encountered as fashion elements. In this respect, the words of the famous fashion designer Coco Chanel (1883-1971) are important in terms of expressing the scope of fashion: *Fashion is not something that exists only in clothes, fashion is something in the air we breathe. It is a wind, you feel it coming, you smell it. Fashion is about ideas, lifestyles, what is happening.* The basis of fashion culture is capitalism, which is driven by an unlimited and irresponsible drive for material profit. The rulers of the capitalist mentality, who deliberately declare the contents of existing wardrobes *obsolete* and *outdated*, have succeeded in turning people into slaves dependent on themselves through fashion; they have first and foremost influenced young people and women. Nowadays, even young people who do not have enough money for a bagel to fill their bellies consider following fashion as an indispensable condition and try to follow fashion as much as possible. Young people with no economic means walk around hungry, they feel cold because they have no clothes to protect themselves from the cold, but they try to have something fashionable; sometimes it is perfume, sometimes it is a branded clothing, and lately most of the time it is a mobile phone. Because it is through these that the young person feels his/her existence and makes his/her peers feel it.

The modern mentality and lifestyle has placed the human being as the "subject" at the centre of the "God-centred" existence and lifestyle of the previous, traditional period. This subject, on

the other hand, manifests the things constructed and characterised by the culture industry in all the units of the system at the centre of which it sits. For this reason, the mass society and its individuals value fragmentation instead of unity and harmony, pleasure and desire instead of reason. In addition, modernity prefers not the sacred but the profane embodied in itself. In this respect, while entering into a conflict with the sacred, it also presents itself as a taboo. This presentation manifests itself most clearly in fashion rituals. For example, the fact that fashion shows are presented in a ritual/ritual atmosphere, that fashion provides its followers with a belonging with transcendental references, that the members of this belonging display the appearance of a "faith community", that they think, dress and live in the same style... points to fashion's effort to create a *sacred* space around itself. Through fashion, the profane is given a sacred spirit and appearance. For this reason, Barnard's definition that *fashionable clothing and clothing items are the most fetish products produced and consumed in capitalist society* is very meaningful. According to Andrew Greeley, an American clergyman, it is enough to visit any car fair today to watch a religious ritual. When one goes to the place where automobiles are exhibited, it will be seen that fashion presenters are treated as people with immunity like clergymen, and the products are treated as aesthetically and ethically indisputable taboos.

### **Conclusion**

In addition to all these, the following should also be stated: The planned rapid *obsolescence of* consumer goods through fashion provides capitalist capital with billions of dollars every year. This makes capitalism always strong and effective. It is possible to clearly see how this process works in the individuals of the consumer society who see consumption as the only way of expressing themselves and use the brands they use instead of their identity. It would be misleading to see this as merely a situation that enables consumers to prefer the products they need. This operates through an idea/value that is embedded in the consciousness of consumers in their human relations and perspectives on life, and is reflected in their behaviour. The philosophy of *carpe diem*, which invites individuals to cut their ties with the past, not to take the future into account and to turn towards the present moment, and to enjoy the moment, drags consumers to further stages and contributes to the establishment of the *disposable* logic from products to human relations, from nature to working life.

**Abstract**

Among the places where people's shopping activities were shaped before the Industrial Revolution, the agora of Ancient Greece, the market area or city squares of the Middle Ages are important in terms of the functions they fulfil. In addition to being places where commercial activities were carried out and shopping was carried out to meet needs, they were also places where political or cultural activities were carried out and where individuals socialised extensively. They were the heart of social life. In fact, this situation has never completely ended, and especially city squares, with their increasingly narrower and shallower functions, have maintained the features they inherited from history until today, albeit in a diminishing form. However, with the Industrial Revolution, the first signs of change began to be seen in the primary space of production-consumption relations. In the first stage, department stores, which can be considered as the pioneers of shopping centres, started to be seen. These stores fulfilled important functions for a while as places where comfortable shopping could be done, where the products offered for sale were offered to the consumer under favourable conditions and exhibited to encourage consumption. As of today, shopping malls, which have become a centre of attraction with their many elements, are living centres that host many of the activities that individuals and masses feel the need for or feel the need for. These places have become places where the heart of urban life beats with their multifaceted functionality such as shopping, entertainment, eating and drinking, worshipping, doing sports, leisure time, watching movies in the cinema, spending time with friends, spending the weekend with the family, window shopping, socialising, following fashion with their units such as shops, cinema, bank, restaurant, patisserie, cafeteria, hairdresser, pharmacy, place of worship, entertainment or sports venue, playground. With these multifaceted functions, they appeal to all segments of the society from the highest income level to the lowest income level and attract everyone's attention. In this respect, they are micro spaces of daily life. With this research, the meaning and functions of shopping centres, which represent the last stage of the change process of shopping spaces, in the context of consumption culture will be discussed and evaluations will be made regarding the process.

**Keywords:** Shopping, Consumption, Shopping places, Shopping centres.

## **Introduction**

The Industrial Revolution has an important place in the formation of the modern mentality and lifestyle, to put it in terms of shaping the process, disregarding the philosophical and scientific heritage of several centuries. The Industrial Revolution, which led to many changes in people's mentality and in their individual and social lives, and the urban life that accelerated and intensified thanks to it, significantly changed the production-consumption relations and caused these relations to be reflected in other areas of individual and social life, rather than being limited to the economic field as before. Changes in working life, the emergence of the traffic problem, new meanings attributed to consumption, the emergence of the concept of "leisure time" and proposals and initiatives regarding its content, the search for alternative spaces for the needs shaped by the new mentality and lifestyle... have been the determinants of radical changes and innovations in the course of humanity.

## **Emergence of Shopping Centres**

Before the Industrial Revolution, among the places where people's shopping activities were shaped, the agora of Ancient Greece, the market area of the Middle Ages or the city squares are important in terms of the functions they fulfil. In addition to being places where commercial activities were carried out and shopping was carried out to meet needs, they were also places where political or cultural activities were carried out and where individuals socialised extensively. They were the heart of social life. In fact, this situation has never completely ended, and especially city squares, with their increasingly narrower and shallower functions, have maintained their features inherited from history until today, albeit in a diminishing form. However, with the Industrial Revolution, the first signs of change began to be seen in the primary space of production-consumption relations. In the first stage, *department stores*, which can be considered as the pioneers of shopping centres, started to be seen. These stores fulfilled important functions for a while as places where comfortable shopping could be done, where the products offered for sale were offered to the consumer under favourable conditions and exhibited to encourage consumption. The growth of cities, the increase and intensification of the population, the emergence of the traffic problem, the emergence of the concept of leisure time in general and holidays in particular due to the regulations in working life, the emergence of the need to engage in as many activities as possible in limited free time... all these have led to the inadequacy of city centres and the search for alternative spaces has emerged. Although the spaces that were the product of these searches responded to the needs, albeit with difficulty,

until the 1950s, this was not found sufficient. Victor Gruen (1903-1980) was the planner of the first shopping centre with its present form and function in the United States based on the existing problems and demands. According to him, there was a need for a place of escape for people who were overwhelmed by the traffic problem and the boredom of daily life. Due to the fact that the city centres had lost their functions to a great extent with the division of life and spatial construction into different activity areas in cities, he thought that there was a need for places where new social activities were concentrated and designed the first shopping mall. In 1954, he designed the first suburban open-air shopping facility called Northland Mall. In addition to shops, it was designed as a complex of apartment blocks, schools and health facilities, with its own large park and lake. This complex was never completed, but the idea of this complex space design was original. Victor Gruen continued to design new spaces with some additions and subtractions. The second mall Gruen designed was the Southdale Shopping Centre in Minnesota. He designed it as an enclosed space for both vendors and consumers, where social activities were carried out together, going beyond mere shopping activities. Others followed. By the mid-1970s he had designed more than fifty shopping centres in the USA. Each space was planned in more detail than the previous ones. Thus, he reached the shopping centre design that brings together the functions that the busy and complex lifestyle of today's modern city makes individuals feel the need or desired to feel in their daily lives under a single homogeneous roof.

### **Structural Features of Shopping Centres**

As of today, shopping malls, which have become centres of attraction with their many elements, are living centres that host many of the activities that individuals and masses need or feel the need for. These places have become places where the heart of urban life beats with their multifaceted functionality such as shopping, entertainment, eating and drinking, worshipping, doing sports, leisure time, watching movies in the cinema, spending time with friends, spending the weekend with the family, window shopping, socialising, following fashion with their units such as shops, cinema, bank, restaurant, patisserie, cafeteria, hairdresser, pharmacy, place of worship, entertainment or sports venue, playground. With these multifaceted functions, they appeal to all segments of the society from the highest income level to the lowest income level and attract everyone's attention. In this respect, they are micro spaces of daily life.

The main factor that is often unrecognised in the functioning of shopping malls is the phenomenon of *leisure time*, which is a product of the Industrial Revolution. While *production*

and *work* were at the forefront in the early days of the Industrial Revolution, *leisure time* based on consumption was built as an important living space in the following period. Following the Industrial Revolution, *working time* and *rest time* were completely separated from each other as two separate living spaces. However, in traditional life, working life and rest time were intertwined; there was no such separation. With this separation, the social structure based on production and work was replaced by a new social structure based on consumption and leisure time. Capitalism, which is the subject of the process, while reshaping production and consumption through its own paradigm, has designed that individuals who use their time for production should also have private time for consumption. Non-working time, which is created through regulations on working life, is designed as a field of activity based on consumption. For this reason, leisure time activities have been commodified and functioned as a tool of hegemonic planning rather than being seen as a time to spend leisure time resting. Consumption became the main activity of the process. In this respect, thanks to *the institution of leisure time* built under the conditions of the Industrial Revolution, *consumption* has ceased to be a means of sustaining life and has become an end in itself. This has functioned as an important means of dominating the understanding that people should *live to consume rather than consume to live*.

Today, the act of shopping and consumption has social and symbolic contents such as having fun, leisure time, acquiring status, achieving an idealised lifestyle and obtaining prestige. In terms of the modern mentality, consumption has emphasised the meanings attributed to products rather than their properties and functions, and in some cases even completely. The "mass society", which is constructed with the help of mass media and is open to all kinds of manipulation, and whose sociality is questionable in every respect, has been transformed *into a society of consumption*. The *consumer society*, which is constructed with the desires of large companies engaged in mass production and through the advertising-fashion tools of mass media, gains meaning as the name of an extremely shallow and largely formal structure compared to the natural/real social structure. This structure is a structure whose main function is to consume, where not only consumption commodities but also identities, spaces, lifestyles, cultural elements, images, meanings, values, time and almost everything else are perceived as objects of consumption. Consumption has ceased to be the result of an act of shopping to satisfy mostly physiological needs and has become a phenomenon that is supported and directed through fashion and advertisements in line with the aims of the capitalist economy, and in which

consumed objects are used as identity and status indicators. Both the constructor and the supporter of this phenomenon is the capitalist mentality. Just as every society has a culture, a culture has been invented for *the consumption society*, and unlimited consumption tendencies to obtain the symbols dressed in consumption objects, and the lifestyle shaped around consumption behaviours that diversify every day have formed the basis of this culture. The modern urban individual has become the ideal type of *consumption society* and *consumption culture*. This individual consumes in order to have the sense of identity offered to him/her and to live according to who he/she wants to be perceived as.

*Consumption culture* is a necessity of not seeing consumption activity only as the consumption of commodities. Consumption culture refers to a mentality and lifestyle related to the purpose and manner of obtaining the commodities consumed, the way they are used and the norms and value system emerging in this process. The use of an object because of its ability to satisfy a need and being found valuable in this respect is a very normal and routine feature in terms of human behaviour. Here, the subject is the human and the object is the product consumed. However, consumer culture gains meaning as the name of a situation that disrupts this hierarchy. In this case, people become objectified and things become subjectified. Karl Marx's (1818-1883) conceptualisations of alienation and fetishism are important as one of the first to recognise this situation. Another social scientist György Lukacs (1885-1971) made a similar evaluation while reaching the concept of *reification* through what Marx expressed with alienation and fetishism. Whatever the conceptualisations expressing the subversion of the hierarchy in question, what is expressed expresses the differentiation of the connection that should be in the relationship between man and things. In other words, while the thing produced for use becomes the basic reference of a system of values, the human being, who should be the subject, becomes objectified and ordinary. However, the thing that becomes subjective in consumer culture is essentially the thing produced by human beings for human beings. To give an example of how this happens; when a person sees a state-of-the-art technological product, if he starts to see that technological product as a value in itself, as a basic reference that will increase his own value if he owns it, rather than the feature related to the function of that product, this is a problematic relationship and corresponds to *the culture of consumption*. In Marx's conceptualisation, the person in this situation becomes "alienated" from his/her own essence/humanity, and the object that enables this alienation gains the quality of a fetish. In the same way, the fact that money, which is an intermediary in the purchase of commodities,

becomes a measure of value is shaped according to the functioning of the process envisaged by the consumption culture. At this stage, it is meaningful that Ivan Illich (1926-2002) defines *consumer society as a type of society in which life is organised around commodities and social progress is measured by the power of access to these commodities*, or Zygmunt Bauman considers *consumer culture as a type of society in which the exchange value of commodities disappears and the function of commodities as indicators comes to the fore instead of their utility function*.

### **Consumption Culture and Shopping Centres**

For the modern and therefore urban individual, being different from everyone else, and demonstrating this difference with his appearance, especially in terms of clothing and attire, eating and drinking places, the tools and equipment he uses, and the social environment he is in contact with, constitutes one of the targeted goals of the idealised lifestyle. He strives to be different from those around him with the visible brand name of his clothing, the neighbourhood of his residence, the brand and model of his car, the country and region he goes on holiday, the popularity of the food he eats, the subjects he is interested in, his circle of "friends", the way he speaks... This situation leads to an endless struggle to *be recognisable*, and all their efforts are shaped on the axis of being different and staying different. As a result of the increased accessibility of consumption commodities and the tendency to spread to all segments of the society, the current situation of the socioeconomically upper segments has become questionable, which has necessitated the continuous reconstruction of *differentiation* tendencies through fashion, which triggers and accelerates *being different*. The widespread access to all kinds of clothes as a stage of this situation has pushed *the privileged segments* who tend to be different to expose themselves with a nudity in which only the genitals are covered, or to exhibit behaviours that reveal their differences through appearing in such art activities. The paradox of *differentiation* and *sameness* leads to an endless consumption motivation. In this respect, shopping malls function as spaces of the capitalist commodity system cycle *that both segregates and replicates*. As places where an *ostentatious* lifestyle is embodied in all its dimensions in accordance with *the requirements of the consumption culture*, shopping malls make life easier for the members of the consumption culture by offering all the products required by *ostentatious symbolic consumption as well as* products that will meet all the needs that can be considered as *compulsory* such as food and clothing. Offering a wide variety of products in different stores that meet all kinds of needs together allows people to shop in accordance with their lifestyles,

identities and status. Special security personnel, devices and inspections create a safe environment and provide protection from external factors that may harm individuals. People have the understanding and confidence that they breathe in a highly controlled and disciplined life during their stay there. In shopping centres, it is clear where to enter and exit and what to do. These are dictated to individuals in the form of unwritten rules. In these places where individuals stay as long as they can, showcases create a visual space that they cannot break away from. The perception that the individual can spend his whole life if he wants is successfully dictated. There is something for everyone. People's interests, feelings of pleasure and desires are constantly provoked. In addition to these, the fact that shopping malls offer colourful brands and different lives causes people to be psychologically affected; shopping malls function as a means to get away from external problems. Individuals numb their problems or take a break by visiting the colourful showcases in the shopping malls. In shopping centres, there is virtually "nothing to find", all stores and "needs" are waiting for their customers in magical boxes.

### **Shopping Centres and Religious Rituals**

The fact that shopping malls have become a centre of attraction of consumption that constantly renews itself and does not lose anything from its attractiveness in this respect has been possible thanks to planning carried out in a highly rational manner. Among the objective, emotional and functional elements that make shopping malls the centres of attraction of consumption culture, the fact that they are gigantic and easily accessible places, their eye-catching showcases that stimulate feelings of need, the fact that they are offered with opportunities to meet many different needs at the same time, and the use of credit card shopping facilities that facilitate spending and transfer payments to the future are important attraction features. In a sense, the roads in shopping centres, which have the appearance and function of a micro city, constantly direct people to the stores depending on the architectural tricks that highlight the showcases of the stores and present them to the attention of the consumer. The arrangement of the space is realised in such a way that the individual will increase the time he/she will spend in the shopping mall and thus, he/she will feel the need by seeing what he/she does not need. The internal flow in the space is realised through labyrinth-like circulation areas, enabling consumers to encounter the maximum number of products and shopping opportunities. The escalators, which are located in the same direction but not end-to-end and used for vertical connection, are planned to allow people to walk around and thus see more stores. What is more important and

interesting is that consumption is not directly presented in these spaces. Entertaining activities and shows are attached before and next to the consumption activity, and campaigns presented as special opportunities successfully fulfil the functions of directing consumption. Shopping in shopping centres is no longer just an act of purchasing. Entertainment, aesthetics, image and belonging have become effective elements of purchasing. With the addition of entertainment to the meaning of shopping, the distinction between shopping and entertainment has almost disappeared. Thus, consumption is transformed into an act of pleasure, a recreational activity. With the establishment of shopping centres, shopping has become an effective element of purchases such as entertainment, aesthetics, image and belonging. With the addition of entertainment to the meaning of shopping, the distinction between shopping and entertainment has almost disappeared. A *lifestyle* is offered to individuals in shopping centres. This is a lifestyle envisaged by capitalism and designed by the culture industry. The masses are directed towards the modern mentality and lifestyle through these places, the relations and transactions in these places. These spaces of production-consumption relations, which seem to put the human being at the centre, but where the intellectuals and representatives of the consumer culture are the subjects and the masses are the objects, are places where rationalism, hedonism, change, individualism, materialism, secularism... appear in accordance with the requirements of modernity. With these characteristics, they are concrete and functional examples of modernity's function of being an "anti-religion religion". Modernity, which is built on anti-religion (Catholicism/Church) and presents itself as a religion in many respects by taking its "enemy" as a model, transforms itself into a "religion of science" in educational institutions, a "religion of pleasure/entertainment" in daily life, or a belief/religion system of "sexuality", "violence", "physical power" ... in different places and environments. In this respect, Ivan Illich was one of the first and important figures to draw attention to the functions of shopping centres outside the production-consumption relationship. While defining the consumer society as a type of society in which life is organised around commodities and social progress is measured by the ability to access these commodities, he emphasised the "slavery of consumption", although the implication of "religion" is also quite strong in this determination. The American sociologist George Ritzer, on the other hand, used the term "religion" directly. As Ritzer expressed in his book *Enchanting the Disenchanted World*, shopping centres are the "cathedrals" of the "religion of consumption". He had no difficulty in finding traces of the forms and worship of the Abrahamic religions (Judaism- Christianity-Islam) in shopping centres. He likened shopping centres to places of pilgrimage. To extend his metaphor a bit; shopping malls function as the

place of worship of the modern/secular individual. In the standardised rituals here, it is possible to find traces of the weekly prayers and pilgrimages of the three Abrahamic religions. Individuals who are believers *of the religion of consumption* have a feeling of spiritual emptiness if they do not visit the shopping centre one day a week, similar to the worship of Jews on Saturday, Christians on Sunday and Muslims on Friday. Due to the conditions of working life, this is usually at the weekend. This situation is important in terms of giving the shopping centre "visit" the form of weekly worship. However, the similarity in question is by no means due to the fact that the visit in question is made once a week, but due to the meaning and function attributed to that "visit". The modern/secular individual, who is restless when he/she does not perform his/her "weekly worship"<sup>M</sup>, returns home after his/her "worship" in a state of "peace of mind". The relationship of the modern individual with shopping centres is also reminiscent of the pilgrimage rituals of the three Abrahamic religions. In the pilgrimage worship of all three religions, there are rituals such as walking around (tawaf) the object/place of pilgrimage (e.g. the Kaaba), venerating a certain building or object in the centre of the pilgrimage site with respect and love (contemplation/zikr), anointing the building or object in the centre of the pilgrimage site (Hajar al-Aswad) .... The modern individual also walks around the shops in shopping centres, which are the "cathedrals" of the "religion of consumption", admires the shop windows/items (reverence), anoints the objects (touching them, trying them on...) and leaves the place in a "purified" way.

### **Conclusion**

Shopping centres are the *magical* places of today. It represents an association in which "magic", which is thrown out of life due to rationality and secularism, the basic principle of modernism, is also activated where necessary. Those who look into its "eyes" fall under its influence and follow it unconsciously. For this reason, George Ritzer (b.1940) likened being in places of consumption such as shopping malls to the situation of a child who imagines himself in a place where everything is made of sugar and can easily reach those candies, and emphasised the *fascinating* aspect of shopping malls. However, there is also a negative side to this; just like the spooky things, ghosts and witches in the child's imaginary space, there are things in this space that have the potential to turn beautiful dreams into nightmares. These are personal impossibilities that exceed the means and power of purchase and therefore can only be watched, which in turn leads to the destruction of the integrity of the psyche. This castle of dreams, where

***VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES***

***April 09-16, 2024 / Lisbon, Portugal***

---

almost every product and service of the world of consumption can be accessed, represents the realm of nightmares with its unaffordability as well as its accessibility.

**YÜKSEK PERFORMANSLI SİGORTA ACENTELERİNİN ORTAK BAŞARI  
FAKTÖRLERİNİN BELİRLENMESİ ÜZERİNE BİR DEĞERLENDİRME**

**Öğr. Gör. Dr. Erdiç CESUR (ORCID:0000-0002-4697-3866)**

Sakarya Uygulamalı Bilimler Üniversitesi, Sapanca Meslek Yüksekokulu,  
Finans-Bankacılık ve Sigortacılık Bölümü, Sakarya, Türkiye.

**Email:** ecesur@subu.edu.tr

**Özet**

Bu çalışmanın temel amacı yüksek performanslı sigorta acentelerinin ortak kritik başarı özelliklerinin neler olabileceği konusunda bir değerlendirme yapmaktır. Dünyanın birçok ülkesinde sigortacılık sektörü devletin yasal olarak belirlemiş olduğu sınırlar çerçevesinde uygulanmaktadır. Sigorta şirketlerinin kuruluşundan, tasfiyesine kadar, sigorta ürünlerinin dağıtımından hasar işlemlerine kadar tüm süreçler kanun, yönetmelik, tarife ve talimatlar, genelgeler ve uygulama tebliğleri ile belirlenmektedir. Sigorta acentelerinin de kuruluşundan, tasfiyesine kadar tüm iş ve işlemlerin her biri yasal olarak tanımlanmış ve tüm sigorta acenteleri için eşit koşulları kapsamasına rağmen nasıl oluyor da sigorta acentelerinin bazıları çok başarılı olabilirken, bazıları ise iflasın eşiğine gelebilmektedir? Aradaki fark/farklar nerelerden kaynaklanmaktadır? Bu kapsamda temel araştırma sorusu “yüksek performanslı sigorta acentelerinin ortak kritik başarı faktörleri nelerdir ve gelecekte nasıl olacaktır?” şeklinde belirlenmiştir. Çalışmada, nitel araştırma yöntemi kullanılarak, literatürde yer alan ampirik ve teorik ikincil verilerden yararlanılmıştır. İlgili literatürde dünyada ve Türkiye’de yapılmış konuyla ilgili seçilmiş araştırma sonuçlarına göre başarılı sigorta acentelerinin ortak özellikleri incelenmiştir. Çalışmanın sonuçlarına göre, sigortacılık sektöründe başarılı sigorta acentelerini diğerlerinden ayırt eden ortak faktörler tespit edilmiştir. Bu ortak faktörler arasında sigorta acentelerinin insan kaynakları yönetim uygulamalarında AMO (Yetenek, Motivasyon ve Fırsat) teorisi olarak da bilinen faktörlerin önemli bir rol oynadığı tespit edilmiştir. Bir başka ifadeyle, sigorta acentesi çalışanlarının gerekli becerilere sahip olduklarında, yeterince motive olduklarında ve iş atmosferlerine katılma fırsatlarına sahip olduklarında, iyi performans gösterdiklerinde, sigorta acentesinin başarısında kritik bir rol oynadığı tespit edilmiştir.

**AN EVALUATION ON DETERMINING COMMON SUCCESS FACTORS OF HIGH-  
PERFORMANCE INSURANCE AGENCIES**

**Abstract**

The main purpose of this study is to make an assessment of what the common critical success characteristics of high-performance insurance agencies might be. In many countries of the world, the insurance sector is implemented within the limits legally determined by the state. All processes, from the establishment of insurance companies to their liquidation, from the distribution of insurance products to damage transactions, are determined by laws, regulations, tariffs and instructions, circulars and implementation communiqués. Although all business and transactions of insurance agencies, from their establishment to their liquidation, are legally defined and cover equal conditions for all insurance agencies, how come some of the insurance agencies can be very successful, while others can be on the verge of bankruptcy? Where do the difference(s) arise? In this context, the main research question is “What are the common critical success factors of high-performance insurance agencies and how will they be in the future?” It was determined as. In the study, empirical and theoretical secondary data in the literature were used by using qualitative research method. The common characteristics of successful insurance agencies were examined according to the results of selected research on the subject in the relevant literature, conducted in the world and in Turkey. According to the results of the study, common factors that distinguish successful insurance agencies from others in the insurance industry have been identified. Among these common factors, it has been determined that factors also known as AMO (Ability, Motivation and Opportunity) theory play an important role in the human resources management practices of insurance agencies. In other words, it has been found that insurance agency employees play a critical role in the success of the insurance agency when they have the necessary skills, are sufficiently motivated and have the opportunity to participate in their work atmosphere, and perform well.

**Keywords:** Insurance, Insurance, Insurance Agencies, Amo Theory

## **Giriş**

Bu çalışma yüksek performanslı sigorta acentelerinin ortak kritik başarı faktörlerinin neler olabileceğine odaklanmıştır. Diğer bütün şirketlerde olduğu gibi sigorta şirketlerinin de başarısının temelini oluşturan faktörler her şirket için farklılık arz etmektedir. Bir başka ifadeyle her şirketin tüm alanlarında ve faaliyetlerinde başarısını garantileyen ortak bir başarı kriterleri seti mevcut değildir. Her şirketin faaliyet göstermiş olduğu alanlarda geçerli olabilecek performans göstergeleri farklı olabilir. Şirketler önceden belirlenmiş olan bu performans kriterlerine göre faaliyetlerini sürdürürken ortaya koyacakları çaba onların başarı veya başarısızlıklarını belirleyecektir. Bu sebeplerden dolayı ortak kritik başarı faktörleri hakkında genelleme yapmak çok zordur. Şimdiye kadar yapılan araştırma ve çalışmalarda kritik başarı faktörlerini analiz etme ve tanımlama girişimlerinde, her bir alanın spesifik özellikleri, örneğin, üretim ve hizmetler, faaliyette bulunulan sektör, pazar ve bu pazardaki rekabet ilişkileri son kullanıcıların gereksinimleri ve tercihleri, teknolojik başarı ve başarısızlıklar gibi bir çok etken ve unsurun belirleyici rol oynadığı tespit edilmiştir (Selimović, 2020). Diğer yandan her ne kadar günümüze değin yapılan araştırmalarda ortak başarı faktörleri belirlenmiş olsa da covid 19 pandemisi ve sonrasında yaşanan gelişmeler daha önceden tespit edilmiş ortak kritik başarı faktörlerinin değişmiş olabileceği varsayımını da gündeme getirmektedir. Çünkü pandemi ile birlikte tüm sektörler de olduğu gibi sigortacılıkta da iş yapma biçimleri değişmekle birlikte acentelerin o dönemde (covid-19) ayakta kalma stratejileri henüz tam olarak akademik çalışmalara yeterince yansımamıştır. Bu sebeplerden ötürü günümüzde yüksek performanslı sigorta acentelerinin ortak kritik başarı faktörlerinin neler olabileceğinin belirlenmesi ayrı bir önem kazanmaktadır. Zira, böyle bir çalışma hali hazırda sigorta acenteleri için bir kılavuz görevi görmesinin yanında onların daha uzun süre hayatta kalmalarına zemin hazırlayabilecektir. Bilindiği üzere, günümüzde sigorta sektöründe faaliyette bulunan tüm aktör ve paydaşların her türlü süreç ve faaliyetleri devletin kontrolü ve müdahalesi altındadır. Bir başka ifadeyle sigorta şirketleri ve sigorta acentelerinin kuruluşundan, tasfiyesine kadar, sigorta ürünlerinin üretilip dağıtımından risk gerçekleşmesi sonucu hasar işlemlerine kadar tüm süreçler kanun, yönetmelik, tarife ve talimatlar, genel şartlar, genelgeler ve uygulama tebliğleri ile belirlenmektedir. Hal böyle olunca, söz konusu mevzuat ve düzenlemeler tüm sigorta acenteleri için eşit koşulları kapsamasına rağmen nasıl oluyor da sigorta acentelerinin bazıları çok başarılı olabilirken, bazıları ise iflasın eşiğine gelebilmektedir? Aradaki fark/farklar nerelerden kaynaklanmaktadır? Bu belirlenmiş olan araştırma sorusu çerçevesinde şimdiye kadar yapılan çalışmalara göre, yüksek performanslı sigorta acentelerinin ortak kritik başarı

faktörleri ve günümüzde ve gelecekte de geçerli olabilecek nitelikteki faktörlerin değerlendirilmesi, çalışmanın temel içeriğini oluşturmaktadır. Çalışmada, nitel araştırma yöntemi ile kavramsal ve teorik incelemeler yapılmıştır. Sistematik ve kapsamlı bir literatür araştırması ile ampirik ve teorik ikincil verilerden yararlanılmıştır. İlgili literatürde dünyada ve Türkiye’de yapılmış konuyla ilgili seçilmiş araştırma sonuçlarına göre başarılı sigorta acentelerinin ortak özellikleri incelenmiştir. Ayrıca yönetim ve danışmanlık firmalarının, sektörlerin geleceğine yönelik hazırlanmış oldukları raporlardan yararlanılarak bugün ve gelecekte sözkonusu ortak başarı faktörlerine hangilerinin eklenebileceği konusundan çıkarımlar yapılmaya çalışılmıştır. Çalışmada elde edilen sonuçlara göre, yüksek performanslı sigorta acentelerinin ortak olabilecek özelliklerine yönelik bir değerlendirme yapılmıştır. Buna göre, acentelerin mevcut insan kaynakları yapısı, yetenekleri, bilgi düzeyleri, faaliyet bölgelerindeki fırsatları görme ve değerlendirme kabiliyetleri ön plana çıkmıştır. Yapılan tespitlerde günümüzde insan kaynakları yönetim uygulamalarında AMO (Ability-Motivation-Opportunity/Yetenek, Motivasyon ve Fırsat) teorisi olarak da bilinen faktörlerin sigorta acentelerinin yüksek performanslı olmalarında en önemli unsurlardan biri olduğu tespit edilmiştir.

## **2.Çalışma Alanı**

### **2.1.Sigorta, Sigorta Şirketleri ve Sigorta Acenteleri**

Bilindiği üzere, sigorta sektöründe faaliyette bulunan şirketler, olası risklerin gerçekleşmesi sonucu meydana gelebilecek ekonomik kayıpların telafi edilmesinde önemli rol oynayan kurumlardır. Sigorta şirketleri gerek kendileri gerekse sigorta aracıları üzerinden müşterilerine sigorta sözleşmesi (Poliçe) düzenleyip satarak prim geliri elde ederler. Toplanan bu primlerle büyük fonlar oluşturulmakta ve riskler gerçekleştiğinde meydana gelen ekonomik kayıplar poliçe şartları gereğince hak sahiplerine ödenmektedir. Risk yönetim tekniklerinden biri olan sigortacılık dünyanın birçok ülkesinde devletin yasal olarak belirlemiş olduğu sınırlar çerçevesinde uygulanmaktadır. Sigorta hizmetleri, sigorta endüstrisi için ayırt edici olan diğer bazı hizmetlerin yanı sıra, herhangi bir hizmetin tipik özelliklerine sahiptir. Aslında sigorta hizmeti, sigortalı kişinin potansiyelin sigorta şirketine duyduğu güvene dayanmaktadır (Selimović, 2020). Sigorta, birey veya kurumların ileride meydana gelebilecek (sözleşme süresi içinde) muhtemel çeşitli risklerin neden olabileceği ekonomik kayıpların karşılanmasını sağlayan bir sistemdir (Dalkılıç, 2010; Gupta, 2011; Rejda, 2005). Bu sistemde, riski bir prim karşılığında üzerine alan tarafa “sigortacı”, belli bir prim karşılığında riski sigortacıya devreden tarafa “sigortalı veya sigorta ettiren”, sigortacı ile sigortalı/sigorta ettiren arasında yapılan

anlaşmanın yazılı haline ise “sigorta poliçesi” denilmektedir (Cesur, 2023). Bu sistemde sigorta şirketleri poliçeleri isterlerse kendileri direkt olarak müşterilere satabilecekleri gibi çeşitli sigorta aracıları vasıtasıyla da satabilmektedirler. Bu araçlardan biri de sigorta acenteleridir. Sigorta şirketlerinin nam ve hesabına sigorta poliçelerinin hazırlanması ve satışına aracılık eden “Sigorta acenteleri” sigorta sözleşmelerinin hazırlanması ve satışını belli bir komisyon karşılığında yapan gerçek veya tüzel kişilerdir (Cesur, 2023).Günümüzde tüm sektörlerde oyunun kurallarının değiştiği söylenebilir. Özellikle covid-19 pandemisi ve sonrasındaki yaşanan değişimler diğer alanlarda olduğu gibi, sigortacılık sektöründe de önemli değişimlerin yaşanmasına neden olmakta ve bu değişim halen tüm hızıyla devam etmektedir. Pandemi öncesi ve sonrası olarak bakıldığında başta müşteriler olmak üzere, pazarlardaki tüm paydaşların istek ve beklentileri, iş yapma yöntem ve usülleri gibi şirketlerin başarı performanslarını etkileyecek gelişmeler yaşanmaktadır. “Artık hiçbir şey eskisi gibi olmayacak” şeklinde klişeleşmiş bir deyim olan bu ifade neredeyse tam da bu durumu özetlemektedir.

### **2.2.Kritik Başarı Faktörleri Kavramı**

Kritik başarı faktörleri kavramı ilk olarak 20. yüzyılın ikinci yarısında yazılan makalelerde tanımlanmış ve “*birey, departman veya organizasyon için tatmin edici sonuçların başarılı rekabet performansını garanti edeceği sınırlı sayıda alan*” olarak tanımlanmıştır (Selimović, 2020). Kritik başarı faktörleri, işin gelişmesi ve yöneticinin hedeflerine ulaşması için işlerin yolunda gitmesi gereken birkaç temel alandan biridir. Boynton ve Zmud (1984) kritik başarı faktörlerinin “önemli/yüksek performansın elde edilmesini sağlayacak şekilde özel ve sürekli ilgiyi hak eden yönetsel veya organizasyonel faktörler” olduğunu belirtmektedir. Bunlar, mevcut faaliyetlerin başarısının yanı sıra gelecekte de başarıya ulaşmanın önemli temelidir. Diğer bir ifadeyle bu faktörler bir kuruluşun başarılı olabilmesi için odaklanması gereken faktörlerdir. Sanvido ve ark. (1992) kritik başarı faktörlerini “başarıyı gösteren hedeflere ulaşmak ve yönetmek için işin kritik/kaçınılmaz olarak tanımlanan yönleri” olarak tanımlamaktadır. Selimović (2020) bu faktörlerin genellikle üretim süreçleri, çalışanların organizasyonel ve kişisel becerileri gibi alanlarda bulunduğunu ileri sürmektedir.

### **2.3.AMO Yaklaşımı**

AMO yaklaşımı (Ability-Motivation-Opportunity/Yetenek, Motivasyon ve Fırsat), yüksek performanslı insan kaynakları yönetimi için “bir firmanın sürdürülebilir rekabet avantajı elde etmesini sağlamak için çalışanların becerilerini, motivasyonunu ve katılımını teşvik etmek için tasarlanmış bir İKY uygulamaları paketi” olarak açıklanmaktadır (Kremmydas ve Austen, 2020). Bu yaklaşım modeli çalışan performansını belirleyen değişkenleri temel almaktadır.

Konuyla ilgili çalışma yapan arařtırmacılar, yetenek, motivasyon ve fırsatın birbiriyle iliřkili olduđu ileri sürülmektedirler (Blumberg ve Pringle, 1982). AMO modelinin kökenleri, endüstriyel psikoloji perspektifinden gelmektedir (Beltrán-Martín ve Bou-Llusar, 2018; Kremmydas ve Austen, 2020; Lawshe, 1945). Bu modele göre, yetenek (A-Ability) ve performansın aynı zamanda çalışan motivasyonuna (M-Motivation) bađlı olduđu ve fırsatların (O-Opportunity) bu yüksek performansın ortaya çıkarılmasında önemli olduđu vurgulanmaktadır (Beltrán-Martín ve Bou-Llusar, 2018; Kremmydas ve Austen, 2020). AMO yaklaşımının, “A” boyutu, çalışanların işlerini yürütme yeteneklerini ifade ettiđi, yani, bireysel çalışanların sahip olduđu bilgi, beceri ve yetenekler olarak tanımlandığını ve çalışanların deđerlendirmesi olarak ifade edilen mesleki öz-yeterlik yapısıyla yakından bađlantılı olduđu vurgulanmaktadır. “M” boyutunun ise çalışanların işyerinde çaba harcama istekliliđini yansıtan bir dizi çalışan tutumunu ve etkisini yani motivasyonunu içerdini bir başka ifadeyle “davranıřı yönlendiren, harekete geçiren ve sürdüren gözlemlenemeyen bir güç” olduđu ifade edilmektedir. AMO yaklaşımının, “O” boyutunun ise “çalışanların yeteneklerinin ve çabalarının sonuçlara dönüřtürülebileceđi araçları yansıttığını” belirtilmektedir (Beltrán-Martín ve diđ., 2017; Kremmydas ve Austen, 2020). Sonuç olarak AMO yaklaşımı, “A” bileşeninin çalışanların katkıda bulunma yeteneklerini, “M” bileşeninin bu yetenekleri ne ölçüde kullanmaya istekli olduklarını ve “O” bileşenin de bireysel düzeydeki fırsat boyutu, genel anlamda becerilerini işlerinde kullanma ve firmanın başarısına katkıda bulunma şanslarını yansıtan özerkliği, görevin önemini ve çalışanların işte algıladıkları etkiyi içerdini ifade etmektedir (Beltrán-Martín ve Bou-Llusar, 2018; Kremmydas ve Austen, 2020).

#### **2.4.Sigortacılıkta Kritik Başarı Faktörleri**

Farokhain ve Sadeghi, (2011) de çalışmalarında günümüze kadar sigortacının başarısının kritik faktörleri arasında sunulan hizmetin kalitesi, müşterilerin memnuniyet derecesi ve müşterilerin sadakatinin yer aldığını, ancak, günümüzde pazardaki tüm deđişiklikler dikkate alındığında yakın gelecekte sadakatini yerini, sunulan hizmetin müşteriye uygun olup olmadığına ilişkin deđerlendirmelerin yer alacağını iddia etmektedir. Zealley ve diđ., (2018) da sigorta şirketlerinin önemli kritik başarı faktörleri olarak, motive edilmiş nitelikli insan gücü, beceriler, bilgi ve kaynaklar olduğunu belirtmiştir. Kulkarni, (2015) çalışmasında “her pazarlama faaliyetinin müşteriyle başlayıp ve müşteriyle bittiğini” belirterek, müşterilerin bir pazarlamacı için nihai hedef olduğunu vurgulamıştır. Bir şirketin pazarlama çabalarının başarısının, dağıtım ađına hakimiyetine bađlı olduğunu belirten yazar, pazarlama kanallarının, bir ürün veya hizmetin kullanıma veya tüketime hazır hale getirilmesi sürecine katılan birbirine bađlı

kuruluşlar kümesi olduğunu ileri sürmüştür. Yazar çalışmasında telekomünikasyon ve bilgisayar teknolojisindeki gelişmelerin, hizmet sunumunda birçok yeni yaklaşımı teşvik ettiğini sigorta sektörünün de bundan yakından etkilendiğini, sigorta şirketlerinden müşterilere uzanan dağıtım kanalındaki sigorta acentelerinin kendilerini yenileyerek yeni başarı ölçütlerine sahip olmaları gerektiğini savunmuştur. Akpınar (2018) çalışmasında sigorta sektöründe MİY'in önemli konuma gelmesiyle birlikte şirketlerin müşterileri hakkında daha fazla bilgiye ihtiyaçları olduğunu ve müşterilerini iyi tanıyan ve müşterilerini iyi analiz eden şirketlerin MİY uygulamalarında da oldukça başarılı olacakları ifade etmiştir. Bunun yeni ekonomide işletmelerin rekabet avantajı sağlayacağı ideal bir yönetim yaklaşımı olduğunu açıklayan yazar, günümüz koşullarında müşterilerini tanıyan, onlara özel kişiselleştirilmiş ürün veya hizmet sunabilen, onları bir değer olarak işletmenin merkezine koyan ve süreçlerini bu doğrultuda oluşturan sigorta şirketleri müşterileri için daha fazla değer sunarak sadakat yaratmakta ve uzun dönemli karlılık elde edecekleri vurgulamaktadır. KPMG'nin raporuna (2019) göre, Insurtech'in sigorta sektöründe yenilikleri tetikleyerek, çevrimiçi sigortanın hızlı gelişimini sağladığı vurgulanmaktadır. Diğer yandan yaşanan bu değişimlerle fiyatlandırma ve sigortalıdan dağıtım ve hak taleplerine kadar çeşitli iş süreçlerinde yeni uygulamalar gelişmekte ve sektörün yenilikçi yeteneklerinin yeni boyutlara ulaşmakta olduğu ifade edilmektedir. Bu durumda sigorta acentelerinin de yeni teknikleri benimseyerek, kendi performanslarını arttırmaları için yeni kapıların açıldığı ifade edilmektedir. Kaesler ve diğ., (2020) çalışmalarında, covid-19 pandemisinin, birçok sektörlerde ve coğrafyalarda insanların birbirleriyle etkileşimini derinden etkilediğini belirterek, sigortacılıkta birçok işlemin dijital ve uzaktan kanallara kaydığını ifade etmişlerdir. Yazarlar çalışmalarında günümüzde sigorta acentelerin, eskisinden farklı yeni yol ve yöntemler bulmasının zorunluluğuna dikkat çekmiştir. Yazarlar çalışmalarında Nisan 2020'de Alman sigorta acenteleri arasında yapılan (tecritten dört hafta sonra gerçekleştirilen) bir anket sonuçlarına göre, sigorta acentelerinin yaklaşık yarısının yeni işlerde yüzde 40'tan fazla düşüş yaşadığını, Mayıs 2020'de ABD bir grup sigorta acenteleri arasında yapılan bir ankete göre de benzer bir etkilerin çıktığını ifade etmişlerdir. Yapılan araştırmaya göre, acentelerin neredeyse yüzde 50'si, uzaktan yeni müşteri ilişkileri kurmanın covid-19 sırasındaki en büyük zorluk olduğunu belirtmişlerdir. Yazarlar çalışmalarında önceden yüksek performans gösteren sigorta acentelerinin pandemi sonrasında işlerinin azalmasına işaret ederek, yeni normalde farklı başarı kriterlerinin ortaya çıktığını belirtmişlerdir. Selimović, (2020) çalışmasında, sigorta şirketinin performansını etkileyen unsurları araştırmıştır. Yazar çalışmasında, sigorta şirketinin büyüklüğü, geleneği ve imajı, yani

itibarı, pazardaki konumu ve başarısı, yönetimin kalitesi ve yeteneđi, modern yönetim yöntemlerinin kullanımı, deęişim yönetimi, bilgi yönetimi ve risk yönetimini tanıtmaya ihtiyacının şirketin performansını yakından etkilediđini belirtmiştir. Yazar ayrıca, çalışmasında, satış gücünün özellikleri, yani motivasyonları özelleştirme ve müşteri odaklı süreçlere yani süreç kişiselleştirme ve iyi iletişim odaklı olarak sunulan hizmetlerin kalitesi, sayısı ve farklılığı gibi özelliklerin de şirket performansı için önemli olduğunu açıklamıştır. Bu bağlamda sigorta şirketlerinin kritik başarı faktörleri olarak, müşterilerin ihtiyaç duyduđu hizmetin sağlanması için gerekli olan tüm faktörlerin, yani şirketin finansal performansı ile ölçülebilen başarısını etkileyebilecek tüm deęişkenler olduğunu tespit etmiştir. Šmietanka ve dię., (2021) çalışmalarında, günümüzde yaşanmakta olan dijital deęişimlerin, sigortacılıkta yapay zeka tabanlı analizlerin, sigorta şirketlerinin sigorta ürünlerini kişiselleştirmelerine ve mevcut müşterilerin ihtiyaçlarına daha iyi yanıt vermelerine olanak tanıdığına belirtmişlerdir. Yazarlar çalışmalarında sigorta şirketlerinin yeni işler yapmalarına yardımcı olacağını ileri sürerek, sigorta sektöründe makine öğrenimi tekniklerinden yararlanmanın fırsatlarını açıklamışlardır. Yazarlar çalışmalarında yaşanacak bu teknolojik yenilikler ile sigorta acentelerinin de müşteri çekme ve elde tutma konusunda etkili stratejiler geliştirmelerinin önemine değinmişlerdir. Bunun için de yeni dönemde yeni normal için yeni performans yeteneklerinin kazanılması gerektiğini savunmuşlardır. Svoboda (2021) çalışmasında, pandemi ve sonrasında gündeme gelen dijitalleşme ile birlikte, özellikle de hizmet sektöründe büyük deęişiklikler ve geçişlerle birlikte çevrimiçi satın alma ve işlemlerin, dijital platformlar aracılığıyla yapılamaya başlandığını vurgulamıştır. Yazar çalışmasında temel bulgu olarak, sigorta acenteleri için böyle bir duruma kendilerini dijital süreçlere adapte etmelerinin rakiplerine göre farklar oluşturacağını ileri sürmektedir. Ayrıca yazar çalışmasında araştırmasının sonuçlarına göre, pandemi sonrasında oluşan yeni normalde sigorta acentelerinin farklı ekosistemlerde faaliyet göstermek zorunda olacaklarından dolayı diđer acenteler ile ortaklıklar kurmaya odaklanmalarını, acentelerin ekip olarak çalışmaya teşvik edilmelerinin ve hibrit veya çok kanallı bir dağıtım modeli oluşturmaları durumunda yüksek performanslı konuma geçebileceklerini ifade etmektedir. HBW Leads ekibinden kıdemli bir satış temsilcisi olan Bondaug-Win (2021), başarılı sigorta acentelerinin sahip olduğu alışkanlığı, nasıl çalıştıklarını ve bunları profesyonel yaşamda nasıl uygulanabileceği konusunda şunları belirtmektedir:

**Günlük Rutin Oluşturulması:** Günlük bir rutine sahip olmak, başarılı sigorta acentelerinin zamanlarını yönetmelerine ve fırsatlar ortaya çıktığında esnek olmalarına olanak tanıyan bir yapı sağlar.

**İyi Bir Satış Temsilcisi:** Birçok sigorta acentesi her şeyi kendi başına halletme alışkanlığını edinir. Oysa başarılı sigorta acenteleri görevlerinin çoğunu asistanlara ve meslektaşlarına devretmektedir.

**Stres Yönetimi:** Sağlıklı stres yönetimi başarılı sigorta acenteleri için önemli bir alışkanlıktır. İhtiyaçlarına uygun bir iş-yaşam dengesi geliştirmeye çalışmak, “Çalışma” saatleri ile “ev” saatlerinin ayrılması gibi.

**Hedefleri Belirleyin ve Takip Edin:** Kişisel, profesyonel ve ekip hedeflerini belirlemek, büyümeye yardımcı olacak değerlendirme araçları oluşturmak, acente performansını önemli oranda artırabilecektir.

**Başarılı İnsanlarla İletişim İçinde Olmak:** Başarılı acenteler ister kişisel olarak ister sosyal medyadan takip ettiğiniz kişiler olsun, hep çevresindeki başarılı kişileri takip ederler. Başarılı acenteler başarılı meslektaşlarıyla güçlü ilişkiler kurarlar.

**Tavsiye ve Rehberlik:** Bazı acenteler için rehberlik istemek yenilgiyi kabul etmek anlamına gelmektedir. Esasen bu yanlış bir düşüncedir.

**Her Yerde İlişkiler Kurmaya Özen Göstermek:** Bir sigorta acentesi olarak ağ kurmak yalnızca konferanslara ve çalıştaylara gitmek ve diğer sigorta acenteleriyle konuşmaktan ibaret değildir.

**Öğrenmeye Devam Etmek:** Neredeyse her kaynağın parmaklarınızın ucunda olduğu bir zamanda, kendi eğitiminize yatırım yapmaya devam etmek önemlidir.

**Sosyal Becerilere İnce Ayar Yapılması:** İletişim, problem çözme, organizasyon ve eleştirel düşünme gibi sosyal becerilerinizi yeniden gözden geçirin. Bir takımında çalışıyorsanız iletişim ve problem çözme egzersizleri yapma fırsatı olabilir.

**Teknolojiyi Kucaklamak:** Başarılı sigorta acentelerini ve diğer uzmanları takip ederek rutinlerine hangi araç ve yazılımları uyguladıklarını öğrenin. Sizin için anlamlı olanları benimseyin. Kalıpların dışında düşünün ve diğer sektörleri ve kullandıkları yazılımları inceleyin.

Cesur (2023) çalışmasında, sigorta acenteleri üzerinde yapmış olduğu saha araştırmalarından elde edilen verileri tematik analiz yöntemiyle değerlendirerek, sigorta acentelerinin hayatta kalma becerilerini belirlemeye çalışmıştır. Yazar, çalışmasında yüksek performanslı en başarılı sigorta acentelerinin ortak özelliklerinin, *acente-şirket arası ilişkiler, adaptasyon, bilgi düzeyi*

ve paylaşımı, sorun çözme kabiliyeti, müşteri memnuniyeti ve kanıksanmışlık olarak açıklamıştır. Cesur, çalışmasında başarılı ve uzun ömürlü sigorta acentelerinin ortak özelliklerinden en göze çarpanlarının ise sorun çözme kabiliyetine sahip, değişimlere hızlı cevap verebilen, sürekli kendilerini geliştiren nitelikli kadroların işin başında olduğu acenteleri işaret etmiştir. Uluslararası Sigorta Denetçileri Birliği tarafından yayınlanan direktiflere göre (Insurance Authority, 2024). Sigorta acenlerinin yasalara uygun bir şekilde faaliyet gösterebilmeleri için aşağıda belirlenmiş olan kriterlere dikkat etmelerini önermişlerdir. Bir anlamda yetkili bir sigorta acentelerinin ortak başarı kriterleri olarak tanımlanabilecek bu faktörler şunlardır:

- Yetkili bir sigorta acentesi, dürüst, etik ve doğrulukla hareket etmelidir.
- Müşterilerine her zaman adil davranmalı ve onların çıkarlarına en uygun şekilde hareket etmelidir.
- Özen, beceri ve titizlikle hareket etmelidir.
- Uygun düzeyde mesleki bilgi ve deneyime sahip olmalı ve yalnızca acentenin gerekli yetkinliğe sahip olduğu düzenlenmiş faaliyetleri yürütmelidir.
- Müşterilere bilinçli kararlar verebilmeleri için doğru ve yeterli bilgi sağlamalıdır.
- Düzenlenmiş tavsiyesi, müşterinin koşulları dikkate alınarak müşteriye uygun olmalıdır.
- Çıkar çatışmalarını önlemek için en iyi çabayı göstermeli ve bu tür çatışmalar önlenemediğinde, acente, müşterilere her zaman adil davranılmasını sağlamak için bunları uygun açıklamalarla yönetmelidir.
- Acente tarafından alınan veya acentenin mülkiyetinde olan müşteri varlıklarını korumak için yeterli güvenlik önlemlerine sahip olmalıdır.

Accenture tarafından hazırlanan rapora (2024) göre, yüksek performanslı sigorta acentelerinin yapması gereken iş ve eylemler şu şekilde sıralanmıştır:

- Yeni nesil sigorta müşterilerinin değişen davranış ve beklentilerine uyum sağlamak.
- Zorlu pazar ortamında müşterileri elde tutmaya odaklanmak.
- Çapraz satış ve üst satış yaparak müşterilerin “Gümüş” ten “Platin” e yükseltmek.
- Temsilcileri yeni müşteri türüne uygun hale getirmeye odaklanmak.
- Temsilcilerin uygun pazar segmentine odaklanmasını sağlamak.
- Yaşlanan müşteri popülasyonu için bir geçiş stratejisi geliştirmek.
- Hedef pazarlara ilişkin bilgi edinmek.

- Müşterileri doğru kanallara yönlendirmek.
- Müşterileri doğru ürünlere yönlendirmek.
- Temsilcileri doğru ürün için, doğru pazardaki doğru müşteriye yönlendirmek.

Slayton Search Partners'in (2024) hazırlamış olduğu rapora göre, sigorta sektöründe dijital dönüşüm, sigortacı ve müşteri çıkarlarının birleşmesi için yeni fırsatlar sunmaktadır. Sigorta şirketleri, araç telematik cihazları, kondisyon takip cihazları, elektrokardiyogram (EKG) monitörleri gibi yeni veri toplama araçlarından da yararlanarak poliçelerini hazırlayıp uygulamaya koyabilmektedirler.

### **3. Materyal ve Yöntem**

Çalışmada, nitel araştırma yöntemi ile kavramsal ve teorik incelemeler yapılmıştır. Nitel veri analizi, dilsel (veya görsel) materyalin araştırmanın amacı doğrultusunda yorumlanması ve sınıflandırılmasıdır (Flick, 2022; Kara, 2015). Yazar araştırmasında sistematik ve kapsamlı bir literatür araştırması ile ampirik ve teorik ikincil verilerden yararlanılmıştır. Bilindiği üzere, literatür taraması belirli amaçları gerçekleştirmek veya konunun doğası ve nasıl ele alınması gerektiği hakkında belirli görüşleri ifade etmek için belirli bir bakış açısıyla yazılmış bilgi, fikir, veri ve kanıt içeren, konuyla ilgili mevcut belgelerin seçimi, incelenmesi ve bu belgelerin önerilen araştırmayla ilişkili olarak etkin bir şekilde değerlendirilmesi sürecidir (Bowen 2009; Kara, 2015). Araştırmacı çalışmanın amacı doğrultusunda ilgili literatürde dünyada ve Türkiye'de yapılmış konuyla ilgili seçilmiş araştırma sonuçlarına göre başarılı sigorta acentelerinin ortak özellikleri incelemiştir. Ayrıca yönetim ve danışmanlık firmalarının sektörlerin geleceğine yönelik hazırlamış oldukları raporlardan yararlanılarak bugün ve gelecekte sözkonusu ortak başarı faktörlerine hangilerinin eklenebileceği konusundan çıkarımlar yapmaya çalışılmıştır. Bilindiği üzere ikincil verilerin analizi, birincil verilerin analizi kadar yaratıcı olabilir ve araştırmacının analitik hayal gücünün akıllıca kullanılmasını destekleyerek sonuçlara ulaşmasını sağlayabilir (James 2012; Kara, 2015).

### **4. Bulgular ve Tartışma**

Çalışmanın kavramsal çerçevesinde de belirtildiği üzere, sigorta acentelerinin esas yaptıkları iş, faaliyet bölgelerinde sigorta şirketlerinin nam ve hesabına sigorta poliçelerin tanıtımı, pazarlanması ve satışı ile ilgili çalışmalar yapmaktır. Yani bir tür hizmet pazarlamasına ait iş ve işlemleri yürütmektedir. Bu acentelerin bir kısmı faaliyet bölgelerinde başarılı olup yüksek cirolar ve satış komisyon gelirleri elde ederken, diğerleri ise benzer başarıyı göstermekten

yoksun kalmaktadırlar. Bu aradaki farkların hangi faktörlerden kaynaklandığının araştırıldığı bu çalışmada cevabını aradığımız temel araştırma sorularından biri “yüksek performanslı sigorta acentelerinin ortak kritik başarı faktörleri nelerdir?” şeklinde belirlenmiştir. Bir diğer araştırma sorusu ise bugün ve geleceğe yönelik, yani “bundan sonra yüksek performanslı sigorta acentelerinin ortak kritik başarı faktörleri neler olacaktır?” şeklinde belirlenmiştir. Yapılan inceleme ve araştırmalardan elde edilen tespitler Tablo 1’de yer almaktadır. Yine çalışmanın kavramsal çerçevesinde belirtildiği üzere belirlenmiş olan bu sözkonusu kritik başarı faktörlerinin tüm sigorta acenteleri için mutlak geçerli olacağını ileri sürmek mümkün değildir. Zira her acentenin içinde bulunduğu faaliyet bölgesi, kendi iç yapısı, çalışanlarının ve müşterilerinin demografik, ekonomik ve sosyolojik özellikleri gibi birçok farklılıklar söz konusudur. Elde edilen bulguların bu çerçevede değerlendirilmesi önem arz etmektedir.

**Tablo 1:** Sigorta Acentelerinin Kritik Başarı Faktörleri

<b>Yazarlar/Yıl</b>	<b>Kritik Başarı Faktörleri</b>
Farokhain ve Sadeghi, (2011)	Sunulan hizmetin kalitesi, müşterilerin memnuniyet derecesi ve müşterilerin sadakati, hizmetin müşteriye uygun olup olmadığı, çalışanların sahip olduğu beceriler, bilgi ve kaynaklar.
Kulkarni, (2015)	Dağıtım ağına, telekomünikasyon ve bilgisayar teknolojisindeki gelişmelere hakim olmak.
Zealley ve diğ., (2018)	Beceriler, bilgi ve kaynaklar, nitelikli ve motive edilmiş insan gücü.
Akpınar (2018)	MİY uygulamalarına özen göstermek, müşterilerini iyi analiz etmek, müşterilerine kişiselleştirilmiş ürün veya hizmet sunabilmek, sadık müşteri oluşturmak.
KPMG'nin raporu (2019)	Insurtech, yapay zeka ve yeni teknikleri benimsemek, personelin dijital becerilerle donatılması, yenilikçi yeteneklerin şirkete kazandırılması.
Kaesler ve diğ., (2020)	Dijital ve uzaktan çalışma kanallara adapte olmak, eskisinden farklı yeni yol ve yöntemler bulmak, dijital becerilere sahip personele sahip olmak.
Selimović, (2020)	Şirketinin büyüklüğü, geleneği ve imajı, itibarı, pazardaki konumu ve başarısı, yönetimin kalitesi ve yeteneği, modern yönetim yöntemlerinin kullanımı, değişim yönetimi, bilgi yönetimi ve risk yönetimini tanıtmaya, satış gücünün özellikleri, yani motivasyonları özelleştirme ve müşteri odaklı süreçlere yani süreç kişiselleştirme ve iyi iletişim odaklı olarak sunulan hizmetlerin kalitesi, sayısı ve farklılığı.
Śmietanka ve diğ., (2021)	Yapay zeka ve makine öğrenimi tekniklerinden yararlanmak, müşteri çekme ve elde tutma konusunda etkili stratejiler geliştirmek, çalışanlara yeni normal için yeni performans yetenekleri kazandırmak.
Svoboda (2021)	Dijital süreçlere adapte olmak, diğer acenteler ile ortaklıklar kurmaya odaklanmak, acentelerin ekip olarak çalışmaya teşvik edilmesi ve hibrit veya çok kanallı bir dağıtım modeli oluşturmalarını sağlamak.
Bondaug-Win (2021)	Acentelerde günlük rutinlerin oluşturulması, iyi bir satış temsilcisi/temsilcilerine sahip olması, stres yönetimi ve uygulamalarına hakim olması, hedeflerin belirlenmesi ve takip edilmesi, acente sahibini ve çalışanlarının başarılı insanlarla iletişim içinde olması, müşteriye tavsiye ve rehberlik konusunda destek ve kılavuz olmak, acente sahibi ve çalışanlarının her yerde sosyal ve iş ilişkileri kurmaya özen göstermesi, acentede görevli herkesin öğrenmeye ve kendini geliştirmesine devam etmesi, sosyal becerilere sahip olmak, acentedeki tüm çalışanların Insurtech gibi teknolojilere hakim olması.
Cesur (2023)	Acente-şirket arası ilişkilere özen göstermek, adaptasyon konusunda acente sahibi ve çalışanlarının her türlü yasal, teknolojik, ekonomik ve sosyal değişimlere hızlı ve etkili uyum sağlaması, bilgi düzeyi ve paylaşımı konusunda duyarlı olmak, karşılaşılan sorunlar karşısında hızlı ve etkili sorun çözme kabiliyetine sahip olmak, müşteri memnuniyetine azami ve sürekli olarak özen göstermek ve müşteriler nezdinde işini iyi yapan bir acente olarak kanıksanmış olmak. Yetkili bir sigorta acentesi, dürüst, etik ve doğrulukla hareket etmelidir. Müşterilerine her zaman adil davranmalı ve onların çıkarlarına en uygun şekilde hareket etmelidir. Özen, beceri ve titizlikle hareket etmelidir. Uygun düzeyde mesleki bilgi ve deneyime sahip olmalı ve yalnızca acentenin gerekli yetkinliğe sahip olduğu düzenlenmiş faaliyetleri yürütmelidir. Müşterilere bilinçli kararlar verebilmeleri için doğru ve yeterli bilgi sağlamalıdır. Düzenlenmiş tavsiyesi, müşterinin koşulları dikkate alınarak müşteriye uygun olmalıdır. Çıkar çatışmalarını önlemek için en iyi çabayı göstermeli ve bu tür çatışmalar önlenemediğinde, acente, müşterilere her zaman adil davranılmasını sağlamak için bunları uygun açıklamalarla yönetmelidir. Acente tarafından alınan veya acentenin mülkiyetinde olan müşteri varlıklarını korumak için yeterli güvenlik önlemlerine sahip olmalıdır.

## **5.Sonuçlar**

Araştırmadan elde edilen bulgulara göre, yüksek performanslı sigorta acentelerinin müşterileri anlamak konusunda hünnerli olduklarını söylemek pek yanlış olmayacaktır. Başarılı sigorta acentelerinin müşterilerden hangilerinden en büyük karı elde edeceğini, hangilerinin üst ve çapraz satışa uygun olduğunu, bu müşterilerin hangilerinin en sadık ve hangilerinin en büyük kaçış riskiyle karşı karşıya olduğunu anlamakta yetenekli oldukları ön plana çıkmıştır. Bir başka ifadeyle, sigortacı, bir müşterinin elde tutulup tutulmayacağına, buna değer olup olmadığını ve en değerli müşterileri kazanmak ve elde tutmak için nasıl bir yol izleyeceğini konusunda bilgi ve yetenek sahibidir. Elde edilen bir diğer bulgu ise, yüksek performanslı sigorta acentelerinin doğru pazarları hedefleyerek kendi performansları üzerinde pozitif bir etki yapacak şekilde çalışmalarınıdır. Bir başka ifade ile bu sigorta acenteleri bu tür belirli müşterilere ve segmentlere göre uyarlanmış büyüme stratejileri ile belirli bir bölgenin potansiyeline göre iş yapmaktadırlar. Bir anlamda bu sigorta acenteleri, bir bölgedeki hangi müşteri segmentlerine hangi ürünlerin sunulması gerektiğinin yanı sıra pazarlama kaynaklarının en iyi şekilde nasıl tahsis edilebileceğini belirlemede yeteneklidirler. Şüphesiz bu durum acentenin satışlarında yüksek performansa ulaşmalarını kolaylaştırmaktadır. Araştırma sonucuna göre, elde edilen bir diğer bulgu ise, sigorta acentelerinin doğru sigorta satış temsilcilerini işe alma ve onları doğru bir şekilde görevlendirmeleridir. Acente performansını artırabilecek yüksek performanslı satış gücüne sahip olan sigorta acenteleri diğerlerine karşı önemli bir avantaj yakalamaktadır. Özellikle de acentenin istikrarlı, deneyimli yetenek havuzuna erişmesi ve en son teknoloji ve araçlarından yararlanmayı bilen işgücü onu diğer acentelerin önünde yer almasında önemli rol oynamaktadır. Elde edilen bulgular bir bütün olarak değerlendirildiğinde tespit edilen hususların en ortak özelliği ise, AMO yaklaşımı olarak da bilinen İK uygulamalarının yüksek performanslı sigorta acentelerinde çok önemli olduğu tespit edilmiştir. Çalışmanın kavramsal çerçevesinde de açıklandığı üzere, söz konusu bu yaklaşımında, çalışanların işlerini yürütme yeteneklerinin, yani, bireysel çalışanların sahip olduğu bilgi, beceri ve yetenekleri şirket performansını yakından etkilemektedir. Diğer yandan çalışanların işyerinde çaba harcama istekliliği, motivasyonu ve en önemlisi, bütün bunları değerlendirebileceği fırsatların acente performansını diğer unsurlardan daha fazla etkilediği tespit edilmiştir. Araştırma kapsamında cevabı aranan bir diğer soru ise, “bundan sonra yüksek performanslı sigorta acentelerinin ortak kritik başarı faktörleri neler olacaktır?” şeklinde belirlenmişti. Yapılan incelemeler sonucunda bugün ve gelecekte sigorta acentelerinin her şeyden önce sağlam bir kurumsal yapıya sahip olup, dijital çağın gerektirdiği tüm aksiyonları hızlı bir şekilde bünyesine adapte etme

kabiliyetine haiz olması gerekmektedir. Şüphesiz Cesur'un (2023) da belirttiği gibi, acente-şirket arasındaki ilişkiler acentenin yüksek performans göstermesinde ilk sırada yer almaktadır. Acente sahibi ve çalışanlarının değişimlere hızlı uyumu ve bu değişimlere etkili cevap verebilme yetenekleri ikinci derecede önem arz etmektedir. Üçüncü sırada da acente personelinin AMO yaklaşımı çerçevesinde çalışanların bilgi, beceri ve yeteneklerinin sürekli geliştirilmesinin yanında, motivasyonlarının yüksek tutulması ve son olarak da ortaya çıkacak fırsatları değerlendirme kapasiteleri yer almaktadır. Sigorta acentelerinin başarılı olanları hakkında yapılan çalışmaların çoğu pandemi öncesine dayanmaktadır. Günümüzde (pandemi sonrası) başarılı sigorta acentelerinin ortak özelliklerini açıklayan bir çalışmaya yapılan literatür çalışmalarında rastlanmamıştır. O yüzden konu hakkında yeni araştırmalara ihtiyaç olduğu söylenebilir. Bu çalışma böyle bir ihtiyacın giderilmesine katkı sağlayabilir. Bir başka ifade ile bu çalışma diğer araştırmacılar için bir davet anlamı taşımaktadır.

**Özet**

Bu çalışmanın amacı; gayrimenkul sektörünün Türkiye'deki mali durumunu incelemektir. Bu incelemeyi gerçekleştirmek için BİST Gayrimenkul Faaliyetleri Sektörü'ne kayıtlı 3 firmanın nakit, borçlanma ve kârlılık rasyoları hesaplanmıştır. Çalışmanın örneklem yılı, 2018-2022 yılları arasını kapsayan 5 yıllık zaman dilimidir. Çalışmada BİST Gayrimenkul Faaliyetleri Sektörü'nde 3 işletme bulunmaktadır. Bunlar; Adese Gayrimenkul, İhlas Gayrimenkul ve Sönmez Filament işletmeleridir. Çalışmada ayrıca bu işletmelerin piyasa değerleri de incelenmiştir. Sonuç olarak; işletmelerin hangi yıllarda nakit düzeylerinin daha düşük veya yüksek olduğu, borçlanma durumları ve kârlılıkları tespit edilmiştir. Bu tespite göre firmalara politika önerileri sunulmuştur.

**Anahtar Kelimeler:** Gayrimenkul Sektörü, Nakit, Borçlanma ve Kârlılık Oranları

**REVIEW OF CASH, DEBT AND PROFITABILITY SITUATION IN ISTANBUL  
STOCK EXCHANGE REAL ESTATE ACTIVITIES SECTOR**

**Abstract**

The aim of this study is to examine the financial situation of the real estate sector in Turkey. Cash, debt and profitability ratios of 3 companies registered in the BIST Real Estate Activities Sector were calculated to carry out this analysis. The sample year of the study is a 5-year period between 2018 and 2022. In the study, there are 3 firms in the BIST Real Estate Activities Sector. These are Adese Gayrimenkul, İhlas Gayrimenkul and Sönmez Filament firms. The study also examined the market values of these firms. As a result, the years in which the cash levels of the enterprises were lower or higher, their debt status and profitability were determined. According to this determination, policy recommendations were presented to companies.

**Keywords:** Real Estate Sector, Cash, Debt and Profitability Rates

## **GİRİŞ**

Gayrimenkul sektörü, ülkelerin ekonomik koşullarından oldukça etkilenen ve ekonomiye duyarlılığı yüksek olan bir sektördür. Dolayısıyla bu sektörün durumu ülke ekonomisini istihdam, işsizlik vb. göstergeler açısından ilgilendirmektedir. Türkiye için ise bu ilgi daha çok gayrimenkul faaliyetleriyle doğrudan ilişkili olan inşaat sektörünün durumuna bağlıdır. Gayrimenkul, hukuki açıdan bir sermaye niteliğine sahiptir. Çünkü gayrimenkul tanımında da ifade edildiği üzere; bireylerin veya kurumların barınabilmek veya yatırım yapmak amacıyla sahip oldukları taşınmaz maldır (Parasız, 2015). Gayrimenkuller literatürde farklı şekillerde sınıflandırılrsa da genellikle arazi ve arsalar, binalar ve projeler olarak üç ana başlık altında toplanmaktadır (Akbulut, 2023). Gayrimenkulleri finanse etmek için kullanılan yöntemler farklılık göstermekte ve ülkelerin ekonomik ve sosyal yapılarına göre şekillenmektedir (Yalçınar, 2006). Bu yöntemler; doğrudan finansman, mevduat finansmanı, mortgage kredileri, menkul kıymetleştirme ve yapı tasarruf sandığı olarak gruplara ayrılmaktadır (Akbulut, 2023). Türkiye’de faaliyet gösteren firmaları oluşturan gayrimenkul sektörü ise nüfus, kentleşme ve göç, kentsel dönüşüm, yabancı ülke vatandaşlarına satış ve ekonomiden etkilenmektedir (Akbulut, 2023). Nüfusa bakıldığında; Türkiye’nin genç ve dinamik bir nüfusuyla birlikte hayat standardındaki yükselmenin getirdiği yaşam kalitesi artışı gayrimenkule olan talebi doğrudan etkilemektedir. Yaş ortalamasındaki artış, çalışan nüfusun orta ve uzun vadede gayrimenkul ihtiyacının artacağını göstermektedir (Özdemir, 2018). Türkiye’de kentleşme ve göç birbirinden bağımsız olarak düşünülemez. Bu iki kavram iç içedir. Kentleşme, göçün etkisiyle hızlanmıştır. Türkiye’de 2011 yılına kadar iç göç yoğunluğu olsa da ilerleyen yıllarda dış göç de hızlanmıştır. Orta Doğu’daki gelişmelerle birlikte 2022 yılı itibarıyla yaklaşık 4 milyon yabancı uyruklu vatandaş Türkiye’de ikamet etmektedir. Bu değişimle beraber konut talebi ve üretimi hızla artış göstermiştir (Akbulut, 2023). Yabancı ülke vatandaşlarına satışta; mütekabiliyet ilkesinin kaldırılması ve yabancı ülke vatandaşlarına vatandaşlık verilmesiyle beraber gayrimenkul satışları hızlanmış ve gayrimenkul sektörüne pozitif etki yapmıştır (Akbulut, 2023). Kentsel dönüşüm; çarpık yapıların, eski, altyapısı yetersiz, yapılaşmanın yoğun fakat afet riskine duyarlı mülklerin yeni imar planı verilerine göre düzenlemesidir (Ülger & Ülger, 2015). Kentsel dönüşüm Türkiye için özellikle deprem riskleriyle beraber sürekli gündemde yer almakta ve konut piyasasını etkilemektedir.

Ekonomi kavramı ise birçok göstergelyi içinde barındırmaktadır. Bu göstergeler içerisinde yer alan kişi başı milli gelir, satın alma gücü, enflasyon, faiz oranı ve istihdam gibi faktörler

gayrimenkul sektörünü direkt olarak etkilemektedir (Akbulut, 2023). Gayrimenkul sektörüyle ilgili literatürdeki çalışmaların bazıları incelenmiş ve kronolojik olarak özetlenmiştir. Şeker (2023) çalışmasında; Türkiye Gayrimenkul Piyasaları Bileşik Endeksi hazırlamıştır. 2010 yılını baz alarak veri seti yapılmıştır. Sonuç olarak; endekste en güçlü 3 değişken saptanmıştır. İlk sırada konut kredisi faizleri, ikinci sırada ihraç edilen gayrimenkule dayalı finansal araçların ihraç tutarları, üçüncü olarak ise gayrimenkul değerlendirme uzmanı sayısı değişkenlerinin ön planda oldukları ortaya konmuştur. Çubukcu vd. (2023) tarafından yapılan çalışmada; Türkiye genelinde 2023 depremlerinden sonra gayrimenkul sektöründeki yatırımcı davranışlarını ölçmektir. Deprem öncesi ve sonrası yatırımcı davranışlarının oldukça farklılaştığı görülmüştür. Depremden sonra yapılan yatırımlarda deprem yönetmeliğine uygun olup olmamasının tasarım, fiyat vb. özelliklerin önüne geçtiğini göstermektedir. İlave olarak müstakil veya az katlı yapılan tercih edildikleri ortaya çıkarılmıştır. Zoghayyer (2022) yapmış olduğu yayınında; Covid-19'un Türkiye Emlak Piyasası üzerindeki makroekonomik etkilerini incelemiştir. Kullanılan değişkenler; konut faiz oranı ve gayrimenkul konut satışlarındaki toplam ihracattır. Veri seti Ocak 2018 – Eylül 2021 arasındaki aylık verilerden oluşmaktadır. Covid-19 öncesi ve sonrası iki regresyon modeli kurulmuştur. Ampirik bulgulara göre; ihracat hem Covid-19 öncesi hem de sonrasında konut satışlarını olumlu etkilemektedir. Faiz, konut satışlarını negatif etkilemektedir. Covid-19 döneminde ihracatın konut satışlarındaki olumlu etkisi azalırken, reel faiz oranlarının olumsuz etkisinin arttığı tespit edilmiştir.

## **2. MATERYAL VE YÖNTEM**

Araştırma 2018-2022 yılları arasını kapsayan 5 yıllık veri setinden oluşmaktadır. Araştırmaya ait verilere Kamuyu Aydınlatma Platformu (KAP) internet sitesinden erişim sağlanmıştır. Dolayısıyla ikincil verilerden oluşmaktadır. Araştırmada kullanılan örneklem Borsa İstanbul Gayrimenkul Faaliyetleri Sektörü'ne kayıtlı 3 işletmeden oluşmaktadır. Bu işletmeler; Adese Gayrimenkul, İhlas Gayrimenkul ve Sönmez Filament firmalarıdır. İşletmelere ait nakit, borçlanma ve kârlılık durumları finansal rasyolar aracılığıyla ölçülmüştür. Nakit durumunu ölçmek için likidite rasyoları kullanılmıştır. Kullanılan likidite rasyoları; cari oran, asit-test oranı ve nakit orandır. Borçlanma durumunu ölçerken finansal yapı oranlarından faydalanılmıştır. Kullanılan finansal yapı oranları; finansal kaldıraç oranı, genel ödeme gücü oranı, özkaynaklar / aktif toplamı, kısa vadeli borç / özkaynak toplamı, borçlanma katsayısıdır. Kârlılık durumu için ise kârlılık rasyoları kullanılmış ve bunlar; brüt kâr marjı, net kâr marjı, özsermaye kârlılığı ve aktif kârlılığıdır.

### 3. BULGULAR

Borsa İstanbul Gayrimenkul Faaliyetleri Sektörü'ndeki 3 işletmenin 2018-2022 yılları arasındaki 5 yıllık likidite oranları hesaplanmış ve Tablo 1'de verilmiştir.

**Tablo 1: Likidite Oranları**

2022 yılı			
İşletmeler / Oranlar	Cari Oran	Asit-Test Oranı	Nakit Oran
Adese Gayrimenkul	4,622343	3,89885072	3,0894746
İhlas Gayrimenkul	5,66972	5,00773751	1,2882832
Sönmez Filament	1,059684	1,059684102	0,5461471
2021 yılı			
İşletmeler / Oranlar	Cari Oran	Asit-Test Oranı	Nakit Oran
Adese Gayrimenkul	6,729453	6,646149181	5,9790942
İhlas Gayrimenkul	2,720932	2,089466038	0,4534886
Sönmez Filament	0,763954	0,76395375	0,3480463
2020 yılı			
İşletmeler / Oranlar	Cari Oran	Asit-Test Oranı	Nakit Oran
Adese Gayrimenkul	0,568987	0,52777429	0,048482
İhlas Gayrimenkul	4,441025	2,891927285	0,7414709
Sönmez Filament	1,207602	1,207601508	0,9729962
2019 yılı			
İşletmeler / Oranlar	Cari Oran	Asit-Test Oranı	Nakit Oran
Adese Gayrimenkul	0,644805	0,600294344	0,0085138
İhlas Gayrimenkul	1,945331	1,110928358	0,0193664
Sönmez Filament	0,170759	0,067303938	0,0195453
2018 yılı			
İşletmeler / Oranlar	Cari Oran	Asit-Test Oranı	Nakit Oran
Adese Gayrimenkul	0,613775	0,50257766	0,0149617
İhlas Gayrimenkul	4,695462	2,621925633	0,0064096
Sönmez Filament	1,760979	1,471860691	0,7213558

Tablo 1'de hesaplanan likidite oranlarını daha ayrıntılı biçimde yorumlayabilmek için sonuçlar grafiğe dökülerek Şekil 1'de verilmiştir.

Şekil 1: Likidite Oranları

Şekil 1’de verilen likidite oranlarına göre;

- 2022 yılında Adese ve İhlas Gayrimenkul işletmelerinin Sönmez Filament işletmesine göre daha likit durumda olduğu tespit edilmiştir.
- 2021 yılında Adese Gayrimenkul işletmesinin tüm likidite oranlarının diğer işletmelere göre daha iyi olduğu ve dolayısıyla nakit sıkıntısı yaşamadığı görülmüştür.
- 2020 yılında ise tüm işletmelerin likidite oranları düşerken, İhlas Gayrimenkul işletmesinin diğerlerine kıyasla daha iyi durumda olduğu saptanmıştır.
- 2019 yılında Covid-19 pandemisinin de etkisiyle işletmelerin likidite düzeyleri düşmüştür.
- 2018 yılında İhlas Gayrimenkul işletmesinin diğer işletmelere kıyasla likidite düzeyinin daha iyi olduğu ortaya konmuştur.

Likidite oranlarının ardından firmaların borç durumunu inceleyebilmek için borçlanma rasyoları hesaplanmış ve Tablo 2’de sunulmuştur.

Tablo 2’de sunulan borçlanma rasyolarını ayrıntılı biçimde inceleyebilmek için grafiğe dönüştürülüp Şekil 2 oluşturulmuştur.

Şekil 2: Borçlanma Oranları

Şekil 2’de verilen borçlanma oranları incelendiğinde; tüm yıllarda genel ödeme gücü oranının diğer oranlara göre yüksek olduğu dolayısıyla işletmelerin borçlanma potansiyelinin iyi olduğu görülmüştür. Ayrıntılı biçimde değerlendirildiğinde;

- 2022 yılında Sönmez Filament işletmesinin borçlanma potansiyelinin daha yüksek olduğu görülmüştür. Çünkü genel ödeme gücü en yüksek firma olarak tespit edilmiştir.
- 2021 yılında da benzer biçimde Sönmez Filament işletmesinin borçlanma potansiyelinin en yüksek olduğu saptanmıştır.
- 2020 yılında ise Sönmez Filament hariç diğer işletmelerin pandeminin de etkisiyle genel ödeme güçleri azalmıştır.
- 2019 yılında da aynı şekilde genel ödeme güçleri düşerken, Sönmez Filament işletmesi en iyi durumdadır.
- 2018 yılında diğer işletmelere göre yine Sönmez Filament borçlanma potansiyeli en iyi işletme olarak tespit edilmiştir.

Borçlanma oranlarının ardından firmaların kârlılık durumunu inceleyebilmek için kârlılık rasyoları hesaplanmış ve Tablo 3’de sunulmuştur.

Tablo 3'deki kârlılık oranları grafiğe dönüştürülüp Şekil 3 oluşturulmuştur.

Şekil 3: Kârlılık Oranları

Şekil 3’de görülen kârlılık oranlarına göre; diğer oranlara kıyasla net kâr marjının en yüksek olduğu görülmüştür. Firma bazlı incelendiğinde;

- 2022 yılında Adese Gayrimenkul işletmesi en kârlı işletme olarak tespit edilmiştir.
- 2021 yılında Adese Gayrimenkul en kârlı iken, Sönmez Filament işletmesinin de kârlılık düzeyi artış göstermiştir.
- 2020 yılında ise Sönmez Filament hariç diğer işletmelerin pandeminin de etkisiyle kârlılık oranları düşüş eğilimindedir.
- 2019 yılında Sönmez Filament işletmesi en kârlı durumdadır.
- 2018 yılında ise bu kez Sönmez Filament işletmesi zarar açıklamış ve net kâr marjı negatif olarak tespit edilmiştir.

Nakit, borçlanma ve kârlılık durumları tespit edildikten sonra gayrimenkul firmalarının piyasa değerleri bulunmuş ve Tablo 4’te sunulmuştur.

**Tablo 4: Piyasa Değerleri**

<b>2022 yılı</b>	
<b>İşletmeler</b>	<b>Piyasa Değeri</b>

Tablo 4’te verilen piyasa değerlerini ayrıntılı yorumlayabilmek için veriler grafiğe aktarılarak Şekil 4 oluşturulmuştur.

**Şekil 4: Piyasa Değeri**

Şekil 4'te görülen piyasa değerleri genellikle analizin gerçekleştiği son iki yıl olan 2021 ve 2022'de yükselişe geçmiştir. Ayrıntılı incelendiğinde;

- 2022 yılında piyasa değeri en yüksek işletme olarak Sönmez Filament tespit edilmiştir.
- 2021 yılında da benzer şekilde Sönmez Filament işletmesinin piyasa değeri en iyidir.
- 2020 yılında ise piyasa değerleri birbirine daha yakın seyretmekte ve İhlas Gayrimenkul işletmesinin piyasa değeri en yüksektir.
- 2019 yılında pandemi etkisiyle tüm işletmelerin piyasa değerleri düşük seyrete de içlerinde en yüksek piyasa değeri İhlas Gayrimenkul'e aittir.
- 2018 yılında yine düşük piyasa değerleri içerisinde en yüksek piyasa değeri Adese Gayrimenkul işletmesinindir.

#### **4. SONUÇ ve ÖNERİLER**

İnşaat sektörünün önderliğinde faaliyetlerini sürdüren gayrimenkul sektörü yaşanan olaylara ve koşullara göre şekillenmektedir. Dünyada yaşanan pandemi döneminde gayrimenkul sektöründeki talep daha çok sessiz, sakin ve doğayla iç içe alanlara yapılan konutlar iken, Türkiye'de yaşanan deprem sonrası, bu kez konutların depreme dayanıklılığı birinci öncelik hâline gelmiştir. Hatta Covid-19 dönemindeki gibi az katlı binalara talep artış göstermeye başlamıştır. Gayrimenkul sektöründe başarıyı sürdürebilir kılmak için hedef kitleyi doğru tespit ederek hedef kitlenin istek ve ihtiyaçlarına hitap edebilmek son derece önem arz etmektedir.

Bu çalışmada Borsa İstanbul Gayrimenkul Faaliyetleri Sektörü'ne kayıtlı 3 işletmenin nakit, borçlanma ve kârlılık oranları hesaplanmıştır. Ayrıca bu işletmelerin piyasa değerleri de

bulunmuştur. Hesaplamalar 2018-2022 yılları arası 5 yılı kapsamaktadır. Elde edilen bulgular ışığında; nakit, borçlanma ve kârlılık oranları ile piyasa değerleri yorumlanmıştır. Likidite oranlarına bakıldığında; 5 yılda nakit durumu en iyi olan işletmeler farklılaşsa da genellikle 3 işletmenin de likidite oranları pozitif ve nakit durumlarının yeterli düzeyde olduğu görülmüştür. Borçlanma oranlarına göre; 3 işletmenin de yıl bazlı farklılık gösterse de ödeme güçlerinin iyi ve yeterli olduğu tespit edilmiştir. Kârlılık oranları incelendiğinde ise; net kâr marjının en çok önem verilen kârlılık oranı olduğu fakat bazı yıllarda işletmelerin zarar etmesinden dolayı net kâr marjının negatif olduğu tespit edilmiştir. Piyasa değerlerine göre genellikle 5 yıl içerisinde Sönmez Filament işletmesinin piyasa değerinin en yüksek olduğu saptanmıştır. Bu yorumlar doğrultusunda; Türkiye’de gayrimenkul sektöründe faaliyet gösteren işletmelerin pandemi gibi istisnai dönemler dışında mali durumlarının yeterli düzeyde olduğu görülmüştür. İşletmelerin mali açıdan sürdürülebilirliğini sağlamak için hedef kitlenin arz ve talebine cevap vermeleri ve sürekli yenilenmeye açık olmaları gereklidir. Gayrimenkul yatırımlarının uzun vadeli ve finansal açıdan yüksek değerli oldukları için müşteri istek ve ihtiyaçlarına cevap verebilecek şekilde kendilerini iyileştirmeleri hem firmaların geleceği hem ülke ekonomilerine katkıları için oldukça önemlidir.

**ABSTRACT**

Public transport plays a vital role in people's day-to-day migrations in all modern countries around the world. High quality public transport systems are the right tool for satisfying transportation demand in most global cities. Demand for bus, rail, underground and tram transport systems is varied, and safety is the key factor of its effectiveness. Adequate operation of the public transport system has economic effects, where many urban areas focus on tackling three main problems: safety, congestion and pollution. Alongside the demand for public transport, the need for higher-level safety regulations in the public transport system is growing as well. With continuous development of technology and innovations, the human factor remains the most common cause of traffic accidents. Those commuters who trust the accountable institutions for transportation safety are prone to use the services more often. In addition, vice versa, those who have issues regarding the public transport are more inclined to use private vehicles. The behaviour of the commuters is guided by their safety transportation awareness and is also influenced by individual factors and the environment. In this paper, based on extend literature review, it will be emphasized the most important characteristics for the establishment of safe public transport. This research was motivated by the need to better understand, address, and optimize safety, behaviour, and economic aspects related to public transportation, while emphasizing the role of technology and considering socioeconomic factors. The scientific contribution of this paper lies in the recognition of the multifaceted relationship between public transport, safety, and individual behaviour, and the intention to provide insights based on a literature review to enhance the safety and efficiency of public transportation systems in urban areas.

**Keywords:** expenses for transport, safety, safety awareness, public transport.

## **INTRODUCTION**

In most of the world's metropolises, transport demand is met precisely through high-quality public transport systems (Schmöcker, Bell & Lam, 2010). The lack of transportation is an obstacle to accessibility and social inclusion in modern society. Thus, in rural and sparsely populated areas, access to public transport, compared to urban areas, is often poor, which leads to fewer opportunities for rural residents to participate in various activities (Berg & Ihlström, 2019). The development of transport services is a very important factor for the quality of life, and the availability of public transport plays a key role in the evaluation and design of transport systems in terms of mobility and sustainability (Saif, Zefreh & Torok, 2019). Considering that the public transport system enables the transportation of passengers to school, public health institutions and to work, it is extremely important to take care of examining the competitiveness of it (Poliak et al., 2017). Taking into account the undoubted importance of this system, there is a lot of research that focused on the functioning of the same. Thus, the findings of earlier research, among others, confirmed that the key factor for the efficient functioning of the public transport system is safety (Marusin, Marusin & Danilov, 2018; Schmöcker, Bell & Lam, 2010). Passengers show a greater preference for using public transport systems when they believe in the safety of the same (Jain et al., 2014). As the demand for the use of public transport grows, so does the need to establish a higher level of security in the public transport system (Wang et al., 2020). Public transport represents a greater risk for safety because, as a rule, the means of transport in this system in most cases contain a large number of passengers. The problem of establishing a safe public transport system is even more pronounced in developing countries due to the lack of appropriate and integrated approaches (Joewono & Kubota, 2006). Taking into account the crisis caused by the COVID-19 pandemic, it can be seen that now is the right time to rebuild trust in public transport and to give it the attention that deserves through politics and investment decisions (United Nations Habitat, 2021). According to the above, the purpose of this paper is to conduct a systematic literature review of the studies that have analysed the public transportation with special emphasis on those which have put focus on the establishment of the safe public transportation. The expected results of the research are likely to include a comprehensive overview of the state of public transportation safety, identification of key challenges and best practices, and potential recommendations for policymakers and urban planners to improve safety and accessibility in public transportation systems. After the introduction section, in the second chapter it will be analysed the significance and specifics of public transportation. In the third chapter, the focus is on crucial aspects for the establishment

of safe public transport. Discussion is provided in the fourth chapter, while conclusion remarks are presented in the fourth chapter.

## **2. SIGNIFANCE AND SPECIFICS OF PUBLIC TRANSPORTATION**

Public transport plays a key role in the daily migration of people in all modern countries of the world (Tirachini & Cats, 2020). Transport systems are complex and dynamic systems that include people, vehicles, infrastructure and the environment; and eventual deficiencies of this system can very easily cause a traffic accident (Feng et al., 2021). Requirements for bus, railway, subway and tram systems are diverse, and the key factor for their efficient functioning is safety (Marusin, Marusin & Danilov, 2018). Most of the developed countries are making efforts to increase the share of public transportation, and in the period from 2017 to 2021, city authorities around the world implemented numerous projects to improve the operation of the public transportation system (McKinsey & Company, July 2021). Adequate functioning of the public transport system has economic effects, whereby many urban areas solve three main problems: safety, congestion and pollution (Schmöcker, Bell and Lam, 2010). Traditional public transport, operated by heavily subsidized public bodies using separate modes, was fragmented in terms of timetables, ticketing, and customer service alignment. This approach, while asset-focused, often hindered citizens; journey options across transit systems, with agencies adopting a monopoly mindset. But today, new market players are improving last-mile transportation with enhanced services and convenience. Emerging disruptive transport technologies and the seamless service interactions in other sectors have raised customer expectations for public transport. The future of mature transport systems lies in integrated services, effortless payments, and enhanced customer experiences (KPMG, November 2022)Not only is public transport important when it comes to providing the workforce with the means to travel to work and generally across a given region; it allows for a better distribution of congestion levels across different modes of transport, which usually contribute to reduced carbon dioxide emissions, for example if individuals opt for public transport instead of driving a car (Burgueño Salas, 28.11.2022). Along with the growing demand for public transport, the need for establishment a higher level of security in the public transport system also grows stronger (Wang et al., 2020). There is continuous development of technology and innovative solutions, and the human factor remains the most common cause of traffic accidents (Feng et al., 2021).The specificity of social dialogue in public transport in many countries of Central and Eastern Europe is characterized by a high degree of decentralization with a lack of sectoral or

national organizations. Thus, social dialogue in the countries of Central and Eastern Europe is organized mainly within the framework of national social and economic councils that make decisions on various topics at the state or company level (Bordogna, 2018). An important contribution to the social dialogue in the public transport segment in Europe is made by the European social partners for public transport: The International Association of Public Transport (UITP) and The European Transport Workers' Federation Federation (ETF)) (Europäische Akademie für umweltorientierten Verkehr gGmbH, May 2019). Rundmo et al. (2011) emphasize that there is a significant relationship between trust in accountable institutions and the use of public transport. People who trust the institutions in charge of transport safety use public transport more often. Consequently, people with less trust in accountable institutions will be more inclined to use privately owned means of transport (Rundmo et al., 2011). For many regional journeys, walking and cycling are not viable options, meaning that public transport is often the only alternative to the car for such journeys. People in rural areas are at risk of being excluded from participating in normal relationships and activities if they do not have a driver's license or access to a car (Lucas, 2012). The quality of regional public transport services affects the independent movement of this group, especially children and adolescents (Berg & Ihlstrom, 2019). The availability of public transport has a significant impact on life satisfaction in the form of perceived accessibility (Saif, Zefreh & Torok, 2019). Although public transport represents a financial burden for public budgets, it must not be forgotten that it ensures the mobility of passengers that usually dispose with less financial means (pensioners, students, etc.) (Poliak et al, 2017). An efficient public transport system, including its management, plays a significant role in economic development (Madejski, Amushila & Kulatau, 2014).

The concluding remarks serve to encapsulate the significance and multifaceted impact of public transport, underlining its role in enhancing safety, environmental sustainability, social inclusion, and economic development.

### **3. CRUCIAL ASPECTS FOR THE ESTABLISHMENT OF SAFE PUBLIC TRANSPORT**

Passengers in public transport have high demands from service providers expecting safety, comfort, regularity, frequency, speed and economics (Hussain, Zefreh & Torok, 2018). The most important requirement of passengers in public transport is safety (Vuletić, Horak & Jurčević, 2021: 63; Jain et al., 2014). The behaviour of road users is driven by their transportation safety awareness (Feng et al., 2021), which is influenced by individual factors and the environment (Feng et al., 2021; Tao, Zhang & Qu, 2017). When a person thinks about safety, he is motivated

to find countermeasures to avoid accidents or at least reduce their consequences. Fear of crime is an important issue affecting passengers' perception of public transport safety. Especially when it comes to younger people who often avoid using public transport services due to prejudice (Currie, Delbosc & Mahmoud, 2013). Potential security threats in the public transport system relate to injuries caused by infrastructure (eg escalators), violent crime (eg sexual offences, stabbings, terrorism), non-violent crime (eg vandalism, drug use, trespassing, drunkenness), or viruses (Friman, Lättman & Olsson, 2020). The level of transportation safety awareness determines the participation of individuals in the traffic activities of public and private transport (Liu, 2007) and affects the level of expenditure of individuals for transport needs. Expenditures for transportation represent an important part of an individual's budget, and at the same time there are large variations in consumption due to belonging to a particular socio-economic group. On average, individuals with the highest income spend 1.8 times more on transportation than individuals from the lowest income group (Kauppila, 2015). The share of transport expenses in personal consumption increases with income, and most often as a result of buying a personal car (European Environment Agency, 2012). Transport policies aimed at sustainability, i.e. those that promote public transport and the reduction of cars, reduce the impact of the crisis on the amount of personal expenditure on transport (Cascajo et al., 2018). For people with higher incomes, public transportation represents an inferior good, and their transportation expenditures are relatively higher for public and private transportation (Burguillo, Romero-Jordan & Sanz-Sanz, 2017). Due to the growing awareness of public transport safety among people with higher incomes, the demand for public transport services is increasing (Gandelman, Serebrisky & Suárez-Alemán, 2019). The behaviour of traffic users is guided by their transportation safety (Feng et al., 2021). Transportation safety awareness implies continuous adjustment of the individual's activities and behaviour (Liu, 2007). An individual's transportation safety awareness is associated with a safe way of participating in transportation (Liu, 2007). Factors affecting transportation safety awareness are divided into individual factors and environmental factors. Gender, age, level of education, occupation, income and mode of travel have a significant impact on the way public transport services are used (Zhu et al., 2014). Men are more prone to less safe behaviour in transport, so for example a larger proportion of them do not use a seat belt (Ghadban et al., 2017). Personality traits imply a recognizable pattern of feelings, thoughts and behaviour of individuals (McCrae & Costa, 2021), and are significantly related to the risky behaviour of road users. Personality traits contribute to indirect effects on crash risk driven by road users' unsafe behaviour (Tao, Zhang & Qu, 2017). In addition to

individual factors, environmental factors have an important influence on safety awareness (education about traffic safety, records of traffic violations, approval of violations of traffic regulations and traffic culture (Feng et al., 2021). Education about transportation safety, especially for children, significantly improves their safety knowledge, but also their transportation safety awareness (Rosenbloom et al., 2008). Safety awareness in the context of public transport refers to the safety knowledge of passengers that enables the protection of persons (individuals and others), as well as influencing others to behave safely in public transport (Wang et al., 2020). Individuals are more likely to develop safety awareness if they perceive the behaviour of people around them and if their friends and family follow certain safety regulations (Chang & Liao, 2010; Chan et al., 2005). Also, normative encouragement from important people has a positive effect on the development of an individual's consciousness (Asif et al., 2018). The role of the interpersonal environment is emphasized when studying an individual's transportation safety awareness. Family and friends can be the basis of emotional support in developing safety awareness. If a larger share of close people does not approve the violation of regulations on transportation safety, the individual's awareness of it is higher (Feng et al., 2021). Transport safety culture includes all factors related to drivers, vehicles and infrastructure (Leviäkangas, 1998) and therefore has a strong influence on an individual's safety awareness. Gehlert et al. (2014) emphasize how it unites the thoughts and feelings of the participants about transportation in the environment as well as the possible intentions of the participants regarding behaviour. Chen et al (2023) research the impact of the neighborhood and working environment on green commuting from a health perspective. Authors conclude that good working environment and relationships will significantly encourage the sub-healthy group to choose active commuting. Individuals with a positive attitude toward safe passenger behaviour seek important safety information and become more aware of the importance of safe transportation behaviour (Wang et al., 2020). The safe behaviour of passengers in public transport implies the actions shown by passengers to reduce the probability of occurrence of unwanted events when traveling by public transport (Wang et al., 2020). The state of traffic safety in an area is inseparable from the transportation safety awareness of the local public. Therefore, in order to improve the transport safety, that is, public transport, it is crucial to improve the transportation safety awareness (Rong, 2008). Safe behaviour in transport refers to all behaviours that the public shows when participating in public transport, which enable them to comply with regulations and protect themselves and other people in case of danger (Feng et al., 2021). Safety awareness implies the passenger's safety knowledge that enables him to

consciously protect himself and others, as well as influence others for the purpose of safe behaviour in public transport (Wang et al., 2020). The level of transportation safety awareness determines the participation of individuals in transportation activities, whether public or private (Liu, 2007) and affects the level of personal expenditures for transportation needs. Among people with a higher income, due to the increase in safety awareness of the public transport, the share of public transport use increases (Gandelman, Serebrisky & Suárez-Alemán, 2019). Expenditures for transportation represent an important part of an individual's budget, and there are large variations in consumption depending on belonging to a particular socio-economic group (Kauppila, 2015). Personal expenses for transportation refer to the cost of buying a private car, the cost of fuel and the cost of usage of public transportation (Köhler, Luhmann & Wadeskog, 2004). A person's position along the rural-urban continuum significantly affects transportation expenditures as well as the perceived severity of problems related to a particular type of transportation. People with disabilities and the elderly have similar spending patterns for transportation, as well as the interdependence of the same with safety awareness of a particular type of transportation (Venter, 2011). The establishment of an adequate and safe public transport system is an urban necessity. In order to establish a more sustainable transport system, it is necessary to provide all citizens access to the public transport system and, if necessary, to work on its expansion (United Nations Habitat, 2021). A safe public transport system is of primary importance for any economic system. Therefore, one of the roles of the European Commission is to respond to these expectations by ensuring satisfactory standards throughout the Union for safety in all modes of transport, especially the public transport system (European Commission, 2022). Through provisions such as the EU Road Safety Policy Framework 2021-2030 (European Commission, 2019) and White Paper 2011 Mobility and Transport (European Commission, 2011), the European Commission strives to standardize and improve the level of safety of the public transport system at the level of the Union. It was the recent crisis periods (coronavirus pandemic and Russia's invasion of Ukraine) that confirmed that public transport is an important backbone for the functioning of highly urbanized areas. In essence, the concluding remarks reinforce the importance of public transport safety, its influence on behaviour and expenditures, and its role in urban and economic contexts. As well it is also emphasize the efforts made by organizations like the European Commission to ensure and enhance safety standards in public transport.

#### **4. DISCUSSION**

Based on the analyzed research that have observed or highlighted the signifiacnce and specifics of public transportation, it is evident that public transport is recognized as playing a crucial role in the daily lives of people in modern countries, facilitating their mobility and daily activities (Pichardo-Muñiz, 2011; Mononen & Leviäkangas, 2016). Safety is identified as a fundamental factor in the efficient functioning of public transport systems. The text underscores that deficiencies in these systems can lead to traffic accidents, emphasizing the need for safety measures. Public transport systems are noted to have economic effects, addressing issues like safety, congestion, and pollution in urban areas (Singh, 2012; Pojani & Stead, 2017; Allbalate & Fageda, 2019; Almatar, 2024). They contribute to a better distribution of congestion levels and reduced carbon dioxide emissions (Kramberger, Dragan & Prah, 2014; Newman & Kenworthy, 2015; Liu, Yu & He, 2022; Al-Jabir & Isaifan, 2024) highlighting their positive environmental impact. The ongoing development of technology and the persistent role of human behaviour in traffic accidents are acknowledged, reinforcing the need for evolving safety measures and technology in public transport. The role of social dialogue and trust in accountable institutions is discussed, pointing out that trust in these institutions is linked to increased use of public transport. Lack of trust may lead to a preference for private means of transportation (Maroun et al., 2024; Nasrin & Bunker, 2024). Public transport is considered essential, particularly in rural areas (Šťastná & Vaishar, 2017; Porru et al, 2020) to prevent the exclusion of individuals from participating in normal activities due to a lack of personal transportation options. It is essential for independent movement, especially for children and adolescents. The availability of public transport is connected to life satisfaction, particularly regarding perceived accessibility. Public transport is highlighted as a critical option for individuals with limited financial means. Passengers in public transport have high expectations, with safety being the most critical requirement. Safety is paramount for passenger satisfaction (Mouwen, 2015). The behaviour of road users is strongly influenced by their transportation safety awareness, which is shaped by both individual and environmental factors. Fear of crime, particularly among younger individuals, affects passengers' perception of public transport safety and can deter them from using these services. Transportation expenses represent a significant portion of an individual's budget (Kapatsila, Collins & Grise, 2024). The level of transportation safety awareness affects personal transportation choices and expenditures. There are notable variations in transportation expenditures based on socio-economic status. People with higher incomes tend to spend more on transportation, and safety awareness in public transport can lead to increased usage among this group. Transport safety culture, which

encompasses drivers, vehicles, and infrastructure, plays a crucial role in influencing individuals' safety awareness. A positive attitude toward safe passenger behaviour leads individuals to seek safety information and become more aware of the importance of safe transportation behaviour. Transportation safety awareness enables passengers to consciously protect themselves and others while influencing safe behaviour in public transport. Establishing an adequate and safe public transport system is a necessity for urban areas. A safe public transport system is essential for economic stability. The European Commission is mentioned as an entity working to ensure satisfactory safety standards in all modes of transport, including public transport, at the European Union level. In the previous chapter it is also under-scored the resilience of public transport during recent crisis periods, such as the corona-virus pandemic and geopolitical events, highlighting its importance in urbanized areas. For better understanding the relationship between safety awareness and public transport usage, future research could delve into behavioural studies. These studies might explore how individuals' perceptions of safety influence their choices and behaviours in public transport systems. As well it could be conducted comparative analysis which can be valuable to understand how different cities or regions have successfully improved safety in their public transport systems. Research can identify best practices, policies, and strategies for enhancing safety.

## **5. CONCLUSION**

Safety in public transport is extremely important considering that public transport is closely connected with human lives, and because of fact that in most situation a large number of people participate in it at the same time. It is not disputed that public transport plays an important role in the functioning of economic systems, given that it enables people to be transported to schools, faculties and work. But in order to ensure an even greater role of public transport in the functioning of individual cities, as well as a role in the establishment of a more sustainable transport system, it is necessary to continuously work on the establishment of a higher level of safety. It should not be overlooked that the establishment of an adequate and safe public transport system is an urban necessity. An important factor influencing people's attitudes towards the use of the public transport system is precisely their transportation safety awareness, which is influenced by individual and environmental factors. Thus, the level of transportation safety awareness actually determines whether individuals can participate in the public transport system in a safe manner and in compliance with regulations, and it also affects the level of personal consumption for transport needs. When people perceive the public transport system as

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

---

safer, then they are more willing to use its services more often. Accountable institutions should allocate more financial resources to safety education, because through it both the knowledge of individuals and the transportation safety awareness can be significantly improved. In order to establish a safe public transport system, in addition to the adoption of an adequate development transport policy, it is necessary to influence the growth of transportation safety awareness by taking appropriate measures. A public transport system that does not use its capacity represents only financial damage to society, and therefore it is extremely important not only to take care of the technical aspects of establishing more safety, but above all to restore or create people's trust in the safety of the public transport system.

**ABSTRACT**

Multimodal therapy regimens are used to treat tuberculosis, an infectious disease spread through the air. Maintaining an appropriate blood medication level during long-term antituberculosis therapy requires strict adherence. Inadequate patient care is a major factor in the emergence and dissemination of strains that are resistant to Mycobacterium TB. Because there are costly, ineffective, and hazardous substitutes for first-line medications, treating tuberculosis that has developed drug resistance is a laborious process. In recent years, health government officials have approved two new antituberculosis medications: bedaquiline and delamanid. However, these drugs cannot serve as the only treatment for tuberculosis that has developed drug-resistant forms; this is especially true in settings with intermediate economies, like China, India, and the collapsed Soviet republics, where resistance to medications is common. There is an urgent need for new research and development initiatives. It is necessary for public health policies to protect both novel and traditional therapy alternatives. Combination treatment is used in the treatment of tuberculosis. Although there are new medications currently being researched and licenced (such as bedaquiline), the leadership of tuberculosis has become more difficult due to the rise in drug-resistant forms of the illness. A key element in the leadership and oversight of tuberculosis is the use of medical treatment in conjunction with accurate diagnosis. From a clinical and public health standpoint, it matters because tuberculosis is a dangerously contagious illness that may spread through the air.

**Keywords:** Anti tuberculosis, Bedaquiline, Combination treatment .

## **INTRODUCTION**

One of the most serious infectious illnesses in the world, tuberculosis, has a major effect on public health. Mycobacterium tuberculosis, a bacteria that causes tuberculosis, mostly affects the lungs, though it can also damage the kidneys, spine, and brain. It is extremely contagious because it spreads via the air when an infected person coughs, sneezes, or talks. Clinical manifestations of tuberculosis vary, encompassing latent infection, in which individuals harbour the bacteria without exhibiting symptoms or disseminating the disease, and active tuberculosis disease, which is marked by symptoms like fever, cough, weight loss, and exhaustion. Tuberculosis can be lethal or extremely debilitating if left untreated. Poverty, overcrowding, malnutrition, and weaker immune systems particularly in those with HIV/AIDS are factors that contribute to the persistence of tuberculosis[1]. Additionally, a major obstacle to international tuberculosis control efforts is the growth of drug-resistant forms of the disease. A multimodal strategy is used to fight tuberculosis, involving early detection, suitable treatment, infection control practices, and public health initiatives. A combination of clinical assessment, imaging techniques (like chest X-rays), and laboratory testing (like sputum microscopy and culture) are usually used to make the diagnosis[2]. To properly eradicate the germs and stop the emergence of drug resistance, treatment for tuberculosis usually entails a combination of antibiotics administered over a period of many months. A popular tactic to guarantee treatment adherence and enhance results is Directly Observed Therapy, in which a medical professional watches patients take their medications. Even with improvements in tuberculosis diagnosis and treatment, societal stigma surrounding the illness, a lacklustre healthcare system, and restricted access to treatments all continue to impede the fight against tuberculosis. To reach the aim of eliminating tuberculosis as a worldwide health issue, governments, healthcare providers, researchers, and communities must work together in harmony[3].

## **PHARMACOLOGICAL TREATMENT FOR TUBERCULOSIS :**

Anti-tuberculosis medications are a class of antibiotics used in combination to treat tuberculosis. The purpose of these medications is to eradicate the tuberculosis causing germs and stop antibiotic resistance from growing. The most widely used anti tubercular medications are as follows:

**Isoniazid (INH):** An important first-line medication for tuberculosis treatment, isoniazid acts by preventing the bacterial cell wall's ability to synthesise mycolic acids, which eventually results in the death of the bacteria.

**Rifampicin (RIF):** Rifampicin is another first-line medication that kills bacteria by preventing them from synthesising RNA. It is frequently taken in addition to other medications to treat tuberculosis.

**Pyrazinamide (PZA):** In acidic settings, like those present inside macrophages, pyrazinamide is effective against bacteria that are actively multiplying. It is essential for reducing the length of time that tuberculosis lasts[4].

**Ethambutol (EMB):** Ethambutol helps to kill off mycobacteria by preventing the synthesis of certain cell wall components. When treating tuberculosis, it is frequently used in conjunction with other medications, especially to stop the emergence of drug resistance.

**Streptomycin:** This injectable antibiotic is mostly used for drug-resistant tuberculosis cases or in situations where other first-line medications are intolerable.

Drug-resistant strains of tuberculosis may also be treated with second-line medications in addition to these first-line medications. These medications include injectable antibiotics like kanamycin and amikacin, as well as fluoroquinolones like levofloxacin and moxifloxacin. Drug susceptibility test findings, the existence of comorbidities, and the patient's clinical presentation all play a role in the selection of medications and treatment plans[5].

### **MULTI DRUG THERAPY**

The mainstay of treatment for tuberculosis (TB) is multi-drug therapy (MDT), particularly in cases where the tuberculosis bacteria is caused by drug-sensitive strains. To minimise the possibility of drug resistance and target distinct stages of the bacterial life cycle, multiple antibiotics are used simultaneously in a method known as multidrug resistance. Eliminating the tuberculosis germs from the body and avoiding relapse is the main goal of MDT[6]. It usually entails a mix of first-line anti-tubercular medications, which are quite successful in treating the majority of TB strains. For drug-sensitive tuberculosis, the most often prescribed combination regimen consists of isoniazid (INH), rifampicin (RIF), pyrazinamide (PZA), and ethambutol (EMB) [7]. Together, these medications suppress the manufacture of proteins, RNA, and cell walls, among other methods that the bacteria use to survive. MDT lessens the possibility of

drug-resistant strains emerging by focusing on several facets of bacterial growth and replication, assisting in the effective destruction of all germs[8]. Depending on variables like the patient's reaction to treatment and the extent of the illness, the multi drug therapy usually lasts six to nine months. Patients must closely follow the recommended treatment plan throughout this time in order to get positive results. Multi drug therapy is frequently given as part of directly observed therapy (DOT), in which a medical professional or other qualified observer makes sure patients take their prescriptions as directed. This strategy lowers the chance of treatment failure and relapse while also enhancing treatment adherence[9]. Second-line therapies, which are effective against TB strains resistant to first-line medications, may be added to the multidisciplinary treatment plan (MDT) in cases of drug-resistant tuberculosis. Drug-resistant tuberculosis, on the other hand, is more difficult to treat and may need longer periods of therapy with a variety of antibiotics, including injectable ones. In general, MDT is essential to the treatment of tuberculosis (TB) since it aids in the infection's cure, stops its spread, and lessens the burden of medication resistance. On the other hand, prompt diagnosis, wise treatment choices, and rigorous commitment to the recommended course of action are necessary for good results[10].

### **DRUG RESISTANT TUBERCULOSIS AND TREATMENT CHALLENGES**

Global attempts to eliminate tuberculosis (TB) are severely hampered by drug-resistant TB. It happens when the tuberculosis-causing germs become resistant to one or more of the medications prescribed to treat the illness. Two primary forms of drug-resistant tuberculosis exist:

**Multidrug-resistant TB (MDR-TB):** This type of TB is resistant to isoniazid and rifampicin, two of the most effective first-line anti-TB medications.

**Extensively drug-resistant tuberculosis (XDR-TB):** This is a more severe type of tuberculosis that is resistant to intravenous second-line treatments such as amikacin, kanamycin, or capreomycin, as well as to at least one fluoroquinolone, isoniazid, and rifampicin[11].

Because there are fewer treatment options, longer treatment periods, more potent second-line medications, and greater treatment costs for drug-resistant TB, treating this type of TB is far more complicated and difficult than treating drug-sensitive TB. The following are some of the main obstacles to treating drug-resistant tuberculosis:

**Restricted Treatment Options:** Compared to drug-sensitive TB, drug-resistant TB is treated with fewer potent medications. Second-line medications are frequently more costly, more hazardous, and less successful for treating drug-resistant tuberculosis.

**Extended Treatment Period:** Compared to drug-sensitive TB, which usually only needs 6 to 9 months of medication, treatment for drug-resistant TB usually takes a longer period of time, ranging from 9 to 24 months or more. The chance of side effects, relapse, and treatment failure rises with extended treatment[12].

**Increased Toxicity:** When second-line medications are used to treat drug-resistant tuberculosis, there is a greater chance of side effects, such as peripheral neuropathy, renal damage, hearing loss, and mental health issues. Handling these side effects calls for careful observation and can call for modifying the prescribed course of action.

**High Cost:** Treating drug-resistant TB is far more expensive than treating drug-sensitive TB because it requires longer treatment periods, more costly medications, and specialised monitoring and care.

**Treatment Adherence:** For drug-resistant tuberculosis treatment to be effective, patients must adhere to the recommended treatment plan. Adherence, however, may be more difficult for patients due to the extended length of therapy, the higher pill burden, and the intensity of unpleasant effects[13].

## **MANAGEMENT OF SIDE EFFECTS**

Effective control of side effects during tuberculosis (TB) treatment is essential to good treatment outcomes, patient adherence, and reduced treatment interruptions. Medication for tuberculosis (TB), especially second-line treatments for drug-resistant TB, can have a number of adverse effects, such as:

**Gastrointestinal Symptoms:** Many TB drugs can cause nausea, vomiting, and abdominal pain as adverse effects, particularly if taken empty. To lessen stomach discomfort, patients may be encouraged to take their prescriptions with meals.

**Hepatic toxicity:** Isoniazid and rifampicin are two examples of TB medications that can harm the liver and result in hepatitis, increased liver enzymes, or even cirrhosis of the liver. Clients should be advised to report any symptoms of jaundice, stomach pain, or dark urine at least once. Liver function test monitoring is crucial[14].

**Peripheral Neuropathy:** Some TB medications, such as isoniazid and ethambutol, can harm peripheral nerves, leading to symptoms including tingling, numbness, or weakness in the hands and feet. Peripheral neuropathy may be prevented or treated using vitamin B6 (pyridoxine) supplements.

**Ototoxicity:** Injectable TB medications, including capreomycin, kanamycin, and amikacin, might result in balance issues or hearing loss. Patients should receive counselling with the warning signals of ototoxicity, and audiometric monitoring is required to detect any changes in hearing[15].

**Nephropathy Toxicity:** Aminoglycosides (kanamycin, amikacin, etc.) and capreomycin are examples of aminoglycosides that can harm the kidneys. Moisturising may be advised to reduce the risk of kidney toxicity, and monitoring renal function tests is crucial.

**Visual Disability:** An optic neuritis that results from ethambutol, a regularly used TB medicine, can cause visual abnormalities or possibly irreversible vision loss. Patients should report any changes in vision as soon as they occur, and regular vision testing is essential[16].

Adjusting dosages, temporarily stopping problematic medications, or switching to other medications are some methods of managing adverse effects. Supportive treatments such as topical medications for skin responses, analgesics for stomach discomfort, and antiemetics for nausea may occasionally be recommended to treat symptoms. Throughout the duration of TB therapy, healthcare providers are essential in keeping an eye out for side effects, informing patients about possible adverse responses, and offering support and guidance. To maximise treatment success and reduce the risk of side effects, close communication between patients and healthcare providers is necessary[17].

## **CONCLUSION**

Tuberculosis (TB) remains a significant global health challenge, with drug-resistant strains posing an increasingly formidable threat. The management of TB requires a comprehensive approach that encompasses early diagnosis, appropriate treatment, infection control measures, and patient support. Pharmacological treatments, including multi-drug therapy (MDT), are essential for effectively treating TB and preventing the development of drug resistance. However, the emergence of drug-resistant TB presents unique challenges, including limited treatment options, prolonged treatment durations, increased toxicity, and higher costs.

SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

---

Managing side effects is crucial for ensuring patient adherence and treatment success. Healthcare providers play a vital role in monitoring for side effects, educating patients about potential adverse reactions, and providing support throughout the treatment process. At the local, national, and international levels, coordinated efforts are required to solve the problems caused by tuberculosis. This entails bolstering medical systems, boosting financing for tuberculosis research and control initiatives, enhancing infection control practices, and increasing access to diagnoses and treatment. Ultimately, governments, medical professionals, researchers, civil society organisations, and impacted communities must work together to coordinate and persistently eradicate tuberculosis as a global health issue. Together, we can accomplish the aim of eliminating tuberculosis from the world.

**OPINIONS OF EDUCATION ADMINISTRATORS ON EFFECTIVE SCHOOL  
DEVELOPMENT: A CASE STUDY**

**Doç. Dr. Süleyman KARATAŞ**  
Akdeniz University

**Özlem Güngören PAZZANESE**  
Akdeniz University

**ABSTRACT**

In this study, it was aimed to reveal the opinions of the education administrators working in Antalya city Muratpaşa district official public schools in the context of their opinions about effective school and to determine their views on effective school development. In the study, one of the qualitative research designs, the holistic multi-case design based on the case study was used. The data collection technique of the research is individual interview. The interviews were made using the semi-structured interview form developed by the researcher, and the descriptive analysis technique was used in the data analysis. As a result of the research, it was determined that most of the education administrators had knowledge about the concept of effectiveness, but it was determined that they perceive the concept as a social activity in terms of the concept of activity. According to the views of the administrators, the ideas that the characteristics of effective schools should primarily provide the school's education-training service in the best way, the school should attach importance to the relationship between the school and the environment, and the school climate and culture are noteworthy. It was emphasized that education administrators think that each school has its own mission and vision, that being effective and efficient can only be achieved with a vision and mission determined according to needs, and that physical needs, maintenance of classes and materials should be completed in cooperation with all stakeholders in order for schools to be effective. Participants emphasized that discipline, punishment and reward should be intertwined with a flexible educational environment in an effective school, and emphasized the importance of the concepts of school climate and corporate culture, and mentioned a need-oriented planning. Finally, in this study, the importance of breaking out of routine behaviors of effective schools, providing students with different educational environments, and doing extra studies was mentioned, and it was concluded that students' change in the desired direction and their self-actualization depend on these differences. It was emphasized that motivation is important while meeting the different expectations and needs of the stakeholders of an effective school, but positive reinforcement can be achieved with positive communication and cooperation. It was mentioned that random goals are not achieved in effective schools, and that clear and clear criteria are required according to the structure and mission-vision of the schools. It has been concluded that effective schools must focus on the necessity and indispensability of change and adapt to changes in order to be effective. According to the educational administrators, the lack of control in educational organizations has once again emerged, and the fact that the greatest deficiency in becoming an effective school originates from this gap has been emphasized with precision.

## **INTRODUCTION**

The biggest task of schools is to help students achieve the set goals. Schools that provide students with targeted behaviors in the desired direction are effective and successful schools. The aim is that all schools should be effective, and the studies and recommendations made in order for schools to be effective schools will make it easier for schools to move along this path. The aim of this study is to define an effective school based on the opinions of school administrators working in Muratpaşa district of Antalya province and to reveal what needs to be done in developing an effective school. For this purpose, the answers to the following questions were sought in the research.

- 1- What do the concepts of effectiveness and effectiveness mean for managers?
- 2- What does effective school mean according to administrators? Why?
- 3- How should the structuring process of effective schools be? Why?
- 4- According to the administrators, what is seen and applied in effective schools?
- 5- According to managers, what are the duties of stakeholders in effective schools?

## **RESEARCH AND FINDINGS**

In this study, the qualitative research design was used. The focus of qualitative research is to understand, explain, examine, explore and clarify the situations, feelings, perceptions, attitudes, values, beliefs and experiences of a group of individuals (Çokluk & Şekercioğlu, 2014). Since the research was conducted with education administrators who voluntarily participated in the research working in different official public schools in Muratpasa district of Antalya Province, a holistic multi-situation design related to case study, one of the qualitative research patterns, was used in this study.

The data collection technique of the research is individual interview. The data were recorded and notes were taken during the interview. First of all, the records were handled and written down. The written data were recorded after the individual interviews were completed. In the data analysis, inductive descriptive analysis method was used. The themes created after analyzing the literature and data tools were categorized in the form expressed in the research method and these themes were listed as: effectiveness and effectiveness, effective school,

effective school configuration, effective school practices, stakeholder tasks, models designed to improve effective school.

## **CONCLUSION**

The participants think that each school has its own unique mission and vision, that being effective and efficient can only be achieved with a vision and mission determined according to needs, and that involving parents and other stakeholders in this process will increase the impact, overlap in this respect and sufficiently demonstrate the necessity of the vision and mission.

One of the results of this research is student-centered activities. The prerequisite for these activities is that the trust and physical conditions are made suitable for students. For an effective education system, it is necessary to provide a certain level of minimum resources and facilities. Schools with effective education systems should provide facilities and equipment that meet the basic health and safety needs of all students (Kemal & Karip, 1996).

From this point of view, the participants support this idea by expressing that physical needs, classroom maintenance and materials should be completed with TAF, stakeholders and cooperation in order for schools to be effective, emphasizing the importance of meeting basic needs by talking about corporate culture and school climate.

If the school administrator can create an effective culture and an effective school climate, he can contribute to the development of a healthy school personality by increasing the motivation of teachers (Çelik, 2002). In this context, it has been emphasized in this research that motivation is important when meeting the different expectations and needs of stakeholders of an effective school, but positive reinforcement can be achieved through positive communication and cooperation. Also, the lack of supervision in organizations in Turkey has once again emerged in this study, and the fact that the biggest deficiency in becoming an effective school is born from this gap has been emphasized by school administrators.

**DECOLONISATION AND ITS AFTERMATH: PESSIMISM AND OPTIMISM'S  
DESCRIPTION OF NIGERIAN SPACE, 1980S-2015**

**Olufemi Timothy OGUNBODE**

Department of History, Faculty of Arts, Ladoké Akintola University of Technology,  
Ogbomoso, Oyo State.

**Email:**olufemitimothyogunbode@gmail.com

**Abstract**

The thoughts of being pessimistic and optimistic about the remote and contemporary issues of Nigeria after independence have birth political thoughts in the dimensions of hope and ruin in the building of Nigerian nationhood. It is evidently true that, the large proportion of decolonisation activities were of the 20th-century in Africa. This does not position the critical thinking about it to be limited to the above mentioned century, but did flow into the 21st-century experiences of Africa. Hence, Africa as a continent recognised 1950s and 1975 as the landmark periodisation of the phenomenon of decolonisation in history. In light of this fact, the political thoughts of pessimism and optimism have become a strong instrument in the definition of Nigeria as a state of hope or ruin after breaking lose from the grip of the colonial masters in 1960. These thoughts will guide this discourse with reference to Nigeria because it created unprecedented platforms to host critical thinking about her existence since independence. More so, agitations of Nigerians who were brought together in 1914 with Nigerian Council Constitution cannot be under emphasised in this discourse. Thereafter, the agitators found errors in the constitution formation and started with constitutional reforms and better life for her people till independence in 1960. Consequently, the constitutional reforms and agitations led into two political thoughts of pessimism and optimism in the Nigerian space from 1980s to 2015.

**Keywords:** Pessimism, Optimism, Decolonisation, Nigeria and Constitution

## **Introduction**

This study explores 35 years' experience of Nigerian State existence after independence between 1980 and 2015. Nigerian State has been searching for her nationhood since 1980s and this explains the trajectory of the thoughts of pessimism and optimism in its growth and development in the period under review. This search for nationhood has generated the national question phenomenon in the building of Nigerian State. As a result of these agitations, Nigeria has been confronted with series of agitations such as Movement for the Actualisation of the Sovereign State of Biafra (MASSOB), Niger Delta People's Volunteer Force (NDPVF), Oodua's People's Congress (OPC) and Boko Haram insurgency and banditry, among others questioning the hope or ruin notion for Nigerian State.<sup>1</sup> From the perspective of constitution making in the country since the earliest experience in 1914 up to the most recent in 1999, questions bordering on Nigeria's existence or otherwise have continued to generate controversial strands of thoughts. With this understanding, Babatunde and Morakinyo opine that the constitutional trajectory in Nigeria can be broadly examined under three different historical epochs, viz: the period of colonial autocracy and absolutism; the era of constitutional democracy and the period of Presidentialism.<sup>2</sup>

Hence, this study explores a historical route into the discourse on the attitudinal framework of Nigerians' political thoughts in the postcolonial Nigeria. This is with regards to its developmental stages and progresses in the last 35 years between 1980 and 2015. This study captures the activities of the military and democratic rules as the major leadership in the period under study with emphasis on the second and fourth Republican system of government in Nigeria under the watch of these political parties viz: National Party of Nigeria (NPN), Shehu Shagari (1979-1983) and Peoples' Democratic Party (PDP), Olusegun Obasanjo (1999-2007), Umar Musa Yar'Adua (2007-2010) and Goodluck Jonathan (2007-2015).<sup>3</sup>

<sup>3</sup> Oloruntimehin, *Culture and Democracy*, 35.

This research examines the pessimists and the optimists' political thoughts in Nigeria between 1980 and 2015 exploring significant individuals within their scope of thought in the areas of the divide and how these thoughts have initiated a divided mindset and attitude in Nigerians in the describing doom and hope. What kept the thoughts afloat or alive in Nigerian space is analysed within the philosophy of these divides in the postcolonial Nigeria as aftermath of decolonisation process. The study employed secondary source of data. The secondary source included books, journal articles and the Internet. The collected data were analysed from a historical perspective. The results showed in the study that there were historical awareness and indications in the Nigerian's space of the thoughts of pessimism and optimism in describing the entity called Nigeria between 1980 and 2015. The study concluded that the postcolonial Nigeria is a description of pessimism and optimism and that this argument will continue to engage each other until an ideal Nigerian's space is achieved in the postcolonial epoch.

### **Conceptual Clarifications**

#### **Nigerian's Space**

Nigerian's space dates antiquity as far back as 3 million years ago when human evidence was found in Africa with the fact of its evidence at Iwo Eleru in present Ondo State which dated the 9th millennium BC. Nigeria is a formation with more than 200 ethnic societies which came under the British colonial hegemony as an amalgamated entity in 1914.<sup>4</sup> Hence, she is a republican state situated in the West Africa and it is bordered to the West by Republics of Ghana and Benin, to the East by Republics of Cameroon and Chad, to the North by Republic of Niger and to the South Gulf of Guinea. She lies between the latitudes 4<sup>0</sup> North and 14<sup>0</sup> North and

---

<sup>4</sup> Alao and Ogunyemi, 'Introduction', xiii; Adetunji Ojo Ogunyemi, 'Nigeria: A Review of its History since the Precolonial Times', Akin Alao and Adetunji Ojo Ogunyemi (eds.), *Contemporary Issues on Nigeria's Development Trajectory Since 1914* (Ile-Ife: Obafemi Awolowo University Press, 2020), 4

longitude 3<sup>0</sup> and 16<sup>0</sup> East of the meridian. This implies that Nigeria approximately is 923,000 square kilometers or about 356,000 square miles. The population of Nigeria is about 206 million with a Federal Capital Territory at Abuja, 36 State and 774 sub-components parts.<sup>5</sup>

### **Decolonisation**

Decolonisation is the dimension of political economy activities embarked upon by the colonial powers after the World War II to free her colonies and reabsorbed them into her political hegemony in order to save herself from the severe economic crisis and to acquire economic recovery and development in the postwar era. It is also the process of making efforts for the survival of the colonial masters. It explains the competition for economic space between Africa and the metropolises. Decolonisation represents negotiation about control of the postcolonial political economy. It is a phenomenon in salvaging the primary interest of colonialism of the colonial powers. It is an expensive programme but not with major restructuring or initiative for the colonies.<sup>6</sup>

### **Pessimism**

It is a thought pattern that see worst aspect of a thing and believe that the worst will happen, in this context that Nigeria will collapse and will not hold. In other words, it is an attitude that Nigerian state is not a working entity, it is a dead system on arrival. It is a thought of evil will prevail over good. It is negativity, hopelessness and gloom mindset.

## **Optimism**

It is an attitude of confidence that all will be well about the future of a system like Nigeria even in the face of threats to her existence when things seem not working. In addition, it is positivism of thought that Nigeria is the best of all best states in the world.

## **The aftermath of Decolonisation in the Description of Nigerian Space: Pessimism and Optimism, 1980s-2015**

Taking a leave from 1979 the opening date into the second Republic in postcolonial Nigeria between 1979 and 1983 which gave hope to Nigerian's space after the decades of military rule between 1966 and 1979. Olusegun Obasanjo in 1979 ignited the fire of optimism which ran into the 80s of the last century. Obasanjo was endorsed as the first African military head of State to hand over power to a democratically elected government under the watch of Shehu Shagari. While by 1983 the hope began to dim and the pessimists' ideology came with the return to the military rule in successions of Muhammad Buhari (1983-1985) and Ibrahim Babangida (1985-1993) and Chinua Achebe's thesis on the ruin description of Nigerian's space surfaced with his work titled, *The Trouble with Nigeria*. Thereafter, the discourse of ruin and hope kept engaging each other for 35 years as observed in this study. The appearance of Olusegun Obasanjo in 1999 in the journey of the fourth Republic further contested the position of the pessimists' description of Nigerian State. This actions, reactions and counteractions of attitude of Nigerians formed the background to the positive and negative sides to the description of Nigeria in the postcolonial era in this study.<sup>7</sup>

### **Pessimism's Description of Nigerian Space**

The remote factor into the contemporary idea of pessimism in Nigeria is dated to 1967. This was during the regime of General Yakubu Gowon when the Eastern Region was established as an administrative convenience system and later turned to be an opened wall in the building of the nationhood of Nigeria through the machinery of Colonel Odumegwu Ojukwu. This was in an effort to react to some maladies in the institutional framework of Nigerian State system in the period then. To resolve the problem, the creation of Biafra State was seen as a remedy to the poor leadership and negative stereotypes of Nigeria to her major stakeholders. This agitation by the east was as a result of the political economy situation of Nigeria which gave no hope to the whole but, few individuals who exploited the masses for their own capitalist gains.<sup>8</sup> This opinion of pessimism was further reinstated with Chinua Achebe in 1983 in his work titled, *The Trouble with Nigeria* barely 13 years after the first movement in the dimension of no hope for Nigerian State because most of the leaders are like old wine in new bottles. He drew the attention of the masses to the pessimistic atmosphere of Nigerian state as a result of maladministration and mismanagement of economic resources of the State by Shehu Shagari's government. This notion was further reechoed in 2012 by Chinua Achebe in another work titled, *There was a Country: A Personal History of Biafra*, when Goodluck Jonathan was the President. By 1986, Chu S. P Okongwu observed that Nigeria has huge external debt and he alerted the people of Nigeria as a pessimist in his article, *The Nigerian Economy: Being an Anatomy of a Traumatized Economy with some Proposal for Stabilisation*, he made a way forward for Nigerian State if the instruction would be followed. This call came during the reign of Ibrahim Babangida. Thus, Obafemi Awolowo's opinion serves as a bridge to the above opinions, he emphasised political and legal crisis of governance as a catalyst to misrule and

---

<sup>8</sup> *Ibid.* Ogunyemi, 'Nigeria: A Review of its History since the Precolonial Times', 23

lack of accountability. This opinion is found in his work title, *The Travails of Democracy and the Rule of Law* in 1987. This still falls under the regime of Ibrahim Babangida.<sup>9</sup> The Federal Office of Statistics explains further the pessimism of the socio-economy structure of Nigerian state from 1987 to the middle 1990s by expressing a disturbing picture of Nigerian federation criticising the government's economy reform programme called the Structural Adjustment Programme (SAP), creation of States and Local Governments Areas to manage the fiscal crisis in Nigeria.<sup>10</sup> By 2014, John A. A. Ayoade, Adeoye Akinsanya and Olatunde Ojo opine that Nigeria has no hope in their work titled, *Nigerian: Descent into Anarchy and Collapse?*<sup>11</sup> The above pessimists' thought in the political arena of Nigeria revealed selfishness through party deflections with no agenda for the masses except for themselves. The leadership in Nigeria has not gotten it right and cannot lead Nigeria anywhere. In substantiating their notion of pessimism these factors below were used as argument in favour and to further enriched the hopelessness of the Nigerian state because of its relationship and understanding of the political economy consciousness in the contemporary times. The arguments include: Constitutional power has always been from the centre rather than from the components between 1980 and 2015. This has not given an inclusive consciousness to Nigerians as major stakeholder in their state affairs. These components made decisions which ought to be recognised but such recommendations were just for sighting not for the real business of doing the needful among the citizens of Nigeria. Therefore, individuals with opinion that no hope for Nigeria used this as a base for argument which replicates itself in different movements such as MASSOB, NDPVF, OPC, Boko Haram and deadly politics through vote buying and coercion among others.<sup>12</sup> In addition,

<sup>9</sup> Alao and Ogunyemi, 'Introduction', xv, xvii

<sup>10</sup> *Ibid.* Alao and Ogunyemi, 'Introduction', xvi-xvii

<sup>11</sup> *Ibid.* Alao and Ogunyemi, 'Introduction', xvii

<sup>12</sup> Babawale, *Good Governance, Democracy and Democratic "Best Practices"*: 9; *Ibid.* Ogunyemi, 'Nigeria: A Review of its History since the Precolonial Times', 16.

the economic factor has been one of the propelling factors in decisions making as regards amalgamation of Nigerian space since 1861 for the exploitation of the people colonised and for the balanced budget which has shown injustice in the administration of the protectorates and division to the level of regions and State creations. The driving force has been economy, with the understanding of robbing the south to feed the north, and there was no efforts to plow back such contributions' profit into the south, the people felt it is better Nigeria seize to exist and the south is at peace.<sup>13</sup> Administrative convenience as a unitary and centralised state was in operation from 1914 to 1939. This structure made the northern protectorate to be an entity with 12 provinces and the southern protectorate was divided into two; western and eastern with 11 provinces. By 1943, it was further divided into administrative divisions 39 and 44 respectively and by 1946 there exist 23 provinces and 83 divisions. By 1953 the provinces were grouped into Northern, Western and Eastern regions with an addition of Mid-west region in 1963. This structure ran with little modification till 1967. This administrative convenience revealed the inequality in the Nigerian State and encouraged the attitude of pessimism in the period under review.<sup>14</sup> Dissolution of regional system structure by Gowon in 1967 and the creation of 12 State was a check against ruin of Nigerian space. Northern region was fragmented into 10 states of 41 divisions while eastern, western and mid-west regions were split into three states with 55 divisions. This is an unequal arrangement which strengthened the hopelessness in Nigerian State.<sup>15</sup> General Murtala Muhammed in 1976 created an additional 7 states and collapsed the 96 division into 301 Local Government Areas structure and the north benefited more from this decisions while the south were at the receiving end.<sup>16</sup> The regime of General Ibrahim Babangida

<sup>13</sup> Ogunyemi, 'Nigeria: A Review of its History since the Precolonial Times', 16-17, 21, 26

<sup>14</sup> *Ibid.* Ogunyemi, 'Nigeria: A Review of its History since the Precolonial Times', 18-19, 22-23

<sup>15</sup> *Ibid.* Ogunyemi, 'Nigeria: A Review of its History since the Precolonial Times', 23.

<sup>16</sup> *Ibid.* Ogunyemi, 'Nigeria: A Review of its History since the Precolonial Times', 24.

between 1985 and 1991 had the highest creation of States and Local Government Areas in Nigerian space in the period under review from 1980s and 2015: 1987-1990 3 States, 1991 9 States. By 1996, General Sanni Abacha created additional 5 states making total of 36 States and 769 Local Government Areas with 774 sub-component part including 5 area councils at Abuja. All these administrative convenience were like adding salt to injury, as the problem of injustice in the distribution of the state resources were not solved the national questions were not treated clinically by the political actors.<sup>17</sup> Nigeria has not stopped practicing colonial legacies consciously or unconsciously. Nigeria has not been able to look inward and find solution to her own problem in all spheres of life ranging from politics to social life.<sup>18</sup> Most of the promulgated laws were not working in sustaining the Nigerian State as it affects waste management, pollution, oil spills and oil pipeline vandalisation, deforestation, erosion and flood, among others. For instance, the supervising agency for environmental protection, Nigerian Environmental Standard Regulation Agency (NESRES) has not done the needful in knitting Nigerian's space as an entity of hope in the period under review.<sup>19</sup> Olanisebe and Lateju opine that Ariri-Chidomere describes Nigeria as an artificial creation, by implication, it is not meant to last. It will soon disintegrate and the marriage will fall and members of the union will divorce one another. According to the duo, marriage by convenience is not providing hope for Nigerian State. Corroborating the above Isiramen avers that Nigerian State is a volatile mix which some day must fail.<sup>20</sup> The religious factor has put Nigerian state on a divide rather than unity, the pessimists see this as a signal for Nigerian ruin. Ariri-Chidomere observes that the marriage of

<sup>18</sup> Alao and Ogunyemi, 'Introduction', xviii

<sup>19</sup> Bosun Banjoko, 'Environmental and Ecological Question in the Nigerian Project', Akin Alao and Adetunji Ojo Ogunyemi (eds.), *Contemporary Issues on Nigeria's Development Trajectory Since 1914* (Ile-Ife: Obafemi Awolowo University Press, 2020), 641; Babawale, *Good Governance, Democracy and Democratic "Best Practices"*: 11.

<sup>20</sup> Samson O. Olanisebe and Fola T. Lateju, 'The Role of Religion in the Making of Nigerian State', Akin Alao and Adetunji Ojo Ogunyemi (eds.), *Contemporary Issues on Nigeria's Development Trajectory Since 1914* (Ile-Ife: Obafemi Awolowo University Press, 2020), 647.

Christianity and Islam is not a good match for Nigerian State. For example when the Sharia law was agitated for between 1976 and 1978 which finally had a headway in 1979 with the inclusion of Sharia Court in the fourth Republic's constitution. This gave an explanation that the postcolonial Nigeria situation encouraged loyalty of individuals first to religion and ethnic divides at the expense of the whole State. Hence, religion has been used to further polarised Nigerian people. The inclusion of Nigeria into the Organisation of Islamic Countries (OIC) has also tolled the route of ruin for Nigerian State which was perfected by Ibrahim Babangida regime although initiated by Yakkubu Gowon's regime.<sup>21</sup> This action has continued to generate heat and violence between 1980 and 2015 viz: Kano (1980), Maiduguri and Kaduna (1982), Yola (1984), Gombe (1985), Funtua (1993), Kafanchan-Kaduna (1987), Zaria (1988), Bauchi (1991), Kano (1991), Zagonkataf-Kaduna (1992), Kastina (2000), Jos (2001 and 2004), Onitsha (2006), Jos (2008), Bauchi (2009) and Boko Haram insurgencies (2009-2015).<sup>22</sup> It is pretty clear that at independent with the application of 1960 constitution and first Republic constitution no mention of the word God not until 1979 and 1999 constitutions that birth the second and fourth Republic respectively, these constitutions made provisions for the mention of the word God. This has also been replicated in the National Anthem and Pledge. This religio-politics phenomenon has since 1914 being there. This religious factor made Wole Soyinka to observe that Religion is the enemy of Nation building because it drives exclusion and not inclusion.<sup>23</sup>

### **Optimism's Description of Nigerian Space**

At the inauguration on the 29th May, 2007, President, Umar Musa Yar'Adua encourages Nigerian to march with him into the age of restoration by working together to restore the lost

<sup>21</sup> *Ibid.* Olanisebe and Lateju, 'The Role of Religion in the Making of Nigerian State', 652-653.

<sup>22</sup> *Ibid.* Olanisebe and Lateju, 'The Role of Religion in the Making of Nigerian State', 654-655.

<sup>23</sup> *Ibid.* Olanisebe and Lateju, 'The Role of Religion in the Making of Nigerian State', 657-658.

honoured values of honesty, decency, generosity, modesty, selflessness, transparency and accountability which are foundation to a society with hope and a future because Nigerians choose to succeed.<sup>24</sup> The optimists were of the opinion that despite all the challenges faced by Nigerian State that someday Nigerian would overcome it and hit the ground running as great nation-state. The admonition of the optimist is that Nigerians should have positive mindset and they should work for the benefit of the State by moving amass to taking her on the path of greatness through revolutionary change activities. Nigerian efforts in the larger world revealed an atmosphere of optimism because of Nigerians' contributions to creativity and innovations in the global economy which is top notch, if applied in Nigeria with the right attitude then she would be bettered for it. Olusegun Obasanjo is one of the optimists who sees hope in Nigerian State way back in 1989 when others saw ruin, he suggested integration of Nigerian people for political inclusion and economic development. He understood the effect of the political economy on the attitude of Nigerians which at all times stares at the existence of Nigerian State as a political entity in the communities of nation as an existence. Hence, the likes of Hyacinth Ajaeghu, B.J. St. Mathew-Daniels, Okon Edet Uya, A.B. Mamman and Oluwole Oyebamiji put up a piece in 2014 titled, *Nigeria: A people United, A Future Assured (Vol. I)* and by 2002, Olusegun Obasanjo encourages Nigerian youth in an engaging entrepreneur exercise in his work title, *I See Hope* as a reflection that Nigerian can still be stronger again through patriotism and perseverance.<sup>25</sup> Adetunji Ogunyemi and Richard Adeyemi corroborate the thought of hope in Nigerian system if Nigerians can be properly integrated into a true State system by restructuring and free her from the attachment to the West.<sup>26</sup> Having looked at some of the optimists and how it began in the period under review, they provide way forward to Nigerian

State which include: The safety of Nigeria as opined by the optimist is the safety of Africa. This has been the approach of the integrative element in Nigerian State. This thought informed the foreign policy of Nigeria which is African centre in the period under review. This sect believes that Nigeria has life and hope. This factor has helped strengthened the optimists thought in the description of Nigerian State between 1980 and 2015.<sup>27</sup> Education is another factor recommended by the optimist that seeking knowledge always is power and by this the mental capacity of Nigerians are equipped and strengthened for the kind of change Nigerians want by critically analysing issues and situations as it appear.<sup>28</sup> Participatory democracy is used here to argue further the hope for Nigeria, Nigerian should come out and do the needful, enough of putting the ball in the court of bad leaders only. Nigerian should stop complaining and being lackadaisical, Nigerians should keep a watch on the politics and stop seeing politics as a dirty game which has been used to deprive Nigerians of their benefits between 1980s and 2015. This participation is to be rooted in the family system not by queuing behind the politicians and individuals who want to use and drop them but mobilise for a better Nigeria.<sup>29</sup> Resilience and Consistence is the power to giving Nigeria hope even when Nigerians leaders failed in their efforts in changing thing because the system is saturated with bad people. Nigerian should keep at it and forge ahead with the attitude of Nigeria must be rescued from the bad leadership by contributing to its maintenance as structural functional system.<sup>30</sup> Doing it right is another instrument in making Nigeria to live as a sovereign state in the committee of nations.

<sup>29</sup> Tunde Babawale, *Culture, Politics and Sustainable Development: Lessons for Nigeria* (Lagos: Centre for Black and African Arts and Civilisation, 2007) 18-19; Ogunbameru, *Sociological Theory*, 38-39.

<sup>30</sup> Babawale, *Culture, Politics and Sustainable Development: Lessons for Nigeria*, 18-19; Ogunbameru, *Sociological Theory*, 39.

Government is all about people, when a Nigerian is in a leadership position he/she should strive to do it right. Learn the art of good leadership and lead right and through this there would be positive outcomes for the overall benefits of Nigerians. Adding to the above the optimists believe that it is a prepared leader that can do it and a transformational leadership is what Nigeria needs, this has been the thought since 1980 to 2015. The optimists are of the opinion that Nigerian are creative and are self-made because of their level of creativity and innovations. With this creativity Nigerians can achieve more in order for Nigeria to exist and perform maximally. Therefore, Nigerian should keep at being creative always as she forges ahead with rays of hope.<sup>31</sup>

### **Conclusion**

This paper has revealed two major sects of Nigerians based on the political thoughts of pessimism and optimism. In other words, those who are negative and disintegrative and those who are positive and integrative as a balanced description of Nigerian State in the period under review. The discourse on the pessimists and optimists thinking in Nigerian's space has revealed the two sides of a coin which cannot be separated from each other. These two perspectives serve as a correctional and checkmating mechanism to putting Nigeria on the right footing as a corporate existence. The thoughts are good for Nigerian system to survive. Those with the thought that Nigeria is done for and those who see Nigeria coming strong are both striving directly or indirectly for a better and strong Nigeria. The study has observed that when the maladies are well taken care of the pessimists will become optimist automatically because the system will be inclusive and everyone will be integrated pragmatically into a Nigeria with nationhood although diversified with cultures and orientations.

**Abstract**

This paper attempts to interrogate the spectacle of the *'First'* grand breaking individuals and the routes engaged by them in the Baptist Medical Mission's activities in Ogbomoso in the period under review. It explores the relationship between the institution (Baptist Medical Centre, Ogbomoso (BMCO)) as the first and selected individuals who were *'First'* in their delivery of services in BMCO. This interrogation adopts both primary and secondary sources of data which is contextualised within the framework of medical evangelism in Yorubaland. This research embraces a case study approach to achieving its purposes in one of the Baptist Mission's medical facilities in the southwestern state of Nigeria. This facility under study was established on 18th March, 1907 as the first Baptist Medical Mission facility in Yorubaland through the instrumentality of the Southern Baptist Convention's medical missionaries. Other medical facilities of the Baptist Mission in Yorubaland are located in Oyo, Ibadan, Iwo, Saki, Okeho, Okaka, Gbaabe, Ilero, Okuta, Iree, Ile-Oluji, Ejigbo and Igede-Ekiti, among others. This study gives prominence to BMCO and selected individuals in the period under review.

**Keywords:** First, Ogbomoso, Phenomena, Medical Mission and Baptist Medical Centre.

## **Introduction**

This study attempts to explore the trajectory of human condition and knowledge in the Baptist Medical Centre Ogbomoso by reviewing selected individuals with the incident of the idea 'first' in their existence in the Baptist Mission's medical evangelism in Ogbomoso between 1907 and 1997.<sup>32</sup> Hence, four selected individuals who possessed both material and spiritual human condition and knowledge are examined in this paper using *phenomena*: appearance as they were and *noumena*; things in themselves (self-consciousness). The human situation and information about them is not devoid of God (religion) consequently, man and religion walk together in existence.<sup>33</sup> In addition, human experience is the ultimate source and justification of all forms knowledge. This implies that, every man is different from another due to the way he thinks and behaves in his environment based on time and space factors.<sup>34</sup> Therefore, these selected individuals are cultures on their own though of different backgrounds and orientations but with a common being, human condition and knowledge of 'first' in their distinct cultures in the activities of the Baptist Medical Centre Ogbomoso (BMCO) between 1907 and 1997.<sup>35</sup> Human existence is germane to historical reconstruction of any kind be it political, social, economic and medical, among others. In the light of human existence in a space which is time bound with historical evidences, this research attempt considering the existence of selected individuals who have showcased themselves as 'first' in the history of Baptist Medical Centre Ogbomoso (BMCO) between 1907 and 1997.<sup>36</sup>

This study explores these significant individuals within the medical mission of the Baptists exposing their biographical experiences and contributions to humanity as a form of knowledge which is buried in human memories. The study employed both primary and secondary sources of data. The primary source included oral interviews with purposively selected informants and archival materials like Baptist papers, memoirs and diaries, annual reports, magazines and other relevant records collected from Baptist repositories in Ogbomoso. The four selected individuals in Baptist Medical Centre Ogbomoso in this study are: George Green, Ruth May Kersey, Adeoye Adeniyi and Peter Olusola Elemile. This selection is based on the fact that these individuals were Baptist Mission's medical missionaries who were first in their respective culture and played significant roles in the growth and development of the Baptist medical facilities in Ogbomoso between 1907 and 1997. The secondary source included books, journal articles and the Internet. The collected data were analysed from a historical perspective. The results showed in the study that there were historical consciousness and suggestions in the Baptist Medical Centre Ogbomoso between 1907 and 1997. The study concluded that the colonial and postcolonial experiences and memories of these selected individuals cannot be underemphasised in the routes to human condition and knowledge in the Baptist Mission's enterprise in Ogbomoso.

### **Conceptual Clarifications**

#### **First**

The concept the '*First*' in this article is a form of human condition and knowledge which is termed *phenomena*; things as they appeared in human space. In other words, it is a common set of circumstantial appearance of man as a historical existence in space-time.<sup>37</sup> Hence, the appearance of the idea '*First*' at different times in the history of man most especially in the history of the Baptist Medical Centre Ogbomoso (BMCO) was a systematic reality in existence as it explains these dimensions viz.: Horizontal Auto-Transcendence<sup>38</sup> and Vertical Auto-Transcendence.<sup>39</sup> This human condition and knowledge is applied in this research as a result of the appearance of significant individuals in history with distinct and unique impact on humanity in the medical space. Therefore, *first* as a condition and knowledge is the coming before all

<sup>37</sup> J.V.L. Casserly, 'Some Contemporary Beliefs' I. Levine (ed.), *Philosophy: Man's Search for Reality* (London: Odhams Press, 1955), 181, 217; Bali, *Introduction to Philosophy*, 224-226; T.Z. Lavine, *From Socrates to Sartre: The Philosophic Quest* (Bantam Books, 1984), 330-333.

<sup>38</sup>Egocentric and Philanthropic Auto-Transcendence

<sup>39</sup>Theocentric Auto-Transcendence

others in time or order; earliest.<sup>40</sup> It also means preceding all others in time, order, importance or series; before any other.<sup>41</sup> The 'first'<sup>42</sup> in this research draws readers' attention to a unique circumstantial knowledge in history as an occurrence that is a thrust to many succeeding events in the perspective of the unique individuals as *phenomena* and *noumena* in space.<sup>43</sup> The concept 'first' in this research is also looked at based on the postulation of Aristotle as statements of understanding, accepted saying, definition and assumption of significant individuals. On this justification of the 'first' as human condition and knowledge; statement of understanding, accepted saying, definition and assumption is the Baptist Medical Centre Ogbomoso (BMCO) examined. By implication, the 'first' have carved a niche which was '*formally accepted human condition and assumption*' about the being of appearance and consciousness in the activities of the Baptist Medical facility in Ogbomoso in the period under review.<sup>44</sup>

### **Baptist Medical Centre Ogbomoso (BMCO)**

Baptist Medical Centre Ogbomoso is an idea explaining the contributions of the nationals to growth and development of medical mission in Ogbomoso. It is also an expansion in services delivery and the amalgamation of three (3) initial independent medical institutions in Ogbomoso viz.: Baptist Hospital Ogbomoso (1907), Kersey Children Home (1926) and Leprosy Camp (Health Service) (1930s) which were coordinated differently until the introduction BMCO as a coordinating entity of the Baptist Mission's medical facilities in Ogbomoso in 1980s.<sup>45</sup> However, the idea of the Baptist Medical Centre Ogbomoso has since expanded by incorporating other facilities viz.: School of Nursing, Educational services and financial institution, among others.<sup>46</sup>

**Phenomena of the ‘First’ in the Baptist Medical Centre Ogbomoso, 1907-1997**

The selected four individuals in this study possess human condition and knowledge of appearances, memories and experiences which birth arts and reasoning in the Baptist Mission’s enterprise in Ogbomoso between 1907 and 1997. Hence, appearances, memories and experiences are the universal judgment for human relational activities to space, time and action as it was engaged and interrogated in the Baptist Medical Centre Ogbomoso in the 20th-century.<sup>47</sup>

**George Green: The First Baptist Medical Missionary and Medical Superintendent,  
1907-1944**

It is worthy to note that George Green was born in London on the 26th July, 1872 by George Green and Charlotte Steadman Green. He encounter Christ at the age of 12 at a revival meeting held on the 4th November, 1884 when he became born again. This corroborates the statement of Socrates that one must aspire to know oneself. According to Socrates he who knows himself knows his Lord. This attitude led George Green to be baptised into full membership of the Upton Baptist Chapel in 1885 at age 13. In addition, he was inflicted with influenza in 1895 which made him to be admitted in the Montreal General Hospital. He was cared and treated by the Reeds, member of Upton Baptist Chapel and got recuperated in the home of another church family member. This compassionate care he received from these kind people planted the seed of medical mission which got germinated when he was enrolled into the world of medical missions as a Medical Doctor. This medical mission assignment made him in 1906 to complete his 18 months non-remunerative internship training at St. Vincent de Paul’s Hospital, Norfolk.<sup>48</sup> He was ordained into the gospel ministry of Christ on the 26th November, 1906. He and his wife, Lydia were married at Park Avenue Baptist Church, Norfolk, on the 9th January, 1907. This newly wedded couple went directly from the church to the wharf to board the steamer from Norfolk to Richmond. They left Richmond for New York on the 17th January, 1907. Finally departed for Lagos on the steamship Carmania via Liverpool, England, on the 19th January,

1907. They arrived in Lagos on the 4th March, 1907 and finally in Ogbomoso on 18th March, 1907.<sup>49</sup>

Consequently, his rebirth and spiritual encounter and the medical training further led to unprecedented action of his movement to Africa, West Africa, Nigeria and Ogbomoso respectively. The Foreign Mission Board (FMB) of the Southern Baptist Convention (SBC) appointed him, the first medical missionary and superintendent to Africa and by extension Ogbomoso. His arrival in Ogbomoso made him to encounter his first patient, a little girl (Aina) who spurred the chain reactions that led to creation and establishment of the Baptist Hospital Ogbomoso 1907 and Baptist Medical Centre Ogbomoso years after. Aina was about four years old, when the Greens arrived in Ogbomoso. She had severe burns and burns contractures that had caused significant deformity to one of her legs. The fame of George Green and his new hospital in Ogbomoso soon spread far and wide in the existence of Baptist Medical Centre Ogbomoso (BMCO) in the 20th century. The Baptist Hospital Ogbomoso grew in leaps and bounds and George Green, the first Southern Baptist Convention (SBC) medical missionary to Nigeria, reported to the Foreign Mission Board (FMB) that, 'Our work in Ogbomoso has been three-fold in character; Evangelistic, Educational, and Medical.' In other words, it included the work of the Churches, Schools and Dispensaries.<sup>50</sup> The people he worked with as the first medical missionary and superintendent in the Baptist Mission's medical facility in Ogbomoso included Lydia William Green, Basil Lee Lockett, Mary Ellen Caver, Mary Reeks McCormick,<sup>51</sup> Ruth Mary McCormick, S.G. Pinnock, John Ajao Dare<sup>52</sup>, Peter Ogunranti

### **Ruth May Kersey: First Missionary Nurse and Pediatric Nurse, 1920-1955**

Ruth May Kersey experiences started in 1889 with Mr. Phillip W. Kersey and Mrs. Emma Cornelia Kersey in Virginia, who warmly received her on the said date above. The existence of Ruth May Kersey in 1889 made her to acquire education from these institutions namely Public school in Hanover County, 1896-1907; Richmond High School, 1907-1908 and Hanover College Richmond where she studied English and History, 1913-1914. Hence, at the age of 25, she enrolled into the Southern Baptist Women Missionary's Union Training School in Louisville, Kentucky in 1914 and graduated in 1916 with a Bachelor in Missionary Training Degree. Kersey enrolled for nurse training at Retreat for the Sick in Richmond near her home in 1917 and graduated in 1920 with a Nursing degree.<sup>62</sup> She read several books to prepare her for mission work such as *The Romance of Nigeria*, *The Light of the World*, *An African Trail*, and *The Cure of Africa*. In addition to the above facts about her she studied Comparative Religion and Missions under Dr Carver.<sup>63</sup> The chain of educational reactions was a reflection of her appearance, memory and experience as she searched for the real Kersey in existence in the 20th-century. Ruth May Kersey was appointed a missionary on the 10th June, 1920. At the

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

**April 09-16, 2024 / Lisbon, Portugal**

age of 31, as a single woman, she sailed for Africa on the 28th December, 1920. When she arrived Nigeria, she was sent to work with Dr George Green at the Baptist Hospital, Ogbomoso. She worked with him for 6 years at Ogbomoso. Before she had the encounter that further shaped her life's work in Ogbomoso in 1926. Mrs Green was quoted in an article published by the Women's Missionary Union (WMU):

'Ruth had lived in our home when she first came to Nigeria and I could almost tell what she was thinking as she looked at the little black baby whose mother had died and at the father with such pleading in his eyes. Somehow he had managed to keep the baby alive for nearly two weeks and the loving heart of the missionary was touched. She told the father to leave the baby and she would do what she could. The Africans knew nothing about artificial feeding and she knew the baby would die and she reached out her arms for the child....'<sup>64</sup> The statement above from Mrs Green summarised the contribution and the creation of a single lady in search for authentic life as a being there in the Baptist Medical Centre Ogbomoso. It was her appearance, memory and experience in the above statement that shaped and turned her history around for good in Ogbomoso. The experience birth Kersey's Home where children who needed help were helped and supported. Emma was the product of Kersey's appearance, memory and experience in her search for knowledge's creation in history. Kersey's existence in the Baptist Medical Centre Ogbomoso (BMCO) started in 1920 by working with George Green as the principal officer at that time until she came up with her dream child Kersey Home in 1926. She served in Nigeria for 35 years before retiring at age 66. She worked in the Baptist Hospital, Ogbomoso before establishing the Kersey Home for the motherless children in 1926.<sup>65</sup> She served as paediatric advisor to the Baptist Hospital, Ogbomoso and held clinics on proper feeding for mothers in the community from 1920-1958.<sup>66</sup>The people she worked with as the first missionary nurse in the Baptist Medical Centre Ogbomoso were Lydia William Green, Basil Lee Lockett, Mary Ellen Caver, Mary Reeks McCormick,<sup>67</sup> Ruth Mary McCormick, S.G. Pinnock, John

### **Adeoye Adeniyi, First Indigenous Medical Doctor, 1963-1966**

Adeoye Adeniyi (Nigerian National Postgraduate Medical College Prof. Emeritus) was born on 26th January, 1924 into the family of Pastor David Osayingbemi. Adeniyi and Mary Stefanu Fayomi at Ogga in West Yagba Local Government of Kwara State. His birth led him into marrying Florence Adedayo nee Adegbite in 1955. The marriage was blessed with four (4) children namely Dr Adedapo Adeniyi, Mrs Aderonke A. Ajibola nee Adeniyi, Mr Oyedotun O. Adeniyi and Dr Mrs Adebola O. Adetunmbi nee Adeniyi.<sup>74</sup> Hence, Adeniyi went through appearance, memory and experience by acquiring education from these institutions: Sudan Interior Mission (SIM) School, Egbe and Holy Trinity Church School, Lokoja for his Primary Education, 1934-1940. For his Secondary Education, he went to Baptist Boys' High School (BBHS), Abeokuta, 1943-1947 with certificate in Cambridge School. He had his University study at the University College Ibadan, for his Pre-Clinical training, 1952-1956 and for Clinical training at Guy's Hospital Medical School and West London Hospital, Hammersmith in United Kingdom, 1956-1960 with Bachelor of Medicine and Surgery (MBBS). He was a graduate member of the Royal College of Surgeons (MRCS) and Licentiate of the Royal College of Physicians (MLRCP). He did his House Job in England and returned to Nigeria in 1961. He furthered his study at the University College Hospital (UCH), Ibadan in Paediatrics, Obstetrics and Gynecology as a preparatory stage for him to be appointed into the Baptist Hospital, Ogbomoso in 1963. <sup>75</sup>Before his engagement with the Baptist Hospital Ogbomoso, he had

worked as Agricultural Officer at Samaru, Zaria, 1948, Laboratory Technologist, General Hospital, Lagos, 1949 and Leprosy Settlement/Services at Uzuakoli and Umuahia, Eastern Nigeria, 1949-1951. The aforementioned were not directly related to medicine, his career as Medical Doctor started with the Baptist Hospital, Ogbomoso January, 1963 and withdrew his service for further study in September, 1966.<sup>76</sup> The reason for his withdrawal of service was because of the commonwealth award he got in 1966 to study Paediatrics at the Post-Graduate level in the United Kingdom. This opportunity drew him into the Post-Graduate research studies at Sheffield University and the Institute of Child Health, Great Ormond Street, London. He received the Doctor of Medicine (MD) of University of London, 1972. He became research fellow, University of London and University of Ibadan, 1967-1972. By 1976, he rose to the rank of an Associate Professor at University of Ibadan and was appointed Professor of Paediatrics and Child Health in December, 1977 at the University of Ilorin and assumed the post in January, 1978.<sup>77</sup>

The people he worked with as the first indigenous medical doctor in the Baptist Mission's healthcare services included Loy Connell Smith, T. Keith Edward, Martha Gilliland, Karl Myers, Daisy Jester, Georgia Alice Miller,<sup>78</sup> Grace Atinuke Odebode, Ruth Tinuola Oke and Hazel Moor among others.<sup>79</sup>

#### **Peter O. Elemile, First Indigenous Medical Superintendent, 1974-1997**

Peter O. Elemile was born on 20th July, 1949 into the Iworoko of family in Owo, Ondo State. His parents who warmly received him when he was born were Peter Olasegbe and Janet Amope Elemile of blessed memory. He belonged to the family of five (5). He got born again in 1970. This rebirth of his in the consciousness of knowing himself and his Lord as found in the Socrates' statement formed his passion for medical mission which became reality in 1974 at first appearance and 1983 at the second appearance.<sup>80</sup> He got married to Olubunmi Ololade<sup>81</sup>

in 1976.<sup>82</sup> Peter Elemile was privileged to benefit from the free education programme of the Old Western Region in the early days of his life's existence at the Elekuro Baptist Primary School, Ibadan, 1956-1960. For his Secondary School programme he went to Methodist High School, Igbogila in the Yewa Region of the Old Western Region in present Ogun State between 1961 and 1964. He further his education by attending Anglican Mission school named Christ's School, Ado-Ekiti for his HSC between 1965 and 1967. He proceeded for his University education at the Premier University of Ibadan, 1968-1973. Between 1978 and 1983 he did his Post-Graduate courses in the United Kingdom.<sup>83</sup> He started work at the Baptist Hospital, Ogbomoso as House Officer in 1974 thereafter he proceeded for his NYSC between 1975 and 1976. He worked at Ile Abiye Hospital in Ondo State between 1976 and 1978. He left for the United Kingdom in 1978 and returned in 1983 and continued his career in the Baptist Mission's medical service at the Baptist Hospital, Ogbomoso till 1997 when he retired from active service. He was the first indigenous medical superintendent in the Baptist Medical Centre between 1984 and 1997.<sup>84</sup> The people he worked with medical superintendent in the Baptist Medical Centre Ogbomoso included Jack Eldon Tolar, Bill Norman, Martha Jordan Gililand, William Carter Garventer, William Jackson Williams, Howard Douglas Mcamey, Margret Richardson, Daniel Adedosu Gbadero, Grace A. Odebode, J.O. Ojebode, David Asaju, Grace Koleosho, Robert Koleosho,<sup>85</sup> Samuel Oyedele, S.O. Olaoti, Adekola Alade and David O. Akande among others.<sup>86</sup>

### **Contributions and the Creations of selected 'First' in the Baptist Medical Centre Ogbomoso, 1907-1997**

One of selected firsts by name George Green contributed and created the household name as the pioneer Baptist medical missionary to Africa and by extension Ogbomoso and the first medical superintendent. George Green was a medical doctor of the Foreign Mission Board (FMB) of the Southern Baptist Convention (SBC) to Ogbomoso. This opportunity given to him by the SBC helped him in a way to create his being, consequently historicising himself as the

pioneer medical missionary and superintendent to of the Baptist Hospital Ogbomoso through the evidence of the establishment of the hospital in Ogbomso in 1907. This experience had outlived him in the whole world especially in Africa and Ogbomoso to be precise he was seen as the first embodiment of medical mission in Nigeria.<sup>87</sup> Another contribution and creation by George Green was that he was declared the father of the Baptist Medical Ministry in Nigeria which picked its root from the activities at Baptist Hospital Ogbomoso. This was because every other activity picked its activities from him as far Nigeria and Baptist medical evangelism was concerned in Africa.<sup>88</sup>In addition, Ruth May Kersey contributed and created the Kersey Children's Home (KCH) through the help of the Foreign Mission Board of the Southern Baptist Convention, USA, in 1926. Hence, the historical fact about the establishment of the Kersey Home was rather dramatic. Motherless Children Home, Ogbomoso was founded 1926 by a missionary nurse Ruth May Kersey, six years after her commissioning to Ogbomoso.<sup>89</sup> It began in 1926 following the admission of the first motherless child, a girl (Emma), into the Baptist Hospital, Ogbomoso. The father had arrived at the facility carrying a set of twins who had been born in a distant village, the mother of the babies had died soon after delivery of the twins. The father carried the two babies to the hospital in a calabash tray. One of the twins died soon after their arrival at the hospital. With adequate healthcare and treatment given to the set of twins, one of them, a girl survived the crisis. The prominent nurse who played the role in caring for the twins was Ruth May Kersey. Thereafter, many more motherless children were brought to the hospital. The primary responsibility of caring for these children fell squarely on the shoulder of Ruth May Kersey.<sup>90</sup> Motherless and malnourished babies' care programmes through the use of artificial milk got from plant (Soya) have been in continuum since the founding of it in 1926.<sup>91</sup> KCH building was constructed next to the Baptist Hospital, Ogbomoso and it housed

April 09-16, 2024 / Lisbon, Portugal

about 45 infants and small 24 children at a time between 1926 and 1950s.<sup>92</sup> Thereafter, Kersey Children Home, also known as *Bebi*, today in 1965 built and dedicated a facility for its use on about six acres of land on the way to Ikoyi at Kinira area, Ogbomoso.<sup>93</sup> Peter Olusola Elemile's contribution and creation was in the area of the marriage among the initial different entities of Baptist Hospital, Kersey Children Home and Leprosy Camp that later became Baptist Medical Centre Ogbomoso in 1980s. In other words, he merged all the components facilities of the Baptist Mission's medical services in Ogbomoso into one for easy administration in 1980s when he was the Medical Superintendent. This was further consolidated to be managed by single Board of Trustees as against three board committees as it was presented by Adeniyi Adeoye in a report to the Nigerian Baptist Convention (NBC) during Convention-in-session in the 1960s.<sup>94</sup>

Another contribution and creation was in the achieving of quality service these individuals applied the Principle of Non-Maleficence which implies 'Do no harm.' It also means that they will willingly refrain from doing any injury or wrong.' All these selected people refrained from doing harm to anybody who came their way for treatment or healthcare services.<sup>95</sup> Health challenges recorded in Ogbomoso viz: Influenza pandemic of 1918, 1957 and 1968, recurrent Yellow Fever, Cholera 1971 and 1979, Measles, Meningitis and Smallpox among others revealed the creation by selected individuals to see to it that the people prosper both in health and in mind.<sup>96</sup> Corroborating the above it was noted that George Green treated over 5,000 patients during his stay in Ogbomoso, record has it that, in his first year he treated over 2,000 patients in Ogbomoso<sup>97</sup> More so, he initiated the construction of water well system in Ogbomoso in 1907, when he discovered the town had no good water system to enhance the health of the people. This became a strong contribution towards the health of the people since

1907 to 1997.<sup>98</sup> Many people were healed of their diseases due to the health facility introduced by the Greens in 1907. By 1923 thousands upon thousands had benefitted from the facility and it was one of the contributions and creation of the Greens to healthcare system in Ogbomoso. Also, quality service came to light by sourcing for fund to build a big hospital that could accommodate increasing patients in the Baptist Hospital, Ogbomoso. The sum of Seven Thousand pounds was raised for that purpose in 1910, by 1917, Three Thousand five hundred dollars was raised for expansion of the health facility. By 1919, Seventy Five Thousand dollars was raised for the same purpose. By 1923, the facility was set for commissioning and the dream of the Greens came through.<sup>99</sup> He left indelible footprint in the three continents; Europe his place of birth continent, America his adopted continent and Africa his home continent.<sup>100</sup> George was part of the medical committee of the Christian Council of Nigeria (CCN) which advised the colonial government periodically on medical programmes and policies that guided the transformation of the people's health.<sup>101</sup> He trained nurses to help reduced the burden of the work on him at least till when Ruth May Kersey emerged in 1920s.<sup>102</sup> Elemile initiated and started Midwifery services at the centre and made part of the school of nursing course of study to include Midwifery for good enhancement of the beauty of the centre in 1993.<sup>103</sup> Also, improvement on the take home package of the staff was another contribution and creation by Elemile. Nationals who were indigenous staff were not included in the payroll by the FMB and this arrangement was not too good for sustainability of the integrity of the centre as upheld by the missionaries due to quality staff. To achieve this, Elemile had to increase the pay of the staff a little to measure up with what was obtained with other medical facilities in town.<sup>104</sup> To sustain this welfare package, Randa Community Bank in 1995 was initiated by Elemile, now Randalpha Microfinance Bank to generate Pension Fund. Trading company was established in 1995, it was named GORAH.<sup>105</sup> It was to generate income for the centre for smooth running of

the healthcare services of the Baptist Medical Centre Ogbomoso and the management of the welfare of the medical and para-medical staff at the centre.<sup>106</sup> Medical Mission was one of the strategies imbibed by Baptist missionaries in reaching Nigerians for Christ most especially Ogbomoso people. This in a way was a contribution and creation that Nigerian would access salvation in Christ through the instrumentality of Baptist Medical Centre Ogbomoso (BMCO). George Green pursued this creativity vigorously and vehemently.<sup>107</sup> In his report to Foreign Mission Board (FMB), he stated, ‘our work in Ogbomoso had been of three fold in character (Evangelistic, Educational and Medicals).’ It was the medicals, he gave his life to between 1907 and 1944.<sup>108</sup> His proficiency in medicine and surgery created and enhanced the value of his services and multiply his usefulness as a soul winner in Africa. This explained the power of his skill as a factor for a creating being. Also, Kersey had considered foreign mission work every import ever since she was a small child and felt that it was a life work. As she wrote in one of her notes, Christ said, ‘Go into the world and preach the gospel to every creature...I believe that was meant for me.’ Jesus also said, ‘Heal the Sick’ When asked if she preferred a special field, she wrote, Africa...I have always felt that it is the least desirable from a personal viewpoint. She also noted that she would desire medical missionary service and wrote again of her three (3) years of nurse’s training at the Retreat for the Sick.<sup>109</sup> More so, Adeoye corroborated the above statement concerning creating Christian community that, health ministry was a call to serve Jesus Christ who went about doing good and part of his good deeds was this healing of a thing and resolved to do good to humanity and most especially Ogbomoso people. This statement corroborated Adeniyi’s contribution to as the first Nigerian medical doctor at the Baptist Hospital, Ogbomoso between 1963 and 1966. He served only for short time but labored ‘creditably, maintaining the high standard of work, diligence and honesty which the missionary doctors have consistently maintained.’<sup>110</sup> Finally, they all contributed and created a historic human relationship within the medical and community space which cannot be under emphasised in this discourse. This level of human relation out lived them in the Baptist

Mission's medical space in the 20th and 21st century Ogbomoso's space. It was this contribution that has sustained the longevity of the facility since 1907 and 1997 which covers the scope of this study. The contribution made it real to his that the Baptist Medical Centre and the four selected individuals appeared in space-time, had memories and initiated experiences in Baptist Medical Centre Ogbomoso between 1907 and 1997.<sup>111</sup>

### **Conclusion**

This study has explored the thesis that human experience is the ultimate knowledge through engaging of the Baptist Medical Centre Ogbomoso and four (4) selected individuals who had made landmark impacts on the facility and the host community in the period under review. In achieving the goal of this study the phenomena of the 'First' and their contributions and creations were highlighted and discussed in line with the scope of this study between 1907 and 1997. This revealed the human condition and knowledge which spread across selected individuals medical missionaries with appearances, memories and experiences of a balanced study of foreign and indigenous missionaries of the Baptist Mission in Nigeria.

**Özet**

Son yıllarda Türkiye’de göç konusu önemli konuların biri sayılmaktadır. Çünkü Türkiye transit göçün değişmeyen coğrafyası olmayı sürdürmeye devam etmekte. Ancak 2011 yılından bu yana eksilmeyen hatta artan mülteci sayısı bize geçici göçmenlerin zamanla kalıcı göçmenler haline geldiğini gösteriyor. TUIK’in son verilerine göre gelen göçmenlerin büyük kısmını çocuk ve gençler oluşturuyor. Bu nedenle Türkiye ilk başta göçmen eğitim politikasını da ilk sıraya koymalıdır. Çünkü gelen göçmenlerin entegrasyon olabilmeleri için göçmenlere uygun hem eğitim planı şart. Bu sebeple çalışmamızda göçmen eğitim politikasına değindik ve örnek olarak Afgan göçmenleri aldık. Çünkü son on yıldır Türkiye’de Suriyeli göçmenler fazla ilgi gösterilmesiyle azınlık olarak algılanan ancak son iki yılda gelen Afgan göçmenleri sayı olarak Suriyelileri geçmiş durumda. Bu çalışmada Afganistan’ının göç sorununu ve Türkiye’de Afgan göçmenlere karşı uygulanan göçmen eğitim politikasını ele aldık.

**MIGRATION POLICIES IN EDUCATION, IMMIGRANT, ASYLUM SEEKER AND  
REFUGEE PROBLEMS: THE CASE OF AFGHAN IMMIGRANTS**

**Abstract**

In recent years, the issue of migration has been considered one of the important issues in Turkey. Because Turkey continues to be the unchanging geography of transit migration. However, the number of refugees, which has not decreased or even increased since 2011, shows us that temporary migrants have become permanent migrants over time. According to the latest data of TUIK, most of the incoming migrants are children and young people. For this reason, Turkey should also put its migrant education policy first. Because for incoming immigrants to be integrated, an education plan suitable for immigrants is necessary. For this reason, we touched upon the immigrant education policy in our study and took Afghan immigrants as an example. Because Syrian immigrants have been perceived as a minority in Turkey for the last ten years with a lot of attention, but Afghan immigrants who have arrived in the last two years have surpassed Syrians in number. In this study, we discussed the migration problem of Afghanistan and the immigrant education policy applied against Afghan immigrants in Turkey.

### **Göç Kavramı**

Göç teriminin kavramına literatürde birçok tanım bulunmaktadır. Onların biri Durugönül'e (Durugönül,1997) göre yaşanan coğrafi ve sosyal-kültürel çevreden ayrılıp başka coğrafi ve sosyal-kültürel çevreye yerleşmesidir. Burada yerleşmek kalıcı süreklilik anlamını taşımaktadır. Göç, çok boyutlu bir olaydır. Yasal, eğitsel, kültürel ve psikolojik sorunları da beraberinde getirir (Tezcan, 2000). Göç, Türk Dil Kurumuna göre; “ekonomik, toplumsal, siyasi sebeplerle bireylerin veya toplulukların bir ülkeden başka bir ülkeye, bir yerleşim yerinden başka bir yerleşim yerine gitme işi, taşınma, hicret, muhaceret” olarak tanımlanmıştır. (Erişim, TDK 2020, <https://sozluk.gov.tr>). Göç kavramının kökeni ise 19. yüzyılına dayanmaktadır ve günümüzde literatüre geçen göç tanımları Avrupa'dan Amerika'ya doğru gerçekleşen göç sürecini tanımlama ve analiz etme sonucunda ortaya çıkmıştır (Öner vd., 2012).

### **Göç Türleri**

Birçok çalışmada göç ile ilgili farklı sınıflandırmalar bulunmaktadır. Örneğin William Peterson, gücü 5 başlığa ayırırken, Fichter ise göç türlerini sadece ikiye ayırmıştır.

William Peterson'a göre:

Göç				
İlkel göç	Kontrollü göç	Serbest göç	Zorunlu göç	Yönetilmiş göç

Fichter'e göre:

Göç	
Zorunlu Göçler	Gönüllü Göçler

Bunların dışında iç göç, dış göç, beyin göçü, işçi göçü, kitlesel göç ve doğal afetler nedeniyle oluşan geçici göç gibi olayların çeşitliğine göre göç türleri farklılık gösterebilir.

### **İç Göçler**

Ülke sınırlarında gerçekleşen göçlere iç göç denilmektedir (Sağlam, 2006) ve kendi içinde de farklılık göstermektedir. Onlar, kırdan kente, kentten kıra, kırdan kıra, kentten kente olarak bilinmektedir. Türkiye'de iç göç, hızla gelişen sanayileşme süreciyle birlikte daha kırdan kentte olarak seyredilmektedir. Buna Türkiye'nin birçok boşaltılmış yani nüfusu tamamen göç etmiş köyler örnek olabilir. Ancak son zamanda büyük ilgi gören organik yaşam akımı nedeniyle birçok insan büyük şehirler yerine köyleri, kırları tercih etmeyi başlaması boş kalmış köyler

için tekrardan yaşam katmaktadır. Bir diğer etken olarak da ulusal ve küresel ekonomik krizler nedeniyle son yıllarda büyük şehirlerde seyredilen barınma sorunları kentlerden kırsala ya da İstanbul, Ankara, İzmir ve Antalya gibi şehirlerden başka şehirlere iç göç gözlemlenmektedir.

### **Dış Göçler**

Bireylerin/toplumların sürekli ikamet ettiği ülkeden siyasi, dini, ekonomik ya da savaş, iç çatışma gibi nedenler ile ayrılarak kalıcı/ geçici süreyle yeni bir ikamet oluşturmak amacıyla gerçekleştirdikleri göç faaliyetlerine dış göç denmektedir (Günay vd., 2017). Bir ülkenin gelişmesinde nitelikli insan gücü önemlidir. Ülkelerin gelişme sürecinde çeşitli alanlarda uzmanlaşmış bireylere ihtiyaç duyulmaktadır, bu alanlarının uzmanı olan nitelikli insanların göç ülkeleri için büyük bir kayıptır (Başaran, 1972). Türkiye dış göç olarak sadece göç alan değil göç veren ülkelere de biridir ve aynı zamanda geçici olarak Türkiye'ye yerleşen ve daha sonra başka ülkeye göç eden göçmen sayısı da çoktur. Bu açıdan göçmenler için Türkiye transit ülke olarak görülmektedir.

### **Zorunlu Göç**

Zorunlu göç kavramının karşılığını birçok araştırmacı ele almıştır ve genel olarak zorunlu göç dediğimizde nedeni ne olursa olsun insanların isteği olmadan bir yerden ikinci yere taşınmasıdır diyebiliriz. Bu nedenlerin çeşitlerine göre de zorunlu göçü sınıflandırabiliriz. Doğal afetler, beklenmedik savaşlar, terör, eğitim, sosyal entegrasyon, sağlık, iç siyaset gibi nedenler zorunlu göçün en büyük nedenidir. Bunlara itici ve zorlayıcı nedenler diyebiliriz. Türkiye'de kendi sınırlarında olsun ya da sınır dışından olsun bu tür göçlere fazla maruz kalmıştır. Özellikle 2000'li yıllardan itibaren zaman zaman işsizlik, yoksulluk, terör, doğal afetler nedeniyle zorunlu iç göçler yaşanmaktadır. Örneğin 6 Şubat 2023'te Kahramanmaraş merkezli Türkiye'nin Hatay, Gaziantep, Malatya, Diyarbakır, Kilis, Şanlıurfa, Adıyaman, Osmaniye, Adana ve Elâzığ bölgesinde Türkiye Cumhuriyeti'nin en büyük depremi yaşanmıştır. Açıklanmış resmi rakamlara göre 50 783 kişi hayatını kaybederken 115 353 kişi yaralanmıştır. Belirtilen bölgelerde olağanüstü hâl ilan edilerek yaklaşık 2,8 milyon insan zorunlu göç etmiştir. Deprem bölgesinin büyüklüğü nedeniyle yaklaşık 13 milyon insan etkilendiği belirtilmektedir. Zorunlu bir şekilde deprem bölgelerinden geçici ve kalıcı olarak Türkiye'nin güvenli bölgelerine göç yaşanmıştır. Türkiye'de deprem nedeniyle yaşanan zorunlu göçün bir kısmını geçici göç olarak değerlendirebiliriz. Çünkü deprem sonrası alınan kararlar niteliğinde deprem bölgesindeki vatandaşları güvenli bölgelere, depremden etkilenmeyen bölgelere taşıma yapıldı. Depremzedeler sadece yakınların buldukları bölgelere değil hükümetin belirlemiş oldukları illere yerleştirildi. Olağanüstü hâl ilan edilerek güvenli bölgelerdeki KYK yurtlarına

yerleştirildi. Deprem sonrası deprem bölgelerine konteynerlerin hazırlanması bittikten sonra geçici olarak KYK yurtlarında kalan vatandaşlar deprem bölgelerine geri döndü. Böylece, geçici göç yaşandı. Uluslararası boyutta ise dünya siyasi gündemler nedeniyle özellikle Suriye’de ve Irak’ta yaşanan ve yaşanmakta olan iç savaş nedeniyle zorunlu göç alan konumuna geçmiştir ve son yıllarda Afganistan’dan ve İran’dan da çok diyecek kadar göç almaya başladığını belirtebiliriz.

### **Afganistan’ın Yakın Tarih Göç Sorunu**

Afganistan’ın iç göç sorunu en çok XX yüzyılın 70 yıllarında 2 yıl süren kuraklık nedeniyle çıkmıştır. Özellikle bu dönemde köylüler zor zamanlar geçirmişlerdir, kuraklık tarlaların yanmasına ve hasattın azalmasına hatta sıfıra inmesine neden olmuştur. Hasat azalınca, ülke çapında hayvan besleme ve yetiştirme yok olmaya başlamıştır. Özellikle Kuzey-Batı Afganistan (Gerat, Badgis, Maymana, Gor) ve Kuzey-Doğu Afganistan (Badaşan) gibi bölgeleri çok zarar görerek halk arasında açlık başlamıştır. Böylece yüz binlerce köylü tarlalarını ucuz satarak büyük şehirlere göç etmiş (Слинкин М.Ф., 2001).

Uluslararası boyutta ise Birleşmiş Milletler Mülteciler Yüksek Komiserliği (UNHCR) verilerine göre Afganistan dünyadaki en büyük göç veren beş ülkeden biridir. Hatta Suriye’de iç savaş çıkmadan önce mülteci sayısı ile ilk sırada yer alıyordu. Çünkü Afganistan’daki göç sorununun temeli, özellikle uluslararası boyutta XVIII yüzyılların başlarına kadar dayanıyor. Kayıtlara göre Afganlar en çok İran’a ve Pakistan’a göç etmiştir. Nedenlerin biri coğrafi yakınlık, etnik-kültürel bağlar ve dini benzerlikler olmuştur (Abbasi-Shavaz M. J vd., 2015). En büyük dış göçlerin biri 1973 yılında gerçekleşen darbe sonrasıdır. Bu darbe sonrası ülke büyük ölçüde beyin göçü vermiştir. Onlar, üst düzey askeri rütbeliler, yüksek ve orta düzey makamlı devlet memurları. İlk gidenler (1973 yılında) Avrupa ülkelerine ve ABD’ye kaçmıştır. İkinci grup gidenler (1975-1978) ağırlıklı Pakistan’a ve İran’a göç etmiştir. Böylece, ülkede daha iç savaş çıkmadan mülteci ve göçmen sayısı yükselmiştir.

1978 yılında gerçekleşen ve Afganistan’ın tüm illerini iç savaştan sonra ise iç göç ve dış göç inanılmaz derecede artarak ülkede en büyük ulusal ve sosyal-kültürel sorun haline gelmiştir. İç göç sayısının belirlemek zor olmuştur. Çünkü 1980 ve 1990 yılları arasındaki iç göçün yönü sürekli değiştiği kayıt tutmak imkânsız kalmış. Örneğin ilk başlarda insanlar güvenlik açısından orduya yakın olmak amaçlı köylerden büyük şehirlere akın etmiştir. Ancak büyük şehirlerde farklı siyasi görüşlere sahip grupların çatışmaları göç yönünü tersine şehirlerden kırsala yönlendirmiştir. Birleşmiş Milletler Örgütünün verilerine göre 1987 yılında iç göç sayısı yaklaşık 2 milyon insandı. Özellikle başkentte göçmen sayısı çok yüksekti. Resmi verilere göre

1978 yılı başkent sınırları içinde 650 000 kişi ederken, 1979 yılında 931 418 insan, 1980 yılında 992 286, 1981 yılında 1 057 124 insan, 1982 yılında 1 126 205 insan ve seksenlerin sonlarında ise 1,5 milyon insana kadar yükselmiştir. Başkent Kabil'in nüfusu 1978 yıldan seksenlerin sonlarına kadar üçe katlanmıştır (Porahov, 1978). Daha sonrasında 1985 yılında Mücahitler bir araya gelerek Afganistan'daki Demokratik Halk Partisi'nin perçem kanadından Bebrek Kemal'ı destekleyen Sovyet askerlerine karşı ittifak kurdular. Bu tarihe geldiğinde Afgan halkının yarısı göç etmiş durumdaydı (Afganistan'ın yakın tarihi, 2009) ve doksanlarda Mücahitler Kabil'i aldıklarına sadece 200 binden fazla kişi şahit olabilmıştır. Çünkü ilk başlarda köylüler ve kırsal bölgelerde yaşayanlar başkent onlara daha güvenli yaşam sağlayacak düşüncesiyle göç etmiştir. Ancak Mücahitlerin ve diğer siyasi ve dini gruplar başkenti kanlı çatışma merkezine çevirmiştir. Böylece birçok insan ve aile çaresiz ülkeyi tamamen terk ederek komşu ülkelere gitmeyi tercih etmiştir. Özellikle Afganlar o dönemler Pakistan'a akın etmiştir. Pakistan'a göç edenlerin sayısı birden yükselince Pakistan Hükümeti tarafından Afgan göçmenleri kontrol etmek amaçlı özel ulusal komite kurulmuştur. Aynı şekilde İran'da Afgan göçmenlerin akın etmesiyle özel komiteler oluşturulmuştur. Ancak Afganların en çok tercih ettikleri ülke Pakistan olmuştur. Bunu Nisan 1978 yılından Kasım 1982 yılına kadar raporlanmış tabloya bakarak görebiliriz (Collins J.J., 1982).

1980	Kasım	1 148 470	1981	Şubat	2 800 000
1980	Aralık	1 232 253			

Tabloya bakarak Afganistan'ın iki yıl içerisindeki göç hızını ne kadar yüksek olduğunu görebiliriz. BM örgütün verilerine göre 1990 yılında Pakistan'da ve İran'da Afgan göçmenler sayısı toplam yaklaşık 6,2 milyon insana ulaşmıştır (Сижкоев Р.Р.,1999).

**Türkiye'de Mülteci Hakları**

Uluslararası düzeyde mültecilerin hakları ilk defa 1951 yılında Birleşmiş Milletler Sözleşmesinde belirtilmiştir. Sözleşmenin 1. Maddesine göre, "1 Ocak 1951'den önce meydana gelen olaylar sonucunda ve ırkı, dini, tabiiyeti, belli bir toplumsal gruba mensubiyeti veya siyasi düşünceleri yüzünden, zulme uğrayacağından haklı sebeplerle korktuğu için vatandaşı olduğu ülkenin dışında bulunan ve bu ülkenin korumasından yararlanamayan, ya da söz konusu korku nedeniyle yararlanmak istemeyen; yahut tabiiyeti yoksa ve bu tür olaylar sonucu önceden yaşadığı ikamet ülkesinin dışında bulunan, oraya dönemeyen veya söz konusu korku nedeniyle dönmek istemeyen şahıs" olarak tanımlanmıştır. Bu sözleşmenin nedeni ikinci Dünya

Savaşında dünyada sayısızca insanın mülteci konumuna düşmesi olmuştur. Türkiye’de ise ilk olarak mülteci hakları ilgili hukuki düzenlemeler, Ortadoğu’daki 1980’lerin sonlarında başlayan ve 1990’ların başlarına kadar uzanan iç savaşlar yüzünden Türkiye’ye mültecilerin akın etmeye başlaması nedeniyle başlamıştır. Böylece 1994 yılında “Türkiye’ye İltica Eden veya Başka Bir Ülkeye İltica Etmek Üzere Türkiye’den İkamet İzni Talep Eden Münferit Yabancılar ile Topluca Sığınma Amacıyla Sınırlarımıza Gelen Yabancılara ve Olabilecek Nüfus Hareketlerine Uygulanacak Usul ve Esaslar Hakkında Yönetmelik” yayınlanmıştır. Daha sonra mevcut yönetmenliğe değişiklikler getirilerek 2006 yılında “Türkiye’ye İltica Eden veya Başka Bir Ülkeye İltica Etmek Üzere Türkiye’den İkamet İzni Talep Eden Münferit Yabancılar ile Topluca Sığınma Amacıyla Sınırlarımıza Gelen Yabancılara ve Olabilecek Nüfus Hareketlerine Uygulanacak Usul ve Esaslar Hakkında Yönetmelikte Değişiklik Yapılmasına Dair Yönetmelik” olarak yeni yönetmenlik resmi gazetede yayınlanmıştır. Türkiye’de göçmen hakları en başta Türkiye Cumhuriyeti Anayasasında 10. Maddesinde belirtilmiştir: “Temel hak ve özgürlükler, yabancılar için milletlerarası hukuka uygun olarak kanunla sınırlanabilir”. Türkiye’nin göç politikasının önemli dönüm noktalarının biri 1999 yılında Avrupa Birliğine kabul edilmiş olup önündeki en önemli engel “göç” politikası olmasıdır. Bu sebeple hükümet bu konuda kapsamlı araştırmalar yürüterek göç yönetimini nasıl yönetilebilir soruna cevap alabilmek amaçlı çalışmalar yapılmıştır ve 2001 yılında Türkiye ile Avrupa Konseyi arasında imzalanan ortaklık belgesinde göç yönetimi konusunda Türkiye hedeflerini şu şekilde belirtmiştir.

1. “Yasal olmayan göçü önlemek için, göç, (kabul, tekrar kabul, sınır dışı etme) konusundaki AB Mevzuatı ve uygulamalarının benimsenmesi ve uygulanması.”
2. “Müktesebatın benimsenmesi, uygulanması ve idare edilmesi için kamu yönetiminin kapasitesinin özellikle eğitim ile yasal olmayan göç ve yasal olmayan insan ve uyuşturucu kaçakçılığını önlemek için etkin sınır kontrollerinin geliştirilmesi dahil olmak üzere, bakanlıklar arasında uygun eşgüdüm sağlanmak suretiyle, iyileştirilmesi.” Türkiye’de son on sene değişen göç akımı nedeniyle “1994 Yönetmenliği” ve diğer hukuki düzenlemeler yetersiz kaldığı için 2 Şubat 2013’te 6458 sayılı Yabancılar ve Uluslararası Koruma Kanunu (YUKK) düzenlenerek 11 Nisan 2014 yürürlüğe girmiştir. Yabancılar ve Uluslararası Koruma Kanunu’nun (YUKK) getirdiği önemli değişiklik, 1951 Mülteci Sözleşmesi ve 1994 Yönetmenliğinde yer alan “sığınmacı” kavramına son vererek “mülteci, şartlı mülteci, ikincil koruma” gibi tanımlara vererek değişiklikler getirmiştir.

**Mülteci:** Avrupa ülkelerinde meydana gelen olaylar nedeniyle; ırkı, dini, tabiiyeti, belli bir toplumsal gruba mensubiyeti veya siyasi düşüncelerinden dolayı zulme uğrayacağından haklı sebeplerle korktuğu için vatandaşı olduğu ülkenin dışında bulunan ve bu ülkenin korumasından yararlanamayan ya da söz konusu korku nedeniyle yararlanmak istemeyen yabancıya veya bu tür olaylar sonucu önceden yaşadığı ikamet ülkesinin dışında bulunan, oraya dönemeyen veya söz konusu korku nedeniyle dönmek istemeyen vatansız kişiye statü belirleme işlemleri sonrasında mülteci statüsü verilir (Yabancılar ve Uluslararası Koruma Kanunu (YUKK)-Md. 61).

**Şartlı Mülteci:** Avrupa ülkeleri dışında meydana gelen olaylar sebebiyle; ırkı, dini, tabiiyeti, belli bir toplumsal gruba mensubiyeti veya siyasi düşüncelerinden dolayı zulme uğrayacağından haklı sebeplerle korktuğu için vatandaşı olduğu ülkenin dışında bulunan ve bu ülkenin korumasından yararlanamayan, ya da söz konusu korku nedeniyle yararlanmak istemeyen yabancıya veya bu tür olaylar sonucu önceden yaşadığı ikamet ülkesinin dışında bulunan, oraya dönemeyen veya söz konusu korku nedeniyle dönmek istemeyen vatansız kişiye statü belirleme işlemleri sonrasında şartlı mülteci statüsü verilir. Üçüncü ülkeye yerleştirilinceye kadar, şartlı mültecinin Türkiye’de kalmasına izin verilir (YUKK-Md. 62)

**İkincil Koruma:** Mülteci veya şartlı mülteci olarak nitelendirilemeyen, ancak menşe ülkesine veya ikamet ülkesine geri gönderildiği takdirde;

- a) Ölüm cezasına mahkûm olacak veya ölüm cezası infaz edilecek,
- b) İşkenceye, insanlık dışı ya da onur kırıcı ceza veya muameleye maruz kalacak,
- c) Uluslararası veya ülke genelindeki silahlı çatışma durumlarında, ayırım gözetmeyen şiddet hareketleri nedeniyle şahsına yönelik ciddi tehditle karşılaşacak, olması nedeniyle menşe ülkesinin veya ikamet ülkesinin korumasından yararlanamayan veya söz konusu tehdit nedeniyle yararlanmak istemeyen yabancı ya da vatansız kişiye, statü belirleme işlemleri sonrasında ikincil koruma statüsü verilir (YUKK-Md. 63).

**Geçici Koruma:** “1-Ülkesinden ayrılmaya zorlanmış, ayrıldığı ülkeye geri dönemeyen, acil ve geçici koruma bulmak amacıyla kitlel olarak sınırlarımıza gelen veya sınırlarımızı geçen yabancılara geçici koruma sağlanabilir.” “2-Bu kişilerin Türkiye’ye kabulü, Türkiye’de kalışı, hak ve yükümlülükleri, Türkiye’den çıkışlarında yapılacak işlemler, kitlel hareketlere karşı alınacak tedbirlerle ulusal ve uluslararası kurum ve kuruluşlar arasındaki iş birliği ve koordinasyon, merkez ve taşrada görev alacak kurum ve kuruluşların görev ve yetkilerinin belirlenmesi, Bakanlar Kurulu tarafından çıkarılacak yönetmelikle düzenlenir (YUKK-Md. 62).Geçici Koruma Dair Yönetmenliğine 2016 yılında değişiklik yapılarak “20 Mart 2016

tarihinden sonra ülkemiz üzerinden düzensiz yollarla Ege adalarına geçmiş olan Suriye Arap Cumhuriyeti vatandaşlarından, ülkemize geri kabul edilenlere koruma talep etmeleri halinde bu Yönetmelik kapsamında geçici koruma sağlanabilir” fıkrası eklenmiş olup, söz konusu Yönetmelik halen yürürlükte bulunmaktadır.

### **Türkiye’de Afgan Göçmenlerin Eğitim Sorunu**

Milli Eğitim Bakanlığının 23 Eylül 2014 tarih ve 2014/21 sayılı “Yabancılara Yönelik Eğitim-Öğretim Hizmetleri” konulu genelgeyle mülteci ve sığınmacı çocuklar da dahil olmak üzere ülke sınırları içerisindeki zorunlu eğitim çağındaki tüm çocukların eğitim-öğretim hizmetlerine erişimleri ile ilgili birtakım standartlar oluşturulmuştur. Söz konusu genelgeyle ülke sınırları içerisindeki yabancı uyruklu öğrencilerin eğitim öğretim hizmetleri ile ilgili işlemlerin Bakanlık ve İl Komisyonlarınca yerine getirilmesi esasa bağlanmıştır. Aynı genelgeyle mülteci ve sığınmacıların sadece Geçici Eğitim Merkezlerinde değil, MEB’e bağlı devlet okullarında da eğitimlerine devam etmeleri sağlanırken, öncesinde kayıta istenen “ikamet izni” yerine artık “yabancı tanıtma belgesi” ile en yakın bir devlet okuluna kaydolabilmelerinin önü açılmıştır.

TUİK’in verilerine göre Afganlar Türkiye’de son 3 yılda fazla göçmen sayısı ile üçüncü sırada gelmektedir ve sayı olarak Suriyeli göçmenlerden önde gelmektedir. UNHCR’in verilerine göre Afgan göçmenlerin yaklaşık %60 gençler ve çocuklar oluşturmaktadır. Kayıtsız ikamet edenlerin sayısı da çok fazladır. Afganların en çok bulunduğu iller Adana, Konya, Erzurum, Van, İzmir ve İstanbul.

**Maddi Sorunlar:** Afgan çocukların ve gençlerin Türkiye’de eğitim almalarında en büyük sorun sosyal-ekonomik sorunlardır. Ailelerin büyük kısmı daimî gelire sahip değil. Devlet tarafından da belirli yardım ya da program belirlenmemektedir. Bu konuda İl Milli Eğitim Müdürlükler, Belediyeler ve sivil Toplum Örgütleri iş birliği içerisinde birçok program düzenleyerek yardımcı gelişme sağlamaya çalışsa da uygulamada sorunlar hala devam etmektedir.

**Dil Sorunu:** Son yapılan araştırmalara göre Afgan çocukların önemli sorunların biri dil olmaktadır. Bu nedenle çoğu göçmen çocukları Türkiye Cumhuriyeti tarafından onlara tanınan tüm devlet okullarında eğitim alma haklarını kullanamıyorlar. Türkçe bilmedikleri için devlet okullarında diğer çocuklarla entegre olmaları neredeyse imkânsız oluyor ve aynı zamanda akademik başarılarını etkilemektedir.

**Sürekli Yer Değiştirme:** Afgan çocukların diğer sorunlarının biri ailelerin sürekli yer değiştirmeleridir. Türkiye’ye gelen Afgan ailelerin en büyük sorunların biri de sabit iş bulamama. Gelen göçmenlerin büyük kısmı günlük işlerde çalışıyorlar. Bu nedenle yurt dışına kadar yol alan istihdam arayışı Türkiye’de de son bulmuyor ve Türkiye sınırları içerisinde de

göç hareketlilikleri devam ediyor. Bu nedenle Afgan çocukların kaydoldukları okullardaki eğitimleri yarım kalıyor ve sürekli okul değiştirme sonucunda çocuğun hem akademik başarısı olumsuz etkilenecek ve okuldaki diğer öğrencilerle uyum sorunu yaşanıyor.

**Düzensiz Göçmenler:** Afgan çocukların eğitimden uzak kalmalarının bir başka sorunu Afgan ailelerin Türkiye'ye kaçak yollarla gelmeleridir. Son yılların verilerine göre Türkiye sınırını kanun dışı yollarla geçenler listesinde Afganlar ilk sırada gelmektedir. UNESCO Uluslararası Göç Kürsüsü Yürütücüsü Doç. Dr. Ayselin Yıldız, Türkiye'de yakalanan göçmenlerin %40 Afgan göçmenler olduğunu belirtti ve son yıllarda ilk sırada Suriyeliler değil Afganlar olması her sene Afganistan'dan gelen göçmenlerin arttığını göstergesidir. Düzensiz gelen Afgan göçmenlerin kaçak çalışarak ilgili kurumlara kayıt yaptırmıyorlar. Çocukları ise haliyle okula kaydolamıyorlar.

### **Sonuç ve Öneriler**

Göç ve göçmenler geçmişten günümüzde kadar tüm ülkelerde önemli yere sahip olmuştur. Birçok ülkede göçmenler ülkenin siyasi ve ekonomik gelişmelerini etkileyen en büyük faktörlerin biridir. Örneğin yakın tarihe bakacak olursak, en güzel örnek olarak Sovyet Sosyalist Cumhuriyetler Birliğini (SSCB) gösterebiliriz. Çünkü 1922'de kurulan ve on beş ülkeden oluşan Sovyet Birliği, bu ülkelerin birleşmesiyle ülkeler arası göçün sayısı artacağına farkına varmıştır. Özellikle gelişmeyen ve ekonomik olarak daha zayıf kalan ülkelerden merkeze (Moskova) ve başka büyük kentlere göç akını olabileceğini öngörmüşlerdir. Olası büyük göçler sonucu farklı kültürlerin büyük çatışması da kaçınılmaz olabilirdi. Bu nedenle hükümet bu konuda kapsamlı göç politikası ve entegrasyon programı düzenlemiştir. Bu programın en büyük önem gösterilen nokta eğitim olmuştur. Yapılan düzenlemeler sonucunda on beş ülkeyi Kiril alfabesine geçirerek aynı eğitim sistemi uygulanmaya başlanmıştır. Orta Asya ülkelerinde yaşayanlar göçebe hayat sürdürdükleri için ve belirli sabit yaşam alanları olmadıkları için çocuklarına düzenli eğitim vermek çok zor olmasına rağmen hükümet çocukları kelimenin tam anlamıyla dağdan taştan toplayarak yatılı okullarda eğitim vermeye çalışmıştır. Aynı zamanda kadın erkek eşitliğini getirerek cinsiyet ayırmaksızın tüm çocuklar eğitim almaya hak kazanmıştır. Çocuğunu okula yollamak istemeyene hükümet caydırıcı hatta hapis cezası bile uygulamıştır. Böylece, 1940'lara gelince halkın nerdeyse tamamının okuma yazma sorununu çözülmüştür. Bununla birlikte entegrasyondan ekonomiğe kadar en büyük sorunlar ortadan kalkarak bu topraklarda göze görülür derecede ciddi sosyal-ekonomik gelişmeler başlamıştır. Bu nedenle göç kontrolünde eğitim politikası en başta gelen ve en önemli adım.

Türkiye’de son zamanlarda görülen göçmen sayısı, acil yeni göçmen eğitim politikasına ihtiyacımız olduğunu gösteriyor. Çünkü yukarıdaki verdiğimiz SSCB örneğinden eğitimin ne kadar önemli yere sahip olduğunu görebiliriz. Çünkü Türkiye’ye gelen göçmenlerin büyük kısmı mülteci statüsündeki göçmenler ve gelen göçmen çocukların çoğu kendi ülkelerinde de eğitime ulaşamayanlardandır. Bu nedenle öncelikle kapsamlı bir eğitim politikasının düzenlenmesi şart.

Yukarıda belirttiğimiz gibi Afgan göçmenlerin %40 illegal yollarla Türkiye’ye gelmekte. Bazıları kilometrelerce, günlerce yürüyerek ve birçok zorlukları atlatarak geliyor. Büyüklerle birlikte çocuklar da büyük psikolojik travma ile sınırları geçmekte. Göçmen eğitim politikasında en çok bu konuda çalışmalar yürütmemiz gerekir ve oluşturacağımız göçmen eğitim sistemi adım adım ilerlemeli:

1. Gelen göçmen çocuklara psikolojik destek sağlamak ve bunu zorunlu hale getirmek.
2. Zorunlu Türkçe dil hazırlığıyla birlikte, Türk kültürü dersi (Göçmen çocuklara özel Türkiye’yi tanıtan, Türk kültürünü anlatan ders içeriği oluşturmak).
3. Çocuklarını okutamayan bunun için maddi ve fiziki durumu müsaade etmeyen göçmen aile çocukları için yatılı okulları açılabilir (bunun için projeler geliştirerek uluslararası yardım kurumlardan maddi destek alınabilir).
4. Devlet okullarına yerleştirmek.

Böylece, göçmen çocukları daha kolay bir şekilde entegre edebiliriz. Onların eğitim alması, yerli sosyal-kültürel değerlere sahip olması Türkiye’nin yarınları için büyük bir katkı olacaktır. Çünkü göçmenler arasındaki yoksulluk, eğitimsizlik, entegrasyon sorunu ilerde Türkiye’nin iç güvenliği ve refahı için tehdit oluşturabilir.

Araştırmamızda belki de son yılların en çok konuşulan konuyu ele aldık ama güncel duruma baktığımızda somut adımlar atılmayan bir konu olduğunu vurgulamak istedik. Çünkü gittikçe artan Afgan göçmen sayısı ve diğer göçmenler ileride ülkemizin nüfusunün bir parçası olabilir. Bu nedenle durum daha karmaşık hale gelmeden eğitim konusunda belirli bir politika izlememiz şart. Unutmayalım ki “Ağaç yaş iken eğilir”, bugün bizim değil dediğim ağaç yarın bize belki meyve verir, gölge olur korur...

**İKLİM VERİLERİNDEN FAYDALANARAK SİİRT ZİVZİK NARININ  
BİTKİ SU TÜKETİMİNİN BELİRLENMESİ**

**Doç. Dr. Ali Beyhan UÇAK (ORCID: 0000000343442848)**

Siirt Üniversitesi, Ziraat Fakültesi, Biyosistem Mühendisliği Bölümü Siirt /Türkiye

**Email:**abucak@siirt.edu.tr

**ÖZET**

Bu çalışmanın amacı iklim parametrelerinden yararlanarak bitki su tüketimini tahmin etmeye yarayan Penman Monteith eşitliği ( $ET_o$  miktarına bağlı olarak çeşitli bitkilerin ET miktarlarının tahmin edilmesinde kullanılan yöntem) FAO 56 modifikasyonu yöntemini kullanarak Siirt zivzik narının Siirt iklim koşullarında bitki su tüketimini belirlemektir. Araştırmada bitki materyali olarak Siirt zivzik narı kullanılmıştır. Çalışma 2017 yılı narın yetiştirme sezonu boyunca yürütülmüştür. Erken vejetatif dönemde Penman Monteith eşitliği ile saptanan referans bitki su tüketimi günlük  $ET_a$  değeri  $5,5 \text{ mm gün}^{-1}$  arasında değişirken, çiçeklenme öncesinde ve çiçeklenme döneminde  $10-10,5 \text{ mm gün}^{-1}$  olarak belirlenmiştir. Aylık (Temmuz) olarak ise, Penman Monteith eşitliğine göre  $288.50 \text{ mm ay}^{-1}$  olarak hesaplanmıştır. Penman Monteith FAO 56 modifikasyonu eşitliğine göre ise sezonluk  $ET_o$  miktarı  $808.0 \text{ mm/yıl}$  olarak tespit edilmiştir. Sonuç olarak çalışmada gerçek su tüketimi ile hesaplanan (kıyas) su tüketimi arasındaki farkın önemsiz olduğu ve daha fazla meteorolojik veri kullanarak bitki su tüketim tahminlerinde daha gerçekçi sonuçlara ulaşan bir yöntem olan Penman-Monteith eşitliği kullanılarak zivzik narının yarı kurak iklim koşullarında sulama programının hazırlanmasında kullanılabileceği söylenebilir.

**Anahtar Kelimeler:** Plant water consumption, Climate data, Zivzik pomegranate

**BENEFITTING FROM CLIMATE DATA, SIİRT ZİVZİK PARI  
DETERMINATION OF PLANT WATER CONSUMPTION**

**ABSTRACT**

The aim of this study is to determine the plant water consumption of Siirt zivzik pomegranate in Siirt climatic conditions by using the FAO 56 modification method of the Penman Monteith equation (the method used to estimate the ET amounts of various plants depending on the amount of ETo), which is used to estimate plant water consumption by using climate parameters. Siirt zivzik pomegranate was used as plant material in the research. The study was conducted during the 2017 pomegranate growing season. While the reference plant water consumption daily ETa value determined by the Penman Monteith equation in the early vegetative period varied between 5.5 mm day<sup>-1</sup>, it was determined as 10-10.5 mm day<sup>-1</sup> before flowering and during the flowering period. In monthly (July) terms, it was calculated as 288.50 mm month<sup>-1</sup> according to the Penman Monteith equation. According to the Penman Monteith FAO 56 modification equation, the seasonal ETo amount was determined as 808.0 mm/year. As a result, it can be said that the difference between the actual water consumption and the calculated (comparison) water consumption in the study is insignificant and that it can be used in the preparation of the irrigation program of zivzik pomegranate in semi-arid climate conditions by using the Penman-Monteith equation, which is a method that reaches more realistic results in plant water consumption estimates by using more meteorological data.

**Keywords:** Crop water consumption, Water balance equation, Climate data

## **Giriş**

Zivzik Narı, Siirt yöresinin önemli tarımsal ürünleri arasında yer almaktadır. Botan Çayı Vadisi etekleri boyunca yerleşim gösteren, Şirvan ilçesine bağlı Kapılı, Sarıdana, Pirinçli ve Zivzik (Dişlinar) köylerinde kapama bahçelerde yaygın olarak yetiştiriciliği yapılan bir meyve türüdür. Tad, aroma ve lezzet bakımından son derece iyi bir çeşit olan Zivzik, adından da anlaşılacağı gibi orta-sert yapıda bir çekirdeğe sahip olması nedeniyle sofralık tüketimden çok meyve suyu elde edilmesine uygundur. Mayhoş bir tada sahiptir. Bu çeşidin en önemli bir diğer özelliği de kontrollü atmosferli koşullarda altı aya kadar depolanabilme özelliğine sahip olmasıdır. 2008 yılında Gaziantep Fıstık Araştırma Enstitüsü tarafından tescil ettirilmiş bir çeşit olan Zivzik Narı üzerinde şimdiye kadar çeşitli konularda farklı araştırmalar yapılmıştır (Pakyürek ve ark., 2020; Al-Jabbari ve ark., 2020; Pakyürek ve ark., 2019; Aydın ve ark., 2017). Damla sulama yöntemi, tarımsal üretimde hem suyun ekonomik kullanımı sağlamakta hem de yabancı otları baskılayarak su kaybını azaltabilmektedir (Hill ve Keller, 1980). Nar yetiştiriciliğinde uygulanan sulama suyu miktarı ile verim ve meyve kalitesi arasında önemli ilişki olduğu bildirilmektedir. Uygulanan sulama suyu arttıkça meyve veriminin de buna paralel olarak arttığı ancak meyve kabuğunda oluşacak çatlaklar olmak üzere bazı kalite özelliklerinde azalmalar olabildiği bildirilmektedir (Khattab ve ark., 2011). Galindo ve ark. (2014), tarafından yapılan bir çalışmada kısıtlı su uygulamasının (0.33) verimde azalmaya, olgunlaşma süresinde kısalmaya, toplam fenolik madde miktarında az da olsa artışa, antosiyanin içeriğinde ise herhangi bir değişime neden olmadığı belirlenmiştir. Pena-Estevez ve ark. (2016), tarafından Mollar de Elche nar çeşidinde kontrol olarak tam sulama (1.00) ve kontrole göre %78 oranında azaltılmış sulama olmak üzere iki farklı sulama seviyesinin meyve kalitesi üzerine etkisi araştırılmıştır. Araştırma sonuçlarına göre hasat edilen taze meyvelerde toplam fenolik madde ve antosiyanin içeriğinin kontrol konusuna kıyasla daha yüksek olduğu belirlenmiştir. Mellisho ve ark. (2012) tarafından narda farklı sulama düzeylerinin meyvenin renk, mineral madde, suda çözünür kuru madde, asitlik gibi bazı kalite özellikleri üzerine olan etkisi araştırılmıştır.

Sulama programı oluşturulmasında ve bitki su tüketiminin saptanmasında alternatif metotlardan birisi de, toprak suyunun ölçülmesi (gravimetrik) yöntemidir (Pardossi et al., 2009). Bitki su tüketimi ve sulama suyu ihtiyacı bitki, toprak ve iklim özelliklerine bağlı olarak değişkenlik göstermektedir. Tarımsal sulamada su kaynaklarının optimum bir randımanla kullanımı, bitki su tüketimini esas alan sulama programları hazırlanarak, bitkinin suya ihtiyacı olduğu zamanlarda sulama yapılması ve her sulamada bitkiye ihtiyacı kadar su verilmesi ile sağlanabilmektedir (Jensen ve Allen, 2016). Bitki su tüketim yöntemleri direkt olarak veya

indirekt olarak iklim parametrelerine bağlı olarak birçok yöntemle tespit edilebilmektedir. Direkt yöntemler uzun bir zaman dilimi ve fazla miktarda iş gücü gerektirirken, indirekt yöntemler daha basit ve daha hızlı uygulanabilmektedir (Kaya 2011). ETo'ı belirleyen etmenler iklim parametreleri ve hava verileridir. Örneğin belirlenmesinde FAO56 Penman-Monteith yöntemi değerlendirildiği bölgede çayır bitkileri ETo değeriyle oldukça sıkı şekilde benzerlik gösterdiği için, fiziksel olarak, fizyolojik ve aerodinamik parametrelerin her ikisini de açıkça birleştirmiş bir yöntem olması sebebiyle tek yöntem olarak tavsiye edilmektedir. Yöntemin ilk aşamasında birçok iklim verisi formüle dâhil olduğu için zorluklar yaşanmasına karşın araştırmadaki ilerlemeler ve bitkiler kıyas ürünlerini içeren geçerli tahminleri ile büyük çapta aşmıştır (Jensen ve Allen, 2016).

Bu çalışmanın amacı iklim parametrelerinden yararlanarak bitki su tüketimini tahmin etmeye yarayan Penman Monteith eşitliği (ETo miktarına bağlı olarak çeşitli bitkilerin ET miktarlarının tahmin edilmesinde kullanılan yöntem) FAO 56 modifikasyonu yöntemini kullanarak tatlı zivzik narının Siirt iklim koşullarında bitki su tüketimini belirlemektir.

## **2. Gereç ve Yöntem**

### **2.1. Deneysel Çalışmalar**

Penman-Monteith yöntemine göre referans (kıyas) bitki su tüketiminin hesaplanması aşağıda formülde verilmiştir.

Bu yöntemde kıyas bitki su tüketimi;

Bu yöntemde kıyas bitki su tüketimi;

$$ET = \frac{\delta}{\delta + \gamma^*} (R_n - G) \frac{1}{\lambda} + \frac{\gamma}{\delta + \gamma^*} \frac{900}{T + 275} u_2 (e_a - e_d)$$

(1.3) eşitliği ile tahmin edilmektedir.

Bu eşitlikteki bazı terimlerin hesaplanmasında kullanılan eşitlikler ise aşağıda verilmiştir.

$$\delta = \frac{4098e_a}{(T+237.3)^2} \quad (1.4)$$

$$\lambda = 2.501 - 2.361 \times 10^{-3}T \quad (1.5)$$

$$\gamma = 0.0016286 \frac{P}{\lambda} \quad (1.6)$$

$$\gamma^* = \gamma(1 +$$

$$0.34u_2)$$

$$R_n = R_{n_s} - R_{nl} \quad (1.8)$$

$$R_{n_s} = 0,75R_s \quad (1.9)$$

$$R_{n_l} = 2,451f(T)f(e_d)f\left(\frac{n}{N}\right) \quad (1.10)$$

$$R_s = \left(0.25 + 0.50\frac{n}{N}\right)R_a \quad (1.11)$$

$$e_d = e_a \frac{RH}{100} \quad (1.12)$$

$$u_2 = u_z \left(\frac{z}{z}\right)^{0.2} \quad (1.13)$$

Bu eşitliklerde;

$ET$  = Referans bitki su tüketimi, mm/gün,

$\delta$  = Buhar basıncı eğrisinin eğimi, kPa/°C

$\gamma^*$  = Modifiye psikrometrik sabite, kPa/°C

$\gamma$  = Psikrometrik sabite, kPa/°C

$P$  = Atmosfer basıncı, kPa

$R_n$  = Bitki yüzeyindeki net radyasyon,  $\frac{MJ}{M^2}$ /  
gün

$R_a$  = Atmosferin dış yüzüne ulaşan radyasyon,  $\frac{MJ}{M^2}$ /  
gün

(Çizelge 1.2'den doğrudan alınabilir.)

$R_s$  = Yeryüzüne ulaşan kısa dalgalı radyasyon,  $\frac{MJ}{M^2}$ /  
gün

$R_{n_s}$  = Kısa dalgalı net radyasyon,  $\frac{MJ}{M^2}$ /  
gün

$R_{n_l}$  = Uzun dalhalı net radyasyon,  $\frac{MJ}{M^2}$ /  
gün

$f(T)$  = Sıcaklık fonksiyonu (Çizelge 1.3'den doğrudan alınabilir.)

$T$  = Sıcaklık, °C

$f(e_d)$  = Buhar basıncı fonksiyonu (Çizelge 1.4'ten doğrudan alınabilir)

$e_d$  = Ortalama hava sıcaklığındaki gerçek buhar basıncı, kPa

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

**April 09-16, 2024 / Lisbon, Portugal**

$e_a$  = Ortalama hava sıcaklığındaki doymun buhar basıncı, kPa

(Çizelge 1.5'ten doğrudan alınabilir)

$f(n/N)$ : Güneşlenme oranı fonksiyonu

(Çizelge 1.6'dandogrudan alınabilir)

n = Güneşlenme süresi, h

N = Olası maksimum güneşlenme süresi, h (Çizelge 1.7'den doğrudan alınabilir)

G = Topraktaki ısı akımı, MJ/m<sup>2</sup>/gün

(Ardışık periyotlarda toprağın ortalama sıcaklığı çok fazla değişmediğinden ihmal edilebilir.)

$\lambda$  = Buharlaşma gizli ısı,  $\frac{MJ}{kg}$  (ortalama bir değer olarak  $2.45 \frac{MJ}{kg}$  alınabilir)

$u_2$  = Rüzgar hızının 2 m yükseklikteki eşdeğeri, m/s

$u_z$  = z m yükseklikte ölçülmüş rüzgar hızı,  $\frac{m}{s}$

z = Rüzgar hızının ölçüldüğü yükseklik, m

(Türkiye'de meteoroloji bültenlerinde genellikle 10 m yükseklikte ölçülmüş rüzgar hızı değerleri verilmektedir) ve RH = Ortalama bağıl (nispi) nem, % değerlerini göstermektedir.

**Çizelge 1.** Siirt iline ait uzun yıllık meteorolojik veriler (1938-2019).

Parametre	Maksimum Sıcaklık (°C)	Minimum Sıcaklık (°C)	Ortalama Nispi Nem (%)	Toplam Yağış Ortalaması (mm)	Maksimum Yağış (mm)	Ortalama Buharlaşma (mm)	Ortalama Güneşlenme Süresi (Saat)

### **3. Bulgular ve Tartışma**

Erken vejetatif dönemde Penman Monteith eşitliği ile saptanan günlük ETa değeri  $5,5 \text{ mm gün}^{-1}$  arasında değişirken, çiçeklenme öncesinde ve çiçeklenme döneminde  $10-10,5 \text{ mm gün}^{-1}$  olarak hesaplanmıştır. Aylık olarak ise Penman Monteith eşitliğine göre  $288,5 \text{ mm ay}^{-1}$  olarak hesaplanmıştır. Araştırmanın yürütüldüğü yıl mevsimlik bitki su tüketimi (Penman Monteith FAO 56) modifikasyonu eşitliğine göre ise ETo miktarı  $808,0 \text{ mm}$  olarak tespit edilmiştir.

### **4. Sonuç**

Son zamanlarda küresel ısınmaya bağlı olarak ciddi bir tehdit olarak karşımıza çıkan ani iklimsel değişim, ülkemizdeki kısıtlı olan su kaynaklarının tükenmesine yol açmakta önemli bir oynamaktadır. Bunun yanında zivzik narı bitkisi yetiştiriciliği alanında daha fazla teşvik edilmesi için yapılan çalışmada gerçek su tüketimi ile hesaplanan referans su tüketimi arasında farkın önemsiz olduğu belirlenmiştir. Öte yandan su tüketiminin en yoğun olarak kullanıldığı alanların sulama amaçlı olduğu düşünüldüğünde sulama projelerinin gerçekçi olarak iklim verilerine bağlı, uzun ya da kısa dönemlere ilişkin bitkilerin kullanacakları su miktarının belirlenmesi gereklidir. Sonuç olarak bitki su tüketiminin saptanmasında daha fazla meteorolojik veri kullanarak bitki su tüketim tahminlerinde daha gerçekçi sonuçlara ulaşan bir yöntem olan Penman-Monteith eşitliği kullanılarak zivzik narı bitkisinin sulama programı hazırlanmasında önerilebilir. Araştırmadan elde edilen sonuçlar diğer araştırmacılar tarafından da test edilebilir.

**ÖZET**

Bu çalışmanın amacı doğrudan bitki su tüketimini belirlemeye yarayan su dengesi eşitliği yöntemi ve iklim parametrelerinden yararlanarak bitki su tüketimini tahmin etmeye yarayan Penman Monteith eşitliği ( $ET_0$  miktarına bağlı olarak çeşitli bitkilerin ET miktarlarının tahmin edilmesinde kullanılan yöntem) FAO 56 modifikasyonu yöntemini kullanarak ayçiçeği hatlarının Siirt iklim koşullarında bitki su tüketimini belirlemektir. Araştırmada bitki materyali olarak ayçiçeği hattı kullanılmıştır. Çalışma 2016 yılı ayçiçeği hatlarının yetiştirme sezonu boyunca Siirt Üniversitesi Ziraat Fakültesi deneme arazisinde yürütülmüştür. Erken vejetatif dönemde su dengesi eşitliğine göre günlük  $ET_a$  değeri  $4,5 \text{ mm gün}^{-1}$  arasında değişirken, çiçeklenme öncesinde ve çiçeklenme döneminde  $9,510 \text{ mm gün}^{-1}$  olarak belirlenmiştir. Penman Monteith eşitliği ile saptanan referans bitki su tüketimi ise  $9.0 \text{ mm gün}^{-1}$  olarak hesaplanmıştır. Aylık (Temmuz) olarak ise su dengesi eşitliğine göre  $270.0 \text{ mm ay}^{-1}$ , Penman Monteith eşitliğine göre  $262.22 \text{ mm ay}^{-1}$  olarak hesaplanmıştır. Araştırmanın yürütüldüğü yıl ayçiçeği hatlarına uygulanan sulama suyu miktarı  $637.00 \text{ mm}$  olup su dengesi eşitliği yöntemine göre mevsimlik bitki su tüketimi ( $ET_a$ )  $724.0 \text{ mm}$ , Penman Monteith FAO 56 modifikasyonu eşitliğine göre ise  $ET_0$  miktarı  $738.0 \text{ mm}$  olarak tespit edilmiştir. Sonuç olarak çalışmada gerçek su tüketimi ile hesaplanan (kıyas) su tüketimi arasındaki farkın önemsiz olduğu ve daha fazla meteorolojik veri kullanarak bitki su tüketim tahminlerinde daha gerçekçi sonuçlara ulaşan bir yöntem olan Penman-Monteith eşitliği kullanılarak ayçiçeği bitkisinin yarı kurak iklim koşullarında sulama programının hazırlanmasında kullanılabileceği söylenebilir.

**Anahtar Kelimeler:** Bitki su tüketimi, Su dengesi eşitliği, İklim verileri

**SUNFLOWER LINES USING CLIMATE DATA  
DETERMINATION OF PLANT WATER CONSUMPTION**

**ABSTRACT**

The aim of this study is to determine the water balance equation method, which is used to directly determine plant water consumption, and the Penman Monteith equation, which is used to estimate plant water consumption by using climate parameters (the method used to estimate the ET amounts of various plants depending on the amount of ETo) and the FAO 56 modification method, to determine the results of sunflower lines in Siirt climatic conditions. To determine plant water consumption. Sunflower line was used as plant material in the research. The study was carried out in the trial field of Siirt University Faculty of Agriculture during the growing season of sunflower lines in 2016. According to the water balance equation in the early vegetative period, the daily ETa value varied between 4.5 mm day<sup>-1</sup>, while it was determined as 9,510 mm day<sup>-1</sup> before flowering and during the flowering period. The reference plant water consumption determined by the Penman Monteith equation was calculated as 9.0 mm day<sup>-1</sup>. On a monthly basis (July), it was calculated as 270.0 mm month<sup>-1</sup> according to the water balance equation and 262.22 mm month<sup>-1</sup> according to the Penman Monteith equation. In the year the research was conducted, the amount of irrigation water applied to sunflower lines was 637.00 mm, and according to the water balance equation method, seasonal plant water consumption (ETa) was determined as 724.0 mm, and according to the Penman Monteith FAO 56 modification equation, the amount of ETo was determined as 738.0 mm. As a result, it can be said that the difference between the actual water consumption and the calculated (comparison) water consumption in the study is insignificant and that it can be used in the preparation of the irrigation program of the corn plant in semi-arid climate conditions by using the Penman-Monteith equation, which is a method that reaches more realistic results in plant water consumption estimates by using more meteorological data.

**Keywords:** Crop water consumption, Water balance equation, Climate data

## **Giriş**

Ülkemizde insan beslenmesinde çoğunlukla ayçiçeği yağının tercih edilmesi ve artan yağ açığımız nedeniyle en önemli yağ bitkilerinden birisi ayçiçeğidir. Hemen her şeyin mekanize olması, düşük işgücü kullanımı, geniş alanlarda ekim potansiyeline sahip olmasına rağmen, ayçiçeği ekim alanlarında istenen artış sağlanamamıştır. Bunun en önemli nedenlerinden birisi; ülkemizin hemen her bölgesinde ayçiçeği kuru ziraat şeklinde (yağışa bağlı olarak sulanmadan) üretildiğinden, gelişme dönemindeki kuraklıkların tane verimini olumsuz yönde etkilemesiyle üretiminin yıllar bazında değişiklik göstermesidir. Tarımsal anlamda iklim değişikliğinin en ciddi sonucu olan su stresi veya kuraklık konusunda alınabilecek önlemlerden biride ülkemizde önemli bir ekim alanına sahip olan ayçiçeğinin, su stresi koşullarında yetiştirilebilecek yeni ayçiçeği çeşitlerinin su stresine olası tepkilerinin belirlenmesi ve her yöreye uygun bitki su tüketimlerinin saptanması sürdürülebilir tarımın devamlılığı açısından büyük önem arz etmektedir (Anonim, 2022). Türkiye sahip olduğu toprak ve su kaynakları ile çok değişik iklim koşulları yönünden dünyada tarımsal potansiyeli yüksek olan sayılı ülkeler arasında bulunmaktadır. Ülkemizde işlenen arazi 28,5 milyon hektardır. Yapılan etütlere göre, mevcut su potansiyeli ile teknik ve ekonomik olarak sulanabilecek arazi miktarı 8,5 milyon hektar olarak hesaplanmıştır. Sulanan alan ise 6,7 milyon ha'dır (Anonim, 2021). Kırnak, ve Gençdoğan (2001), yaptıkları çalışmada Akdeniz ülkeleri için suyun kısıntılı bir kaynak olduğunu, kişi başına gerekli toplam su miktarının ise yaklaşık 1700 m<sup>3</sup>/kişi/yıl olduğunu bildirmişlerdir. Ancak, çoğu Batı Asya ülkelerinde bu rakam 500 m<sup>3</sup>/kişi/yıl'dan daha azdır. Bu durum gelecekte artan nüfus için çok olumsuz bir durumdur. Tarım %70 kullanım oranı ile suyu en fazla tüketen sektördür. Ülkemizin nüfusu yaklaşık olarak 82 milyona ulaşmış bulunmaktadır. Hâlbuki tarım arazilerini daha fazla arttırma olanağı bulunmamaktadır. Bu durumda artan nüfusumuzun beslenmesi, sanayimize hammadde sağlaması ve dış ödemeler dengesinde katkıda bulunması için tarımsal üretimin arttırılması gerekmektedir. Bu husus ülke çapında iyi bir üretim planlaması ve günün modern tekniklerinin uygulanmasıyla sağlanabilir. Günümüzde bitkilerin sulanmasında yüzey sulama yöntemleri yetersiz kalmakta ve uygulanan sulama suyunun yalnızca 1/3'ü bitkiler tarafından terleme (transpirasyon) yoluyla kullanılmaktadır. Bu nedenle, sulama yöntemlerinin geliştirilmesine şiddetle ihtiyaç duyulmaktadır. Bu bağlamda, Türkiye'nin de dâhil olduğu Akdeniz ülkelerinde yapılan çalışmaların sonucuna göre; damla sulamanın, ortalama %42 su tasarrufu sağladığı, fertigasyonun geleneksel gübrelemeye göre verimi %42 arttırdığı, sulama suyu kullanma etkinliği ise %79 oranında daha yüksek olduğu belirtilmiştir. Özellikle yağmurlama ve damla

sulama sistemlerine uygun sulama programları hazırlayıp, bu programları sulama otomasyonu ile birlikte uygulayarak su kullanım etkinliği daha da artırılabilir. Plastik sanayinin hızla gelişimi, sulama sistemi ve donanımındaki gelişmeler, basınçlı sulama sistemi kullanımının artmasında itici bir güç oluşturmuştur. Bunun sonucu olarak son yıllarda birçok bitkinin sulanmasında yağmurlama ve damla sulama uygulamaları başlamıştır. Ülkemizde de bu konudaki araştırma çalışmaları yakın geçmişten (son 20-25 yıl) beri yapılmaktadır. Ayrıca, yüzey sulamadan damla sulama sistemlerine geçişte %30-60 arasında değişen oranda bir su tasarrufu sağlanabilmektedir (Anonim, 2003). Bitkilerin sulanması amacıyla, sulama programlarının oluşturulmasında son zamanlarda sulama otomasyonu kullanılmaya başlanmıştır. Sulama otomasyonu sulama programı ile birlikte kullanıldığında, daha hassas olmakta, su ve gübre kullanım etkinliğini arttırmakta, işçilik ve enerji giderlerini azaltmakta, verimi ve kaliteyi arttırmakta, insan hatasını en aza indirmekte, sık ve düşük hacimli sulama yapma imkânı sağlamaktadır. Günümüzde bitkilerin sulanmasında yüzey sulama yöntemleri yetersiz kalmakta ve uygulanan sulama suyunun yalnızca 1/3'ü bitkiler tarafından terleme (transpirasyon) yoluyla kullanılmaktadır. Bu nedenle, bitkilerin her yöre ve her bitki için bitki su tüketimlerinin geliştirilmesine yönelik çalışmaların yapılmasına gereksinim duyulmaktadır. Ulusal ve uluslararası kaynaklarda 'Evapotranspirasyon' olarak adlandırılan ve ETa simgesiyle gösterilen terimin Türkçe' deki karşılığı 'Bitki Su Tüketimi' olarak tanımlanmaktadır (Bayramoğlu, 2013; Uçak ve ark., 20216). Bitki su tüketiminin (Evapotranspirasyon, ETa) saptanması; su kaynaklarının işletilmesi, sulama sistemlerinin planlanması ve sulama programlarının yapılabilmesi için temel bir ihtiyaçtır. Bitkisel üretimde bitki su tüketiminin dikkate alınması ve suyun ölçülü kullanılması, hem verim hem de toprak-su kaynaklarının korunması açısından büyük önem taşımaktadır (Abtey ve Obeysekera, 1995; Güngör et al., 2004; Demir ve Meral, 2016). Günümüzde sulama programlarının oluşturulmasında dikkate alınan en önemli parametrelerden biriside bitki su tüketimidir. Bitki su tüketimi lizimetre sistemleri, tarla deneme parselleri ve bitki kök bölgesindeki nem azalmasının denetimi gibi metotlardan faydalanarak doğrudan hesaplanabilmektedir (Şarлак ve Bağçacı, 2020; Kırnak ve Gençdoğan, 2001). Sulama uygulamalarında bitki su tüketimin dikkate alınmadığı ve homojen bir su dağılımının yapılamadığı, salma sulama yönteminin kullanılması durumunda, bitki gelişiminde büyük bir öneme sahip olan demir mineralinin topraktan yıkanarak etkili kök bölgesi altında sızmasına sebep olmaktadır (Fulton, 2013; Jarvis Shean et al., 2018). Uygulamada sulama programı, genellikle yetiştirici deneyimlerine veya toprak su dengesi (iklim temelli yöntem) belirlenmesine dayanmaktadır. Sulama programı oluşturulmasında ve

bitki su tüketiminin saptanmasında alternatif metotlardan birisi de, toprak suyunun ölçülmesi (gravimetrik) yöntemdir (Pardossi et al., 2009). Bitki su tüketimi ve sulama suyu ihtiyacı bitki, toprak ve iklim özelliklerine bağlı olarak değişkenlik göstermektedir. Tarımsal sulamada su kaynaklarının optimum bir randımanla kullanımı, bitki su tüketimini esas alan sulama programları hazırlanarak, bitkinin suya ihtiyacı olduğu zamanlarda sulama yapılması ve her sulamada bitkiye ihtiyacı kadar su verilmesi ile sağlanabilmektedir (Jensen ve Allen, 2016). Bitki su tüketim yöntemleri direkt olarak veya indirekt olarak iklim parametrelerine bağlı olarak birçok yöntemle tespit edilebilmektedir. Direkt yöntemler uzun bir zaman dilimi ve fazla miktarda iş gücü gerektirirken, indirekt yöntemler daha basit ve daha hızlı uygulanabilmektedir (Kaya 2011). ETo'ı belirleyen etmenler iklim parametreleri ve hava verileridir. Örneğin belirlenmesinde FAO56 Penman-Monteith yöntemi değerlendirildiği bölgede çayır bitkileri ETo değeriyle oldukça sıkı şekilde benzerlik gösterdiği için, fiziksel olarak, fizyolojik ve aerodinamik parametrelerin her ikisini de açıkça birleştirmiş bir yöntem olması sebebiyle tek yöntem olarak tavsiye edilmektedir. Yöntemin ilk aşamasında birçok iklim verisi formüle dâhil olduğu için zorluklar yaşanmasına karşın araştırmadaki ilerlemeler ve bitkiler kıyas ürünlerini içeren geçerli tahminleri ile büyük çapta aşılmıştır (Allen et al., 1998). Bu çalışmanın amacı doğrudan bitki su tüketimini belirlemeye yarayan su dengesi eşitliği ve iklim parametrelerinden yararlanarak bitki su tüketimini tahmin etmeye yarayan Penman Monteith eşitliği (ETo miktarına bağlı olarak çeşitli bitkilerin ET miktarlarının tahmin edilmesinde kullanılan yöntem) FAO 56 modifikasyonu yöntemini kullanarak ayçiçeği hatlarının Siirt iklim koşullarında bitki su tüketimini belirlemektir.

## **2. Gereç ve Yöntem**

### **2.1. Deneysel Çalışmalar**

Damlama sulama yönteminin kullanıldığı deneme parsellerinde su dağıtımı, 4 atm çalışma basıncı ve 16 mm dış çapa sahip yumuşak PE lateral boru hatları kullanılarak sağlanmıştır. Araştırma alanının toprakları ağırdır ve  $7 \text{ mm h}^{-1}$  infiltrasyon oranına sahiptir. Her lateralde, sıralı tip basınç düzenleyicisi ve 1 atm çalışma basıncında  $4 \text{ L h}^{-1}$  akış hızına sahip damlatıcılar kullanıldı ve aralarında 0.33 m boşluk kaldı. Bu nedenle, bitki damla sulama yöntemi ile sulama suyu sadece doğru miktarda uygulanmıştır. Herhangi bir sızma veya yüzey akışı meydana gelmesine izin verilmemiştir. Sırta ekilecek tohum yatağı hazırlanmıştır. Her parsel, sıra arasında 70 cm boşluk, sıra üzeri 20 cm boşluk, parsellerin boyutları 6 m uzunluğunda ve 2,8 m genişliğinde (parsel yüzeyi =  $16,8 \text{ m}^2$ ) olmak üzere 4 çizgiye sahip olacak şekilde tasarlanmıştır. Tohumun 4-5 cm derinlikte ekildiğinden emin olmak için 4 hatlı pnömatik

tohum makinası kullanılmıştır. Sulama konuları ve tekrarlar arasındaki etkileşimleri önlemek için 2 m tampon bölge oluşturulmuştur. Çalışmada, etkili kök derinliğinin (90 cm) nem içeriği her sulamadan önce gravimetrik yöntem kullanılarak tespit edilmiştir. Her tür için tam sulama (I100) ile kontrol parselinde 90 cm toprak derinliğinde eksik nem getirmek için sulama suyu miktarı, her bir konu için uygulanacak sulama suyu miktarını belirlemek için kullanılmıştır. Bu amaçla, sulama öncesi her sulama derinliği için 90 cm'lik toprak profilinin 0-30, 30-60 ve 60-90 cm'lik tabakalarından alınan toprak numuneleri toplanmış ve kuru toprak ağırlık yüzdesi (%Pw) olarak belirlenmiştir. Her katman için belirlenen nem içeriği, denklem 1 kullanılarak derinlemesine nem içeriğine dönüştürülmüştür.

$$d=(Pw-PwAW)*As*D/100..... (1)$$

Burada; d derinliğinde toprak nem içeriğidir (mm), Pw tarla kapasitesi (%), PwAW; her katmanın nem içeriği (%), As ,Toprak birim ağırlığı (g/cm<sup>3</sup>)

D katman derinliği (mm) olduğu gibi uygulanacak suyun hacmi aşağıdaki denklem kullanılarak hesaplanmıştır (Eq. (2));

Her tabaka için hesaplanan su içeriği nin eklenmesiyle, etkili kök derinliği için toplam su miktarı (dT) bulunmuştur (Eq. (2)).

$$dT=d(0-30)+ d(30-60) + d(60-90) ..... (2)$$

Her sulama konusunun aylık ve mevsimsel evapotranspirasyon değerleri, büyüme mevsiminde hasadın başlangıcında ve sonunda ölçülen toprağın nem oranı (90 cm) su bütçe yöntemi ve nem içeriği değerleri kullanılarak hesaplanmıştır (Zelege ve Wade 2012).

Bitkinin su tüketiminin hesaplanmasında aşağıdaki su dengesi denklemi kullanılmıştır (Eq. (4)) (Zelege ve Wade 2012).

$$ETa= P + I - Rf - Dp \pm \Delta S .....(Eq. (5)).$$

ETa: Evapotranspirasyon (mm),

P: yağış (mm),

I: sulama suyu miktarı (mm),

Rf: yüzey akışı (mm),

Dp: Derin infiltrasyon (mm) ve

$\Delta S$  (mm) kökündeki toprak nem değişimidir. Çalışmada tercih edilen damla akış hızı toprağın sızma hızından daha düşük olduğundan, yüzey akışı oluşmamıştır. Sulama suyu miktarı mevcut nemi saha kapasitesine getirmek için yeterli olduğu için derin bir sızma meydana gelmediği varsayılmıştır. Penman-Monteith yöntemine göre referans (kıyas) bitki su tüketiminin hesaplanması aşağıda formülde verilmiştir.

Bu yöntemde kıyas bitki su tüketimi;

Bu yöntemde kıyas bitki su tüketimi;

$$ET = \frac{\delta}{\delta + \gamma^*} (R_n - G) \frac{1}{\lambda} + \frac{\gamma}{\delta + \gamma^*} \frac{900}{T + 275} u_2 (e_a - e_d)$$

(1.3) eşitliği ile tahmin edilmektedir.

Bu eşitlikteki bazı terimlerin hesaplanmasında kullanılan eşitlikler ise aşağıda verilmiştir.

$$\delta = \frac{4098e_a}{(T+237.3)^2} \quad (1.4)$$

$$\lambda = 2.501 - 2.361 \times 10^{-3}T \quad (1.5)$$

$$\gamma = 0.0016286 \frac{P}{\lambda} \quad (1.6)$$

$$\gamma^* = \gamma(1 +$$

$$0.34u_2) \quad (1.7)$$

$$R_n = R_{n_s} - R_{n_l} \quad (1.8)$$

$$R_{n_s} = 0,75R_s \quad (1.9)$$

$$R_{n_l} = 2,451f(T)f(e_d)f\left(\frac{n}{N}\right) \quad (1.10)$$

$$R_s = \left(0.25 + 0.50\frac{n}{N}\right) R_a \quad (1.11)$$

$$e_d = e_a \frac{RH}{100} \quad (1.12)$$

$$u_2 = u_z \left(\frac{z}{z_0}\right)^{0.2} \quad (1.13)$$

Bu eşitliklerde;

$ET$  = Referans bitki su tüketimi, mm/gün,

$\delta$  = Buhar basıncı eğrisinin eğimi, kPa/°C

$\gamma^*$  = Modifiye psikrometrik sabite, kPa/°C

$\gamma$  = Psikrometrik sabite,  $kPa/^\circ C$

$P$  = Atmosfer basıncı,  $kPa$

$R_n$  = Bitki yüzeyindeki net radyasyon,  $\frac{MJ}{M^2 \text{ gün}}$

$R_a$  = Atmosferin dış yüzüne ulaşan radyasyon,  $\frac{MJ}{M^2 \text{ gün}}$

(Çizelge 1.2'den doğrudan alınabilir.)

$R_s$  = Yeryüzüne ulaşan kısa dalgalı radyasyon,  $\frac{MJ}{M^2 \text{ gün}}$

$R_{ns}$  = Kısa dalgalı net radyasyon,  $\frac{MJ}{M^2 \text{ gün}}$

$R_{nl}$  = Uzun dalhalı net radyasyon,  $\frac{MJ}{M^2 \text{ gün}}$

$f(T)$  = Sıcaklık fonksiyonu (Çizelge 1.3'den doğrudan alınabilir.)

$T$  = Sıcaklık,  $^\circ C$

$f(e_d)$  = Buhar basıncı fonksiyonu (Çizelge 1.4'ten doğrudan alınabilir)

$e_d$  = Ortalama hava sıcaklığındaki gerçek buhar basıncı,  $kPa$

$e_a$  = Ortalama hava sıcaklığındaki doymun buhar basıncı,  $kPa$

(Çizelge 1.5'ten doğrudan alınabilir)

$f(n/N)$ : Güneşlenme oranı fonksiyonu

(Çizelge 1.6'dan doğrudan alınabilir)

$n$  = Güneşlenme süresi,  $h$

$N$  = Olası maksimum güneşlenme süresi,  $h$  (Çizelge 1.7'den doğrudan alınabilir)

$G$  = Topraktaki ısı akımı,  $MJ/m^2/gün$

(Ardışık periyotlarda toprağın ortalama sıcaklığı çok fazla değişmediğinden ihmal edilebilir.)

$\lambda$  = Buharlaşma gizli ısı,  $\frac{MJ}{kg}$  (ortalama bir değer olarak  $2.45 \frac{MJ}{kg}$  alınabilir)

$u_2$  = Rüzgar hızının 2 m yükseklikteki eşdeğeri,  $m/s$

$u_z$  =  $z$  m yükseklikte ölçülmüş rüzgar hızı,  $\frac{m}{s}$

$z$  = Rüzgar hızının ölçüldüğü yükseklik,  $m$

(Türkiye'de meteoroloji bültenlerinde genellikle 10 m yükseklikte ölçülmüş rüzgar hızı

değerleri verilmektedir) ve  $RH$  = Ortalama bağıl (nispi) nem, % değerlerini göstermektedir.

**Çizelge 1.** Siirt iline ait uzun yıllık meteorolojik veriler (1938-2019).

### 3. Bulgular ve Tartışma

Erken vejetatif dönemde su dengesi eşitliğine göre günlük ETa değeri  $4,5 \text{ mm gün}^{-1}$  arasında değişirken, çiçeklenme öncesinde ve çiçeklenme döneminde  $9,5-10 \text{ mm gün}^{-1}$  olarak belirlenmiş olup, Penman Monteith eşitliği ile saptanan referans bitki su tüketimi ise  $9.0 \text{ mm gün}^{-1}$  olarak hesaplanmıştır. Aylık olarak ise su dengesi eşitliğine göre  $270 \text{ mm ay}^{-1}$ , Penman Monteith eşitliğine göre  $262,3 \text{ mm ay}^{-1}$  olarak hesaplanmıştır. Araştırmanın yürütüldüğü yıl ayçiçeği hattına uygulanan sulama suyu miktarı  $637.00 \text{ mm}$  olup su dengesi eşitliği yöntemine göre mevsimlik bitki su tüketimi (ETa)  $724 \text{ mm}$ , Penman Monteith FAO 56 modifikasyonu eşitliğine göre ise ETo miktarı  $738.40 \text{ mm}$  olarak tespit edilmiştir.

### 4. Sonuç

Son zamanlarda küresel ısınmaya bağlı olarak ciddi bir tehdit olarak karşımıza çıkan ani iklimsel değişim, ülkemizdeki kısıtlı olan su kaynaklarının tükenmesine yol açmakta önemli bir oynamaktadır. Bunun yanında ayçiçeği bitkisi yetiştiriciliği alanında daha fazla teşvik edilmesi için yapılan çalışmada gerçek su tüketimi ile hesaplanan referans su tüketimi arasında farkın önemsiz olduğu belirlenmiştir. Öte yandan su tüketiminin en yoğun olarak kullanıldığı alanların

sulama amaçlı olduđu düşünöldüğünde sulama projelerinin gerçekçi olarak iklim verilerine bađlı, uzun ya da kısa dönemlere ilişkin bitkilerin kullanacakları su miktarının belirlenmesi gereklidir. Sonuç olarak bitki su tüketiminin saptanmasında daha fazla meteorolojik veri kullanarak bitki su tüketim tahminlerinde daha gerçekçi sonuçlara ulaşan bir yöntem olan Penman-Monteith eşitliđi kullanılarak ayçiçeđi hatlarının bitkisinin sulama programı hazırlanmasında önerilebilir. Araştırmadan elde edilen sonuçlar diđer araştırmacılar tarafından da test edilebilir.

**Abstract**

The spatial arrangement and connectivity of urban environments play a significant role in shaping human behavior, social interactions, and the overall functioning of cities. This study explores the application of the Space Syntax method as a powerful tool in understanding and designing urban spaces that promote efficient movement, social integration, and improved quality of life. The Space Syntax method, rooted in architecture and urban planning, focuses on mapping and analyzing the spatial layout and connectivity of cities, districts, or individual buildings. By utilizing graph theory and mathematical models, this approach allows researchers and practitioners to unveil patterns of movement, accessibility, and social interaction within built environments. This study provides an overview of the theoretical framework and the various techniques employed in Space Syntax analysis. It discusses the significance of axial and visibility analysis, which capture the movement potential and visibility relationships of different spatial configurations. Furthermore, it delves into tools such as integration analysis, which quantifies the interconnectedness of spaces, and configurational analysis, which measures the complexity and intelligibility of spatial layouts. The study further highlights the invaluable insights provided by Space Syntax analysis in the planning and design of cities and buildings. By understanding how spatial layouts influence human behavior, decision-makers can optimize urban environments to foster social cohesion, pedestrian movement, and accessibility. This method has the potential to inform crucial decisions related to urban regeneration, transportation planning, and the design of public spaces.

**Keywords:** Space Syntax in Urban Planning, Space Syntax in Architecture, Human Behavior

## **Introduction**

In the intricate weave of urban landscapes and architectural design lies a profound understanding of space and its influence on human behavior. At the heart of this understanding is the concept of space syntax—a powerful analytical tool that unveils the underlying patterns and relationships within built environments. As cities grow denser and design becomes more complex, the application of space syntax offers a compelling lens through which architects and urban planners can decipher the dynamics of space. Urban planning is a complex and multifaceted process that requires careful consideration of numerous factors to create functional and livable cities. One approach gaining traction in recent years is the use of space syntax. Space syntax is a method that analyzes spatial configurations and their relationships to human behavior. By mapping the accessibility and connectivity of urban spaces, planners can better understand how people navigate and interact with the built environment. This information can inform decisions on transportation, land use, and urban design to create more efficient, inclusive, and sustainable cities. As urban populations continue to grow, the need for strategic planning becomes increasingly crucial. Through the use of space syntax, planners can gain valuable insights into the spatial dynamics of cities, ultimately leading to more effective and responsive urban planning strategies. This study delves into the fundamental principles and practical applications of space syntax, exploring its transformative impact on architectural theory and urban planning strategies. From its theoretical origins to its contemporary use in shaping vibrant, functional spaces, we embark on a journey to uncover how space syntax enriches our comprehension of spatial organization and human interaction.

## **Understanding Space Syntax**

Understanding space syntax is crucial for effective urban planning as it offers a comprehensive framework that integrates physical structures with social, economic, and cultural considerations. Building on the principles of space syntax theory, urban designers can gain deeper insights into the spatial configurations of urban environments and their impact on human interactions and activities. The use of advanced methodologies, such as drone oblique photography and clustering algorithms, as demonstrated in (Ran Zhang et al., 2023), allows for a nuanced analysis of spatial patterns, emergence of informal spaces, and their determinants within communities. By leveraging space syntax tools like Depthmap, designers can decipher the intrinsic relationships between architectural layouts, traffic patterns, and the formation of various spatial typologies, as exemplified in the case study of Jilin City (Kayvan Karimi, 2023). This in-depth understanding of urban morphology enables planners to develop evidence-based

designs and predictive models that address the evolving needs of urban populations while fostering sustainable and balanced urban environments. Ultimately, the integration of space syntax in urban planning practices holds the potential to reshape future urban settings by harmonizing physical structures with human existence. Space syntax emerged in the 1970s, pioneered by a group of researchers at the Bartlett School of Architecture and Planning under the leadership of Bill Hillier and Julienne Hanson. This group developed a theoretical and practical methodology aimed at providing a mathematical definition of space and testing its spatial potentials with foresight. This methodology, developed to predict human behaviors at both building and urban scales, came to be known as space syntax. Space syntax studies are not limited to urban scales but also encompass architectural scales. Over time, the most important concept encapsulated within space syntax is the notion of spatial configuration (Hillier, 2007). Hillier and Hanson (1984) assert that the spaces within buildings reflect the relationships within society. As expressed by Penn (2003), space syntax enables the comparative reading of spaces with different functional organizations and configurations.

### **Space Syntax With the Scope of Urban Planning**

#### Historical Development of Space Syntax in Urban Planning

The historical development of Space Syntax in urban planning has been a subject of significant evolution and application, as evidenced by the studies on urban agglomeration patterns and topological analyses of cities like Colombo and Irkutsk. Research (Nilantha Randeniya et al., 2023) highlights the interconnectedness of cities within urban agglomerations, emphasizing the spatial formations and population integration crucial in urban design. This perspective underscores the importance of understanding historical urbanization patterns, such as Colombo's nuclear style urbanization prior to 1970 and subsequent suburban expansion post-1990, shaping the city over time. Additionally, the study on Irkutsk (Timur A. Dashiev, 2021) showcases the practical implications of Space Syntax through the analysis of axial maps and city integration dynamics. Drawing insights from these studies, the historical development of Space Syntax reveals its relevance in enhancing urban functional zoning, improving social efficiency, and guiding spatial development strategies for sustainable urban planning practices.

#### Principles of Space Syntax Analysis

In understanding the principles of Space Syntax Analysis within the realm of urban planning, it is essential to delve into the intricate dynamics of public spaces and their impact on social interactions, particularly among the elderly population. Research has shown that close social interactions, such as those facilitated through blind-dating activities in urban areas, play a vital

role in enhancing the well-being and social connections of the elderly. This emphasis on social behavior highlights the importance of designing urban spaces that not only cater to physical needs but also foster opportunities for meaningful social engagement. Additionally, the recognition of spatial hierarchy within architectural structures, as observed in mosques, sheds light on the significance of spatial organization in creating inclusive and accessible environments for community interaction. By integrating the principles of Space Syntax Analysis with a focus on encouraging social interactions and hierarchies within public spaces, urban planners can enhance the quality of city living, promote community cohesion, and contribute to the overall well-being of residents.

### **Applications of Space Syntax in Urban Planning**

The application of Space Syntax in urban planning offers significant benefits in enhancing the design and functionality of urban spaces. By incorporating principles of Space Syntax, urban planners can analyze the spatial configurations of cities to optimize connectivity, integration, and choice within the urban fabric. Utilizing a combination of Space Syntax analysis and clustering techniques, as proposed in the study by (C. Pezzica et al., 2021), can further facilitate the evaluation of temporary housing sites post-disaster, aiding in the formulation of effective urban design strategies for resilient recovery. Additionally, the theoretical foundations of Space Syntax, as expounded in (A. Refaat, 2019), provide a framework for understanding the tangible aspects of urban design, translating intangible urban values such as legibility and accessibility into quantifiable measures. This comprehensive approach empowers urban planners to create more inclusive, navigable, and user-friendly urban environments through informed spatial design decisions.

### **Case Studies Utilizing Space Syntax**

In exploring the utilization of space syntax in urban planning through case studies, it becomes evident that the integration of digital technologies and data analysis plays a crucial role in understanding spatial patterns and their implications on social behavior and economic growth. As evidenced by the research presented in (Tara Azad Rauof, 2023), there exists a mathematical relationship between connectivity values and urban spatial layouts, highlighting the importance of analyzing such relationships to enhance urban design efficiency. Moreover, the findings from (Yunfeng Huang et al., 2023) shed light on the spatial advantages of commercial layouts in traditional villages, emphasizing the significance of strategic placement for optimal commercial success. By critically analyzing these case studies, planners and architects can glean valuable insights into how space syntax principles can be effectively applied to enhance urban

configurations, promote economic development, and improve overall urban planning strategies for sustainable and efficient city design.

#### Criticisms and Limitations of Space Syntax

The use of space syntax in urban planning has garnered significant attention for its ability to analyze spatial configurations and their impact on human behavior and movement patterns. However, criticisms and limitations of space syntax must be acknowledged to ensure its effective application in urban design. One major criticism relates to the challenge of state-space explosion, which can hinder the scalability and complexity of space syntax models. Symmetry reduction techniques, as discussed in (Shamim Ripon et al., 2011), offer a potential solution to alleviate this issue by addressing the effects of identical components within systems. Moreover, the notion of generalizing mechanical translation procedures based on thesaurus principles, as explored in (M. Masterman et al., 2011), could inspire a broader perspective on addressing the complexities of spatial analysis in urban planning through innovative methodologies. By recognizing and addressing these criticisms and limitations, urban planners can enhance the applicability and robustness of space syntax in shaping sustainable and efficient urban environments.

#### Integration of Space Syntax with Other Urban Planning Approaches

The integration of space syntax with other urban planning approaches presents a valuable opportunity to enhance the sustainable development and functionality of urban areas. This synergy allows for a comprehensive analysis of urban morphology, connectivity, and mixed land use, as seen in studies focusing on neighborhoods in Erbil and Latin American cities. By incorporating space syntax analysis alongside qualitative and quantitative methods, urban planners can gain deeper insights into the relationships between street networks, neighborhood connectivity, and residents' satisfaction. The research on neighborhood planning in Erbil demonstrates that non-gated neighborhoods tend to exhibit higher levels of connectivity and mixed land use, emphasizing the need for interventions in gated communities to align with sustainable urban design principles. Similarly, the study on the expansion areas in Latin American cities underscores the importance of integrating new development with already established urban areas to promote urban inclusion and functionality. Integrating space syntax with other planning approaches can guide decision-making processes in urban development to create more integrated, sustainable, and functional urban environments.

### Future Directions in Space Syntax Research

In contemplating the future directions of space syntax research within the realm of urban planning, it is crucial to acknowledge the evolving trends and challenges that shape the field. As highlighted by bibliometric analysis (Abdelbaseer A. Mohamed et al., 2023), there exists a gap in understanding the main characteristics and tendencies of space syntax studies, emphasizing the need to delve deeper into publication trends, collaboration networks, and research frontiers to chart a course for future exploration. Furthermore, the comparative analysis of medical research facilities (Z. Zamani, 2023) sheds light on the importance of optimizing spatial allocations and design to foster collaboration, productivity, and efficiency—a lesson that can be extended to the urban planning domain. Moving forward, future research endeavors should capitalize on empirical data and longitudinal studies to address current limitations and ensure that space syntax methodologies continue to enrich urban planning practices by enhancing connectivity, flexibility, and safety within built environments.

### Impacts of Space Syntax on Urban Design and Policy

The integration of space syntax in urban design and policy has had a significant impact on the way cities are planned and developed. By analyzing the relationship between spatial configuration and human behavior, space syntax enables planners to create more efficient and pedestrian-friendly urban environments. This approach considers how the layout of streets and buildings influences movement patterns, social interactions, and accessibility within a city. Through the use of space syntax analysis, planners can identify areas that may be underutilized or congested, leading to targeted interventions that improve the overall functionality of a city. Additionally, space syntax has been used to inform policy decisions related to transportation, land use, and public space design, promoting sustainability and equity in urban development (Akkelies van Nes et al., 2021-07-31). Overall, the application of space syntax in urban planning has proven to be a valuable tool in creating more livable and vibrant cities for residents and visitors alike.

### Challenges and Opportunities in Implementing Space Syntax

The integration of space syntax into urban planning presents both challenges and opportunities that warrant careful consideration. Focusing on the implementation of space syntax in this context reveals complexities related to data collection, analysis, and interpretation, as well as the need for interdisciplinary collaboration between urban planners, architects, and data scientists. Leveraging modern data science practices, such as artificial intelligence and machine learning, as suggested by (Travis A. Meyer et al., 2022), offers the potential to enhance the

efficiency and effectiveness of space syntax analysis in urban planning. Moreover, the incorporation of computational visual programming, as discussed in (R. Schroeder et al., 2019), can facilitate interactive design tools and real-time collaboration, critically influencing design methodologies in the architectural and urban planning realms. Embracing these technological advancements may revolutionize the way urban planners approach spatial analysis, leading to more informed decision-making processes and innovative urban design solutions that prioritize functionality and aesthetic appeal while effectively addressing societal needs.

### **Space Syntax With the Scope of Architecture**

#### Historical Development of Space Syntax in Architecture

##### 1. Early Influences (1960s-1970s):

In the 1960s and 1970s, seminal works by urban theorists such as Kevin Lynch and historical geographers like M. R. G. Conzen laid the groundwork for understanding the significance of spatial configuration in urban environments. Lynch's book "The Image of the City" (1960) explored how people perceive and navigate urban spaces, while Conzen's research on town-plan analysis, such as "Alnwick, Northumberland: A Study in Town-Plan Analysis" (1960), highlighted the importance of historical spatial arrangements in shaping urban form.

##### 2. Formation of Space Syntax Theory (1980s):

Space syntax theory emerged in the 1980s through the pioneering work of architects Bill Hillier and Julienne Hanson. Their influential book "The Social Logic of Space" (1984) laid the foundation for understanding how spatial configurations influence human behavior and social interactions within built environments. This work introduced concepts such as visibility, accessibility, and integration, which became central to space syntax analysis.

##### 3. Theoretical Refinement (1990s):

Throughout the 1990s, Hillier, Hanson, and their colleagues further refined space syntax theory and developed analytical techniques to quantify spatial configurations. The book "Space is the Machine: A Configurational Theory of Architecture" (1996) provided a comprehensive overview of space syntax theory and its applications. Additionally, scholars like Alan Penn contributed to the theoretical advancement of space syntax, exploring topics such as spatial cognition and the relationship between space syntax and architectural design.

##### 4. Widespread Adoption (2000s):

In the early 2000s, space syntax gained popularity among architects, urban designers, and researchers worldwide. Researchers such as Michael Marshall and A. Turner explored the application of space syntax in architectural design and urban planning. Space syntax analysis

became increasingly integrated into architectural and urban design practices, influencing projects ranging from individual buildings to entire cities.

#### 5. Continued Research and Applications (2010s-present):

In recent years, space syntax research has expanded to encompass a wide range of topics, including sustainability, accessibility, and pedestrian movement. Scholars like Bin Jiang and Jie Yin have applied space syntax analysis to study urban street networks and pedestrian flow patterns. The continued research and application of space syntax continue to contribute to our understanding of how spatial configuration shapes human behavior and the built environment. These references provide a comprehensive overview of the historical development of space syntax theory in architecture, from its theoretical foundations to its widespread adoption and ongoing research applications.

#### **Applications of Space Syntax in Architecture**

Designing in the field of architecture is a learning process acquired through doing and experiencing. Architects, while engaged in design, generate multiple problems and ask questions within the fieldwork. These questions aid in defining the field and executing the design, contributing to a comprehensive understanding of architectural knowledge. Architectural knowledge is a synthesis of practice and theory (Vitruvius, 1990). During the design process, architects must reconcile abstract-concrete, mystery-certainty, intuition-science, and practice-research concepts. Thus, focusing on the configurational theory (space syntax) of space and incorporating this process into design becomes an integral part of the design.

#### **The Usage Areas of Syntax in Architecture**

Space syntax analysis is often used in architectural design to understand how spatial layouts influence movement patterns, visibility, and social interactions within buildings. Architects use space syntax techniques to evaluate different design options and optimize spatial configurations for functionality and user experience (Turner, A., Penn, A., 2003). Space syntax analysis helps architects and urban designers create more navigable environments by understanding how spatial configurations affect wayfinding. By analyzing the spatial connectivity and accessibility of different paths and spaces, designers can improve navigation efficiency and user experience (Dalton, R.C., 2008). Space syntax analysis is used to assess and improve the accessibility of buildings and urban environments for people with disabilities. By identifying barriers to movement and circulation, designers can implement solutions to enhance accessibility and inclusivity (Kim, Y. H., & Steinfeld, E. 2012).

## **Conclusion**

In conclusion, the use of space syntax in urban planning has proven to be a valuable tool for analyzing and understanding the spatial configurations of cities. By applying this methodology, planners can identify patterns of movement, connectivity, and accessibility within urban environments, allowing for more informed decision-making in the design and development of urban spaces. The integration of space syntax into planning processes has the potential to optimize the functionality and efficiency of cities, creating more pedestrian-friendly environments, improving traffic flow, and enhancing overall urban livability. Additionally, space syntax analysis can help identify potential barriers to social inclusion and accessibility, guiding efforts to create more equitable and inclusive urban spaces. As cities continue to grow and evolve, the application of space syntax in urban planning will play a crucial role in shaping the future of sustainable and people-centered urban development.

Commonalities and differences have been observed between the disciplines of architecture and urban regional planning in the concept of spatial sequence. In both architecture and urban planning, spatial sequence provides an analytical analysis of spatial structures. This analytical approach helps to understand spatial relationships and interactions and to support design decisions. In addition, in both fields, spatial sequencing focuses on improving design by taking into account human behaviour and interactions. By analysing the way users perceive, move and interact with spaces, spatial sequencing contributes to more user-oriented and functional designs. While spatial organization in architecture analyses the functional arrangements within buildings, spatial organization in urban planning generally examines the spatial structures of urban areas at a large scale. Therefore, in urban planning, the spatial sequence is analysed at a macro scale to understand urban morphology and social interactions, whereas in architecture, this scale remains at a micro level. On the other hand, while spatial organisation in architecture is used in the design process of individual projects, spatial organisation in urban planning is used in the development of broader urban strategies such as urban development policies, infrastructure planning and the elimination of social inequalities.

In conclusion, the use of the Space Syntax method in architecture and urban planning presents a paradigm shift in understanding and designing built environments. By analyzing the spatial configuration and connectivity of cities and buildings, this approach offers valuable insights into the relationship between space, movement, and social interactions. Ultimately, this knowledge allows for the creation of urban environments that are not only aesthetically pleasing but also efficient, inclusive, and sustainable.

**Özet**

Moleküler orbital teorisinde, sınır moleküler orbitaller (FMO) fikri, organik kimyada moleküllerin reaktivitesini anlamak için çok önemlidir. En Yüksek İşgalli Moleküler Orbital (HOMO) ve En Düşük İşgalsiz Moleküler Orbital (LUMO) iki temel sınır moleküler orbitaldir. Kimyasal bir süreçte, HOMO orbitalinden bir elektron çıkarılır. Bir reaksiyonda, bu orbital donör orbital anlamına gelir. Öte yandan, bir kimyasal reaksiyon sırasında bir elektron alan orbital ise LUMO olarak bilinir. Bir reaksiyonda, kabul eden yani alan orbital anlamına gelir. Bu çalışmada, 2,4-dihidro-1H-siklopenta[b]indol-3-one molekülünün sınır orbital analizi Gaussian 09W yazılım paketi kullanılarak DFT/B3LYP teorisi/fonksiyoneli ve 6-311++G(d,p) temel seti ile gerçekleştirilmiştir. Elde edilen sonuçlardan, üzerinde çalıştığımız molekülün yeni bir organik korozyon inhibitörü olup olamayacağı araştırılmıştır.

**2,4-DIHYDRO-1H-CYCLOPENTA[B]INDOL-3-ONE: FRONTIER MOLECULAR  
ORBITAL ANALYSIS**

**Abstract**

In molecular orbital theory, the idea of frontier molecular orbitals (FMO) is crucial for comprehending the reactivity of molecules in organic chemistry. The Highest Occupied Molecular Orbital (HOMO) and the Lowest Unoccupied Molecular Orbital (LUMO) are the two fundamental frontier molecular orbitals. In a chemical process, one electron is extracted from the HOMO orbital. In a reaction, it stands for the orbital that is donating. On the other hand, the orbital that acquires an electron during a chemical reaction is known as the LUMO. In a reaction, it stands for the accepting orbital. In this study, the frontier orbital analysis of molecule 2,4-dihydro-1H-cyclopenta[b]indol-3-one was performed with DFT/B3LYP theory/functional and 6-311++G(d,p) basis set using Gaussian 09W software package. From the results obtained, it was investigated whether the molecule we worked on could be a new organic corrosion inhibitor.

**Keywords:** Corrosion Inhibitors, Frontier Orbitals, DFT

## **Introduction**

Inhibitors of organic corrosion are essential for preventing corrosion in metal materials. Because of their advantageous qualities, which include good metal adsorption, low oxidation resistance, thermal stability, and environmental friendliness, these compounds are frequently employed for surface anti-corrosion (Zhao et al., 2023). The ability to comprehend the molecular behavior of organic corrosion inhibitors by quantum theoretical modeling is an intriguing feature of these compounds (Brycki, Kowalczyk, Szulc, Kaczerewska, & Pakiet, 2018; Popoola, 2019). Computational techniques are used in quantum theoretical modeling to forecast the electronic structure and characteristics of molecules. Density functional theory (DFT) computations are used by researchers to investigate different factors in the context of organic corrosion inhibitors. In other words, we can put it as follows: We can investigate the atomic-level electrical structure and reactivity of molecules using quantum chemistry techniques. We can forecast the efficacy of organic compounds employed as corrosion inhibitors by using these methodologies, eliminating the need for expensive and time-consuming trials. Within the fields of materials research and corrosion prevention, this prediction capacity is extremely significant. Quantum chemical simulations shed light on the interactions between corrosion inhibitors and metal surfaces in terms of mechanism. The energy bandgap, the energy of the lowest occupied molecular orbital ( $E_{LUMO}$ ), and the energy of the highest occupied molecular orbital ( $E_{HOMO}$ ) are among the factors that we can examine. These characteristics aid in our comprehension of how inhibitors attach themselves to metal surfaces and impede the corrosion process.

In this study, the frontier orbital analysis of 2,4-dihydro-1H-cyclopenta[b]indole-3-one molecule (Fig. 1) was calculated for the first time with DFT/B3LYP theory/functional and 6-311++G(d,p) basis set using Gaussian 09W package (Frisch et al., 2009) and Gauss View 5. 0 (Dennington, Keith, & Millam, 2009) interface softwares. Based on the results obtained, it was investigated whether the molecule we studied could be a potential new organic corrosion inhibitor.

**Figure 1.** Unoptimized version of the molecule (<https://pubchem.ncbi.nlm.nih.gov/>).

## Materials and Methods

Our molecule was quantum chemically optimized using the Gaussian 09W software (Frisch et al., 2009) and Gauss View 5.0 (Dennington et al., 2009) interface tools. Gaussian 09W software (Frisch et al., 2009) is used in many different fields by researchers, such as organic chemistry, materials science, and biochemistry. It is essential to comprehending molecular characteristics and making behavioral predictions. In addition, this program includes molecular mechanics, semi-empirical and ab initio methods. The program allows for extensive customization, offering multiple theory and basis set options for each method. GaussView 5.0 (Dennington et al., 2009) is a powerful graphical interface designed to work seamlessly with Gaussian computational chemistry software. In summary, GaussView 5.0 also simplifies the workflow for computational chemists and physicists, allowing them to work efficiently with large molecular systems. With the use of the 6-311++G(d,p) basis set and DFT/B3LYP theory/functional, the molecule was optimized.

## Findings and Discussion

Utilizing the DFT/B3LYP theory/functional and 6-311++G(d,p) basis set, 2,4-dihydro-1H-siklopenta[b]indol-3-one molecule was optimized and the symmetry state of the molecule was determined as Cs (mirror symmetry). The optimized structure and the horizontal position of the molecule were shown in Fig. 2.

**Figure 2.** Optimized (a) and horizontal position (b) version of the molecule.

In the previous section, we have explained the importance of quantum chemical calculations before testing organic corrosion inhibitors in the experimental environment, both in terms of time and financially. Although there are many methods to quantum chemically predict whether a molecule can be an organic corrosion inhibitor (Albo Hay Allah, Balakit, Salman, Abdulridha, & Sert, 2023; Obot, Macdonald, & Gasem, 2015; Özlem, Gümüş, Yusuf, İrfan, & Atıf, 2022;

Saha, Hens, Murmu, & Banerjee, 2016), the most common of these is to determine the proton affinity points on the molecule, to calculate the proton affinity points on the molecule, to analyze the frontier orbital of the molecule and to decide by looking at the symmetry state. At this stage, it should be emphasized that in order for a molecule to be a corrosion inhibitor, it should generally have the following properties, which directly require frontier molecular orbital analysis for the molecule. a) Cs must be close to symmetry, b) Excess in the ring, c)  $E_{HOMO}$  value must be large, d)  $E_{LUMO}$  value must be small, e)  $\Delta E$  value must be small, f) Chemical softness value must be large, g) Chemical hardness value must be small, h) Electronegativity value must be small. In the first two stages, the symmetry of the molecule being mirror symmetry, i.e. Cs, is very good in terms of adhesion to the surface to be applied and the number of rings in the molecule is a positive start. The calculations required for the other parameters mentioned above were carried out with DFT/B3LYP theory/functional and 6-311++G(d,p) basis set using chk\* file over the optimized structure. Table 1 presented the results that were obtained.

<b>Table 1.</b> Some global reactivity descriptors the computed for the title compound.	
Parameters (eV)	Values
$E_{LUMO}$	-1.821
$E_{HOMO}$	-6.218
Energy bandgap $/E_{HOMO} - E_{LUMO}/$	4.397
Ionization potential ( $I = -E_{HOMO}$ )	6.218
Electron affinity ( $A = -E_{LUMO}$ )	1.821
Chemical hardness ( $\eta = (I - A)/2$ )	2.199
Chemical softness ( $\sigma = 1/2\eta$ )	0.227
Electronegativity ( $\chi = (I + A)/2$ )	4.020
Chemical potential ( $\mu = -(I + A)/2$ )	-4.020
Electrophilicity index $\omega = \mu^2/2\eta$	3.674
Maximum charge transfer index ( $\Delta N_{max} = \eta/\mu$ )	1.828

Fig. 3 also provided the molecule's HOMO and LOMO distributions. As can be seen from Fig. 3, the HOMO and LUMO clouds are concentrated on indole and cyclopenta rings, i.e. there is almost no electron flow from HOMO to LUMO.

**Figure 3.** HOMO and LUMO distributions of the molecule.

Band gap, ionization potential, electron affinity, chemical hardness, chemical softness, electronegativity, chemical potential, electrophilic index and maximum charge transfer values obtained by looking at the HOMO and LUMO values of the molecule. The band gap, ionization potential, electron affinity, chemical hardness, chemical softness, electronegativity, chemical potential, electrophilic index and maximum charge transfer values obtained by looking at the HOMO and LUMO values of the molecule support that the studied molecule can potentially be an organic corrosion inhibitor.

### Conclusion and Recommendations

We can emphasize the outcomes with the following remarks in the section on Conclusion and recommendations:

- Computational modeling helps evaluate the effectiveness of organic compounds as corrosion inhibitors. Therefore, the optimization and symmetry state of the 2,4-dihydro-

1H-cyclopenta[b]indole-3-one molecule, which is considered to be a potential corrosion inhibitor, was modelled quantum chemically with Gaussian 09W program.

- The frontier orbitals of the molecule and the global indicators calculated based on these values were calculated using the optimized structure. Based on the results obtained, it was predicted that the molecule could be an alternative corrosion inhibitor.
- When  $\Delta N$  is less than 3.6eV, the inhibitor's ability to donate electrons to the surface of the material increases, leading to an increase in inhibition efficiency.
- Although the theoretical results obtained are promising, the proton affinity points will be determined by using advanced computational techniques under the conditions considered for a real experimental environment and the values will be repeated more precisely. The calculations performed in this study were carried out in the gas phase.

#### **Thanks and Information Note**

The author especially thank to Prof. Dr. Fatih UCUN from the Süleyman Demirel University for his helpful contribution for Gaussian calculations.

**Özet**

Literatürde belirtildiği üzere, cüzzamla bağlantılı ağrılı bir cilt rahatsızlığı olan eritema nodozum leprosum talidomid ile tedavi edilmekte ve önlenmektedir. Ayrıca, bir kan hastalığı olan multipl miyelomdan muzdarip bireylerde deksametazon ile birlikte kullanılır. Talidomid bağışıklık sistemini etkileyerek iltihaplanmayı azaltır. Aynı zamanda multipl miyelom hücrelerinin çoğalmasını önler, bu da sonuçta vücutlarının yok olmasına yol açar. Talidomid bir leprostatik ajan ve bir antineoplastiktir (kanser ilacı). Bu çalışma, 2-(2,6-Dioxopiperidin-3-yl)-5-fluoroisoindoline-1,3-dione'un PDB-4TZ4 proteini ile moleküler kenetlenmesinin kapsamlı bir araştırmasını ve ayrıntılı analizini içermektedir. Ayrıca çalıştığımız molekülün elektronca zengin ve elektronca eksikliği olan bölgeleri MEP analizi ile araştırılmıştır. Moleküler kenetlenme çalışmaları Autodock Vina ile MEP (Moleküler Elektrostatik Potansiyel) analizi ise Gaussian 09W paket programı ile gerçekleştirilmiştir.

**2-(2,6-DIOXOPIPERIDIN-3-YL)-5-FLUOROISOINDOLINE-1,3-DIONE:  
MOLECULAR DOCKING AND MEP ANALYSIS**

**Abstract**

As stated in the literature, erythema nodosum leprosum, a painful skin condition linked to leprosy, is treated and prevented with thalidomide. Additionally, it is used in conjunction with dexamethasone to individuals suffering from multiple myeloma, a blood malignancy. Thalidomide reduces inflammation by influencing the immune system. It also prevents multiple myeloma cells from proliferating, which ultimately leads to their body's destruction. Thalidomide is a leprostatic agent and an antineoplastic (drug for cancer). This work involved a thorough investigation and detailed analysis of the molecular docking of 2-(2,6-dioxopiperidin-3-yl)-5-fluoroisoindoline-1,3-dione with PDB-4TZ4 protein. In addition, electron-rich and electron-deficient regions of the molecule we studied were investigated by MEP analysis. Molecular docking studies were performed with Autodock Vina and MEP (Molecular Electrostatic Potential) analysis was performed with Gaussian 09W package program.

**Keywords:** Thalidomide, Molecular Docking, MEP

## **Introduction**

The antiangiogenic and anti-immunoinflammatory properties of thalidomide and its analogs have increased its clinical usage in the treatment of multiple myeloma, various malignancies, and Hansen's disease despite its teratogenic hazard (Aragon-Ching, Li, Gardner, & Figg, 2007; Millrine & Kishimoto, 2017; Sherbet, 2015). Consequently, great efforts are being made to increase thalidomide's efficacy while lowering its toxicity. Due to its wide range of biological effects, including reduced TNF- $\alpha$  production, destabilized or decreased COX-2 expression, downregulated VEGF and FGF, NF- $\kappa$ B inhibition (possibly via suppression of I $\kappa$ B kinase), inhibition of prostaglandin E2 secretion, and  $\alpha$ 1-acid glycoprotein binding, thalidomide was initially thought to be a multitarget drug (Lepper, Smith, Cox, Scripture, & Figg, 2006; Paravar & Lee, 2008). But in 2010, a thalidomide-linked magnetic nanoparticle test for affinity purification revealed cereblon to be the exclusive target of thalidomide binding (Ito et al., 2010). The component of a DDB1-CUL4-RBX1 E3 ubiquitin ligase complex that recognizes substrates is called cereblon. The current theory explaining the bioactivity of thalidomide and analogues is that binding to the cereblon itself causes all downstream effects by inducing the degradation of substrates for the E3 complex by ubiquitin-dependent proteasomal enzymes (Ito & Handa, 2016; Krönke et al., 2015; Matyskiela et al., 2018). One of the products of glutamic acid is thalidomide. With the structural formula C<sub>13</sub>H<sub>10</sub>N<sub>2</sub>O<sub>4</sub>, it is a crystalline solid that dissolves readily in water. The general chemical behaviour of the structure is as follows (Fig. 1):

**Figure 1.** The chemical structure of thalidomide molecule (Peach et al., 2020). Another name of the molecule which we are working on is thalidomide 5-fluoride. So it's a thalidomide-based molecule.

This study provides a comprehensive investigation of the molecular docking of the 2-(2,6-Dioxopiperidin-3-yl)-5-fluoroisoindoline-1,3-dione molecule with the PDB-4TZ4 protein and the molecular electrostatic potential (MEP) analysis of the molecule was analysed for the first time.

### **Materials and Methods**

Quantum chemical calculations of our ligand molecule were performed with Gaussian 09W package (Frisch et al., 2009) and Gauss View 5.0 (Dennington, Keith, & Millam, 2009) interface programs and docking calculations of the molecule to the related protein were performed with Autodock Vina (Trott & Olson, 2010). A popular software for determining the geometries and energy levels of molecular structures is Gaussian 09W (Frisch et al., 2009). An interface tool for modifying and viewing molecular structures is called Gauss View 5.0 (Dennington et al., 2009). This tool allows you to study the molecule's shape and assess its many characteristics. The optimization of the used ligand was performed with the help of DFT/B3LYP theory/functional and 6-311++G(d,p) basis set. Docking calculations of the ligand molecule to the related protein were performed using Autodock Vina (Trott & Olson, 2010). Autodock Vina is a molecular modeling tool used to predict protein-ligand interactions.

### **Findings and Discussion**

The results obtained at this stage of the study can be analysed in two ways: molecular docking and MEP analysis results. When evaluated in terms of molecular docking, the following results were obtained. The molecule 2-(2,6-Dioxopiperidin-3-yl)-5-fluoroisoindoline-1,3-dione was optimized as mentioned above (Fig. 2) and subjected to molecular docking calculations with the PDB-4TZ4 protein. Calculations were performed with the Autodock Vina program. Although the protein we are working on has two chains, A and C, only the A chain was considered in the calculations. For more efficient results, the active residues of the C chain were determined as follows: PHE402, TRP400, CYS394, CYS391, TRP386, TRP380, SER379, HIS378, PRO352, ASN351, CYS326 and CYS323. Therefore, the selected grid parameters were also chosen to keep these active residues within and the obtained calculation results were presented in Table 1 (molecular docking energy scores, rmsd l.b. and rmsd u.b. values). Table 1 shows that the optimal binding energy in the first mode was determined to be -7.2 (kcal/mol). Furthermore, employing the  $\exp(\Delta G/RT)$  equation "(G: binding energy, R: gas constant= 1.987203610<sup>-3</sup> kcal/mol, and T: room temperature= 298.15K)", the inhibition constant was discovered to be 5.27669  $\mu$ M.

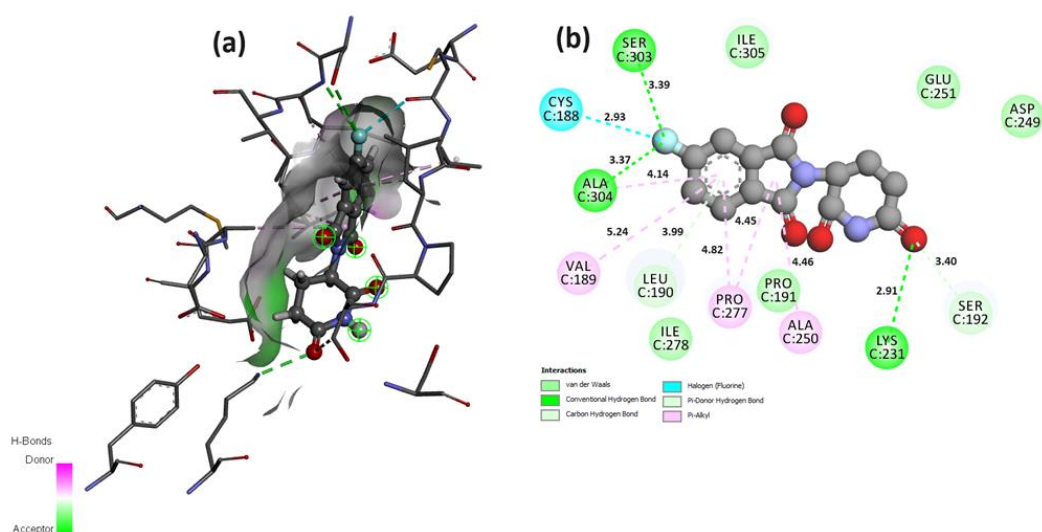

**Figure 2.** The optimized structure of the title molecule.

**Table 1.** AutoDockVina results of the binding affinity and RMSD values of different poses in 4TZ4 inhibitor (C chain) of the title compound.

Mode	Affinity (kcal/mol)	rmsdl.b.	rmsdu.b.
1	-7.2	0.000	0.000
2	-6.9	13.965	15.269
3	-6.9	8.924	11.422
4	-6.3	13.659	14.813
5	-6.1	8.347	10.429
6	-5.9	1.977	3.076
7	-5.8	21.766	23.043
8	-5.8	39.091	39.822
9	-5.8	24.228	26.101
10	-5.5	45.258	46.344

The docking results obtained as a result of the interaction are given in 3D (a) and 2D (b) in Fig. 3.

**Figure 3.** (a) 3D and (b) 2D molecular docking results of the ligand+PDB:4TZ4 (C chain).

In addition, we can easily see which point of the protein the ligand is attached to as a result of the interaction in Fig. 4.

**Figure 4.** The placement of the title molecule in active site of PDB: 4TZ4 (C chain) protein.

In the second stage of the findings, the MEP analysis of the molecule was analysed. For MEP analysis of the molecule, the chk\* file generated from the optimized structure was used. Again, as mentioned above, the calculation was performed on the same theory, functional and basis set. The MEP surface of the molecule and the scale obtained as a result of the calculation were presented in Fig. 5. Finding out a compound's reactivity and potential sites of interaction can be aided by MEP analysis, therefore it is very important (Palafox et al., 2015; Ramalingam, Periandy, Karabacak, & Karthikeyan, 2013).

The positive moiety on the MEP diagram represents the nucleophilic sites (blue dots), whereas the negative region represents the electrophilic sites (red points). Ultimately, the title chemical's MEP scale covered a range of  $-4.526e-2$  to  $4.526e-2$ .

### Conclusion and Recommendations

In the Conclusion and Recommendations section, we can highlight the results obtained with the following points:

- Molecular docking analysis between ligand and 4TZ4 (C chain) protein was performed with Autodock Vina. According to the scores obtained, 2-(2,6-dioxopiperidin-3-yl)-5-fluoroisindoline-1,3-dione molecule can be considered as a good potential inhibitor for related target.
- Using MEP analysis, the molecule's nucleophilic (on hydrogen atoms) and electrophilic (over oxygen atoms like O2, O3, O4, and O5) sites were identified. Thus, it was roughly determined at which atoms the molecule would be inserted into the protein. Quantum chemical calculations of the molecule were performed with Gaussian 09W package programme.

### Thanks and Information Note

The author especially thank to Prof. Dr. Fatih UCUN from the Süleyman Demirel University for his helpful contribution for Gaussian calculations.

**Abstract**

In the gothic works the dark, abandoned and decaying places often take place and there is a heavy reliance on symbolism. The characters, settings, and objects are closely related to symbolic meanings. Supernatural characters/beings such as vampires, monsters, demons, ghosts, witches, and supernatural objects are employed. H. P. Lovecraft in his “The Transition of Juan Romero” (1944) renders some strange occurrences at an extremely deep mine, including the rhythmic throbbing from the depths and the inexplicable sealing of the abyss. All these hint the supernatural forces at work. Romero who has an uncanny interest in the narrator’s Hindoo ring succumbs to the abyss, while the narrator experiences a moment of oblivion. In John Cheever’s “The Enormous Radio” (1947) a newly bought, enormous, and expensive radio, representing uncanny technology, violating the happiness and privacy of the family by broadcasting the private conversations of the neighbors is a supernatural intrusion, a common trope in gothic literature, and it isolates its owners from their environment. In the two American short stories the gothic clichés are used both to constitute gothic atmosphere and to convey symbolic meanings. The stories reflect the anxiety about and the fear of the unknown, including the developing technology and old lore.

**Keywords:** Gothic, Uncanny, “The Enormous Radio”, John Cheever, “The Transition of Juan Romero”, H. P. Lovecraft

## **Introduction**

Gothic architecture is associated with churches, cathedrals, ribbed vaults, pointed arches, and flying buttresses. As a genre, the gothic dates back to the eighteenth century when *The Castle of Otranto* by Horace Walpole (1717-1797) was published in 1764. Moreover, the dark, abandoned, decaying places frequently take place in gothic works. Besides, there is a heavy reliance on symbolism in gothic works, characters, settings, and objects are engaged with symbolic meanings. The reader encounters supernatural characters such as vampires, monsters, demons, ghosts, witches, and supernatural objects like the ring in “The Transition of Juan Romero” by H. P. Lovecraft (1890-1937), and the radio in “The Enormous Radio” by John Cheever (1912-1982). There are also supernatural events in gothic fiction. The anti-hero figure or the gothic protagonist portrayed as flawed, isolated, or a marginalized outcast are common. “The Transition of Juan Romero” by Howard Phillips Lovecraft is a short story about the unsettling past experiences of the unnamed narrator with the enigmatic Mexican miner Juan Romero in the Norton Mine in 1894. This experience was fraught with horror and ominous incidents. From the beginning, the introduction of Juan Romero creates an eerie atmosphere. Lovecraft’s use of gothic descriptions, vivid imagery, and the desolate setting lead to a sense of unease and dread throughout the mysterious story. The story includes the common features of gothic literature but most importantly there is a gothic object in the story, the narrator’s Hindoo ring with strange writing on it which attracts the attention of Juan Romero. “The Enormous Radio” by John Cheever, published in the *New Yorker Magazine* in 1947 narrates the story of a nine-years married couple with two children. They have an “average of income, endeavour and respectability” (Cheever, 2024) in an apartment near Sutton Place. Their relationship with the newly bought gothic-like, enormous, and expensive radio violates privacy by broadcasting the private conversations of their neighbours. Jim and Irene Wescott are fond of serious music unlike their environment, and they frequently go to the cinema, listen to music on the radio, and go to concerts. That is why, music has a crucial role in their lives. In the beginning, the couple and their way of living with their two children seem normal, yet towards the end of the story, the reader understands that they are not acting ethically like their neighbours whose conversations they hear on the radio. This radio is interesting because the family can hear the voices in the apartment through it.

### **Discussion**

The narrator of “The Transition of Juan Romero” by Howard Phillips Lovecraft is nameless since according to him a man who “suddenly migrates to the States or the Colonies, ... leaves his past behind him” (Lovecraft, 2024). However, he always tells about a character named Juan Romero with his name at every turn. He states that not so long after his arrival at the Norton Mine, Juan Romero comes. He describes Romero as a noble Aztec, and states that “Juan differed little from his fellows” (Lovecraft, 2024). Nonetheless, there is a communication problem between the narrator and Juan Romero because Romero knows a few words of English, and the narrator is not acquainted with Oxonian Spanish. His past experiences with Juan Romero take place in a desolate setting, at a mine. There is an eerie setting throughout the story. The use of words such as ‘uncanny’ and ‘eerie’ in the story again attracts the reader’s attention. The narrator’s Hindoo ring attracts Juan Romero’s attention. Everything related to the ring is mysterious. The narrator does not know how he got the ring. Juan Romero a native sees it and he is fascinated and becomes like a slave a narrator. Maybe the ring evokes something for him or he feels that he should be a slave to the owner of the ring. Juan lives the ring’s magic and sacred power. It reminds him of Aztec religion. “The attachment which Romero manifested toward me was undoubtedly commenced through the quaint and ancient Hindoo ring which I wore when not engaged in active labour” (Lovecraft, 2024). The narrator is also aware of this; “... my ring had affected him peculiarly...” (Lovecraft, 2024). These foreshadow the importance of the gothic object, the ring. The narrator does not even desire to talk about the incidents: “in the last years of my life, scenes and happenings fraught with a terror doubly acute because I cannot wholly define it” (Lovecraft, 2024), but there is an urge to narrate what happened on October eighteenth and nineteenth, 1894 at the Norton Mine. The narrator wants to explain the transition of Juan Romero since the narrator desires everyone to know this supernatural and mysterious story even though it is hard to explain it for him. Lovecraft’s use of atmospheric descriptions creates a sense of unease and dread as Romero’s fascination with the ancient ring leads to their descent into a supernatural abyss beneath the mine. The bizarre and otherworldly events that unfold challenge the narrator’s understanding of reality, culminating in Romero’s disappearance and the narrator’s struggle to make sense of the inexplicable horrors he has witnessed. The narrator’s ring appears as a gothic object in the story. After they discover the abyss, they try to understand what is going on. It is as if the abyss calls them and invites them. Then the narrator realizes: “... the ancient ring on my finger was glowing with eerie

radiance, diffusing a pallid lustre through the damp, heavy air around” (Lovecraft, 2024). At first, the narrator points out that they hear a noise and then go investigation. In a night the narrator hears a strange howling and pulsing sounds of ‘a creature’. The colour of the ring changes and Juan goes to the place where these sounds come. They realize “a new abyss yawned indefinitely below the seat of the blast; an abyss so monstrous that no handy line might fathom it, nor any lamp illuminate it” (Lovecraft, 2024). With Juan Romero, the narrator goes to “the infinite void” (Lovecraft, 2024) and Juan Romero is the leading one. Suddenly, Juan Romero shouts at him with dread and terror "Madre de Dios! - el sonido - ese sonido - oiga Vd! - lo oye Vd? - señor, THAT SOUND!" (Lovecraft, 2024). However, the narrator does not understand anything. Then the supernatural effect of the ring is explained by the narrator: “I realized that the ancient ring on my finger was glowing with eerie radiance, diffusing a pallid lustre through the damp, heavy air around” (Lovecraft, 2024). The reader understands that there is a strange relationship between the abyss and the ring. At the climax of the story, “the light from my ring was extinguished, and I saw a new light glimmering from lower space but a few yards ahead of me” (Lovecraft, 2024). When the light of the ring is extinguished, the narrator understands that Juan Romero is swallowed by the infinite void and the ring is lost. ‘God! I dare not tell you what I saw! ... Some power from heaven, coming to my aid, obliterated both sights and sounds in such a crash as may be heard when two universes collide in space. Chaos supervened, and I knew the peace of oblivion. I hardly know how to continue, since conditions so singular are involved; but I will do my best, not even trying to differentiate betwixt the real and the apparent’ (Lovecraft, 2024) Juan goes into the abyss and disappears in the fire. The ring that guided with its light announces the death of Juan Romero when its shine faded. Even though the narrator narrates the incidents that happen at the Norton Mine, later he explains that these happenings are experienced only by him. All the other people are not aware of what he has undergone. Thus it is obvious that there is a supernatural event has occurred. The narrator at the end of the story thinks that everything was a dream. ‘When I awakened, I was safe in my bunk and the red glow of dawn was visible at the window. Some distance away the lifeless body of Juan Romero lay upon a table, surrounded by a group of men, including the camp doctor. The men were discussing the strange death of the Mexican as he lay asleep; a death seemingly connected in some way with the terrible bolt of lightning which had struck and shaken the mountain. No direct cause was evident, and an autopsy failed to show any reason why Romero should not be living. Snatches of conversation indicated beyond a doubt that neither Romero nor I had left

the bunk-house during the night; that neither of us had been awake during the frightful storm which had passed over the Cactus range' (Lovecraft, 2024)

It is seen that all the events, all the screams, and all the fear are not perceived by the others. It is like a nightmare. All these events are inexplicable by mere reason. Through this tale of cosmic horror, and the use of the ring as a gothic object, Lovecraft explores the limits of human understanding and the fragility of the human psyche in the face of the unknown. The characters of Cheever's short story, Jim and Irene Wescott live in an apartment building with their two children in New York. It is an upper-middle class family. At the beginning of "The Enormous Radio," there is an old radio appearing as a gothic element in the way Cheever describes it: 'old instrument, sensitive, unpredictable, and beyond repair' (Cheever, 2024). Neither Jim nor Irene understands the mechanics of the old radio, and when it falters, the only thing Jim can do is to strike the side of the cabinet with his hand. Sometimes this works out, sometimes not. That is why, in order to make his wife happy, after the old radio breaks down, Jim buys a new one because they are fond of listening to classical music as a couple and the radio is essential for Irene. The newly purchased radio is not as functional as expected. Jim purchases it to entertain his wife but at the end of the story, it is seen that it overthrows Irene. As soon as the radio enters the scene, there is a gradual change in mood and atmosphere. The scene suggests the presence of sinister influences disturbing the reader and exposing the feeling of discomfort. That is why, the new one is a gothic object. When the radio takes its place in the living room, Irene is disturbed by the presence of "the physical ugliness of the large gumwood cabinet" (Cheever, 2024) spoiling the harmony of the furniture since it does not blend with the living room's colours, which is crucial for Irene. Irene even chooses her clothes colour according to the furniture's colour because she desires to be in harmony with her house. She is an obsessive woman. She hides radio behind the armchair. That is why, it is perceived as "an aggressive intruder" by her. Besides, when she switches it, an ornament falls from the table into the floor due to the "noise" that it produces. It creates noise, it is not a radio for listening to classical music or even any type of music. The sounds are an unpredictable producing a gothic atmosphere. The radio fails to give Irene a good first impression. On the second try, Irene listens to Mozart's quintet. Despite initially enjoying the quintet, she soon encounters interference, including crackling sounds in addition to other noises. Despite her attempts, she could not fix the problem, and the instrument is depicted as "powerful and ugly" (Cheever, 2024). It is like Irene feels the uncomfortable side of the radio even when she sees it for the first time. When Jim comes and tries to switch the radio, he has the same experience as Irene. "A man was

speaking on the station Jim had chosen, and his voice swung instantly from the distance into a force so powerful that it shook the apartment" (Cheever, 2024). It is not desirable to listen to music via the radio. It appears unbearable not only for Irene but also for Jim. They find it out of order, abnormal and uncanny; thus, they try to make it repaired. Furthermore, the radio is a supernatural element, representing the uncanny technology. It is "a radio whose 'enormous' power is its ability to broadcast not the standard range of programs available at normal frequencies, but instead, the private dramas enacted in each of the apartments in the Wescotts' building." (Gerlach, 2024, p. 146-147) While Irene listens to Chopin, she hears a man's voice speaking to a woman. While the man and the woman are speaking obscenely, the couple continues to listen to them. Irene continues to listen to the conversations of the neighbours whenever she has time. They are afraid of the possibility of being heard by the others. Although listening to their neighbours' conversations is not a problem for the couple, being heard by them is a problem. They do not have the feeling of guilt. They do not have moral dilemmas but they act amorally by listening to these private conversations. They wonder about the other people's personal lives. Irene spends all of her spare time in front of the radio. She only listens to the radio. The radio represents uncanny technology by violating the privacies of the neighbours and revealing their secrets and troubles. It transmits the neighbours' conversations to the Wescotts leading to an unpleasant atmosphere later. It becomes a supernatural intrusion, a common trope in gothic literature. After making sure no one heard them, they continue listening to the radio. Irene becomes curious about the lives of the other people's, and so obsessed with the radio that at the end her husband points out that listening to the radio is like voyeurism and she should give it up. The radio isolates Irene from her environment because she does not desire to meet her friends and relatives. It causes obsession and isolation which are common themes in gothic literature. Through the conversations on the radio, the moral decay of the urban people is perceived because there is infidelity, addiction, mental illness, and lies. As Irene continues to listen to these conversations, she begins to experience psychological turmoil. She wants Jim to interfere because Mr. Osborn is beating his wife. She wants her husband to interfere in the lives of the people she is eavesdropping on. After that point the couple starts to argue; Irene asks Jim not to argue with her because she desires to be different from their unethical and unhappy neighbours. Irene differentiates his relationship with Jim by stating: "Don't, don't, don't, don't quarrel with me, ... All the others have been quarreling all day. Everybody's been quarreling. They're all worried about money. Mrs. Hutchinson's mother is dying of cancer in Florida and they don't have enough money to send her to the Mayo Clinic. At least, Mr. Hutchinson says

they don't have enough money. And some woman in this building is having an affair with the handyman- with that hideous handyman. It's too disgusting. And Mrs. Melville has heart trouble, and Mr. Hendricks is going to lose his job in April and Mrs. Hendricks is horrid about the whole thing and that girl that plays the 'Missouri Waltz' is a whore, a common whore, and the elevator man has tuberculosis and Mr. Osborn has been beating his wife. ... Life is too terrible, too sordid and awful. But we've never been like that, have we, darling? Have we? I mean, we've always been good and decent and loving to one another, haven't we? And we have two children, two beautiful children. Our lives aren't sordid, are they, darling? Are they? ... We're happy, aren't we, darling? We are happy, aren't we?" (Cheever, 2024) She is aware of the fact that their neighbours are not proper people, yet according to Irene, she and Jim are normal because they are not cheating on each other, they do not quarrel, and the only thing that is important for them is not money, they are ethical people. As Gerlach states: "'Normal' is compartmentalizing suffering or corruption so that we can consider ourselves above them; 'normal' is our desire to seek out the worst in others, to know the worst that can happen to them, while maintaining that we ourselves are different, untouched by what we are most curious to learn" (Gerlach, 2024, p. 148). In the story, Irene closes her eyes to their problems, she only talks about the problems of their neighbours. This is how she normalizes her relationship with her husband. Nonetheless, Jim is aware of their situation and does not place them above the others. He states that she is not an ethical person as well since she spends the money entitled to her sister. On the other hand, Jim is concerned about the money and he complains about the expenses of both the old radio and the new one. In fact, the couple is also concerned about the money like their neighbours. That is why, it is obvious that there is a lack of communication between Irene and Jim: "You've got to learn to handle the money I give you a little more intelligently, Irene ... You've got to understand that we don't have as much money this year as we had last. I had a very sobering talk with Mitchell today. No one is buying anything. We're spending all of our time promoting new issues, and you know how long that takes. I'm not getting any younger you know. I'm thirty-seven. My hair will be gray next year. I haven't done as well as I hoped to do. And I don't suppose things will get any better." (Cheever, 2024) Jim emphasizes the fact that he is not young anymore and he will not be productive as he was before. There are also some economic problems. He pours out his heart, tells things he hasn't told his wife before and paints a pessimistic picture, and complains about Irene's spending too much. That is why, the radio serves as a turning point in their marriage, causing the man to reveal the things he keeps inside. She sees that her family has the same problems like the

neighbours. And her innocence is lost. It's as if Irene wakes up from a dream and encounters reality. And she undergoes an awareness; financial and family problems. Thus, the radio's ugliness symbolizes people's ugly lives. However, instead of taking into account what her husband says, becomes afraid of the fact that the other people will hear their conversation because this is how the radio works. If you do not hear others' conversations, most probably the others hear your conversations. She has anxiety due to the radio, and even in her own house she does not feel safe and she has suspicions that she is being eavesdropped because this is what she does. It can be said that the radio as a gothic object creates a displeasing atmosphere, violates the privacy of the neighbours and leads Jim and Irene to quarrel.

### **Conclusion**

From the Middle Ages, gothic has been associated with depressing, scary themes. Besides, the representation of dark, abandoned, and decaying places often takes place and there is a heavy reliance on symbolism. The characters, settings, and objects are closely related to symbolic meanings. Supernatural characters/beings such as vampires, monsters, demons, ghosts, witches, and supernatural objects are employed to highlight the dark atmosphere. H. P. Lovecraft in his "The Transition of Juan Romero" (2024) renders some strange occurrences at an intense mine, including the rhythmic throbbing from the depths and the inexplicable sealing of the abyss. All these hint at the supernatural forces at work. Romero who has an uncanny interest in the narrator's Hindoo ring succumbs to the abyss, while the narrator experiences a moment of oblivion. The ring is a gothic object in the story. On the other hand, in John Cheever's "The Enormous Radio" (2024) a newly bought, enormous, and expensive radio, representing uncanny technology, violating the happiness and privacy of the family by broadcasting the private conversations of the neighbours is a supernatural intrusion, a common trope in gothic literature, and it isolates its owners from their environment. In the two American short stories, the gothic clichés are used both to create a gothic atmosphere and to convey symbolic meanings. The stories reflect the anxiety about and the fear of the unknown, including the developing technology and old lore.

**KIRSAL YERLEŞİMLERDE YÖRESEL KONUTLARIN TURİZM İLE  
KORUNMASI: KUZEY KIBRIS ÖRNEĞİ**

**Prof. Dr. Kağan GÜNÇE (ORCID: 0000-0003-1557-2987)**

Eastern Mediterranean University, Faculty of Architecture, Department of Int. Architecture,  
Mağusa-TRNC, Mersin 10 Türkiye  
**Email:** kagan.gunce@emu.edu.tr

**Özet**

Yerel (vernaküler) konut mimarisi coğrafi konum, iklim, aile yapısı, kültür, üretim-tüketim biçimleriyle şekillenen ve deneyimle inşa edilmiş yapılardır. Yerel konutlar, bulunduğu bölgenin özgünlüğünü, önceki yapı ve yaşam deneyimlerini günümüze taşıyan; aynı zamanda çevre, kültür ve ekonomik koşullara uygun çözümleri ile ekolojik ve sürdürülebilir yapılardır. Konut mimarisinde yerel kavramı, konutun mekana ve forma ait şekillenişini ortaya koymaya yarayan, tipolojik yaklaşımların temelini oluşturmaktadır. Yerel konut olgusu, kentler dışındaki belirli bir yerdeki geleneksel konutu tanımlarken, o yerdeki yapıların benzer yaklaşımlarla kurgulanıp örgütlendiği savını ortaya çıkarmaktadır. Kültürel miras niteliği taşıyan yerel konut mimarisi, bir toplumun geçmişi ile bugünü arasında bağ kurmasını sağlayan; toplumu kimliklendiren; yerel ve evrensel ‘değer’ niteliği taşıyan korunması amaçlanan değerdir. Kültürel mirasla ilgili odağın sadece kentsel ölçekte geleneksel ve anıtsal mimari miras için değil, aynı zamanda benzer bir hassasiyetin Yerel mimari için de gösterilmesi gerekmektedir. Kıbrıs adasına yerleşimin ne zamandan beri olduğu kestirmek oldukça zordur. Ancak bulunan ilk insan kalıntıları, adada ilk yerleşmelerin Yeni Taş devrine ait olduğu bilinmektedir. O günden bugüne pek çok medeniyete ev sahipliği yapmış olan Kıbrıs adasının hem kentlerde hem de kırsal alanlarında zengin bir kültürel mirası vardır. Yerel konut mirası da bu değerli mirasın en önemlilerindedir. Yerel konut mirası, kültür turizm potansiyeli yüksek yapılardır. Bu çalışmada, adada bu mirasın korunması için, “ICOMOS’un 2003 yılında yapılan 14. Genel Kurulu’nda Mimari Mirasın Analizi, Korunması ve Strüktürel Restorasyonu için İlkeler sözleşmesi” ve “Kültür turizminin sağlıklı bir şekilde sürdürülmesi için ICOMOS’un 1999 yılında belirlenen Kültürel Turizm Tüzüğü İlkeleri” ışığında çalışmalar yapılmıştır. Çalışmada ayrıca, literatür çalışmasına dayandırılarak Kıbrıs yerel konut yapılarının korunması gerekliliği ve yöntemleri üzerinde durulmuştur. Kuzey Kıbrıs’ta kırsal yerleşimler çalışma alanı olarak seçilmiştir.

**Anahtar Kelimeler:** Kültürel miras, koruma, kültür turizmi, kırsal yerleşimler, yerel (verneküler) konut.

**CONSERVATION OF VERNACULAR HOUSING IN RURAL SETTLEMENTS  
WITH TOURISM: NORTHERN CYPRUS CASE**

**Abstract**

Vernacular housing architecture refers to buildings that are shaped by geographical location, climate, family structure, culture, and production-consumption patterns, and are built through experience. Vernacular houses are unique to the region they are located in, carrying forward past construction and living experiences to the present day. They are also ecological and sustainable structures with solutions that are appropriate to environmental, cultural, and economic conditions. In vernacular housing architecture concept is fundamental to typological approaches, revealing the spatial and formal configuration of the dwelling. The vernacular housing phenomenon defines traditional housing in a specific location outside of cities, arguing that the structures in that location are designed and organized with similar approaches. Vernacular housing architecture, which has the character of cultural heritage, establishes a link between the past and present of a society; it identifies the society; it is a value that is local and universal and it is a value that is worth conserving. The focus on cultural heritage should not only be on traditional and monumental architectural heritage at the urban scale, but also on vernacular architecture in rural settlement with a similar sensitivity. It is difficult to determine when settlement on the island of Cyprus first occurred. However, the earliest human remains found indicate that the first settlements on the island date back to the Neolithic period. Having hosted many civilizations since then, the island of Cyprus has a rich cultural heritage in both its cities and rural areas. The vernacular housing heritage is one of the most important of these valuable heritages. Vernacular housing heritage is highly valuable for cultural tourism. This study focuses on the conservation of this heritage on the island of Cyprus, based on the “ICOMOS Principles for the Analysis, Conservation and Structural Restoration of Architectural Heritage” adopted at the 14th ICOMOS General Assembly in 2003 and the “ICOMOS Charter for Cultural Tourism” adopted in 1999. The study also discusses the necessity and methods of protecting vernacular housing structures in Cyprus based on a literature review. Rural settlements in Northern Cyprus have been selected as the study area.

**Keywords:** Cultural heritage, conservation, cultural tourism, rural settlements, vernacular housing.

## **Introduction**

The concept of locality can be said to encompass both the tangible and intangible aspects of a place, including its physical attributes and characteristics as well as its abstract and concrete values. Understanding and evaluating the concept of locality requires consideration of its historical, social, and cultural dimensions, as well as its political and psychological implications. The changing world order driven by rapid production and consumption relationships Post-Industrial Revolution has directly impacted the local / vernacular. Particularly, the concept of locality has been increasingly questioned and examined with the onset of the modernist movement, especially Post-Industrial Revolution. As the presentation of the 'modern' in place of traditional and local spread, every aspect of the local became subject to debate. Especially since the latter half of the 20th century, evaluations, activities, and action plans have been put forth to ensure that locality under the pressure of modernization is not lost. Vernacular housing architecture is shaped by geographical location, climate, family structure, culture, and production-consumption patterns (Günçe & al., 2008). At the same time, these houses are developed and built through experience. Local housing carries the uniqueness of the region, bringing forward past building and living experiences to the present. These houses are referred to as ecological and sustainable structures due to their solutions suitable for environmental, cultural, and economic conditions. Vernacular housing, which carries the characteristic of cultural heritage, is significant in bridging a society's past and present. These houses, possessing both local and universal 'value' that identifies the community, are structures that need preservation. Just as awareness, care, importance, and sensitivity are required for traditional and monumental architectural heritage structures at the urban scale, the same should be extended to local architectural heritage. The island of Cyprus, with its rich cultural history, has hosted many civilizations (Günçe & Mısırlısoy, 2019). Therefore, the island has a rich cultural heritage in both its cities and rural settlements. Vernacular housing heritage is one of the most important components of this valuable heritage and should be preserved and sustained.

## **Materials and Methods**

The transmission of vernacular housing heritage to future generations is necessary for the cultural continuity on the island. Conservation and perpetuation of this heritage are inevitable for it to be passed on to future generations. Alongside necessary restoration efforts, it is essential to revitalize these aging structures with new functions. Vernacular housing heritage represents structures with high potential for cultural tourism. Repurposing rural settlements and vernacular structures with cultural tourism functions is an important approach to sustain them.

Vernacular houses, one of the most important components of architectural heritage in rural settlements, have significant potential for tourism purposes, especially for accommodation. Proper analysis of these houses is necessary to utilize this potential. Preserving authentic structures without compromising their integrity and repurposing them for cultural tourism is one way forward. Thus, tourists will not only experience rural settlements in various dimensions but also have the opportunity to stay in the authentic vernacular houses. A comprehensive literature review was conducted on locality, rural life, vernacular architecture, vernacular housing, cultural heritage preservation, and cultural tourism. Additionally, visits were made to rural settlements in Northern Cyprus. These visits involved detailed examinations of both the region and vernacular architectural heritage. Photographs of these heritages, sketches, and historical information were gathered, especially focusing on the houses. In-depth research was conducted to preserve this heritage, guided by the principles established in the 'ICOMOS Principles for the Analysis, Conservation, and Structural Restoration of Architectural Heritage' from the 14th General Assembly in 2003 (URL 01), and the 'ICOMOS Charter on Cultural Tourism Principles' defined in 1999 (URL 02) for the sustainable management of cultural tourism. In this study, rural settlements in Northern Cyprus were chosen as the research area, and the necessity and methods of preserving Cyprus' vernacular housing were discussed based on ICOMOS guidelines.

### **Vernacular Housing Phenomenon**

From the very existence of humans until today, there has been a tendency to shape living environments according to needs, in other words, to create organized environments. The most straightforward observation of this can be made in local built environments. Described by various terms such as civil architecture, folk architecture, traditional architecture, architecture without architects, spontaneous, indigenous, primitive, ethnic, folkloric, anonymous, and regional architecture, "vernacular architecture" conveys the unique architectural language of a region (Paköz, 2017), reflecting its socio-cultural structure and natural-physical environment (Figure 1). One of the most important building blocks of vernacular architecture is undoubtedly the house, which is the spiral of human life. Originally arising from the need for shelter, this construct later became an indispensable part of life. The concept of vernacular housing has matured over the years through continuous and diverse experiences, adapting to local conditions and evolving through integration with the past. Concerning vernacular housing, the integration of 'meeting human needs with simple solutions', 'utilizing existing local resources' and

‘considering environmentally respectful design principles’ together contribute to the sustainable identity of such structures.

<b>Factors Determining Housing Form</b>	<b>Environmental Factors</b>	Climate, Topography, Materials and technology available in nearest surroundings.
	<b>Socio-Cultural Factors</b>	Working area and welfare level of the society, Familial structure (kinship) and neighbourliness, Religion, Way of living and behaviours.

**Figure 1.** Factors Determining Housing Form - Developed based on Rapoport (Rapoport, 1969)

Vernacular housing architecture is shaped by geographical location, climate, family structure, culture, and production-consumption patterns, and constructed through experiential knowledge. Vernacular housing not only carry the uniqueness of the region they are located in, preserving previous building and living experiences to the present day, but also provide ecological and sustainable solutions tailored to environmental, cultural, and economic conditions. The concept of locality in housing architecture forms the basis of typological approaches, revealing the shaping of the dwelling's space and form. While defining the vernacular housing dwelling in a specific location outside urban areas, local housing also suggests that structures in that area are similarly organized and constructed with comparable approaches. Vernacular housing, often situated in rural settlements and also referred to as vernacular homes, is characterized by being produced not by trained architect designers, but by experienced human hands, and organized in a natural manner. The significant role of local masters in the formation of vernacular housing, also described as architecture without architects, is emphasized (Rudofsky, 1964; Aran, 2000; Bektaş, 2001; Kozak, Evren, Çakır, 2013). The structure language (shape grammar) utilized by these masters and the norms they conceptualize are among the most critical elements of local housing. Besides being based on traditions, vernacular housing architecture in rural settlement is shaped by Environmental Factors and Socio-Cultural Factors (Figure 1).

### **Assessment of Vernacular Housing as Cultural Heritage**

Culture encompasses the tangible and intangible elements shared by a society, including beliefs, values, and objects passed down to future generations, serving as a bridge between the past, present, and future. Cultural values tend to persist more strongly in rural life compared to urban areas, making rural settlements valuable sources of traditional values and significant cultural heritage. Not everything left by past generations constitutes 'heritage'. Objects reflecting tangible culture (such as structures, monuments, architectural works, archival materials, books, artworks, among others) and intangible culture (folklore, oral history, traditions, customs, cuisine, depictions, ceremonies, language, and knowledge) and believed to possess universal values are considered cultural heritage (URL 03). In the dynamic and advancing global landscape, dynamism and evolution persist as enduring characteristics. Urban areas undergo rapid changes, whereas rural communities undergo slower transformations, largely owing to their inherently conservative disposition. Rural settlements, along with their rich socio-cultural structure, undergo changes in demographic, economic, environmental, and spatial diversity over time, leading to the evolution of locality. Consequently, the definitions of 'rural settlements' and 'locality' change and evolve. This evolution inevitably affects the phenomenon of vernacular housing in rural settlements. Examining vernacular housing architecture within the historical and cultural context, the significance of the culture-space relationship and heritage values in the formation and organization of these structures is highlighted (Turgut 1989, Çahantimur 1997, Muşkara 2017). Vernacular housing architecture, with its documentary, historical, architectural, aesthetic, economic, and utilitarian values, constitutes an essential building block of our cultural heritage. However, this cultural heritage is at risk due to the changes in the life cycle of rural settlements in which they are located. The cultural heritage values outlined above underscore the importance of preserving this heritage. Cultural heritage possesses documentary value due to the information it contains and transmits to contemporary society. Through vernacular housing, it is possible to interpret and learn about various aspects of society, including its social, cultural, political, and economic characteristics, technical levels, trends, aesthetic approaches, lifestyles, rituals, and social norms (Ahunbay 1994, Kuban 1995). In a rapidly globalizing world increasingly tending towards uniformity, preserving the sustainability of societal identities and environmental characteristics is crucial. Vernacular housing architecture, as a significant cultural heritage transmitting values to future generations, encompasses both sustainability aspects.

Especially in rural settlements, traditional housing heritage, when preserved alongside the geography and history, culture, and traditions of the local population, can maintain its original value holistically.

### **Addressing the Relationship between Cultural Heritage and Tourism**

The acceleration of social and economic, or class-based, disparities among people, alongside changes, transformations, and developments in human rights; the widespread expansion of transportation, communication, and production; the emergence of tourism as a humanitarian need; have led to the emergence of 'Modern Tourism Paradigms' (Urry, 2002; Goeldner, Ritchie & McIntosh, 2000). The importance of tourism-related activities has rapidly increased in today's world, making tourism one of the prominent sectors. As a result of globalization, people's needs related to tourism have diversified, and new quests have gained momentum. These developments have led to a diversification and intensification of research on tourism (Urry, 2002; Stylianou-Lambert, 2011). It is observed that alongside the classical tourism known as sun, sand, and sea tourism, there is an increasing demand for alternative forms of tourism among individuals or groups participating in tourism activities. Among these types, 'Cultural Heritage Tourism' stands out. With the prominence of cultural tourism, the concept of 'culture' has become more debated. Thus, the value of 'Cultural Heritage Tourism' has increased, depending on both tangible and intangible values (Turok, 2009). Especially from the late 20th century to the beginning of the 21st century, tourism has evolved into a multi-dimensional phenomenon of significant ecological, economic, political, social, and cultural importance worldwide. The World Tourism Organization defines cultural tourism as the movement of individuals motivated by cultural factors such as participating in education, art, festivals, and events; visiting monuments and sites; exploring nature or folklore; and engaging in religious visits. The most significant difference that sets cultural tourism apart from other forms of tourism is its educational function. Culture encompasses what people think (attitudes, beliefs, ideas, and values), what they do (behaviours and ways of life), and what they create (architecture, artworks, handicrafts, and other cultural products). From this perspective, cultural tourism is not just about visiting places and monuments but also about learning about the way of life in the visited area. The Charter on the Management of Tourism in Cultural Heritage Areas, endorsed by ICOMOS in October 1999 during the 12th General Assembly in Mexico, highlights that heritage, encompassing both natural and cultural environments, belongs to all humanity, and understanding, appreciating, and protecting its universal values is the right and responsibility of every individual. It emphasizes: "Heritage is a broad concept that includes

landscapes, historic areas, sites, and built environments, as well as biological diversity, collections, ongoing and past cultural practices, knowledge, and life experiences. It narrates and records long historical development processes that form the basis of various national, regional, indigenous, and local identities and is an integral part of contemporary life. It is a dynamic reference point for growth and change, a positive tool. Cultural heritage and collective memory of every place and community are invaluable treasures, forming an essential basis for current and future developments."Especially towards the end of the 20th century, developments in world tourism have turned cultural heritage into a revenue-generating phenomenon. With an awareness of the necessity of preserving cultural heritage, indirect economic contributions should be made through tourism without commodifying cultural heritage. In this regard, principles have been established by ICOMOS (1999) for the healthy sustainability of cultural tourism. 'The Principles of the Charter on Cultural Tourism' are listed as follows (URL 01):

*Principles of the Cultural Tourism Charter (URL 01)*

- *Principle 1 - Since domestic and international tourism is among the foremost vehicles for cultural exchange, conservation should provide responsible and well managed opportunities for members of the host community and visitors to experience and understand that community's heritage and culture at first hand.*
- *Principle 2 - The relationship between Heritage Places and Tourism is dynamic and may involve conflicting values. It should be managed in a sustainable way for present and future generations.*
- *Principle 3 - Conservation and Tourism Planning for Heritage Places should ensure that the Visitor Experience will be worthwhile, satisfying and enjoyable.*
- *Principle 4 - Host communities and indigenous peoples should be involved in planning for conservation and tourism.*
- *Principle 5 - Tourism and conservation activities should benefit the host community.*
- *Principle 6 - Tourism promotion programmes should protect and enhance Natural and Cultural Heritage characteristics.*

*The Objectives of the International Cultural Tourism Charter are (URL 01):*

- *To facilitate and encourage those involved with heritage conservation and management to make the significance of that heritage accessible to the host community and visitors.*

## **VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY SCIENTIFIC STUDIES**

**April 09-16, 2024 / Lisbon, Portugal**

- *To facilitate and encourage the tourism industry to promote and manage tourism in ways that respect and enhance the heritage and living cultures of host communities.*
- *To facilitate and encourage a dialogue between conservation interests and the tourism industry about the importance and fragile nature of heritage places, collections and living cultures, including the need to achieve a sustainable future for them.*
- *To encourage those formulating plans and policies to develop detailed, measurable goals and strategies relating to the presentation and interpretation of heritage places and cultural activities, in the context of their preservation and conservation. In addition,*
- *The Charter supports wider initiatives by ICOMOS, other international bodies and the tourism industry in maintaining the integrity of heritage management and conservation.*
- *The Charter encourages the involvement of all those with relevant or at times conflicting interests, responsibilities and obligations to join in achieving its objectives.*
- *The Charter encourages the formulation of detailed guidelines by interested parties, facilitating the implementation of the Principles to their specific circumstances or the requirements of particular organisations and communities.*

In light of these principles and ‘ICOMOS Principles for the Analysis, Conservation and Structural Restoration of Architectural Heritage’ adopted at the 14th ICOMOS General Assembly in 2003 (URL 02), must be conserved and kept alive. Only in the light of these approaches is it possible to convey this cultural heritage to future generations.

Cultural assets attract the interest of people from different communities due to the values they carry. These works, which contain many experiences within their historical context, are important as objects of value for tourism. Despite their unique values and aging physical conditions, cultural heritage structures strive to stand upright and attract people from different parts of the world for various purposes. Therefore, these assets make significant contributions to tourism. Rural tourism can be defined as the totality of tourist activities conducted in a geography other than sea and mountain areas. Rural tourism is a type of tourism that is integrated with rural culture, natural environment, and agriculture, and can also be easily integrated with other types of tourism. Therefore, rural tourism, enriched with various local,

**VI. INTERNATIONAL CONFERENCE ON GLOBAL PRACTICE OF MULTIDISCIPLINARY  
SCIENTIFIC STUDIES**

*April 09-16, 2024 / Lisbon, Portugal*

national, and international initiatives, can attract both local and foreign people to rural settlements for holidays (Soykan, 1999). In rural tourism, the rural world is presented to the tourist in all its aspects. During the tourist's stay, besides resting, it is possible to watch, participate, learn, and engage in various activities. The applicability of rural tourism in all four seasons increases the variety of activities. Moreover, the rural geographical environment is a unique place where many recreational activities based on outdoor activities can be carried out. Rural culture, on the other hand, encompasses different activities, all of which are specific to the region, and even if similarities are found, it is difficult to encounter the same elsewhere (Stojanović, & Denadić, 2020). Since tourists of sea tourism are tired of the same architecture and animations in all coastal facilities, they look for locality at least in food and music in the countries they visit. Rural tourism is the one that will provide them with authenticity (Soykan, 2003).

**An overview of the Vernacular Housing Phenomenon in Cyprus**

Due to its significant historical background, the island of Cyprus has hosted many communities with differences in religion, language, race, and thus their civilizations. Therefore, the island of Cyprus possesses a rich cultural heritage. A mobilization should be declared to preserve our country's rich cultural heritage.

Period	Duration
<b>Late Paleolithic Period</b>	9000–7000 BC
<b>Neolithic Period</b>	7000–3800 BC
<b>Chalcolithic Period</b>	3900–2500 BC
<b>Early Bronze Age</b>	2500–1900 BC
<b>Middle Bronze Age</b>	1900–1650 BC
<b>Late Bronze Age</b>	1650–1050 BC
<b>Geometric Period</b>	1050–750 BC
<b>Archaic Period</b>	750–475 BC
<b>Classical Period</b>	475–325 BC
<b>Hellenistic Period</b>	325–50 BC

**Figure 2.** Historical periods in Cyprus before 1960 (Karageorgis, 1969).

On the island, traces of the Lusignan, Venetian, Ottoman, and British periods are still frequently encountered today. The richness of this multiculturalism has increased with each new period, akin to a ‘palimpsest’.

**Figure 3.** An important example of the typology illustrating the vernacular housing scheme (Christou & et al., 1995).

**Figure 4.** Vernacular Housing Examples from Rural Northern Cyprus. (Photo by K. Günçe)

Based on the findings of numerous studies conducted on traditional Cypriot housing, it is evident that the ‘courtyard’, where many activities take place and where a significant portion of daily life unfolds, holds an important place in this typology. Thus, the courtyard, as a large open space, has emerged as a result of the subdivision into smaller enclosed spaces such as residential units. There are two main enclosed spaces: one is the living room, carefully

constructed to accommodate various functions and designed to protect against the short but harsh winters and scorching summers, and the other is the storage room, where seasonal food needs essential for life can be stored. Positioned between the open and enclosed spaces is a semi-open area, known as the canopy, which serves as a sun control element (Günçe, K. & at al., 2008). Rural settlements in Cyprus and the vernacular architectural examples produced here can be classified geographically into three categories: 'Seaside - Coastal settlements', 'Mountain slopes - Hillside settlements' and 'Plains - Plain settlements'. In light of the research conducted by UNHCR, as depicted in Figure 3. (Christou & et al., 1995), the identified vernacular Cypriot housing layout constitutes a holistic structure from south to north, comprising open, semi-open, and enclosed spaces. The semi-open canopy space, referred to as the 'canopy', is situated between the open space termed the 'courtyard' and the enclosed space referred to as the 'multi-purpose room', 'storage' and 'kitchen'. Consistent with the principles advocated by Altman, Sommer, and Zeisel, the concept of multifunctionality, implying the ability of designs to serve multiple purposes within the same space, has been effectively applied in traditional Cypriot housing (Altman, 1975; Sommer, 1969; Zeisel, 1984). The multi-purpose room accommodates various activities such as sitting, receiving guests, cooking, dining, and sleeping. One of the significant rooms in the east-west oriented house is the 'storage' room, where seasonal food and agricultural tools are stored. Adjacent to the storage is a small room called the 'kitchen', where food preparation and dishwashing tasks are performed, and utensils are stored. Additionally, in many houses, this room also serves as a 'bathroom' where water is heated for bathing. All these rooms open onto the south-facing canopy, establishing an indirect relationship between the rooms and the street. The courtyard, where a significant part of life unfolds, hosts various activities such as vegetable cultivation, food preparation for winter storage, annual cheese (halloumi) production, relaxation, cooking, dining, laundry, and other daily household chores. Furthermore, the courtyard houses shelters for pets, a toilet (also used as a bathroom), and an oven used for baking bread. When examining the typological characteristics of vernacular Cypriot housing, we encounter striking features that underscore the determining role of 'Environmental Factors' and 'Socio-Cultural Factors' (Günçe, K. & at al., 2008).

### **Strategies for Conserving Vernacular Architecture in Rural Northern Cyprus through Tourism**

Preservation of cultural heritage is a multidimensional issue that requires knowledge and experience. The question of "what, why, and how should we preserve?" is the starting point of a nuanced debate with no single answer. These discussions, which remain relevant in many countries worldwide, lead to different outcomes in practice. However, the preservation of cultural heritage should not be about merely 'concealing' it but rather ensuring its continued existence and sustainability by allowing it to thrive and be passed down. Especially, the reuse and revitalization of many architectural heritage structures should be pursued. One of the most crucial components of cultural heritage is undoubtedly vernacular cultural heritage. Integrating vernacular cultural heritage with contemporary life is a significant factor in ensuring the cultural continuity of societies.

The significant destruction experienced by many European cities after World War II was a crucial factor in the development of the concept of conservation. The "Conference on the Conservation of the Identity and Attractiveness of Settlements and Natural Environment Settings," organized by UNESCO in 1962, was an early measure concerning the preservation of rural and associated natural environments (Eres, 2013; Muşkara, 2017). The Venice Charter, published in 1964, established principles that are still accepted today, particularly regarding architectural reconstruction, restoration, and repair (ICOMOS, 1964). In the 1980s, with the expansion of the concept of conservation, approaches to the preservation of vernacular architectural heritage also broadened. By the 1990s, rural architectural heritage began to be evaluated as a whole with its surrounding natural environment, shaping the concept of cultural heritage (Eres, 2013; Muşkara, 2017). In 2003, during the 14th General Assembly of ICOMOS,

the Principles for the Analysis, Conservation, and Structural Restoration of Architectural Heritage were adopted (URL 04). This document holds significant importance in the realm of architectural heritage and addresses the challenges posed by structures with historical and material significance. In order to ensure the conservation of the unique values of rural settlements in Northern Cyprus and their transfer to the future, the planning process of protection must be carried out with the participatory approaches of all stakeholders. In this context, rapid steps need to be taken to establish a sustainable relationship between cultural tourism and conservation. It is emphasized that the areas to be protected are different for each conservation area, as stated in the European Charter for Sustainable Tourism in Protected Areas by the EUROPARC Federation. Therefore, it is emphasized that this should be addressed at the local level (URL 05). In line with these conclusions, the general principles for the conservation of rural vernacular dwellings and other cultural heritage in rural settlements are (URL 05): 'preservation and enhancement of natural and cultural heritage', 'improvement of the quality of the tourism experience', 'increasing community awareness', 'development of area-specific tourism activities', 'organization of information and education programs for all stakeholders', 'support and preservation of the quality of life of the local population', 'promotion of social and economic development at the local level' and 'control of tourist numbers'. In addition to these principles, the conservation process for vernacular housing heritage in rural North Cyprus should encompass research, documentation, diagnosis, analysis, interpretation, determination of conservation approaches, definition of intervention measures, implementation, and monitoring activities. These activities should be based on the principles outlined in the ICOMOS (1999) 'The Principles of the Charter on Cultural Tourism' (URL 01). Therefore, conservation efforts for vernacular housing heritage in North Cyprus should be redeveloped to serve cultural tourism. ICOMOS conduct numerous studies on the preservation, sustainability, and development of vernacular structures in rural settlements for tourism purposes. Within the framework of the 'World Heritage and Sustainable Tourism Program', ICOMOS has introduced a new approach that integrates tourism and heritage management planning at the destination level, values and protects natural and cultural assets, develops sustainable tourism, and represents a new approach based on dialogue and stakeholder collaboration.

Studies demonstrate that 'cultural tourism' is one of the suitable models for rural settlements in Cyprus, given the richness of cultural heritage. In this context, within the framework established by ICOMOS, determining the shape and implementation methods of 'cultural tourism' is inevitable, but it should be done without forgetting local values.

### **Conclusion**

The concept of cultural tourism transcends merely socio-economic value, representing a national asset capable of facilitating socio-cultural interaction with the people constituting rural culture, while also serving as a prime means for representing a nation's inherent values. These values, coupled with a serene ambiance, attract the interest of not only urban populations but also foreigners desiring to acquaint themselves with authentic and unique cultural values and local livelihoods. Cultural heritage and tourism are intricately intertwined, necessitating the preservation and enhancement of both natural and architectural assets for the continuity of tourism (Kiper & et al., 2006; Kalaycı & Özçatalbaş, 2021). Consequently, sustainability, creativity, locality, and authenticity emerge as indispensable concepts to be concurrently upheld in rural tourism. While globalization endeavors to foster a ubiquitous popular culture across all spheres, there exist domains where its influence has yet to reach, preserving original values. Among these, rural settlements that uphold societal values and coexist with these values assume paramount importance. Vernacular housing architectural spaces, reflecting rural life, serve as vital reservoirs for the preservation of traditional values and their transmission to future generations. Vernacular housing, as manifestations of rural life, symbolize a period and way of life with their local and regional architectures. Concurrently, the vernacular architectural heritage in rural areas symbolizes various cultural, social, economic, and political phenomena. Thus, the preservation and perpetuation of cultural values and vernacular architectural heritage are pivotal for sustaining the memory of Cyprus. To safeguard the vernacular architectural heritage in rural Cyprus, 'cultural tourism' should increasingly be perceived as a positive force. In alignment with the principles and approaches delineated by ICOMOS, the primary objective should entail the preservation, sustenance, and transmission of the unique values of every settlement in rural Cyprus to the future. In this regard, the evaluation of 'Cultural Tourism' as a tool necessitates the implementation of participatory approaches in the conservation planning process. Urgent steps must be taken to establish the nexus between sustainable tourism, cultural heritage, and conservation. Accordingly, traditional structures constructed using conventional methods to fulfill spatial needs should cease their physical deterioration and be imbued with new functions to foster continued vitality. TOMORROW MAY BE TOO LATE.

**Özet**

Kurumsal eğitimin ilk basamağı olan okul öncesi eğitim kurumları, çocukların zamanlarının önemli bir kısmını geçirdikleri mekânlardır. Bu anlamda okul öncesi eğitim kurumlarında çocukların motivasyonu, verimliliği, fiziksel ve bilişsel gelişimi açısından fiziksel koşullar önem arz etmektedir. Okul öncesi eğitim kurumlarındaki sınıflar ve eğlence alanları, çocukların etkinlik, grup çalışmaları, sunu, gösteri gibi birçok farklı eylem alanlarını oluşturmaktadır. Bu sebeple okul öncesi eğitim kurumlarındaki ders ve etkinlik alanlarındaki kullanılan mobilyaların kullanım açısından esneklik arz etmektedir. Ayrıca mekanın fiziksel ortam öğeleri olan mobilyaların, öğrencilerin verimliliği, konsantrasyonu ve sağlığı açısından optimum konfor koşullarında olması önemlidir. Okul öncesi eğitim kurumlarındaki eğitim ve eğlence mekânları ergonomik tasarım prensiplerine uygun olarak tasarlanması gerekmektedir. Okul öncesi eğitim kurumlarındaki kullanılan mobilyaların ergonomik tasarım prensiplerine uygunluğunu analiz etmeyi ve bulgulara bağlı olarak iç mekân tasarımından dikkat edilmesi gereken tasarım prensiplerine ilişkin öneriler sunmayı amaçlayan bu çalışma kapsamında İstanbul ilinde bulunan iki okul öncesi eğitim kurumlarında inceleme çalışması yapılmıştır.

Çalışma neticesinde İstanbul ilinde mevcut biri özel biri kurumsal olmak üzere iki farklı okul öncesi eğitim kurumlarında kullanılan mobilyaların ergonomik açıdan çok önemli farklılıklar olduğu tespit edilmiştir. Özel kurumda kullanılan malzemeler ile kurumsal olan mekândaki boyutsal anlamda farklılıklar bulunmaktadır. Kurumsal olan eğitim kurumunda kullanılan mobilyalar ve malzemeler okul öncesi eğitim kurumunda eğitim gören çocuklar için uygun standartlarda olmadığı, bu sebeple kurumdaki çocukların eğitim ve eğlence açısından olumsuzluklar barındırdığı görülmüştür.

**Anahtar Kelimeler:** Mobilya Ergonomisi, Okul Öncesi Eğitim Mekânları, Mobilya Standartları, Çocuk Mobilyaları.

**INVESTIGATION OF CHILDREN'S EDUCATIONAL PLACE FURNITURE IN  
TERMS OF ERGONOMICS**

**Abstract**

Preschool education institutions, which are the first step of institutional education, are places where children spend a significant part of their time. In this sense, physical conditions are important in terms of children's motivation, efficiency, physical and cognitive development in pre-school education institutions. Classrooms and entertainment areas in pre-school education institutions should create many different action areas for children, such as activities, group work, presentations and demonstrations. For this reason, the furniture used in lesson and activity areas in pre-school education institutions is flexible in terms of usage. In addition, it is important that furniture, which is the physical environment elements of the space, be in optimum comfort conditions for students' productivity, concentration and health. Education and entertainment spaces in pre-school education institutions should be designed in accordance with ergonomic design principles. Within the scope of this study, which aims to analyze the compliance of the furniture used in pre-school education institutions with ergonomic design principles and to offer suggestions regarding the design principles that should be taken into consideration in interior design, depending on the findings, an examination study was carried out in two pre-school education institutions in Istanbul. As a result of the study, it was determined that the furniture used in two different pre-school education institutions in Istanbul, one private and one institutional, had significant differences in terms of ergonomics. There are dimensional differences between the materials used in private institutions and corporate spaces. It has been observed that the furniture and materials used in the institutional educational institution are not of appropriate standards for children studying in the pre-school education institution, and therefore have negative effects on the education and entertainment of the children in the institution.

**Keywords:** Furniture Ergonomics, Preschool Education Spaces, Furniture Standards, Children's Furniture.

## **GİRİŞ**

Hayatın vazgeçilmez bir parçası olan eğitim, bireyin ilk eğitimi bebeklik döneminde ailesi ile başlar, daha sonra öğretmenler vasıtasıyla eğitim kurumlarında devam eder. Çocuklar toplumların geleceğe uzanan merdiven basamaklarıdır. Geleceğin teminatı olan çocuklarımızın iyi bir eğitim alması için gerekli şartların oluşturulması tüm toplumun sorumluluğundadır.

Eğitim-öğretim hayatı belirli yaş grubuna gelindiğinde devlet tarafından verilmektedir. Türkiye’de ilk eğitim devlet tarafından zorunlu bir şekilde verilmektedir. Devlet kontrolünde gerçekleşen eğitimin sağlanması ve silsile şeklinde teşkilatlanması adına eğitim-öğretim, devletin Milli Eğitim Bakanlığı’nca ilgili kanun ve yönetmelikler çerçevesinde sağlanmaktadır. Türkiye’de Milli Eğitim Bakanlığı tarafından belirlenen zorunlu eğitim belirli kriterlerle yaş gruplarının belirlenmesi, öğrencilerin yaş grubuna göre sınıflandırılması ve aynı ortamda eşit eğitim alabilmesi standartlar belirlenmiştir. Türkiye’de MEB tarafından eğitimin başlama tarihi olarak eylül ayı referans alınırken, yaş olarak 57 haftalık olan çocuklar anaokulu veya okul öncesi eğitim kurumlarında eğitim-öğretime başlamaktadır. Ancak gerekli şartların sağlanması ve ailenin isteği doğrultusunda 36 haftalık iken de okul öncesi eğitim-öğretime başlanabilmektedir (Resmi Gazete 2019. Erişim Tarihi: 25.04.2024 18.00).Çocuğun güven içerisinde olduğu ev ortamından ayrılıp günün önemli bir kısmını geçirdiği mekânların başında okul öncesi eğitim kurumları gelmektedir. Okul öncesi eğitim kurumları genellikle 3-6 yaş aralığındaki yaş grubuna yönelik eğitim-öğretim sunmak amacıyla hizmet vermektedir. Burada önemli olan mesele çocukların 0-6 yaş dönemin diğer yaş dönemlerine göre ayrıcalık göstermesidir. Erken çocukluk dönemi olarak tanımlanan bu dönemde bilişsel, fiziksel, duygusal ve sosyal gelişim kişinin sonraki hayatındaki gelişimi için temel teşkil etmektedir (Kepekçi Yetkin, 2021).Birey karakter, ilgi ve isteklerin gelişmesi de bu dönemde gerçekleşmektedir. Birey için hayatının şekillendiği bu dönemde verilmesi gereken eğitimin niteliği ve önemini daha da arttırmaktadır. Bireyin gelişiminde eğitimin kalitesi, kurgulanan eğitim sistemine bağlı olduğu kadar bu kurgunun doğru ve etkili bir şekilde hayata geçirilmesini sağlayacak ortamların, mekânların tasarlanması ve ortaya konulmasına bağlıdır. Bir eylem gerçekleştirilirken eylemin gerçekleştiği mekan, mekanın kullanıcı ile ilişkisi ve kullanıcıya verdiği destek ve sağladığı konfor koşulları eylemin kalitesini, elde edilen sonuç ürünü, dolayısıyla da kullanıcı memnuniyetini doğrudan etkilemektedir (Bilgiç ve Surur, 2016).Okul öncesi eğitim kurumları; ilgili bakanlıkların belirlediği tip projeler kapsamında il müdürlüklerince uygun görülen alanlara inşa edilmektedir. Okul öncesi eğitim kurumlarının fizyolojik ve psikolojik yeterlilikleri, ergonomik özellikleri, bulunması gereken mekanlar,

kullanıcıların tercihlerine göre nasıl şekillenmesi gerektiği, mekanlardaki alan yeterlilikleri, kullanıcı ve mekan ilişkisi, kullanıcının talepleri ve bu taleplerin mekanlara nasıl uygulanabileceği gibi konuların araştırılması ve incelenmesi önem arz etmektedir. Bu çalışmada da çocuk eğitim mekanları mobilyalarının ergonomik açıdan incelenmesi üzerine gerçekleştirilmiştir.

### **Ergonomi Tanımı**

Ergonomi kavramı anlam olarak en temel haliyle uygunluk anlamında gelmektedir. Kavram köken olarak Yunanca olup “ergo” ve “nomos” kelimelerin birleşmesiyle oluşan ergonomi sözcüğünde; “ergo” kelimesi iş kavramı, “nomos” kelimesi ise yasa kavramını karşılamaktadır (Tokat, 2018). Temel anlamda iş yasası olarak kelime karşılığı bulunan ergonomi kavramının Türkiye’deki karşılığı ise iş bilimidir (İsmailoğlu, 2016). Bunların yanında Türkçede ergonomik kavramının karşılığı kullanışlı ve elverişli olarak geçmektedir (Türk Dil Kurumu TDK, Erişim Tarihi: 28.04.2024).Çeşitli bilim dallarından edinilen veriler doğrultusunda insan yapısının ergonomisi belirlenmiş, bu kurallar çerçevesinde belirli kategorilere ayrılmıştır. Ergonominin al dalları anatomi, fizyolojik, psikolojik, antropoloji, nöroloji ve davranış bilimleri olarak sınıflandırılır (Doğan, 2007).

### **Çizim 1. Ergonomi ve diğer bilim dallarıyla ilişkileri (Doğan, 2007).**

Her şeyden önce ergonomi, incelemelerden elde edilen verileri derleyip sonuç elde eden bir yöntemdir. Teknolojik ve yaşambilimsel verileri içermektedir. İş metotlarının, araç gereçlerin ve geniş anlamda çevrenin, insanın yapısına, işlev ve yetilerine göre tasarlanmasına yardımcı olmaktadır. İnsan değiş çevreyi değiştirir (Doğan, 2007).Ergonomik veriler doğrultusunda belirlenen tasarım ilkeleri, yapılacak olan tasarımın “insan için tasarım” ilkesinden hareketle benimsendiğini göstermektedir. Tasarımlarda, evrensel ergonomik faktörlerin dışında, bireysel özellikler de yer almaktadır. Kişiden kişiye farklılık gösteren bu özellikler, mekan

kullanıcılarının kendilerine yönelik tasarımlarla mekanı şekillendirmesine sebep olmaktadır. Burada önemli olan her kullanıcının kendi mekanında kendi kurallarının yer almasıdır. Bu da evrensellik genellemesinde bizi yeni boyutlar, estetik kaygılar çıkmaktadır (Albayrak, 2012). Ergonomide temel yaklaşım, insanın fizyolojik ve psikolojik özelliklerine ilişkin veri ve bilgilerin, toplanmasıdır. Bu bilgilerin toplanmasındaki amaç, daha sonra çeşitli eşya, araç, gereç, donanım ve fiziki çevre tasarımında, kişilerin rahatını, sağlığını ve üretkenliklerini arttıracak şekilde kullanılmasıdır (Aykal ve Günyel 2010).Ergonomi araştırmaları gerçekleştirilirken gerekli parametreler incelenmektedir. Bunlar antropometri, çalışma ortamı ve fiziksel çevre, iş ve işyeri düzenleme, ergonomik tasarım ve ergonomik yaklaşım olarak sıralanabilir (Eryılmaz, 2015). Tasarlanan mekanların ölçüleri, aydınlatması, havalandırılması, tefrişleri, konumları gibi özelliklerin tasarlanması ve ergonomide erişebilirlik ve kullanılabilirlik açısından değerlendirilmesi yapılırken, insan ölçüğü referans alınmaktadır. İnsan ölçüğünden kasıt mekanların ve tasarımların kullanıcıları olan bireylerin antropometrik değerleridir (Kepekçi Yetkin, 2021).

### **Ergonominin Amacı**

Bireylerin erkek-kadın, çocuk-yaşlı, üretici-tüketici, sakat-sağlam olmalarına göre farklı özellikleri bulunmaktadır. İnsanlar doğumları ile birlikte Çevre koşulları ve dış dünyadaki birçok durum ve araçla etkileşim ve ilişki içerisine girmektedirler. Ergonomi tasarımda insan merkeze alan bir bilim dalıdır. Temelde hayatın insana uygun hale getirilmesini amaçlamıştır (Shapanis, 1983). Ergonominin iki temel amacı bulunmaktadır:

### **Tablo 1. Ergonominin Temel Amaçları**

1. Yürütülen işin etkililiğini ve etkinliğini artırmaktır: Kişi ile makineler arasındaki temel fark insanların hata yapmasıdır. Kişilerin hata nedenleri incelenecek olursa hatalar azaltılabilir. Bu yolla sistemin verim ve etkinliği yükselmektedir.
2. Çalışanların refahının artırılmasıdır: Güvenliğin ve teknoloji kullanım rahatlığının artırılması, operatörün yorgunluğunu azaltmakta ve kişilerin yaşam kalitesini yükseltici etki yapmaktadır.

### **Ergonomi Biliminin Gelişimi**

İnsanın araç-gereç ve donanımların kullanımını daha kolay ve faydalı hale dönüştürmek üzere asırlardır değişiklikler ve yeni eklemeler yapılmaktadır. Örneğin taş devrinde taştan daha sonra

hayvan kemiklerinden yapılan ara-gereçler ele tutulur bir şekilde biçimlendirilmiştir. Yine endüstri devriminde işlerin daha verimli ve kolay yapılabilmesi için birçok yeni icatlar, araç ve makinalar geliştirilmiştir. Lakin tüm bunlar “ergonomi denilebilecek bir bilimsel disiplin yaklaşımı içinde gerçekleştirilmiştir (Bridger, 1995) İş sağlığı konusunda işçilerin yanı sıra işyeri ve çevresinin de değerlendirilmesi gerektiğini ileri süren ilk kişi Ramazani'dir. Ramazani işçi sağlığı ile ilgili hastalıkları ve olası zararları araştırırken günümüzde ergonominin yaptığı benzer yöntem ve yaklaşımlar kullanmıştır. Kullandığı sistematik yaklaşımlar arasında her işin teknik analizinin yapılması, hastalık patolojisinin klinik yönlerinin değerlendirilmesi, kaynak taraması, iş yeri ile ilgili düzenlemeler ve iyileştirmeler yer almaktadır (Tunçez, 2017). Ergonomi kavramı ilk olarak Polonyalı Profesör W. B. Jastrebowski tarafından 1857'de yayımlanan bir makale ile bilim dünyasına tanıtılmıştır. Frederick Taylor 1900'lü yılların başında “Taylorism” olarak bilinen yaklaşımıyla endüstri işçilerinin seçimine yoğunlaşırken aynı zamanda insan kaynakları ve yöneylem yöneticilerince günümüzde de kullanılan çalışma yöntem ve standartlarına da ağırlık vermiştir. İşin talebine göre insan kısıtlılıklarını ve yeteneklerini de değerlendirmiştir. 1939-1945 yılları arasında ergonomi bir disiplin ve meslek haline gelme sürecini tamamlamıştır (Güler 2012). 1952 yılında İngiltere'de “Ergonomic Society”, 1957 yılında ise ABD'de “Human Factor Society” kurulmuştur. Daha sonra çeşitli ülkelerde ergonomi dernekleri kurulmaya devam etmiştir. 1990'lı yıllara gelindiğinde İngiltere'de “elle yük kaldırılmasına yönelik minimum güvenlik ve sağlık gereksinimleri” ile “ekranlı araçlarda çalışmanın minimum güvenlik ve sağlık gereksinimleri” direktifleri yayınlanmıştır (Tekbaş 2004). Ülkemizde ise 4857 sayılı iş yasası 2003 yılında yürürlüğe girmiştir. Yine “Ekranlı araçlarla çalışmalarda sağlık ve güvenlik önlemleri hakkında yönetmelik”, “Elle taşıma işleri yönetmeliği” ve “İş sağlığı ve güvenliği yönetmeliği” gibi yönetmeliklerle ergonomi sözcüğü ilk kez yasada yer almış ve bu alanda çeşitli düzenlemeler yapılmıştır (Esmailzadeh 2008).

### **Ergonominin Sınıflandırılması**

Ergonomi, geniş bir perspektife sahip olan ve çalışma ortamlarındaki etkileşimleri inceleyen bir disiplindir. Bu disiplin, genellikle fiziksel, bilişsel ve örgütsel olmak üzere 3 ana kategoriye ayrılır (Saygı, 2019):

1. Fiziksel ergonomi: Fiziksel ergonomi, çalışanların fiziksel çevreleriyle etkileşimlerini inceleyen bir alt dal olarak kabul edilir (Saygı, 2019). Bu kategori, işyerindeki ekipmanlar, araçlar ve çalışma ortamının tasarımını kapsar (Doğan vd., 2022). Bu şekilde, ergonomik mobilyalar, doğru yükseklikte masa ve sandalyeler gibi fiziksel unsurların optimal düzenlemesi sağlanarak çalışanların konforu ve performansı artırılır.

2. Bilişsel ergonomi: Bilişsel ergonomi, çalışanların zihinsel süreçleri, bilişsel işlevleri ve bilgi işleme kapasitelerini inceleyen bir alanı temsil eder. Bu kategori, görev karmaşıklığı, bilgi işleme hızı, öğrenme süreçleri gibi zihinsel faktörleri ele alır. Bu bağlamda, kullanıcı arayüzlerinin anlaşılır ve kullanıcı dostu olması, bilgi akışının düzenli ve etkili olması bilişsel ergonominin odak noktalarındandır (Doğan vd., 2022).
3. Örgütsel (Organizasyonel) ergonomi: Örgütsel ergonomi, işyerindeki örgüt yapısını, liderlik tarzlarını, iletişim ve iş düzenlemelerini inceleyen bir alanı ifade eder (Saygı, 2019).

Bu kategori, çalışanların işyerindeki ilişkilerini, iş bölümünü, motivasyonu ve örgüt kültürünü değerlendirir. Bu şekilde, bir organizasyonun verimliliği, çalışan memnuniyeti ve iş süreçlerinin düzenliliği üzerinde etki sağlanır (Saygı, 2019). Bu üç ana kategori, ergonominin geniş kapsamını anlamamıza yardımcı olarak, çalışma ortamlarının daha etkili, güvenli ve verimli olması için çeşitli faktörleri ele almaktadır.

### **Ergonomi İç Mimarlık İlişkisi**
