

Instructions for git/GitHub

1. Install git

[git installation](#)

2. On the command line enter

```
git clone https://github.com/grfiv/healthcare\_twitter\_analysis.git
```

3. This will create a new folder named

`healthcare_twitter_analysis`

which will contain all the files and folders on the GitHub repo.

4. Every day or so enter the following on the command line

```
cd healthcare_twitter_analysis (ie. go to the folder for this project)
```

```
git pull
```

This will pull down any changes I have made, keeping you current

5. It's easy for a newcomer to screw up git; it's the least intuitive useful program I think I have ever used. If things get out of control just save whatever you want to keep, delete the entire folder and go back to step 2.
