## **Explanatory Note:**

This table was compiled between 2011 and 2018. It is a list of companies offering direct-to-consumer DNA tests over the internet. It is primarily concerned with direct-to-consumer genetic testing companies operating currently and also includes those, which are no longer operating. The table briefly summarizes the services offered by each company and gives the company's location.

I am continuing to update this list, so it is a work in progress, it does include some companies that advertise their services to physicians and some companies may have altered their offerings. Further updates will be provided later in 2018. I have added a shorter table at the end of relevant other companies.

**This work is being released for informational and educational purposes and should not be used for commercial purposes.**

This work builds upon work done by the Human Genetics Commission (HGC), the Government Accountability Office (GAO) and the Genetics and Public Policy Center (GPPC) at Johns Hopkins, which have all compiled lists of DTC companies. I have also had the benefit of consulting Mary Chitty from Cambridge Healthtech Institute and comparing her list with my own, although her focus is on biotech consumer focussed companies more broadly, rather than DTC specifically. However, the list compiled here is more extensive than others previously published, and has involved a very large amount of hours of independent Internet trawling and frequent checks to ascertain whether companies are continuing to operate. As there have been a number of versions of this document prior to releasing it here, not all the checks I have carried out are included.

I have also made tables categorizing companies according to service type, which I am in the process of updating, but I am releasing this master list.

## Table of Direct-to-Consumer Genetic Testing Companies showing their location and the services offered

Company:	Location of company:	Services offered:
1) <b>23andMe</b> <sup>1</sup>	California, USA 899 West Evelyn Ave., Mountain View, CA 94041.	<ul style="list-style-type: none"><li>• Ancestry and health</li><li>• Current EU prices €79 for ancestry and €129 for health and ancestry (14 February 2018)</li><li>• Valentines special 20% off (14 February 2018)</li><li>• Previously offered:<ul style="list-style-type: none"><li>○ Pre-symptomatic</li><li>○ Predictive/susceptibility</li><li>○ Pharmacogenetic</li><li>○ Carrier</li></ul></li></ul>
2) <b>23DNA</b> <sup>2</sup>	Over 100 locations, but slightly unclear where they are based. Probably UK and Brooklyn, NY, USA.	<ul style="list-style-type: none"><li>• Paternity</li><li>• Non invasive paternity</li><li>• Relationship including:<ul style="list-style-type: none"><li>○ Maternity</li><li>○ Twin zygosity</li></ul></li><li>• Mitochondrial</li><li>• Immigration</li></ul>

- Epilepsy
- Autism
- Mitochondrial disease
- And intellectual deficiency
- Previously Tests were (2014):
  - **MitoDx™** - mitochondrial testing
  - **MitoMED1204™**
  - **MitoMED-Autism** – ‘analyzes 1204 nuclear-encoded mitochondrial residing or mitochondrial related genes plus 75 additional nuclear genes known to contribute to ASD’.
  - **MitoMED-Epilepsy™** – ‘analyzes 1204 nuclear-encoded mitochondrial residing or mitochondrial related genes plus 343 genes known to cause or contribute to epilepsy’.
  - **MitoMED-ID™** – ‘analyzes 1204 nuclear-encoded mitochondrial residing or mitochondrial related genes plus 110 additional nuclear genes known to cause or contribute to intellectual disability’.
  - **Interpretive Diagnostic ExOMe (InDxOM™)**  
– ‘For the InDxOM™ test, the coding sequence and the exon/intron boundaries of ~20,000 protein-coding genes are analyzed by harnessing the massively parallel power of NGS. MEDomics proprietary bioinformatics pipeline is used to map and compare the patient’s DNA sequence to that of a reference sequence and to control individuals, as well as

assess the depth of coverage and data quality. The exome sequence data is analyzed by MEDomics scientists to detect at least three different types of mutations: 1) point mutations that cause an amino acid substitution, 2) point mutations that cause a splicing abnormality, and 3) micro-deletions/insertions that cause a frame shift in the protein sequence. Clinical exome interpretation includes an analysis of protein “truncoid” mutations (stop codons, critical splice junction mutations, and microdeletions or insertions) and an analysis of the presence of any of the many thousands of putative mutations listed in the Human Gene Mutation Database (HGMD). The presence of such variants triggers a more detailed analysis of other variants in that gene’.

○ **And customized Mutation Expert Analysis**

This test has become the standard of care in identification of individuals with hereditary breast and ovarian cancer.</li><li>○ COLARIS® testing assesses a person’s risk of developing hereditary colorectal cancer and a woman’s risk of developing hereditary uterine cancer. COLARIS detects disease-causing mutations in the MLH1, MSH2, MSH6, PMS2 and EPCAM genes which are responsible for the majority of Lynch syndrome related cancers.</li></ul></li></ul>

<sup>234</sup> Myriad, <<https://www.myriad.com/patients/>> accessed 29 January 2014. [Checked again 24 April 2014]. Checked again 7 February 2018 and still operating.

- COLARIS AP® testing assesses a person's risk of developing hereditary colorectal polyps and cancer. COLARISAP detects mutations in the APC and MYH genes, which cause adenomatous polyposis colon cancer syndromes, including familial adenomatous polyposis (FAP), attenuated FAP (AFAP), and MYH-associated polyposis (MAP).
- MELARIS® testing assesses a person's risk of developing hereditary melanoma. This test detects inherited mutations in the p16 gene (also called CDKN2A or INK4A), which are associated with hereditary melanoma.
- PANEXIA® testing assesses a person's risk of developing hereditary pancreatic cancer. PANEXIA offers insight about the risk of future hereditary cancers for patients and their families. PANEXIA analyzes the PALB2 and BRCA2 genes, the two genes most commonly mutated in families with hereditary pancreatic cancer.
- PREZEON™ testing assesses loss of PTEN function in cancer patients, which is associated with more aggressive disease progression and poorer survival rate. The PTEN gene is a major tumor suppressor that plays a critical role in cell signaling pathways that are the target of cancer drugs, such as EGFR and mTOR inhibitors.
- TheraGuide® 5-FU testing assesses a person's risk of developing a severe toxic reaction to 5-FU-based chemotherapy. It detects variations in 2

		genes, dihydropyrimidine dehydrogenase (DPYD) and thymidylate synthetase (TYMS), that are responsible for a significant portion of serious adverse reactions to 5-FU-based therapy.
		<ul style="list-style-type: none"> <li>○ Prolaris® testing assesses the prostate cancer aggressiveness in conjunction with other clinical parameters. Prolaris measures the expression level of genes involved with cell cycle progression in tumor specimens to predict disease outcome'.<sup>235</sup></li> </ul>

business by the name of YSEQ.net. Thomas and Astrid were formerly employed by Family Tree DNA where they developed the Walk Through the Y SNP discovery programme. The new company will cater for a niche market developing custom SNPs on demand. Thomas announced the service on the Genealogy DNA list and in the ISOGG Facebook group as follows:

- Expecting a flood of new SNPs from Next Gen sequencing we try to help with cleaning up the mess by offering very traditional Sanger sequencing for any marker you desire on the Y chromosome. The testing will be performed in our own laboratory.
- Check out <http://yseq.net/> and <http://shop.yseq.net/>
- We don't have very many markers yet, but you can "Wish a SNP" of your choice and we'll make it available as fast as we can. We'll not limit the number of markers to 2000 or so. If you just received your NGS results, ask us for a bulk package offer by e-mail ([info@yseq.net](mailto:info@yseq.net)). Let me know if you have questions.
- YSEQ will focus on providing SNPs that are not available with other testing companies. SNPs will be available either singly or in panels. Family Tree DNA was previously the only other company to offer single SNP testing, but they currently do not have the capacity to provide testing for more than 2000 additional SNPs.
- New SNPs can be suggested. There is a \$1 fee for suggestions but this is a formal spam blocker, and it

will be possible to send a long list of markers at once with a single submission.

- YSEQ also plan to offer a Y-STR testing service in the near future. It is expected that this service will focus on the 300 or more STRs that are included in the next generation sequencing tests but which are not currently available to test separately from any commercial provider.
- YSEQ will provide a very useful and much-needed service as we anticipate the arrival of the SNP tsunami. We are entering uncharted territory with next generation sequencing of the Y-chromosome. Custom SNP testing using the tried and tested Sanger sequencing technology will be necessary to validate the new SNPs found. Custom SNP testing will also provide a cheaper method for comparative testing of SNPs to verify their placement on the branches of the Y-tree'.<sup>308</sup>
