PROTOCOL SYNOPSIS

A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL®) in the Treatment of Patients with Bipolar Depression

Investigator

Multicenter trial: << To be determined >>

Study center(s) and number of subjects planned

A total of approximately 740 subjects will be screened to enroll approximately 530 into the trial in order to obtain approximately 504 evaluable patients, defined as those who have a baseline visit and at least one post baseline assessment. It is expected that approximately 75 centers will participate in the trial, with each center enrolling 8 patients (maximum 70).

Study period		**Phase of development**
Estimated date of first subject enrolled	September, 2002	IIIb
Estimated date of last subject completed	March, 2004	

Objectives

Primary:

To evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks as assessed by comparing

1. the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score
2. the percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at final assessment
3. the change from baseline to each assessment in the MADRS total score

4. the change from baseline to each assessment in the Hamilton Rating scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S)

5. the Clinical Global Impression - Change (CGI-C).

Secondary:

1. to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

2. to evaluate the effect of quetiapine on anxiety compared to placebo by comparing

   - the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

   - the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

3. to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by comparing

   - the incidence and nature of all adverse events

   - the incidence and nature of drug-related adverse events

   - subject withdrawal due to adverse events during double-blind treatment

   - the number of patients having clinically significant changes in vital signs from baseline to end of treatment

   - the change in Simpson-Angus Scale (SAS) total score

   - the change in the Barnes Akathisa Rating Scale (BARS) total score from baseline to end of treatment

   - the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Exploratory

1. to evaluate the efficacy of quetiapine on sleep quality by comparing the change in the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment

2. to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment.

Hypotheses:

Primary:

1. Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

2. Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

Secondary hypotheses are defined in Section 3.1.

Study design

Study 5077US/0049 is a randomized, multicenter, double-blind, placebo-controlled, double-dummy, parallel group, fixed-dose comparison of quetiapine vs placebo in the treatment of bipolar depression. This study will be stratified 1:1 for bipolar I and bipolar II.

Target subject population

Outpatients, aged 18 to 65 years, with a diagnosis of bipolar I or bipolar II disorder with a current major depressive episode of duration less than one year but greater than 4 weeks will be enrolled in the trial. The HAM-D (17-item scale) score must be ≥20, the HAM-D item 1 (depressed mood) score must be ≥2, and the YMRS score must be ≤12 at both Visit 1and Visit 2 (randomization) to be eligible for entry into the trial.

Investigational product, dosage and mode of administration

Study drug will be titrated in a blinded manner to a total daily dose of 300 mg/day by Day 4 in the 300-mg/day treatment group and to a total daily dose of 600 mg/day by Day 8 in the 600-mg/day treatment group. Thereafter, oral doses of quetiapine fumarate will be administered in a blinded fashion once daily at bedtime (qhs) in a total daily dose of 300 or 600 mg/day. One-time dose reductions for intolerability of 100 mg/day in both the 300 mg/day and in the 600 mg/day treatment groups will be allowed at the discretion of the Investigator after Day 8.

Comparator, dosage and mode of administration

Placebo will be administered once daily with tablets matching in number and appearance to blinded quetiapine dosing.

Duration of treatment

Patients will receive double-blind, double-dummy treatment for up to 8 weeks (56 days), following an initial washout period of between 7 to 28 days (depending on the medications involved) and will come in to the clinic on Day 57 for final assessments.

Endpoints

- **Efficacy**

  Primary efficacy endpoint is the change from baseline to final assessment in the MADRS total score.

  Secondary efficacy endpoints are the percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at study endpoint, the change from baseline to each assessment (observed cases) in the MADRS total score, and the change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, and CGI-S and the CGI-C.; the change from baseline to each assessment (observed cases) and final assessment in the YMRS, and the HAM-A total scores.

- **Safety**

  Safety endpoints are the incidence and nature of all adverse events, the incidence of drug-related adverse events, the incidence of subject withdrawal due to adverse events, and the incidence of clinically significant changes in vital signs, weight, and body mass index during double-blind treatment. Tolerability endpoints are the change in the SAS total score from baseline to final assessment, the change in BARS total score from baseline to final assessment, and the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

- **Quality of life**

  Exploratory quality of life endpoints are the change from baseline in the PSQI score and Q-Les-Q total score.

Statistical methods

All statistical comparisons will be 2-sided tests for the difference between active study medication and placebo. The primary analysis will be analysis of covariance (ANCOVA) for the change from baseline to final assessment for total MADRS score. The ANCOVA model will include terms for treatment, and stratum, with the baseline MADRS score as a covariate. Pair-wise comparisons of each dose with placebo will be assessed within this model as planned comparisons. In order to adjust for multiple comparisons with placebo a step-up

procedure will be employed with a rule for tests of significance based on ordered p-values, maintaining an overall experiment wise type I error rate of 0.05. The proportion of patients having a $\geq$ 50% reduction from baseline to final assessment in MADRS will be compared across treatments using a logistic model. Change from baseline in MADRS scores at each assessment (observed cases), and change from baseline in HAM-D, HAM-D item 1, CGI-S, YMRS, HAM-A, Q-Les-Q and PSQI score at each assessment (observed cases) and LOCF, will be analyzed using the same ANCOVA model as for the primary endpoint. The CGI-C will be analyzed using the ANCOVA model with the baseline CGI-S as a covariate.

The change from baseline in SAS and BARS score data will be assessed using the same ANCOVA model as the primary endpoint. The incidence of EPS AEs and overall AEs will be reported using descriptive statistics. Vital signs, weight, and body mass index will be tabulated using descriptive statistics at baseline, final assessment, and for change from baseline. Descriptive statistics will also be used to describe the proportion of patients whose final Q-Les-Q is within community norm levels.

Repeated measures analysis of variance (ANOVA)will be performed to evaluate whether there are significant differences among treatments across time for MADRS, HAM-D, and HAM-A total scores.

Efficacy analyses will be conducted on a modified intention-to-treat (MITT) population. A per-protocol (PP) analysis will be conducted for the primary analysis measure (change from baseline MADRS) to evaluate sensitivity of the response. The safety population will include all subjects who took study medication.

APPENDICES

LIST OF ABBREVIATIONS AND DEFINITION OF TERMS

The following abbreviations and specialist terms are used in this study protocol.

Table 1 Abbreviations and specialist terms

Abbreviation or specialist term	Explanation
AE	Adverse event (see definition in Section 4.4.2.1)
ALT	Alanine aminotransferase
ANCOVA	Analysis of covariance
ANOVA	Analysis of variance
AST	Aspartate aminotransferase
BARS	Barnes Akathisia Rating Scale
BP	Bipolar Disorder
BPD	Bipolar Depression
CGI	Clinical Global Impression
CGI-C	Clinical Global Impression - Change
CGI-S	Clinical Global Impression - Severity
CMH	Cochran-Mantel Haenszel
CRF	Case Report Form
CRS	Concordant Rater systems
DSM-IV	Diagnostic and Statistical Manual of Mental Disorders - Fourth Edition
EPS	Extrapyramidal symptoms
ECG	Electrocardiogram
GCP	Good Clinical Practice

Abbreviation or specialist term	Explanation
HAM-A	Hamilton Rating Scale for Depression
HAM-D	Hamilton Rating Scale for Anxiety
ICH	International Conference on Harmonisation
ICI-D	Interactive Computor Interview-Depression
ICTI	Interactive Clinical Technologies, Incorporated
IEC	Independent Ethics Committee
IRB	Institutional Review Board
IVRS	Interactive Voice Response System
LOCF	Last Observation Carried Forward
MADRS	Montgomery-Asberg Depression Rating Scale
MITT	Modified Intent to Treat
OAE	Other significant adverse event (ie, an adverse event of special interest in this clinical development; see definition in Section 4.4.2.1). The classification of OAEs will be performed by AstraZeneca drug safety physicians after the study is complete.
PSQI	Pittsburgh Sleep Quality Index
Principal investigator	The investigator who leads the study conduct at an individual study center. Every study center has a principal investigator.
Qhs	at bedtime
Q-Les-Q	Quality of Life Enjoyment Satisfaction Questionnaire
SAE	Serious adverse event (see definition in Section 4.4.2.1).
SAS	Simpson Angus Scale
SSRI	Selective serotonin reuptake inhibitors

Abbreviation or specialist term	Explanation
UNI	Universal Systems Incorporated
YMRS	Young Mania Rating Scale

1. INTRODUCTION

1.1 Background

Quetiapine fumarate (SEROQUEL®, quetiapine) is a dibenzothiazepine derivative approved by the United States Food and Drug Administration (FDA) on 26 September 1997 following clinical development by AstraZeneca Pharmaceuticals LP (also referred to as the sponsor) for the treatment of subjects with schizophrenia. Quetiapine fumarate is designated chemically as bis [2-(2-[4-(dibenzo[b,f][1,4]thiazepin-11-yl) piperazin-1-yl]ethoxy)ethanol] fumarate

Quetiapine has been studied in a toxicological and clinical program directed at supporting clinical evaluation in man. The results of these studies are presented in the Investigator's Brochure dated January 2002. The Professional Information Brochure (PIB) contains the current prescribing information for quetiapine.

1.2 Rationale for this study

The bipolar disorders are psychiatric disorders in which a disturbance in mood is the predominant feature. Bipolar I disorder is characterized by one or more manic or mixed episodes, usually accompanied by major depressive episodes. Bipolar II disorder is characterized by one or more major depressive episodes accompanied by at least one hypomanic episode. Bipolar depression refers to the major depressive episodes that occur with bipolar I and II disorder.

The prevalence of bipolar disorder is estimated to be 1 to 3.5%, evenly divided between men and women. The length of time between onset and symptoms and proper diagnosis and treatment is approximately 10 years and it is estimated that only 60% of those suffering from a bipolar disorder are receiving appropriate pharmacotherapy.

Although there is extensive and emerging literature guiding the treatment of the manic phase of bipolar I disorder as well as many approved compounds for the treatment of unipolar depression, the treatment of bipolar depression has not been widely studied and treatment guidelines are in their infancy. The use of currently available antidepressants for monotherapy for bipolar depression is often problematic as they may increase the "switch" into hypomania or mania from depression, or increase cycle acceleration. The adjunctive use of mood stabilizing medications such as lithium carbonate (LiCO3) is common and may decrease the likelihood of these complications.

Evidence indicates that medications with mood stabilizing properties which produced low levels of mania, hypomania, or cycle acceleration may be useful as monotherapy in the treatment of bipolar depression. The antiepileptic lamotrigine produced improvement in HAM-D and MADRS scores in a 7-week, double-blind, placebo controlled trial for the

patients who completed this study (Calabrese 1999). More recently, the anti-manic agent divalproex demonstrated numerical improvement over placebo in the percentage of patients with bipolar depression having a 50% reduction in the HAM-D scores without mania in an 8 week trial (Sachs, 2001) but this difference was not statistically significant. Lithium carbonate, also approved for the treatment of mania, has been demonstrated to be effective as a monotherapeutic agent in approximately 50% of patients with bipolar depression (Bauer). However, there are efficacy and tolerability limitations which may prohibit widespread use of the above therapies.

A large multicentered, double-blind, placebo controlled trial was recently completed, which demonstrated efficacy of the atypical antipsychotic olanzapine as monotherapy for the treatment of bipolar depression (Tohen, 2002). The endpoint mean MADRS change was significantly greater for patients on olanzapine (-15.0 points) than for those on placebo (-11.9 points). Treatment-emergent mania did not differ significantly between groups. There also is evidence from small uncontrolled studies that other atypical antipsychotics such as risperidone, and clozapine have mild to moderate antidepressant activity when used in patients with mood disorders. These small studies also indicate that these compounds are unlikely to cause patients to “switch” into mania.

The potential efficacy of quetiapine in depressive symptoms is provided in data from the Quetiapine Experience with Safety and Tolerability Trial (QUEST) and from investigator-initiated trials in mood disorder patients. In an open-label trial evaluating the safety and tolerability of quetiapine over 700 subjects with schizophrenia and other psychotic disorders were randomized to treatment with quetiapine or risperidone. Quetiapine-treated patients experienced a greater improvement in depressive symptoms compared with risperidone-treated patients, with a mean difference of 1.3 points on the HAM-D after adjustment for baseline differences (P=0.028) (Mullen et al, 2001).

A trial of quetiapine in 20 neuroleptic-dependent patients with bipolar or schizoaffective disorder also suggested positive effects on the depressive and psychotic symptoms in these disorders (Sajatovic et al, 2001). Overall, in 10 patients with bipolar disorder and 10 with schizoaffective disorder who received open-label quetiapine to optimum clinical dosage (25 to 800-mg), significant improvement in Brief Psychiatric Rating Scale (BPRS), Young Mania Rating Scale (YMRS), and HAM-D scores was noted.

In summary, the paucity of satisfactory treatments available signify an unmet medical need for the treatment of bipolar depression. There are signals of efficacy from clinical trials for the antidepressant properties of atypical antipsychotics such as quetiapine.

2. STUDY OBJECTIVES

2.1 Primary objective

The primary objectives of the study are to evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks by comparing

1. the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

2. the percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at final assessment

3. the change from baseline to each assessment in the MADRS total score

4. the change from baseline to each assessment in the total Hamilton Rating Scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S), and the Clinical Global Impression - Change (CGI-C).

2.2 Secondary objective

The secondary objectives of the study are:

1. to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

2. to evaluate the effect of quetiapine on anxiety compared to placebo by

   - the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

   - the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

3. to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by

   - the incidence and nature of overall adverse events

   - the incidence and nature of drug-related adverse events

   - subject withdrawal due to adverse events during double-blind treatment

- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Experimental:

1. to evaluate the efficacy of quetiapine on sleep quality by comparing the change in sleep quality using the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment

2. to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment

3. HYPOTHESES, STUDY PLAN AND PROCEDURES

3.1 Hypotheses

Primary:

1. Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to edpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

2. Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

1. Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

2. Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

3. Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

4. Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

5. Quetiapine at a dose of 300 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

6. Quetiapine at a dose of 600 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

7. Quetiapine at a dose of 300-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

8. Quetiapine at a dose of 600-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

9. Quetiapine at a dose of 300 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

10. Quetiapine at a dose of 600 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

11. Quetiapine at a dose of 300 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

12. Quetiapine at a dose of 600 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

13. Quetiapine at a dose of 300 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

14. Quetiapine at a dose of 600 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

3.2 Overall study design and flow chart

This multicenter, double-blind, randomized, placebo-controlled, double-dummy, parallel group trial will consist of a washout period (from 7 to 28 days depending on the medications involved) followed by 8 weeks of treatment to evaluate the efficacy, safety, and tolerability of quetiapine fumarate in the treatment of a major depressive episode in adult subjects with bipolar disorder. A total of approximately 740 subjects will be screened to obtain 530 enrolled subjects to yield 504 evaluable subjects at approximately 75 centers, with a target enrollment of 8 patients per center (maximum 70). Subjects are required to have a HAM-D (17-item scale) score of $\geq$ 20 and a YMRS of =12 at screening baseline (Visit 1).

The trial comprises the following 2 periods:

- Washout period
  Subjects will undergo HAM-D, SCID, YMRS, and safety evaluations at screen (Visit 1) and if they qualify to participate they will commence a washout of antidepressant, antipsychotic, and mood stabilizer medications. The number of days for washout will depend on the medication they are taking. These medications must be discontinued for a period of at least 7 days prior to randomization (Day 1, Visit 2), with the exception of fluoxetine which must be discontinued for a period of 14 days prior to randomization (Day 1, Visit 2) and depot injections of haloperidol decanoate or fluphenazine decanoate which need 28 days washout before randomization.

- 8-week double-blind randomized treatment period (Weeks 1 to 8)
  Eligible subjects will be randomized on Day 1 (Visit 2) to 1 of 3 treatment groups: quetiapine 300 mg/day, quetiapine 600 mg/day, or placebo. The randomization will be done using a stratification based on diagnosis. Treatment will be administered once daily at bedtime for 8 weeks (Days 1 - 56). Subjects will not receive medication on Day 57 which is only for final assessments. Doses will be titrated to achieve target doses of 300 mg/day within 4 days or 600 mg/day within 8 days. A dose reduction of 100 mg is allowed to improve patient tolerance in each treatment group. MADRS assessments (used to evaluate the primary efficacy variable) will be performed at Days 1, 8, 15, 22, 29, 36, 43, 50, and 57.

Figure 1 Study flow chart

			Treatment										
Day	**Screen**	**Washout [b]**	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9-14**	**15-56**	**57**

[a] Washout of antidepressants, antipsychotics, mood stabilizer for 7 to 28 days depending on the medications involved and a 14-day washout for fluoxetine.

[b] Repeat laboratory tests and ECG only if results outside of normal range and clinically significant at Screening

c Height and weight on screen and weight on Day 57

d Physical exam includes ophthalmoscopic exam on screen

e Blood pressure will be obtained in supine and standing positions

3.3 Rationale for study design, doses and control groups

This trial is designed as a double-blind placebo-controlled evaluation of Seroquel as monotherapy in bipolar depression. There is no currently approved compound for use in bipolar depression, nor is there a clinically accepted "gold standard". Conventional antidepressants have fallen out of favor because of their ability to induce manic symptoms. Antidepressants approved forthe treatment of unipolar depression have not been demonstrated to improve mood symptoms relative to placebo (Nemeroff et al Am J Psychiatry 158:6 June 2001). Moreover, there is a high placebo response rates of approximately 30% found in bipolar depression trials. Thus, the use of a placebo treatment arm for comparison is clinically justified.

Trial treatment will be administered as quetiapine monotherapy in order to more clearly identify a treatment effect of quetiapine on bipolar depression. Quetiapine fumarate will be administered once daily at bedtime. The current label specifies twice daily (BID) but a double-blind crossover study in bipolar patients indicated that once daily (qd) is well tolerated and as effective as BID dosing (Chengappa, 2002).

A period of 7 to 28 days is adequate for washout of most psychoactive medications including antidepressants, antipsychotics (including depot agents), and mood stabilizers to ensure that subjects are stable and continue to have adequate depressive symptoms requiring treatment, prior to randomization into the trial. The double-blind treatment period of 8 weeks is consistent with the time period that is required to see a clinically meaningful response in depressive symptoms.

The trial is designed as a fixed-dose evaluation due to the failure of flexible dose regimens in other psychiatric disorders. The dosages are based on clinical trial data with quetiapine in patients with a mood disorder. In the QUEST trial, the average dose of quetiapine in patients with a primary mood disorder (N=316) was approximately 250 mg/day at 16 weeks. In 20 patients with bipolar or schizoaffective disorder treated with open-label quetiapine, the mean dose was approximately200 mg/day (Sajatovic). Based on this data, 300 mg/day administered as monotherapy is an appropriate low-dose treatment arm, and 600 mg/day is an appropriate high-dose treatment arm that should exhibit efficacy without a high rate of AEs or noncompliance.

The MADRS is a standardized, well-validated measure of depressive symptoms that is sensitive to treatment effects in depressed outpatients.

3.4 Selection of study population

3.4.1 Study selection record

Investigators must keep a record of subjects who underwent screening but were not randomized into the trial.

3.4.2 Inclusion criteria

At screen (Visit 1) subjects must fulfill all of the following criteria:

1. Documented ability to provide informed consent before beginning any study-specific procedures.

2. Male and female patients between 18 and 65 years of age, inclusive

3. Females of childbearing potential must be using a reliable method of contraception. Reliable methods include hormonal contraceptives (eg, oral contraceptive or long-term injectable or implantable hormonal contraceptive), double-barrier methods (eg, condom and diaphragm, condom and foam, condom and sponge), intrauterine devices, and tubal ligation

4. Women must have a negative pregnancy test

5. Meets DSM-IV criteria for bipolar disorder I or bipolar II, most recent episode depressed (296.5x and 296.89x), confirmed by the amended version (by Dr. Michael First) of the Structured Clinical Interview for DSM-IV (SCID) as administered by an AstraZeneca approved clinician with a signed confirmation by the Principal Investigator

6. Outpatient status

7. HAM-D (17-item) total score of 20 or greater

8. HAM-D item 1 (depressed mood) score ≥2

9. YMRS total ≤12

At randomization (Visit 2) subjects must fulfill the following criteria:

1. HAM-D (17-item) total score of 20 or greater

2. HAM-D item 1 (depressed mood) score ≥2

3. YMRS total ≤12

3.4.3 Exclusion criteria

Any of the following is regarded as a criterion for exclusion from the study:

1. Patients with a current Axis I disorder other than bipolar disorder within 6 months of screening

2. Patients whose current episode of depression exceeds 12 months or is less than 4 weeks

3. History of non-response to an adequate trial (6 weeks) of more than 2 classes of antidepressants during their current episode

4. Patients who meet DSM-IV criteria for substance dependence, for any substance except nicotine, within 12 months of screening

5. Patients with a positive urine toxicology screen for illicit substances of abuse

6. Patients who are unable to discontinue all psychoactive medications (excluding prn benzodiazepines), including antidepressants, antipsychotics, and mood stabilizer, at least 7 days prior to randomization and consistent with the pharmacokinetics of the drug

   – Patients treated with fluoxetine who have not discontinued this medication for at least 14 days prior to randomization.

   – Patients treated with haloperiodol decanoate or fluphenazine decanoate who have not discontinued these medications 28 days prior to randomization.

7. Patient who have not discontinued the use of potent P450 inhibitors and inducers (See Section 4.3, Table 13)

8. Patients who in the investigators opinion will require initiation of psychotherapy during the study period. Note: ongoing psychotherapy for a minimum of 3 months may continue.

9. Patients who, in the investigator's judgment, pose a current serious suicidal or homicidal risk at Visit 1 (HAM-D item 3 score of 3 or greater), or have made a suicide attempt within the past 6 months

10. Patients with a history of clinically significant cardiac, renal, neurologic, cerebrovascular, metabolic, or pulmonary disease, or other disease or clinical finding that is unstable or that, in the opinion of the investigator, would be negatively affected by trial medication or that would affect trial medication

11. Patients who have had a myocardial infarction within 1 year before Visit 1

12. Patients with clinically significant abnormal laboratory findings at Visit 1

13. Patients with renal impairment (serum creatinine $\geq$1.5 mg/dL) or hepatic impairment (ALT or AST 3 times the upper limit of normal)

14. Patients whose TSH is ≥10% over the upper normal limit. Patients maintained on thyroid medication must be euthyroid for a period of at least 3 months before Visit 1

15. Patients with clinically significant abnormalities on ECG

16. Women who have a positive human chorionic gonadotropin (HCG) pregnancy test at Visit 1 or who are lactating or planning to become pregnant during the course of the study

17. Patients who have participated in a clinical trial of an investigational drug within the past 3 months

18. Patients who, in the opinion of the investigator, would be non-compliant with the visit schedule or study procedures

19. History of orthostatic hypotension or conditions that would predispose them to hypotension (eg dehydration, hypovolemia)

20. Known history of intolerance, hypersensitivity, or lack of response to quetiapine or any of the components of Seroquel tablets, as judged by the investigator

3.4.4 Restrictions

Subjects will be required to adhere to the following special restrictions:

1. Use of any psychoactive drugs including antidepressants, hypnotics (with the exceptions noted in Section 4.3), mood stabilizing drugs, and antipsychotics is not permitted from a period of 5 elimination half-lives (28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

2. Use of cytochrome P450 3A4 inducers and potent inhibitors are not permitted from 14 days prior to randomization to end of study (see Table 13)

3.4.4.1 Criteria for discontinuation

Subjects may be discontinued from study treatment and assessments at any time, at the discretion of the investigator(s). Specific reasons for discontinuing a subject from this study are:

1. Withdrawal of informed consent

2. Worsening psychiatric symptoms such that the symptoms constitute a danger to themselves or to others

3. Use of psychotropic medications at any time during the double-blind treatment period.

4. Pregnancy at any time during the double-blind treatment period.

5. Clinically significant or serious adverse event that would not be consistent with continuation in the study, as determined by the investigator, AstraZeneca, or the subject.

3.4.4.2 Voluntary discontinuation by a subject

Subjects are free to discontinue their participation in the study at any time, without prejudice to further treatment. Subjects who discontinue from the study should always be asked about the reason(s) for their discontinuation and about the presence of any adverse events. They should be seen and assessed by an investigator(s) (see Section 3.4.4.4). Adverse events should be followed up and any diary cards, questionnaires (eg, for Quality of Life assessments) and investigational products should be returned by the subject.

3.4.4.3 Incorrectly enrolled or randomized subjects

Incorrectly enrolled subjects will be discontinued from further study treatment and assessments. If a subject is given the incorrect randomized treatment, the subject should be continued on the treatment dispensed and Interactive Clinical Technologies, Inc. (ICTI), the vendor providing the randomization patient assignment) should be notified of the error. The next patient randomized at the site will be assigned an appropriate kit number by ICTI, accounting for the error.

3.4.4.4 Procedures for discontinuation

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- Physical examination
- Vital signs and weight
- 12-lead ECG
- HAM-D
- MADRS
- ICI-D
- YMRS
- HAM-A

- CGI-C
- CGI-S
- SAS
- BARS
- PSQI
- Q les Q
- Adverse events assessment

Psychiatric assessments (HAM-D, MADRS, YMRS, HAM-A, CGI-C, CGI-S, Q les Q, and PSQI) should not be performed on subjects who have missed 72 hours of study drug before any study visit. Due to the pharmacokinetic profile of quetiapine, these assessments are of questionable clinical accuracy.

3.5 Treatments

3.5.1 Investigational products

3.5.1.1 Identity of investigational product and comparators

Investigational product will consist of 25-mg, 100-mg, and 200-mg tablets of quetiapine fumarate and matching placebo tablets as shown in Table 3.

Table 3 Trial medication

Tablet strength	Formulation number	Tablet color
25-mg quetiapine	F12804	peach
25- mg placebo	F12636	peach
100-mg quetiapine	F12689	yellow
100-mg placebo	F12637	yellow
200-mg quetiapine	F12690	white
200-mg placebo	F12638	white

3.5.1.2 Doses and treatment regimens

Quetiapine and placebo for each trial center will be packaged in blister cards. The 8-week supply will consist of 8 double-blind blister cards. The 8 double-blind blister cards will be packaged in subject-specific cartons.

Trial medication will be provided for each subject in an 8-card carton that contains the following:

- 1-week titration double-blind treatment cards for Days 1-7
- seven 1-week double-blind treatment cards for Days 8-56, with individual cards provided for treatment Days 8-14, 15-21, 22-28, 29-35, 36-42, 43-49, and 50-56. Each one-week blister card will include a 2-day treatment overage to accommodate visit schedules.

The Week 1 titration card will consist of 25 mg tablets, 100-mg tablets, and 200-mg tablets or matching placebo, as described below, for each of the 300 mg/day and 600 mg/day treatment groups and placebo treatment group.

Blister cards for Weeks 2 through 8, for each treatment group, will consist of 9 days of dosing with the same number of pills for each group (300-mg, 600-mg, and placebo) respectively. The cards for each treatment group will consist of 2 yellow tablets and 2 white tablets per day at bedtime.

Quetiapine or placebo will be administered once a day at bedtime with dose titration to reach a target dose of 300 mg/day by Day 4 in the 300-mg/day treatment group and 600 mg/day by Day 8 in the 600 mg/day group. The schedule for quetiapine or placebo administration is shown in Tables 4, 5, and 6.

Table 4 Dose administration schedule for 300-mg double-blind quetiapine

Trial Day	Quetiapine 300 mg/day and placebo				
	Quetiapine 25 mg	**Quetiapine 100 mg**	**Placebo 100 mg**	**Quetiapine 200 mg**	**Placebo 200 mg**

Day 8	0	2 tablets/100-mg	2 tablets/400-mg
Days 9-56	0	2 tablets/100-mg	2 tablets/400-mg

Dosing Reduction

Dose reductions for intolerability will be allowed after Day 8. In the 300-mg/day group, dose reductions of 100 mg/day will be achieved by reducing the dose by one 100-mg tablets. In the 600-mg/day group, a dose reduction of 100 mg/day will be achieved by reducing the bedtime dose by one 100-mg tablets active drug. This dose reduction can occur anytime after Day 8. Each column in the blister packs will be numbered 1-4. By Day 6 columns 1 and 2 of the blister packs will each contain a 100-mg tablet. In both the 300-mg /day group and the 600-mg/day group, column 1 will contain active medication thus ensuring that by eliminating the first column (column #1) of medication they are reducing their dose by 100-mg. Each tablet in the placebo treatment group will also indicate the same corresponding numbers (columns #1-4) as the active treatment groups even though no active product is packaged. This will ensure the blind is maintained.

Table 7 Week 1 Blister pack for 300-mg/Day Quetiapine Group

Day	Column 1	Column 2	Column 3	Column 4
1	25-mg quetiapine	25-mg quetiapine		
2	100-mg quetiapine			
3	200-mg quetiapine			
4	100-mg quetiapine	200-mg quetiapine

3.5.1.3 Labeling

All trial supplies will be provided by AstraZeneca.

The blister cards Days 1- 56 will be supplied in subject-specific cartons. Each blister card will be labeled with a two-panel, double-blind label. The left portion of the label will remain on the blister card. The right portion of the label will be affixed to the appropriate Case Report Form (CRF) as part of the individual's permanent record. The label will contain at least the following information: trial number, code assignment and storage condition. The carton for the 8 blister cards for Days 1-56 will be labeled with a single-panel double-blind label. The label will contain at least the following information: trial number, storage conditions, and instructions to dispense according to protocol.

3.5.1.4 Storage

All investigational products must be kept in a secure and locked location, at room temperature and protected from light and moisture.

3.5.1.5 Accountability

The investigational materials are to be prescribed only by the investigator or the sub-investigators named in Form FDA-1572. Under no circumstances will the investigator allow the investigational drug to be used other than as directed by the protocol without prior AstraZeneca approval.

The investigator must maintain accurate records accounting for the receipt of the investigational materials (ICTI provides a acknowledge the receipt of drug shipment module for this purpose) and for the disposition of the material. This record keeping consists of a dispensing record that includes the identification of the person to who the drug is dispensed, the quantity and the date of dispensing, and documentation of any unused drug returned to the investigator. This record is in addition to any drug accountability information recorded on the subject's hospital or clinic chart.

Starting with Week 1, each patient will return the blister card for the preceding week to the clinic. The clinic will tabulate the returned pills to aid in drug accountability.

At the termination of the study or at the request of the sponsor, the Clinical Research Associate must return any unused study supplies to Universal Systems Incorporated (USI), at the address listed below, for destruction. This return will be documented on an Investigational Product Return Invoice supplied by AstraZeneca.

USI
2084-900 Lake Industrial Court
Conyers, GA 30013

3.5.2 Method of assigning subjects to treatment groups

This trial will be established with a non-specific labeling (NCSL) randomization that will be stratified by bipolar type. Randomization to trial treatment will be done via an Interactive Voice Response System (IVRS) at ICTI on Day 1 (Visit 2) in balanced blocks within each stratum in order to ensure relative balance among treatment groups and strata (Bipolar I and Bipolar II)in terms of total number of subjects. The randomization schedule will be created under the auspices of AstraZeneca Quantitative Decision Sciences Group and will provide allocation of subject numbers to the treatment regiments. Number and size of tablets will be identical for the 3 treatment arms. Clinical supplies will contain a 4-digit subject number which is allocated to the treatment arm through the randomization scheme. A separate randomization will be used to provide kits of packaged drugs to the sites. The IVRS system at ICTI will allocate a kit number at the site for the treatment assigned through the stratified randomization.

Subject eligibility will be established before treatment randomization. Subjects will be randomized centrally sequentially within the stratum, as subjects are eligible for enrollment/randomization. If a subject discontinues from the study, the subject number will not be reused, and the subject will not be allowed to re-enter the study.

The randomization is centralized and the assigned randomized patient number and associated kit numbers will not be sequential within a site.

3.5.3 Blinding and procedures for unblinding the study

3.5.3.1 Methods for ensuring blinding

All packaging will be identical with placebo and active tablets identical in size and color. The number of tablets dispensed on each card will be identical across all treatment arms.

The randomization for the kit assignments will be generated by the study statistician and provided directly to packaging with a copy going to ICTI Clinical Supplies Management Group. The stratified patient randomization will be generated by an AstraZeneca randomization staff member not associated with the trial and will be provided directly to ICTI for incorporation into the IVRS system. No member of the study team in AstraZeneca, at investigational sites or the CRO organization handing data will have access to the randomization scheme during the conduct of the study.

3.5.3.2 Methods for unblinding the study

Individual treatment codes, indicating the treatment randomization for each randomized subject, will be available to the investigator(s) or pharmacists at the study center through the use of a concealed panel on the label.

The treatment code must not be broken except in medical emergencies when the appropriate management of the subject necessitates knowledge of the treatment randomization. The investigator(s) must document and report to AstraZeneca any breaking of the treatment code. AstraZeneca retains the right to break the code in order to report serious adverse events to regulatory authorities.

Treatment codes will not be broken for the planned analyses of data until all decisions on the evaluability of the data from each individual subject have been made and documented.

3.5.4 Treatment compliance

Compliance will be assessed based on returned tablet counts. The percent compliance will be calculated as the number of tablets taken (dispensed - returned) divided by the prescribed number of tablets (number of days times number of tablets per day) expressed as a percent. Based on this calculation a subject with at least 75% compliance with study medication during study participation will be classified as compliant.

Furthermore, if there are any significant irregularities in compliance, in the opinion of the investigator, the patient should be withdrawn from the study.

4. CONCURRENT TREATMENT

4.1 General medications

Nonpsychotropic medication, including over-the counter medications, taken by the subject before entry into the trial may be continued during the trial. Medications required to treat illnesses or complaints that occur during the trial may be used at the discretion of the investigator. Use of cytochrome P450 inducers and potent inhibitors is restricted (see Table 13 below).

Women who enter the trial with an intrauterine device in place, using oral contraceptives, or using injectable or implantable hormonal agents designed to prevent pregnancy may continue these treatments throughout the trial.

The specific type of medication (trade or generic name), the indication for use, and the dates of usage should be reported on the CRF entitled Concurrent Treatment.

Medication which is considered necessary for the subject's safety and well being may be given at the discretion of the investigator(s). The administration of all medication (including investigational products) must be recorded in the appropriate sections of the case report form (CRF).

4.2 Use of psychoactive medications

The use of psychoactive drugs other than those specifically allowed during the trial (ie, lorazepam and zolpidem tartrate) is restricted (see Section 4.3, Table 13).

4.3 Summary of permitted concurrent medications

Medications specifically prohibited or restricted, and those permitted during the trial are listed in Table 13

Table 13 Permitted, restricted, and prohibited medications

Use category	Type of medication
Permitted	Previous medications for medical, nonpsychiatric illnesses Oral contraceptives and contraceptive devices
Restricted	Zolpidem tartrate 5-10 mg at bedtime for insomnia Lorazepam 1-3 mg per day for severe anxiety These drugs may be prescribed during the first 3 weeks of the study as long as they do not interfere with any assessments
Prohibited	Potent cytochrome P450 3A4 inducers (including but not limited to barbiturates, carbamazepine, rifampin, and St John's Wort) Potent cytochrome P450 3A4 inhibitors (including but not limited to ketoconazole, itraconazoole, fluconazole, erythromycin, clarithromycin, troleandomycin, indinavir, nelfinavir, ritonavir, and saquinavir) Antipsychotic medications (including but not limited to phenothiazines, risperidone, olanzapine, ziprasidone, clozapine, loxapine, thiothixene, molindone) Use of any psychoactive drugs including antidepressants, hypnotics, mood stabilizing drugs, and antipsychotics from a period of 7 to 28 days depending on the medications involved (eg. 28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

5. STUDY MEASUREMENTS AND ENDPOINTS

5.1 Primary endpoint

The primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score. This endpoint is used as the basis for the sample size calculation, as provided in Section 6.1.

5.2 Screening and demographic measurements

The following data are to be collected at screening:

- date of birth, sex, and race
- vital signs, height, weight
- supine and standing blood pressure and pulse
- significant medical history
- physical examination including ophthalmoscopic exam
- 12-lead electrocardiogram
- clinical chemistry and hematology
- pregnancy test (if female of childbearing potential)
- HAM-D assessment
- YMRS
- DSM-IV diagnosis, based on SCID assessment

5.3 Efficacy measurements and endpoints

The following assessments will be used to evaluate efficacy:

- change from baseline to final assessment in MADRS total score
- percentage of subjects with $\geq$50% reduction from baseline in MADRS total score at final assessment
- the change from baseline in each assessment (observed cases) in the MADRS total score

- the change from baseline to each assessment (observed cases) and final assessment in the CGI-S
- the CGI-C at final assessment
- the change from baseline to each assessment (observed cases) and final assessment in the YMRS
- the change from baseline to each assessment (observed cases) and final assessment in the total HAM-A

Evaluation using each of these scales should be performed by the same trained/certified staff member who has been approved by AstraZeneca for all assessments of the scale for an individual subject.

5.3.1 Summary of efficacy objectives and endpoints

Table 14 shows how the efficacy endpoints of this study relate to the study objectives.

Table 14 Efficacy objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Primary	Primary measure		
evaluate the efficacy of quetiapine compared to placebo in the treatment of a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks	change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score; ls means, 95% CI at final assessment ; descriptive statistics by statum	ANCOVA for the change from baseline to final assessment for total MADRS score. Pair-wise comparisons of each dose with placebo using step up procedure	Reductions in MADRS compared with placebo will indicate doses which are effective in treating depressive episode
	Secondary measure		
	percentage of subjects meeting the MADRS responder criteria ; n, percentage responders at each assessment, final assessment ; descriptive statistics by statum	Logistic model	Higher response rates will indicate doses which are effective in treating depressive episode in treating depressive episode
	change from baseline to each assessment for the MADRS total score, and each assessment and final assessment Clinical Global Impression - Severity (CGI-S); ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment (LOCF) for CGI-S. Pair-wise comparisons of each dose with placebo	Reductions in scales compared with placebo will indicate doses which are effective in treating depressive episode
	Clinical Global Impression - Change (CGI-C); ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the CGI-C for each assessment and final assessment (LOCF). Pair-wise comparisons	Greater improvements in CGI-C will indicate doses which are effective compared with placebo

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Primary	Primary measure		
		of each dose with placebo	
Secondary			
evaluate the efficacy of quetiapine compared to placebo in the incidence of treatment -emergent mania	change from baseline to each assessment and final assessment in the YMRS total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for YMRS total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	No significant increase in the YMRS compared to placebo will indicate doses which do not result in treatment-emergent mania
evaluate the effect of quetiapine compared to placebo on symptoms of anxiety	change from baseline to each assessment and final assessment in the HAM-A total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for HAM-A total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Improvement in the HAM-A compared to placebo will indicate efficacy in treating anxiety component of the depressive episode

The methods for collecting efficacy data are presented below.

5.3.2 Montgomery-Asberg Depression Rating Scale (MADRS)

5.3.2.1 Methods of assessment

The MADRS will be performed at each visit during the trials using the validated MADRS instrument by certified staff at each site.

5.3.2.2 Calculation or derivation of endpoint

The change from baseline to final LOCF will be calculated for total MADRS score. A subject will be classified as a responder if the % change from baseline, calculated as the (change from baseline divided by the baseline) multiplied by 100 indicates a ≥ 50% reduction in baseline total MADRS score.

5.3.3 Hamilton Rating Scale for Depression (HAM-D)

5.3.3.1 Methods of assessment

The HAM-D will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-D and HAM-D item #1.

5.3.4 Clinical Global Impression - Severity (CGI-S)

5.3.4.1 Methods of assessment

The CGI-S will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.4.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in CGI-S.

5.3.5 Clinical Global Impression - Change (CGI-C)

5.3.5.1 Methods of assessment

The CGI-C will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.5.2 Calculation or derivation of endpoint

The CGI-C is a measure of change from baseline and therefore requires no further derivation.

5.3.6 Hamilton Rating Scale for Anxiety (HAM-A)

5.3.6.1 Methods of assessment

The HAM-A will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.6.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-A.

5.3.7 Young Mania Rating Scale (YMRS)

5.3.7.1 Methods of assessment

The YMRS will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.7.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in YMRS.

5.4 Safety measurements and endpoints

The following measurements will be used to assess safety:

- adverse event reporting (both general adverse events and serious adverse events), coded using MedDRA system of nomenclature
- fasting clinical laboratory tests (including chemistry and hematology)
- vital signs(taken in both the standing and supine positions)
- ECG tests
- Simpson-Angus Scale
- Barnes-Akathesia Rating Scale

5.4.1 Summary of safety objectives and endpoints

Table 15 shows how the safety endpoints of this study relate to the study objectives.

Table 15 Safety objectives and endpoints relating to each objective

Objective	Endpoints and statistic	Planned analysis	Significance of results
evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression	incidence and nature of adverse events during double-blind treatment ; n, % incidence per event, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	no new safety issues identified
	incidence of drug-related adverse events during double-blind treatment ; n, % incidence; titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of subject withdrawal due to adverse events; n, % withdrawn, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of clinically significant changes in vital signs; n, % at each assessment and final visit	descriptive statistics only	
	change in the SAS total score ; mean change, standard deviation, baseline to final assessment (LOCF)	descriptive statistics only	
	the change in BARS total score	descriptive statistics only	
	incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment	descriptive statistics only	

The methods for collecting safety data are described below.

5.4.2 Adverse Events

5.4.2.1 Definitions

The definitions of adverse events (AEs), serious adverse events (SAEs) and other significant adverse events (OAEs) are given below. It is of the utmost importance that all staff involved in the study is familiar with the content of this section. The principal investigator is responsible for ensuring this.

(a) Adverse Event

An adverse event is the development of an undesirable medical condition or the deterioration of a pre-existing medical condition following or during exposure to a pharmaceutical product, whether or not considered causally related to the product. An undesirable medical condition can be symptoms (eg, nausea, chest pain), signs (eg, tachycardia, enlarged liver) or the abnormal results of an investigation (eg, laboratory findings, electrocardiogram). In clinical studies, an AE can include an undesirable medical condition occurring at any time, including run-in or washout periods, even if no study treatment has been administered.

(b) Serious Adverse Event

A serious adverse event is an AE occurring during any study phase (ie, run-in, treatment, washout, follow-up), and at any dose of the investigational product, comparator or placebo, that fulfills one or more of the following criteria:

- results in death
- is immediately life-threatening
- requires in-patient hospitalization or prolongation of existing hospitalization
- results in persistent or significant disability or incapacity
- is a congenital abnormality or birth defect
- is an important medical event that may jeopardize the subject or may require medical intervention to prevent one of the outcomes listed above?

The causality of SAEs (ie, their relationship to study treatment) will be assessed by the investigator(s), who in completing the relevant case report form must answer “yes” or “no” to the question “Do you consider that there is a reasonable possibility that the event may have been caused by the drug?” For further guidance on the definition of a SAE and a guide to the interpretation of the causality question, see Appendix F.

(c) Other significant adverse event

An AstraZeneca expert will identify OAEs during the evaluation of safety data for the Clinical Study Report. Significant adverse events of particular clinical importance, other than SAEs and those AEs leading to discontinuation of the subject from study treatment, will be classified as OAEs. Examples of these are marked hematological and other laboratory abnormalities, and certain events that lead to intervention (other than those already classified as serious), dose reduction or significant additional treatment. For each OAE, a narrative will be written and included in the Clinical Study Report.

5.4.2.2 Recording of adverse events

All AEs and SAEs that occur before, during treatment, or within 30 days following the cessation of treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor. If any SAEs are recorded during the 30-day follow-up period, all concomitant medications taken during the 30-day follow-up should also be recorded on the CRF. A description of the event, its intensity, duration, action taken (eg, treatment and follow-up tests), and outcome should be given, along with the investigator's causality assessment of the relationship of the event to the study drug. If a diagnosis of the subject's condition has been made, then the diagnosis should be recorded as the SAE. In instances of well recognized syndromes (eg, fever, runny nose, cough) they can be recorded as "flu". However, if a diagnosis of the subject's condition has not been made, or if the individual symptoms are not well recognized, then the individual symptoms should be recorded separately.

In general, abnormal laboratory tests or vital signs should not be reported as AEs unless they fulfill the criteria for an SAE or lead to discontinuation. If an abnormal laboratory test result or vital sign is associated with clinical signs and symptoms, the sign or symptom should be reported as an AE, and the associated test result or vital sign should be recorded on the appropriate CRF.

A causality assessment must be recorded for all AEs. The CRF asks the question, "In your medical judgement, is there a reasonable possibility that the event may have been caused by the study therapy?" If there is any valid reason, even if undetermined or untested, for suspecting a possible cause-and-effect relationship between the study drug and the occurrence of the AE, then this should be answered "yes." Otherwise, if no valid reason exists for suggesting a possible relationship, then this should be answered "no." If more than 1 AE is identified, a causality assessment must be made for each AE.

It is important to distinguish between serious and severe AEs. Severity is a measure of intensity whereas seriousness is defined by the criteria in Section 5.4.2.1 (b). An AE of severe intensity need not necessarily be considered serious. For example, nausea which persists for several hours may be considered severe nausea, but not a SAE. On the other hand, a stroke that results in only a limited degree of disability may be considered a mild stroke but would be a SAE.

Any detrimental change in the subject's condition after the subject enters the study will be discussed with the investigator. Where the detrimental change is considered by the investigator to constitute a progression or relapse of bipolar depression or a lack of efficacy, then this will not be considered an AE even where this necessitates or prolongs hospitalization. When there is deterioration in the condition for which the medicine is being used, there may be uncertainty as to whether this is lack of efficacy or an AE. In such cases, unless AstraZeneca or the reporting physician considers that the medicine contributed to the deterioration, the deterioration should be considered lack of efficacy. However, if it is believed that the medicine may have contributed to the deterioration, then this should be treated as an AE.

Study drug abuse is an SAE, even when there are no symptoms or additional AEs and should be reported according to the guidelines in Section 5.4.2.3. Misuse of study drug is an AE but is not considered an SAE unless accompanied by serious sequelae.

Should an overdose occur, it must be reported in accordance with the procedures described in Section 10.3 Procedures in case of overdose. All overdoses, with or without associated symptoms, should be reported as AEs.

Suicide and attempted suicide, irrespective of the method, but occurring in connection with the use of study drug, should be reported as AEs (serious or non-serious). This event should be identified as suicide or attempted suicide, and the method of the suicide or attempt should be provided. If an attempted suicide meets the criteria for an SAE, the event must be reported according to the guidelines in Section 10.4.

Should a pregnancy occur, it must be reported in accordance with the procedures described in Section 10.5. Procedures in case of pregnancy. Pregnancy in itself is not regarded as an AE unless there is a suspicion that an investigational product may have interfered with the effectiveness of a contraceptive medication.

5.4.2.3 Reporting of serious adverse events

Investigators and other site personnel must inform appropriate AstraZeneca representatives of any SAE that occurs in the course of the study within 1 day (i.e. immediately but no later than the end of the next business day) of when he or she becomes aware of it.

The AstraZeneca representative will work with the investigator to compile all the necessary information and ensure that the appropriate AstraZeneca Drug Safety Department receives a report by day 1 for all fatal and life-threatening cases and by day 5 for all other SAEs.

Follow-up information on SAEs must also be reported by the investigator within the same time frames.

If a non-serious AE becomes serious, this and other relevant follow-up information must also be provided to AstraZeneca within 1 day as described above.

After initial notification, the AstraZeneca representatives have 4 days to work with the investigator to compile all the necessary information to ensure that the appropriate AstraZeneca Drug Safety Department receives a complete report by day 5. Follow-up information on SAEs should also be reported by the investigator within the same time frames. If a non-serious case becomes serious, this and other relevant follow-up information should also be provided to AstraZeneca within 1 day as described in the paragraph above

All SAEs have to be reported, whether or not considered causally related to the investigational product. All SAEs will be recorded in the case report form. The investigator is responsible for informing the Ethics Committee and/or the Regulatory Authority of the SAE as per local requirements.

5.4.3 Laboratory safety measurements and variables

Blood (under fasting conditions) and urine specimens will be collected for laboratory test analysis and these samples will be processed by a central laboratory (Quintiles Central Laboratory).

5.4.3.1 Methods of assessment

- Fasting hematology: hemoglobin, hematocrit, red blood cell count, total and differential white blood cell counts and platelet count
- Fasting clinical chemistry: total bilirubin, alkaline phosphatase, alanine transaminase(ALT), aspartate transaminase(AST), sodium, potassium, chloride, creatinine, glucose, insulin, bicarbonate, high-density lipoprotein cholesterol, triglycerides, low-density lipoprotein cholesterol and total cholesterol
- Thyroid function tests: thyroid stimulating hormone (TSH), Triiodothyronine resin uptake (T3RU), and total thyroxine (T4)
- Serum pregnancy tests
- Urine toxicology screen

5.4.3.2 Calculation or derivation of endpoints

Change from baseline will be derived for all subjects who have a screening laboratory test and a final laboratory test. The change from baseline is the final test value minus the screening test value. Laboratory test values will also be compared to the laboratory standard normal ranges and flagged with H or L if they are outside of the normal range. In addition, treatment emergent laboratory changes identified using computerized methods to compare results or changes from baseline to standard extended ranges will be flagged at the subject and test level.

5.4.4 Vital signs measurement

5.4.4.1 Methods of assessment

A standard blood pressure cuff will be used to obtain systolic and diastolic blood pressure. The assessment will be done first with the subject in the supine position for 3 minutes and again within 3 minutes of the subject attaining a standing position. Pulse will be measured for 1 minute.

5.4.4.2 Calculation or derivation of endpoints

Change from baseline will derived be as the value at the visit minus the screen value for the same assessment and position. In addition the change within a visit between the standing and supine blood pressure assessments will be calculated for both systolic and diastolic blood pressures. This difference will be calculated as supine minus standing. A subject will be classified as having calculated postural hypotension if either the systolic blood pressure difference indicates a decrease >20 mmHg or the diastolic blood pressure difference indicates a decrease >15 mmHg.

5.4.5 ECG safety measurements and variables

5.4.5.1 Methods of assessment

A 12 lead ECG assessment will be done using an ECG machine compatible with the requirements for eResearch the central evaluation laboratory. The central laboratory will supply the interval data, rates and standard interpretation of the ECG test results.

eResearch
30 south 17th Street
Philadelphia, PA 19103-4001

5.4.5.2 Calculations and derivations of endpoint

Change from baseline for interval data and rate data will be derived by subtracting the screen value from the final assessment value. Values outside the extended range in Appendix XX will be flagged.

5.4.6 Simpson-Angus Scale (SAS)

5.4.6.1 Methods of assessment

The SAS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.6.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.4.7 Barnes-Akathisia Rating Scale (BARS)

5.4.7.1 Methods of assessment

The BARS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.7.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.5 Quality of Life endpoint

The following assessment will be used to assess the effect of quetiapine compared with placebo on quality of life as assessed by:

- the PSQI
- the short form Q-Les-Q

5.5.1 Summary of quality of life objectives and endpoints

Table 16 shows how the efficacy endpoints of this study relate to the study objectives.

Table 16 Quality of life objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Secondary evaluate the effect of quetiapine compared to placebo on quality of sleep	Secondary measure change from baseline to final assessment in PSQI; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for PSQI total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Reduction in PSQI compared with placebo indicates improvement of sleep quality
evaluate the effect of quetiapine compared to placebo on the overall quality of life	change from baseline to final assessment in Q-Les-Q; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for Q-Les-Q total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Increase in Q-Les-Q compared with placebo indicates improvement of overall quality of life

The methods of collecting quality of life data are described below.

5.5.2 PSQI

5.5.2.1 Methods of assessment

The PSQI will be performed at scheduled visits during the trial by a patient at each site. The 9 self-rated questions will be incorporated into 7 component scores which are added together to yield one total "global" score. Higher scores indicate more severe difficulties in sleep quality.

5.5.2.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the PSQI.

5.5.3 Q-Les-Q

5.5.3.1 Methods of assessment

The Q-Les-Q is a patient self assessment questionnaire which will be completed at scheduled visits during the trial by a patient at each site. The short form has 14 self-rated questions, the first 12 will be incorporated into a total score. Higher scores indicate better quality of life.

5.5.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the Q-Les-Q.

5.6 Interactive Computer Interview for Depression (ICI-D)

Participating in the Interactive Computer Interview for Depression (ICI-D) is voluntary for all the sites. Participation by the subjects at these sites is also voluntary. At each study visit, subjects at all participating sites will complete a computer-based self-report measure of depression severity (the interactive computer interview or ICI-D) after completing the MADRS. Raters or other site staff will first enter the subject's MADRS scores into a computer supplied by the sponsor. Subjects will then complete a computer-based self-report measure of depression severity . This measure will not be considered primary or source data, and will be recorded on a coded, anonymized form. This data will be securely transmitted to Concordant Rater Systems (CRS) for ongoing quality control.

For quality assurance purposes, if an above-threshold variance is detected between the ICI-D and the MADRS on individual items or the overall score, a CRS clinician (Ph.D. or MD) will contact the applicable rater for a monitoring consultation. The CRS clinician will discuss possible reasons for the discrepancy, review conventions for scoring and offer additional training if necessary.

The ICI-D will also provide an additional check of the patient's suicide status. The ICI-D will alert the rater if the patient reports suicidal plans. If the patient did not verbalize these thoughts during the interview /assessment process, the rater could then take the appropriate clinical steps.

A standard operating procedure for ICI-D will be provided to the sites.

5.7 Genetic sampling and storage

There will be no genetic sampling in this trial.

5.8 Volume of blood sampling and handling of biological samples

The total volume of blood that will be drawn from each subject in this study is as follows:

Table 17 Volume of blood to be drawn from each subject

Assessment		Sample volume (ml)	N of samples	Total volume (ml)	
				Women	Men
Safety	Clinical chemistry				
	Hematology	18	2	36	36
	Serum Pregnancy [a]	2	1	2	
Total				38	36

[a] Women only.

Sample handling and storage will be defined by the central laboratory which will be handling the analysis and reporting or results from samples.

6. DATA MANAGEMENT

Case Report Forms (CRFs) will be provided for recording of data. The forms will be in triplicate with carbonless paper. Data will be recorded legibly onto the CRFs with black ink, preferably with a ballpoint pen. If any data are not available, omissions will be indicated on the CRFs. Corrections should be made legibly and be initialed and dated. Correction fluid or covering labels must not be used. The top original and the first copy of the completed form will collected and returned to AstraZeneca/AstraZeneca's agent and the second copy will be retained by the investigator.

Data received electronically by AstraZeneca from a validated source will be loaded directly into the trial database for analysis.

7. STATISTICAL METHODS AND DETERMINATION OF SAMPLE SIZE

7.1 Determination of sample size

Since there is no data using the MADRS instrument in the assessment of quetiapine in treating bipolar subjects with depression, the sample size estimation was based on published data from the lamotrigine monotherapy (Calabrese et al, 1999) and olanzapine trials (Tohen et al, 2002). The percentage change in the HAM-D across these lamotrigine studies in bipolar depression is similar to that observed with quetiapine. MADRS scores correlate significantly with those of the HAM-D (Montgomery Asberg 1979).

Sample size was estimated using an Bonferroni correction for the 2 comparisons with placebo. A clinically meaningful 3.6-unit difference between quetiapine treatment and placebo was used to estimate the effect size (with 3.1 units considered a minimally effective and detectable difference). The variability used for calculation was 10 units, the variability seen in the olanzapine study. A sample size of 168 subjects/arm (504 subjects total) would provide 85% power for 2-sided pair-wise comparisons with placebo at α=0.025 which provides an overall experiment wise type I error rate of 0.05. Therefore, 740 patients will be screened and approximately 530 subjects randomized (allowing for a 5% early drop out rate), to insure 504 subjects with post baseline data available for analysis (MITT analysis population). This sample size will provide 72% power to detect a 3.1 unit difference from placebo.

7.2 Statistical evaluation

7.2.1 Methods of statistical analysis

A comprehensive Statistical Analysis Plan (SAP) will be prepared before unblinding of the data.

Missing data for final visit resulting from patient drop outs will be imputed using an LOCF approach. Patients with post baseline data (MITT population) will have their last trial assessment carried forward as the final assessment for analyses.

7.2.2 Study endpoints

Primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score.

Secondary efficacy endpoints:

1. Percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at study endpoint

2. Change from baseline to each assessment (observed cases) in the MADRS total score

3. Change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, CGI-S, CGI-C, and Young Mania Rating Scale.

4. Change in the PSQI score from baseline to final assessment

Safety endpoints:

1. Incidence and nature of adverse events during double-blind treatment

2. Incidence of drug-related adverse events during double-blind treatment

3. Incidence of subject withdrawal due to adverse events

4. Incidence of clinically significant changes in hematology and chemistry laboratory results, vital signs, electrocardiograms, weight, and body mass index.
Tolerability endpoints:

5. Change in the SAS total score from baseline to final assessment

6. Change in BARS total score from baseline to final assessment

7. Incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment

Quality of Life endpoints:

1. Change in Q-Les-Q total score from baseline to final assessment

2. Proportion of patients achieving community norm levels in Q-Les-Q at final assessment

7.2.3 Statistical analyses

The randomization will be stratified by Bipolar type (I or II) in order to assure balance across treatments for the type of patient enrolled. The stratification will be incorporated into the statistical analysis models and descriptive statistics will be provided for each stratum.

For each statistical model run, the assumptions for the model will be evaluated. If the assumptions are not reasonably met, the data may be transformed to meet assumptions or a non-parametric test performed.

All statistical comparisons will be based on 2-sided testing approaches for testing the difference between active study medication dose and placebo.

7.2.3.1 Study populations for analysis

The modified intention to treat population (MITT) will be the population for efficacy and quality of life evaluation. The MITT population will include all randomized subjects who were received study treatment and had at least one post baseline efficacy assessment with a last observation carried forward approach for final assessment.

The safety population will include all subjects who provide consent and received study medication.

7.2.3.2 Primary Analysis

The primary analysis will use analysis of covariance (ANCOVA) model for the change from baseline at final assessment for the MADRS. The model will include terms for treatment, stratum, with the baseline MADRS as a covariate. The Simes-Hommel step-up procedure will be used to adjust for the 2 comparisons with placebo (Simes-Hommel, 1988). The p-values obtained from the pair-wise comparisons will be ordered as follows: $P(1) \leq P(2)$. The following rule will be used to assess statistical significance:

1. If $P(2) \leq 0.05$, then reject both null hypotheses associated with P(2) and P(1); else proceed to the next step;

2. If $P(1) \leq 0.025$, then reject the null hypothesis associated with P(1).

7.2.3.3 Secondary Analyses of efficacy and quality of life

The secondary endpoint for responder, defined as a subject who has a 50% reduction in MADRS score from baseline to final assessment, will be analyzed by comparing the proportion of subjects responding across treatments using a logistic model which includes treatment, stratum, and center in the model. The secondary endpoints based on change from baseline for scales at an assessment time will be analyzed using the same model as the primary endpoint. Nominal p-values will be used for all secondary endpoint comparisons.

Exploratory repeated measures analysis of variance model will also be conducted to evaluate whether there are significant differences among treatments across time for the MADRS and HAM-D scores.

Descriptive statistics will be used to report stratum, item scores, and subscale scores.

7.2.3.4 Safety analyses

Adverse events will be coded using the MedDRA dictionary. Numbers of events and incidence rates for AEs in each treatment group will be summarized by preferred term and system organ class. An event that occurred one or more times on the date of, or subsequent to, randomization will contribute one observation to the numerator of the incidence rate. The denominator will comprise all patients exposed to study treatment.

Adverse events that lead to premature withdrawal of subjects will be tabulated for each treatment group.

All laboratory assessments, vital signs, ECG (rates and intervals) results, and weight and body mass index will be tabulated using descriptive statistics at baseline, final assessment and including change from baseline. Descriptive statistics will include n, mean, standard deviation, minimum and maximum value.

7.2.3.5 Tolerability analyses

The change from baseline in SAS and BARS score data will be summarized using descriptive statistics (mean, standard deviation, median, minimum and maximum).

Incidence rates of EPS adverse events will be compared and tabulated using descriptive statistics.

7.2.3.6 Interim analysis

No interim analysis is planned

7.2.3.7 Data or safety monitoring committee

There will be no data or safety monitoring committee.

8. STUDY MANAGEMENT

8.1 Monitoring

Before the study begins, a representative of AstraZeneca or company representing AstraZeneca will visit the investigational site to

- determine the adequacy of the facilities
- discuss with the investigator(s) (and other personnel involved with the study) their responsibilities with regard to protocol adherence, and the responsibilities of AstraZeneca or its representatives.

During the study, a monitor from AstraZeneca or company representing AstraZeneca will have regular contacts with the investigational site, including visits to

- provide information and support to the investigator(s)
- confirm that facilities remain acceptable
- confirm that the investigational team is adhering to the protocol, that data are being accurately recorded in the case report forms (CRFs), and that investigational product accountability checks are being performed.
- perform source data verification (a comparison of the data in the CRFs with the subject's records at the hospital or practice, and other records relevant to the study). This will require direct access to all original records for each subject (eg, clinic charts).

The monitor or another AstraZeneca representative will be available between visits if the investigator(s) or other staff at the center needs information and advice.

8.2 Audits and inspections

Authorized representatives of AstraZeneca, a regulatory authority, an Independent Ethics Committee (IEC) or an Institutional Review Board (IRB) may visit the center to perform audits or inspections, including source data verification. The purpose of an AstraZeneca audit or inspection is to systematically and independently examine all study related activities and documents to determine whether these activities were conducted, and data were recorded, analyzed, and accurately reported according to the protocol, Good Clinical Practice (GCP), guidelines of the International Conference on Harmonization (ICH), and any applicable regulatory requirements. The investigator should contact AstraZeneca immediately if contacted by a regulatory agency about an inspection at his or her center.

8.3 Training of staff

The principal investigator will maintain a record of all individuals involved in the study (medical, nursing and other staff). He or she will ensure that appropriate training relevant to the study is given to all of these staff, and that any new information of relevance to the performance of this study is forwarded to the staff involved.

8.4 Changes to the protocol

Study procedures will not be changed without the mutual agreement of the international principal investigator(s) and AstraZeneca.

If it is necessary for the study protocol to be amended, the amendment or a new version of the study protocol must be notified to or approved by each IEC or IRB, and in many countries also the local regulatory authority, before implementation. Local requirements must be followed.

If a protocol amendment requires a change to a particular center's Written Informed Consent Form, then AstraZeneca and the center's IEC or IRB must be notified. Approval of the revised Written Informed Consent Form by AstraZeneca and by the IEC or IRB is required before the revised form is used.

AstraZeneca will distribute amendments and new versions of the protocol to each principal investigator(s), who in turn is responsible for the distribution of these documents to his or her IEC or IRB, and to the staff at his or her center. The distribution of these documents to the regulatory authority will be handled according to local practice.

8.5 Study agreements

The principal investigator at each center must comply with all the terms, conditions, and obligations of the study agreement for this study. In the event of any inconsistency between this protocol and the study agreement, this study agreement shall prevail.

8.6 Study timetable and termination

It is anticipated that the first subject will be enrolled in September 2002 and that the last subject will complete the study in March 2004.

9. ETHICS

9.1 Ethics review

The final study protocol, including the final version of the Written Informed Consent Form, must be approved or given a favorable opinion in writing by an IEC or IRB as appropriate. The investigator must submit written approval to AstraZeneca before he or she can enroll any subject into the study.

The principal investigator(s) is responsible for informing the IEC or IRB of any amendment to the protocol in accordance with local requirements. In addition, the IEC or IRB must approve all advertising used to recruit subjects for the study. The protocol must be reapproved by the IEC or IRB annually, as local regulations require.

Either the investigator(s) or AstraZeneca must submit progress reports to the IEC or IRB according to local regulations and guidelines. The principal investigator(s) must also provide the IEC or IRB with any reports of serious adverse events from the study site.

The principal investigator(s) is also responsible for providing the IRB with reports of any serious adverse events from any other study conducted with the investigational product. This information will be provided to the principal investigator(s) by AstraZeneca.

9.2 Ethical conduct of the study

The study will be performed in accordance with the ethical principles in the Declaration of Helsinki (see Appendix C), Good Clinical Practice, and applicable regulatory requirements.

9.3 Subject information and consent

The principal investigator(s) at each center will ensure that the subject is given full and adequate oral and written information about the nature, purpose, possible risk and benefit of the study. Subjects must also be notified that they are free to discontinue from the study at any time. The subject should be given the opportunity to ask questions and allowed time to consider the information provided.

The subject's signed and dated informed consent must be obtained before conducting any procedure specifically for the study, including the following:

The principal investigator(s) must store the original, signed Written Informed Consent Form. A copy of the Written Informed Consent Form must be given to the subject.

A sample Written Informed Consent Form is enclosed (Appendix B). If modifications are made according to local requirements, the new version has to be approved by AstraZeneca.

9.4 Subject data protection

AstraZeneca recognises the importance of protecting the privacy of patient (subject) data. Therefore, for study sites within the US or in studies where foreign subjects' protected health information **(subject data)** will come into the US through a covered entity (eg, Central Lab/Reader), the Informed Consent Form will incorporate, or be accompanied by, a separate document incorporating HIPAA-compliant wording by which subjects authorize the use and disclosure of their Protected Health Information by the Investigator and by those persons who need that information for the purposes of the study.

The Written Informed Consent Form will explain that study data will be stored in a computer database, maintaining confidentiality in accordance with national data legislation. The subjects' names will not be recorded in this database. The Written Informed Consent Form will also explain that for data verification purposes, authorized representatives of AstraZeneca, a regulatory authority, an IEC or IRB may require direct access to parts of the hospital or practice records relevant to the study, including subjects' medical history.

10. EMERGENCY PROCEDURES

10.1 AstraZeneca emergency contact procedure

In the case of a medical emergency, contact AstraZeneca personnel shown below.

Wayne Macfadden MD
Project Physician
302-886-1147 (telephone)
302-886-5567 (fax)
REDACTED

Robin McCoy RN
Senior Clinical Research Scientist
302-886-4650 (telephone)
302-886-5567 (fax)
REDACTED

Contact AstraZeneca switchboard on 1-800-236-9933 and ask to be put in contact with the person on call for the Seroquel clinical team.

10.2 Procedures in case of medical emergency

The principal investigator(s) is responsible for ensuring that procedures and expertise are available to cope with medical emergencies during the study.

10.3 Procedures in case of overdose

For the purpose of this trial all overdoses should be reported as adverse events. However, all cases of overdose must be reported immediately, within 1 day, if sequelae meeting the criteria for serious adverse event have occurred in association with the overdose. In all instances, the overdose substance should be stated and whether the overdose was accidental or intentional. If the overdose was a suicide attempt, this fact should be clearly stated. Adverse events

(serious and non-serious) arising as the result of an overdose should be recorded on an adverse event form as "sequelae to overdose." For example "nausea as sequelae to overdose."

10.4 Suicide

Suicide and suicide attempt, irrespective of the method, but in connection with the use of trial drug, should be reported as a serious adverse event (in accordance with the definition provided in Section 5.4.2.1). This event should be identified as suicide or suicide attempt, and the method of the suicide or the suicide attempt should be provided. Suicidal thoughts should also be regarded as adverse events.

10.5 Procedures in case of pregnancy

Pregnancy itself is not regarded as an adverse event unless there is a suspicion that the investigational product under study may have interfered with the effectiveness of a contraceptive medication. However, the outcome of all pregnancies (spontaneous miscarriage, elective termination, normal birth or congenital abnormality) must be followed up and documented even if the subject was discontinued from the study.

All reports of congenital abnormalities/birth defects are SAEs. Spontaneous miscarriages should also be reported and handled as SAEs. Elective abortions without complications should not be handled as AEs. All outcomes of pregnancy must be reported to AstraZeneca on the pregnancy outcomes report form.

Declaration of Helsinki

Recommendations guiding physicians in biomedical research involving human subjects.

Adopted by the 18th World Medical Assembly, Helsinki, Finland, June 1964, amended by the 29th World Medical Assembly, Tokyo, Japan, October 1975 and the 35th World Medical Assembly, Venice, Italy, October 1983 and the 41st World Medical Assembly Hong Kong, September 1989 and the 48th General Assembly, Somerset West, Republic of South Africa, October 1996.

Introduction

It is the mission of the physician to safeguard the health of the people. His or her knowledge and conscience are dedicated to the fulfilment of this mission.

The Declaration of Geneva of The World Medical Association binds the physician with the words, "The health of my patient will be my first consideration," and the International Code of Medical Ethics declares that, "A physician shall act only in the patient´s interest when providing medical care which might have the effect of weakening the physical and mental condition of the patient".

The purpose of biomedical research involving human subjects must be to improve diagnostic, therapeutic and prophylactic procedures and the understanding of the aetiology and pathogenesis of disease.

In current medical practice most diagnostic, therapeutic or prophylactic procedures involve hazards. This applies especially to biomedical research.

Medical progress is based on research which ultimately must rest in part on experimentation involving human subjects.

In the field of biomedical research a fundamental distinction must be recognised between medical research in which the aim is essentially diagnostic or therapeutic for a patient, and medical research, the essential object of which is purely scientific and without implying direct diagnostic or therapeutic value to the person subjected to the research.

Special caution must be exercised in the conduct of research which may affect the environment, and the welfare of animals used for research must be respected.

Because it is essential that the results of laboratory experiments be applied to human beings to further scientific knowledge and to help suffering humanity, the World Medical Association has prepared the following recommendations as a guide to every physician in biomedical research involving human subjects. They should be kept under review in the future. It must be stressed that the standards as drafted are only a guide to physicians all over the world. Physicians are not relieved from criminal, civil and ethical responsibilities under the laws of their own countries.

I. Basic principles

1. Biomedical research involving human subjects must conform to generally accepted scientific principles and should be based on adequately performed laboratory and animal experimentation and on a thorough knowledge of the scientific literature.

2. The design and performance of each experimental procedure involving human subjects should be clearly formulated in an experimental protocol which should be transmitted for consideration, comment and guidance to a specially appointed committee independent of the investigator and the sponsor provided that this independent committee is in conformity with the laws and regulations of the country in which the research experiment is performed.

3. Biomedical research involving human subjects should be conducted only by scientifically qualified persons and under the supervision of a clinically competent medical person. The responsibility for the human subject must always rest with a medically qualified person and never rest on the subject of the research, even though the subject has given his or her consent.

4. Biomedical research involving human subjects cannot legitimately be carried out unless the importance of the objective is in proportion to the inherent risk to the subject.

5. Every biomedical research project involving human subjects should be preceded by careful assessment of predictable risks in comparison with foreseeable benefits to the subject or to others. Concern for the interests of the subject must always prevail over the interests of science and society.

6. The right of the research subject to safeguard his or her integrity must always be respected. Every precaution should be taken to respect the privacy of the subject and to minimise the impact of the study on the subject´s physical and mental integrity and on the personality of the subject.

7. Physicians should abstain from engaging in research projects involving human subjects unless they are satisfied that the hazards involved are believed to be predictable. Physicians should cease any investigation if the hazards are found to outweigh the potential benefits.

8. In publication of the results of his or her research, the physician is obliged to preserve the accuracy of the results. Reports of experimentation not in accordance with the principles laid down in this Declaration should not be accepted for publication.

9. In any research on human beings, each potential subject must be adequately informed of the aims, methods, anticipated benefits and potential hazards of the study and the discomfort it may entail. He or she should be informed that he or she is at liberty to abstain from participation in the study and that he or she is free to withdraw his or her consent to participation at any time. The physician should then obtain the subject´s freely-given informed consent, preferably in writing.

10. When obtaining informed consent for the research project the physician should be particularly cautious if the subject is in a dependent relationship to him or her or may consent under duress. In that case the informed consent should be obtained by a physician who is not engaged in the investigation and who is completely independent of this official relationship.

11. In case of legal incompetence, informed consent should be obtained from the legal guardian in accordance with national legislation. Where physical or mental incapacity makes it impossible to obtain informed consent, or when the subject is a minor, permission from the responsible relative replaces that of the subject in accordance with national legislation.

Whenever the minor child is in fact able to give a consent, the minor´s consent must be obtained in addition to the consent of the minor´s legal guardian.

12. The research protocol should always contain a statement of the ethical considerations involved and should indicate that the principles enunciated in the present Declaration are complied with.

II. Medical research combined with professional care (Clinical research)

1. In the treatment of the sick person, the physician must be free to use a new diagnostic and therapeutic measure, if in his or her judgement it offers hope of saving life, re-establishing health or alleviating suffering.

2. The potential benefits, hazards and discomfort of a new method should be weighed against the advantages of the best current diagnostic and therapeutic methods.

3. In any medical study, every patient - including those of a control group, if any - should be assured of the best proven diagnostic and therapeutic method. This does not exclude the use of inert placebo studies where no proven diagnostic or therapeutic method exists.

4. The refusal of the patient to participate in a study must never interfere with the physician-patient relationship.

5. If the physician considers it essential not to obtain informed consent, the specific reasons for this proposal should be stated in the experimental protocol for transmission to the independent committee (I,2).

6. The physician can combine medical research with professional care, the objective being the acquisition of new medical knowledge, only to the extent that medical research is justified by its potential diagnostic or therapeutic value for the patient.

III. Non-therapeutic biomedical re-search involving human subjects

(Non-clinical biomedical research)

1. In the purely scientific application of medical research carried out on a human being, it is the duty of the physician to remain the protector of the life and health of that person on whom biomedical research is being carried out.

2. The subjects should be volunteers - either healthy persons or patients for whom the experimental design is not related to thepatient´s illness.

3. The investigator or the investigating team should discontinue the research if in his/her or their judgement it may, if continued, be harmful to the individual.

4. In research on man, the interest of science and society should never take precedence over considerations related to the well-being of the subject.

AstraZeneca

Clinical Study Protocol: Appendix E	
Study Code	5077US/0049
Version No.	1
Appendix date	August 8, 2002

Appendix E

Insurance and indemnity

For the US, this Appendix E is not applicable. Please refer to the clinical study agreement for information regardingAstraZeneca's obligation to insure and indemnify institution and investigator.

INSURANCE AND INDEMNITY

AstraZeneca's liability is covered by a liability insurance policy with AstraZeneca Insurance Company Limited, policy No.: L/702938.

With respect to any liability directly or indirectly caused by the investigational products in connection with this Clinical Study, AstraZeneca assumes liability by law on behalf of the investigator(s) and his assistants for possible injury to the subject provided the investigator(s) and his assistants have followed the instructions of AstraZeneca in accordance with this protocol and any amendments thereto, that the investigational products administered to the subject in this Clinical Study have been supplied by AstraZeneca and that the investigator and his assistants have in general performed this clinical study in accordance with scientific practice and currently acceptable techniques and know-how.

AstraZeneca can forward a letter of indemnity if needed by the investigator(s)/institution.

Appendix F
Additional safety information

1. FURTHER GUIDANCE ON THE DEFINITION OF A SERIOUS ADVERSE EVENT (SAE)

Life threatening

'Life-threatening' means that the subject was at immediate risk of death from the adverse event as it occurred or it is suspected that use or continued use of the product would result in the subject's death. 'Life-threatening' does not mean that had an adverse event occurred in a more severe form it might have caused death (ie hepatitis that resolved without hepatic failure).

Hospitalisation

Out-subject treatment in an emergency room is not in itself a serious adverse event, although the reasons for it may be (eg, bronchospasm, laryngeal oedema). Hospital admissions and/or surgical operations planned before or during a study are not considered adverse events if the illness or disease existed before the subject was enrolled in the study, provided that it did not deteriorate in an unexpected way during the study.

Important medical event or medical intervention

Medical and scientific judgement should be exercised in deciding whether a case is serious in a situation where important medical events may not be immediately life-threatening or result in death, hospitalisation, disability or incapacity but may jeopardise the subject or may require medical intervention to prevent one or more outcomes listed in the definition of serious. These should usually be considered as serious. Examples of such events are:

- Angioedema not severe enough to require intubation but requiring iv. hydrocortisone treatment
- Hepatotoxicity caused by paracetamol (acetaminophen) overdose requiring treatment with N-acetylcysteine
- Intensive treatment in an emergency room or at home for allergic bronchospasm
- Blood dyscrasias (eg, neutropenia or anaemia requiring blood transfusion, etc.) or convulsions that do not result in hospitalisation
- Development of drug dependency or drug abuse

2. FURTHER GUIDANCE ON THE ASSESSMENT OF CAUSALITY

The following factors should be considered when deciding if there is a "reasonable possibility" that an adverse event (AE) may have been caused by the investigational product.

- **Time course of events and exposure to suspect drug**. Has the subject actually received the suspect drug? Did the AE occur in a reasonable temporal relationship to the administration of suspect drug?

- **Consistency with known drug profile**. Was the AE consistent with the previous knowledge of the suspect drug (pharmacology and toxicology) or drugs of the same pharmacological class? OR could the AE be anticipated from its pharmacological properties?

- **Dechallenge experience**. Did the AE resolve or improve on stopping or reducing the dose of the suspect drug?

- **No alternative cause**. The AE cannot be reasonably explained by another aetiology such as the underlying disease, other drugs, other host or environmental factors.

- **Rechallenge experience**. Did the AE reoccur if the suspected drug was reintroduced after having been stopped? AstraZeneca would not normally recommend or support a rechallenge.

- **Laboratory tests**. Has a specific laboratory investigation confirmed the relationship?

A "reasonable possibility" could be considered to exist for an AE where one or more of these factors exist.

In contrast, there would not be a "reasonable possibility" of causality if none of the above criteria apply or where there is evidence of exposure and a reasonable time course but any dechallenge (if performed) is negative or ambiguous or there is another more likely cause of the AE.

In difficult cases, other factors could be considered such as:

- Is this a recognised feature of overdose of the drug?

- Is there a known mechanism

Ambiguous cases should be considered as being a “reasonable possibility” of a causal relationship unless further evidence becomes available to refute this.

AstraZeneca

Clinical Study Protocol Amendment

Amendment No.	5
Study Code	5077US/0049
Date	July 14, 2003

Sponsor:

AstraZeneca Pharmaceuticals LP, Wilmington, Delaware, USA

Centers affected by the amendment:

All centers

The protocol for the study is to be amended as follows:

1. Page 48 Section 5.4.2.2 Recording of adverse events

Original text

All AEs and SAEs that occur before, during treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor. **Following cessation of treatment, SAEs, whether or not related to the study drug, must be collected for 7 days and recorded on the CRF provided by the sponsor. If any SAEs are recorded during the 7-day follow-up period, all concomitant medications taken during the 7-day follow-up period should also be recorded on the CRF.**

Amended text

All AEs and SAEs that occur before, during treatment or within 30 days following the cessation of treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor. If any SAEs are recorded during the 30-day follow-up period, all concomitant medications taken during the 30-day follow-up period should also be recorded on the CRF.

2. **Page 63 Section 9.4 Subject data protection**

Original text

The Written Informed Consent Form will explain that study data will be stored in a computer database, maintaining confidentiality in accordance with national data legislation. The subjects' names will not be recorded in this database. The Written Informed Consent Form will also explain that for data verification purposes, authorized representatives of AstraZeneca, a regulatory authority, an IEC or IRB may require direct access to parts of the hospital or practice records relevant to the study, including subjects' medical history.

Amended text

AstraZeneca recognizes the importance of protection the privacy of patient (subject) data. Therefore, for study sites within the US or in studies where foreign subjects' protected health information (subject data) will come into the US through a covered entity (e.g., Central Lab/Reader), the Informed consent Form will incorporate, or be accompanied by , a separate document incorporating HIPAA-compliant wording by which subjects authorize the use and disclosure of their Protected Health Information by the Investigator and by those persons who need that information for the purposes the study.

The Written Informed Consent Form will explain that study data will be stored in a computer database, maintaining confidentiality in accordance with national data legislation. The subjects' names will not be recorded in this database. The Written Informed Consent Form will also explain that for data verification purposes, authorized representatives of AstraZeneca, a regulatory authority, an IEC or IRB may require direct access to parts of the hospital or practice records relevant to the study, including subjects' medical history.

Reasons for making the amendment:

1. The procedure for reporting adverse events and serious adverse events for a period of 30 days after cessation of study treatment was established for all patients enrolled into the trial at the request of the FDA.

2. The requirement of the informed consent to include HIPAA-compliant wording for subject authorization of the use and disclosure of the Protected Health Information was included in the protocol.

Amended Clinical Study Protocol	
Drug Substance	Quetiapine Fumarate
Study Code	5077US/0049
Edition No.	Version 6
Date	14 July 2003

A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL®) in the Treatment of Patients with Bipolar Depression

AstraZeneca confirms that all revisions contained in the Clinical Study Protocol Amendment Revision Summaries (1, 2, 3, 4, and 5) have been accurately reflected in the amended clinical trial protocol, Protocol 5077US/0049.

PROTOCOL SYNOPSIS

A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL™) in the Treatment of Patients with Bipolar Depression

Investigator

Multicenter trial: << To be determined >>

Study center(s) and number of subjects planned

A total of approximately 740 subjects will be screened to enroll approximately 530 into the trial in order to obtain approximately 504 evaluable patients, defined as those who have a baseline visit and at least one post baseline assessment. It is expected that approximately 75 centers will participate in the trial, with each center enrolling 8 patients (minimum 4, maximum 50).

Study period		**Phase of development**
Estimated date of first subject enrolled	September, 2002	IIIb
Estimated date of last subject completed	March, 2004	

Objectives

Primary:

To evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks as assessed by comparing

(1) the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

(2) the percentage of patients with a ≥50% reduction from baseline in the MADRS total score at final assessment

(3) the change from baseline to each assessment in the MADRS total score

(4) the change from baseline to each assessment in the Hamilton Rating scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S)

(5) the Clinical Global Impression - Change (CGI-C).

Secondary:

(1) to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

(2) to evaluate the effect of quetiapine on anxiety compared to placebo by comparing

- the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score
- the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

(3) to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by comparing

- the incidence and nature of all adverse events
- the incidence and nature of drug-related adverse events
- subject withdrawal due to adverse events during double-blind treatment
- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score from baseline to end of treatment
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Exploratory

(1) to evaluate the efficacy of quetiapine on sleep quality by comparing the change in the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment

(2) to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment.

Hypotheses:

Primary:

(1) Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

(2) Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

Secondary hypotheses are defined in Section 3.1.

Study design

Study 5077US/0049 is a randomized, multicenter, double-blind, placebo-controlled, double-dummy, parallel group, fixed-dose comparison of quetiapine vs placebo in the treatment of bipolar depression. This study will be stratified 1:1 for bipolar I and bipolar II.

Target subject population

Outpatients, aged 18 to 65 years, with a diagnosis of bipolar I or bipolar II disorder with a current major depressive episode of duration less than one year but greater than 4 weeks will be enrolled in the trial. The HAM-D (17-item scale) score must be ≥2, the HAM-D item 1 (depressed mood) score must be $\geq$ 2, and the YMRS score must be ≤12 at both Visit 1and Visit 2 (randomization) to be eligible for entry into the trial.

Investigational product, dosage and mode of administration

Study drug will be titrated in a blinded manner to a total daily dose of 300 mg/day by Day 4 in the 300-mg/day treatment group and to a total daily dose of 600 mg/day by Day 8 in the 600-mg/day treatment group. Thereafter, oral doses of quetiapine fumarate will be administered in a blinded fashion once daily at bedtime (qhs) in a total daily dose of 300 or 600 mg/day. One-time dose reductions for intolerability of 100 mg/day in both the 300 mg/day and in the 600 mg/day treatment groups will be allowed at the discretion of the Investigator after Day 8.

Comparator, dosage and mode of administration

Placebo will be administered once daily with tablets matching in number and appearance to blinded quetiapine dosing.

Duration of treatment

Patients will receive double-blind, double-dummy treatment for up to 8 weeks (56 days), following an initial washout period of between 7 to 28 days (depending on the medications involved) and will come in to the clinic on Day 57 for final assessments.

Endpoints

- **Efficacy**

  Primary efficacy endpoint is the change from baseline to final assessment in the MADRS total score.

  Secondary efficacy endpoints are the percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at study endpoint, the change from baseline to each assessment (observed cases) in the MADRS total score, and the change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, and CGI-S and the CGI-C.; the change from baseline to each assessment (observed cases) and final assessment in the YMRS, and the HAM-A total scores.

- **Safety**

  Safety endpoints are the incidence and nature of all adverse events, the incidence of drug-related adverse events, the incidence of subject withdrawal due to adverse events, and the incidence of clinically significant changes in vital signs, weight, and body mass index during double-blind treatment. Tolerability endpoints are the change in the SAS total score from baseline to final assessment, the change in BARS total score from baseline to final

assessment, and the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

- **Quality of life**

  Exploratory quality of life endpoints are the change from baseline in the PSQI score and Q-Les-Q total score.

Statistical methods

All statistical comparisons will be 2-sided tests for the difference between active study medication and placebo. The primary analysis will be analysis of covariance (ANCOVA) for the change from baseline to final assessment for total MADRS score. The ANCOVA model will include terms for treatment, and stratum, with the baseline MADRS score as a covariate. Pair-wise comparisons of each dose with placebo will be assessed within this model as planned comparisons. In order to adjust for multiple comparisons with placebo a step-up procedure will be employed with a rule for tests of significance based on ordered p-values, maintaining an overall experiment wise type I error rate of 0.05. The proportion of patients having a $\geq$ 50% reduction from baseline to final assessment in MADRS will be compared across treatments using a logistic model. Change from baseline in MADRS scores at each assessment (observed cases), and change from baseline in HAM-D, HAM-D item 1, CGI-S, YMRS, HAM-A, Q-Les-Q and PSQI score at each assessment (observed cases) and LOCF, will be analyzed using the same ANCOVA model as for the primary endpoint. The CGI-C will be analyzed using the ANCOVA model with the baseline CGI-S as a covariate.

The change from baseline in SAS and BARS score data will be assessed using the same ANCOVA model as the primary endpoint. The incidence of EPS AEs and overall AEs will be reported using descriptive statistics. Vital signs, weight, and body mass index will be tabulated using descriptive statistics at baseline, final assessment, and for change from baseline. Descriptive statistics will also be used to describe the proportion of patients whose final Q-Les-Q is within community norm levels.

Repeated measures analysis of variance (ANOVA)will be performed to evaluate whether there are significant differences among treatments across time for MADRS, HAM-D, and HAM-A total scores.

Efficacy analyses will be conducted on a modified intention-to-treat (MITT) population. A per-protocol (PP) analysis will be conducted for the primary analysis measure (change from baseline MADRS) to evaluate sensitivity of the response. The safety population will include all subjects who took study medication.

APPENDICES

LIST OF ABBREVIATIONS AND DEFINITION OF TERMS

The following abbreviations and specialist terms are used in this study protocol.

Table 1 Abbreviations and specialist terms

Abbreviation or specialist term	Explanation
AE	Adverse event (see definition in Section 4.4.2.1)
ALT	Alanine aminotransferase
ANCOVA	Analysis of covariance
ANOVA	Analysis of variance
AST	Aspartate aminotransferase
BARS	Barnes Akathisia Rating Scale
BP	Bipolar Disorder
BPD	Bipolar Depression
CGI	Clinical Global Impression
CGI-C	Clinical Global Impression - Change
CGI-S	Clinical Global Impression - Severity
CMH	Cochran-Mantel Haenszel
CRF	Case Report Form
DSM-IV	Diagnostic and Statistical Manual of Mental Disorders - Fourth Edition
EPS	Extrapyramidal symptoms
ECG	Electrocardiogram
GCP	Good Clinical Practice
HAM-A	Hamilton Rating Scale for Depression
HAM-D	Hamilton Rating Scale for Anxiety
ICH	International Conference on Harmonisation
ICTI	Interactive Clinical Technologies, Incorporated
IEC	Independent Ethics Committee
IRB	Institutional Review Board
IVRS	Interactive Voice Response System
LOCF	Last Observation Carried Forward

Abbreviation or specialist term	Explanation
MADRS	Montgomery-Asberg Depression Rating Scale
MITT	Modified Intent to Treat
OAE	Other significant adverse event (ie, an adverse event of special interest in this clinical development; see definition in Section 4.4.2.1). The classification of OAEs will be performed by AstraZeneca drug safety physicians after the study is complete.
PSQI	Pittsburgh Sleep Quality Index
Principal investigator	The investigator who leads the study conduct at an individual study center. Every study center has a principal investigator.
Qhs	at bedtime
Q-Les-Q	Quality of Life Enjoyment Satisfaction Questionnaire
SAE	Serious adverse event (see definition in Section 4.4.2.1).
SAS	Simpson Angus Scale
SSRI	Selective serotonin reuptake inhibitors
UNI	Universal Systems Incorporated
YMRS	Young Mania Rating Scale

1 INTRODUCTION

1.1 Background

Quetiapine fumarate (SEROQUEL™, quetiapine) is a dibenzothiazepine derivative approved by the United States Food and Drug Administration (FDA) on 26 September 1997 following clinical development by AstraZeneca Pharmaceuticals LP (also referred to as the sponsor) for the treatment of subjects with schizophrenia. Quetiapine fumarate is designated chemically as bis [2-(2-[4-(dibenzo[b,f][1,4]thiazepin-11-yl) piperazin-1-yl]ethoxy)ethanol] fumarate

Quetiapine has been studied in a toxicological and clinical program directed at supporting clinical evaluation in man. The results of these studies are presented in the Investigator's Brochure dated January 2002. The Professional Information Brochure (PIB) contains the current prescribing information for quetiapine.

1.2 Rationale for this study

The bipolar disorders are psychiatric disorders in which a disturbance in mood is the predominant feature. Bipolar I disorder is characterized by one or more manic or mixed episodes, usually accompanied by major depressive episodes. Bipolar II disorder is characterized by one or more major depressive episodes accompanied by at least one hypomanic episode. Bipolar depression refers to the major depressive episodes that occur with bipolar I and II disorder.

The prevalence of bipolar disorder is estimated to be 1 to 3.5%, evenly divided between men and women. The length of time between onset and symptoms and proper diagnosis and treatment is approximately 10 years and it is estimated that only 60% of those suffering from a bipolar disorder are receiving appropriate pharmacotherapy.

Although there is extensive and emerging literature guiding the treatment of the manic phase of bipolar I disorder as well as many approved compounds for the treatment of unipolar depression, the treatment of bipolar depression has not been widely studied and treatment guidelines are in their infancy. The use of currently available antidepressants for monotherapy for bipolar depression is often problematic as they may increase the "switch" into hypomania or mania from depression, or increase cycle acceleration. The adjunctive use of mood stabilizing medications such as lithium carbonate (LiCO3) is common and may decrease the likelihood of these complications.

Evidence indicates that medications with mood stabilizing properties which produced low levels of mania, hypomania, or cycle acceleration may be useful as monotherapy in the treatment of bipolar depression. The antiepileptic lamotrigine produced improvement in

HAM-D and MADRS scores in a 7-week, double-blind, placebo controlled trial for the patients who completed this study (Calabrese 1999). More recently, the anti-manic agent divalproex demonstrated numerical improvement over placebo in the percentage of patients with bipolar depression having a 50% reduction in the HAM-D scores without mania in an 8 week trial (Sachs, 2001) but this difference was not statistically significant. Lithium carbonate, also approved for the treatment of mania, has been demonstrated to be effective as a monotherapeutic agent in approximately 50% of patients with bipolar depression (Bauer). However, there are efficacy and tolerability limitations which mkay prohibit widespread use of the above therapies.

A large multicentered, double-blind, placebo controlled trial was recently completed, which demonstrated efficacy of the atypical antipsychotic olanzapine as monotherapy for the treatment of bipolar depression (Tohen, 2002). The endpoint mean MADRS change was significantly greater for patients on olanzapine (-15.0 points) than for those on placebo (-11.9 points). Treatment-emergent mania did not differ significantly between groups. There also is evidence from small uncontrolled studies that other atypical antipsychotics such as risperidone, and clozapine have mild to moderate antidepressant activity when used in patients with mood disorders. These small studies also indicate that these compounds are unlikely to cause patients to “switch” into mania.

The potential efficacy of quetiapine in depressive symptoms is provided in data from the Quetiapine Experience with Safety and Tolerability Trial (QUEST) and from investigator-initiated trials in mood disorder patients. In an open-label trial evaluating the safety and tolerability of quetiapine over 700 subjects with schizophrenia and other psychotic disorders were randomized to treatment with quetiapine or risperidone. Quetiapine-treated patients experienced a greater improvement in depressive symptoms compared with risperidone-treated patients, with a mean difference of 1.3 points on the HAM-D after adjustment for baseline differences (P=0.028) (Mullen et al, 2001).

A trial of quetiapine in 20 neuroleptic-dependent patients with bipolar or schizoaffective disorder also suggested positive effects on the depressive and psychotic symptoms in these disorders (Sajatovic et al, 2001). Overall, in 10 patients with bipolar disorder and 10 with schizoaffective disorder who received open-label quetiapine to optimum clinical dosage (25 to 800-mg), significant improvement in Brief Psychiatric Rating Scale (BPRS), Young Mania Rating Scale (YMRS), and HAM-D scores was noted.

In summary, the paucity of satisfactory treatments available signify an unmet medical need for the treatment of bipolar depression. There are signals of efficacy from clinical trials for the antidepressant properties of atypical antipsychotics such as quetiapine.

2 STUDY OBJECTIVES

2.1 Primary objective

The primary objectives of the study are to evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks by comparing

(1) the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

(2) the percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at final assessment

(3) the change from baseline to each assessment in the MADRS total score

(4) the change from baseline to each assessment in the total Hamilton Rating Scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S), and the Clinical Global Impression - Change (CGI-C).

2.2 Secondary objective

The secondary objectives of the study are:

(1) to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

(2) to evaluate the effect of quetiapine on anxiety compared to placebo by

- the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score
- the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

(3) to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by

- the incidence and nature of overall adverse events
- the incidence and nature of drug-related adverse events
- subject withdrawal due to adverse events during double-blind treatment

- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Experimental:

1. to evaluate the efficacy of quetiapine on sleep quality by comparing the change in sleep quality using the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment
2. to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment

3 HYPOTHESES, STUDY PLAN AND PROCEDURES

3.1 Hypotheses

Primary:

(1) Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

(2) Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

(1) Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

(2) Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

(3) Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

(4) Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

(5) Quetiapine at a dose of 300 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

(6) Quetiapine at a dose of 600 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

(7) Quetiapine at a dose of 300-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

(8) Quetiapine at a dose of 600-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

(9) Quetiapine at a dose of 300 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

(10) Quetiapine at a dose of 600 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

(11) Quetiapine at a dose of 300 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

(12) Quetiapine at a dose of 600 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

(13) Quetiapine at a dose of 300 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

(14) Quetiapine at a dose of 600 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

3.2 Overall study design and flow chart

This multicenter, double-blind, randomized, placebo-controlled, double-dummy, parallel group trial will consist of a washout period (from 7 to 28 days depending on the medications involved) followed by 8 weeks of treatment to evaluate the efficacy, safety, and tolerability of quetiapine fumarate in the treatment of a major depressive episode in adult subjects with bipolar disorder. A total of approximately 740 subjects will be screened to obtain 530 enrolled subjects to yield 504 evaluable subjects at approximately 75 centers, with a target enrollment

of 8 patients per center (minimum 4 maximum 30). Subjects are required to have a HAM-D (17-item scale) score of $\geq$ 20 and a YMRS of $\leq$12 at screening baseline (Visit 1).

The trial comprises the following 2 periods:

- Washout period
  Subjects will undergo HAM-D, SCID, YMRS, and safety evaluations at screen (Visit 1) and if they qualify to participate they will commence a washout of antidepressant, antipsychotic, and mood stabilizer medications. The number of days for washout will depend on the medication they are taking. These medications must be discontinued for a period of at least 7 days prior to randomization (Day 1, Visit 2), with the exception of fluoxetine which must be discontinued for a period of 14 days prior to randomization (Day 1, Visit 2) and depot injections of haloperidol decanoate or fluphenazine decanoate which need 28 days washout before randomization.

- 8-week double-blind randomized treatment period (Weeks 1 to 8)
  Eligible subjects will be randomized on Day 1 (Visit 2) to 1 of 3 treatment groups: quetiapine 300 mg/day, quetiapine 600 mg/day, or placebo. The randomization will be done using a stratification based on diagnosis. Treatment will be administered once daily at bedtime for 8 weeks (Days 1 - 56). Subjects will not receive medication on Day 57 which is only for final assessments. Doses will be titrated to achieve target doses of 300 mg/day within 4 days or 600 mg/day within 8 days. A dose reduction of 100 mg is allowed to improve patient tolerance in each treatment group. MADRS assessments (used to evaluate the primary efficacy variable) will be performed at Days 1, 8, 15, 22, 29, 36, 43, 50, and 57.

Figure 1 Study flow chart

			Treatment										
Day	**Screen**	**Washout [b]**	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9-14**	**15-56**	**57**

[a] Washout of antidepressants, antipsychotics, mood stabilizer for at least 7 days; 14-day washout for fluoxetine and 28 days for haloperidol or fluphenazine decanoate

[b] Repeat laboratory tests and ECG only if results outside of normal range and clinically significant at Screening

c Height and weight on screen and weight on Day 57
d Physical exam includes ophthalmoscopic exam on screen
e Blood pressure will be obtained in supine and standing positions

3.3 Rationale for study design, doses and control groups

This trial is designed as a double-blind placebo-controlled evaluation of Seroquel as monotherapy in bipolar depression. There is no currently approved compound for use in bipolar depression, nor is there a clinically accepted "gold standard". Conventional antidepressants have fallen out of favor because of their ability to induce manic symptoms. Antidepressants approved forthe treatment of unipolar depression have not been demonstrated to improve mood symptoms relative to placebo (Nemeroff et al Am J Psychiatry 158:6 June 2001). Moreover, there is a high placebo response rates of approximately 30% found in bipolar depression trials. Thus, the use of a placebo treatment arm for comparison is clinically justified.

Trial treatment will be administered as quetiapine monotherapy in order to more clearly identify a treatment effect of quetiapine on bipolar depression. Quetiapine fumarate will be administered once daily at bedtime. The current label specifies twice daily (BID) but a double-blind crossover study in bipolar patients indicated that once daily (qd) is well tolerated and as effective as BID dosing (Chengappa, 2002).

A period of 7 to 28 days is adequate for washout of most psychoactive medications including antidepressants, antipsychotics (including depot agents), and mood stabilizers to ensure that subjects are stable and continue to have adequate depressive symptoms requiring treatment, prior to randomization into the trial. The double-blind treatment period of 8 weeks is consistent with the time period that is required to see a clinically meaningful response in depressive symptoms.

The trial is designed as a fixed-dose evaluation due to the failure of flexible dose regimens in other psychiatric disorders. The dosages are based on clinical trial data with quetiapine in patients with a mood disorder. In the QUEST trial, the average dose of quetiapine in patients with a primary mood disorder (N=316) was approximately 250 mg/day at 16 weeks. In 20 patients with bipolar or schizoaffective disorder treated with open-label quetiapine, the mean dose was approximately200 mg/day (Sajatovic). Based on this data, 300 mg/day administered as monotherapy is an appropriate low-dose treatment arm, and 600 mg/day is an appropriate high-dose treatment arm that should exhibit efficacy without a high rate of AEs or noncompliance.

The MADRS is a standardized, well-validated measure of depressive symptoms that is sensitive to treatment effects in depressed outpatients.

3.4 Selection of study population

3.4.1 Study selection record

Investigators must keep a record of subjects who underwent screening but were not randomized into the trial.

3.4.2 Inclusion criteria

At screen (Visit 1) subjects must fulfill all of the following criteria:

(1) Documented ability to provide informed consent before beginning any study-specific procedures.

(2) Male and female patients between 18 and 65 years of age, inclusive

(3) Females of childbearing potential, be using a reliable method of contraception. Reliable methods include hormonal contraceptives (eg, oral contraceptive or long-term injectable or implantable hormonal contraceptive), double-barrier methods (eg, condom and diaphragm, condom and foam, condom and sponge), intrauterine devices, and tubal ligation

(4) Women must have a negative pregnancy test

(5) Meets DSM-IV criteria for bipolar disorder I or bipolar II, most recent episode depressed (296.5x and 296.89x), confirmed by the amended version(by Dr. Michael First) of the Structured Clinical Interview for DSM-IV (SCID) as administered by an AstraZeneca approved clinician with a signed confirmation by the Principal Investigator

(6) Outpatient status

(7) HAM-D (17-item) total score of 20 or greater

(8) HAM-D item 1 (depressed mood) score $\geq$2

(9) YMRS total $\leq$12

At randomization (Visit 2) subjects must fulfill the following criteria:

(1) HAM-D (17-item) total score of 20 or greater

(2) HAM-D item 1 (depressed mood) score $\geq$2

(3) YMRS total $\leq$12

3.4.3 Exclusion criteria

Any of the following is regarded as a criterion for exclusion from the study:

(1) Patients with a current Axis I disorder other than bipolar disorder within 6 months of screening

(2) Patients whose current episode of depression exceeds 12 months or is less than 4 weeks

(3) History of non-response to an adequate trial (6 weeks) of more than 2 classes of antidepressants during their current episode

(4) Patients who meet DSM-IV criteria for substance dependence, for any substance except nicotine, within 12 months of screening

(5) Patients with a positive urine toxicology screen for illicit substances of abuse

(6) Patients who are unable to discontinue all psychoactive medications (excluding prn benzodiazapines), including antidepressants, antipsychotics, and mood stabilizer, at least 7 days prior to randomization and consistent with the pharmacokinetics of the drug

- Patients treated with fluoxetine who have not discontinued this medication for at least 14 days prior to randomization.
- Patients treated with haloperiodol decanoate or fluphenazine decanoate who have not discontinued these medications 28 days prior to randomization.

(7) Patient who have not discontinued the use of potent P450 inhibitors and inducers (See Section 4.3, Table 13)

(8) Patients who in the investigators opinion will require initiation of psychotherapy during the study period. Note: ongoing psychotherapy for a minimum of 3 months may continue.

(9) Patients who, in the investigator's judgment, pose a current serious suicidal or homicidal risk at Visit 1 (HAM-D item 3 score of 3 or greater), or have made a suicide attempt within the past 6 months

(10) Patients with a history of clinically significant cardiac, renal, neurologic, cerebrovascular, metabolic, or pulmonary disease, or other disease or clinical finding that is unstable or that, in the opinion of the investigator, would be negatively affected by trial medication or that would affect trial medication

(11) Patients who have had a myocardial infarction within 1 year before Visit 1

(12) Patients with clinically significant abnormal laboratory findings at Visit 1

(13) Patients with renal impairment (serum creatinine ≥1.5 mg/dL) or hepatic impairment (ALT or AST 3 times the upper limit of normal)

(14) Patients whose TSH is ≥10% over the upper normal limit. Patients maintained on thyroid medication must be euthyroid for a period of at least 3 months before Visit 1

(15) Patients with clinically significant abnormalities on ECG

(16) Women who have a positive human chorionic gonadotropin (HCG) pregnancy test at Visit 1 or who are lactating or planning to become pregnant during the course of the study

(17) Patients who have participated in a clinical trial of an investigational drug within the past 3 months

(18) Patients who, in the opinion of the investigator, would be non-compliant with the visit schedule or study procedures

(19) History of orthostatic hypotension or conditions that would predispose them to hypotension (eg dehydration, hypovolemia)

(20) Known history of intolerance, hypersensitivity, or lack of response to quetiapine or any of the components of Seroquel tablets, as judged by the investigator

3.4.4 Restrictions

Subjects will be required to adhere to the following special restrictions:

1) Use of any psychoactive drugs including antidepressants, hypnotics (with the exceptions noted in Section 4.3), mood stabilizing drugs, and antipsychotics is not permitted from a period of 5 elimination half-lives (28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

2) Use of cytochrome P450 3A4 inducers and potent inhibitors are not permitted from 14 days prior to randomization to end of study (see Table 13)

3.4.4.1 Criteria for discontinuation

Subjects may be discontinued from study treatment and assessments at any time, at the discretion of the investigator(s). Specific reasons for discontinuing a subject from this study are:

1. Withdrawal of informed consent

2. Worsening psychiatric symptoms such that the symptoms constitute a danger to themselves or to others

3. Use of psychotropic medications at any time during the double-blind treatment period.

4. Pregnancy at any time during the double-blind treatment period.

5. Clinically significant or serious adverse event that would not be consistent with continuation in the study, as determined by the investigator, AstraZeneca, or the subject.

3.4.4.2 Voluntary discontinuation by a subject

Subjects are free to discontinue their participation in the study at any time, without prejudice to further treatment. Subjects who discontinue from the study should always be asked about the reason(s) for their discontinuation and about the presence of any adverse events. They should be seen and assessed by an investigator(s) (see Section 3.4.4.4). Adverse events should be followed up and any diary cards, questionnaires (eg, for Quality of Life assessments) and investigational products should be returned by the subject.

3.4.4.3 Incorrectly enrolled or randomized subjects

Incorrectly enrolled subjects will be discontinued from further study treatment and assessments. If a subject is given the incorrect randomized treatment, the subject should be continued on the treatment dispensed and Interactive Clinical Technologies, Inc. (ICTI), the vendor providing the randomization patient assignment) should be notified of the error. The next patient randomized at the site will be assigned an appropriate kit number by ICTI, accounting for the error.

3.4.4.4 Procedures for discontinuation

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- Physical examination including an ophthalmoscopic exam
- Vital signs and weight
- HAM-D
- MADRS
- YMRS
- HAM-A

- SAS
- BARS
- PSQI
- Adverse events assessment

3.5 Treatments

3.5.1 Investigational products

3.5.1.1 Identity of investigational product and comparators

Investigational product will consist of 25-mg , 100-mg, and 200-mg tablets of quetiapine fumarate and matching placebo tablets as shown in Table 3.

Table 3 Trial medication

Tablet strength	Formulation number	Tablet color
25-mg quetiapine	F12804	peach
25- mg placebo	F12636	peach
100-mg quetiapine	F12689	yellow
100-mg placebo	F12637	yellow
200-mg quetiapine	F12690	white
200-mg placebo	F12638	white

3.5.1.2 Doses and treatment regimens

Quetiapine and placebo for each trial center will be packaged in blister cards. The 8-week supply will consist of 8 double-blind blister cards. The 8 double-blind blister cards will be packaged in subject-specific cartons.

Trial medication will be provided for each subject in an 8-card carton that contains the following:

- 1-week titration double-blind treatment cards for Days 1-7
- seven 1-week double-blind treatment cards for Days 8-56, with individual cards provided for treatment Days 8-14, 15-21, 22-28, 29-35, 36-42, 43-49, and 50-56.
  Each one-week blister card will include a 2-day treatment overage to accommodate visit schedules.

The Week 1 titration card will consist of 25 mg tablets, 100-mg tablets, and 200-mg tablets or matching placebo, as described below, for each of the 300 mg/day and 600 mg/day treatment groups and placebo treatment group.

Blister cards for Weeks 2 through 8, for each treatment group, will consist of 9 days of dosing with the same number of pills for each group (300-mg,600-mg, and placebo) respectively. The cards for each treatment group will consist of 2 yellow tablets and 2 white tablets per day at bedtime.

Quetiapine or placebo will be administered once a day at bedtime with dose titration to reach a target dose of 300 mg/day by Day 4 in the 300 mg/day treatment group and 600 mg/day by Day 8 in the 600 mg/day group. The schedule for quetiapine or placebo administration is shown in Tables 4, 5, and 6.

Table 4 Dose administration schedule for 300-mg double-blind quetiapine

Trial Day	**Quetiapine 300 mg/day and placebo**				
	Quetiapine 25 mg	**Quetiapine 100 mg**	**Placebo 100 mg**	**Quetiapine 200 mg**	**Placebo 200 mg**

Days 9-56	0	2 tablets/100-mg	2 tablets/400-mg

Dosing Reduction

Dose reductions for intolerability will be allowed after Day 8. In the 300-mg/day group, dose reductions of 100 mg/day will be achieved by reducing the dose by one 100-mg tablets. In the 600-mg/day group, a dose reduction of 100 mg/day will be achieved by reducing the bedtime dose by one 100-mg tablets active drug. This dose reduction can occur anytime after Day 8. Each column in the blister packs will be numbered 1-4. By Day 6 columns 1 and 2 of the blister packs will each contain a 100-mg tablet. In both the 300-mg /day group and the 600-mg/day group, column 1 will contain active medication thus ensuring that by eliminating the first column (column #1) of medication they are reducing their dose by 100-mg. Each tablet in the placebo treatment group will also indicate the same corresponding numbers (columns #1-4) as the active treatment groups even though no active product is packaged. This will ensure the blind is maintained.

Extra Day	100-mg placebo	100-mg placebo	200-mg placebo	200-mg placebo

3.5.1.3 Labeling

All trial supplies will be provided by AstraZeneca.

The blister cards Days 1- 56 will be supplied in subject-specific cartons. Each blister card will be labeled with a two-panel, double-blind label. The left portion of the label will remain on the blister card. The right portion of the label will be affixed to the appropriate Case Report Form (CRF) as part of the individual's permanent record. The label will contain at least the following information: trial number, code assignment and storage condition. The carton for the 8 blister cards for Days 1-56 will be labeled with a single-panel double-blind label. The label will contain at least the following information: trial number, storage conditions, and instructions to dispense according to protocol.

3.5.1.4 Storage

All investigational products must be kept in a secure and locked location, at room temperature and protected from light and moisture.

3.5.1.5 Accountability

The investigational materials are to be prescribed only by the investigator or the sub-investigators named in Form FDA-1572. Under no circumstances will the investigator allow the

investigational drug to be used other than as directed by the protocol without prior AstraZeneca approval.

The investigator must maintain accurate records accounting for the receipt of the investigational materials (ICTI provides a acknowledge the receipt of drug shipment module for this purpose) and for the disposition of the material. This record keeping consists of a dispensing record that includes the identification of the person to who the drug is dispensed, the quantity and the date of dispensing, and documentation of any unused drug returned to the investigator. This record is in addition to any drug accountability information recorded on the subject's hospital or clinic chart.

Starting with Week 1, each patient will return the blister card for the preceding week to the clinic. The clinic will tabulate the returned pills to aid in drug accountability.

At the termination of the study or at the request of the sponsor, the Clinical Research Associate must return any unused study supplies to Universal Systems Incorporated (USI), at the address listed below, for destruction. This return will be documented on an Investigational Product Return Invoice supplied by AstraZeneca.

USI
2084-900 Lake Industrial Court
Conyers, GA 30013

3.5.2 Method of assigning subjects to treatment groups

This trial will be established with a non-specific labeling (NCSL) randomization which will be stratified by bipolar type. Randomization to trial treatment will be done via an Interactive Voice Response System (IVRS) at ICTI on Day 1 (Visit 2) in balanced blocks within each stratum in order to ensure relative balance among treatment groups and strata (Bipolar I and Bipolar II)in terms of total number of subjects. The randomization schedule will be created under the auspices of AstraZeneca Quantitative Decision Sciences Group and will provide allocation of subject numbers to the treatment regiments. Number and size of tablets will be identical for the 3 treatment arms. Clinical supplies will contain a 4-digit subject number which is allocated to the treatment arm through the randomization scheme. A separate randomization will be used to provide kits of packaged drugs to the sites. The IVRS system at ICTI will allocate a kit number at the site for the treatment assigned through the stratified randomization.

Subject eligibility will be established before treatment randomization. Subjects will be randomized centrally sequentially within the stratum, as subjects are eligible for enrollment/randomization. If a subject discontinues from the study, the subject number will not be reused, and the subject will not be allowed to re-enter the study.

The randomization is centralized and the assigned randomized patient number and associated kit numbers will not be sequential within a site.

3.5.3 Blinding and procedures for unblinding the study

3.5.3.1 Methods for ensuring blinding

All packaging will be identical with placebo and active tablets identical in size and color. The number of tablets dispensed on each card will be identical across all treatment arms.

The randomization for the kit assignments will be generated by the study statistician and provided directly to packaging with a copy going to ICTI Clinical Supplies Management Group. The stratified patient randomization will be generated by an AstraZeneca randomization staff member not associated with the trial and will be provided directly to ICTI for incorporation into the IVRS system. No member of the study team in AstraZeneca, at investigational sites or the CRO organization handing data will have access to the randomization scheme during the conduct of the study.

3.5.3.2 Methods for unblinding the study

Individual treatment codes, indicating the treatment randomization for each randomized subject, will be available to the investigator(s) or pharmacists at the study center through the use of a concealed panel on the label.

The treatment code must not be broken except in medical emergencies when the appropriate management of the subject necessitates knowledge of the treatment randomization. The investigator(s) must document and report to AstraZeneca any breaking of the treatment code. AstraZeneca retains the right to break the code in order to report serious adverse events to regulatory authorities.

Treatment codes will not be broken for the planned analyses of data until all decisions on the evaluability of the data from each individual subject have been made and documented.

3.5.4 Treatment compliance

Compliance will be assessed based on returned tablet counts. The percent compliance will be calculated as the number of tablets taken (dispensed - returned) divided by the prescribed number of tablets (number of days times number of tablets per day) expressed as a percent. Based on this calculation a subject with at least 75% compliance with study medication during study participation will be classified as compliant.

Furthermore, if there are any significant irregularities in compliance, in the opinion of the investigator, the patient should be withdrawn from the study.

4 CONCURRENT TREATMENT

4.1 General medications

Nonpsychotropic medication, including over-the counter medications, taken by the subject before entry into the trial may be continued during the trial. Medications required to treat illnesses or complaints that occur during the trial may be used at the discretion of the investigator. Use of cytochrome P450 inducers and potent inhibitors is restricted (see Table 13 below).

Women who enter the trial with an intrauterine device in place, using oral contraceptives, or using injectable or implantable hormonal agents designed to prevent pregnancy may continue these treatments throughout the trial.

The specific type of medication (trade or generic name), the indication for use, and the dates of usage should be reported on the CRF entitled Concurrent Treatment.

Medication which is considered necessary for the subject's safety and well being may be given at the discretion of the investigator(s). The administration of all medication (including investigational products) must be recorded in the appropriate sections of the case report form (CRF).

4.2 Use of psychoactive medications

The use of psychoactive drugs other than those specifically allowed during the trial (ie, lorazepam and zolpidem tartrate) is restricted (see Section 4.3, Table 13).

4.3 Summary of permitted concurrent medications

Medications specifically prohibited or restricted, and those permitted during the trial are listed in Table 13

Table 13 Permitted, restricted, and prohibited medications

Use category	Type of medication
Permitted	Previous medications for medical, nonpsychiatric illnesses Oral contraceptives and contraceptive devices
Restricted	Zolpidem tartrate 5-10 mg at bedtime for insomnia Lorazepam 1-3 mg per day for severe anxiety These drugs may be prescribed during the first 3 weeks of the study as long as they do not interfere with any assessments
Prohibited	Potent cytochrome P450 3A4 inducers (including but not limited to barbiturates, carbamazepine, rifampin, and St John's Wort) Potent cytochrome P450 3A4 inhibitors (including but not limited to ketoconazole, itraconazoole, fluconazole, erythromycin, clarithromycin, troleandomycin, indinavir, nelfinavir, ritonavir, and saquinavir) Antipsychotic medications (including but not limited to phenothiazines, risperidone, olanzapine, ziprasidone, clozapine, loxapine, thiothixene, molindone) Use of any psychoactive drugs including antidepressants, hypnotics, mood stabilizing drugs, and antipsychotics from a period of 5 elimination half-lives (28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

5 STUDY MEASUREMENTS AND ENDPOINTS

5.1 Primary endpoint

The primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score. This endpoint is used as the basis for the sample size calculation, as provided in Section 6.1.

5.2 Screening and demographic measurements

The following data are to be collected at screening:

- date of birth, sex, and race
- vital signs, height, weight
- supine and standing blood pressure and pulse
- significant medical history
- physical examination including ophthalmoscopic exam
- 12-lead electrocardiogram
- clinical chemistry and hematology
- pregnancy test (if female of childbearing potential)
- HAM-D assessment
- YMRS
- DSM-IV diagnosis, based on SCID assessment

5.3 Efficacy measurements and endpoints

The following assessments will be used to evaluate efficacy:

- change from baseline to final assessment in MADRS total score
- percentage of subjects with $\geq$50% reduction from baseline in MADRS total score at final assessment
- the change from baseline in each assessment (observed cases) in the MADRS total score

- the change from baseline to each assessment (observed cases) and final assessment in the CGI-S
- the CGI-C at final assessment
- the change from baseline to each assessment (observed cases) and final assessment in the YMRS
- the change from baseline to each assessment (observed cases) and final assessment in the total HAM-A

Evaluation using each of these scales should be performed by the same trained/certified staff member who has been approved by AstraZeneca for all assessments of the scale for an individual subject.

5.3.1 Summary of efficacy objectives and endpoints

Table 17 shows how the efficacy endpoints of this study relate to the study objectives.

Table 14 Efficacy objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Primary	Primary measure		
evaluate the efficacy of quetiapine compared to placebo in the treatment of a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks	change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score; ls means, 95% CI at final assessment ; descriptive statistics by statum	ANCOVA for the change from baseline to final assessment for total MADRS score. Pair-wise comparisons of each dose with placebo using step up procedure	Reductions in MADRS compared with placebo will indicate doses which are effective in treating depressive episode
	Secondary measure		
	percentage of subjects meeting the MADRS responder criteria ; n, percentage responders at each assessment, final assessment ; descriptive statistics by statum	Logistic model	Higher response rates will indicate doses which are effective in treating depressive episode in treating depressive episode
	change from baseline to each assessment for the MADRS total score, and each assessment and final	ANCOVA for the change from baseline to each assessment and final assessment	Reductions in scales compared with placebo will indicate doses which are effective in

	assessment Clinical Global Impression - Severity (CGI-S); ls means, 95% CI; descriptive statistics by stratum	(LOCF) for CGI-S. Pair-wise comparisons of each dose with placebo	treating depressive episode
	Clinical Global Impression - Change (CGI-C); ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the CGI-C for each assessment and final assessment (LOCF). Pair-wise comparisons of each dose with placebo	Greater improvements in CGI-C will indicate doses which are effective compared with placebo
Secondary			
evaluate the efficacy of quetiapine compared to placebo in the incidence of treatment -emergent mania	change from baseline to each assessment and final assessment in the YMRS total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for YMRS total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	No significant increase in the YMRS compared to placebo will indicate doses which do not result in treatment-emergent mania
evaluate the effect of quetiapine compared to placebo on symptoms of anxiety	change from baseline to each assessment and final assessment in the HAM-A total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for HAM-A total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Improvement in the HAM-A compared to placebo will indicate efficacy in treating anxiety component of the depressive episode

The methods for collecting efficacy data are presented below.

5.3.2 Montgomery-Asberg Depression Rating Scale (MADRS)

5.3.2.1 Methods of assessment

The MADRS will be performed at each visit during the trials using the validated MADRS instrument by certified staff at each site.

5.3.2.2 Calculation or derivation of endpoint

The change from baseline to final LOCF will be calculated for total MADRS score. A subject will be classified as a responder if the % change from baseline, calculated as the (change from

baseline divided by the baseline) multiplied by 100 indicates a ≥ 50% reduction in baseline total MADRS score.

5.3.3 Hamilton Rating Scale for Depression (HAM-D)

5.3.3.1 Methods of assessment

The HAM-D will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-D and HAM-D item #1.

5.3.4 Clinical Global Impression - Severity (CGI-S)

5.3.4.1 Methods of assessment

The CGI-S will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.4.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in CGI-S.

5.3.5 Clinical Global Impression - Change (CGI-C)

5.3.5.1 Methods of assessment

The CGI-C will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.5.2 Calculation or derivation of endpoint

The CGI-C is a measure of change from baseline and therefore requires no further derivation.

5.3.6 Hamilton Rating Scale for Anxiety (HAM-A)

5.3.6.1 Methods of assessment

The HAM-A will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.6.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-A.

5.3.7 Young Mania Rating Scale (YMRS)

5.3.7.1 Methods of assessment

The YMRS will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.7.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in YMRS.

5.4 Safety measurements and endpoints

The following measurements will be used to assess safety:

- adverse event reporting (both general adverse events and serious adverse events), coded using MedDRA system of nomenclature
- fasting clinical laboratory tests (including chemistry and hematology)
- vital signs(taken in both the standing and supine positions)
- ECG tests
- Simpson-Angus Scale
- Barnes-Akathesia Rating Scale

5.4.1 Summary of safety objectives and endpoints

Table 13 shows how the safety endpoints of this study relate to the study objectives.

Table 15 Safety objectives and endpoints relating to each objective

Objective	Endpoints and statistic	Planned analysis	Significance of results
evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression	incidence and nature of adverse events during double-blind treatment ; n, % incidence per event, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	no new safety issues identified
	incidence of drug-related adverse events during double-blind treatment ; n, % incidence; titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of subject withdrawal due to adverse events; n, % withdrawn, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of clinically significant changes in vital signs; n, % at each assessment and final visit	descriptive statistics only	
	change in the SAS total score ; mean change, standard deviation, baseline to final assessment (LOCF)	descriptive statistics only	
	the change in BARS total score	descriptive statistics only	
	incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment	descriptive statistics only	

The methods for collecting safety data are described below.

5.4.2 Adverse Events

5.4.2.1 Definitions

The definitions of adverse events (AEs), serious adverse events (SAEs) and other significant adverse events (OAEs) are given below. It is of the utmost importance that all staff involved in the study is familiar with the content of this section. The principal investigator is responsible for ensuring this.

(a) Adverse Event

An adverse event is the development of an undesirable medical condition or the deterioration of a pre-existing medical condition following or during exposure to a pharmaceutical product, whether or not considered causally related to the product. An undesirable medical condition can be symptoms (eg, nausea, chest pain), signs (eg, tachycardia, enlarged liver) or the abnormal results of an investigation (eg, laboratory findings, electrocardiogram). In clinical studies, an AE can include an undesirable medical condition occurring at any time, including run-in or washout periods, even if no study treatment has been administered.

(b) Serious Adverse Event

A serious adverse event is an AE occurring during any study phase (ie, run-in, treatment, washout, follow-up), and at any dose of the investigational product, comparator or placebo, that fulfills one or more of the following criteria:

- results in death
- is immediately life-threatening
- requires in-patient hospitalization or prolongation of existing hospitalization
- results in persistent or significant disability or incapacity
- is a congenital abnormality or birth defect
- is an important medical event that may jeopardize the subject or may require medical intervention to prevent one of the outcomes listed above?

The causality of SAEs (ie, their relationship to study treatment) will be assessed by the investigator(s), who in completing the relevant case report form must answer “yes” or “no” to the question “Do you consider that there is a reasonable possibility that the event may have been caused by the drug?” For further guidance on the definition of a SAE and a guide to the interpretation of the causality question, see Appendix F.

(c) Other significant adverse event

An AstraZeneca expert will identify OAEs during the evaluation of safety data for the Clinical Study Report. Significant adverse events of particular clinical importance, other than SAEs and those AEs leading to discontinuation of the subject from study treatment, will be classified as OAEs. Examples of these are marked hematological and other laboratory abnormalities, and certain events that lead to intervention (other than those already classified as serious), dose reduction or significant additional treatment. For each OAE, a narrative will be written and included in the Clinical Study Report.

5.4.2.2 Recording of adverse events

All AEs that occur before treatment, during treatment, or within 30 days following the cessation of treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor. A description of the event, its intensity, duration, action taken (eg, treatment and follow-up tests), and outcome should be given, along with the investigator's causality assessment of the relationship of the event to the study drug. If a diagnosis of the subject's condition has been made, then the diagnosis should be recorded as the SAE. In instances of well recognized syndromes (eg, fever, runny nose, cough) they can be recorded as "flu". However, if a diagnosis of the subject's condition has not been made, or if the individual symptoms are not well recognized, then the individual symptoms should be recorded separately.

In general, abnormal laboratory tests or vital signs should not be reported as AEs unless they fulfill the criteria for an SAE or lead to discontinuation. If an abnormal laboratory test result or vital sign is associated with clinical signs and symptoms, the sign or symptom should be reported as an AE, and the associated test result or vital sign should be recorded on the appropriate CRF.

A causality assessment must be recorded for all AEs. The CRF asks the question, "In your medical judgement, is there a reasonable possibility that the event may have been caused by the study therapy?" If there is any valid reason, even if undetermined or untested, for suspecting a possible cause-and-effect relationship between the study drug and the occurrence of the AE, then this should be answered "yes." Otherwise, if no valid reason exists for suggesting a possible relationship, then this should be answered "no." If more than 1 AE is identified, a causality assessment must be made for each AE.

It is important to distinguish between serious and severe AEs. Severity is a measure of intensity whereas seriousness is defined by the criteria in Section 5.4.2.1 b. An AE of severe intensity need not necessarily be considered serious. For example, nausea which persists for several hours may be considered severe nausea, but not a SAE. On the other hand, a stroke which results in only a limited degree of disability may be considered a mild stroke but would be a SAE.

Any detrimental change in the subject's condition after the subject enters the study will be discussed with the investigator. Where the detrimental change is considered by the investigator to constitute a progression or relapse of bipolar depression or a lack of efficacy, then this will not be considered an AE even where this necessitates or prolongs hospitalization. When there is deterioration in the condition for which the medicine is being used, there may be uncertainty as to whether this is lack of efficacy or an AE. In such cases, unless AstraZeneca or the reporting physician considers that the medicine contributed to the deterioration, the deterioration should be considered lack of efficacy. However, if it is believed that the medicine may have contributed to the deterioration, then this should be treated as an AE.

Study drug abuse is an SAE, even when there are no symptoms or additional AEs and should be reported according to the guidelines in Section 5.4.2.3. Misuse of study drug is an AE but is not considered an SAE unless accompanied by serious sequelae.

Should an overdose occur, it must be reported in accordance with the procedures described in Section 10.3 Procedures in case of overdose. All overdoses, with or without associated symptoms, should be reported as AEs.

Suicide and attempted suicide, irrespective of the method, but occurring in connection with the use of study drug, should be reported as AEs (serious or non-serious). This event should be identified as suicide or attempted suicide, and the method of the suicide or attempt should be provided. If an attempted suicide meets the criteria for an SAE, the event must be reported according to the guidelines in Section 10.4.

Should a pregnancy occur, it must be reported in accordance with the procedures described in Section 10.5. Procedures in case of pregnancy. Pregnancy in itself is not regarded as an AE unless there is a suspicion that an investigational product may have interfered with the effectiveness of a contraceptive medication.

5.4.2.3 Reporting of serious adverse events

Investigators and other site personnel must inform appropriate AstraZeneca representatives of any SAE that occurs in the course of the study within 1 day (i.e. immediately but no later than the end of the next business day) of when he or she becomes aware of it.

The AstraZeneca representative will work with the investigator to compile all the necessary information and ensure that the appropriate AstraZeneca Drug Safety Department receives a report by day 1 for all fatal and life-threatening cases and by day 5 for all other SAEs.

Follow-up information on SAEs must also be reported by the investigator within the same time frames.

If a non-serious AE becomes serious, this and other relevant follow-up information must also be provided to AstraZeneca within 1 day as described above.

After initial notification, the AstraZeneca representatives have 4 days to work with the investigator to compile all the necessary information to ensure that the appropriate AstraZeneca Drug Safety Department receives a complete report by day 5. Follow-up information on SAEs should also be reported by the investigator within the same time frames. If a non-serious case becomes serious, this and other relevant follow-up information should also be provided to AstraZeneca within 1 day as described in the paragraph above

All SAEs have to be reported, whether or not considered causally related to the investigational product. All SAEs will be recorded in the case report form. The investigator is responsible for informing the Ethics Committee and/or the Regulatory Authority of the SAE as per local requirements.

5.4.3 Laboratory safety measurements and variables

Blood (under fasting conditions) and urine specimens will be collected for laboratory test analysis and these samples will be processed by a central laboratory (Quintiles Central Laboratory).

5.4.3.1 Methods of assessment

- Fasting hematology: hemoglobin, hematocrit, red blood cell count, total and differential white blood cell counts and platelet count
- Fasting clinical chemistry: total bilirubin, alkaline phosphatase, alanine transaminase(ALT), aspartate transaminase(AST), sodium, potassium, chloride, creatinine, glucose, insulin, bicarbonate, high-density lipoprotein cholesterol, triglycerides, low-density lipoprotein cholesterol and total cholesterol
- Thyroid function tests: thyroid stimulating hormone (TSH), Triiodothyronine resin uptake (T3RU), and total thyroxine (T4)
- Serum pregnancy tests
- Urine toxicology screen

5.4.3.2 Calculation or derivation of endpoints

Change from baseline will be derived for all subjects who have a screening laboratory test and a final laboratory test. The change from baseline is the final test value minus the screening test value. Laboratory test values will also be compared to the laboratory standard normal ranges and

flagged with H or L if they are outside of the normal range. In addition, treatment emergent laboratory changes, identified using computerized methods to compare results or changes from baseline to standard extended ranges will be flagged at the subject and test level.

5.4.4 Vital signs measurement

5.4.4.1 Methods of assessment

A standard blood pressure cuff will be used to obtain systolic and diastolic blood pressure. The assessment will be done first with the subject in the supine position for 3 minutes and again within 3 minutes of the subject attaining a standing position. Pulse will be measured for 1 minute.

5.4.4.2 Calculation or derivation of endpoints

Change from baseline will derived be as the value at the visit minus the screen value for the same assessment and position. In addition the change within a visit between the standing and supine blood pressure assessments will be calculated for both systolic and diastolic blood pressures. This difference will be calculated as supine minus standing . A subject will be classified as having calculated postural hypotension if either the systolic blood pressure difference indicates a decrease >20 mmHg or the diastolic blood pressure difference indicates a decrease >15 mmHg.

5.4.5 ECG safety measurements and variables

5.4.5.1 Methods of assessment

A 12 lead ECG assessment will be done using an ECG machine compatible with the requirements for eResearch the central evaluation laboratory. The central laboratory will supply the interval data, rates and standard interpretation of the ECG test results.

eResearch
30 south 17th Street
Philadelphia, PA 19103-4001

5.4.5.2 Calculations and derivations of endpoint

Change from baseline for interval data and rate data will be derived by subtracting the screen value from the final assessment value. Values outside the extended range in Appendix XX will be flagged.

5.4.6 Simpson-Angus Scale (SAS)

5.4.6.1 Methods of assessment

The SAS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.6.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.4.7 Barnes-Akathisia Rating Scale (BARS)

5.4.7.1 Methods of assessment

The BARS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.7.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.5 Quality of Life endpoint

The following assessment will be used to assess the effect of quetiapine compared with placebo on quality of life as assessed by:

- the PSQI
- the short form Q-Les-Q

5.5.1 Summary of quality of life objectives and endpoints

Table 19 shows how the efficacy endpoints of this study relate to the study objectives.

Table 19 Efficacy objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Secondary	Secondary measure		
evaluate the effect of quetiapine compared to placebo on quality of sleep	change from baseline to final assessment in PSQI; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for PSQI total score, with MADRS score as covariate. Pair-wise comparisons of	Reduction in PSQI compared with placebo indicates improvement of sleep quality

		each dose with placebo	
evaluate the effect of quetiapine compared to placebo on the overall quality of life	change from baseline to final assessment in Q-Les-Q; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for Q-Les-Q total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Increase in Q-Les-Q compared with placebo indicates improvement of overall quality of life

The methods of collecting quality of life data are described below.

5.5.2 PSQI

5.5.2.1 Methods of assessment

The PSQI will be performed at scheduled visits during the trial by a patient at each site. The 9 self-rated questions will be incorporated into 7 component scores which are added together to yield one total "global" score. Higher scores indicate more severe difficulties in sleep quality.

5.5.2.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the PSQI.

5.5.3 Q-Les-Q

5.5.3.1 Methods of assessment

The Q-Les-Q is a patient self assessment questionnaire which will be completed at scheduled visits during the trial by a patient at each site. The short form has 14 self-rated questions, the first 12 will be incorporated into a total score. Higher scores indicate better quality of life.

5.5.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the Q-Les-Q.

5.6 Genetic sampling and storage

There will be no genetic sampling in this trial.

5.7 Volume of blood sampling and handling of biological samples

The total volume of blood that will be drawn from each subject in this study is as follows:

Table 16 Volume of blood to be drawn from each subject

Assessment		Sample volume (ml)	N of samples	Total volume (ml)	
				Women	Men
Safety	Clinical chemistry				
	Hematology	18	2	36	36
	Serum Pregnancy [a]	2	1	2	
Total				38	36

[a] Women only.

Sample handling and storage will be defined by the central laboratory which will be handling the analysis and reporting or results from samples.

6 DATA MANAGEMENT

Case Report Forms (CRFs) will be provided for recording of data. The forms will be in triplicate with carbonless paper. Data will be recorded legibly onto the CRFs with black ink, preferably with a ballpoint pen. If any data are not available, omissions will be indicated on the CRFs. Corrections should be made legibly and be initialed and dated. Correction fluid or covering labels must not be used. The top original and the first copy of the completed form will collected and returned to AstraZeneca/AstraZeneca's agent and the second copy will be retained by the investigator.

Data received electronically by AstraZeneca from a validated source will be loaded directly into the trial database for analysis.

7 STATISTICAL METHODS AND DETERMINATION OF SAMPLE SIZE

7.1 Determination of sample size

Since there is no data using the MADRS instrument in the assessment of quetiapine in treating bipolar subjects with depression, the sample size estimation was based on published data from the lamotrigine monotherapy (Calabrese et al, 1999) and olanzapine trials (Tohen et al, 2002). The percentage change in the HAM-D across these lamotrigine studies in bipolar depression is similar to that observed with quetiapine. MADRS scores correlate significantly with those of the HAM-D (Montgomery Asberg 1979).

Sample size was estimated using an Bonferroni correction for the 2 comparisons with placebo. A clinically meaningful 3.6-unit difference between quetiapine treatment and placebo was used to estimate the effect size (with 3.1 units considered a minimally effective and detectable difference). The variability used for calculation was 10 units, the variability seen in the olanzapine study. A sample size of 168 subjects/arm (504 subjects total) would provide 85% power for 2-sided pair-wise comparisons with placebo at α=0.025 which provides an overall experiment wise type I error rate of 0.05. Therefore, 740 patients will be screened and approximately 530 subjects randomized (allowing for a 5% early drop out rate), to insure 504 subjects with post baseline data available for analysis (MITT analysis population). This sample size will provide 72% power to detect a 3.1 unit difference from placebo.

7.2 Statistical evaluation

7.2.1 Methods of statistical analysis

A comprehensive Statistical Analysis Plan (SAP) will be prepared before unblinding of the data.

Missing data for final visit resulting from patient drop outs will be imputed using an LOCF approach. Patients with post baseline data (MITT population) will have their last trial assessment carried forward as the final assessment for analyses.

7.2.2 Study endpoints

Primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score.

Secondary efficacy endpoints:

(1) Percentage of patients with a ≥50% reduction from baseline in the MADRS total score at study endpoint

(2) Change from baseline to each assessment (observed cases) in the MADRS total score

(3) Change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, CGI-S, CGI-C, and Young Mania Rating Scale.

(4) Change in the PSQI score from baseline to final assessment

Safety endpoints:

(1) Incidence and nature of adverse events during double-blind treatment

(2) Incidence of drug-related adverse events during double-blind treatment

(3) Incidence of subject withdrawal due to adverse events

(4) Incidence of clinically significant changes in hematology and chemistry laboratory results, vital signs, electrocardiograms, weight, and body mass index.
Tolerability endpoints:

(5) Change in the SAS total score from baseline to final assessment

(6) Change in BARS total score from baseline to final assessment

(7) Incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment

Quality of Life endpoints:

(1) Change in Q-Les-Q total score from baseline to final assessment

(2) Proportion of patients achieving community norm levels in Q-Les-Q at final assessment

7.2.3 Statistical analyses

The randomization will be stratified by Bipolar type (I or II) in order to assure balance across treatments for the type of patient enrolled. The stratification will be incorporated into the statistical analysis models and descriptive statistics will be provided for each stratum.

For each statistical model run, the assumptions for the model will be evaluated. If the assumptions are not reasonably met, the data may be transformed to meet assumptions or a non-parametric test performed.

All statistical comparisons will be based on 2-sided testing approaches for testing the difference between active study medication dose and placebo.

7.2.3.1 Study populations for analysis

The modified intention to treat population (MITT) will be the population for efficacy and quality of life evaluation. The MITT population will include all randomized subjects who were received study treatment and had at least one post baseline efficacy assessment with a last observation carried forward approach for final assessment.

The safety population will include all subjects who provide consent and received study medication.

7.2.3.2 Primary Analysis

The primary analysis will use analysis of covariance (ANCOVA) model for the change from baseline at final assessment for the MADRS. The model will include terms for treatment, stratum, with the baseline MADRS as a covariate. The Simes-Hommel step-up procedure will be used to adjust for the 2 comparisons with placebo (Simes-Hommel, 1988). The p-values obtained from the pair-wise comparisons will be ordered as follows: $P(1) \leq P(2)$. The following rule will be used to assess statistical significance:

1) If $P(2) \leq 0.05$, then reject both null hypotheses associated with P(2) and P(1); else proceed to the next step;

2) If $P(1) \leq 0.025$, then reject the null hypothesis associated with P(1).

7.2.3.3 Secondary Analyses of efficacy and quality of life

The secondary endpoint for responder, defined as a subject who has a 50% reduction in MADRS score from baseline to final assessment, will be analyzed by comparing the proportion of subjects responding across treatments using a logistic model which includes treatment, stratum, and center in the model. The secondary endpoints based on change from baseline for scales at an assessment time will be analyzed using the same model as the primary endpoint. Nominal p-values will be used for all secondary endpoint comparisons.

Exploratory repeated measures analysis of variance model will also be conducted to evaluate whether there are significant differences among treatments across time for the MADRS and HAM-D scores.

Descriptive statistics will be used to report stratum, item scores, and subscale scores.

7.2.3.4 Safety analyses

Adverse events will be coded using the MedDRA dictionary. Numbers of events and incidence rates for AEs in each treatment group will be summarized by preferred term and system organ class. An event that occurred one or more times on the date of, or subsequent to, randomization will contribute one observation to the numerator of the incidence rate. The denominator will comprise all patients exposed to study treatment.

Adverse events that lead to premature withdrawal of subjects will be tabulated for each treatment group.

All laboratory assessments, vital signs, ECG (rates and intervals) results, and weight and body mass index will be tabulated using descriptive statistics at baseline, final assessment and including change from baseline. Descriptive statistics will include n, mean, standard deviation, minimum and maximum value.

7.2.3.5 Tolerability analyses

The change from baseline in SAS and BARS score data will be summarized using descriptive statistics (mean, standard deviation, median, minimum and maximum).

Incidence rates of EPS adverse events will be compared and tabulated using descriptive statistics.

7.2.3.6 Interim analysis

No interim analysis is planned

7.2.3.7 Data or safety monitoring committee

There will be no data or safety monitoring committee.

8 STUDY MANAGEMENT

8.1 Monitoring

Before the study begins, a representative of AstraZeneca or company representing AstraZeneca will visit the investigational site to

- determine the adequacy of the facilities
- discuss with the investigator(s) (and other personnel involved with the study) their responsibilities with regard to protocol adherence, and the responsibilities of AstraZeneca or its representatives.

During the study, a monitor from AstraZeneca or company representing AstraZeneca will have regular contacts with the investigational site, including visits to

- provide information and support to the investigator(s)
- confirm that facilities remain acceptable
- confirm that the investigational team is adhering to the protocol, that data are being accurately recorded in the case report forms (CRFs), and that investigational product accountability checks are being performed.
- perform source data verification (a comparison of the data in the CRFs with the subject's records at the hospital or practice, and other records relevant to the study). This will require direct access to all original records for each subject (eg, clinic charts).

The monitor or another AstraZeneca representative will be available between visits if the investigator(s) or other staff at the center need information and advice.

8.2 Audits and inspections

Authorized representatives of AstraZeneca, a regulatory authority, an Independent Ethics Committee (IEC) or an Institutional Review Board (IRB) may visit the center to perform audits or inspections, including source data verification. The purpose of an AstraZeneca audit or inspection is to systematically and independently examine all study related activities and documents to determine whether these activities were conducted, and data were recorded, analyzed, and accurately reported according to the protocol, Good Clinical Practice (GCP), guidelines of the International Conference on Harmonization (ICH), and any applicable regulatory requirements. The investigator should contact AstraZeneca immediately if contacted by a regulatory agency about an inspection at his or her center.

8.3 Training of staff

The principal investigator will maintain a record of all individuals involved in the study (medical, nursing and other staff). He or she will ensure that appropriate training relevant to the study is given to all of these staff, and that any new information of relevance to the performance of this study is forwarded to the staff involved.

8.4 Changes to the protocol

Study procedures will not be changed without the mutual agreement of the international principal investigator(s) and AstraZeneca.

If it is necessary for the study protocol to be amended, the amendment or a new version of the study protocol must be notified to or approved by each IEC or IRB, and in many countries also the local regulatory authority, before implementation. Local requirements must be followed.

If a protocol amendment requires a change to a particular center's Written Informed Consent Form, then AstraZeneca and the center's IEC or IRB must be notified. Approval of the revised Written Informed Consent Form by AstraZeneca and by the IEC or IRB is required before the revised form is used.

AstraZeneca will distribute amendments and new versions of the protocol to each principal investigator(s), who in turn is responsible for the distribution of these documents to his or her IEC or IRB, and to the staff at his or her center. The distribution of these documents to the regulatory authority will be handled according to local practice.

8.5 Study agreements

The principal investigator at each center must comply with all the terms, conditions, and obligations of the study agreement for this study. In the event of any inconsistency between this protocol and the study agreement, this study agreement shall prevail.

8.6 Study timetable and termination

It is anticipated that the first subject will be enrolled in September 2002 and that the last subject will complete the study in March 2004.

9 ETHICS

9.1 Ethics review

The final study protocol, including the final version of the Written Informed Consent Form, must be approved or given a favorable opinion in writing by an IEC or IRB as appropriate. The investigator must submit written approval to AstraZeneca before he or she can enroll any subject into the study.

The principal investigator(s) is responsible for informing the IEC or IRB of any amendment to the protocol in accordance with local requirements. In addition, the IEC or IRB must approve all advertising used to recruit subjects for the study. The protocol must be reapproved by the IEC or IRB annually, as local regulations require.

Either the investigator(s) or AstraZeneca must submit progress reports to the IEC or IRB according to local regulations and guidelines. The principal investigator(s) must also provide the IEC or IRB with any reports of serious adverse events from the study site.

The principal investigator(s) is also responsible for providing the IRB with reports of any serious adverse events from any other study conducted with the investigational product. This information will be provided to the principal investigator(s) by AstraZeneca.

9.2 Ethical conduct of the study

The study will be performed in accordance with the ethical principles in the Declaration of Helsinki (see Appendix C), Good Clinical Practice, and applicable regulatory requirements.

9.3 Subject information and consent

The principal investigator(s) at each center will ensure that the subject is given full and adequate oral and written information about the nature, purpose, possible risk and benefit of the study. Subjects must also be notified that they are free to discontinue from the study at any time. The subject should be given the opportunity to ask questions and allowed time to consider the information provided.

The subject’s signed and dated informed consent must be obtained before conducting any procedure specifically for the study, including the following:

The principal investigator(s) must store the original, signed Written Informed Consent Form. A copy of the Written Informed Consent Form must be given to the subject.

A sample Written Informed Consent Form is enclosed (Appendix B). If modifications are made according to local requirements, the new version has to be approved by AstraZeneca.

9.4 Subject data protection

The Written Informed Consent Form will explain that study data will be stored in a computer database, maintaining confidentiality in accordance with national data legislation. The subjects' names will not be recorded in this database. The Written Informed Consent Form will also explain that for data verification purposes, authorized representatives of AstraZeneca, a regulatory authority, an IEC or IRB may require direct access to parts of the hospital or practice records relevant to the study, including subjects' medical history.

10 EMERGENCY PROCEDURES

10.1 AstraZeneca emergency contact procedure

In the case of a medical emergency, contact AstraZeneca personnel shown below.

Wayne Macfadden MD
Project Physician
302-886-1147 (telephone)
302-886-5567 (fax)
REDACTED

Robin McCoy RN
Senior Clinical Research Scientist
302-886-4650 (telephone)
302-886-5567 (fax)
REDACTED

Contact AstraZeneca switchboard on 1-800-236-9933 and ask to be put in contact with the person on call for the Seroquel clinical team.

10.2 Procedures in case of medical emergency

The principal investigator(s) is responsible for ensuring that procedures and expertise are available to cope with medical emergencies during the study.

10.3 Procedures in case of overdose

For the purpose of this trial all overdoses should be reported as adverse events. However, all cases of overdose must be reported immediately, within 1 day, if sequelae meeting the criteria for serious adverse event have occurred in association with the overdose. In all instances, the overdose substance should be stated and whether the overdose was accidental or intentional. If the overdose was a suicide attempt, this fact should be clearly stated. Adverse events (serious and non-serious) arising as the result of an overdose should be recorded on an adverse event form as “sequelae to overdose.” For example ”nausea as sequelae to overdose.”

10.4 Suicide

Suicide and suicide attempt, irrespective of the method, but in connection with the use of trial drug, should be reported as a serious adverse event (in accordance with the definition provided in Section 5.4.2.1). This event should be identified as suicide or suicide attempt, and the method of the suicide or the suicide attempt should be provided. Suicidal thoughts should also be regarded as adverse events.

10.5 Procedures in case of pregnancy

Pregnancy itself is not regarded as an adverse event unless there is a suspicion that the investigational product under study may have interfered with the effectiveness of a contraceptive medication. However, the outcome of all pregnancies (spontaneous miscarriage, elective termination, normal birth or congenital abnormality) must be followed up and documented even if the subject was discontinued from the study.

All reports of congenital abnormalities/birth defects are SAEs. Spontaneous miscarriages should also be reported and handled as SAEs. Elective abortions without complications should not be handled as AEs. All outcomes of pregnancy must be reported to AstraZeneca on the pregnancy outcomes report form.

Declaration of Helsinki

Recommendations guiding physicians in biomedical research involving human subjects.

Adopted by the 18th World Medical Assembly, Helsinki, Finland, June 1964, amended by the 29th World Medical Assembly, Tokyo, Japan, October 1975 and the 35th World Medical Assembly, Venice, Italy, October 1983 and the 41st World Medical Assembly Hong Kong, September 1989 and the 48th General Assembly, Somerset West, Republic of South Africa, October 1996.

Introduction

It is the mission of the physician to safeguard the health of the people. His or her knowledge and conscience are dedicated to the fulfilment of this mission.

The Declaration of Geneva of The World Medical Association binds the physician with the words, "The health of my patient will be my first consideration," and the International Code of Medical Ethics declares that, "A physician shall act only in the patient´s interest when providing medical care which might have the effect of weakening the physical and mental condition of the patient".

The purpose of biomedical research involving human subjects must be to improve diagnostic, therapeutic and prophylactic procedures and the understanding of the aetiology and pathogenesis of disease.

In current medical practice most diagnostic, therapeutic or prophylactic procedures involve hazards. This applies especially to biomedical research.

Medical progress is based on research which ultimately must rest in part on experimentation involving human subjects.

In the field of biomedical research a fundamental distinction must be recognised between medical research in which the aim is essentially diagnostic or therapeutic for a patient, and medical research, the essential object of which is purely scientific and without implying direct diagnostic or therapeutic value to the person subjected to the research.

Special caution must be exercised in the conduct of research which may affect the environment, and the welfare of animals used for research must be respected.

Because it is essential that the results of laboratory experiments be applied to human beings to further scientific knowledge and to help suffering humanity, the World Medical Association has prepared the following recommendations as a guide to every physician in biomedical research involving human subjects. They should be kept under review in the future. It must be stressed that the standards as drafted are only a guide to physicians all over the world. Physicians are not relieved from criminal, civil and ethical responsibilities under the laws of their own countries.

I. Basic principles

1. Biomedical research involving human subjects must conform to generally accepted scientific principles and should be based on adequately performed laboratory and animal experimentation and on a thorough knowledge of the scientific literature.

2. The design and performance of each experimental procedure involving human subjects should be clearly formulated in an experimental protocol which should be transmitted for consideration, comment and guidance to a specially appointed committee independent of the investigator and the sponsor provided that this independent committee is in conformity with the laws and regulations of the country in which the research experiment is performed.

3. Biomedical research involving human subjects should be conducted only by scientifically qualified persons and under the supervision of a clinically competent medical person. The responsibility for the human subject must always rest with a medically qualified person and never rest on the subject of the research, even though the subject has given his or her consent.

4. Biomedical research involving human subjects cannot legitimately be carried out unless the importance of the objective is in proportion to the inherent risk to the subject.

5. Every biomedical research project involving human subjects should be preceded by careful assessment of predictable risks in comparison with foreseeable benefits to the subject or to others. Concern for the interests of the subject must always prevail over the interests of science and society.

6. The right of the research subject to safeguard his or her integrity must always be respected. Every precaution should be taken to respect the privacy of the subject and to minimise the impact of the study on the subject´s physical and mental integrity and on the personality of the subject.

7. Physicians should abstain from engaging in research projects involving human subjects unless they are satisfied that the hazards involved are believed to be predictable. Physicians should cease any investigation if the hazards are found to outweigh the potential benefits.

8. In publication of the results of his or her research, the physician is obliged to preserve the accuracy of the results. Reports of experimentation not in accordance with the principles laid down in this Declaration should not be accepted for publication.

9. In any research on human beings, each potential subject must be adequately informed of the aims, methods, anticipated benefits and potential hazards of the study and the discomfort it may entail. He or she should be informed that he or she is at liberty to abstain from participation in the study and that he or she is free to withdraw his or her consent to participation at any time. The physician should then obtain the subject´s freely-given informed consent, preferably in writing.

10. When obtaining informed consent for the research project the physician should be particularly cautious if the subject is in a dependent relationship to him or her or may consent under duress. In that case the informed consent should be obtained by a physician who is not engaged in the investigation and who is completely independent of this official relationship.

11. In case of legal incompetence, informed consent should be obtained from the legal guardian in accordance with national legislation. Where physical or mental incapacity makes it impossible to obtain informed consent, or when the subject is a minor, permission from the responsible relative replaces that of the subject in accordance with national legislation.

Whenever the minor child is in fact able to give a consent, the minor´s consent must be obtained in addition to the consent of the minor´s legal guardian.

12. The research protocol should always contain a statement of the ethical considerations involved and should indicate that the principles enunciated in the present Declaration are complied with.

II. Medical research combined with professional care (Clinical research)

1. In the treatment of the sick person, the physician must be free to use a new diagnostic and therapeutic measure, if in his or her judgement it offers hope of saving life, re-establishing health or alleviating suffering.

2. The potential benefits, hazards and discomfort of a new method should be weighed against the advantages of the best current diagnostic and therapeutic methods.

3. In any medical study, every patient - including those of a control group, if any - should be assured of the best proven diagnostic and therapeutic method. This does not exclude the use of inert placebo studies where no proven diagnostic or therapeutic method exists.

4. The refusal of the patient to participate in a study must never interfere with the physician-patient relationship.

5. If the physician considers it essential not to obtain informed consent, the specific reasons for this proposal should be stated in the experimental protocol for transmission to the independent committee (I,2).

6. The physician can combine medical research with professional care, the objective being the acquisition of new medical knowledge, only to the extent that medical research is justified by its potential diagnostic or therapeutic value for the patient.

III. Non-therapeutic biomedical re-search involving human subjects

(Non-clinical biomedical research)

1. In the purely scientific application of medical research carried out on a human being, it is the duty of the physician to remain the protector of the life and health of that person on whom biomedical research is being carried out.

2. The subjects should be volunteers - either healthy persons or patients for whom the experimental design is not related to thepatient´s illness.

3. The investigator or the investigating team should discontinue the research if in his/her or their judgement it may, if continued, be harmful to the individual.

4. In research on man, the interest of science and society should never take precedence over considerations related to the well-being of the subject.

Clinical Study Protocol: Appendix E	
Study Code	5077US/0049
Version No.	1
Appendix date	August 8, 2002

Appendix E

Insurance and indemnity

For the US, this Appendix E is not applicable. Please refer to the clinical study agreement for information regardingAstraZeneca's obligation to insure and indemnify institution and investigator.

INSURANCE AND INDEMNITY

AstraZeneca's liability is covered by a liability insurance policy with AstraZeneca Insurance Company Limited, policy No.: L/702938.

With respect to any liability directly or indirectly caused by the investigational products in connection with this Clinical Study, AstraZeneca assumes liability by law on behalf of the investigator(s) and his assistants for possible injury to the subject provided the investigator(s) and his assistants have followed the instructions of AstraZeneca in accordance with this protocol and any amendments thereto, that the investigational products administered to the subject in this Clinical Study have been supplied by AstraZeneca and that the investigator and his assistants have in general performed this clinical study in accordance with scientific practice and currently acceptable techniques and know-how.

AstraZeneca can forward a letter of indemnity if needed by the investigator(s)/institution.

Appendix F
Additional safety information

1. FURTHER GUIDANCE ON THE DEFINITION OF A SERIOUS ADVERSE EVENT (SAE)

Life threatening

'Life-threatening' means that the subject was at immediate risk of death from the adverse event as it occurred or it is suspected that use or continued use of the product would result in the subject's death. 'Life-threatening' does not mean that had an adverse event occurred in a more severe form it might have caused death (ie hepatitis that resolved without hepatic failure).

Hospitalisation

Out-subject treatment in an emergency room is not in itself a serious adverse event, although the reasons for it may be (eg, bronchospasm, laryngeal oedema). Hospital admissions and/or surgical operations planned before or during a study are not considered adverse events if the illness or disease existed before the subject was enrolled in the study, provided that it did not deteriorate in an unexpected way during the study.

Important medical event or medical intervention

Medical and scientific judgement should be exercised in deciding whether a case is serious in a situation where important medical events may not be immediately life-threatening or result in death, hospitalisation, disability or incapacity but may jeopardise the subject or may require medical intervention to prevent one or more outcomes listed in the definition of serious. These should usually be considered as serious. Examples of such events are:

- Angioedema not severe enough to require intubation but requiring iv. hydrocortisone treatment
- Hepatotoxicity caused by paracetamol (acetaminophen) overdose requiring treatment with N-acetylcysteine
- Intensive treatment in an emergency room or at home for allergic bronchospasm
- Blood dyscrasias (eg, neutropenia or anaemia requiring blood transfusion, etc.) or convulsions that do not result in hospitalisation
- Development of drug dependency or drug abuse

2. FURTHER GUIDANCE ON THE ASSESSMENT OF CAUSALITY

The following factors should be considered when deciding if there is a "reasonable possibility" that an adverse event (AE) may have been caused by the investigational product.

- **Time course of events and exposure to suspect drug**. Has the subject actually received the suspect drug? Did the AE occur in a reasonable temporal relationship to the administration of suspect drug?

- **Consistency with known drug profile**. Was the AE consistent with the previous knowledge of the suspect drug (pharmacology and toxicology) or drugs of the same pharmacological class? OR could the AE be anticipated from its pharmacological properties?

- **Dechallenge experience**. Did the AE resolve or improve on stopping or reducing the dose of the suspect drug?

- **No alternative cause**. The AE cannot be reasonably explained by another aetiology such as the underlying disease, other drugs, other host or environmental factors.

- **Rechallenge experience**. Did the AE reoccur if the suspected drug was reintroduced after having been stopped? AstraZeneca would not normally recommend or support a rechallenge.

- **Laboratory tests**. Has a specific laboratory investigation confirmed the relationship?

A "reasonable possibility" could be considered to exist for an AE where one or more of these factors exist.

In contrast, there would not be a "reasonable possibility" of causality if none of the above criteria apply or where there is evidence of exposure and a reasonable time course but any dechallenge (if performed) is negative or ambiguous or there is another more likely cause of the AE.

In difficult cases, other factors could be considered such as:

- Is this a recognised feature of overdose of the drug?

- Is there a known mechanism

Ambiguous cases should be considered as being a “reasonable possibility” of a causal relationship unless further evidence becomes available to refute this.

AstraZeneca

Clinical Study Protocol Amendment

Amendment No.	1
Study Code	5077US/0049
Date	September 30, 2002

Sponsor:

AstraZeneca LP 1800 Concord Pike, Wilmington, DE 19850 USA >>

Centres affected by the amendment:

All centers

The protocol for the study is to be amended as follows:

1. Page 22, Study Plan

Removed BARS, SAS, Q les Q, and PSQI from Screen, and Days 8, 15, 22, 36, and 43

2. Page 22, study Plan Postscript b

Laboratory tests and ECG will only be repeated if “abnormal” and “clinically significant”

3. Page 24, Section 3.4.2 Inclusion Criteria # 3

Was:

Sexually active females of childbearing potential, be using a reliable method of contraception. Reliable methods include hormonal contraceptives (eg, oral contraceptive or long-term injectable or implantable hormonal contraceptive), double-barrier methods (eg, condom and diaphragm, condom and foam, condom and sponge), intrauterine devices, and tubal ligation

Now reads:

Females of childbearing potential, be using a reliable method of contraception. Reliable methods include hormonal contraceptives (eg, oral contraceptive or long-term injectable or implantable hormonal contraceptive), double-barrier methods (eg, condom and diaphragm, condom and foam, condom and sponge), intrauterine devices, and tubal ligation

4. Page 24, Section 3.4.2 Inclusion Criteria

Added YMRS ≤12 to inclusion criteria

5. Page 25, Section 3.4.3 Exclusion Criteria # 3

Was:

Patients who have been treated with antidepressant therapy for their current episode for more than three weeks prior to Visit 1

Now reads:

History of non-response to an adequate trial (6 weeks) of more than 2 classes of antidepressants during their current episode

6. Page 25, Section 3.4.3 Exclusion Criteria

Removed Exclusion Criteria # 5

Patients who meet DSM IV criteria for substance abuse within 3 months

7. Page 25, Section 3.4.3 Exclusion Criteria # 6

Was:

Patients who are unable to discontinue all psychoactive medications (excluding prn benzodiazapines), including antidepressants, antipsychotics, and mood stabilizer, **5 elimination half lives** prior to randomization.

Now reads:

Patients who are unable to discontinue all psychoactive medications (excluding prn benzodiazapines), including antidepressants, antipsychotics, and mood stabilizer, at least **7 days** prior to randomization and consistent with the pharmacokinetics of the drug

8. Page 49, Section 5.4.3.1, Bullet 2

Creatinine added to blood draw on Screen and Day 57

9. Page 50, Section5.4.4.1

We will not be collecting respirations

Reasons for making the amendment:

1. Shorten the length of time the subject was at the clinic to improve subject retention
2. Washout may be anywhere from 7 to 28 days depending on the drugs that the subject has been taking prior to randomization
3. The term “sexually active” implies that abstinence is an acceptable form of birth control in this study and it is not.
4. Eliminating patients in mixed episodes
5. Eliminating non-responders
6. It was not necessary
7. Clarified that washout must be at least 7 days instead of 5 half lives which could be less than 7 days.
8. Because Exclusion Criteria # 13 states that patients with Creatinine of ≥1.5 mg/dl are excluded
9. We do not need respirations collected

Signed agreement to the amendment:

<< The general rule is that those who signed the protocol should sign the amendment, except for local amendments. >>

I agree to the terms of this protocol amendment.

CLINICAL TRIAL PROTOCOL AMENDMENT

Protocol Title: A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Seroquel in the Treatment of Patients with Bipolar Depression

I. Amendment details

Trial number: 5077US/0049	Amendment number: 1	Amendment date: September 24, 2002
Drug: Seroquel	IND number:	NDA number: 32,132

Reason for Amendment:

1. Added YMRS to Inclusion Criteria
2. Clarified Exclusion # 3
3. Removed exclusion #5 as unnecessary..
4. Added Creatinine to blood draw.
5. Removed request for repeat labs and ECG if Day 1 is more than 1 week from screen, because washout may be for 7 to 28 days depending on the drugs that the patient has been taking.
6. Removed BARS, SAS, Q les Q, and PSQI from Screen, and Days 8, 15, 22, 36, 43, and 57
7. Removed "sexually active" from inclusion criteria #3
8. Exclusion Criteria # 6 changed from "5 elimination half lives" to "7 days"
9. We will not be collecting respirations

Is amendment likely to affect subject consent? YES	Y X	N
IRB approval required before implementation ? YES (written approval or notification that they do not wish to review it - only safety amendments may be implemented immediately)	Y X	N
IRB notification required ? YES	Y - mandatory for all	

Description of amendment: See attachment	Listed below:	See attachment: X

For amendments requiring formal IRB approval the effective date will be the date of IRB approval

A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL®) in the Treatment of Patients with Bipolar Depression

The following amendment(s) have been made to this protocol since the date of preparation:

Amendment No. 1		**Date of amendment**	**September 30,2002**
Amendment No 2			**December 4, 2002**
Administrative Change No.	**1**	**Date of administrative change**	**September 30, 2002**

PROTOCOL SYNOPSIS

A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL®) in the Treatment of Patients with Bipolar Depression

Investigator

Multicenter trial: << To be determined >>

Study center(s) and number of subjects planned

A total of approximately 740 subjects will be screened to enroll approximately 530 into the trial in order to obtain approximately 504 evaluable patients, defined as those who have a baseline visit and at least one post baseline assessment. It is expected that approximately 75 centers will participate in the trial, with each center enrolling 8 patients (minimum 4, maximum 50).

Study period		**Phase of development**
Estimated date of first subject enrolled	September, 2002	IIIb
Estimated date of last subject completed	March, 2004	

Objectives

Primary:

To evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks as assessed by comparing

(1) the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

(2) the percentage of patients with a ≥50% reduction from baseline in the MADRS total score at final assessment

(3) the change from baseline to each assessment in the MADRS total score

(4) the change from baseline to each assessment in the Hamilton Rating scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S)

(5) the Clinical Global Impression - Change (CGI-C).

Secondary:

(1) to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

(2) to evaluate the effect of quetiapine on anxiety compared to placebo by comparing

- the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score
- the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

(3) to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by comparing

- the incidence and nature of all adverse events
- the incidence and nature of drug-related adverse events
- subject withdrawal due to adverse events during double-blind treatment
- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score from baseline to end of treatment
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Exploratory

(1) to evaluate the efficacy of quetiapine on sleep quality by comparing the change in the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment

(2) to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment.

Hypotheses:

Primary:

(1) Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

(2) Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

Secondary hypotheses are defined in Section 3.1.

Study design

Study 5077US/0049 is a randomized, multicenter, double-blind, placebo-controlled, double-dummy, parallel group, fixed-dose comparison of quetiapine vs placebo in the treatment of bipolar depression. This study will be stratified 1:1 for bipolar I and bipolar II.

Target subject population

Outpatients, aged 18 to 65 years, with a diagnosis of bipolar I or bipolar II disorder with a current major depressive episode of duration less than one year but greater than 4 weeks will be enrolled in the trial. The HAM-D (17-item scale) score must be ≥20, the HAM-D item 1 (depressed mood) score must be $\geq$ 2, and the YMRS score must be ≤12 at both Visit 1and Visit 2 (randomization) to be eligible for entry into the trial.

Investigational product, dosage and mode of administration

Study drug will be titrated in a blinded manner to a total daily dose of 300 mg/day by Day 4 in the 300-mg/day treatment group and to a total daily dose of 600 mg/day by Day 8 in the 600-mg/day treatment group. Thereafter, oral doses of quetiapine fumarate will be administered in a blinded fashion once daily at bedtime (qhs) in a total daily dose of 300 or 600 mg/day. One-time dose reductions for intolerability of 100 mg/day in both the 300 mg/day and in the 600 mg/day treatment groups will be allowed at the discretion of the Investigator after Day 8.

Comparator, dosage and mode of administration

Placebo will be administered once daily with tablets matching in number and appearance to blinded quetiapine dosing.

Duration of treatment

Patients will receive double-blind, double-dummy treatment for up to 8 weeks (56 days), following an initial washout period of between 7 to 28 days (depending on the medications involved) and will come in to the clinic on Day 57 for final assessments.

Endpoints

- **Efficacy**

  Primary efficacy endpoint is the change from baseline to final assessment in the MADRS total score.

  Secondary efficacy endpoints are the percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at study endpoint, the change from baseline to each assessment (observed cases) in the MADRS total score, and the change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, and CGI-S and the CGI-C.; the change from baseline to each assessment (observed cases) and final assessment in the YMRS, and the HAM-A total scores.

- **Safety**

  Safety endpoints are the incidence and nature of all adverse events, the incidence of drug-related adverse events, the incidence of subject withdrawal due to adverse events, and the incidence of clinically significant changes in vital signs, weight, and body mass index during double-blind treatment. Tolerability endpoints are the change in the SAS total score from baseline to final assessment, the change in BARS total score from baseline to final

assessment, and the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

- **Quality of life**

  Exploratory quality of life endpoints are the change from baseline in the PSQI score and Q-Les-Q total score.

Statistical methods

All statistical comparisons will be 2-sided tests for the difference between active study medication and placebo. The primary analysis will be analysis of covariance (ANCOVA) for the change from baseline to final assessment for total MADRS score. The ANCOVA model will include terms for treatment, and stratum, with the baseline MADRS score as a covariate. Pair-wise comparisons of each dose with placebo will be assessed within this model as planned comparisons. In order to adjust for multiple comparisons with placebo a step-up procedure will be employed with a rule for tests of significance based on ordered p-values, maintaining an overall experiment wise type I error rate of 0.05. The proportion of patients having a $\geq$ 50% reduction from baseline to final assessment in MADRS will be compared across treatments using a logistic model. Change from baseline in MADRS scores at each assessment (observed cases), and change from baseline in HAM-D, HAM-D item 1, CGI-S, YMRS, HAM-A, Q-Les-Q and PSQI score at each assessment (observed cases) and LOCF, will be analyzed using the same ANCOVA model as for the primary endpoint. The CGI-C will be analyzed using the ANCOVA model with the baseline CGI-S as a covariate.

The change from baseline in SAS and BARS score data will be assessed using the same ANCOVA model as the primary endpoint. The incidence of EPS AEs and overall AEs will be reported using descriptive statistics. Vital signs, weight, and body mass index will be tabulated using descriptive statistics at baseline, final assessment, and for change from baseline. Descriptive statistics will also be used to describe the proportion of patients whose final Q-Les-Q is within community norm levels.

Repeated measures analysis of variance (ANOVA)will be performed to evaluate whether there are significant differences among treatments across time for MADRS, HAM-D, and HAM-A total scores.

Efficacy analyses will be conducted on a modified intention-to-treat (MITT) population. A per-protocol (PP) analysis will be conducted for the primary analysis measure (change from baseline MADRS) to evaluate sensitivity of the response. The safety population will include all subjects who took study medication.

LIST OF ABBREVIATIONS AND DEFINITION OF TERMS

The following abbreviations and specialist terms are used in this study protocol.

Table 1 Abbreviations and specialist terms

Abbreviation or specialist term	Explanation
AE	Adverse event (see definition in Section 4.4.2.1)
ALT	Alanine aminotransferase
ANCOVA	Analysis of covariance
ANOVA	Analysis of variance
AST	Aspartate aminotransferase
BARS	Barnes Akathisia Rating Scale
BP	Bipolar Disorder
BPD	Bipolar Depression
CGI	Clinical Global Impression
CGI-C	Clinical Global Impression - Change
CGI-S	Clinical Global Impression - Severity
CMH	Cochran-Mantel Haenszel
CRF	Case Report Form
CRS	Concordant Rater systems
DSM-IV	Diagnostic and Statistical Manual of Mental Disorders - Fourth Edition
EPS	Extrapyramidal symptoms
ECG	Electrocardiogram
GCP	Good Clinical Practice
HAM-A	Hamilton Rating Scale for Depression
HAM-D	Hamilton Rating Scale for Anxiety
ICH	International Conference on Harmonisation
ICI-D	Interactive Computor Interview-Depression
ICTI	Interactive Clinical Technologies, Incorporated
IEC	Independent Ethics Committee
IRB	Institutional Review Board

Abbreviation or specialist term	Explanation
IVRS	Interactive Voice Response System
LOCF	Last Observation Carried Forward
MADRS	Montgomery-Asberg Depression Rating Scale
MITT	Modified Intent to Treat
OAE	Other significant adverse event (ie, an adverse event of special interest in this clinical development; see definition in Section 4.4.2.1). The classification of OAEs will be performed by AstraZeneca drug safety physicians after the study is complete.
PSQI	Pittsburgh Sleep Quality Index
Principal investigator	The investigator who leads the study conduct at an individual study center. Every study center has a principal investigator.
Qhs	at bedtime
Q-Les-Q	Quality of Life Enjoyment Satisfaction Questionnaire
SAE	Serious adverse event (see definition in Section 4.4.2.1).
SAS	Simpson Angus Scale
SSRI	Selective serotonin reuptake inhibitors
UNI	Universal Systems Incorporated
YMRS	Young Mania Rating Scale

1 INTRODUCTION

1.1 Background

Quetiapine fumarate (SEROQUEL®, quetiapine) is a dibenzothiazepine derivative approved by the United States Food and Drug Administration (FDA) on 26 September 1997 following clinical development by AstraZeneca Pharmaceuticals LP (also referred to as the sponsor) for the treatment of subjects with schizophrenia. Quetiapine fumarate is designated chemically as bis [2-(2-[4-(dibenzo[b,f][1,4]thiazepin-11-yl) piperazin-1-yl]ethoxy)ethanol] fumarate

Quetiapine has been studied in a toxicological and clinical program directed at supporting clinical evaluation in man. The results of these studies are presented in the Investigator's Brochure dated January 2002. The Professional Information Brochure (PIB) contains the current prescribing information for quetiapine.

1.2 Rationale for this study

The bipolar disorders are psychiatric disorders in which a disturbance in mood is the predominant feature. Bipolar I disorder is characterized by one or more manic or mixed episodes, usually accompanied by major depressive episodes. Bipolar II disorder is characterized by one or more major depressive episodes accompanied by at least one hypomanic episode. Bipolar depression refers to the major depressive episodes that occur with bipolar I and II disorder.

The prevalence of bipolar disorder is estimated to be 1 to 3.5%, evenly divided between men and women. The length of time between onset and symptoms and proper diagnosis and treatment is approximately 10 years and it is estimated that only 60% of those suffering from a bipolar disorder are receiving appropriate pharmacotherapy.

Although there is extensive and emerging literature guiding the treatment of the manic phase of bipolar I disorder as well as many approved compounds for the treatment of unipolar depression, the treatment of bipolar depression has not been widely studied and treatment guidelines are in their infancy. The use of currently available antidepressants for monotherapy for bipolar depression is often problematic as they may increase the "switch" into hypomania or mania from depression, or increase cycle acceleration. The adjunctive use of mood stabilizing medications such as lithium carbonate (LiCO3) is common and may decrease the likelihood of these complications.

Evidence indicates that medications with mood stabilizing properties which produced low levels of mania, hypomania, or cycle acceleration may be useful as monotherapy in the treatment of bipolar depression. The antiepileptic lamotrigine produced improvement in

HAM-D and MADRS scores in a 7-week, double-blind, placebo controlled trial for the patients who completed this study (Calabrese 1999). More recently, the anti-manic agent divalproex demonstrated numerical improvement over placebo in the percentage of patients with bipolar depression having a 50% reduction in the HAM-D scores without mania in an 8 week trial (Sachs, 2001) but this difference was not statistically significant. Lithium carbonate, also approved for the treatment of mania, has been demonstrated to be effective as a monotherapeutic agent in approximately 50% of patients with bipolar depression (Bauer). However, there are efficacy and tolerability limitations which mkay prohibit widespread use of the above therapies.

A large multicentered, double-blind, placebo controlled trial was recently completed, which demonstrated efficacy of the atypical antipsychotic olanzapine as monotherapy for the treatment of bipolar depression (Tohen, 2002). The endpoint mean MADRS change was significantly greater for patients on olanzapine (-15.0 points) than for those on placebo (-11.9 points). Treatment-emergent mania did not differ significantly between groups. There also is evidence from small uncontrolled studies that other atypical antipsychotics such as risperidone, and clozapine have mild to moderate antidepressant activity when used in patients with mood disorders. These small studies also indicate that these compounds are unlikely to cause patients to “switch” into mania.

The potential efficacy of quetiapine in depressive symptoms is provided in data from the Quetiapine Experience with Safety and Tolerability Trial (QUEST) and from investigator-initiated trials in mood disorder patients. In an open-label trial evaluating the safety and tolerability of quetiapine over 700 subjects with schizophrenia and other psychotic disorders were randomized to treatment with quetiapine or risperidone. Quetiapine-treated patients experienced a greater improvement in depressive symptoms compared with risperidone-treated patients, with a mean difference of 1.3 points on the HAM-D after adjustment for baseline differences (P=0.028) (Mullen et al, 2001).

A trial of quetiapine in 20 neuroleptic-dependent patients with bipolar or schizoaffective disorder also suggested positive effects on the depressive and psychotic symptoms in these disorders (Sajatovic et al, 2001). Overall, in 10 patients with bipolar disorder and 10 with schizoaffective disorder who received open-label quetiapine to optimum clinical dosage (25 to 800-mg), significant improvement in Brief Psychiatric Rating Scale (BPRS), Young Mania Rating Scale (YMRS), and HAM-D scores was noted.

In summary, the paucity of satisfactory treatments available signify an unmet medical need for the treatment of bipolar depression. There are signals of efficacy from clinical trials for the antidepressant properties of atypical antipsychotics such as quetiapine.

2 STUDY OBJECTIVES

2.1 Primary objective

The primary objectives of the study are to evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks by comparing

(1) the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

(2) the percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at final assessment

(3) the change from baseline to each assessment in the MADRS total score

(4) the change from baseline to each assessment in the total Hamilton Rating Scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S), and the Clinical Global Impression - Change (CGI-C).

2.2 Secondary objective

The secondary objectives of the study are:

(1) to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

(2) to evaluate the effect of quetiapine on anxiety compared to placebo by

- the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score
- the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

(3) to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by

- the incidence and nature of overall adverse events
- the incidence and nature of drug-related adverse events
- subject withdrawal due to adverse events during double-blind treatment

- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Experimental:

1. to evaluate the efficacy of quetiapine on sleep quality by comparing the change in sleep quality using the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment
2. to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment

3 HYPOTHESES, STUDY PLAN AND PROCEDURES

3.1 Hypotheses

Primary:

(1) Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

(2) Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

(1) Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

(2) Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

(3) Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

(4) Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

(5) Quetiapine at a dose of 300 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

(6) Quetiapine at a dose of 600 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

(7) Quetiapine at a dose of 300-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

(8) Quetiapine at a dose of 600-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

(9) Quetiapine at a dose of 300 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

(10) Quetiapine at a dose of 600 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

(11) Quetiapine at a dose of 300 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

(12) Quetiapine at a dose of 600 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

(13) Quetiapine at a dose of 300 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

(14) Quetiapine at a dose of 600 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

3.2 Overall study design and flow chart

This multicenter, double-blind, randomized, placebo-controlled, double-dummy, parallel group trial will consist of a washout period (from 7 to 28 days depending on the medications involved) followed by 8 weeks of treatment to evaluate the efficacy, safety, and tolerability of quetiapine fumarate in the treatment of a major depressive episode in adult subjects with bipolar disorder. A total of approximately 740 subjects will be screened to obtain 530 enrolled subjects to yield 504 evaluable subjects at approximately 75 centers, with a target enrollment

of 8 patients per center (minimum 4 maximum 30). Subjects are required to have a HAM-D (17-item scale) score of $\geq$ 20 and a YMRS of $\leq$12 at screening baseline (Visit 1).

The trial comprises the following 2 periods:

- Washout period
  Subjects will undergo HAM-D, SCID, YMRS, and safety evaluations at screen (Visit 1) and if they qualify to participate they will commence a washout of antidepressant, antipsychotic, and mood stabilizer medications. The number of days for washout will depend on the medication they are taking. These medications must be discontinued for a period of at least 7 days prior to randomization (Day 1, Visit 2), with the exception of fluoxetine which must be discontinued for a period of 14 days prior to randomization (Day 1, Visit 2) and depot injections of haloperidol decanoate or fluphenazine decanoate which need 28 days washout before randomization.

- 8-week double-blind randomized treatment period (Weeks 1 to 8)
  Eligible subjects will be randomized on Day 1 (Visit 2) to 1 of 3 treatment groups: quetiapine 300 mg/day, quetiapine 600 mg/day, or placebo. The randomization will be done using a stratification based on diagnosis. Treatment will be administered once daily at bedtime for 8 weeks (Days 1 - 56). Subjects will not receive medication on Day 57 which is only for final assessments. Doses will be titrated to achieve target doses of 300 mg/day within 4 days or 600 mg/day within 8 days. A dose reduction of 100 mg is allowed to improve patient tolerance in each treatment group. MADRS assessments (used to evaluate the primary efficacy variable) will be performed at Days 1, 8, 15, 22, 29, 36, 43, 50, and 57.

Figure 1 Study flow chart

			Treatment										
Day	**Screen**	**Washout [b]**	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9-14**	**15-56**	**57**

[a] Washout of antidepressants, antipsychotics, mood stabilizer for at least 7 days; 14-day washout for fluoxetine and 28 days for haloperidol or fluphenazine decanoate

[b] Repeat laboratory tests and ECG only if results outside of normal range and clinically significant at Screening

c Height and weight on screen and weight on Day 57
d Physical exam includes ophthalmoscopic exam on screen
e Blood pressure will be obtained in supine and standing positions

3.3 Rationale for study design, doses and control groups

This trial is designed as a double-blind placebo-controlled evaluation of Seroquel as monotherapy in bipolar depression. There is no currently approved compound for use in bipolar depression, nor is there a clinically accepted "gold standard". Conventional antidepressants have fallen out of favor because of their ability to induce manic symptoms. Antidepressants approved forthe treatment of unipolar depression have not been demonstrated to improve mood symptoms relative to placebo (Nemeroff et al Am J Psychiatry 158:6 June 2001). Moreover, there is a high placebo response rates of approximately 30% found in bipolar depression trials. Thus, the use of a placebo treatment arm for comparison is clinically justified.

Trial treatment will be administered as quetiapine monotherapy in order to more clearly identify a treatment effect of quetiapine on bipolar depression. Quetiapine fumarate will be administered once daily at bedtime. The current label specifies twice daily (BID) but a double-blind crossover study in bipolar patients indicated that once daily (qd) is well tolerated and as effective as BID dosing (Chengappa, 2002).

A period of 7 to 28 days is adequate for washout of most psychoactive medications including antidepressants, antipsychotics (including depot agents), and mood stabilizers to ensure that subjects are stable and continue to have adequate depressive symptoms requiring treatment, prior to randomization into the trial. The double-blind treatment period of 8 weeks is consistent with the time period that is required to see a clinically meaningful response in depressive symptoms.

The trial is designed as a fixed-dose evaluation due to the failure of flexible dose regimens in other psychiatric disorders. The dosages are based on clinical trial data with quetiapine in patients with a mood disorder. In the QUEST trial, the average dose of quetiapine in patients with a primary mood disorder (N=316) was approximately 250 mg/day at 16 weeks. In 20 patients with bipolar or schizoaffective disorder treated with open-label quetiapine, the mean dose was approximately200 mg/day (Sajatovic). Based on this data, 300 mg/day administered as monotherapy is an appropriate low-dose treatment arm, and 600 mg/day is an appropriate high-dose treatment arm that should exhibit efficacy without a high rate of AEs or noncompliance.

The MADRS is a standardized, well-validated measure of depressive symptoms that is sensitive to treatment effects in depressed outpatients.

3.4 Selection of study population

3.4.1 Study selection record

Investigators must keep a record of subjects who underwent screening but were not randomized into the trial.

3.4.2 Inclusion criteria

At screen (Visit 1) subjects must fulfill all of the following criteria:

(1) Documented ability to provide informed consent before beginning any study-specific procedures.

(2) Male and female patients between 18 and 65 years of age, inclusive

(3) Females of childbearing potential, be using a reliable method of contraception. Reliable methods include hormonal contraceptives (eg, oral contraceptive or long-term injectable or implantable hormonal contraceptive), double-barrier methods (eg, condom and diaphragm, condom and foam, condom and sponge), intrauterine devices, and tubal ligation

(4) Women must have a negative pregnancy test

(5) Meets DSM-IV criteria for bipolar disorder I or bipolar II, most recent episode depressed (296.5x and 296.89x), confirmed by the amended version(by Dr. Michael First) of the Structured Clinical Interview for DSM-IV (SCID) as administered by an AstraZeneca approved clinician with a signed confirmation by the Principal Investigator

(6) Outpatient status

(7) HAM-D (17-item) total score of 20 or greater

(8) HAM-D item 1 (depressed mood) score $\geq$2

(9) YMRS total $\leq$12

At randomization (Visit 2) subjects must fulfill the following criteria:

(1) HAM-D (17-item) total score of 20 or greater

(2) HAM-D item 1 (depressed mood) score $\geq$2

(3) YMRS total $\leq$12

3.4.3 Exclusion criteria

Any of the following is regarded as a criterion for exclusion from the study:

(1) Patients with a current Axis I disorder other than bipolar disorder within 6 months of screening

(2) Patients whose current episode of depression exceeds 12 months or is less than 4 weeks

(3) History of non-response to an adequate trial (6 weeks) of more than 2 classes of antidepressants during their current episode

(4) Patients who meet DSM-IV criteria for substance dependence, for any substance except nicotine, within 12 months of screening

(5) Patients with a positive urine toxicology screen for illicit substances of abuse

(6) Patients who are unable to discontinue all psychoactive medications (excluding prn benzodiazapines), including antidepressants, antipsychotics, and mood stabilizer, at least 7 days prior to randomization and consistent with the pharmacokinetics of the drug

- Patients treated with fluoxetine who have not discontinued this medication for at least 14 days prior to randomization.
- Patients treated with haloperiodol decanoate or fluphenazine decanoate who have not discontinued these medications 28 days prior to randomization.

(7) Patient who have not discontinued the use of potent P450 inhibitors and inducers (See Section 4.3, Table 13)

(8) Patients who in the investigators opinion will require initiation of psychotherapy during the study period. Note: ongoing psychotherapy for a minimum of 3 months may continue.

(9) Patients who, in the investigator's judgment, pose a current serious suicidal or homicidal risk at Visit 1 (HAM-D item 3 score of 3 or greater), or have made a suicide attempt within the past 6 months

(10) Patients with a history of clinically significant cardiac, renal, neurologic, cerebrovascular, metabolic, or pulmonary disease, or other disease or clinical finding that is unstable or that, in the opinion of the investigator, would be negatively affected by trial medication or that would affect trial medication

(11) Patients who have had a myocardial infarction within 1 year before Visit 1

(12) Patients with clinically significant abnormal laboratory findings at Visit 1

(13) Patients with renal impairment (serum creatinine ≥1.5 mg/dL) or hepatic impairment (ALT or AST 3 times the upper limit of normal)

(14) Patients whose TSH is ≥10% over the upper normal limit. Patients maintained on thyroid medication must be euthyroid for a period of at least 3 months before Visit 1

(15) Patients with clinically significant abnormalities on ECG

(16) Women who have a positive human chorionic gonadotropin (HCG) pregnancy test at Visit 1 or who are lactating or planning to become pregnant during the course of the study

(17) Patients who have participated in a clinical trial of an investigational drug within the past 3 months

(18) Patients who, in the opinion of the investigator, would be non-compliant with the visit schedule or study procedures

(19) History of orthostatic hypotension or conditions that would predispose them to hypotension (eg dehydration, hypovolemia)

(20) Known history of intolerance, hypersensitivity, or lack of response to quetiapine or any of the components of Seroquel tablets, as judged by the investigator

3.4.4 Restrictions

Subjects will be required to adhere to the following special restrictions:

1) Use of any psychoactive drugs including antidepressants, hypnotics (with the exceptions noted in Section 4.3), mood stabilizing drugs, and antipsychotics is not permitted from a period of 5 elimination half-lives (28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

2) Use of cytochrome P450 3A4 inducers and potent inhibitors are not permitted from 14 days prior to randomization to end of study (see Table 13)

3.4.4.1 Criteria for discontinuation

Subjects may be discontinued from study treatment and assessments at any time, at the discretion of the investigator(s). Specific reasons for discontinuing a subject from this study are:

1. Withdrawal of informed consent

2. Worsening psychiatric symptoms such that the symptoms constitute a danger to themselves or to others

3. Use of psychotropic medications at any time during the double-blind treatment period.

4. Pregnancy at any time during the double-blind treatment period.

5. Clinically significant or serious adverse event that would not be consistent with continuation in the study, as determined by the investigator, AstraZeneca, or the subject.

3.4.4.2 Voluntary discontinuation by a subject

Subjects are free to discontinue their participation in the study at any time, without prejudice to further treatment. Subjects who discontinue from the study should always be asked about the reason(s) for their discontinuation and about the presence of any adverse events. They should be seen and assessed by an investigator(s) (see Section 3.4.4.4). Adverse events should be followed up and any diary cards, questionnaires (eg, for Quality of Life assessments) and investigational products should be returned by the subject.

3.4.4.3 Incorrectly enrolled or randomized subjects

Incorrectly enrolled subjects will be discontinued from further study treatment and assessments. If a subject is given the incorrect randomized treatment, the subject should be continued on the treatment dispensed and Interactive Clinical Technologies, Inc. (ICTI), the vendor providing the randomization patient assignment) should be notified of the error. The next patient randomized at the site will be assigned an appropriate kit number by ICTI, accounting for the error.

3.4.4.4 Procedures for discontinuation

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- Physical examination including an ophthalmoscopic exam
- Vital signs and weight
- HAM-D
- MADRS
- ICI-D
- YMRS

- HAM-A
- SAS
- BARS
- PSQI
- Adverse events assessment

3.5 Treatments

3.5.1 Investigational products

3.5.1.1 Identity of investigational product and comparators

Investigational product will consist of 25-mg , 100-mg, and 200-mg tablets of quetiapine fumarate and matching placebo tablets as shown in Table 3.

Table 3 Trial medication

Tablet strength	Formulation number	Tablet color
25-mg quetiapine	F12804	peach
25- mg placebo	F12636	peach
100-mg quetiapine	F12689	yellow
100-mg placebo	F12637	yellow
200-mg quetiapine	F12690	white
200-mg placebo	F12638	white

3.5.1.2 Doses and treatment regimens

Quetiapine and placebo for each trial center will be packaged in blister cards. The 8-week supply will consist of 8 double-blind blister cards. The 8 double-blind blister cards will be packaged in subject-specific cartons.

Trial medication will be provided for each subject in an 8-card carton that contains the following:

- 1-week titration double-blind treatment cards for Days 1-7
- seven 1-week double-blind treatment cards for Days 8-56, with individual cards provided for treatment Days 8-14, 15-21, 22-28, 29-35, 36-42, 43-49, and 50-56.

Each one-week blister card will include a 2-day treatment overage to accommodate visit schedules.

The Week 1 titration card will consist of 25 mg tablets, 100-mg tablets, and 200-mg tablets or matching placebo, as described below, for each of the 300 mg/day and 600 mg/day treatment groups and placebo treatment group.

Blister cards for Weeks 2 through 8, for each treatment group, will consist of 9 days of dosing with the same number of pills for each group (300-mg,600-mg, and placebo) respectively. The cards for each treatment group will consist of 2 yellow tablets and 2 white tablets per day at bedtime.

Quetiapine or placebo will be administered once a day at bedtime with dose titration to reach a target dose of 300 mg/day by Day 4 in the 300 mg/day treatment group and 600 mg/day by Day 8 in the 600 mg/day group. The schedule for quetiapine or placebo administration is shown in Tables 4, 5, and 6.

Table 4 Dose administration schedule for 300-mg double-blind quetiapine

Trial Day	Quetiapine 300 mg/day and placebo				
	Quetiapine 25 mg	**Quetiapine 100 mg**	**Placebo 100 mg**	**Quetiapine 200 mg**	**Placebo 200 mg**

Day 7	0	2 tablets/100-mg	1 tablet/200-mg
Day 8	0	2 tablets/100-mg	2 tablets/400-mg
Days 9-56	0	2 tablets/100-mg	2 tablets/400-mg

Dosing Reduction

Dose reductions for intolerability will be allowed after Day 8. In the 300-mg/day group, dose reductions of 100 mg/day will be achieved by reducing the dose by one 100-mg tablets. In the 600-mg/day group, a dose reduction of 100 mg/day will be achieved by reducing the bedtime dose by one 100-mg tablets active drug. This dose reduction can occur anytime after Day 8. Each column in the blister packs will be numbered 1-4. By Day 6 columns 1 and 2 of the blister packs will each contain a 100-mg tablet. In both the 300-mg /day group and the 600-mg/day group, column 1 will contain active medication thus ensuring that by eliminating the first column (column #1) of medication they are reducing their dose by 100-mg. Each tablet in the placebo treatment group will also indicate the same corresponding numbers (columns #1-4) as the active treatment groups even though no active product is packaged. This will ensure the blind is maintained.

3.5.1.3 Labeling

All trial supplies will be provided by AstraZeneca.

The blister cards Days 1- 56 will be supplied in subject-specific cartons. Each blister card will be labeled with a two-panel, double-blind label. The left portion of the label will remain on the blister card. The right portion of the label will be affixed to the appropriate Case Report Form (CRF) as part of the individual's permanent record. The label will contain at least the following information: trial number, code assignment and storage condition. The carton for the 8 blister cards for Days 1-56 will be labeled with a single-panel double-blind label. The label will contain at least the following information: trial number, storage conditions, and instructions to dispense according to protocol.

3.5.1.4 Storage

All investigational products must be kept in a secure and locked location, at room temperature and protected from light and moisture.

3.5.1.5 Accountability

The investigational materials are to be prescribed only by the investigator or the sub-investigators named in Form FDA-1572. Under no circumstances will the investigator allow the

investigational drug to be used other than as directed by the protocol without prior AstraZeneca approval.

The investigator must maintain accurate records accounting for the receipt of the investigational materials (ICTI provides a acknowledge the receipt of drug shipment module for this purpose) and for the disposition of the material. This record keeping consists of a dispensing record that includes the identification of the person to who the drug is dispensed, the quantity and the date of dispensing, and documentation of any unused drug returned to the investigator. This record is in addition to any drug accountability information recorded on the subject's hospital or clinic chart.

Starting with Week 1, each patient will return the blister card for the preceding week to the clinic. The clinic will tabulate the returned pills to aid in drug accountability.

At the termination of the study or at the request of the sponsor, the Clinical Research Associate must return any unused study supplies to Universal Systems Incorporated (USI), at the address listed below, for destruction. This return will be documented on an Investigational Product Return Invoice supplied by AstraZeneca.

USI
2084-900 Lake Industrial Court
Conyers, GA 30013

3.5.2 Method of assigning subjects to treatment groups

This trial will be established with a non-specific labeling (NCSL) randomization which will be stratified by bipolar type. Randomization to trial treatment will be done via an Interactive Voice Response System (IVRS) at ICTI on Day 1 (Visit 2) in balanced blocks within each stratum in order to ensure relative balance among treatment groups and strata (Bipolar I and Bipolar II)in terms of total number of subjects. The randomization schedule will be created under the auspices of AstraZeneca Quantitative Decision Sciences Group and will provide allocation of subject numbers to the treatment regiments. Number and size of tablets will be identical for the 3 treatment arms. Clinical supplies will contain a 4-digit subject number which is allocated to the treatment arm through the randomization scheme. A separate randomization will be used to provide kits of packaged drugs to the sites. The IVRS system at ICTI will allocate a kit number at the site for the treatment assigned through the stratified randomization.

Subject eligibility will be established before treatment randomization. Subjects will be randomized centrally sequentially within the stratum, as subjects are eligible for enrollment/randomization. If a subject discontinues from the study, the subject number will not be reused, and the subject will not be allowed to re-enter the study.

The randomization is centralized and the assigned randomized patient number and associated kit numbers will not be sequential within a site.

3.5.3 Blinding and procedures for unblinding the study

3.5.3.1 Methods for ensuring blinding

All packaging will be identical with placebo and active tablets identical in size and color. The number of tablets dispensed on each card will be identical across all treatment arms.

The randomization for the kit assignments will be generated by the study statistician and provided directly to packaging with a copy going to ICTI Clinical Supplies Management Group. The stratified patient randomization will be generated by an AstraZeneca randomization staff member not associated with the trial and will be provided directly to ICTI for incorporation into the IVRS system. No member of the study team in AstraZeneca, at investigational sites or the CRO organization handing data will have access to the randomization scheme during the conduct of the study.

3.5.3.2 Methods for unblinding the study

Individual treatment codes, indicating the treatment randomization for each randomized subject, will be available to the investigator(s) or pharmacists at the study center through the use of a concealed panel on the label.

The treatment code must not be broken except in medical emergencies when the appropriate management of the subject necessitates knowledge of the treatment randomization. The investigator(s) must document and report to AstraZeneca any breaking of the treatment code. AstraZeneca retains the right to break the code in order to report serious adverse events to regulatory authorities.

Treatment codes will not be broken for the planned analyses of data until all decisions on the evaluability of the data from each individual subject have been made and documented.

3.5.4 Treatment compliance

Compliance will be assessed based on returned tablet counts. The percent compliance will be calculated as the number of tablets taken (dispensed - returned) divided by the prescribed number of tablets (number of days times number of tablets per day) expressed as a percent. Based on this calculation a subject with at least 75% compliance with study medication during study participation will be classified as compliant.

Furthermore, if there are any significant irregularities in compliance, in the opinion of the investigator, the patient should be withdrawn from the study.

4 CONCURRENT TREATMENT

4.1 General medications

Nonpsychotropic medication, including over-the counter medications, taken by the subject before entry into the trial may be continued during the trial. Medications required to treat illnesses or complaints that occur during the trial may be used at the discretion of the investigator. Use of cytochrome P450 inducers and potent inhibitors is restricted (see Table 13 below).

Women who enter the trial with an intrauterine device in place, using oral contraceptives, or using injectable or implantable hormonal agents designed to prevent pregnancy may continue these treatments throughout the trial.

The specific type of medication (trade or generic name), the indication for use, and the dates of usage should be reported on the CRF entitled Concurrent Treatment.

Medication which is considered necessary for the subject's safety and well being may be given at the discretion of the investigator(s). The administration of all medication (including investigational products) must be recorded in the appropriate sections of the case report form (CRF).

4.2 Use of psychoactive medications

The use of psychoactive drugs other than those specifically allowed during the trial (ie, lorazepam and zolpidem tartrate) is restricted (see Section 4.3, Table 13).

4.3 Summary of permitted concurrent medications

Medications specifically prohibited or restricted, and those permitted during the trial are listed in Table 13

Table 13 Permitted, restricted, and prohibited medications

Use category	Type of medication
Permitted	Previous medications for medical, nonpsychiatric illnesses Oral contraceptives and contraceptive devices
Restricted	Zolpidem tartrate 5-10 mg at bedtime for insomnia Lorazepam 1-3 mg per day for severe anxiety These drugs may be prescribed during the first 3 weeks of the study as long as they do not interfere with any assessments
Prohibited	Potent cytochrome P450 3A4 inducers (including but not limited to barbiturates, carbamazepine, rifampin, and St John's Wort) Potent cytochrome P450 3A4 inhibitors (including but not limited to ketoconazole, itraconazoole, fluconazole, erythromycin, clarithromycin, troleandomycin, indinavir, nelfinavir, ritonavir, and saquinavir) Antipsychotic medications (including but not limited to phenothiazines, risperidone, olanzapine, ziprasidone, clozapine, loxapine, thiothixene, molindone) Use of any psychoactive drugs including antidepressants, hypnotics, mood stabilizing drugs, and antipsychotics from a period of 5 elimination half-lives (28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

5 STUDY MEASUREMENTS AND ENDPOINTS

5.1 Primary endpoint

The primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score. This endpoint is used as the basis for the sample size calculation, as provided in Section 6.1.

5.2 Screening and demographic measurements

The following data are to be collected at screening:

- date of birth, sex, and race
- vital signs, height, weight
- supine and standing blood pressure and pulse
- significant medical history
- physical examination including ophthalmoscopic exam
- 12-lead electrocardiogram
- clinical chemistry and hematology
- pregnancy test (if female of childbearing potential)
- HAM-D assessment
- YMRS
- DSM-IV diagnosis, based on SCID assessment

5.3 Efficacy measurements and endpoints

The following assessments will be used to evaluate efficacy:

- change from baseline to final assessment in MADRS total score
- percentage of subjects with $\geq$50% reduction from baseline in MADRS total score at final assessment
- the change from baseline in each assessment (observed cases) in the MADRS total score

- the change from baseline to each assessment (observed cases) and final assessment in the CGI-S
- the CGI-C at final assessment
- the change from baseline to each assessment (observed cases) and final assessment in the YMRS
- the change from baseline to each assessment (observed cases) and final assessment in the total HAM-A

Evaluation using each of these scales should be performed by the same trained/certified staff member who has been approved by AstraZeneca for all assessments of the scale for an individual subject.

5.3.1 Summary of efficacy objectives and endpoints

Table 17 shows how the efficacy endpoints of this study relate to the study objectives.

Table 14 Efficacy objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Primary	Primary measure		
evaluate the efficacy of quetiapine compared to placebo in the treatment of a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks	change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score; ls means, 95% CI at final assessment ; descriptive statistics by statum	ANCOVA for the change from baseline to final assessment for total MADRS score. Pair-wise comparisons of each dose with placebo using step up procedure	Reductions in MADRS compared with placebo will indicate doses which are effective in treating depressive episode
	Secondary measure		
	percentage of subjects meeting the MADRS responder criteria ; n, percentage responders at each assessment, final assessment ; descriptive statistics by statum	Logistic model	Higher response rates will indicate doses which are effective in treating depressive episode in treating depressive episode
	change from baseline to each assessment for the MADRS total score, and each assessment and final	ANCOVA for the change from baseline to each assessment and final assessment	Reductions in scales compared with placebo will indicate doses which are effective in

	assessment Clinical Global Impression - Severity (CGI-S); ls means, 95% CI; descriptive statistics by stratum	(LOCF) for CGI-S. Pair-wise comparisons of each dose with placebo	treating depressive episode
	Clinical Global Impression - Change (CGI-C); ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the CGI-C for each assessment and final assessment (LOCF). Pair-wise comparisons of each dose with placebo	Greater improvements in CGI-C will indicate doses which are effective compared with placebo
Secondary			
evaluate the efficacy of quetiapine compared to placebo in the incidence of treatment -emergent mania	change from baseline to each assessment and final assessment in the YMRS total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for YMRS total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	No significant increase in the YMRS compared to placebo will indicate doses which do not result in treatment-emergent mania
evaluate the effect of quetiapine compared to placebo on symptoms of anxiety	change from baseline to each assessment and final assessment in the HAM-A total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for HAM-A total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Improvement in the HAM-A compared to placebo will indicate efficacy in treating anxiety component of the depressive episode

The methods for collecting efficacy data are presented below.

5.3.2 Montgomery-Asberg Depression Rating Scale (MADRS)

5.3.2.1 Methods of assessment

The MADRS will be performed at each visit during the trials using the validated MADRS instrument by certified staff at each site.

5.3.2.2 Calculation or derivation of endpoint

The change from baseline to final LOCF will be calculated for total MADRS score. A subject will be classified as a responder if the % change from baseline, calculated as the (change from

baseline divided by the baseline) multiplied by 100 indicates a ≥ 50% reduction in baseline total MADRS score.

5.3.3 Hamilton Rating Scale for Depression (HAM-D)

5.3.3.1 Methods of assessment

The HAM-D will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-D and HAM-D item #1.

5.3.4 Clinical Global Impression - Severity (CGI-S)

5.3.4.1 Methods of assessment

The CGI-S will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.4.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in CGI-S.

5.3.5 Clinical Global Impression - Change (CGI-C)

5.3.5.1 Methods of assessment

The CGI-C will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.5.2 Calculation or derivation of endpoint

The CGI-C is a measure of change from baseline and therefore requires no further derivation.

5.3.6 Hamilton Rating Scale for Anxiety (HAM-A)

5.3.6.1 Methods of assessment

The HAM-A will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.6.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-A.

5.3.7 Young Mania Rating Scale (YMRS)

5.3.7.1 Methods of assessment

The YMRS will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.7.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in YMRS.

5.4 Safety measurements and endpoints

The following measurements will be used to assess safety:

- adverse event reporting (both general adverse events and serious adverse events), coded using MedDRA system of nomenclature
- fasting clinical laboratory tests (including chemistry and hematology)
- vital signs(taken in both the standing and supine positions)
- ECG tests
- Simpson-Angus Scale
- Barnes-Akathesia Rating Scale

5.4.1 Summary of safety objectives and endpoints

Table 13 shows how the safety endpoints of this study relate to the study objectives.

Table 15 Safety objectives and endpoints relating to each objective

Objective	Endpoints and statistic	Planned analysis	Significance of results
evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression	incidence and nature of adverse events during double-blind treatment ; n, % incidence per event, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	no new safety issues identified
	incidence of drug-related adverse events during double-blind treatment ; n, % incidence; titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of subject withdrawal due to adverse events; n, % withdrawn, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of clinically significant changes in vital signs; n, % at each assessment and final visit	descriptive statistics only	
	change in the SAS total score ; mean change, standard deviation, baseline to final assessment (LOCF)	descriptive statistics only	
	the change in BARS total score	descriptive statistics only	
	incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment	descriptive statistics only	

The methods for collecting safety data are described below.

5.4.2 Adverse Events

5.4.2.1 Definitions

The definitions of adverse events (AEs), serious adverse events (SAEs) and other significant adverse events (OAEs) are given below. It is of the utmost importance that all staff involved in the study is familiar with the content of this section. The principal investigator is responsible for ensuring this.

(a) Adverse Event

An adverse event is the development of an undesirable medical condition or the deterioration of a pre-existing medical condition following or during exposure to a pharmaceutical product, whether or not considered causally related to the product. An undesirable medical condition can be symptoms (eg, nausea, chest pain), signs (eg, tachycardia, enlarged liver) or the abnormal results of an investigation (eg, laboratory findings, electrocardiogram). In clinical studies, an AE can include an undesirable medical condition occurring at any time, including run-in or washout periods, even if no study treatment has been administered.

(b) Serious Adverse Event

A serious adverse event is an AE occurring during any study phase (ie, run-in, treatment, washout, follow-up), and at any dose of the investigational product, comparator or placebo, that fulfills one or more of the following criteria:

- results in death
- is immediately life-threatening
- requires in-patient hospitalization or prolongation of existing hospitalization
- results in persistent or significant disability or incapacity
- is a congenital abnormality or birth defect
- is an important medical event that may jeopardize the subject or may require medical intervention to prevent one of the outcomes listed above?

The causality of SAEs (ie, their relationship to study treatment) will be assessed by the investigator(s), who in completing the relevant case report form must answer “yes” or “no” to the question “Do you consider that there is a reasonable possibility that the event may have been caused by the drug?” For further guidance on the definition of a SAE and a guide to the interpretation of the causality question, see Appendix F.

(c) Other significant adverse event

An AstraZeneca expert will identify OAEs during the evaluation of safety data for the Clinical Study Report. Significant adverse events of particular clinical importance, other than SAEs and those AEs leading to discontinuation of the subject from study treatment, will be classified as OAEs. Examples of these are marked hematological and other laboratory abnormalities, and certain events that lead to intervention (other than those already classified as serious), dose reduction or significant additional treatment. For each OAE, a narrative will be written and included in the Clinical Study Report.

5.4.2.2 Recording of adverse events

All AEs that occur before treatment, during treatment, or within 30 days following the cessation of treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor. A description of the event, its intensity, duration, action taken (eg, treatment and follow-up tests), and outcome should be given, along with the investigator's causality assessment of the relationship of the event to the study drug. If a diagnosis of the subject's condition has been made, then the diagnosis should be recorded as the SAE. In instances of well recognized syndromes (eg, fever, runny nose, cough) they can be recorded as "flu". However, if a diagnosis of the subject's condition has not been made, or if the individual symptoms are not well recognized, then the individual symptoms should be recorded separately.

In general, abnormal laboratory tests or vital signs should not be reported as AEs unless they fulfill the criteria for an SAE or lead to discontinuation. If an abnormal laboratory test result or vital sign is associated with clinical signs and symptoms, the sign or symptom should be reported as an AE, and the associated test result or vital sign should be recorded on the appropriate CRF.

A causality assessment must be recorded for all AEs. The CRF asks the question, "In your medical judgement, is there a reasonable possibility that the event may have been caused by the study therapy?" If there is any valid reason, even if undetermined or untested, for suspecting a possible cause-and-effect relationship between the study drug and the occurrence of the AE, then this should be answered "yes." Otherwise, if no valid reason exists for suggesting a possible relationship, then this should be answered "no." If more than 1 AE is identified, a causality assessment must be made for each AE.

It is important to distinguish between serious and severe AEs. Severity is a measure of intensity whereas seriousness is defined by the criteria in Section 5.4.2.1 b. An AE of severe intensity need not necessarily be considered serious. For example, nausea which persists for several hours may be considered severe nausea, but not a SAE. On the other hand, a stroke which results in only a limited degree of disability may be considered a mild stroke but would be a SAE.

Any detrimental change in the subject's condition after the subject enters the study will be discussed with the investigator. Where the detrimental change is considered by the investigator to constitute a progression or relapse of bipolar depression or a lack of efficacy, then this will not be considered an AE even where this necessitates or prolongs hospitalization. When there is deterioration in the condition for which the medicine is being used, there may be uncertainty as to whether this is lack of efficacy or an AE. In such cases, unless AstraZeneca or the reporting physician considers that the medicine contributed to the deterioration, the deterioration should be considered lack of efficacy. However, if it is believed that the medicine may have contributed to the deterioration, then this should be treated as an AE.

Study drug abuse is an SAE, even when there are no symptoms or additional AEs and should be reported according to the guidelines in Section 5.4.2.3. Misuse of study drug is an AE but is not considered an SAE unless accompanied by serious sequelae.

Should an overdose occur, it must be reported in accordance with the procedures described in Section 10.3 Procedures in case of overdose. All overdoses, with or without associated symptoms, should be reported as AEs.

Suicide and attempted suicide, irrespective of the method, but occurring in connection with the use of study drug, should be reported as AEs (serious or non-serious). This event should be identified as suicide or attempted suicide, and the method of the suicide or attempt should be provided. If an attempted suicide meets the criteria for an SAE, the event must be reported according to the guidelines in Section 10.4.

Should a pregnancy occur, it must be reported in accordance with the procedures described in Section 10.5. Procedures in case of pregnancy. Pregnancy in itself is not regarded as an AE unless there is a suspicion that an investigational product may have interfered with the effectiveness of a contraceptive medication.

5.4.2.3 Reporting of serious adverse events

Investigators and other site personnel must inform appropriate AstraZeneca representatives of any SAE that occurs in the course of the study within 1 day (i.e. immediately but no later than the end of the next business day) of when he or she becomes aware of it.

The AstraZeneca representative will work with the investigator to compile all the necessary information and ensure that the appropriate AstraZeneca Drug Safety Department receives a report by day 1 for all fatal and life-threatening cases and by day 5 for all other SAEs.

Follow-up information on SAEs must also be reported by the investigator within the same time frames.

If a non-serious AE becomes serious, this and other relevant follow-up information must also be provided to AstraZeneca within 1 day as described above.

After initial notification, the AstraZeneca representatives have 4 days to work with the investigator to compile all the necessary information to ensure that the appropriate AstraZeneca Drug Safety Department receives a complete report by day 5. Follow-up information on SAEs should also be reported by the investigator within the same time frames. If a non-serious case becomes serious, this and other relevant follow-up information should also be provided to AstraZeneca within 1 day as described in the paragraph above

All SAEs have to be reported, whether or not considered causally related to the investigational product. All SAEs will be recorded in the case report form. The investigator is responsible for informing the Ethics Committee and/or the Regulatory Authority of the SAE as per local requirements.

5.4.3 Laboratory safety measurements and variables

Blood (under fasting conditions) and urine specimens will be collected for laboratory test analysis and these samples will be processed by a central laboratory (Quintiles Central Laboratory).

5.4.3.1 Methods of assessment

- Fasting hematology: hemoglobin, hematocrit, red blood cell count, total and differential white blood cell counts and platelet count
- Fasting clinical chemistry: total bilirubin, alkaline phosphatase, alanine transaminase(ALT), aspartate transaminase(AST), sodium, potassium, chloride, creatinine, glucose, insulin, bicarbonate, high-density lipoprotein cholesterol, triglycerides, low-density lipoprotein cholesterol and total cholesterol
- Thyroid function tests: thyroid stimulating hormone (TSH), Triiodothyronine resin uptake (T3RU), and total thyroxine (T4)
- Serum pregnancy tests
- Urine toxicology screen

5.4.3.2 Calculation or derivation of endpoints

Change from baseline will be derived for all subjects who have a screening laboratory test and a final laboratory test. The change from baseline is the final test value minus the screening test value. Laboratory test values will also be compared to the laboratory standard normal ranges and

flagged with H or L if they are outside of the normal range. In addition, treatment emergent laboratory changes, identified using computerized methods to compare results or changes from baseline to standard extended ranges will be flagged at the subject and test level.

5.4.4 Vital signs measurement

5.4.4.1 Methods of assessment

A standard blood pressure cuff will be used to obtain systolic and diastolic blood pressure. The assessment will be done first with the subject in the supine position for 3 minutes and again within 3 minutes of the subject attaining a standing position. Pulse will be measured for 1 minute.

5.4.4.2 Calculation or derivation of endpoints

Change from baseline will derived be as the value at the visit minus the screen value for the same assessment and position. In addition the change within a visit between the standing and supine blood pressure assessments will be calculated for both systolic and diastolic blood pressures. This difference will be calculated as supine minus standing . A subject will be classified as having calculated postural hypotension if either the systolic blood pressure difference indicates a decrease >20 mmHg or the diastolic blood pressure difference indicates a decrease >15 mmHg.

5.4.5 ECG safety measurements and variables

5.4.5.1 Methods of assessment

A 12 lead ECG assessment will be done using an ECG machine compatible with the requirements for eResearch the central evaluation laboratory. The central laboratory will supply the interval data, rates and standard interpretation of the ECG test results.

eResearch
30 south 17th Street
Philadelphia, PA 19103-4001

5.4.5.2 Calculations and derivations of endpoint

Change from baseline for interval data and rate data will be derived by subtracting the screen value from the final assessment value. Values outside the extended range in Appendix XX will be flagged.

5.4.6 Simpson-Angus Scale (SAS)

5.4.6.1 Methods of assessment

The SAS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.6.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.4.7 Barnes-Akathisia Rating Scale (BARS)

5.4.7.1 Methods of assessment

The BARS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.7.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.5 Quality of Life endpoint

The following assessment will be used to assess the effect of quetiapine compared with placebo on quality of life as assessed by:

- the PSQI
- the short form Q-Les-Q

5.5.1 Summary of quality of life objectives and endpoints

Table 19 shows how the efficacy endpoints of this study relate to the study objectives.

Table 19 Efficacy objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Secondary	Secondary measure		
evaluate the effect of quetiapine compared to placebo on quality of sleep	change from baseline to final assessment in PSQI; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for PSQI total score, with MADRS score as covariate. Pair-wise comparisons of	Reduction in PSQI compared with placebo indicates improvement of sleep quality

		each dose with placebo	
evaluate the effect of quetiapine compared to placebo on the overall quality of life	change from baseline to final assessment in Q-Les-Q; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for Q-Les-Q total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Increase in Q-Les-Q compared with placebo indicates improvement of overall quality of life

The methods of collecting quality of life data are described below.

5.5.2 PSQI

5.5.2.1 Methods of assessment

The PSQI will be performed at scheduled visits during the trial by a patient at each site. The 9 self-rated questions will be incorporated into 7 component scores which are added together to yield one total "global" score. Higher scores indicate more severe difficulties in sleep quality.

5.5.2.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the PSQI.

5.5.3 Q-Les-Q

5.5.3.1 Methods of assessment

The Q-Les-Q is a patient self assessment questionnaire which will be completed at scheduled visits during the trial by a patient at each site. The short form has 14 self-rated questions, the first 12 will be incorporated into a total score. Higher scores indicate better quality of life.

5.5.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the Q-Les-Q.

5.6 Interactive Computer Interview for Depression (ICI-D)

At each study visit, subjects at all participating sites will complete a computer-based self-report measure of depression severity (the interactive computer interview or ICI-D) after completing the

MADRS. Raters or other site staff will first enter the subject's MADRS scores into a computer supplied by the sponsor. Subjects will then complete a computer-based self-report measure of depression severity . This measure will not be considered primary or source data, and will be recorded on a coded, anonymized form. This data will be securely transmitted to Concordant Rater Systems (CRS) for ongoing quality control.

For quality assurance purposes, if an above-threshold variance is detected between the ICI-D and the MADRS on individual items or the overall score, a CRS clinician (Ph.D. or MD) will contact the applicable rater for a monitoring consultation. The CRS clinician will discuss possible reasons for the discrepancy, review conventions for scoring and offer additional training if necessary.

The ICI-D will also provide an additional check of the patient's suicide status. The ICI-D will alert the rater if the patient reports suicidal plans. If the patient did not verbalize these thoughts during the interview /assessment process, the rater could then take the appropriate clinical steps.

A standard operating procedure for ICI-D will be provided to the sites.

5.7 Genetic sampling and storage

There will be no genetic sampling in this trial.

5.8 Volume of blood sampling and handling of biological samples

The total volume of blood that will be drawn from each subject in this study is as follows:

Table 16 Volume of blood to be drawn from each subject

Assessment		Sample volume (ml)	N of samples	Total volume (ml)	
				Women	Men
Safety	Clinical chemistry				
	Hematology	18	2	36	36
	Serum Pregnancy [a]	2	1	2	
Total				38	36

[a] Women only.

Sample handling and storage will be defined by the central laboratory which will be handling the analysis and reporting or results from samples.

6 DATA MANAGEMENT

Case Report Forms (CRFs) will be provided for recording of data. The forms will be in triplicate with carbonless paper. Data will be recorded legibly onto the CRFs with black ink, preferably with a ballpoint pen. If any data are not available, omissions will be indicated on the CRFs. Corrections should be made legibly and be initialed and dated. Correction fluid or covering labels must not be used. The top original and the first copy of the completed form will collected and returned to AstraZeneca/AstraZeneca's agent and the second copy will be retained by the investigator.

Data received electronically by AstraZeneca from a validated source will be loaded directly into the trial database for analysis.

7 STATISTICAL METHODS AND DETERMINATION OF SAMPLE SIZE

7.1 Determination of sample size

Since there is no data using the MADRS instrument in the assessment of quetiapine in treating bipolar subjects with depression, the sample size estimation was based on published data from the lamotrigine monotherapy (Calabrese et al, 1999) and olanzapine trials (Tohen et al, 2002). The percentage change in the HAM-D across these lamotrigine studies in bipolar depression is similar to that observed with quetiapine. MADRS scores correlate significantly with those of the HAM-D (Montgomery Asberg 1979).

Sample size was estimated using an Bonferroni correction for the 2 comparisons with placebo. A clinically meaningful 3.6-unit difference between quetiapine treatment and placebo was used to estimate the effect size (with 3.1 units considered a minimally effective and detectable difference). The variability used for calculation was 10 units, the variability seen in the olanzapine study. A sample size of 168 subjects/arm (504 subjects total) would provide 85% power for 2-sided pair-wise comparisons with placebo at α=0.025 which provides an overall experiment wise type I error rate of 0.05. Therefore, 740 patients will be screened and approximately 530 subjects randomized (allowing for a 5% early drop out rate), to insure 504 subjects with post baseline data available for analysis (MITT analysis population). This sample size will provide 72% power to detect a 3.1 unit difference from placebo.

7.2 Statistical evaluation

7.2.1 Methods of statistical analysis

A comprehensive Statistical Analysis Plan (SAP) will be prepared before unblinding of the data.

Missing data for final visit resulting from patient drop outs will be imputed using an LOCF approach. Patients with post baseline data (MITT population) will have their last trial assessment carried forward as the final assessment for analyses.

7.2.2 Study endpoints

Primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score.

Secondary efficacy endpoints:

(1) Percentage of patients with a ≥50% reduction from baseline in the MADRS total score at study endpoint

(2) Change from baseline to each assessment (observed cases) in the MADRS total score

(3) Change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, CGI-S, CGI-C, and Young Mania Rating Scale.

(4) Change in the PSQI score from baseline to final assessment

Safety endpoints:

(1) Incidence and nature of adverse events during double-blind treatment

(2) Incidence of drug-related adverse events during double-blind treatment

(3) Incidence of subject withdrawal due to adverse events

(4) Incidence of clinically significant changes in hematology and chemistry laboratory results, vital signs, electrocardiograms, weight, and body mass index.
Tolerability endpoints:

(5) Change in the SAS total score from baseline to final assessment

(6) Change in BARS total score from baseline to final assessment

(7) Incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment

Quality of Life endpoints:

(1) Change in Q-Les-Q total score from baseline to final assessment

(2) Proportion of patients achieving community norm levels in Q-Les-Q at final assessment

7.2.3 Statistical analyses

The randomization will be stratified by Bipolar type (I or II) in order to assure balance across treatments for the type of patient enrolled. The stratification will be incorporated into the statistical analysis models and descriptive statistics will be provided for each stratum.

For each statistical model run, the assumptions for the model will be evaluated. If the assumptions are not reasonably met, the data may be transformed to meet assumptions or a non-parametric test performed.

All statistical comparisons will be based on 2-sided testing approaches for testing the difference between active study medication dose and placebo.

7.2.3.1 Study populations for analysis

The modified intention to treat population (MITT) will be the population for efficacy and quality of life evaluation. The MITT population will include all randomized subjects who were received study treatment and had at least one post baseline efficacy assessment with a last observation carried forward approach for final assessment.

The safety population will include all subjects who provide consent and received study medication.

7.2.3.2 Primary Analysis

The primary analysis will use analysis of covariance (ANCOVA) model for the change from baseline at final assessment for the MADRS. The model will include terms for treatment, stratum, with the baseline MADRS as a covariate. The Simes-Hommel step-up procedure will be used to adjust for the 2 comparisons with placebo (Simes-Hommel, 1988). The p-values obtained from the pair-wise comparisons will be ordered as follows: $P(1) \leq P(2)$. The following rule will be used to assess statistical significance:

1) If $P(2) \leq 0.05$, then reject both null hypotheses associated with P(2) and P(1); else proceed to the next step;

2) If $P(1) \leq 0.025$, then reject the null hypothesis associated with P(1).

7.2.3.3 Secondary Analyses of efficacy and quality of life

The secondary endpoint for responder, defined as a subject who has a 50% reduction in MADRS score from baseline to final assessment, will be analyzed by comparing the proportion of subjects responding across treatments using a logistic model which includes treatment, stratum, and center in the model. The secondary endpoints based on change from baseline for scales at an assessment time will be analyzed using the same model as the primary endpoint. Nominal p-values will be used for all secondary endpoint comparisons.

Exploratory repeated measures analysis of variance model will also be conducted to evaluate whether there are significant differences among treatments across time for the MADRS and HAM-D scores.

Descriptive statistics will be used to report stratum, item scores, and subscale scores.

7.2.3.4 Safety analyses

Adverse events will be coded using the MedDRA dictionary. Numbers of events and incidence rates for AEs in each treatment group will be summarized by preferred term and system organ class. An event that occurred one or more times on the date of, or subsequent to, randomization will contribute one observation to the numerator of the incidence rate. The denominator will comprise all patients exposed to study treatment.

Adverse events that lead to premature withdrawal of subjects will be tabulated for each treatment group.

All laboratory assessments, vital signs, ECG (rates and intervals) results, and weight and body mass index will be tabulated using descriptive statistics at baseline, final assessment and including change from baseline. Descriptive statistics will include n, mean, standard deviation, minimum and maximum value.

7.2.3.5 Tolerability analyses

The change from baseline in SAS and BARS score data will be summarized using descriptive statistics (mean, standard deviation, median, minimum and maximum).

Incidence rates of EPS adverse events will be compared and tabulated using descriptive statistics.

7.2.3.6 Interim analysis

No interim analysis is planned

7.2.3.7 Data or safety monitoring committee

There will be no data or safety monitoring committee.

8 STUDY MANAGEMENT

8.1 Monitoring

Before the study begins, a representative of AstraZeneca or company representing AstraZeneca will visit the investigational site to

- determine the adequacy of the facilities
- discuss with the investigator(s) (and other personnel involved with the study) their responsibilities with regard to protocol adherence, and the responsibilities of AstraZeneca or its representatives.

During the study, a monitor from AstraZeneca or company representing AstraZeneca will have regular contacts with the investigational site, including visits to

- provide information and support to the investigator(s)
- confirm that facilities remain acceptable
- confirm that the investigational team is adhering to the protocol, that data are being accurately recorded in the case report forms (CRFs), and that investigational product accountability checks are being performed.
- perform source data verification (a comparison of the data in the CRFs with the subject's records at the hospital or practice, and other records relevant to the study). This will require direct access to all original records for each subject (eg, clinic charts).

The monitor or another AstraZeneca representative will be available between visits if the investigator(s) or other staff at the center need information and advice.

8.2 Audits and inspections

Authorized representatives of AstraZeneca, a regulatory authority, an Independent Ethics Committee (IEC) or an Institutional Review Board (IRB) may visit the center to perform audits or inspections, including source data verification. The purpose of an AstraZeneca audit or inspection is to systematically and independently examine all study related activities and documents to determine whether these activities were conducted, and data were recorded, analyzed, and accurately reported according to the protocol, Good Clinical Practice (GCP), guidelines of the International Conference on Harmonization (ICH), and any applicable regulatory requirements. The investigator should contact AstraZeneca immediately if contacted by a regulatory agency about an inspection at his or her center.

8.3 Training of staff

The principal investigator will maintain a record of all individuals involved in the study (medical, nursing and other staff). He or she will ensure that appropriate training relevant to the study is given to all of these staff, and that any new information of relevance to the performance of this study is forwarded to the staff involved.

8.4 Changes to the protocol

Study procedures will not be changed without the mutual agreement of the international principal investigator(s) and AstraZeneca.

If it is necessary for the study protocol to be amended, the amendment or a new version of the study protocol must be notified to or approved by each IEC or IRB, and in many countries also the local regulatory authority, before implementation. Local requirements must be followed.

If a protocol amendment requires a change to a particular center's Written Informed Consent Form, then AstraZeneca and the center's IEC or IRB must be notified. Approval of the revised Written Informed Consent Form by AstraZeneca and by the IEC or IRB is required before the revised form is used.

AstraZeneca will distribute amendments and new versions of the protocol to each principal investigator(s), who in turn is responsible for the distribution of these documents to his or her IEC or IRB, and to the staff at his or her center. The distribution of these documents to the regulatory authority will be handled according to local practice.

8.5 Study agreements

The principal investigator at each center must comply with all the terms, conditions, and obligations of the study agreement for this study. In the event of any inconsistency between this protocol and the study agreement, this study agreement shall prevail.

8.6 Study timetable and termination

It is anticipated that the first subject will be enrolled in September 2002 and that the last subject will complete the study in March 2004.

9 ETHICS

9.1 Ethics review

The final study protocol, including the final version of the Written Informed Consent Form, must be approved or given a favorable opinion in writing by an IEC or IRB as appropriate. The investigator must submit written approval to AstraZeneca before he or she can enroll any subject into the study.

The principal investigator(s) is responsible for informing the IEC or IRB of any amendment to the protocol in accordance with local requirements. In addition, the IEC or IRB must approve all advertising used to recruit subjects for the study. The protocol must be reapproved by the IEC or IRB annually, as local regulations require.

Either the investigator(s) or AstraZeneca must submit progress reports to the IEC or IRB according to local regulations and guidelines. The principal investigator(s) must also provide the IEC or IRB with any reports of serious adverse events from the study site.

The principal investigator(s) is also responsible for providing the IRB with reports of any serious adverse events from any other study conducted with the investigational product. This information will be provided to the principal investigator(s) by AstraZeneca.

9.2 Ethical conduct of the study

The study will be performed in accordance with the ethical principles in the Declaration of Helsinki (see Appendix C), Good Clinical Practice, and applicable regulatory requirements.

9.3 Subject information and consent

The principal investigator(s) at each center will ensure that the subject is given full and adequate oral and written information about the nature, purpose, possible risk and benefit of the study. Subjects must also be notified that they are free to discontinue from the study at any time. The subject should be given the opportunity to ask questions and allowed time to consider the information provided.

The subject’s signed and dated informed consent must be obtained before conducting any procedure specifically for the study, including the following:

The principal investigator(s) must store the original, signed Written Informed Consent Form. A copy of the Written Informed Consent Form must be given to the subject.

A sample Written Informed Consent Form is enclosed (Appendix B). If modifications are made according to local requirements, the new version has to be approved by AstraZeneca.

9.4 Subject data protection

The Written Informed Consent Form will explain that study data will be stored in a computer database, maintaining confidentiality in accordance with national data legislation. The subjects' names will not be recorded in this database. The Written Informed Consent Form will also explain that for data verification purposes, authorized representatives of AstraZeneca, a regulatory authority, an IEC or IRB may require direct access to parts of the hospital or practice records relevant to the study, including subjects' medical history.

10 EMERGENCY PROCEDURES

10.1 AstraZeneca emergency contact procedure

In the case of a medical emergency, contact AstraZeneca personnel shown below.

Wayne Macfadden MD
Project Physician
302-886-1147 (telephone)
302-886-5567 (fax)
REDACTED

Robin McCoy RN
Senior Clinical Research Scientist
302-886-4650 (telephone)
302-886-5567 (fax)
REDACTED

Contact AstraZeneca switchboard on 1-800-236-9933 and ask to be put in contact with the person on call for the Seroquel clinical team.

10.2 Procedures in case of medical emergency

The principal investigator(s) is responsible for ensuring that procedures and expertise are available to cope with medical emergencies during the study.

10.3 Procedures in case of overdose

For the purpose of this trial all overdoses should be reported as adverse events. However, all cases of overdose must be reported immediately, within 1 day, if sequelae meeting the criteria for serious adverse event have occurred in association with the overdose. In all instances, the overdose substance should be stated and whether the overdose was accidental or intentional. If the overdose was a suicide attempt, this fact should be clearly stated. Adverse events (serious and non-serious) arising as the result of an overdose should be recorded on an adverse event form as “sequelae to overdose.” For example ”nausea as sequelae to overdose.”

10.4 Suicide

Suicide and suicide attempt, irrespective of the method, but in connection with the use of trial drug, should be reported as a serious adverse event (in accordance with the definition provided in Section 5.4.2.1). This event should be identified as suicide or suicide attempt, and the method of the suicide or the suicide attempt should be provided. Suicidal thoughts should also be regarded as adverse events.

10.5 Procedures in case of pregnancy

Pregnancy itself is not regarded as an adverse event unless there is a suspicion that the investigational product under study may have interfered with the effectiveness of a contraceptive medication. However, the outcome of all pregnancies (spontaneous miscarriage, elective termination, normal birth or congenital abnormality) must be followed up and documented even if the subject was discontinued from the study.

All reports of congenital abnormalities/birth defects are SAEs. Spontaneous miscarriages should also be reported and handled as SAEs. Elective abortions without complications should not be handled as AEs. All outcomes of pregnancy must be reported to AstraZeneca on the pregnancy outcomes report form.

Declaration of Helsinki

Recommendations guiding physicians in biomedical research involving human subjects.

Adopted by the 18th World Medical Assembly, Helsinki, Finland, June 1964, amended by the 29th World Medical Assembly, Tokyo, Japan, October 1975 and the 35th World Medical Assembly, Venice, Italy, October 1983 and the 41st World Medical Assembly Hong Kong, September 1989 and the 48th General Assembly, Somerset West, Republic of South Africa, October 1996.

Introduction

It is the mission of the physician to safeguard the health of the people. His or her knowledge and conscience are dedicated to the fulfilment of this mission.

The Declaration of Geneva of The World Medical Association binds the physician with the words, "The health of my patient will be my first consideration," and the International Code of Medical Ethics declares that, "A physician shall act only in the patient´s interest when providing medical care which might have the effect of weakening the physical and mental condition of the patient".

The purpose of biomedical research involving human subjects must be to improve diagnostic, therapeutic and prophylactic procedures and the understanding of the aetiology and pathogenesis of disease.

In current medical practice most diagnostic, therapeutic or prophylactic procedures involve hazards. This applies especially to biomedical research.

Medical progress is based on research which ultimately must rest in part on experimentation involving human subjects.

In the field of biomedical research a fundamental distinction must be recognised between medical research in which the aim is essentially diagnostic or therapeutic for a patient, and medical research, the essential object of which is purely scientific and without implying direct diagnostic or therapeutic value to the person subjected to the research.

Special caution must be exercised in the conduct of research which may affect the environment, and the welfare of animals used for research must be respected.

Because it is essential that the results of laboratory experiments be applied to human beings to further scientific knowledge and to help suffering humanity, the World Medical Association has prepared the following recommendations as a guide to every physician in biomedical research involving human subjects. They should be kept under review in the future. It must be stressed that the standards as drafted are only a guide to physicians all over the world. Physicians are not relieved from criminal, civil and ethical responsibilities under the laws of their own countries.

I. Basic principles

1. Biomedical research involving human subjects must conform to generally accepted scientific principles and should be based on adequately performed laboratory and animal experimentation and on a thorough knowledge of the scientific literature.

2. The design and performance of each experimental procedure involving human subjects should be clearly formulated in an experimental protocol which should be transmitted for consideration, comment and guidance to a specially appointed committee independent of the investigator and the sponsor provided that this independent committee is in conformity with the laws and regulations of the country in which the research experiment is performed.

3. Biomedical research involving human subjects should be conducted only by scientifically qualified persons and under the supervision of a clinically competent medical person. The responsibility for the human subject must always rest with a medically qualified person and never rest on the subject of the research, even though the subject has given his or her consent.

4. Biomedical research involving human subjects cannot legitimately be carried out unless the importance of the objective is in proportion to the inherent risk to the subject.

5. Every biomedical research project involving human subjects should be preceded by careful assessment of predictable risks in comparison with foreseeable benefits to the subject or to others. Concern for the interests of the subject must always prevail over the interests of science and society.

6. The right of the research subject to safeguard his or her integrity must always be respected. Every precaution should be taken to respect the privacy of the subject and to minimise the impact of the study on the subject´s physical and mental integrity and on the personality of the subject.

7. Physicians should abstain from engaging in research projects involving human subjects unless they are satisfied that the hazards involved are believed to be predictable. Physicians should cease any investigation if the hazards are found to outweigh the potential benefits.

8. In publication of the results of his or her research, the physician is obliged to preserve the accuracy of the results. Reports of experimentation not in accordance with the principles laid down in this Declaration should not be accepted for publication.

9. In any research on human beings, each potential subject must be adequately informed of the aims, methods, anticipated benefits and potential hazards of the study and the discomfort it may entail. He or she should be informed that he or she is at liberty to abstain from participation in the study and that he or she is free to withdraw his or her consent to participation at any time. The physician should then obtain the subject´s freely-given informed consent, preferably in writing.

10. When obtaining informed consent for the research project the physician should be particularly cautious if the subject is in a dependent relationship to him or her or may consent under duress. In that case the informed consent should be obtained by a physician who is not engaged in the investigation and who is completely independent of this official relationship.

11. In case of legal incompetence, informed consent should be obtained from the legal guardian in accordance with national legislation. Where physical or mental incapacity makes it impossible to obtain informed consent, or when the subject is a minor, permission from the responsible relative replaces that of the subject in accordance with national legislation.

Whenever the minor child is in fact able to give a consent, the minor´s consent must be obtained in addition to the consent of the minor´s legal guardian.

12. The research protocol should always contain a statement of the ethical considerations involved and should indicate that the principles enunciated in the present Declaration are complied with.

II. Medical research combined with professional care (Clinical research)

1. In the treatment of the sick person, the physician must be free to use a new diagnostic and therapeutic measure, if in his or her judgement it offers hope of saving life, re-establishing health or alleviating suffering.

2. The potential benefits, hazards and discomfort of a new method should be weighed against the advantages of the best current diagnostic and therapeutic methods.

3. In any medical study, every patient - including those of a control group, if any - should be assured of the best proven diagnostic and therapeutic method. This does not exclude the use of inert placebo studies where no proven diagnostic or therapeutic method exists.

4. The refusal of the patient to participate in a study must never interfere with the physician-patient relationship.

5. If the physician considers it essential not to obtain informed consent, the specific reasons for this proposal should be stated in the experimental protocol for transmission to the independent committee (I,2).

6. The physician can combine medical research with professional care, the objective being the acquisition of new medical knowledge, only to the extent that medical research is justified by its potential diagnostic or therapeutic value for the patient.

III. Non-therapeutic biomedical re-search involving human subjects

(Non-clinical biomedical research)

1. In the purely scientific application of medical research carried out on a human being, it is the duty of the physician to remain the protector of the life and health of that person on whom biomedical research is being carried out.

2. The subjects should be volunteers - either healthy persons or patients for whom the experimental design is not related to thepatient´s illness.

3. The investigator or the investigating team should discontinue the research if in his/her or their judgement it may, if continued, be harmful to the individual.

4. In research on man, the interest of science and society should never take precedence over considerations related to the well-being of the subject.

Insurance and indemnity

For the US, this Appendix E is not applicable. Please refer to the clinical study agreement for information regardingAstraZeneca's obligation to insure and indemnify institution and investigator.

INSURANCE AND INDEMNITY

AstraZeneca's liability is covered by a liability insurance policy with AstraZeneca Insurance Company Limited, policy No.: L/702938.

With respect to any liability directly or indirectly caused by the investigational products in connection with this Clinical Study, AstraZeneca assumes liability by law on behalf of the investigator(s) and his assistants for possible injury to the subject provided the investigator(s) and his assistants have followed the instructions of AstraZeneca in accordance with this protocol and any amendments thereto, that the investigational products administered to the subject in this Clinical Study have been supplied by AstraZeneca and that the investigator and his assistants have in general performed this clinical study in accordance with scientific practice and currently acceptable techniques and know-how.

AstraZeneca can forward a letter of indemnity if needed by the investigator(s)/institution.

Appendix F
Additional safety information

1. FURTHER GUIDANCE ON THE DEFINITION OF A SERIOUS ADVERSE EVENT (SAE)

Life threatening

'Life-threatening' means that the subject was at immediate risk of death from the adverse event as it occurred or it is suspected that use or continued use of the product would result in the subject's death. 'Life-threatening' does not mean that had an adverse event occurred in a more severe form it might have caused death (ie hepatitis that resolved without hepatic failure).

Hospitalisation

Out-subject treatment in an emergency room is not in itself a serious adverse event, although the reasons for it may be (eg, bronchospasm, laryngeal oedema). Hospital admissions and/or surgical operations planned before or during a study are not considered adverse events if the illness or disease existed before the subject was enrolled in the study, provided that it did not deteriorate in an unexpected way during the study.

Important medical event or medical intervention

Medical and scientific judgement should be exercised in deciding whether a case is serious in a situation where important medical events may not be immediately life-threatening or result in death, hospitalisation, disability or incapacity but may jeopardise the subject or may require medical intervention to prevent one or more outcomes listed in the definition of serious. These should usually be considered as serious. Examples of such events are:

- Angioedema not severe enough to require intubation but requiring iv. hydrocortisone treatment
- Hepatotoxicity caused by paracetamol (acetaminophen) overdose requiring treatment with N-acetylcysteine
- Intensive treatment in an emergency room or at home for allergic bronchospasm
- Blood dyscrasias (eg, neutropenia or anaemia requiring blood transfusion, etc.) or convulsions that do not result in hospitalisation
- Development of drug dependency or drug abuse

2. FURTHER GUIDANCE ON THE ASSESSMENT OF CAUSALITY

The following factors should be considered when deciding if there is a "reasonable possibility" that an adverse event (AE) may have been caused by the investigational product.

- **Time course of events and exposure to suspect drug**. Has the subject actually received the suspect drug? Did the AE occur in a reasonable temporal relationship to the administration of suspect drug?

- **Consistency with known drug profile**. Was the AE consistent with the previous knowledge of the suspect drug (pharmacology and toxicology) or drugs of the same pharmacological class? OR could the AE be anticipated from its pharmacological properties?

- **Dechallenge experience**. Did the AE resolve or improve on stopping or reducing the dose of the suspect drug?

- **No alternative cause**. The AE cannot be reasonably explained by another aetiology such as the underlying disease, other drugs, other host or environmental factors.

- **Rechallenge experience**. Did the AE reoccur if the suspected drug was reintroduced after having been stopped? AstraZeneca would not normally recommend or support a rechallenge.

- **Laboratory tests**. Has a specific laboratory investigation confirmed the relationship?

A "reasonable possibility" could be considered to exist for an AE where one or more of these factors exist.

In contrast, there would not be a "reasonable possibility" of causality if none of the above criteria apply or where there is evidence of exposure and a reasonable time course but any dechallenge (if performed) is negative or ambiguous or there is another more likely cause of the AE.

In difficult cases, other factors could be considered such as:

- Is this a recognised feature of overdose of the drug?

- Is there a known mechanism

Ambiguous cases should be considered as being a “reasonable possibility” of a causal relationship unless further evidence becomes available to refute this.

AstraZeneca

Clinical Study Protocol Amendment

Amendment No.	2
Study Code	5077US/0049
Date	December 4, 2002

Sponsor:

AstraZeneca LP 1800 Concord Pike, Wilmington, DE 19850 USA

Centres affected by the amendment:

All centers who agree to participate in the Interactive Computer Interview-Depression

The protocol for the study is to be amended as follows:

Page 12 List of Abbreviations

Added ICI-D Interactive Computer Interview-Depression

CRS Concordant Rater Systems

Page 22 Table 2 Study Plan

Added Interactive Computer interview for depression on Days 1, 8, 15, 22, 29,36, 43, 50, and 57

Page 27 Section 3.4.4.4 Procedures for discontinuation

Added ICI-D

Page 53 Section 5.6 Interactive Computer Interview for Depression (ICI-D)

At each study visit, subjects at all participating sites will complete a computer-based self-report measure of depression severity (the interactive computer interview or ICI-D) after completing the MADRS. Raters or other site staff will first enter the subject's MADRS scores

into a computer supplied by the sponsor. Subjects will then complete a computer-based self-report measure of depression severity . This measure will not be considered primary or source data, and will be recorded on a coded, anonymized form. This data will be securely transmitted to Concordant Rater Systems (CRS) for ongoing quality control.

For quality assurance purposes, if an above-threshold variance is detected between the ICI-D and the MADRS on individual items or the overall score, a CRS clinician (Ph.D. or MD) will contact the applicable rater for a monitoring consultation. The CRS clinician will discuss possible reasons for the discrepancy, review conventions for scoring and offer additional training if necessary. Given that the correlation between the ICI-D and the MADRS is being evaluated, no changes to the MADRS scores will be done.

The ICI-D will also provide an additional check of the patient's suicide status. The ICI-D will alert the rater if the patient reports suicidal plans. If the patient did not verbalize these thoughts during the interview /assessment process, the rater could then take the appropriate clinical steps.

A standard operating procedure for ICI-D will be provided to the sites.

Reasons for making the amendment:

The intent of the computerized patient's self-report of depression symptoms is to test a quality monitoring and training tool for the investigators and raters at each participating site. This process may help to achieve more accurate recordings of the MADRS in future studies, the primary outcome variable in this study, by ensuring rapid feedback to the raters of any significant variance between the rater administered scale and the patient's self-. This feedback will alert the raters of possible patient misstatements, or misunderstandings report scale of the MADRS questions, which may facilitate future interview assessments.

Signed agreement to the amendment:

I agree to the terms of this protocol amendment.

PROTOCOL SYNOPSIS

A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL®) in the Treatment of Patients with Bipolar Depression

Investigator

Multicenter trial: << To be determined >>

Study center(s) and number of subjects planned

A total of approximately 740 subjects will be screened to enroll approximately 530 into the trial in order to obtain approximately 504 evaluable patients, defined as those who have a baseline visit and at least one post baseline assessment. It is expected that approximately 75 centers will participate in the trial, with each center enrolling 8 patients (minimum 4, maximum 50).

Study period		**Phase of development**
Estimated date of first subject enrolled	September, 2002	IIIb
Estimated date of last subject completed	March, 2004	

Objectives

Primary:

To evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks as assessed by comparing

(1) the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

(2) the percentage of patients with a ≥50% reduction from baseline in the MADRS total score at final assessment

(3) the change from baseline to each assessment in the MADRS total score

(4) the change from baseline to each assessment in the Hamilton Rating scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S)

(5) the Clinical Global Impression - Change (CGI-C).

Secondary:

(1) to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

(2) to evaluate the effect of quetiapine on anxiety compared to placebo by comparing

- the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score
- the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

(3) to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by comparing

- the incidence and nature of all adverse events
- the incidence and nature of drug-related adverse events
- subject withdrawal due to adverse events during double-blind treatment
- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score from baseline to end of treatment
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Exploratory

(1) to evaluate the efficacy of quetiapine on sleep quality by comparing the change in the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment

(2) to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment.

Hypotheses:

Primary:

(1) Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

(2) Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

Secondary hypotheses are defined in Section 3.1.

Study design

Study 5077US/0049 is a randomized, multicenter, double-blind, placebo-controlled, double-dummy, parallel group, fixed-dose comparison of quetiapine vs placebo in the treatment of bipolar depression. This study will be stratified 1:1 for bipolar I and bipolar II.

Target subject population

Outpatients, aged 18 to 65 years, with a diagnosis of bipolar I or bipolar II disorder with a current major depressive episode of duration less than one year but greater than 4 weeks will be enrolled in the trial. The HAM-D (17-item scale) score must be ≥20, the HAM-D item 1 (depressed mood) score must be ≥ 2, and the YMRS score must be ≤12 at both Visit 1and Visit 2 (randomization) to be eligible for entry into the trial.

Investigational product, dosage and mode of administration

Study drug will be titrated in a blinded manner to a total daily dose of 300 mg/day by Day 4 in the 300-mg/day treatment group and to a total daily dose of 600 mg/day by Day 8 in the 600-mg/day treatment group. Thereafter, oral doses of quetiapine fumarate will be administered in a blinded fashion once daily at bedtime (qhs) in a total daily dose of 300 or 600 mg/day. One-time dose reductions for intolerability of 100 mg/day in both the 300 mg/day and in the 600 mg/day treatment groups will be allowed at the discretion of the Investigator after Day 8.

Comparator, dosage and mode of administration

Placebo will be administered once daily with tablets matching in number and appearance to blinded quetiapine dosing.

Duration of treatment

Patients will receive double-blind, double-dummy treatment for up to 8 weeks (56 days), following an initial washout period of between 7 to 28 days (depending on the medications involved) and will come in to the clinic on Day 57 for final assessments.

Endpoints

- **Efficacy**

  Primary efficacy endpoint is the change from baseline to final assessment in the MADRS total score.

  Secondary efficacy endpoints are the percentage of patients with a $\geq$50% reduction from baseline in the MADRS total score at study endpoint, the change from baseline to each assessment (observed cases) in the MADRS total score, and the change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, and CGI-S and the CGI-C.; the change from baseline to each assessment (observed cases) and final assessment in the YMRS, and the HAM-A total scores.

- **Safety**

  Safety endpoints are the incidence and nature of all adverse events, the incidence of drug-related adverse events, the incidence of subject withdrawal due to adverse events, and the incidence of clinically significant changes in vital signs, weight, and body mass index during double-blind treatment. Tolerability endpoints are the change in the SAS total score from baseline to final assessment, the change in BARS total score from baseline to final

assessment, and the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

- **Quality of life**

  Exploratory quality of life endpoints are the change from baseline in the PSQI score and Q-Les-Q total score.

Statistical methods

All statistical comparisons will be 2-sided tests for the difference between active study medication and placebo. The primary analysis will be analysis of covariance (ANCOVA) for the change from baseline to final assessment for total MADRS score. The ANCOVA model will include terms for treatment, and stratum, with the baseline MADRS score as a covariate. Pair-wise comparisons of each dose with placebo will be assessed within this model as planned comparisons. In order to adjust for multiple comparisons with placebo a step-up procedure will be employed with a rule for tests of significance based on ordered p-values, maintaining an overall experiment wise type I error rate of 0.05. The proportion of patients having a $\geq$ 50% reduction from baseline to final assessment in MADRS will be compared across treatments using a logistic model. Change from baseline in MADRS scores at each assessment (observed cases), and change from baseline in HAM-D, HAM-D item 1, CGI-S, YMRS, HAM-A, Q-Les-Q and PSQI score at each assessment (observed cases) and LOCF, will be analyzed using the same ANCOVA model as for the primary endpoint. The CGI-C will be analyzed using the ANCOVA model with the baseline CGI-S as a covariate.

The change from baseline in SAS and BARS score data will be assessed using the same ANCOVA model as the primary endpoint. The incidence of EPS AEs and overall AEs will be reported using descriptive statistics. Vital signs, weight, and body mass index will be tabulated using descriptive statistics at baseline, final assessment, and for change from baseline. Descriptive statistics will also be used to describe the proportion of patients whose final Q-Les-Q is within community norm levels.

Repeated measures analysis of variance (ANOVA)will be performed to evaluate whether there are significant differences among treatments across time for MADRS, HAM-D, and HAM-A total scores.

Efficacy analyses will be conducted on a modified intention-to-treat (MITT) population. A per-protocol (PP) analysis will be conducted for the primary analysis measure (change from baseline MADRS) to evaluate sensitivity of the response. The safety population will include all subjects who took study medication.

LIST OF ABBREVIATIONS AND DEFINITION OF TERMS

The following abbreviations and specialist terms are used in this study protocol.

Table 1 Abbreviations and specialist terms

Abbreviation or specialist term	Explanation
AE	Adverse event (see definition in Section 4.4.2.1)
ALT	Alanine aminotransferase
ANCOVA	Analysis of covariance
ANOVA	Analysis of variance
AST	Aspartate aminotransferase
BARS	Barnes Akathisia Rating Scale
BP	Bipolar Disorder
BPD	Bipolar Depression
CGI	Clinical Global Impression
CGI-C	Clinical Global Impression - Change
CGI-S	Clinical Global Impression - Severity
CMH	Cochran-Mantel Haenszel
CRF	Case Report Form
CRS	Concordant Rater systems
DSM-IV	Diagnostic and Statistical Manual of Mental Disorders - Fourth Edition
EPS	Extrapyramidal symptoms
ECG	Electrocardiogram
GCP	Good Clinical Practice
HAM-A	Hamilton Rating Scale for Depression
HAM-D	Hamilton Rating Scale for Anxiety
ICH	International Conference on Harmonisation
ICI-D	Interactive Computor Interview-Depression
ICTI	Interactive Clinical Technologies, Incorporated
IEC	Independent Ethics Committee

Abbreviation or specialist term	Explanation
IRB	Institutional Review Board
IVRS	Interactive Voice Response System
LOCF	Last Observation Carried Forward
MADRS	Montgomery-Asberg Depression Rating Scale
MITT	Modified Intent to Treat
OAE	Other significant adverse event (ie, an adverse event of special interest in this clinical development; see definition in Section 4.4.2.1). The classification of OAEs will be performed by AstraZeneca drug safety physicians after the study is complete.
PSQI	Pittsburgh Sleep Quality Index
Principal investigator	The investigator who leads the study conduct at an individual study center. Every study center has a principal investigator.
Qhs	at bedtime
Q-Les-Q	Quality of Life Enjoyment Satisfaction Questionnaire
SAE	Serious adverse event (see definition in Section 4.4.2.1).
SAS	Simpson Angus Scale
SSRI	Selective serotonin reuptake inhibitors
UNI	Universal Systems Incorporated
YMRS	Young Mania Rating Scale

1 INTRODUCTION

1.1 Background

Quetiapine fumarate (SEROQUEL®, quetiapine) is a dibenzothiazepine derivative approved by the United States Food and Drug Administration (FDA) on 26 September 1997 following clinical development by AstraZeneca Pharmaceuticals LP (also referred to as the sponsor) for the treatment of subjects with schizophrenia. Quetiapine fumarate is designated chemically as bis [2-(2-[4-(dibenzo[b,f][1,4]thiazepin-11-yl) piperazin-1-yl]ethoxy)ethanol] fumarate

Quetiapine has been studied in a toxicological and clinical program directed at supporting clinical evaluation in man. The results of these studies are presented in the Investigator's Brochure dated January 2002. The Professional Information Brochure (PIB) contains the current prescribing information for quetiapine.

1.2 Rationale for this study

The bipolar disorders are psychiatric disorders in which a disturbance in mood is the predominant feature. Bipolar I disorder is characterized by one or more manic or mixed episodes, usually accompanied by major depressive episodes. Bipolar II disorder is characterized by one or more major depressive episodes accompanied by at least one hypomanic episode. Bipolar depression refers to the major depressive episodes that occur with bipolar I and II disorder.

The prevalence of bipolar disorder is estimated to be 1 to 3.5%, evenly divided between men and women. The length of time between onset and symptoms and proper diagnosis and treatment is approximately 10 years and it is estimated that only 60% of those suffering from a bipolar disorder are receiving appropriate pharmacotherapy.

Although there is extensive and emerging literature guiding the treatment of the manic phase of bipolar I disorder as well as many approved compounds for the treatment of unipolar depression, the treatment of bipolar depression has not been widely studied and treatment guidelines are in their infancy. The use of currently available antidepressants for monotherapy for bipolar depression is often problematic as they may increase the "switch" into hypomania or mania from depression, or increase cycle acceleration. The adjunctive use of mood stabilizing medications such as lithium carbonate (LiCO3) is common and may decrease the likelihood of these complications.

Evidence indicates that medications with mood stabilizing properties which produced low levels of mania, hypomania, or cycle acceleration may be useful as monotherapy in the treatment of bipolar depression. The antiepileptic lamotrigine produced improvement in HAM-

D and MADRS scores in a 7-week, double-blind, placebo controlled trial for the patients who completed this study (Calabrese 1999). More recently, the anti-manic agent divalproex demonstrated numerical improvement over placebo in the percentage of patients with bipolar depression having a 50% reduction in the HAM-D scores without mania in an 8 week trial (Sachs, 2001) but this difference was not statistically significant. Lithium carbonate, also approved for the treatment of mania, has been demonstrated to be effective as a monotherapeutic agent in approximately 50% of patients with bipolar depression (Bauer). However, there are efficacy and tolerability limitations which mkay prohibit widespread use of the above therapies.

A large multicentered, double-blind, placebo controlled trial was recently completed, which demonstrated efficacy of the atypical antipsychotic olanzapine as monotherapy for the treatment of bipolar depression (Tohen, 2002). The endpoint mean MADRS change was significantly greater for patients on olanzapine (-15.0 points) than for those on placebo (-11.9 points). Treatment-emergent mania did not differ significantly between groups. There also is evidence from small uncontrolled studies that other atypical antipsychotics such as risperidone, and clozapine have mild to moderate antidepressant activity when used in patients with mood disorders. These small studies also indicate that these compounds are unlikely to cause patients to “switch” into mania.

The potential efficacy of quetiapine in depressive symptoms is provided in data from the Quetiapine Experience with Safety and Tolerability Trial (QUEST) and from investigator-initiated trials in mood disorder patients. In an open-label trial evaluating the safety and tolerability of quetiapine over 700 subjects with schizophrenia and other psychotic disorders were randomized to treatment with quetiapine or risperidone. Quetiapine-treated patients experienced a greater improvement in depressive symptoms compared with risperidone-treated patients, with a mean difference of 1.3 points on the HAM-D after adjustment for baseline differences (P=0.028) (Mullen et al, 2001).

A trial of quetiapine in 20 neuroleptic-dependent patients with bipolar or schizoaffective disorder also suggested positive effects on the depressive and psychotic symptoms in these disorders (Sajatovic et al, 2001). Overall, in 10 patients with bipolar disorder and 10 with schizoaffective disorder who received open-label quetiapine to optimum clinical dosage (25 to 800-mg), significant improvement in Brief Psychiatric Rating Scale (BPRS), Young Mania Rating Scale (YMRS), and HAM-D scores was noted.

In summary, the paucity of satisfactory treatments available signify an unmet medical need for the treatment of bipolar depression. There are signals of efficacy from clinical trials for the antidepressant properties of atypical antipsychotics such as quetiapine.

2 STUDY OBJECTIVES

2.1 Primary objective

The primary objectives of the study are to evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks by comparing

(1) the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

(2) the percentage of patients with a ≥50% reduction from baseline in the MADRS total score at final assessment

(3) the change from baseline to each assessment in the MADRS total score

(4) the change from baseline to each assessment in the total Hamilton Rating Scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S), and the Clinical Global Impression - Change (CGI-C).

2.2 Secondary objective

The secondary objectives of the study are:

(1) to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

(2) to evaluate the effect of quetiapine on anxiety compared to placebo by

- the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score
- the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

(3) to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by

- the incidence and nature of overall adverse events
- the incidence and nature of drug-related adverse events
- subject withdrawal due to adverse events during double-blind treatment

- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Experimental:

1. to evaluate the efficacy of quetiapine on sleep quality by comparing the change in sleep quality using the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment
2. to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment

3 HYPOTHESES, STUDY PLAN AND PROCEDURES

3.1 Hypotheses

Primary:

(1) Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

(2) Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

(1) Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

(2) Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

(3) Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

(4) Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

(5) Quetiapine at a dose of 300 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

(6) Quetiapine at a dose of 600 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

(7) Quetiapine at a dose of 300-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

(8) Quetiapine at a dose of 600-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

(9) Quetiapine at a dose of 300 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

(10) Quetiapine at a dose of 600 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

(11) Quetiapine at a dose of 300 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

(12) Quetiapine at a dose of 600 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

(13) Quetiapine at a dose of 300 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

(14) Quetiapine at a dose of 600 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

3.2 Overall study design and flow chart

This multicenter, double-blind, randomized, placebo-controlled, double-dummy, parallel group trial will consist of a washout period (from 7 to 28 days depending on the medications involved) followed by 8 weeks of treatment to evaluate the efficacy, safety, and tolerability of quetiapine fumarate in the treatment of a major depressive episode in adult subjects with bipolar disorder. A total of approximately 740 subjects will be screened to obtain 530 enrolled subjects to yield 504 evaluable subjects at approximately 75 centers, with a target enrollment of

8 patients per center (minimum 4 maximum 30). Subjects are required to have a HAM-D (17-item scale) score of $\geq$ 20 and a YMRS of $\leq$12 at screening baseline (Visit 1).

The trial comprises the following 2 periods:

- Washout period
  Subjects will undergo HAM-D, SCID, YMRS, and safety evaluations at screen (Visit 1) and if they qualify to participate they will commence a washout of antidepressant, antipsychotic, and mood stabilizer medications. The number of days for washout will depend on the medication they are taking. These medications must be discontinued for a period of at least 7 days prior to randomization (Day 1, Visit 2), with the exception of fluoxetine which must be discontinued for a period of 14 days prior to randomization (Day 1, Visit 2) and depot injections of haloperidol decanoate or fluphenazine decanoate which need 28 days washout before randomization.

- 8-week double-blind randomized treatment period (Weeks 1 to 8)
  Eligible subjects will be randomized on Day 1 (Visit 2) to 1 of 3 treatment groups: quetiapine 300 mg/day, quetiapine 600 mg/day, or placebo. The randomization will be done using a stratification based on diagnosis. Treatment will be administered once daily at bedtime for 8 weeks (Days 1 - 56). Subjects will not receive medication on Day 57 which is only for final assessments. Doses will be titrated to achieve target doses of 300 mg/day within 4 days or 600 mg/day within 8 days. A dose reduction of 100 mg is allowed to improve patient tolerance in each treatment group. MADRS assessments (used to evaluate the primary efficacy variable) will be performed at Days 1, 8, 15, 22, 29, 36, 43, 50, and 57.

[a] One time dose reductions of 100 mg/day in 300-mg and 600-mg may occur after Day 8

[b] Washout all psychoactive medications, including antidepressants, antipsychotics, and mood stabilizers for 7 to 28 days depending on the medication involved (eg. haloperidol decanoate or fluphenazine decanoate for 28 days), prior to randomization. Patients on fluoxitine must discontinue for 14 days.

[a] Washout of antidepressants, antipsychotics, mood stabilizer for 7 to 28daysdepending on the medications involved and a 14-day washout for fluoxetine.

[b] Repeat laboratory tests and ECG only if results outside of normal range and clinically significant at Screening

[c] Height and weight on screen and weight on Day 57

[d] Physical exam includes ophthalmoscopic exam on screen

[e] Blood pressure will be obtained in supine and standing positions

3.3 Rationale for study design, doses and control groups

This trial is designed as a double-blind placebo-controlled evaluation of Seroquel as monotherapy in bipolar depression. There is no currently approved compound for use in bipolar depression, nor is there a clinically accepted "gold standard". Conventional antidepressants have fallen out of favor because of their ability to induce manic symptoms. Antidepressants approved forthe treatment of unipolar depression have not been demonstrated to improve mood symptoms relative to placebo (Nemeroff et al Am J Psychiatry 158:6 June 2001). Moreover, there is a high placebo response rates of approximately 30% found in bipolar depression trials. Thus, the use of a placebo treatment arm for comparison is clinically justified.

Trial treatment will be administered as quetiapine monotherapy in order to more clearly identify a treatment effect of quetiapine on bipolar depression. Quetiapine fumarate will be administered once daily at bedtime. The current label specifies twice daily (BID) but a double-blind crossover study in bipolar patients indicated that once daily (qd) is well tolerated and as effective as BID dosing (Chengappa, 2002).

A period of 7 to 28 days is adequate for washout of most psychoactive medications including antidepressants, antipsychotics (including depot agents), and mood stabilizers to ensure that subjects are stable and continue to have adequate depressive symptoms requiring treatment, prior to randomization into the trial. The double-blind treatment period of 8 weeks is consistent with the time period that is required to see a clinically meaningful response in depressive symptoms.

The trial is designed as a fixed-dose evaluation due to the failure of flexible dose regimens in other psychiatric disorders. The dosages are based on clinical trial data with quetiapine in patients with a mood disorder. In the QUEST trial, the average dose of quetiapine in patients with a primary mood disorder (N=316) was approximately 250 mg/day at 16 weeks. In 20 patients with bipolar or schizoaffective disorder treated with open-label quetiapine, the mean dose was approximately200 mg/day (Sajatovic). Based on this data, 300 mg/day administered as monotherapy is an appropriate low-dose treatment arm, and 600 mg/day is an appropriate high-dose treatment arm that should exhibit efficacy without a high rate of AEs or noncompliance.

The MADRS is a standardized, well-validated measure of depressive symptoms that is sensitive to treatment effects in depressed outpatients.

3.4 Selection of study population

3.4.1 Study selection record

Investigators must keep a record of subjects who underwent screening but were not randomized into the trial.

3.4.2 Inclusion criteria

At screen (Visit 1) subjects must fulfill all of the following criteria:

(1) Documented ability to provide informed consent before beginning any study-specific procedures.

(2) Male and female patients between 18 and 65 years of age, inclusive

(3) Females of childbearing potential, be using a reliable method of contraception. Reliable methods include hormonal contraceptives (eg, oral contraceptive or long-term injectable or implantable hormonal contraceptive), double-barrier methods (eg, condom and diaphragm, condom and foam, condom and sponge), intrauterine devices, and tubal ligation

(4) Women must have a negative pregnancy test

(5) Meets DSM-IV criteria for bipolar disorder I or bipolar II, most recent episode depressed (296.5x and 296.89x), confirmed by the amended version(by Dr. Michael First) of the Structured Clinical Interview for DSM-IV (SCID) as administered by an AstraZeneca approved clinician with a signed confirmation by the Principal Investigator

(6) Outpatient status

(7) HAM-D (17-item) total score of 20 or greater

(8) HAM-D item 1 (depressed mood) score $\geq$2

(9) YMRS total $\leq$12

At randomization (Visit 2) subjects must fulfill the following criteria:

(1) HAM-D (17-item) total score of 20 or greater

(2) HAM-D item 1 (depressed mood) score $\geq$2

(3) YMRS total $\leq$12

3.4.3 Exclusion criteria

Any of the following is regarded as a criterion for exclusion from the study:

(1) Patients with a current Axis I disorder other than bipolar disorder within 6 months of screening

(2) Patients whose current episode of depression exceeds 12 months or is less than 4 weeks

(3) History of non-response to an adequate trial (6 weeks) of more than 2 classes of antidepressants during their current episode

(4) Patients who meet DSM-IV criteria for substance dependence, for any substance except nicotine, within 12 months of screening

(5) Patients with a positive urine toxicology screen for illicit substances of abuse

(6) Patients who are unable to discontinue all psychoactive medications (excluding prn benzodiazepines), including antidepressants, antipsychotics, and mood stabilizer, at least 7 days prior to randomization and consistent with the pharmacokinetics of the drug

- Patients treated with fluoxetine who have not discontinued this medication for at least 14 days prior to randomization.
- Patients treated with haloperiodol decanoate or fluphenazine decanoate who have not discontinued these medications 28 days prior to randomization.

(7) Patient who have not discontinued the use of potent P450 inhibitors and inducers (See Section 4.3, Table 13)

(8) Patients who in the investigators opinion will require initiation of psychotherapy during the study period. Note: ongoing psychotherapy for a minimum of 3 months may continue.

(9) Patients who, in the investigator's judgment, pose a current serious suicidal or homicidal risk at Visit 1 (HAM-D item 3 score of 3 or greater), or have made a suicide attempt within the past 6 months

(10) Patients with a history of clinically significant cardiac, renal, neurologic, cerebrovascular, metabolic, or pulmonary disease, or other disease or clinical finding that is unstable or that, in the opinion of the investigator, would be negatively affected by trial medication or that would affect trial medication

(11) Patients who have had a myocardial infarction within 1 year before Visit 1

(12) Patients with clinically significant abnormal laboratory findings at Visit 1

(13) Patients with renal impairment (serum creatinine ≥1.5 mg/dL) or hepatic impairment (ALT or AST 3 times the upper limit of normal)

(14) Patients whose TSH is ≥10% over the upper normal limit. Patients maintained on thyroid medication must be euthyroid for a period of at least 3 months before Visit 1

(15) Patients with clinically significant abnormalities on ECG

(16) Women who have a positive human chorionic gonadotropin (HCG) pregnancy test at Visit 1 or who are lactating or planning to become pregnant during the course of the study

(17) Patients who have participated in a clinical trial of an investigational drug within the past 3 months

(18) Patients who, in the opinion of the investigator, would be non-compliant with the visit schedule or study procedures

(19) History of orthostatic hypotension or conditions that would predispose them to hypotension (eg dehydration, hypovolemia)

(20) Known history of intolerance, hypersensitivity, or lack of response to quetiapine or any of the components of Seroquel tablets, as judged by the investigator

3.4.4 Restrictions

Subjects will be required to adhere to the following special restrictions:

1) Use of any psychoactive drugs including antidepressants, hypnotics (with the exceptions noted in Section 4.3), mood stabilizing drugs, and antipsychotics is not permitted from a period of 5 elimination half-lives (28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

2) Use of cytochrome P450 3A4 inducers and potent inhibitors are not permitted from 14 days prior to randomization to end of study (see Table 13)

3.4.4.1 Criteria for discontinuation

Subjects may be discontinued from study treatment and assessments at any time, at the discretion of the investigator(s). Specific reasons for discontinuing a subject from this study are:

1. Withdrawal of informed consent

2. Worsening psychiatric symptoms such that the symptoms constitute a danger to themselves or to others

3. Use of psychotropic medications at any time during the double-blind treatment period.

4. Pregnancy at any time during the double-blind treatment period.

5. Clinically significant or serious adverse event that would not be consistent with continuation in the study, as determined by the investigator, AstraZeneca, or the subject.

3.4.4.2 Voluntary discontinuation by a subject

Subjects are free to discontinue their participation in the study at any time, without prejudice to further treatment. Subjects who discontinue from the study should always be asked about the reason(s) for their discontinuation and about the presence of any adverse events. They should be seen and assessed by an investigator(s) (see Section 3.4.4.4). Adverse events should be followed up and any diary cards, questionnaires (eg, for Quality of Life assessments) and investigational products should be returned by the subject.

3.4.4.3 Incorrectly enrolled or randomized subjects

Incorrectly enrolled subjects will be discontinued from further study treatment and assessments. If a subject is given the incorrect randomized treatment, the subject should be continued on the treatment dispensed and Interactive Clinical Technologies, Inc. (ICTI), the vendor providing the randomization patient assignment) should be notified of the error. The next patient randomized at the site will be assigned an appropriate kit number by ICTI, accounting for the error.

3.4.4.4 Procedures for discontinuation

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- Physical examination
- Vital signs and weight
- 12-lead ECG
- HAM-D
- MADRS

- ICI-D
- YMRS
- HAM-A
- SAS
- BARS
- PSQI
- Adverse events assessment

3.5 Treatments

3.5.1 Investigational products

3.5.1.1 Identity of investigational product and comparators

Investigational product will consist of 25-mg , 100-mg, and 200-mg tablets of quetiapine fumarate and matching placebo tablets as shown in Table 3.

Table 3 Trial medication

Tablet strength	Formulation number	Tablet color
25-mg quetiapine	F12804	peach
25- mg placebo	F12636	peach
100-mg quetiapine	F12689	yellow
100-mg placebo	F12637	yellow
200-mg quetiapine	F12690	white
200-mg placebo	F12638	white

3.5.1.2 Doses and treatment regimens

Quetiapine and placebo for each trial center will be packaged in blister cards. The 8-week supply will consist of 8 double-blind blister cards. The 8 double-blind blister cards will be packaged in subject-specific cartons.

Trial medication will be provided for each subject in an 8-card carton that contains the following:

- 1-week titration double-blind treatment cards for Days 1-7

- seven 1-week double-blind treatment cards for Days 8-56, with individual cards provided for treatment Days 8-14, 15-21, 22-28, 29-35, 36-42, 43-49, and 50-56.
  Each one-week blister card will include a 2-day treatment overage to accommodate visit schedules.

The Week 1 titration card will consist of 25 mg tablets, 100-mg tablets, and 200-mg tablets or matching placebo, as described below, for each of the 300 mg/day and 600 mg/day treatment groups and placebo treatment group.

Blister cards for Weeks 2 through 8, for each treatment group, will consist of 9 days of dosing with the same number of pills for each group (300-mg,600-mg, and placebo) respectively. The cards for each treatment group will consist of 2 yellow tablets and 2 white tablets per day at bedtime.

Quetiapine or placebo will be administered once a day at bedtime with dose titration to reach a target dose of 300 mg/day by Day 4 in the 300 mg/day treatment group and 600 mg/day by Day 8 in the 600 mg/day group. The schedule for quetiapine or placebo administration is shown in Tables 4, 5, and 6.

Table 4 Dose administration schedule for 300-mg double-blind quetiapine

Trial Day	Quetiapine 300 mg/day and placebo				
	Quetiapine 25 mg	**Quetiapine 100 mg**	**Placebo 100 mg**	**Quetiapine 200 mg**	**Placebo 200 mg**

Day 8	0	2 tablets/100-mg	0	2 tablets/400-mg	0
Days 9-56	0	2 tablets/100-mg	0	2 tablets/400-mg	0

Table 6 Dose administration schedule for double-blind placebo

Trial Day			
	Placebo 25mg	**Placebo 100 mg**	**Placebo 200 mg**
Day 1	2 tablets/50-mg	0	0
Day 2	0	1 tablet/100-mg	0
Day 3	0	0	1 tablet/200-mg
Day 4	0	1 tablet/100-mg	1 tablet/200-mg
Day 5	0	2 tablets/100-mg	1 tablet/200-mg
Day 6	0	2 tablets/100-mg	1 tablet/200-mg
Day 7	0	2 tablets/100-mg	1 tablet/200-mg
Day 8	0	2 tablets/100-mg	2 tablets/400-mg
Days 9-56	0	2 tablets/100-mg	2 tablets/400-mg

Dosing Reduction

Dose reductions for intolerability will be allowed after Day 8. In the 300-mg/day group, dose reductions of 100 mg/day will be achieved by reducing the dose by one 100-mg tablets. In the 600-mg/day group, a dose reduction of 100 mg/day will be achieved by reducing the bedtime dose by one 100-mg tablets active drug. This dose reduction can occur anytime after Day 8. Each column in the blister packs will be numbered 1-4. By Day 6 columns 1 and 2 of the blister packs will each contain a 100-mg tablet. In both the 300-mg /day group and the 600-mg/day group, column 1 will contain active medication thus ensuring that by eliminating the first column (column #1) of medication they are reducing their dose by 100-mg. Each tablet in the placebo treatment group will also indicate the same corresponding numbers (columns #1-4) as the active treatment groups even though no active product is packaged. This will ensure the blind is maintained.

Table 7 Week 1 Blister pack for 300-mg/Day Quetiapine Group

Day	Column 1	Column 2	Column 3	Column 4
1	25-mg quetiapine	25-mg quetiapine

3.5.1.3 Labeling

All trial supplies will be provided by AstraZeneca.

The blister cards Days 1- 56 will be supplied in subject-specific cartons. Each blister card will be labeled with a two-panel, double-blind label. The left portion of the label will remain on the blister card. The right portion of the label will be affixed to the appropriate Case Report Form (CRF) as part of the individual's permanent record. The label will contain at least the following information: trial number, code assignment and storage condition. The carton for the 8 blister cards for Days 1-56 will be labeled with a single-panel double-blind label. The label will contain at least the following information: trial number, storage conditions, and instructions to dispense according to protocol.

3.5.1.4 Storage

All investigational products must be kept in a secure and locked location, at room temperature and protected from light and moisture.

3.5.1.5 Accountability

The investigational materials are to be prescribed only by the investigator or the sub-investigators named in Form FDA-1572. Under no circumstances will the investigator allow the investigational drug to be used other than as directed by the protocol without prior AstraZeneca approval.

The investigator must maintain accurate records accounting for the receipt of the investigational materials (ICTI provides a acknowledge the receipt of drug shipment module for this purpose) and for the disposition of the material. This record keeping consists of a dispensing record that includes the identification of the person to who the drug is dispensed, the quantity and the date of dispensing, and documentation of any unused drug returned to the investigator. This record is in addition to any drug accountability information recorded on the subject's hospital or clinic chart.

Starting with Week 1, each patient will return the blister card for the preceding week to the clinic. The clinic will tabulate the returned pills to aid in drug accountability.

At the termination of the study or at the request of the sponsor, the Clinical Research Associate must return any unused study supplies to Universal Systems Incorporated (USI), at the address listed below, for destruction. This return will be documented on an Investigational Product Return Invoice supplied by AstraZeneca.

USI
2084-900 Lake Industrial Court
Conyers, GA 30013

3.5.2 Method of assigning subjects to treatment groups

This trial will be established with a non-specific labeling (NCSL) randomization which will be stratified by bipolar type. Randomization to trial treatment will be done via an Interactive Voice Response System (IVRS) at ICTI on Day 1 (Visit 2) in balanced blocks within each stratum in order to ensure relative balance among treatment groups and strata (Bipolar I and Bipolar II)in terms of total number of subjects. The randomization schedule will be created under the auspices of AstraZeneca Quantitative Decision Sciences Group and will provide allocation of subject numbers to the treatment regiments. Number and size of tablets will be identical for the 3 treatment arms. Clinical supplies will contain a 4-digit subject number which is allocated to the treatment arm through the randomization scheme. A separate randomization will be used to provide kits of packaged drugs to the sites. The IVRS system at ICTI will allocate a kit number at the site for the treatment assigned through the stratified randomization.

Subject eligibility will be established before treatment randomization. Subjects will be randomized centrally sequentially within the stratum, as subjects are eligible for enrollment/randomization. If

a subject discontinues from the study, the subject number will not be reused, and the subject will not be allowed to re-enter the study.

The randomization is centralized and the assigned randomized patient number and associated kit numbers will not be sequential within a site.

3.5.3 Blinding and procedures for unblinding the study

3.5.3.1 Methods for ensuring blinding

All packaging will be identical with placebo and active tablets identical in size and color. The number of tablets dispensed on each card will be identical across all treatment arms.

The randomization for the kit assignments will be generated by the study statistician and provided directly to packaging with a copy going to ICTI Clinical Supplies Management Group. The stratified patient randomization will be generated by an AstraZeneca randomization staff member not associated with the trial and will be provided directly to ICTI for incorporation into the IVRS system. No member of the study team in AstraZeneca, at investigational sites or the CRO organization handing data will have access to the randomization scheme during the conduct of the study.

3.5.3.2 Methods for unblinding the study

Individual treatment codes, indicating the treatment randomization for each randomized subject, will be available to the investigator(s) or pharmacists at the study center through the use of a concealed panel on the label.

The treatment code must not be broken except in medical emergencies when the appropriate management of the subject necessitates knowledge of the treatment randomization. The investigator(s) must document and report to AstraZeneca any breaking of the treatment code. AstraZeneca retains the right to break the code in order to report serious adverse events to regulatory authorities.

Treatment codes will not be broken for the planned analyses of data until all decisions on the evaluability of the data from each individual subject have been made and documented.

3.5.4 Treatment compliance

Compliance will be assessed based on returned tablet counts. The percent compliance will be calculated as the number of tablets taken (dispensed - returned) divided by the prescribed number of tablets (number of days times number of tablets per day) expressed as a percent. Based on this

calculation a subject with at least 75% compliance with study medication during study participation will be classified as compliant.

Furthermore, if there are any significant irregularities in compliance, in the opinion of the investigator, the patient should be withdrawn from the study.

4 CONCURRENT TREATMENT

4.1 General medications

Nonpsychotropic medication, including over-the counter medications, taken by the subject before entry into the trial may be continued during the trial. Medications required to treat illnesses or complaints that occur during the trial may be used at the discretion of the investigator. Use of cytochrome P450 inducers and potent inhibitors is restricted (see Table 13 below).

Women who enter the trial with an intrauterine device in place, using oral contraceptives, or using injectable or implantable hormonal agents designed to prevent pregnancy may continue these treatments throughout the trial.

The specific type of medication (trade or generic name), the indication for use, and the dates of usage should be reported on the CRF entitled Concurrent Treatment.

Medication which is considered necessary for the subject's safety and well being may be given at the discretion of the investigator(s). The administration of all medication (including investigational products) must be recorded in the appropriate sections of the case report form (CRF).

4.2 Use of psychoactive medications

The use of psychoactive drugs other than those specifically allowed during the trial (ie, lorazepam and zolpidem tartrate) is restricted (see Section 4.3, Table 13).

4.3 Summary of permitted concurrent medications

Medications specifically prohibited or restricted, and those permitted during the trial are listed in Table 13

Table 13 Permitted, restricted, and prohibited medications

Use category	Type of medication
Permitted	Previous medications for medical, nonpsychiatric illnesses Oral contraceptives and contraceptive devices
Restricted	Zolpidem tartrate 5-10 mg at bedtime for insomnia Lorazepam 1-3 mg per day for severe anxiety These drugs may be prescribed during the first 3 weeks of the study as long as they do not interfere with any assessments
Prohibited	Potent cytochrome P450 3A4 inducers (including but not limited to barbiturates, carbamazepine, rifampin, and St John's Wort) Potent cytochrome P450 3A4 inhibitors (including but not limited to ketoconazole, itraconazoole, fluconazole, erythromycin, clarithromycin, troleandomycin, indinavir, nelfinavir, ritonavir, and saquinavir) Antipsychotic medications (including but not limited to phenothiazines, risperidone, olanzapine, ziprasidone, clozapine, loxapine, thiothixene, molindone) Use of any psychoactive drugs including antidepressants, hypnotics, mood stabilizing drugs, and antipsychotics from a period of 7 to 28 days depending on the medications involved (eg. 28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

5 STUDY MEASUREMENTS AND ENDPOINTS

5.1 Primary endpoint

The primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score. This endpoint is used as the basis for the sample size calculation, as provided in Section 6.1.

5.2 Screening and demographic measurements

The following data are to be collected at screening:

- date of birth, sex, and race
- vital signs, height, weight
- supine and standing blood pressure and pulse
- significant medical history
- physical examination including ophthalmoscopic exam
- 12-lead electrocardiogram
- clinical chemistry and hematology
- pregnancy test (if female of childbearing potential)
- HAM-D assessment
- YMRS
- DSM-IV diagnosis, based on SCID assessment

5.3 Efficacy measurements and endpoints

The following assessments will be used to evaluate efficacy:

- change from baseline to final assessment in MADRS total score
- percentage of subjects with $\geq$50% reduction from baseline in MADRS total score at final assessment
- the change from baseline in each assessment (observed cases) in the MADRS total score

- the change from baseline to each assessment (observed cases) and final assessment in the CGI-S
- the CGI-C at final assessment
- the change from baseline to each assessment (observed cases) and final assessment in the YMRS
- the change from baseline to each assessment (observed cases) and final assessment in the total HAM-A

Evaluation using each of these scales should be performed by the same trained/certified staff member who has been approved by AstraZeneca for all assessments of the scale for an individual subject.

5.3.1 Summary of efficacy objectives and endpoints

Table 17 shows how the efficacy endpoints of this study relate to the study objectives.

Table 14 Efficacy objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Primary	Primary measure		
evaluate the efficacy of quetiapine compared to placebo in the treatment of a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks	change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score; ls means, 95% CI at final assessment ; descriptive statistics by statum	ANCOVA for the change from baseline to final assessment for total MADRS score. Pair-wise comparisons of each dose with placebo using step up procedure	Reductions in MADRS compared with placebo will indicate doses which are effective in treating depressive episode
	Secondary measure		
	percentage of subjects meeting the MADRS responder criteria ; n, percentage responders at each assessment, final assessment ; descriptive statistics by statum	Logistic model	Higher response rates will indicate doses which are effective in treating depressive episode in treating depressive episode
	change from baseline to each assessment for the MADRS total score, and	ANCOVA for the change from baseline to each assessment	Reductions in scales compared with placebo will indicate doses

	each assessment and final assessment Clinical Global Impression - Severity (CGI-S); ls means, 95% CI; descriptive statistics by stratum	and final assessment (LOCF) for CGI-S. Pair-wise comparisons of each dose with placebo	which are effective in treating depressive episode
	Clinical Global Impression - Change (CGI-C); ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the CGI-C for each assessment and final assessment (LOCF). Pair-wise comparisons of each dose with placebo	Greater improvements in CGI-C will indicate doses which are effective compared with placebo
Secondary			
evaluate the efficacy of quetiapine compared to placebo in the incidence of treatment -emergent mania	change from baseline to each assessment and final assessment in the YMRS total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for YMRS total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	No significant increase in the YMRS compared to placebo will indicate doses which do not result in treatment-emergent mania
evaluate the effect of quetiapine compared to placebo on symptoms of anxiety	change from baseline to each assessment and final assessment in the HAM-A total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for HAM-A total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Improvement in the HAM-A compared to placebo will indicate efficacy in treating anxiety component of the depressive episode

The methods for collecting efficacy data are presented below.

5.3.2 Montgomery-Asberg Depression Rating Scale (MADRS)

5.3.2.1 Methods of assessment

The MADRS will be performed at each visit during the trials using the validated MADRS instrument by certified staff at each site.

5.3.2.2 Calculation or derivation of endpoint

The change from baseline to final LOCF will be calculated for total MADRS score. A subject will be classified as a responder if the % change from baseline, calculated as the (change from baseline divided by the baseline) multiplied by 100 indicates a ≥ 50% reduction in baseline total MADRS score.

5.3.3 Hamilton Rating Scale for Depression (HAM-D)

5.3.3.1 Methods of assessment

The HAM-D will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-D and HAM-D item #1.

5.3.4 Clinical Global Impression - Severity (CGI-S)

5.3.4.1 Methods of assessment

The CGI-S will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.4.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in CGI-S.

5.3.5 Clinical Global Impression - Change (CGI-C)

5.3.5.1 Methods of assessment

The CGI-C will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.5.2 Calculation or derivation of endpoint

The CGI-C is a measure of change from baseline and therefore requires no further derivation.

5.3.6 Hamilton Rating Scale for Anxiety (HAM-A)

5.3.6.1 Methods of assessment

The HAM-A will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.6.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-A.

5.3.7 Young Mania Rating Scale (YMRS)

5.3.7.1 Methods of assessment

The YMRS will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.7.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in YMRS.

5.4 Safety measurements and endpoints

The following measurements will be used to assess safety:

- adverse event reporting (both general adverse events and serious adverse events), coded using MedDRA system of nomenclature
- fasting clinical laboratory tests (including chemistry and hematology)
- vital signs(taken in both the standing and supine positions)
- ECG tests
- Simpson-Angus Scale
- Barnes-Akathesia Rating Scale

5.4.1 Summary of safety objectives and endpoints

Table 13 shows how the safety endpoints of this study relate to the study objectives.

Table 15 Safety objectives and endpoints relating to each objective

Objective	Endpoints and statistic	Planned analysis	Significance of results
evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression	incidence and nature of adverse events during double-blind treatment ; n, % incidence per event, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	no new safety issues identified
	incidence of drug-related adverse events during double-blind treatment ; n, % incidence; titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of subject withdrawal due to adverse events; n, % withdrawn, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of clinically significant changes in vital signs; n, % at each assessment and final visit	descriptive statistics only	
	change in the SAS total score ; mean change, standard deviation, baseline to final assessment (LOCF)	descriptive statistics only	
	the change in BARS total score	descriptive statistics only	
	incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment	descriptive statistics only	

The methods for collecting safety data are described below.

5.4.2 Adverse Events

5.4.2.1 Definitions

The definitions of adverse events (AEs), serious adverse events (SAEs) and other significant adverse events (OAEs) are given below. It is of the utmost importance that all staff involved in the study is familiar with the content of this section. The principal investigator is responsible for ensuring this.

(a) Adverse Event

An adverse event is the development of an undesirable medical condition or the deterioration of a pre-existing medical condition following or during exposure to a pharmaceutical product, whether or not considered causally related to the product. An undesirable medical condition can be symptoms (eg, nausea, chest pain), signs (eg, tachycardia, enlarged liver) or the abnormal results of an investigation (eg, laboratory findings, electrocardiogram). In clinical studies, an AE can include an undesirable medical condition occurring at any time, including run-in or washout periods, even if no study treatment has been administered.

(b) Serious Adverse Event

A serious adverse event is an AE occurring during any study phase (ie, run-in, treatment, washout, follow-up), and at any dose of the investigational product, comparator or placebo, that fulfills one or more of the following criteria:

- results in death
- is immediately life-threatening
- requires in-patient hospitalization or prolongation of existing hospitalization
- results in persistent or significant disability or incapacity
- is a congenital abnormality or birth defect
- is an important medical event that may jeopardize the subject or may require medical intervention to prevent one of the outcomes listed above?

The causality of SAEs (ie, their relationship to study treatment) will be assessed by the investigator(s), who in completing the relevant case report form must answer “yes” or “no” to the question “Do you consider that there is a reasonable possibility that the event may have been caused by the drug?” For further guidance on the definition of a SAE and a guide to the interpretation of the causality question, see Appendix F.

(c) Other significant adverse event

An AstraZeneca expert will identify OAEs during the evaluation of safety data for the Clinical Study Report. Significant adverse events of particular clinical importance, other than SAEs and those AEs leading to discontinuation of the subject from study treatment, will be classified as OAEs. Examples of these are marked hematological and other laboratory abnormalities, and certain events that lead to intervention (other than those already classified as serious), dose reduction or significant additional treatment. For each OAE, a narrative will be written and included in the Clinical Study Report.

5.4.2.2 Recording of adverse events

All AEs and SAEs that occur before and during treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor. Following cessation of treatment, SAEs, whether or not related to the study drug, must be collected for 7 days and recorded on the CRF provided by the sponsor. If any SAEs are recorded during the 7 day follow-up period, all concomitant medications taken during the 7 day follow-up period should also be recorded on the CRF. A description of the event, its intensity, duration, action taken (eg, treatment and follow-up tests), and outcome should be given, along with the investigator's causality assessment of the relationship of the event to the study drug. If a diagnosis of the subject's condition has been made, then the diagnosis should be recorded as the SAE. In instances of well recognized syndromes (eg, fever, runny nose, cough) they can be recorded as "flu". However, if a diagnosis of the subject's condition has not been made, or if the individual symptoms are not well recognized, then the individual symptoms should be recorded separately.

In general, abnormal laboratory tests or vital signs should not be reported as AEs unless they fulfill the criteria for an SAE or lead to discontinuation. If an abnormal laboratory test result or vital sign is associated with clinical signs and symptoms, the sign or symptom should be reported as an AE, and the associated test result or vital sign should be recorded on the appropriate CRF.

A causality assessment must be recorded for all AEs. The CRF asks the question, "In your medical judgement, is there a reasonable possibility that the event may have been caused by the study therapy?" If there is any valid reason, even if undetermined or untested, for suspecting a possible cause-and-effect relationship between the study drug and the occurrence of the AE, then this should be answered "yes." Otherwise, if no valid reason exists for suggesting a possible relationship, then this should be answered "no." If more than 1 AE is identified, a causality assessment must be made for each AE.

It is important to distinguish between serious and severe AEs. Severity is a measure of intensity whereas seriousness is defined by the criteria in Section 5.4.2.1 b. An AE of severe intensity need

not necessarily be considered serious. For example, nausea which persists for several hours may be considered severe nausea, but not a SAE. On the other hand, a stroke which results in only a limited degree of disability may be considered a mild stroke but would be a SAE.

Any detrimental change in the subject's condition after the subject enters the study will be discussed with the investigator. Where the detrimental change is considered by the investigator to constitute a progression or relapse of bipolar depression or a lack of efficacy, then this will not be considered an AE even where this necessitates or prolongs hospitalization. When there is deterioration in the condition for which the medicine is being used, there may be uncertainty as to whether this is lack of efficacy or an AE. In such cases, unless AstraZeneca or the reporting physician considers that the medicine contributed to the deterioration, the deterioration should be considered lack of efficacy. However, if it is believed that the medicine may have contributed to the deterioration, then this should be treated as an AE.

Study drug abuse is an SAE, even when there are no symptoms or additional AEs and should be reported according to the guidelines in Section 5.4.2.3. Misuse of study drug is an AE but is not considered an SAE unless accompanied by serious sequelae.

Should an overdose occur, it must be reported in accordance with the procedures described in Section 10.3 Procedures in case of overdose. All overdoses, with or without associated symptoms, should be reported as AEs.

Suicide and attempted suicide, irrespective of the method, but occurring in connection with the use of study drug, should be reported as AEs (serious or non-serious). This event should be identified as suicide or attempted suicide, and the method of the suicide or attempt should be provided. If an attempted suicide meets the criteria for an SAE, the event must be reported according to the guidelines in Section 10.4.

Should a pregnancy occur, it must be reported in accordance with the procedures described in Section 10.5. Procedures in case of pregnancy. Pregnancy in itself is not regarded as an AE unless there is a suspicion that an investigational product may have interfered with the effectiveness of a contraceptive medication.

5.4.2.3 Reporting of serious adverse events

Investigators and other site personnel must inform appropriate AstraZeneca representatives of any SAE that occurs in the course of the study within 1 day (i.e. immediately but no later than the end of the next business day) of when he or she becomes aware of it.

The AstraZeneca representative will work with the investigator to compile all the necessary information and ensure that the appropriate AstraZeneca Drug Safety Department receives a report by day 1 for all fatal and life-threatening cases and by day 5 for all other SAEs.

Follow-up information on SAEs must also be reported by the investigator within the same time frames.

If a non-serious AE becomes serious, this and other relevant follow-up information must also be provided to AstraZeneca within 1 day as described above.

After initial notification, the AstraZeneca representatives have 4 days to work with the investigator to compile all the necessary information to ensure that the appropriate AstraZeneca Drug Safety Department receives a complete report by day 5. Follow-up information on SAEs should also be reported by the investigator within the same time frames. If a non-serious case becomes serious, this and other relevant follow-up information should also be provided to AstraZeneca within 1 day as described in the paragraph above

All SAEs have to be reported, whether or not considered causally related to the investigational product. All SAEs will be recorded in the case report form. The investigator is responsible for informing the Ethics Committee and/or the Regulatory Authority of the SAE as per local requirements.

5.4.3 Laboratory safety measurements and variables

Blood (under fasting conditions) and urine specimens will be collected for laboratory test analysis and these samples will be processed by a central laboratory (Quintiles Central Laboratory).

5.4.3.1 Methods of assessment

- Fasting hematology: hemoglobin, hematocrit, red blood cell count, total and differential white blood cell counts and platelet count
- Fasting clinical chemistry: total bilirubin, alkaline phosphatase, alanine transaminase(ALT), aspartate transaminase(AST), sodium, potassium, chloride, creatinine, glucose, insulin, bicarbonate, high-density lipoprotein cholesterol, triglycerides, low-density lipoprotein cholesterol and total cholesterol
- Thyroid function tests: thyroid stimulating hormone (TSH), Triiodothyronine resin uptake (T3RU), and total thyroxine (T4)
- Serum pregnancy tests
- Urine toxicology screen

5.4.3.2 Calculation or derivation of endpoints

Change from baseline will be derived for all subjects who have a screening laboratory test and a final laboratory test. The change from baseline is the final test value minus the screening test value. Laboratory test values will also be compared to the laboratory standard normal ranges and flagged with H or L if they are outside of the normal range. In addition, treatment emergent laboratory changes, identified using computerized methods to compare results or changes from baseline to standard extended ranges will be flagged at the subject and test level.

5.4.4 Vital signs measurement

5.4.4.1 Methods of assessment

A standard blood pressure cuff will be used to obtain systolic and diastolic blood pressure. The assessment will be done first with the subject in the supine position for 3 minutes and again within 3 minutes of the subject attaining a standing position. Pulse will be measured for 1 minute.

5.4.4.2 Calculation or derivation of endpoints

Change from baseline will derived be as the value at the visit minus the screen value for the same assessment and position. In addition the change within a visit between the standing and supine blood pressure assessments will be calculated for both systolic and diastolic blood pressures. This difference will be calculated as supine minus standing . A subject will be classified as having calculated postural hypotension if either the systolic blood pressure difference indicates a decrease >20 mmHg or the diastolic blood pressure difference indicates a decrease >15 mmHg.

5.4.5 ECG safety measurements and variables

5.4.5.1 Methods of assessment

A 12 lead ECG assessment will be done using an ECG machine compatible with the requirements for eResearch the central evaluation laboratory. The central laboratory will supply the interval data, rates and standard interpretation of the ECG test results.

eResearch
30 south 17th Street
Philadelphia, PA 19103-4001

5.4.5.2 Calculations and derivations of endpoint

Change from baseline for interval data and rate data will be derived by subtracting the screen value from the final assessment value. Values outside the extended range in Appendix XX will be flagged.

5.4.6 Simpson-Angus Scale (SAS)

5.4.6.1 Methods of assessment

The SAS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.6.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.4.7 Barnes-Akathisia Rating Scale (BARS)

5.4.7.1 Methods of assessment

The BARS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.7.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.5 Quality of Life endpoint

The following assessment will be used to assess the effect of quetiapine compared with placebo on quality of life as assessed by:

- the PSQI
- the short form Q-Les-Q

5.5.1 Summary of quality of life objectives and endpoints

Table 19 shows how the efficacy endpoints of this study relate to the study objectives.

Table 19 Efficacy objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Secondary	Secondary measure		

evaluate the effect of quetiapine compared to placebo on quality of sleep	change from baseline to final assessment in PSQI; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for PSQI total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Reduction in PSQI compared with placebo indicates improvement of sleep quality
evaluate the effect of quetiapine compared to placebo on the overall quality of life	change from baseline to final assessment in Q-Les-Q; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for Q-Les-Q total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Increase in Q-Les-Q compared with placebo indicates improvement of overall quality of life

The methods of collecting quality of life data are described below.

5.5.2 PSQI

5.5.2.1 Methods of assessment

The PSQI will be performed at scheduled visits during the trial by a patient at each site. The 9 self-rated questions will be incorporated into 7 component scores which are added together to yield one total "global" score. Higher scores indicate more severe difficulties in sleep quality.

5.5.2.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the PSQI.

5.5.3 Q-Les-Q

5.5.3.1 Methods of assessment

The Q-Les-Q is a patient self assessment questionnaire which will be completed at scheduled visits during the trial by a patient at each site. The short form has 14 self-rated questions, the first 12 will be incorporated into a total score. Higher scores indicate better quality of life.

5.5.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the Q-Les-Q.

5.6 Interactive Computer Interview for Depression (ICI-D)

At each study visit, subjects at all participating sites will complete a computer-based self-report measure of depression severity (the interactive computer interview or ICI-D) after completing the MADRS. Raters or other site staff will first enter the subject's MADRS scores into a computer supplied by the sponsor. Subjects will then complete a computer-based self-report measure of depression severity . This measure will not be considered primary or source data, and will be recorded on a coded, anonymized form. This data will be securely transmitted to Concordant Rater Systems (CRS) for ongoing quality control.

For quality assurance purposes, if an above-threshold variance is detected between the ICI-D and the MADRS on individual items or the overall score, a CRS clinician (Ph.D. or MD) will contact the applicable rater for a monitoring consultation. The CRS clinician will discuss possible reasons for the discrepancy, review conventions for scoring and offer additional training if necessary.

The ICI-D will also provide an additional check of the patient's suicide status. The ICI-D will alert the rater if the patient reports suicidal plans. If the patient did not verbalize these thoughts during the interview /assessment process, the rater could then take the appropriate clinical steps.

A standard operating procedure for ICI-D will be provided to the sites.

5.7 Genetic sampling and storage

There will be no genetic sampling in this trial.

5.8 Volume of blood sampling and handling of biological samples

The total volume of blood that will be drawn from each subject in this study is as follows:

Table 16 Volume of blood to be drawn from each subject

Assessment		Sample volume (ml)	N of samples	Total volume (ml)	
				Women	Men
Safety	Clinical chemistry				
	Hematology	18	2	36	36
	Serum Pregnancy[a]	2	1	2	
Total				38	36

[a] Women only.

Sample handling and storage will be defined by the central laboratory which will be handling the analysis and reporting or results from samples.

6 DATA MANAGEMENT

Case Report Forms (CRFs) will be provided for recording of data. The forms will be in triplicate with carbonless paper. Data will be recorded legibly onto the CRFs with black ink, preferably with a ballpoint pen. If any data are not available, omissions will be indicated on the CRFs. Corrections should be made legibly and be initialed and dated. Correction fluid or covering labels must not be used. The top original and the first copy of the completed form will collected and returned to AstraZeneca/AstraZeneca's agent and the second copy will be retained by the investigator.

Data received electronically by AstraZeneca from a validated source will be loaded directly into the trial database for analysis.

7 STATISTICAL METHODS AND DETERMINATION OF SAMPLE SIZE

7.1 Determination of sample size

Since there is no data using the MADRS instrument in the assessment of quetiapine in treating bipolar subjects with depression, the sample size estimation was based on published data from the lamotrigine monotherapy (Calabrese et al, 1999) and olanzapine trials (Tohen et al, 2002). The percentage change in the HAM-D across these lamotrigine studies in bipolar depression is similar to that observed with quetiapine. MADRS scores correlate significantly with those of the HAM-D (Montgomery Asberg 1979).

Sample size was estimated using an Bonferroni correction for the 2 comparisons with placebo. A clinically meaningful 3.6-unit difference between quetiapine treatment and placebo was used to estimate the effect size (with 3.1 units considered a minimally effective and detectable difference). The variability used for calculation was 10 units, the variability seen in the olanzapine study. A sample size of 168 subjects/arm (504 subjects total) would provide 85% power for 2-sided pair-wise comparisons with placebo at α=0.025 which provides an overall experiment wise type I error rate of 0.05. Therefore, 740 patients will be screened and approximately 530 subjects randomized (allowing for a 5% early drop out rate), to insure 504 subjects with post baseline data available for analysis (MITT analysis population). This sample size will provide 72% power to detect a 3.1 unit difference from placebo.

7.2 Statistical evaluation

7.2.1 Methods of statistical analysis

A comprehensive Statistical Analysis Plan (SAP) will be prepared before unblinding of the data.

Missing data for final visit resulting from patient drop outs will be imputed using an LOCF approach. Patients with post baseline data (MITT population) will have their last trial assessment carried forward as the final assessment for analyses.

7.2.2 Study endpoints

Primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score.

Secondary efficacy endpoints:

(1) Percentage of patients with a ≥50% reduction from baseline in the MADRS total score at study endpoint

(2) Change from baseline to each assessment (observed cases) in the MADRS total score

(3) Change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, CGI-S, CGI-C, and Young Mania Rating Scale.

(4) Change in the PSQI score from baseline to final assessment

Safety endpoints:

(1) Incidence and nature of adverse events during double-blind treatment

(2) Incidence of drug-related adverse events during double-blind treatment

(3) Incidence of subject withdrawal due to adverse events

(4) Incidence of clinically significant changes in hematology and chemistry laboratory results, vital signs, electrocardiograms, weight, and body mass index.
Tolerability endpoints:

(5) Change in the SAS total score from baseline to final assessment

(6) Change in BARS total score from baseline to final assessment

(7) Incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment

Quality of Life endpoints:

(1) Change in Q-Les-Q total score from baseline to final assessment

(2) Proportion of patients achieving community norm levels in Q-Les-Q at final assessment

7.2.3 Statistical analyses

The randomization will be stratified by Bipolar type (I or II) in order to assure balance across treatments for the type of patient enrolled. The stratification will be incorporated into the statistical analysis models and descriptive statistics will be provided for each stratum.

For each statistical model run, the assumptions for the model will be evaluated. If the assumptions are not reasonably met, the data may be transformed to meet assumptions or a non-parametric test performed.

All statistical comparisons will be based on 2-sided testing approaches for testing the difference between active study medication dose and placebo.

7.2.3.1 Study populations for analysis

The modified intention to treat population (MITT) will be the population for efficacy and quality of life evaluation. The MITT population will include all randomized subjects who were received study treatment and had at least one post baseline efficacy assessment with a last observation carried forward approach for final assessment.

The safety population will include all subjects who provide consent and received study medication.

7.2.3.2 Primary Analysis

The primary analysis will use analysis of covariance (ANCOVA) model for the change from baseline at final assessment for the MADRS. The model will include terms for treatment, stratum, with the baseline MADRS as a covariate. The Simes-Hommel step-up procedure will be used to adjust for the 2 comparisons with placebo (Simes-Hommel, 1988). The p-values obtained from the pair-wise comparisons will be ordered as follows: $P(1) \leq P(2)$. The following rule will be used to assess statistical significance:

1) If $P(2) \leq 0.05$, then reject both null hypotheses associated with P(2) and P(1); else proceed to the next step;

2) If $P(1) \leq 0.025$, then reject the null hypothesis associated with P(1).

7.2.3.3 Secondary Analyses of efficacy and quality of life

The secondary endpoint for responder, defined as a subject who has a 50% reduction in MADRS score from baseline to final assessment, will be analyzed by comparing the proportion of subjects responding across treatments using a logistic model which includes treatment, stratum, and center in the model. The secondary endpoints based on change from baseline for scales at an assessment time will be analyzed using the same model as the primary endpoint. Nominal p-values will be used for all secondary endpoint comparisons.

Exploratory repeated measures analysis of variance model will also be conducted to evaluate whether there are significant differences among treatments across time for the MADRS and HAM-D scores.

Descriptive statistics will be used to report stratum, item scores, and subscale scores.

7.2.3.4 Safety analyses

Adverse events will be coded using the MedDRA dictionary. Numbers of events and incidence rates for AEs in each treatment group will be summarized by preferred term and system organ class. An event that occurred one or more times on the date of, or subsequent to, randomization will contribute one observation to the numerator of the incidence rate. The denominator will comprise all patients exposed to study treatment.

Adverse events that lead to premature withdrawal of subjects will be tabulated for each treatment group.

All laboratory assessments, vital signs, ECG (rates and intervals) results, and weight and body mass index will be tabulated using descriptive statistics at baseline, final assessment and including change from baseline. Descriptive statistics will include n, mean, standard deviation, minimum and maximum value.

7.2.3.5 Tolerability analyses

The change from baseline in SAS and BARS score data will be summarized using descriptive statistics (mean, standard deviation, median, minimum and maximum).

Incidence rates of EPS adverse events will be compared and tabulated using descriptive statistics.

7.2.3.6 Interim analysis

No interim analysis is planned

7.2.3.7 Data or safety monitoring committee

There will be no data or safety monitoring committee.

8 STUDY MANAGEMENT

8.1 Monitoring

Before the study begins, a representative of AstraZeneca or company representing AstraZeneca will visit the investigational site to

- determine the adequacy of the facilities
- discuss with the investigator(s) (and other personnel involved with the study) their responsibilities with regard to protocol adherence, and the responsibilities of AstraZeneca or its representatives.

During the study, a monitor from AstraZeneca or company representing AstraZeneca will have regular contacts with the investigational site, including visits to

- provide information and support to the investigator(s)
- confirm that facilities remain acceptable
- confirm that the investigational team is adhering to the protocol, that data are being accurately recorded in the case report forms (CRFs), and that investigational product accountability checks are being performed.
- perform source data verification (a comparison of the data in the CRFs with the subject's records at the hospital or practice, and other records relevant to the study). This will require direct access to all original records for each subject (eg, clinic charts).

The monitor or another AstraZeneca representative will be available between visits if the investigator(s) or other staff at the center need information and advice.

8.2 Audits and inspections

Authorized representatives of AstraZeneca, a regulatory authority, an Independent Ethics Committee (IEC) or an Institutional Review Board (IRB) may visit the center to perform audits or inspections, including source data verification. The purpose of an AstraZeneca audit or inspection is to systematically and independently examine all study related activities and documents to determine whether these activities were conducted, and data were recorded, analyzed, and accurately reported according to the protocol, Good Clinical Practice (GCP), guidelines of the International Conference on Harmonization (ICH), and any applicable regulatory requirements. The investigator should contact AstraZeneca immediately if contacted by a regulatory agency about an inspection at his or her center.

8.3 Training of staff

The principal investigator will maintain a record of all individuals involved in the study (medical, nursing and other staff). He or she will ensure that appropriate training relevant to the study is given to all of these staff, and that any new information of relevance to the performance of this study is forwarded to the staff involved.

8.4 Changes to the protocol

Study procedures will not be changed without the mutual agreement of the international principal investigator(s) and AstraZeneca.

If it is necessary for the study protocol to be amended, the amendment or a new version of the study protocol must be notified to or approved by each IEC or IRB, and in many countries also the local regulatory authority, before implementation. Local requirements must be followed.

If a protocol amendment requires a change to a particular center's Written Informed Consent Form, then AstraZeneca and the center's IEC or IRB must be notified. Approval of the revised Written Informed Consent Form by AstraZeneca and by the IEC or IRB is required before the revised form is used.

AstraZeneca will distribute amendments and new versions of the protocol to each principal investigator(s), who in turn is responsible for the distribution of these documents to his or her IEC or IRB, and to the staff at his or her center. The distribution of these documents to the regulatory authority will be handled according to local practice.

8.5 Study agreements

The principal investigator at each center must comply with all the terms, conditions, and obligations of the study agreement for this study. In the event of any inconsistency between this protocol and the study agreement, this study agreement shall prevail.

8.6 Study timetable and termination

It is anticipated that the first subject will be enrolled in September 2002 and that the last subject will complete the study in March 2004.

9 ETHICS

9.1 Ethics review

The final study protocol, including the final version of the Written Informed Consent Form, must be approved or given a favorable opinion in writing by an IEC or IRB as appropriate. The investigator must submit written approval to AstraZeneca before he or she can enroll any subject into the study.

The principal investigator(s) is responsible for informing the IEC or IRB of any amendment to the protocol in accordance with local requirements. In addition, the IEC or IRB must approve all advertising used to recruit subjects for the study. The protocol must be reapproved by the IEC or IRB annually, as local regulations require.

Either the investigator(s) or AstraZeneca must submit progress reports to the IEC or IRB according to local regulations and guidelines. The principal investigator(s) must also provide the IEC or IRB with any reports of serious adverse events from the study site.

The principal investigator(s) is also responsible for providing the IRB with reports of any serious adverse events from any other study conducted with the investigational product. This information will be provided to the principal investigator(s) by AstraZeneca.

9.2 Ethical conduct of the study

The study will be performed in accordance with the ethical principles in the Declaration of Helsinki (see Appendix C), Good Clinical Practice, and applicable regulatory requirements.

9.3 Subject information and consent

The principal investigator(s) at each center will ensure that the subject is given full and adequate oral and written information about the nature, purpose, possible risk and benefit of the study. Subjects must also be notified that they are free to discontinue from the study at any time. The subject should be given the opportunity to ask questions and allowed time to consider the information provided.

The subject's signed and dated informed consent must be obtained before conducting any procedure specifically for the study, including the following:

The principal investigator(s) must store the original, signed Written Informed Consent Form. A copy of the Written Informed Consent Form must be given to the subject.

A sample Written Informed Consent Form is enclosed (Appendix B). If modifications are made according to local requirements, the new version has to be approved by AstraZeneca.

9.4 Subject data protection

The Written Informed Consent Form will explain that study data will be stored in a computer database, maintaining confidentiality in accordance with national data legislation. The subjects' names will not be recorded in this database. The Written Informed Consent Form will also explain that for data verification purposes, authorized representatives of AstraZeneca, a regulatory authority, an IEC or IRB may require direct access to parts of the hospital or practice records relevant to the study, including subjects' medical history.

10 EMERGENCY PROCEDURES

10.1 AstraZeneca emergency contact procedure

In the case of a medical emergency, contact AstraZeneca personnel shown below.

Wayne Macfadden MD
Project Physician
302-886-1147 (telephone)
302-886-5567 (fax)
REDACTED

Robin McCoy RN
Senior Clinical Research Scientist
302-886-4650 (telephone)
302-886-5567 (fax)
REDACTED

Contact AstraZeneca switchboard on 1-800-236-9933 and ask to be put in contact with the person on call for the Seroquel clinical team.

10.2 Procedures in case of medical emergency

The principal investigator(s) is responsible for ensuring that procedures and expertise are available to cope with medical emergencies during the study.

10.3 Procedures in case of overdose

For the purpose of this trial all overdoses should be reported as adverse events. However, all cases of overdose must be reported immediately, within 1 day, if sequelae meeting the criteria for serious adverse event have occurred in association with the overdose. In all instances, the overdose substance should be stated and whether the overdose was accidental or intentional. If the overdose was a suicide attempt, this fact should be clearly stated. Adverse events (serious and non-serious) arising as the result of an overdose should be recorded on an adverse event form as "sequelae to overdose." For example "nausea as sequelae to overdose."

10.4 Suicide

Suicide and suicide attempt, irrespective of the method, but in connection with the use of trial drug, should be reported as a serious adverse event (in accordance with the definition provided in Section 5.4.2.1). This event should be identified as suicide or suicide attempt, and the method of the suicide or the suicide attempt should be provided. Suicidal thoughts should also be regarded as adverse events.

10.5 Procedures in case of pregnancy

Pregnancy itself is not regarded as an adverse event unless there is a suspicion that the investigational product under study may have interfered with the effectiveness of a contraceptive medication. However, the outcome of all pregnancies (spontaneous miscarriage, elective termination, normal birth or congenital abnormality) must be followed up and documented even if the subject was discontinued from the study.

All reports of congenital abnormalities/birth defects are SAEs. Spontaneous miscarriages should also be reported and handled as SAEs. Elective abortions without complications should not be handled as AEs. All outcomes of pregnancy must be reported to AstraZeneca on the pregnancy outcomes report form.

Declaration of Helsinki

Recommendations guiding physicians in biomedical research involving human subjects.

Adopted by the 18th World Medical Assembly, Helsinki, Finland, June 1964, amended by the 29th World Medical Assembly, Tokyo, Japan, October 1975 and the 35th World Medical Assembly, Venice, Italy, October 1983 and the 41st World Medical Assembly Hong Kong, September 1989 and the 48th General Assembly, Somerset West, Republic of South Africa, October 1996.

Introduction

It is the mission of the physician to safeguard the health of the people. His or her knowledge and conscience are dedicated to the fulfilment of this mission.

The Declaration of Geneva of The World Medical Association binds the physician with the words, "The health of my patient will be my first consideration," and the International Code of Medical Ethics declares that, "A physician shall act only in the patient´s interest when providing medical care which might have the effect of weakening the physical and mental condition of the patient".

The purpose of biomedical research involving human subjects must be to improve diagnostic, therapeutic and prophylactic procedures and the understanding of the aetiology and pathogenesis of disease.

In current medical practice most diagnostic, therapeutic or prophylactic procedures involve hazards. This applies especially to biomedical research.

Medical progress is based on research which ultimately must rest in part on experimentation involving human subjects.

In the field of biomedical research a fundamental distinction must be recognised between medical research in which the aim is essentially diagnostic or therapeutic for a patient, and medical research, the essential object of which is purely scientific and without implying direct diagnostic or therapeutic value to the person subjected to the research.

Special caution must be exercised in the conduct of research which may affect the environment, and the welfare of animals used for research must be respected.

Because it is essential that the results of laboratory experiments be applied to human beings to further scientific knowledge and to help suffering humanity, the World Medical Association has prepared the following recommendations as a guide to every physician in biomedical research involving human subjects. They should be kept under review in the future. It must be stressed that the standards as drafted are only a guide to physicians all over the world. Physicians are not relieved from criminal, civil and ethical responsibilities under the laws of their own countries.

I. Basic principles

1. Biomedical research involving human subjects must conform to generally accepted scientific principles and should be based on adequately performed laboratory and animal experimentation and on a thorough knowledge of the scientific literature.

2. The design and performance of each experimental procedure involving human subjects should be clearly formulated in an experimental protocol which should be transmitted for consideration, comment and guidance to a specially appointed committee independent of the investigator and the sponsor provided that this independent committee is in conformity with the laws and regulations of the country in which the research experiment is performed.

3. Biomedical research involving human subjects should be conducted only by scientifically qualified persons and under the supervision of a clinically competent medical person. The responsibility for the human subject must always rest with a medically qualified person and never rest on the subject of the research, even though the subject has given his or her consent.

4. Biomedical research involving human subjects cannot legitimately be carried out unless the importance of the objective is in proportion to the inherent risk to the subject.

5. Every biomedical research project involving human subjects should be preceded by careful assessment of predictable risks in comparison with foreseeable benefits to the subject or to others. Concern for the interests of the subject must always prevail over the interests of science and society.

6. The right of the research subject to safeguard his or her integrity must always be respected. Every precaution should be taken to respect the privacy of the subject and to minimise the impact of the study on the subject´s physical and mental integrity and on the personality of the subject.

7. Physicians should abstain from engaging in research projects involving human subjects unless they are satisfied that the hazards involved are believed to be predictable. Physicians should cease any investigation if the hazards are found to outweigh the potential benefits.

8. In publication of the results of his or her research, the physician is obliged to preserve the accuracy of the results. Reports of experimentation not in accordance with the principles laid down in this Declaration should not be accepted for publication.

9. In any research on human beings, each potential subject must be adequately informed of the aims, methods, anticipated benefits and potential hazards of the study and the discomfort it may entail. He or she should be informed that he or she is at liberty to abstain from participation in the study and that he or she is free to withdraw his or her consent to participation at any time. The physician should then obtain the subject´s freely-given informed consent, preferably in writing.

10. When obtaining informed consent for the research project the physician should be particularly cautious if the subject is in a dependent relationship to him or her or may consent under duress. In that case the informed consent should be obtained by a physician who is not engaged in the investigation and who is completely independent of this official relationship.

11. In case of legal incompetence, informed consent should be obtained from the legal guardian in accordance with national legislation. Where physical or mental incapacity makes it impossible to obtain informed consent, or when the subject is a minor, permission from the responsible relative replaces that of the subject in accordance with national legislation.

Whenever the minor child is in fact able to give a consent, the minor´s consent must be obtained in addition to the consent of the minor´s legal guardian.

12. The research protocol should always contain a statement of the ethical considerations involved and should indicate that the principles enunciated in the present Declaration are complied with.

II. Medical research combined with professional care (Clinical research)

1. In the treatment of the sick person, the physician must be free to use a new diagnostic and therapeutic measure, if in his or her judgement it offers hope of saving life, re-establishing health or alleviating suffering.

2. The potential benefits, hazards and discomfort of a new method should be weighed against the advantages of the best current diagnostic and therapeutic methods.

3. In any medical study, every patient - including those of a control group, if any - should be assured of the best proven diagnostic and therapeutic method. This does not exclude the use of inert placebo studies where no proven diagnostic or therapeutic method exists.

4. The refusal of the patient to participate in a study must never interfere with the physician-patient relationship.

5. If the physician considers it essential not to obtain informed consent, the specific reasons for this proposal should be stated in the experimental protocol for transmission to the independent committee (I,2).

6. The physician can combine medical research with professional care, the objective being the acquisition of new medical knowledge, only to the extent that medical research is justified by its potential diagnostic or therapeutic value for the patient.

III. Non-therapeutic biomedical re-search involving human subjects

(Non-clinical biomedical research)

1. In the purely scientific application of medical research carried out on a human being, it is the duty of the physician to remain the protector of the life and health of that person on whom biomedical research is being carried out.

2. The subjects should be volunteers - either healthy persons or patients for whom the experimental design is not related to thepatient´s illness.

3. The investigator or the investigating team should discontinue the research if in his/her or their judgement it may, if continued, be harmful to the individual.

4. In research on man, the interest of science and society should never take precedence over considerations related to the well-being of the subject.

Insurance and indemnity

For the US, this Appendix E is not applicable. Please refer to the clinical study agreement for information regardingAstraZeneca's obligation to insure and indemnify institution and investigator.

INSURANCE AND INDEMNITY

AstraZeneca's liability is covered by a liability insurance policy with AstraZeneca Insurance Company Limited, policy No.: L/702938.

With respect to any liability directly or indirectly caused by the investigational products in connection with this Clinical Study, AstraZeneca assumes liability by law on behalf of the investigator(s) and his assistants for possible injury to the subject provided the investigator(s) and his assistants have followed the instructions of AstraZeneca in accordance with this protocol and any amendments thereto, that the investigational products administered to the subject in this Clinical Study have been supplied by AstraZeneca and that the investigator and his assistants have in general performed this clinical study in accordance with scientific practice and currently acceptable techniques and know-how.

AstraZeneca can forward a letter of indemnity if needed by the investigator(s)/institution.

Appendix F
Additional safety information

1. FURTHER GUIDANCE ON THE DEFINITION OF A SERIOUS ADVERSE EVENT (SAE)

Life threatening

'Life-threatening' means that the subject was at immediate risk of death from the adverse event as it occurred or it is suspected that use or continued use of the product would result in the subject's death. 'Life-threatening' does not mean that had an adverse event occurred in a more severe form it might have caused death (ie hepatitis that resolved without hepatic failure).

Hospitalisation

Out-subject treatment in an emergency room is not in itself a serious adverse event, although the reasons for it may be (eg, bronchospasm, laryngeal oedema). Hospital admissions and/or surgical operations planned before or during a study are not considered adverse events if the illness or disease existed before the subject was enrolled in the study, provided that it did not deteriorate in an unexpected way during the study.

Important medical event or medical intervention

Medical and scientific judgement should be exercised in deciding whether a case is serious in a situation where important medical events may not be immediately life-threatening or result in death, hospitalisation, disability or incapacity but may jeopardise the subject or may require medical intervention to prevent one or more outcomes listed in the definition of serious. These should usually be considered as serious. Examples of such events are:

- Angioedema not severe enough to require intubation but requiring iv. hydrocortisone treatment
- Hepatotoxicity caused by paracetamol (acetaminophen) overdose requiring treatment with N-acetylcysteine
- Intensive treatment in an emergency room or at home for allergic bronchospasm
- Blood dyscrasias (eg, neutropenia or anaemia requiring blood transfusion, etc.) or convulsions that do not result in hospitalisation
- Development of drug dependency or drug abuse

2. FURTHER GUIDANCE ON THE ASSESSMENT OF CAUSALITY

The following factors should be considered when deciding if there is a "reasonable possibility" that an adverse event (AE) may have been caused by the investigational product.

- **Time course of events and exposure to suspect drug**. Has the subject actually received the suspect drug? Did the AE occur in a reasonable temporal relationship to the administration of suspect drug?

- **Consistency with known drug profile**. Was the AE consistent with the previous knowledge of the suspect drug (pharmacology and toxicology) or drugs of the same pharmacological class? OR could the AE be anticipated from its pharmacological properties?

- **Dechallenge experience**. Did the AE resolve or improve on stopping or reducing the dose of the suspect drug?

- **No alternative cause**. The AE cannot be reasonably explained by another aetiology such as the underlying disease, other drugs, other host or environmental factors.

- **Rechallenge experience**. Did the AE reoccur if the suspected drug was reintroduced after having been stopped? AstraZeneca would not normally recommend or support a rechallenge.

- **Laboratory tests**. Has a specific laboratory investigation confirmed the relationship?

A "reasonable possibility" could be considered to exist for an AE where one or more of these factors exist.

In contrast, there would not be a "reasonable possibility" of causality if none of the above criteria apply or where there is evidence of exposure and a reasonable time course but any dechallenge (if performed) is negative or ambiguous or there is another more likely cause of the AE.

In difficult cases, other factors could be considered such as:

- Is this a recognised feature of overdose of the drug?

- Is there a known mechanism

Ambiguous cases should be considered as being a “reasonable possibility” of a causal relationship unless further evidence becomes available to refute this.

AstraZeneca

Clinical Study Protocol Amendment	
Amendment No.	3
Study Code	5077US/0049
Date	April 14, 2003

Sponsor:

AstraZeneca Pharmaceuticals LP, Wilmington, Delaware, USA

Centres affected by the amendment:

All centers

The protocol for the study is to be amended as follows:

1. Page 47 Section 5.4.2.2 Recording of adverse events

Original text

All AEs that occur before treatment, during treatment, or within 30 days following the cessation of treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor.

Amended text

All AEs and SAEs that occur before and during treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor. **Following cessation of treatment, SAEs, whether or not related to the study drug, must be collected for 7 days and recorded on the CRF provided by the sponsor. If any SAEs are recorded during the 7 day follow-up period, all concomitant medications taken during the 7 day follow-up period should also be recorded on the CRF.**

2. Page 39 Summary of permitted medications Table 13 last paragraph

Original text

Use of any psychoactive drugs including antidepressants, hypnotics, mood stabilizing drugs, and antipsychotics from a **period of 5 elimination half-lives (28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. 5. Page 27 Section 3.4.4.4 Procedures for discontinuation

Original text

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- Physical examination including **ophthalmoscopic exam**
- Vital signs and weight
- HAM-D
- MADRS
- ICI-D
- YMRS
- HAM-A
- SAS
- BARS
- PSQI
- Adverse events assessment

Amended text

12-lead ECG added and opthalmoscopic exam removed.

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- **Physical examination**
- Vital signs and weight
- **12-lead ECG**

- HAM-D
- MADRS
- ICI-D
- YMRS
- HAM-A
- SAS
- BARS
- PSQI
- Adverse events assessment

Reasons for making the amendment:

1. The procedure for reporting adverse events for 30 days after cessation of study treatment was changed; adverse events and serious adverse events will be reported for the period of 7 days after cessation of study treatment. These events, whether or not related to study drug, must be recorded on the CRF provided by the Sponsor. If any SAEs are recorded for this follow-up period, all concomitant medications taken during this period should also be recorded on the CRF.

The follow up period for reporting SAEs is being modified from 30 to 7 days after the last dose of study drug to be consistent with the known half-life of Seroquel and to ensure reporting of SAEs for a period corresponding with five half-lives of the drug.

2. Changed to make consistent with the rest of the protocol.

3. Changed to make consistent with the rest of the protocol.

4. Changed to make consistent with the rest of the protocol.

5. Changed to make consistent with the rest of protocol

PROTOCOL SYNOPSIS

A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL®) in the Treatment of Patients with Bipolar Depression

Investigator

Multicenter trial: << To be determined >>

Study center(s) and number of subjects planned

A total of approximately 740 subjects will be screened to enroll approximately 530 into the trial in order to obtain approximately 504 evaluable patients, defined as those who have a baseline visit and at least one post baseline assessment. It is expected that approximately 75 centers will participate in the trial, with each center enrolling 8 patients (maximum 70).

Study period		**Phase of development**
Estimated date of first subject enrolled	September, 2002	IIIb
Estimated date of last subject completed	March, 2004	

Objectives

Primary:

To evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks as assessed by comparing

(1) the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

(2) the percentage of patients with a ≥50% reduction from baseline in the MADRS total score at final assessment

(3) the change from baseline to each assessment in the MADRS total score

(4) the change from baseline to each assessment in the Hamilton Rating scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S)

(5) the Clinical Global Impression - Change (CGI-C).

Secondary:

(1) to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

(2) to evaluate the effect of quetiapine on anxiety compared to placebo by comparing

- the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score
- the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

(3) to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by comparing

- the incidence and nature of all adverse events
- the incidence and nature of drug-related adverse events
- subject withdrawal due to adverse events during double-blind treatment
- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score from baseline to end of treatment
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Exploratory

(1) to evaluate the efficacy of quetiapine on sleep quality by comparing the change in the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment

(2) to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment.

Hypotheses:

Primary:

(1) Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

(2) Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

Secondary hypotheses are defined in Section 3.1.

Study design

Study 5077US/0049 is a randomized, multicenter, double-blind, placebo-controlled, double-dummy, parallel group, fixed-dose comparison of quetiapine vs placebo in the treatment of bipolar depression. This study will be stratified 1:1 for bipolar I and bipolar II.

Target subject population

Outpatients, aged 18 to 65 years, with a diagnosis of bipolar I or bipolar II disorder with a current major depressive episode of duration less than one year but greater than 4 weeks will be enrolled in the trial. The HAM-D (17-item scale) score must be ≥20, the HAM-D item 1 (depressed mood) score must be ≥2, and the YMRS score must be ≤12 at both Visit 1and Visit 2 (randomization) to be eligible for entry into the trial.

Investigational product, dosage and mode of administration

Study drug will be titrated in a blinded manner to a total daily dose of 300 mg/day by Day 4 in the 300-mg/day treatment group and to a total daily dose of 600 mg/day by Day 8 in the 600-mg/day treatment group. Thereafter, oral doses of quetiapine fumarate will be administered in a blinded fashion once daily at bedtime (qhs) in a total daily dose of 300 or 600 mg/day. One-time dose reductions for intolerability of 100 mg/day in both the 300 mg/day and in the 600 mg/day treatment groups will be allowed at the discretion of the Investigator after Day 8.

Comparator, dosage and mode of administration

Placebo will be administered once daily with tablets matching in number and appearance to blinded quetiapine dosing.

Duration of treatment

Patients will receive double-blind, double-dummy treatment for up to 8 weeks (56 days), following an initial washout period of between 7 to 28 days (depending on the medications involved) and will come in to the clinic on Day 57 for final assessments.

Endpoints

- **Efficacy**

  Primary efficacy endpoint is the change from baseline to final assessment in the MADRS total score.

  Secondary efficacy endpoints are the percentage of patients with a ≥50% reduction from baseline in the MADRS total score at study endpoint, the change from baseline to each assessment (observed cases) in the MADRS total score, and the change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, and CGI-S and the CGI-C.; the change from baseline to each assessment (observed cases) and final assessment in the YMRS, and the HAM-A total scores.

- **Safety**

  Safety endpoints are the incidence and nature of all adverse events, the incidence of drug-related adverse events, the incidence of subject withdrawal due to adverse events, and the incidence of clinically significant changes in vital signs, weight, and body mass index during double-blind treatment. Tolerability endpoints are the change in the SAS total score from baseline to final assessment, the change in BARS total score from baseline to final

assessment, and the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

- **Quality of life**

  Exploratory quality of life endpoints are the change from baseline in the PSQI score and Q-Les-Q total score.

Statistical methods

All statistical comparisons will be 2-sided tests for the difference between active study medication and placebo. The primary analysis will be analysis of covariance (ANCOVA) for the change from baseline to final assessment for total MADRS score. The ANCOVA model will include terms for treatment, and stratum, with the baseline MADRS score as a covariate. Pair-wise comparisons of each dose with placebo will be assessed within this model as planned comparisons. In order to adjust for multiple comparisons with placebo a step-up procedure will be employed with a rule for tests of significance based on ordered p-values, maintaining an overall experiment wise type I error rate of 0.05. The proportion of patients having a $\geq$ 50% reduction from baseline to final assessment in MADRS will be compared across treatments using a logistic model. Change from baseline in MADRS scores at each assessment (observed cases), and change from baseline in HAM-D, HAM-D item 1, CGI-S, YMRS, HAM-A, Q-Les-Q and PSQI score at each assessment (observed cases) and LOCF, will be analyzed using the same ANCOVA model as for the primary endpoint. The CGI-C will be analyzed using the ANCOVA model with the baseline CGI-S as a covariate.

The change from baseline in SAS and BARS score data will be assessed using the same ANCOVA model as the primary endpoint. The incidence of EPS AEs and overall AEs will be reported using descriptive statistics. Vital signs, weight, and body mass index will be tabulated using descriptive statistics at baseline, final assessment, and for change from baseline. Descriptive statistics will also be used to describe the proportion of patients whose final Q-Les-Q is within community norm levels.

Repeated measures analysis of variance (ANOVA)will be performed to evaluate whether there are significant differences among treatments across time for MADRS, HAM-D, and HAM-A total scores.

Efficacy analyses will be conducted on a modified intention-to-treat (MITT) population. A per-protocol (PP) analysis will be conducted for the primary analysis measure (change from baseline MADRS) to evaluate sensitivity of the response. The safety population will include all subjects who took study medication.

APPENDICES

LIST OF ABBREVIATIONS AND DEFINITION OF TERMS

The following abbreviations and specialist terms are used in this study protocol.

Table 1 Abbreviations and specialist terms

Abbreviation or specialist term	Explanation
AE	Adverse event (see definition in Section 4.4.2.1)
ALT	Alanine aminotransferase
ANCOVA	Analysis of covariance
ANOVA	Analysis of variance
AST	Aspartate aminotransferase
BARS	Barnes Akathisia Rating Scale
BP	Bipolar Disorder
BPD	Bipolar Depression
CGI	Clinical Global Impression
CGI-C	Clinical Global Impression - Change
CGI-S	Clinical Global Impression - Severity
CMH	Cochran-Mantel Haenszel
CRF	Case Report Form
CRS	Concordant Rater systems
DSM-IV	Diagnostic and Statistical Manual of Mental Disorders - Fourth Edition
EPS	Extrapyramidal symptoms
ECG	Electrocardiogram
GCP	Good Clinical Practice
HAM-A	Hamilton Rating Scale for Depression
HAM-D	Hamilton Rating Scale for Anxiety
ICH	International Conference on Harmonisation
ICI-D	Interactive Computor Interview-Depression
ICTI	Interactive Clinical Technologies, Incorporated
IEC	Independent Ethics Committee

Abbreviation or specialist term	Explanation
IRB	Institutional Review Board
IVRS	Interactive Voice Response System
LOCF	Last Observation Carried Forward
MADRS	Montgomery-Asberg Depression Rating Scale
MITT	Modified Intent to Treat
OAE	Other significant adverse event (ie, an adverse event of special interest in this clinical development; see definition in Section 4.4.2.1). The classification of OAEs will be performed by AstraZeneca drug safety physicians after the study is complete.
PSQI	Pittsburgh Sleep Quality Index
Principal investigator	The investigator who leads the study conduct at an individual study center. Every study center has a principal investigator.
Qhs	at bedtime
Q-Les-Q	Quality of Life Enjoyment Satisfaction Questionnaire
SAE	Serious adverse event (see definition in Section 4.4.2.1).
SAS	Simpson Angus Scale
SSRI	Selective serotonin reuptake inhibitors
UNI	Universal Systems Incorporated
YMRS	Young Mania Rating Scale

1 INTRODUCTION

1.1 Background

Quetiapine fumarate (SEROQUEL®, quetiapine) is a dibenzothiazepine derivative approved by the United States Food and Drug Administration (FDA) on 26 September 1997 following clinical development by AstraZeneca Pharmaceuticals LP (also referred to as the sponsor) for the treatment of subjects with schizophrenia. Quetiapine fumarate is designated chemically as bis [2-(2-[4-(dibenzo[b,f][1,4]thiazepin-11-yl) piperazin-1-yl]ethoxy)ethanol] fumarate

Quetiapine has been studied in a toxicological and clinical program directed at supporting clinical evaluation in man. The results of these studies are presented in the Investigator's Brochure dated January 2002. The Professional Information Brochure (PIB) contains the current prescribing information for quetiapine.

1.2 Rationale for this study

The bipolar disorders are psychiatric disorders in which a disturbance in mood is the predominant feature. Bipolar I disorder is characterized by one or more manic or mixed episodes, usually accompanied by major depressive episodes. Bipolar II disorder is characterized by one or more major depressive episodes accompanied by at least one hypomanic episode. Bipolar depression refers to the major depressive episodes that occur with bipolar I and II disorder.

The prevalence of bipolar disorder is estimated to be 1 to 3.5%, evenly divided between men and women. The length of time between onset and symptoms and proper diagnosis and treatment is approximately 10 years and it is estimated that only 60% of those suffering from a bipolar disorder are receiving appropriate pharmacotherapy.

Although there is extensive and emerging literature guiding the treatment of the manic phase of bipolar I disorder as well as many approved compounds for the treatment of unipolar depression, the treatment of bipolar depression has not been widely studied and treatment guidelines are in their infancy. The use of currently available antidepressants for monotherapy for bipolar depression is often problematic as they may increase the "switch" into hypomania or mania from depression, or increase cycle acceleration. The adjunctive use of mood stabilizing medications such as lithium carbonate (LiCO3) is common and may decrease the likelihood of these complications.

Evidence indicates that medications with mood stabilizing properties which produced low levels of mania, hypomania, or cycle acceleration may be useful as monotherapy in the treatment of bipolar depression. The antiepileptic lamotrigine produced improvement in HAM-

D and MADRS scores in a 7-week, double-blind, placebo controlled trial for the patients who completed this study (Calabrese 1999). More recently, the anti-manic agent divalproex demonstrated numerical improvement over placebo in the percentage of patients with bipolar depression having a 50% reduction in the HAM-D scores without mania in an 8 week trial (Sachs, 2001) but this difference was not statistically significant. Lithium carbonate, also approved for the treatment of mania, has been demonstrated to be effective as a monotherapeutic agent in approximately 50% of patients with bipolar depression (Bauer). However, there are efficacy and tolerability limitations which may prohibit widespread use of the above therapies.

A large multicentered, double-blind, placebo controlled trial was recently completed, which demonstrated efficacy of the atypical antipsychotic olanzapine as monotherapy for the treatment of bipolar depression (Tohen, 2002). The endpoint mean MADRS change was significantly greater for patients on olanzapine (-15.0 points) than for those on placebo (-11.9 points). Treatment-emergent mania did not differ significantly between groups. There also is evidence from small uncontrolled studies that other atypical antipsychotics such as risperidone, and clozapine have mild to moderate antidepressant activity when used in patients with mood disorders. These small studies also indicate that these compounds are unlikely to cause patients to “switch” into mania.

The potential efficacy of quetiapine in depressive symptoms is provided in data from the Quetiapine Experience with Safety and Tolerability Trial (QUEST) and from investigator-initiated trials in mood disorder patients. In an open-label trial evaluating the safety and tolerability of quetiapine over 700 subjects with schizophrenia and other psychotic disorders were randomized to treatment with quetiapine or risperidone. Quetiapine-treated patients experienced a greater improvement in depressive symptoms compared with risperidone-treated patients, with a mean difference of 1.3 points on the HAM-D after adjustment for baseline differences (P=0.028) (Mullen et al, 2001).

A trial of quetiapine in 20 neuroleptic-dependent patients with bipolar or schizoaffective disorder also suggested positive effects on the depressive and psychotic symptoms in these disorders (Sajatovic et al, 2001). Overall, in 10 patients with bipolar disorder and 10 with schizoaffective disorder who received open-label quetiapine to optimum clinical dosage (25 to 800-mg), significant improvement in Brief Psychiatric Rating Scale (BPRS), Young Mania Rating Scale (YMRS), and HAM-D scores was noted.

In summary, the paucity of satisfactory treatments available signify an unmet medical need for the treatment of bipolar depression. There are signals of efficacy from clinical trials for the antidepressant properties of atypical antipsychotics such as quetiapine.

2 STUDY OBJECTIVES

2.1 Primary objective

The primary objectives of the study are to evaluate the efficacy of quetiapine compared to placebo in the treatment for a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks by comparing

(1) the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score

(2) the percentage of patients with a ≥50% reduction from baseline in the MADRS total score at final assessment

(3) the change from baseline to each assessment in the MADRS total score

(4) the change from baseline to each assessment in the total Hamilton Rating Scale for Depression (HAM-D), HAM-D Item 1, and the Clinical Global Impression - Severity (CGI-S), and the Clinical Global Impression - Change (CGI-C).

2.2 Secondary objective

The secondary objectives of the study are:

(1) to evaluate the incidence of treatment-emergent mania compared to placebo by comparing the percentage of patients who have an increase of >4 points at any time on the Young Mania Rating Scale (YMRS)

(2) to evaluate the effect of quetiapine on anxiety compared to placebo by

- the change from baseline to final assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score
- the change from baseline to each assessment in the Hamilton Rating Scale for Anxiety (HAM-A) total score

(3) to evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression by

- the incidence and nature of overall adverse events
- the incidence and nature of drug-related adverse events
- subject withdrawal due to adverse events during double-blind treatment

- the number of patients having clinically significant changes in vital signs from baseline to end of treatment
- the change in Simpson-Angus Scale (SAS) total score
- the change in the Barnes Akathisa Rating Scale (BARS) total score
- the incidence of adverse events related to extrapyramidal symptoms during double-blind treatment

Experimental:

1. to evaluate the efficacy of quetiapine on sleep quality by comparing the change in sleep quality using the Pittsburgh Sleep Quality Index (PSQI) from baseline to end of treatment
2. to evaluate the efficacy of quetiapine on the overall quality of life using the Quality of Life Enjoyment and Satisfaction Questionnaire (Q-Les-Q) from baseline to end of treatment

3 HYPOTHESES, STUDY PLAN AND PROCEDURES

3.1 Hypotheses

Primary:

(1) Quetiapine fumarate at a dose of 300 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

(2) Quetiapine fumarate at a dose of 600 mg/day will be superior to placebo in reducing the level of depressive symptoms as measured by the change from baseline to endpoint on the Montgomery-Asberg Depression Rating Scale (MADRS) total score in patients with bipolar depression.

Secondary:

(1) Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

(2) Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by the percentage of patients achieving a 50% reduction in MADRS total score in patients with bipolar depression.

(3) Quetiapine at a dose of 300 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

(4) Quetiapine at a dose of 600 mg/day will be more effective than placebo in reducing the level of depressive symptoms as measured by change from baseline in the HAM-D item 1 in patients with bipolar depression.

(5) Quetiapine at a dose of 300 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

(6) Quetiapine at a dose of 600 mg/day will be more effective than placebo in improving the patient's clinical status as measured by the CGI-C rating and the change from baseline in the CGI-S in patients with bipolar depression.

(7) Quetiapine at a dose of 300-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

(8) Quetiapine at a dose of 600-mg/day will be no worse than placebo in producing treatment-emergent manic symptoms as measured by the change from baseline in the YMRS in patients with bipolar depression.

(9) Quetiapine at a dose of 300 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

(10) Quetiapine at a dose of 600 mg/day will be similar or better than placebo in producing anxiety symptoms as measured by change from baseline in HAM-A in patients with bipolar depression.

(11) Quetiapine at a dose of 300 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

(12) Quetiapine at a dose of 600 mg/day will be safe and well tolerated compared to placebo in patients with bipolar depression as measured by incidence of adverse events and change from baseline in SAS and BARS.

(13) Quetiapine at a dose of 300 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

(14) Quetiapine at a dose of 600 mg/day will provide improved quality of sleep and quality of life compared to placebo in patients with bipolar depression as measured by the PSQI and Q-Les-Q.

3.2 Overall study design and flow chart

This multicenter, double-blind, randomized, placebo-controlled, double-dummy, parallel group trial will consist of a washout period (from 7 to 28 days depending on the medications involved) followed by 8 weeks of treatment to evaluate the efficacy, safety, and tolerability of quetiapine fumarate in the treatment of a major depressive episode in adult subjects with bipolar disorder. A total of approximately 740 subjects will be screened to obtain 530 enrolled subjects to yield 504 evaluable subjects at approximately 75 centers, with a target enrollment of

8 patients per center (maximum 70). Subjects are required to have a HAM-D (17-item scale) score of $\geq$ 20 and a YMRS of =12 at screening baseline (Visit 1).

The trial comprises the following 2 periods:

- Washout period
  Subjects will undergo HAM-D, SCID, YMRS, and safety evaluations at screen (Visit 1) and if they qualify to participate they will commence a washout of antidepressant, antipsychotic, and mood stabilizer medications. The number of days for washout will depend on the medication they are taking. These medications must be discontinued for a period of at least 7 days prior to randomization (Day 1, Visit 2), with the exception of fluoxetine which must be discontinued for a period of 14 days prior to randomization (Day 1, Visit 2) and depot injections of haloperidol decanoate or fluphenazine decanoate which need 28 days washout before randomization.

- 8-week double-blind randomized treatment period (Weeks 1 to 8)
  Eligible subjects will be randomized on Day 1 (Visit 2) to 1 of 3 treatment groups: quetiapine 300 mg/day, quetiapine 600 mg/day, or placebo. The randomization will be done using a stratification based on diagnosis. Treatment will be administered once daily at bedtime for 8 weeks (Days 1 - 56). Subjects will not receive medication on Day 57 which is only for final assessments. Doses will be titrated to achieve target doses of 300 mg/day within 4 days or 600 mg/day within 8 days. A dose reduction of 100 mg is allowed to improve patient tolerance in each treatment group. MADRS assessments (used to evaluate the primary efficacy variable) will be performed at Days 1, 8, 15, 22, 29, 36, 43, 50, and 57.

Figure 1 Study flow chart

			Treatment										
Day	**Screen**	**Washout [b]**	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9-14**	**15-56**	**57**
	Visit 1		**Visit 2**							**Visit 3**		**Visits 4-9**	**Visit 10**

Dose: 600-mg [a] or placebo group			50-mg	100-mg	200-mg	300-mg	400-mg	400-mg	400-mg	600-mg	600-mg	600-mg	

[a] One time dose reductions of 100 mg/day in 300-mg and 600-mg may occur after Day 8

[b] Washout all psychoactive medications, including antidepressants, antipsychotics, and mood stabilizers for 7 to 28 days depending on the medication involved (eg. haloperidol decanoate or fluphenazine decanoate for 28 days), prior to randomization. Patients on fluoxitine must discontinue for 14 days.

[a] Washout of antidepressants, antipsychotics, mood stabilizer for 7 to 28daysdepending on the medications involved and a 14-day washout for fluoxetine.

[b] Repeat laboratory tests and ECG only if results outside of normal range and clinically significant at Screening

[c] Height and weight on screen and weight on Day 57

[d] Physical exam includes ophthalmoscopic exam on screen

[e] Blood pressure will be obtained in supine and standing positions

3.3 Rationale for study design, doses and control groups

This trial is designed as a double-blind placebo-controlled evaluation of Seroquel as monotherapy in bipolar depression. There is no currently approved compound for use in bipolar depression, nor is there a clinically accepted "gold standard". Conventional antidepressants have fallen out of favor because of their ability to induce manic symptoms. Antidepressants approved forthe treatment of unipolar depression have not been demonstrated to improve mood symptoms relative to placebo (Nemeroff et al Am J Psychiatry 158:6 June 2001). Moreover, there is a high placebo response rates of approximately 30% found in bipolar depression trials. Thus, the use of a placebo treatment arm for comparison is clinically justified.

Trial treatment will be administered as quetiapine monotherapy in order to more clearly identify a treatment effect of quetiapine on bipolar depression. Quetiapine fumarate will be administered once daily at bedtime. The current label specifies twice daily (BID) but a double-blind crossover study in bipolar patients indicated that once daily (qd) is well tolerated and as effective as BID dosing (Chengappa, 2002).

A period of 7 to 28 days is adequate for washout of most psychoactive medications including antidepressants, antipsychotics (including depot agents), and mood stabilizers to ensure that subjects are stable and continue to have adequate depressive symptoms requiring treatment, prior to randomization into the trial. The double-blind treatment period of 8 weeks is consistent with the time period that is required to see a clinically meaningful response in depressive symptoms.

The trial is designed as a fixed-dose evaluation due to the failure of flexible dose regimens in other psychiatric disorders. The dosages are based on clinical trial data with quetiapine in patients with a mood disorder. In the QUEST trial, the average dose of quetiapine in patients with a primary mood disorder (N=316) was approximately 250 mg/day at 16 weeks. In 20 patients with bipolar or schizoaffective disorder treated with open-label quetiapine, the mean dose was approximately200 mg/day (Sajatovic). Based on this data, 300 mg/day administered as monotherapy is an appropriate low-dose treatment arm, and 600 mg/day is an appropriate high-dose treatment arm that should exhibit efficacy without a high rate of AEs or noncompliance.

The MADRS is a standardized, well-validated measure of depressive symptoms that is sensitive to treatment effects in depressed outpatients.

3.4 Selection of study population

3.4.1 Study selection record

Investigators must keep a record of subjects who underwent screening but were not randomized into the trial.

3.4.2 Inclusion criteria

At screen (Visit 1) subjects must fulfill all of the following criteria:

(1) Documented ability to provide informed consent before beginning any study-specific procedures.

(2) Male and female patients between 18 and 65 years of age, inclusive

(3) Females of childbearing potential, be using a reliable method of contraception. Reliable methods include hormonal contraceptives (eg, oral contraceptive or long-term injectable or implantable hormonal contraceptive), double-barrier methods (eg, condom and diaphragm, condom and foam, condom and sponge), intrauterine devices, and tubal ligation

(4) Women must have a negative pregnancy test

(5) Meets DSM-IV criteria for bipolar disorder I or bipolar II, most recent episode depressed (296.5x and 296.89x), confirmed by the amended version(by Dr. Michael First) of the Structured Clinical Interview for DSM-IV (SCID) as administered by an AstraZeneca approved clinician with a signed confirmation by the Principal Investigator

(6) Outpatient status

(7) HAM-D (17-item) total score of 20 or greater

(8) HAM-D item 1 (depressed mood) score ≥2

(9) YMRS total ≤12

At randomization (Visit 2) subjects must fulfill the following criteria:

(1) HAM-D (17-item) total score of 20 or greater

(2) HAM-D item 1 (depressed mood) score ≥2

(3) YMRS total ≤12

3.4.3 Exclusion criteria

Any of the following is regarded as a criterion for exclusion from the study:

(1) Patients with a current Axis I disorder other than bipolar disorder within 6 months of screening

(2) Patients whose current episode of depression exceeds 12 months or is less than 4 weeks

(3) History of non-response to an adequate trial (6 weeks) of more than 2 classes of antidepressants during their current episode

(4) Patients who meet DSM-IV criteria for substance dependence, for any substance except nicotine, within 12 months of screening

(5) Patients with a positive urine toxicology screen for illicit substances of abuse

(6) Patients who are unable to discontinue all psychoactive medications (excluding prn benzodiazepines), including antidepressants, antipsychotics, and mood stabilizer, at least 7 days prior to randomization and consistent with the pharmacokinetics of the drug

- Patients treated with fluoxetine who have not discontinued this medication for at least 14 days prior to randomization.
- Patients treated with haloperiodol decanoate or fluphenazine decanoate who have not discontinued these medications 28 days prior to randomization.

(7) Patient who have not discontinued the use of potent P450 inhibitors and inducers (See Section 4.3, Table 13)

(8) Patients who in the investigators opinion will require initiation of psychotherapy during the study period. Note: ongoing psychotherapy for a minimum of 3 months may continue.

(9) Patients who, in the investigator's judgment, pose a current serious suicidal or homicidal risk at Visit 1 (HAM-D item 3 score of 3 or greater), or have made a suicide attempt within the past 6 months

(10) Patients with a history of clinically significant cardiac, renal, neurologic, cerebrovascular, metabolic, or pulmonary disease, or other disease or clinical finding that is unstable or that, in the opinion of the investigator, would be negatively affected by trial medication or that would affect trial medication

(11) Patients who have had a myocardial infarction within 1 year before Visit 1

(12) Patients with clinically significant abnormal laboratory findings at Visit 1

(13) Patients with renal impairment (serum creatinine ≥1.5 mg/dL) or hepatic impairment (ALT or AST 3 times the upper limit of normal)

(14) Patients whose TSH is ≥10% over the upper normal limit. Patients maintained on thyroid medication must be euthyroid for a period of at least 3 months before Visit 1

(15) Patients with clinically significant abnormalities on ECG

(16) Women who have a positive human chorionic gonadotropin (HCG) pregnancy test at Visit 1 or who are lactating or planning to become pregnant during the course of the study

(17) Patients who have participated in a clinical trial of an investigational drug within the past 3 months

(18) Patients who, in the opinion of the investigator, would be non-compliant with the visit schedule or study procedures

(19) History of orthostatic hypotension or conditions that would predispose them to hypotension (eg dehydration, hypovolemia)

(20) Known history of intolerance, hypersensitivity, or lack of response to quetiapine or any of the components of Seroquel tablets, as judged by the investigator Restrictions

Subjects will be required to adhere to the following special restrictions:

1) Use of any psychoactive drugs including antidepressants, hypnotics (with the exceptions noted in Section 4.3), mood stabilizing drugs, and antipsychotics is not permitted from a period of 5 elimination half-lives (28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

2) Use of cytochrome P450 3A4 inducers and potent inhibitors are not permitted from 14 days prior to randomization to end of study (see Table 13)

3.4.3.1 Criteria for discontinuation

Subjects may be discontinued from study treatment and assessments at any time, at the discretion of the investigator(s). Specific reasons for discontinuing a subject from this study are:

1. Withdrawal of informed consent

2. Worsening psychiatric symptoms such that the symptoms constitute a danger to themselves or to others

3. Use of psychotropic medications at any time during the double-blind treatment period.

4. Pregnancy at any time during the double-blind treatment period.

5. Clinically significant or serious adverse event that would not be consistent with continuation in the study, as determined by the investigator, AstraZeneca, or the subject.

3.4.3.2 Voluntary discontinuation by a subject

Subjects are free to discontinue their participation in the study at any time, without prejudice to further treatment. Subjects who discontinue from the study should always be asked about the reason(s) for their discontinuation and about the presence of any adverse events. They should be seen and assessed by an investigator(s) (see Section 3.4.4.4). Adverse events should be followed up and any diary cards, questionnaires (eg, for Quality of Life assessments) and investigational products should be returned by the subject.

3.4.3.3 Incorrectly enrolled or randomized subjects

Incorrectly enrolled subjects will be discontinued from further study treatment and assessments. If a subject is given the incorrect randomized treatment, the subject should be continued on the treatment dispensed and Interactive Clinical Technologies, Inc. (ICTI), the vendor providing the randomization patient assignment) should be notified of the error. The next patient randomized at the site will be assigned an appropriate kit number by ICTI, accounting for the error.

3.4.3.4 Procedures for discontinuation

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- Physical examination
- Vital signs and weight
- 12-lead ECG
- HAM-D
- MADRS
- ICI-D

- YMRS
- HAM-A
- CGI-C
- CGI-S
- SAS
- BARS
- PSQI
- Q les Q
- Adverse events assessment

Psychiatric assessments (HAM-D, MADRS, YMRS, HAM-A, CGI-C, CGI-S, Q les Q, and PSQI) should not be performed on subjects who have missed 72 hours of study drug before any study visit. Due to the pharmacokinetic profile of quetiapine, these assessments are of questionable clinical accuracy.

3.5 Treatments

3.5.1 Investigational products

3.5.1.1 Identity of investigational product and comparators

Investigational product will consist of 25-mg , 100-mg, and 200-mg tablets of quetiapine fumarate and matching placebo tablets as shown in Table 3.

Table 3 Trial medication

Tablet strength	Formulation number	Tablet color
25-mg quetiapine	F12804	peach
25- mg placebo	F12636	peach
100-mg quetiapine	F12689	yellow
100-mg placebo	F12637	yellow
200-mg quetiapine	F12690	white
200-mg placebo	F12638	white

3.5.1.2 Doses and treatment regimens

Quetiapine and placebo for each trial center will be packaged in blister cards. The 8-week supply will consist of 8 double-blind blister cards. The 8 double-blind blister cards will be packaged in subject-specific cartons.

Trial medication will be provided for each subject in an 8-card carton that contains the following:

- 1-week titration double-blind treatment cards for Days 1-7
- seven 1-week double-blind treatment cards for Days 8-56, with individual cards provided for treatment Days 8-14, 15-21, 22-28, 29-35, 36-42, 43-49, and 50-56.
  Each one-week blister card will include a 2-day treatment overage to accommodate visit schedules.

The Week 1 titration card will consist of 25 mg tablets, 100-mg tablets, and 200-mg tablets or matching placebo, as described below, for each of the 300 mg/day and 600 mg/day treatment groups and placebo treatment group.

Blister cards for Weeks 2 through 8, for each treatment group, will consist of 9 days of dosing with the same number of pills for each group (300-mg,600-mg, and placebo) respectively. The cards for each treatment group will consist of 2 yellow tablets and 2 white tablets per day at bedtime.

Quetiapine or placebo will be administered once a day at bedtime with dose titration to reach a target dose of 300 mg/day by Day 4 in the 300 mg/day treatment group and 600 mg/day by Day 8 in the 600 mg/day group. The schedule for quetiapine or placebo administration is shown in Tables 4, 5, and 6.

Table 4 Dose administration schedule for 300-mg double-blind quetiapine

Trial Day	Quetiapine 300 mg/day and placebo				
	Quetiapine 25 mg	**Quetiapine 100 mg**	**Placebo 100 mg**	**Quetiapine 200 mg**	**Placebo 200 mg**

Day 7	0	2 tablets/100-mg	1 tablet/200-mg
Day 8	0	2 tablets/100-mg	2 tablets/400-mg
Days 9-56	0	2 tablets/100-mg	2 tablets/400-mg

Dosing Reduction

Dose reductions for intolerability will be allowed after Day 8. In the 300-mg/day group, dose reductions of 100 mg/day will be achieved by reducing the dose by one 100-mg tablets. In the 600-mg/day group, a dose reduction of 100 mg/day will be achieved by reducing the bedtime dose by one 100-mg tablets active drug. This dose reduction can occur anytime after Day 8. Each column in the blister packs will be numbered 1-4. By Day 6 columns 1 and 2 of the blister packs will each contain a 100-mg tablet. In both the 300-mg /day group and the 600-mg/day group, column 1 will contain active medication thus ensuring that by eliminating the first column (column #1) of medication they are reducing their dose by 100-mg. Each tablet in the placebo treatment group will also indicate the same corresponding numbers (columns #1-4) as the active treatment groups even though no active product is packaged. This will ensure the blind is maintained.

3.5.1.3 Labeling

All trial supplies will be provided by AstraZeneca.

The blister cards Days 1- 56 will be supplied in subject-specific cartons. Each blister card will be labeled with a two-panel, double-blind label. The left portion of the label will remain on the blister card. The right portion of the label will be affixed to the appropriate Case Report Form (CRF) as part of the individual's permanent record. The label will contain at least the following information: trial number, code assignment and storage condition. The carton for the 8 blister cards for Days 1-56 will be labeled with a single-panel double-blind label. The label will contain at least the following information: trial number, storage conditions, and instructions to dispense according to protocol.

3.5.1.4 Storage

All investigational products must be kept in a secure and locked location, at room temperature and protected from light and moisture.

3.5.1.5 Accountability

The investigational materials are to be prescribed only by the investigator or the sub-investigators named in Form FDA-1572. Under no circumstances will the investigator allow the investigational drug to be used other than as directed by the protocol without prior AstraZeneca approval.

The investigator must maintain accurate records accounting for the receipt of the investigational materials (ICTI provides a acknowledge the receipt of drug shipment module for this purpose) and for the disposition of the material. This record keeping consists of a dispensing record that includes the identification of the person to who the drug is dispensed, the quantity and the date of dispensing, and documentation of any unused drug returned to the investigator. This record is in addition to any drug accountability information recorded on the subject's hospital or clinic chart.

Starting with Week 1, each patient will return the blister card for the preceding week to the clinic. The clinic will tabulate the returned pills to aid in drug accountability.

At the termination of the study or at the request of the sponsor, the Clinical Research Associate must return any unused study supplies to Universal Systems Incorporated (USI), at the address listed below, for destruction. This return will be documented on an Investigational Product Return Invoice supplied by AstraZeneca.

USI
2084-900 Lake Industrial Court
Conyers, GA 30013

3.5.2 Method of assigning subjects to treatment groups

This trial will be established with a non-specific labeling (NCSL) randomization which will be stratified by bipolar type. Randomization to trial treatment will be done via an Interactive Voice Response System (IVRS) at ICTI on Day 1 (Visit 2) in balanced blocks within each stratum in order to ensure relative balance among treatment groups and strata (Bipolar I and Bipolar II)in terms of total number of subjects. The randomization schedule will be created under the auspices of AstraZeneca Quantitative Decision Sciences Group and will provide allocation of subject numbers to the treatment regiments. Number and size of tablets will be identical for the 3 treatment arms. Clinical supplies will contain a 4-digit subject number which is allocated to the treatment arm through the randomization scheme. A separate randomization will be used to provide kits of packaged drugs to the sites. The IVRS system at ICTI will allocate a kit number at the site for the treatment assigned through the stratified randomization.

Subject eligibility will be established before treatment randomization. Subjects will be randomized centrally sequentially within the stratum, as subjects are eligible for enrollment/randomization. If

a subject discontinues from the study, the subject number will not be reused, and the subject will not be allowed to re-enter the study.

The randomization is centralized and the assigned randomized patient number and associated kit numbers will not be sequential within a site.

3.5.3 Blinding and procedures for unblinding the study

3.5.3.1 Methods for ensuring blinding

All packaging will be identical with placebo and active tablets identical in size and color. The number of tablets dispensed on each card will be identical across all treatment arms.

The randomization for the kit assignments will be generated by the study statistician and provided directly to packaging with a copy going to ICTI Clinical Supplies Management Group. The stratified patient randomization will be generated by an AstraZeneca randomization staff member not associated with the trial and will be provided directly to ICTI for incorporation into the IVRS system. No member of the study team in AstraZeneca, at investigational sites or the CRO organization handing data will have access to the randomization scheme during the conduct of the study.

3.5.3.2 Methods for unblinding the study

Individual treatment codes, indicating the treatment randomization for each randomized subject, will be available to the investigator(s) or pharmacists at the study center through the use of a concealed panel on the label.

The treatment code must not be broken except in medical emergencies when the appropriate management of the subject necessitates knowledge of the treatment randomization. The investigator(s) must document and report to AstraZeneca any breaking of the treatment code. AstraZeneca retains the right to break the code in order to report serious adverse events to regulatory authorities.

Treatment codes will not be broken for the planned analyses of data until all decisions on the evaluability of the data from each individual subject have been made and documented.

3.5.4 Treatment compliance

Compliance will be assessed based on returned tablet counts. The percent compliance will be calculated as the number of tablets taken (dispensed - returned) divided by the prescribed number of tablets (number of days times number of tablets per day) expressed as a percent. Based on this

calculation a subject with at least 75% compliance with study medication during study participation will be classified as compliant.

Furthermore, if there are any significant irregularities in compliance, in the opinion of the investigator, the patient should be withdrawn from the study.

4 CONCURRENT TREATMENT

4.1 General medications

Nonpsychotropic medication, including over-the counter medications, taken by the subject before entry into the trial may be continued during the trial. Medications required to treat illnesses or complaints that occur during the trial may be used at the discretion of the investigator. Use of cytochrome P450 inducers and potent inhibitors is restricted (see Table 13 below).

Women who enter the trial with an intrauterine device in place, using oral contraceptives, or using injectable or implantable hormonal agents designed to prevent pregnancy may continue these treatments throughout the trial.

The specific type of medication (trade or generic name), the indication for use, and the dates of usage should be reported on the CRF entitled Concurrent Treatment.

Medication which is considered necessary for the subject's safety and well being may be given at the discretion of the investigator(s). The administration of all medication (including investigational products) must be recorded in the appropriate sections of the case report form (CRF).

4.2 Use of psychoactive medications

The use of psychoactive drugs other than those specifically allowed during the trial (ie, lorazepam and zolpidem tartrate) is restricted (see Section 4.3, Table 13).

4.3 Summary of permitted concurrent medications

Medications specifically prohibited or restricted, and those permitted during the trial are listed in Table 13

Table 13 Permitted, restricted, and prohibited medications

Use category	Type of medication
Permitted	Previous medications for medical, nonpsychiatric illnesses Oral contraceptives and contraceptive devices
Restricted	Zolpidem tartrate 5-10 mg at bedtime for insomnia Lorazepam 1-3 mg per day for severe anxiety These drugs may be prescribed during the first 3 weeks of the study as long as they do not interfere with any assessments
Prohibited	Potent cytochrome P450 3A4 inducers (including but not limited to barbiturates, carbamazepine, rifampin, and St John's Wort) Potent cytochrome P450 3A4 inhibitors (including but not limited to ketoconazole, itraconazoole, fluconazole, erythromycin, clarithromycin, troleandomycin, indinavir, nelfinavir, ritonavir, and saquinavir) Antipsychotic medications (including but not limited to phenothiazines, risperidone, olanzapine, ziprasidone, clozapine, loxapine, thiothixene, molindone) Use of any psychoactive drugs including antidepressants, hypnotics, mood stabilizing drugs, and antipsychotics from a period of 7 to 28 days depending on the medications involved (eg. 28 days for haloperidol decanoate and fluphenazine decanoate) prior to randomization to end of study. Fluoxetine must be discontinued at least 14 days prior to randomization.

5 STUDY MEASUREMENTS AND ENDPOINTS

5.1 Primary endpoint

The primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score. This endpoint is used as the basis for the sample size calculation, as provided in Section 6.1.

5.2 Screening and demographic measurements

The following data are to be collected at screening:

- date of birth, sex, and race
- vital signs, height, weight
- supine and standing blood pressure and pulse
- significant medical history
- physical examination including ophthalmoscopic exam
- 12-lead electrocardiogram
- clinical chemistry and hematology
- pregnancy test (if female of childbearing potential)
- HAM-D assessment
- YMRS
- DSM-IV diagnosis, based on SCID assessment

5.3 Efficacy measurements and endpoints

The following assessments will be used to evaluate efficacy:

- change from baseline to final assessment in MADRS total score
- percentage of subjects with $\geq$50% reduction from baseline in MADRS total score at final assessment
- the change from baseline in each assessment (observed cases) in the MADRS total score

- the change from baseline to each assessment (observed cases) and final assessment in the CGI-S
- the CGI-C at final assessment
- the change from baseline to each assessment (observed cases) and final assessment in the YMRS
- the change from baseline to each assessment (observed cases) and final assessment in the total HAM-A

Evaluation using each of these scales should be performed by the same trained/certified staff member who has been approved by AstraZeneca for all assessments of the scale for an individual subject.

5.3.1 Summary of efficacy objectives and endpoints

Table 14 shows how the efficacy endpoints of this study relate to the study objectives.

Table 14 Efficacy objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Primary	Primary measure		
evaluate the efficacy of quetiapine compared to placebo in the treatment of a major depressive episode in patients with bipolar disorder after receiving treatment for up to 8 weeks	change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score; ls means, 95% CI at final assessment ; descriptive statistics by statum	ANCOVA for the change from baseline to final assessment for total MADRS score. Pair-wise comparisons of each dose with placebo using step up procedure	Reductions in MADRS compared with placebo will indicate doses which are effective in treating depressive episode
	Secondary measure		
	percentage of subjects meeting the MADRS responder criteria ; n, percentage responders at each assessment, final assessment ; descriptive statistics by statum	Logistic model	Higher response rates will indicate doses which are effective in treating depressive episode in treating depressive episode
	change from baseline to each assessment for the MADRS total score, and	ANCOVA for the change from baseline to each assessment	Reductions in scales compared with placebo will indicate doses

	each assessment and final assessment Clinical Global Impression - Severity (CGI-S); ls means, 95% CI; descriptive statistics by stratum	and final assessment (LOCF) for CGI-S. Pair-wise comparisons of each dose with placebo	which are effective in treating depressive episode
	Clinical Global Impression - Change (CGI-C); ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the CGI-C for each assessment and final assessment (LOCF). Pair-wise comparisons of each dose with placebo	Greater improvements in CGI-C will indicate doses which are effective compared with placebo
Secondary			
evaluate the efficacy of quetiapine compared to placebo in the incidence of treatment -emergent mania	change from baseline to each assessment and final assessment in the YMRS total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for YMRS total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	No significant increase in the YMRS compared to placebo will indicate doses which do not result in treatment-emergent mania
evaluate the effect of quetiapine compared to placebo on symptoms of anxiety	change from baseline to each assessment and final assessment in the HAM-A total score; ls means, 95% CI; descriptive statistics by stratum	ANCOVA for the change from baseline to each assessment and final assessment for HAM-A total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Improvement in the HAM-A compared to placebo will indicate efficacy in treating anxiety component of the depressive episode

The methods for collecting efficacy data are presented below.

5.3.2 Montgomery-Asberg Depression Rating Scale (MADRS)

5.3.2.1 Methods of assessment

The MADRS will be performed at each visit during the trials using the validated MADRS instrument by certified staff at each site.

5.3.2.2 Calculation or derivation of endpoint

The change from baseline to final LOCF will be calculated for total MADRS score. A subject will be classified as a responder if the % change from baseline, calculated as the (change from baseline divided by the baseline) multiplied by 100 indicates a ≥ 50% reduction in baseline total MADRS score.

5.3.3 Hamilton Rating Scale for Depression (HAM-D)

5.3.3.1 Methods of assessment

The HAM-D will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-D and HAM-D item #1.

5.3.4 Clinical Global Impression - Severity (CGI-S)

5.3.4.1 Methods of assessment

The CGI-S will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.4.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in CGI-S.

5.3.5 Clinical Global Impression - Change (CGI-C)

5.3.5.1 Methods of assessment

The CGI-C will be performed at scheduled visits during the trial by a trained professional at each site.

5.3.5.2 Calculation or derivation of endpoint

The CGI-C is a measure of change from baseline and therefore requires no further derivation.

5.3.6 Hamilton Rating Scale for Anxiety (HAM-A)

5.3.6.1 Methods of assessment

The HAM-A will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.6.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in HAM-A.

5.3.7 Young Mania Rating Scale (YMRS)

5.3.7.1 Methods of assessment

The YMRS will be performed at scheduled visits during the trial by a certified staff member at each site.

5.3.7.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in YMRS.

5.4 Safety measurements and endpoints

The following measurements will be used to assess safety:

- adverse event reporting (both general adverse events and serious adverse events), coded using MedDRA system of nomenclature
- fasting clinical laboratory tests (including chemistry and hematology)
- vital signs(taken in both the standing and supine positions)
- ECG tests
- Simpson-Angus Scale
- Barnes-Akathesia Rating Scale

5.4.1 Summary of safety objectives and endpoints

Table 15 shows how the safety endpoints of this study relate to the study objectives.

Table 15 Safety objectives and endpoints relating to each objective

Objective	Endpoints and statistic	Planned analysis	Significance of results
evaluate the safety and tolerability of quetiapine in the treatment of patients with bipolar depression	incidence and nature of adverse events during double-blind treatment ; n, % incidence per event, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	no new safety issues identified
	incidence of drug-related adverse events during double-blind treatment ; n, % incidence; titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of subject withdrawal due to adverse events; n, % withdrawn, placebo run-in, titration week and 7 weeks of therapy	descriptive statistics only	
	incidence of clinically significant changes in vital signs; n, % at each assessment and final visit	descriptive statistics only	
	change in the SAS total score ; mean change, standard deviation, baseline to final assessment (LOCF)	descriptive statistics only	
	the change in BARS total score	descriptive statistics only	
	incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment	descriptive statistics only	

The methods for collecting safety data are described below.

5.4.2 Adverse Events

5.4.2.1 Definitions

The definitions of adverse events (AEs), serious adverse events (SAEs) and other significant adverse events (OAEs) are given below. It is of the utmost importance that all staff involved in the study is familiar with the content of this section. The principal investigator is responsible for ensuring this.

(a) Adverse Event

An adverse event is the development of an undesirable medical condition or the deterioration of a pre-existing medical condition following or during exposure to a pharmaceutical product, whether or not considered causally related to the product. An undesirable medical condition can be symptoms (eg, nausea, chest pain), signs (eg, tachycardia, enlarged liver) or the abnormal results of an investigation (eg, laboratory findings, electrocardiogram). In clinical studies, an AE can include an undesirable medical condition occurring at any time, including run-in or washout periods, even if no study treatment has been administered.

(b) Serious Adverse Event

A serious adverse event is an AE occurring during any study phase (ie, run-in, treatment, washout, follow-up), and at any dose of the investigational product, comparator or placebo, that fulfills one or more of the following criteria:

- results in death
- is immediately life-threatening
- requires in-patient hospitalization or prolongation of existing hospitalization
- results in persistent or significant disability or incapacity
- is a congenital abnormality or birth defect
- is an important medical event that may jeopardize the subject or may require medical intervention to prevent one of the outcomes listed above?

The causality of SAEs (ie, their relationship to study treatment) will be assessed by the investigator(s), who in completing the relevant case report form must answer “yes” or “no” to the question “Do you consider that there is a reasonable possibility that the event may have been caused by the drug?” For further guidance on the definition of a SAE and a guide to the interpretation of the causality question, see Appendix F.

(c) Other significant adverse event

An AstraZeneca expert will identify OAEs during the evaluation of safety data for the Clinical Study Report. Significant adverse events of particular clinical importance, other than SAEs and those AEs leading to discontinuation of the subject from study treatment, will be classified as OAEs. Examples of these are marked hematological and other laboratory abnormalities, and certain events that lead to intervention (other than those already classified as serious), dose reduction or significant additional treatment. For each OAE, a narrative will be written and included in the Clinical Study Report.

5.4.2.2 Recording of adverse events

All AEs and SAEs that occur before and during treatment, whether or not related to the study drug, must be recorded on the CRF provided by the sponsor. Following cessation of treatment, SAEs, whether or not related to the study drug, must be collected for 7 days and recorded on the CRF provided by the sponsor. If any SAEs are recorded during the 7 day follow-up period, all concomitant medications taken during the 7 day follow-up period should also be recorded on the CRF. A description of the event, its intensity, duration, action taken (eg, treatment and follow-up tests), and outcome should be given, along with the investigator's causality assessment of the relationship of the event to the study drug. If a diagnosis of the subject's condition has been made, then the diagnosis should be recorded as the SAE. In instances of well recognized syndromes (eg, fever, runny nose, cough) they can be recorded as "flu". However, if a diagnosis of the subject's condition has not been made, or if the individual symptoms are not well recognized, then the individual symptoms should be recorded separately.

In general, abnormal laboratory tests or vital signs should not be reported as AEs unless they fulfill the criteria for an SAE or lead to discontinuation. If an abnormal laboratory test result or vital sign is associated with clinical signs and symptoms, the sign or symptom should be reported as an AE, and the associated test result or vital sign should be recorded on the appropriate CRF.

A causality assessment must be recorded for all AEs. The CRF asks the question, "In your medical judgement, is there a reasonable possibility that the event may have been caused by the study therapy?" If there is any valid reason, even if undetermined or untested, for suspecting a possible cause-and-effect relationship between the study drug and the occurrence of the AE, then this should be answered "yes." Otherwise, if no valid reason exists for suggesting a possible relationship, then this should be answered "no." If more than 1 AE is identified, a causality assessment must be made for each AE.

It is important to distinguish between serious and severe AEs. Severity is a measure of intensity whereas seriousness is defined by the criteria in Section 5.4.2.1 b. An AE of severe intensity need

not necessarily be considered serious. For example, nausea which persists for several hours may be considered severe nausea, but not a SAE. On the other hand, a stroke which results in only a limited degree of disability may be considered a mild stroke but would be a SAE.

Any detrimental change in the subject's condition after the subject enters the study will be discussed with the investigator. Where the detrimental change is considered by the investigator to constitute a progression or relapse of bipolar depression or a lack of efficacy, then this will not be considered an AE even where this necessitates or prolongs hospitalization. When there is deterioration in the condition for which the medicine is being used, there may be uncertainty as to whether this is lack of efficacy or an AE. In such cases, unless AstraZeneca or the reporting physician considers that the medicine contributed to the deterioration, the deterioration should be considered lack of efficacy. However, if it is believed that the medicine may have contributed to the deterioration, then this should be treated as an AE.

Study drug abuse is an SAE, even when there are no symptoms or additional AEs and should be reported according to the guidelines in Section 5.4.2.3. Misuse of study drug is an AE but is not considered an SAE unless accompanied by serious sequelae.

Should an overdose occur, it must be reported in accordance with the procedures described in Section 10.3 Procedures in case of overdose. All overdoses, with or without associated symptoms, should be reported as AEs.

Suicide and attempted suicide, irrespective of the method, but occurring in connection with the use of study drug, should be reported as AEs (serious or non-serious). This event should be identified as suicide or attempted suicide, and the method of the suicide or attempt should be provided. If an attempted suicide meets the criteria for an SAE, the event must be reported according to the guidelines in Section 10.4.

Should a pregnancy occur, it must be reported in accordance with the procedures described in Section 10.5. Procedures in case of pregnancy. Pregnancy in itself is not regarded as an AE unless there is a suspicion that an investigational product may have interfered with the effectiveness of a contraceptive medication.

5.4.2.3 Reporting of serious adverse events

Investigators and other site personnel must inform appropriate AstraZeneca representatives of any SAE that occurs in the course of the study within 1 day (i.e. immediately but no later than the end of the next business day) of when he or she becomes aware of it.

The AstraZeneca representative will work with the investigator to compile all the necessary information and ensure that the appropriate AstraZeneca Drug Safety Department receives a report by day 1 for all fatal and life-threatening cases and by day 5 for all other SAEs.

Follow-up information on SAEs must also be reported by the investigator within the same time frames.

If a non-serious AE becomes serious, this and other relevant follow-up information must also be provided to AstraZeneca within 1 day as described above.

After initial notification, the AstraZeneca representatives have 4 days to work with the investigator to compile all the necessary information to ensure that the appropriate AstraZeneca Drug Safety Department receives a complete report by day 5. Follow-up information on SAEs should also be reported by the investigator within the same time frames. If a non-serious case becomes serious, this and other relevant follow-up information should also be provided to AstraZeneca within 1 day as described in the paragraph above

All SAEs have to be reported, whether or not considered causally related to the investigational product. All SAEs will be recorded in the case report form. The investigator is responsible for informing the Ethics Committee and/or the Regulatory Authority of the SAE as per local requirements.

5.4.3 Laboratory safety measurements and variables

Blood (under fasting conditions) and urine specimens will be collected for laboratory test analysis and these samples will be processed by a central laboratory (Quintiles Central Laboratory).

5.4.3.1 Methods of assessment

- Fasting hematology: hemoglobin, hematocrit, red blood cell count, total and differential white blood cell counts and platelet count
- Fasting clinical chemistry: total bilirubin, alkaline phosphatase, alanine transaminase(ALT), aspartate transaminase(AST), sodium, potassium, chloride, creatinine, glucose, insulin, bicarbonate, high-density lipoprotein cholesterol, triglycerides, low-density lipoprotein cholesterol and total cholesterol
- Thyroid function tests: thyroid stimulating hormone (TSH), Triiodothyronine resin uptake (T3RU), and total thyroxine (T4)
- Serum pregnancy tests
- Urine toxicology screen

5.4.3.2 Calculation or derivation of endpoints

Change from baseline will be derived for all subjects who have a screening laboratory test and a final laboratory test. The change from baseline is the final test value minus the screening test value. Laboratory test values will also be compared to the laboratory standard normal ranges and flagged with H or L if they are outside of the normal range. In addition, treatment emergent laboratory changes, identified using computerized methods to compare results or changes from baseline to standard extended ranges will be flagged at the subject and test level.

5.4.4 Vital signs measurement

5.4.4.1 Methods of assessment

A standard blood pressure cuff will be used to obtain systolic and diastolic blood pressure. The assessment will be done first with the subject in the supine position for 3 minutes and again within 3 minutes of the subject attaining a standing position. Pulse will be measured for 1 minute.

5.4.4.2 Calculation or derivation of endpoints

Change from baseline will derived be as the value at the visit minus the screen value for the same assessment and position. In addition the change within a visit between the standing and supine blood pressure assessments will be calculated for both systolic and diastolic blood pressures. This difference will be calculated as supine minus standing . A subject will be classified as having calculated postural hypotension if either the systolic blood pressure difference indicates a decrease >20 mmHg or the diastolic blood pressure difference indicates a decrease >15 mmHg.

5.4.5 ECG safety measurements and variables

5.4.5.1 Methods of assessment

A 12 lead ECG assessment will be done using an ECG machine compatible with the requirements for eResearch the central evaluation laboratory. The central laboratory will supply the interval data, rates and standard interpretation of the ECG test results.

eResearch
30 south 17th Street
Philadelphia, PA 19103-4001

5.4.5.2 Calculations and derivations of endpoint

Change from baseline for interval data and rate data will be derived by subtracting the screen value from the final assessment value. Values outside the extended range in Appendix XX will be flagged.

5.4.6 Simpson-Angus Scale (SAS)

5.4.6.1 Methods of assessment

The SAS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.6.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.4.7 Barnes-Akathisia Rating Scale (BARS)

5.4.7.1 Methods of assessment

The BARS instrument will be administered by study staff to assess EPS symptoms in the subject.

5.4.7.2 Calculations and derivations of endpoint

Changes from baseline score will be assessed.

5.5 Quality of Life endpoint

The following assessment will be used to assess the effect of quetiapine compared with placebo on quality of life as assessed by:

- the PSQI
- the short form Q-Les-Q

5.5.1 Summary of quality of life objectives and endpoints

Table 16 shows how the efficacy endpoints of this study relate to the study objectives.

Table 16 Quality of life objectives and endpoints relating to each objective

Objective	Endpoint(s) and statistics	Planned analysis	Significance of results
Secondary	Secondary measure		
evaluate the effect of quetiapine compared to placebo on quality of sleep	change from baseline to final assessment in PSQI; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for PSQI total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Reduction in PSQI compared with placebo indicates improvement of sleep quality
evaluate the effect of quetiapine compared to placebo on the overall quality of life	change from baseline to final assessment in Q-Les-Q; ls means, 95% CI	ANCOVA for the change from baseline to each assessment and final assessment for Q-Les-Q total score, with MADRS score as covariate. Pair-wise comparisons of each dose with placebo	Increase in Q-Les-Q compared with placebo indicates improvement of overall quality of life

The methods of collecting quality of life data are described below.

5.5.2 PSQI

5.5.2.1 Methods of assessment

The PSQI will be performed at scheduled visits during the trial by a patient at each site. The 9 self-rated questions will be incorporated into 7 component scores which are added together to yield one total "global" score. Higher scores indicate more severe difficulties in sleep quality.

5.5.2.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the PSQI.

5.5.3 Q-Les-Q

5.5.3.1 Methods of assessment

The Q-Les-Q is a patient self assessment questionnaire which will be completed at scheduled visits during the trial by a patient at each site. The short form has 14 self-rated questions, the first 12 will be incorporated into a total score. Higher scores indicate better quality of life.

5.5.3.2 Calculation or derivation of endpoint

The change from baseline will be calculated at each assessment (observed cases) and final assessment in the Q-Les-Q.

5.6 Interactive Computer Interview for Depression (ICI-D)

Participating in the Interactive Computer Interview for Depression (ICI-D) is voluntary for all the sites. Participation by the subjects at these sites is also voluntary. At each study visit, subjects at all participating sites will complete a computer-based self-report measure of depression severity (the interactive computer interview or ICI-D) after completing the MADRS. Raters or other site staff will first enter the subject's MADRS scores into a computer supplied by the sponsor. Subjects will then complete a computer-based self-report measure of depression severity . This measure will not be considered primary or source data, and will be recorded on a coded, anonymized form. This data will be securely transmitted to Concordant Rater Systems (CRS) for ongoing quality control.

For quality assurance purposes, if an above-threshold variance is detected between the ICI-D and the MADRS on individual items or the overall score, a CRS clinician (Ph.D. or MD) will contact the applicable rater for a monitoring consultation. The CRS clinician will discuss possible reasons for the discrepancy, review conventions for scoring and offer additional training if necessary.

The ICI-D will also provide an additional check of the patient's suicide status. The ICI-D will alert the rater if the patient reports suicidal plans. If the patient did not verbalize these thoughts during the interview /assessment process, the rater could then take the appropriate clinical steps.

A standard operating procedure for ICI-D will be provided to the sites.

5.7 Genetic sampling and storage

There will be no genetic sampling in this trial.

5.8 Volume of blood sampling and handling of biological samples

The total volume of blood that will be drawn from each subject in this study is as follows:

Table 17 Volume of blood to be drawn from each subject

Assessment		Sample volume (ml)	N of samples	Total volume (ml)	
				Women	Men
Safety	Clinical chemistry				
	Hematology	18	2	36	36
	Serum Pregnancy[a]	2	1	2	
Total				38	36

[a] Women only.

Sample handling and storage will be defined by the central laboratory which will be handling the analysis and reporting or results from samples.

6 DATA MANAGEMENT

Case Report Forms (CRFs) will be provided for recording of data. The forms will be in triplicate with carbonless paper. Data will be recorded legibly onto the CRFs with black ink, preferably with a ballpoint pen. If any data are not available, omissions will be indicated on the CRFs. Corrections should be made legibly and be initialed and dated. Correction fluid or covering labels must not be used. The top original and the first copy of the completed form will collected and returned to AstraZeneca/AstraZeneca's agent and the second copy will be retained by the investigator.

Data received electronically by AstraZeneca from a validated source will be loaded directly into the trial database for analysis.

7 STATISTICAL METHODS AND DETERMINATION OF SAMPLE SIZE

7.1 Determination of sample size

Since there is no data using the MADRS instrument in the assessment of quetiapine in treating bipolar subjects with depression, the sample size estimation was based on published data from the lamotrigine monotherapy (Calabrese et al, 1999) and olanzapine trials (Tohen et al, 2002). The percentage change in the HAM-D across these lamotrigine studies in bipolar depression is similar to that observed with quetiapine. MADRS scores correlate significantly with those of the HAM-D (Montgomery Asberg 1979).

Sample size was estimated using an Bonferroni correction for the 2 comparisons with placebo. A clinically meaningful 3.6-unit difference between quetiapine treatment and placebo was used to estimate the effect size (with 3.1 units considered a minimally effective and detectable difference). The variability used for calculation was 10 units, the variability seen in the olanzapine study. A sample size of 168 subjects/arm (504 subjects total) would provide 85% power for 2-sided pair-wise comparisons with placebo at α=0.025 which provides an overall experiment wise type I error rate of 0.05. Therefore, 740 patients will be screened and approximately 530 subjects randomized (allowing for a 5% early drop out rate), to insure 504 subjects with post baseline data available for analysis (MITT analysis population). This sample size will provide 72% power to detect a 3.1 unit difference from placebo.

7.2 Statistical evaluation

7.2.1 Methods of statistical analysis

A comprehensive Statistical Analysis Plan (SAP) will be prepared before unblinding of the data.

Missing data for final visit resulting from patient drop outs will be imputed using an LOCF approach. Patients with post baseline data (MITT population) will have their last trial assessment carried forward as the final assessment for analyses.

7.2.2 Study endpoints

Primary efficacy endpoint is the change from baseline to final assessment in the Montgomery-Asberg Depression Rating Scale (MADRS) total score.

Secondary efficacy endpoints:

(1) Percentage of patients with a ≥50% reduction from baseline in the MADRS total score at study endpoint

(2) Change from baseline to each assessment (observed cases) in the MADRS total score

(3) Change from baseline to each assessment (observed cases) and final assessment in the total HAM-D, HAM-D Item 1, CGI-S, CGI-C, and Young Mania Rating Scale.

(4) Change in the PSQI score from baseline to final assessment

Safety endpoints:

(1) Incidence and nature of adverse events during double-blind treatment

(2) Incidence of drug-related adverse events during double-blind treatment

(3) Incidence of subject withdrawal due to adverse events

(4) Incidence of clinically significant changes in hematology and chemistry laboratory results, vital signs, electrocardiograms, weight, and body mass index.
Tolerability endpoints:

(5) Change in the SAS total score from baseline to final assessment

(6) Change in BARS total score from baseline to final assessment

(7) Incidence rate of adverse events related to extrapyramidal symptoms during double-blind treatment

Quality of Life endpoints:

(1) Change in Q-Les-Q total score from baseline to final assessment

(2) Proportion of patients achieving community norm levels in Q-Les-Q at final assessment

7.2.3 Statistical analyses

The randomization will be stratified by Bipolar type (I or II) in order to assure balance across treatments for the type of patient enrolled. The stratification will be incorporated into the statistical analysis models and descriptive statistics will be provided for each stratum.

For each statistical model run, the assumptions for the model will be evaluated. If the assumptions are not reasonably met, the data may be transformed to meet assumptions or a non-parametric test performed.

All statistical comparisons will be based on 2-sided testing approaches for testing the difference between active study medication dose and placebo.

7.2.3.1 Study populations for analysis

The modified intention to treat population (MITT) will be the population for efficacy and quality of life evaluation. The MITT population will include all randomized subjects who were received study treatment and had at least one post baseline efficacy assessment with a last observation carried forward approach for final assessment.

The safety population will include all subjects who provide consent and received study medication.

7.2.3.2 Primary Analysis

The primary analysis will use analysis of covariance (ANCOVA) model for the change from baseline at final assessment for the MADRS. The model will include terms for treatment, stratum, with the baseline MADRS as a covariate. The Simes-Hommel step-up procedure will be used to adjust for the 2 comparisons with placebo (Simes-Hommel, 1988). The p-values obtained from the pair-wise comparisons will be ordered as follows: $P(1) \leq P(2)$. The following rule will be used to assess statistical significance:

1) If $P(2) \leq 0.05$, then reject both null hypotheses associated with P(2) and P(1); else proceed to the next step;

2) If $P(1) \leq 0.025$, then reject the null hypothesis associated with P(1).

7.2.3.3 Secondary Analyses of efficacy and quality of life

The secondary endpoint for responder, defined as a subject who has a 50% reduction in MADRS score from baseline to final assessment, will be analyzed by comparing the proportion of subjects responding across treatments using a logistic model which includes treatment, stratum, and center in the model. The secondary endpoints based on change from baseline for scales at an assessment time will be analyzed using the same model as the primary endpoint. Nominal p-values will be used for all secondary endpoint comparisons.

Exploratory repeated measures analysis of variance model will also be conducted to evaluate whether there are significant differences among treatments across time for the MADRS and HAM-D scores.

Descriptive statistics will be used to report stratum, item scores, and subscale scores.

7.2.3.4 Safety analyses

Adverse events will be coded using the MedDRA dictionary. Numbers of events and incidence rates for AEs in each treatment group will be summarized by preferred term and system organ class. An event that occurred one or more times on the date of, or subsequent to, randomization will contribute one observation to the numerator of the incidence rate. The denominator will comprise all patients exposed to study treatment.

Adverse events that lead to premature withdrawal of subjects will be tabulated for each treatment group.

All laboratory assessments, vital signs, ECG (rates and intervals) results, and weight and body mass index will be tabulated using descriptive statistics at baseline, final assessment and including change from baseline. Descriptive statistics will include n, mean, standard deviation, minimum and maximum value.

7.2.3.5 Tolerability analyses

The change from baseline in SAS and BARS score data will be summarized using descriptive statistics (mean, standard deviation, median, minimum and maximum).

Incidence rates of EPS adverse events will be compared and tabulated using descriptive statistics.

7.2.3.6 Interim analysis

No interim analysis is planned

7.2.3.7 Data or safety monitoring committee

There will be no data or safety monitoring committee.

8 STUDY MANAGEMENT

8.1 Monitoring

Before the study begins, a representative of AstraZeneca or company representing AstraZeneca will visit the investigational site to

- determine the adequacy of the facilities
- discuss with the investigator(s) (and other personnel involved with the study) their responsibilities with regard to protocol adherence, and the responsibilities of AstraZeneca or its representatives.

During the study, a monitor from AstraZeneca or company representing AstraZeneca will have regular contacts with the investigational site, including visits to

- provide information and support to the investigator(s)
- confirm that facilities remain acceptable
- confirm that the investigational team is adhering to the protocol, that data are being accurately recorded in the case report forms (CRFs), and that investigational product accountability checks are being performed.
- perform source data verification (a comparison of the data in the CRFs with the subject's records at the hospital or practice, and other records relevant to the study). This will require direct access to all original records for each subject (eg, clinic charts).

The monitor or another AstraZeneca representative will be available between visits if the investigator(s) or other staff at the center need information and advice.

8.2 Audits and inspections

Authorized representatives of AstraZeneca, a regulatory authority, an Independent Ethics Committee (IEC) or an Institutional Review Board (IRB) may visit the center to perform audits or inspections, including source data verification. The purpose of an AstraZeneca audit or inspection is to systematically and independently examine all study related activities and documents to determine whether these activities were conducted, and data were recorded, analyzed, and accurately reported according to the protocol, Good Clinical Practice (GCP), guidelines of the International Conference on Harmonization (ICH), and any applicable regulatory requirements. The investigator should contact AstraZeneca immediately if contacted by a regulatory agency about an inspection at his or her center.

8.3 Training of staff

The principal investigator will maintain a record of all individuals involved in the study (medical, nursing and other staff). He or she will ensure that appropriate training relevant to the study is given to all of these staff, and that any new information of relevance to the performance of this study is forwarded to the staff involved.

8.4 Changes to the protocol

Study procedures will not be changed without the mutual agreement of the international principal investigator(s) and AstraZeneca.

If it is necessary for the study protocol to be amended, the amendment or a new version of the study protocol must be notified to or approved by each IEC or IRB, and in many countries also the local regulatory authority, before implementation. Local requirements must be followed.

If a protocol amendment requires a change to a particular center's Written Informed Consent Form, then AstraZeneca and the center's IEC or IRB must be notified. Approval of the revised Written Informed Consent Form by AstraZeneca and by the IEC or IRB is required before the revised form is used.

AstraZeneca will distribute amendments and new versions of the protocol to each principal investigator(s), who in turn is responsible for the distribution of these documents to his or her IEC or IRB, and to the staff at his or her center. The distribution of these documents to the regulatory authority will be handled according to local practice.

8.5 Study agreements

The principal investigator at each center must comply with all the terms, conditions, and obligations of the study agreement for this study. In the event of any inconsistency between this protocol and the study agreement, this study agreement shall prevail.

8.6 Study timetable and termination

It is anticipated that the first subject will be enrolled in September 2002 and that the last subject will complete the study in March 2004.

9 ETHICS

9.1 Ethics review

The final study protocol, including the final version of the Written Informed Consent Form, must be approved or given a favorable opinion in writing by an IEC or IRB as appropriate. The investigator must submit written approval to AstraZeneca before he or she can enroll any subject into the study.

The principal investigator(s) is responsible for informing the IEC or IRB of any amendment to the protocol in accordance with local requirements. In addition, the IEC or IRB must approve all advertising used to recruit subjects for the study. The protocol must be reapproved by the IEC or IRB annually, as local regulations require.

Either the investigator(s) or AstraZeneca must submit progress reports to the IEC or IRB according to local regulations and guidelines. The principal investigator(s) must also provide the IEC or IRB with any reports of serious adverse events from the study site.

The principal investigator(s) is also responsible for providing the IRB with reports of any serious adverse events from any other study conducted with the investigational product. This information will be provided to the principal investigator(s) by AstraZeneca.

9.2 Ethical conduct of the study

The study will be performed in accordance with the ethical principles in the Declaration of Helsinki (see Appendix C), Good Clinical Practice, and applicable regulatory requirements.

9.3 Subject information and consent

The principal investigator(s) at each center will ensure that the subject is given full and adequate oral and written information about the nature, purpose, possible risk and benefit of the study. Subjects must also be notified that they are free to discontinue from the study at any time. The subject should be given the opportunity to ask questions and allowed time to consider the information provided.

The subject's signed and dated informed consent must be obtained before conducting any procedure specifically for the study, including the following:

The principal investigator(s) must store the original, signed Written Informed Consent Form. A copy of the Written Informed Consent Form must be given to the subject.

A sample Written Informed Consent Form is enclosed (Appendix B). If modifications are made according to local requirements, the new version has to be approved by AstraZeneca.

9.4 Subject data protection

AstraZeneca recognises the importance of protecting the privacy of patient (subject) data. Therefore, for study sites within the US or in studies where foreign subjects' protected health information **(subject data)** will come into the US through a covered entity (eg, Central Lab/Reader), the Informed Consent Form will incorporate, or be accompanied by, a separate document incorporating HIPAA-compliant wording by which subjects authorize the use and disclosure of their Protected Health Information by the Investigator and by those persons who need that information for the purposes of the study.

The Written Informed Consent Form will explain that study data will be stored in a computer database, maintaining confidentiality in accordance with national data legislation. The subjects' names will not be recorded in this database. The Written Informed Consent Form will also explain that for data verification purposes, authorized representatives of AstraZeneca, a regulatory authority, an IEC or IRB may require direct access to parts of the hospital or practice records relevant to the study, including subjects' medical history.

10 EMERGENCY PROCEDURES

10.1 AstraZeneca emergency contact procedure

In the case of a medical emergency, contact AstraZeneca personnel shown below.

Wayne Macfadden MD
Project Physician
302-886-1147 (telephone)
302-886-5567 (fax)
REDACTED

Robin McCoy RN
Senior Clinical Research Scientist
302-886-4650 (telephone)
302-886-5567 (fax)
REDACTED

Contact AstraZeneca switchboard on 1-800-236-9933 and ask to be put in contact with the person on call for the Seroquel clinical team.

10.2 Procedures in case of medical emergency

The principal investigator(s) is responsible for ensuring that procedures and expertise are available to cope with medical emergencies during the study.

10.3 Procedures in case of overdose

For the purpose of this trial all overdoses should be reported as adverse events. However, all cases of overdose must be reported immediately, within 1 day, if sequelae meeting the criteria for serious adverse event have occurred in association with the overdose. In all instances, the overdose substance should be stated and whether the overdose was accidental or intentional. If the overdose was a suicide attempt, this fact should be clearly stated. Adverse events (serious and non-serious) arising as the result of an overdose should be recorded on an adverse event form as "sequelae to overdose." For example "nausea as sequelae to overdose."

10.4 Suicide

Suicide and suicide attempt, irrespective of the method, but in connection with the use of trial drug, should be reported as a serious adverse event (in accordance with the definition provided in Section 5.4.2.1). This event should be identified as suicide or suicide attempt, and the method of the suicide or the suicide attempt should be provided. Suicidal thoughts should also be regarded as adverse events.

10.5 Procedures in case of pregnancy

Pregnancy itself is not regarded as an adverse event unless there is a suspicion that the investigational product under study may have interfered with the effectiveness of a contraceptive medication. However, the outcome of all pregnancies (spontaneous miscarriage, elective termination, normal birth or congenital abnormality) must be followed up and documented even if the subject was discontinued from the study.

All reports of congenital abnormalities/birth defects are SAEs. Spontaneous miscarriages should also be reported and handled as SAEs. Elective abortions without complications should not be handled as AEs. All outcomes of pregnancy must be reported to AstraZeneca on the pregnancy outcomes report form.

Declaration of Helsinki

Recommendations guiding physicians in biomedical research involving human subjects.

Adopted by the 18th World Medical Assembly, Helsinki, Finland, June 1964, amended by the 29th World Medical Assembly, Tokyo, Japan, October 1975 and the 35th World Medical Assembly, Venice, Italy, October 1983 and the 41st World Medical Assembly Hong Kong, September 1989 and the 48th General Assembly, Somerset West, Republic of South Africa, October 1996.

Introduction

It is the mission of the physician to safeguard the health of the people. His or her knowledge and conscience are dedicated to the fulfilment of this mission.

The Declaration of Geneva of The World Medical Association binds the physician with the words, "The health of my patient will be my first consideration," and the International Code of Medical Ethics declares that, "A physician shall act only in the patient´s interest when providing medical care which might have the effect of weakening the physical and mental condition of the patient".

The purpose of biomedical research involving human subjects must be to improve diagnostic, therapeutic and prophylactic procedures and the understanding of the aetiology and pathogenesis of disease.

In current medical practice most diagnostic, therapeutic or prophylactic procedures involve hazards. This applies especially to biomedical research.

Medical progress is based on research which ultimately must rest in part on experimentation involving human subjects.

In the field of biomedical research a fundamental distinction must be recognised between medical research in which the aim is essentially diagnostic or therapeutic for a patient, and medical research, the essential object of which is purely scientific and without implying direct diagnostic or therapeutic value to the person subjected to the research.

Special caution must be exercised in the conduct of research which may affect the environment, and the welfare of animals used for research must be respected.

Because it is essential that the results of laboratory experiments be applied to human beings to further scientific knowledge and to help suffering humanity, the World Medical Association has prepared the following recommendations as a guide to every physician in biomedical research involving human subjects. They should be kept under review in the future. It must be stressed that the standards as drafted are only a guide to physicians all over the world. Physicians are not relieved from criminal, civil and ethical responsibilities under the laws of their own countries.

I. Basic principles

1. Biomedical research involving human subjects must conform to generally accepted scientific principles and should be based on adequately performed laboratory and animal experimentation and on a thorough knowledge of the scientific literature.

2. The design and performance of each experimental procedure involving human subjects should be clearly formulated in an experimental protocol which should be transmitted for consideration, comment and guidance to a specially appointed committee independent of the investigator and the sponsor provided that this independent committee is in conformity with the laws and regulations of the country in which the research experiment is performed.

3. Biomedical research involving human subjects should be conducted only by scientifically qualified persons and under the supervision of a clinically competent medical person. The responsibility for the human subject must always rest with a medically qualified person and never rest on the subject of the research, even though the subject has given his or her consent.

4. Biomedical research involving human subjects cannot legitimately be carried out unless the importance of the objective is in proportion to the inherent risk to the subject.

5. Every biomedical research project involving human subjects should be preceded by careful assessment of predictable risks in comparison with foreseeable benefits to the subject or to others. Concern for the interests of the subject must always prevail over the interests of science and society.

6. The right of the research subject to safeguard his or her integrity must always be respected. Every precaution should be taken to respect the privacy of the subject and to minimise the impact of the study on the subject´s physical and mental integrity and on the personality of the subject.

7. Physicians should abstain from engaging in research projects involving human subjects unless they are satisfied that the hazards involved are believed to be predictable. Physicians should cease any investigation if the hazards are found to outweigh the potential benefits.

8. In publication of the results of his or her research, the physician is obliged to preserve the accuracy of the results. Reports of experimentation not in accordance with the principles laid down in this Declaration should not be accepted for publication.

9. In any research on human beings, each potential subject must be adequately informed of the aims, methods, anticipated benefits and potential hazards of the study and the discomfort it may entail. He or she should be informed that he or she is at liberty to abstain from participation in the study and that he or she is free to withdraw his or her consent to participation at any time. The physician should then obtain the subject´s freely-given informed consent, preferably in writing.

10. When obtaining informed consent for the research project the physician should be particularly cautious if the subject is in a dependent relationship to him or her or may consent under duress. In that case the informed consent should be obtained by a physician who is not engaged in the investigation and who is completely independent of this official relationship.

11. In case of legal incompetence, informed consent should be obtained from the legal guardian in accordance with national legislation. Where physical or mental incapacity makes it impossible to obtain informed consent, or when the subject is a minor, permission from the responsible relative replaces that of the subject in accordance with national legislation.

Whenever the minor child is in fact able to give a consent, the minor´s consent must be obtained in addition to the consent of the minor´s legal guardian.

12. The research protocol should always contain a statement of the ethical considerations involved and should indicate that the principles enunciated in the present Declaration are complied with.

II. Medical research combined with professional care (Clinical research)

1. In the treatment of the sick person, the physician must be free to use a new diagnostic and therapeutic measure, if in his or her judgement it offers hope of saving life, re-establishing health or alleviating suffering.

2. The potential benefits, hazards and discomfort of a new method should be weighed against the advantages of the best current diagnostic and therapeutic methods.

3. In any medical study, every patient - including those of a control group, if any - should be assured of the best proven diagnostic and therapeutic method. This does not exclude the use of inert placebo studies where no proven diagnostic or therapeutic method exists.

4. The refusal of the patient to participate in a study must never interfere with the physician-patient relationship.

5. If the physician considers it essential not to obtain informed consent, the specific reasons for this proposal should be stated in the experimental protocol for transmission to the independent committee (I,2).

6. The physician can combine medical research with professional care, the objective being the acquisition of new medical knowledge, only to the extent that medical research is justified by its potential diagnostic or therapeutic value for the patient.

III. Non-therapeutic biomedical re-search involving human subjects

(Non-clinical biomedical research)

1. In the purely scientific application of medical research carried out on a human being, it is the duty of the physician to remain the protector of the life and health of that person on whom biomedical research is being carried out.

2. The subjects should be volunteers - either healthy persons or patients for whom the experimental design is not related to thepatient´s illness.

3. The investigator or the investigating team should discontinue the research if in his/her or their judgement it may, if continued, be harmful to the individual.

4. In research on man, the interest of science and society should never take precedence over considerations related to the well-being of the subject.

Insurance and indemnity

For the US, this Appendix E is not applicable. Please refer to the clinical study agreement for information regardingAstraZeneca's obligation to insure and indemnify institution and investigator.

INSURANCE AND INDEMNITY

AstraZeneca's liability is covered by a liability insurance policy with AstraZeneca Insurance Company Limited, policy No.: L/702938.

With respect to any liability directly or indirectly caused by the investigational products in connection with this Clinical Study, AstraZeneca assumes liability by law on behalf of the investigator(s) and his assistants for possible injury to the subject provided the investigator(s) and his assistants have followed the instructions of AstraZeneca in accordance with this protocol and any amendments thereto, that the investigational products administered to the subject in this Clinical Study have been supplied by AstraZeneca and that the investigator and his assistants have in general performed this clinical study in accordance with scientific practice and currently acceptable techniques and know-how.

AstraZeneca can forward a letter of indemnity if needed by the investigator(s)/institution.

Appendix F
Additional safety information

1. FURTHER GUIDANCE ON THE DEFINITION OF A SERIOUS ADVERSE EVENT (SAE)

Life threatening

'Life-threatening' means that the subject was at immediate risk of death from the adverse event as it occurred or it is suspected that use or continued use of the product would result in the subject's death. 'Life-threatening' does not mean that had an adverse event occurred in a more severe form it might have caused death (ie hepatitis that resolved without hepatic failure).

Hospitalisation

Out-subject treatment in an emergency room is not in itself a serious adverse event, although the reasons for it may be (eg, bronchospasm, laryngeal oedema). Hospital admissions and/or surgical operations planned before or during a study are not considered adverse events if the illness or disease existed before the subject was enrolled in the study, provided that it did not deteriorate in an unexpected way during the study.

Important medical event or medical intervention

Medical and scientific judgement should be exercised in deciding whether a case is serious in a situation where important medical events may not be immediately life-threatening or result in death, hospitalisation, disability or incapacity but may jeopardise the subject or may require medical intervention to prevent one or more outcomes listed in the definition of serious. These should usually be considered as serious. Examples of such events are:

- Angioedema not severe enough to require intubation but requiring iv. hydrocortisone treatment
- Hepatotoxicity caused by paracetamol (acetaminophen) overdose requiring treatment with N-acetylcysteine
- Intensive treatment in an emergency room or at home for allergic bronchospasm
- Blood dyscrasias (eg, neutropenia or anaemia requiring blood transfusion, etc.) or convulsions that do not result in hospitalisation
- Development of drug dependency or drug abuse

2. FURTHER GUIDANCE ON THE ASSESSMENT OF CAUSALITY

The following factors should be considered when deciding if there is a "reasonable possibility" that an adverse event (AE) may have been caused by the investigational product.

- **Time course of events and exposure to suspect drug**. Has the subject actually received the suspect drug? Did the AE occur in a reasonable temporal relationship to the administration of suspect drug?

- **Consistency with known drug profile**. Was the AE consistent with the previous knowledge of the suspect drug (pharmacology and toxicology) or drugs of the same pharmacological class? OR could the AE be anticipated from its pharmacological properties?

- **Dechallenge experience**. Did the AE resolve or improve on stopping or reducing the dose of the suspect drug?

- **No alternative cause**. The AE cannot be reasonably explained by another aetiology such as the underlying disease, other drugs, other host or environmental factors.

- **Rechallenge experience**. Did the AE reoccur if the suspected drug was reintroduced after having been stopped? AstraZeneca would not normally recommend or support a rechallenge.

- **Laboratory tests**. Has a specific laboratory investigation confirmed the relationship?

A "reasonable possibility" could be considered to exist for an AE where one or more of these factors exist.

In contrast, there would not be a "reasonable possibility" of causality if none of the above criteria apply or where there is evidence of exposure and a reasonable time course but any dechallenge (if performed) is negative or ambiguous or there is another more likely cause of the AE.

In difficult cases, other factors could be considered such as:

- Is this a recognised feature of overdose of the drug?

- Is there a known mechanism

Ambiguous cases should be considered as being a “reasonable possibility” of a causal relationship unless further evidence becomes available to refute this.

AstraZeneca

Clinical Study Protocol Amendment	
Amendment No.	4
Study Code	5077US/0049
Date	May 12, 2003

Sponsor:

AstraZeneca Pharmaceuticals LP, Wilmington, Delaware, USA

Centers affected by the amendment:

All centers

The protocol for the study is to be amended as follows:

1. Page 2 Study center (s) and number of subjects planned

Original text

A total of approximately 740 subjects will be screened to enroll approximately 530 into the trial in order to obtain approximately 504 evaluable patients, defined as those who have a baseline visit and at least one post baseline assessment. It is expected that approximately 75 centers will participate in the trial, with each center enrolling 8 patients **(minimum 4, maximum 50).**

Amended text

A total of approximately 740 subjects will be screened to enroll approximately 530 into the trial in order to obtain approximately 504 evaluable patients, defined as those who have a baseline visit and at least one post baseline assessment. It is expected that approximately 75 centers will participate in the trial, with each center enrolling 8 patients **(maximum 70)**.

2. Page 19-20 3.2 Overall study design and flow chart

Original text

This multicenter, double-blind, randomized, placebo-controlled, double-dummy, parallel group trial will consist of a washout period (from 7 to 28 days depending on the medications involved) followed by 8 weeks of treatment to evaluate the efficacy, safety, and tolerability of quetiapine fumarate in the treatment of a major depressive episode in adult subjects with bipolar disorder. A total of approximately 740 subjects will be screened to obtain 530 enrolled subjects to yield 504 evaluable subjects at approximately 75 centers, with a target enrollment of 8 patients per center **(minimum 4, maximum 30).** Subjects are required to have a HAM-D (17-item scale) score of $\geq$ 20 and a YMRS of =12 at screening baseline (Visit 1).

Amended text

This multicenter, double-blind, randomized, placebo-controlled, double-dummy, parallel group trial will consist of a washout period (from 7 to 28 days depending on the medications involved) followed by 8 weeks of treatment to evaluate the efficacy, safety, and tolerability of quetiapine fumarate in the treatment of a major depressive episode in adult subjects with bipolar disorder. A total of approximately 740 subjects will be screened to obtain 530 enrolled subjects to yield 504 evaluable subjects at approximately 75 centers, with a target enrollment of 8 patients per center **(maximum 70).** Subjects are required to have a HAM-D (17-item scale) score of $\geq$ 20 and a YMRS of =12 at screening baseline (Visit 1).

3. Page 27-28 3.4.4.4 Procedures for discontinuation

Original text

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- Physical examination
- Vital signs and weight
- 12-lead ECG
- HAM-D
- MADRS
- ICI-D
- YMRS
- HAM-A

- SAS
- BARS
- PSQI
- Adverse events assessment

Amended text

All study procedures required at Day 57 should be conducted when a patient discontinues from the trial. Procedures required at discontinuation are:

- Physical examination
- Vital signs and weight
- 12-lead ECG
- HAM-D
- MADRS
- ICI-D
- YMRS
- HAM-A
- **CGI-C**
- **CGI-S**
- SAS
- BARS
- PSQI
- **Q les Q**
- Adverse events assessment

Psychiatric assessments (HAM-D, MADRS, YMRS, HAM-A, CGI-C, CGI-S, Q les Q, and PSQI) should not be performed on subjects who have missed 72 hours of study drug before any study visit. Due to the pharmacokinetic profile of quetiapine, these

assessments are of questionable clinical value.

4. Page 54 5.6 Interactive Computer interview for depression

Original text

At each study visit, subjects at all participating sites will complete a computer-based self-report measure of depression severity (the interactive computer interview or ICI-D) after completing the MADRS. Raters or other site staff will first enter the subject's MADRS scores into a computer supplied by the sponsor. Subjects will then complete a computer-based self-report measure of depression severity . This measure will not be considered primary or source data, and will be recorded on a coded, anonymized form. This data will be securely transmitted to Concordant Rater Systems (CRS) for ongoing quality control.

Amended text

Participating in the Interactive Computer Interview for Depression (ICI-D) is voluntary for all the sites. Participation by the subjects at these sites is also voluntary. At each study visit, subjects at all participating sites will complete a computer-based self-report measure of depression severity (the interactive computer interview or ICI-D) after completing the MADRS. Raters or other site staff will first enter the subject's MADRS scores into a computer supplied by the sponsor. Subjects will then complete a computer-based self-report measure of depression severity . This measure will not be considered primary or source data, and will be recorded on a coded, anonymized form. This data will be securely transmitted to Concordant Rater Systems (CRS) for ongoing quality control.

5. Page 64 9.4 Subject data Protection

Additional Text

AstraZeneca recognises the importance of protecting the privacy of patient (subject) data. Therefore, for study sites within the US or in studies where foreign subjects' protected health information **(subject data)** will come into the US through a covered entity (eg, Central Lab/Reader), the Informed Consent Form will incorporate, or be accompanied by, a separate document incorporating HIPAA-compliant wording by which subjects authorize the use and disclosure of their Protected Health Information by the Investigator and by those persons who need that information for the purposes of the study.

Rationale

1.

A few investigative sites have been unable to recruit four patients, due to the patient populations they treat. However, these sites have been compliant with GCP and the protocol. We believe the quality of data is adequate, and we are thus removing the requirement for a minimum enrollment of 4 subjects per site.

The distribution of subject enrollment across sites has been balanced; therefore, it is unnecessary to limit individual sites to a maximum of 50 subjects. The increase to a maximum of 70 subjects will not adversely affect the outcome of the study, as no one site will treat more than 14% of randomized subjects.

2.

See the rationale above.

3.

The serum half-life of Seroquel is approximately 4 hours. While the duration of psychotropic effects are unknown, it is reasonable to assume that some of Seroquel's putative antidepressant and anxiolytic properties may wane after 72 hours. Thus, psychiatric assessments after this duration are of questionable clinical accuracy.

4.

Clarified that the ICI-D is voluntary for the sites and voluntary for the subjects.

5.

Inserted addition text per HIPAA regulations.

AstraZeneca

Amended Clinical Study Protocol	
Drug Substance	Quetiapine Fumarate
Study Code	5077US/0049
Version No.	5
Date	12 May 2003

A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL®) in the Treatment of Patients with Bipolar Depression

AstraZeneca confirms that all revisions contained in the Clinical Study Protocol Amendment Revision Summary have been accurately reflected in the amended clinical trial protocol, Protocol 5077US/0049.

Date Subject signed consent |2|0|0|_|_|_|_| year mm dd

Date of randomization |2|0|0|_|_|_|_| year mm dd

Randomization code |_|_|_|_|

Kit number |_|_|_|_|

Inclusion criteria

		No	Yes
1	Documented ability to provide informed consent before beginning any study-specific procedures.	☐ 0	☐ 1
2	Male and female Subjects between 18 and 65 years of age, inclusive.	☐ 0	☐ 1
3	Females of childbearing potential, should be using a reliable method of contraception. Reliable methods include hormonal contraceptives, (eg, oral contraceptive or long-term injectable or implantable hormonal contraceptive), double-barrier methods (eg, condom and diaphragm, condom and foam, condom and sponge), intrauterine devices, and tubal ligation.	☐ 0	☐ 1
4	Women must have a negative pregnancy test.	☐ 0	☐ 1
5	Meets DSM-IV criteria for bipolar disorder I or bipolar II, most recent episode depressed (296.5x and 296.89x), confirmed by the amended version (by Dr. Michael First) of the Structured Clinical Interview for DSM-IV (SCID) as administered by the Principal Investigator or an AstraZeneca approved clinician with a signed confirmation by the Principal Investigator.	☐ 0	☐ 1
6	Outpatient status.	☐ 0	☐ 1
7	HAM-D (17-item) total score of 20 or greater	☐ 0	☐ 1
8	HAM-D item 1 (depressed mood) score ≥ 2	☐ 0	☐ 1
9	YMRS ≤ 12	☐ 0	☐ 1

At randomization (Visit 2) Subjects must fulfill the following criteria:

1	HAM-D (17-item) total score of 20 or greater	☐ 0	☐ 1
2	HAM-D item 1 (depressed mood) score ≥ 2	☐ 0	☐ 1
3	YMRS ≤ 12	☐ 0	☐ 1

All Inclusion Criteria must be answered Yes for the Subject to qualify for this study

Eligibility Criteria, continued

CRITIE

Exclusion criteria

		No	Yes
1	Subjects with a current Axis I disorder other than bipolar disorder within 6 months of screening.	☐ 0	☐ 1
2	Subjects whose current episode of depression exceeds 12 months or is less than 4 weeks.	☐ 0	☐ 1
3	Subjects who have a history of non-response to an adequate trial (6 weeks) of more than 2 classes of antidepressants during their current episode.	☐ 0	☐ 1
4	Subjects who meet DSM-IV criteria for substance dependence, for any substance except nicotine, within 12 months of screening.	☐ 0	☐ 1
5	Subjects with a positive urine toxicology screen for illicit substances of abuse.	☐ 0	☐ 1
6	Subjects who are unable to discontinue all psychoactive medications (excluding prn benzodiazipines), including antidepressants, antipsychotics, and mood stabilizer, at least **7 days** prior to randomization, and consistent with the pharmacokinetics of the drug. - Subjects treated with fluoxetine who have not discontinued this medication for at least 14 days prior to randomization. - Subjects who have not discontinued haloperidol decanoate or fluphenazine decanoate for 28 days prior to randomization	☐ 0	☐ 1
7	Subjects who have not discontinued the use of potent P450 inhibitors and inducers.	☐ 0	☐ 1
8	Subjects who in the investigators opinion will require initiation of psychotherapy during the study period. Note: Ongoing psychotherapy for a minimum of 3 months may continue.	☐ 0	☐ 1
9	Subjects who, in the investigator's judgment, pose a current serious suicidal or homicidal risk at Visit 1 (HAM-D item 3 score of 3 or greater), or have made a suicide attempt within the past 6 months.	☐ 0	☐ 1
10	Subjects with a history of clinically significant cardiac, renal, neurologic, cerebrovascular, metabolic, or pulmonary disease, or other disease or clinical finding that is unstable or that, in the opinion of the investigator, would be negatively affected by trial medication or that would affect trial medication.	☐ 0	☐ 1
11	Subjects who have had a myocardial infarction within 1 year before Visit 1.	☐ 0	☐ 1
12	Subjects with clinically significant abnormal lab findings at Visit 1.	☐ 0	☐ 1
13	Subjects with renal impairment (serum creatinine ≥ 1.5 mg/dL) or hepatic impairment (ALT or AST 3 times the upper limit of normal).	☐ 0	☐ 1
14	Subjects whose TSH is ≥ 10% over the upper normal limit. Subjects maintained on thyroid medication must be euthyroid for a period of at least 3 months before Visit 1.	☐ 0	☐ 1
15	Subjects with clinically significant abnormalities on ECG.	☐ 0	☐ 1

Hamilton Rating Scale for Depression HAMD

Date of assessment |2|0|0| | | | | (year mm dd)

1. Depressed mood (sadness, hopeless, helpless, worthless)

☐0 Absent

☐1 These feeling states indicated only on questioning

☐2 These feeling states spontaneously reported verbally

☐3 Communicates feeling states non-verbally (ie, through facial expression, posture, voice, and tendency to weep)

☐4 Subject reports virtually only these feeling states in his spontaneous verbal and non-verbal communication

2. Feeling of guilt

☐0 Absent

☐1 Self-reproach, feels he has let people down

☐2 Ideas of guilt or rumination over past errors or sinful deeds

☐3 Present illness is a punishment. Delusions of guilt

☐4 Hears accusatory or denunciatory voices and/or experiences threatening visual hallucinations

3. Suicide

☐0 Absent

☐1 Feels life is not worth living

☐2 Wishes he were dead or any thoughts of possible death to self

☐3 Suicide ideas or gesture

☐4 Attempts at suicide (any serious attempt rates 4)

continues

AW02:09

Hamilton Rating Scale for Depression, continued HAMD

4. Insomnia early

☐0 No difficulty falling asleep

☐1 Complains of occasional difficulty falling asleep (eg, more than 30 minutes)

☐2 Complains of nightly difficulty falling asleep

5. Insomnia middle

☐0 No difficulty

☐1 Subject complains of being restless and disturbed during the night

☐2 Waking during the night - any getting out of bed rates 2 (except for purposes of voiding)

6. Insomnia late

☐0 No difficulty

☐1 Waking in early hours of the morning but goes back to sleep

☐2 Unable to fall asleep again if he gets out of bed

7. Work and activities

☐0 No difficulty

☐1 Thoughts and feelings of incapacity, fatigue or weakness related to activities; work or hobbies

☐2 Loss of interest in activity; hobbies or work - either directly reported by Subject, or indirect in listlessness, indecision and vacillation (feels he has to push self to work or activities)

☐3 Decrease in actual time spent in activities or decrease in productivity

☐4 Stopped working because of present illness.

8. Retardation: psychomotor
(slowness of thought and speech; impaired ability to concentrate; decreased motor activity)

☐0 Normal speech and thought

☐1 Slight retardation at interview

☐2 Obvious retardation at interview

☐3 Interview difficult

☐4 Complete stupor

9. Agitation

☐0 None

☐1 Fidgetiness

☐2 Playing with hands, hair, etc

☐3 Moving about, can't sit still

☐4 Hand wringing, nail-biting, hair-pulling, biting of lips

10. Anxiety (psychological)

☐0 No difficulty

☐1 Subjective tension and irritability

☐2 Worrying about minor matters

☐3 Apprehensive attitude apparent in face or speech

☐4 Fears expressed without questioning

continues

AW02:09

Hamilton Rating Scale for Depression, continued HAMD

11. Anxiety somatic

Physiological concomitants of anxiety (ie, effects of autonomic overactivity, "butterflies", indigestion, stomach cramps, belching, diarrhea, palpitations, hyperventilation, paresthesia, sweating, flushing, tremor, headache, urinary frequency). Avoid asking about possible medication side effects (ie, dry mouth, constipation)

☐0 Absent

☐1 Mild

☐2 Moderate

☐3 Severe

☐4 Incapacitating

12. Somatic symptoms (gastrointestinal)

☐0 None

☐1 Loss of appetite but eating without encouragement from others. Food intake about normal

☐2 Difficulty eating without urging from others. Marked reduction of appetite and food intake

13. Somatic symptoms general

☐0 None

☐1 Heaviness in limbs, back, or head; backaches, headache, muscle aches; loss of energy and fatigability

☐2 Any clear-cut symptom rates 2

14. Genital symptoms

(symptoms such as: loss of libido; impaired sexual performance; menstrual disturbances)

☐0 Absent

☐1 Mild

☐2 Severe

Young Mania Rating Scale YMRS

Date of assessment |2|0|0| | | | | (year mm dd)

1. Elevated Mood

|_| 0 - Absent

1 - Mildly or possibly increased on questioning

2 - Definite subjective elevation; optimistic, self-confident; cheerful; appropriate to content

3 - Elevated; inappropriate to content; humorous

4 - Euphoric; inappropriate laughter; singing

2. Increased Motor Activity - Energy

|_| 0 - Absent

1 - Subjectively increased

2 - Animated; gestures increased

3 - Excessive energy; hyperactive at times; restless (can be calmed)

4 - Motor excitement; continuous hyperactivity (cannot be calmed)

3. Sexual Interest

|_| 0 - Normal; not increased

1 - Mildly or possibly increased

2 - Definite subjective increase on questioning

3 - Spontaneous sexual content; elaborates on sexual matters; hypersexual by self report

4 - Overt sexual acts (towards patients, staff, or interviewer)

4. Sleep

|_| 0 - Reports no decrease in sleep

1 - Sleeping less than normal amount by up to one hour

2 - Sleeping less than normal by more than one hour

3 - Reports decreased need for sleep

4 - Denies need for sleep

Hamilton Rating Scale for Depression HAMD

Date of assessment |2|0|0| | | | | (year mm dd)

1. Depressed mood (sadness, hopeless, helpless, worthless)

☐0 Absent

☐1 These feeling states indicated only on questioning

☐2 These feeling states spontaneously reported verbally

☐3 Communicates feeling states non-verbally (ie, through facial expression, posture, voice, and tendency to weep)

☐4 Subject reports virtually only these feeling states in his spontaneous verbal and non-verbal communication

2. Feeling of guilt

☐0 Absent

☐1 Self-reproach, feels he has let people down

☐2 Ideas of guilt or rumination over past errors or sinful deeds

☐3 Present illness is a punishment. Delusions of guilt

☐4 Hears accusatory or denunciatory voices and/or experiences threatening visual hallucinations

3. Suicide

☐0 Absent

☐1 Feels life is not worth living

☐2 Wishes he were dead or any thoughts of possible death to self

☐3 Suicide ideas or gesture

☐4 Attempts at suicide (any serious attempt rates 4)

continues

AW02:09

Hamilton Rating Scale for Depression, continued HAMD

4. Insomnia early

☐0 No difficulty falling asleep

☐1 Complains of occasional difficulty falling asleep (eg, more than 30 minutes)

☐2 Complains of nightly difficulty falling asleep

5. Insomnia middle

☐0 No difficulty

☐1 Subject complains of being restless and disturbed during the night

☐2 Waking during the night - any getting out of bed rates 2 (except for purposes of voiding)

6. Insomnia late

☐0 No difficulty

☐1 Waking in early hours of the morning but goes back to sleep

☐2 Unable to fall asleep again if he gets out of bed

7. Work and activities

☐0 No difficulty

☐1 Thoughts and feelings of incapacity, fatigue or weakness related to activities; work or hobbies

☐2 Loss of interest in activity; hobbies or work - either directly reported by Subject, or indirect in listlessness, indecision and vacillation (feels he has to push self to work or activities)

☐3 Decrease in actual time spent in activities or decrease in productivity

☐4 Stopped working because of present illness.

Hamilton Rating Scale for Depression, continued HAMD

8. Retardation: psychomotor
(slowness of thought and speech; impaired ability to concentrate; decreased motor activity)

☐0 Normal speech and thought

☐1 Slight retardation at interview

☐2 Obvious retardation at interview

☐3 Interview difficult

☐4 Complete stupor

9. Agitation

☐0 None

☐1 Fidgetiness

☐2 Playing with hands, hair, etc

☐3 Moving about, can't sit still

☐4 Hand wringing, nail-biting, hair-pulling, biting of lips

10. Anxiety (psychological)

☐0 No difficulty

☐1 Subjective tension and irritability

☐2 Worrying about minor matters

☐3 Apprehensive attitude apparent in face or speech

☐4 Fears expressed without questioning

continues

AW02:09

Hamilton Rating Scale for Depression, continued HAMD

11. Anxiety somatic

Physiological concomitants of anxiety (ie, effects of autonomic overactivity, "butterflies", indigestion, stomach cramps, belching, diarrhea, palpitations, hyperventilation, paresthesia, sweating, flushing, tremor, headache, urinary frequency). Avoid asking about possible medication side effects (ie, dry mouth, constipation)

☐0 Absent

☐1 Mild

☐2 Moderate

☐3 Severe

☐4 Incapacitating

12. Somatic symptoms (gastrointestinal)

☐0 None

☐1 Loss of appetite but eating without encouragement from others. Food intake about normal

☐2 Difficulty eating without urging from others. Marked reduction of appetite and food intake

13. Somatic symptoms general

☐0 None

☐1 Heaviness in limbs, back, or head; backaches, headache, muscle aches; loss of energy and fatigability

☐2 Any clear-cut symptom rates 2

14. Genital symptoms

(symptoms such as: loss of libido; impaired sexual performance; menstrual disturbances)

☐0 Absent

☐1 Mild

☐2 Severe

15. Hypochondriasis

☐0 Not present

☐1 Self-absorption (bodily)

☐2 Preoccupation with health

☐3 Frequent complaints, requests for help, etc

☐4 Hypochondriacal delusions

16. Loss of weight)

A. When rating by history

☐0 No weight loss

☐1 Probable weight loss associated with present illness

☐2 Definite (according to Subject) weight loss

☐3 Not assessed

17. Insight

☐0 Acknowledges being depressed and ill

☐1 Acknowledges illness but attributes cause to bad food, climate, overwork, virus, need for rest, etc

☐2 Denies being ill at all

AW02:09

Montgomery-Asberg Depression Rating Scale MADRS

Date of assessment |2|0|0| | | | | (year mm dd)

1. Apparent sadness

Representing despondency, gloom, and despair (more than just ordinary transient low spirits), reflected in speech, facial expression, and posture.
Rate by depth and inability to brighten up.

☐0 No sadness

☐1

☐2 Looks dispirited but does brighten up without difficulty

☐3

☐4 Appears sad and unhappy most of the time

☐5

☐6 Looks miserable all the time; extremely despondent

2. Reported sadness

Representing reports of depressed mood, regardless of whether it is reflected in appearance or not. Includes low spirits, despondency, or the feeling of being beyond help and without hope. Rate according to intensity, duration, and the extent to which the mood is reported to be influenced by events.

☐0 Occasional sadness in keeping with the circumstances

☐1

☐2 Sad or low but brightens up without difficulty

☐3

☐4 Pervasive feelings of sadness or gloominess. The mood is still influenced by external circumstances

☐5

☐6 Continuous or unvarying sadness, misery, or despondence

continues

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

3. Inner tension

Representing feelings of ill-defined discomfort, edginess, inner turmoil, mental tension mounting to either panic, dread, or anguish.
Rate according to intensity, frequency, duration, and the extent of reassurance called for.

☐0 Placid; only fleeting inner tension

☐1

☐2 Occasional feelings of edginess and ill-defined discomfort

☐3

☐4 Continuous feelings of inner tension or intermittent panic which Subject can only master with some difficulty

☐5

☐6 Unrelenting dread or anguish; overwhelming panic

4. Reduced sleep

Representing the experience of reduced duration or depth of sleep compared to Subject's own normal pattern when well.

☐0 Sleeps as usual

☐1

☐2 Slight difficulty dropping off to sleep or slightly reduced, light or fitful sleep

☐3

☐4 Sleep reduced or broken by at least two hours

☐5

☐6 Less than two or three hours sleep

continues

Study code 5077US/0049 Subj initials ..... E code |E|0|0| | | | |

Visit No. 2

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

5. Reduced appetite

Representing the feeling of a loss of appetite compared with when well.
Rate by loss of desire for food or the need to force oneself to eat.

☐0 Normal or increased appetite

☐1

☐2 Slightly reduced appetite

☐3

☐4 No appetite; food is tasteless

☐5

☐6 Needs persuasion to eat at all

6. Concentration difficulties

Representing difficulties in collecting one's thoughts mounting to incapacitating lack of concentration.
Rate according to intensity, frequency, and degree of incapacity produced.

☐0 No difficulties in concentrating

☐1

☐2 Occasional difficulties in collecting one's thoughts

☐3

☐4 Difficulties in concentrating and sustaining thought which reduces ability to read or hold a conversation

☐5

☐6 Unable to read or converse without great difficulty

continues

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

7. Lassitude

Representing a difficulty getting started or slowness initiating and performing everyday activities.

☐0 Hardly any difficulty in getting started; no sluggishness

☐1

☐2 Difficulties in starting activities

☐3

☐4 Difficulties in starting simple routine activities which are carried out with effort

☐5

☐6 Complete lassitude; unable to do anything without help

8. Inability to feel

Representing the subjective experience of reduced interest in the surroundings, or activities that normally give pleasure. The ability to react with adequate emotion to circumstances or people is reduced.

☐0 Normal interest in the surroundings and in other people

☐1

☐2 Reduced ability to enjoy usual interests

☐3

☐4 Loss of interest in the surroundings; loss of feelings for friends and acquaintances

☐5

☐6 The experience of being emotionally paralyzed; inability to feel anger, grief, or pleasure; and a complete or even painful failure to feel for close relatives

continues

Study code 5077US/0049 Subj initials ..... E code |E|0|0| | | | |

Visit No. 2

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

9. Pessimistic thoughts

Representing thoughts of guilt, inferiority, self-reproach, sinfulness, remorse and ruin.

☐0 No pessimistic thoughts

☐1

☐2 Fluctuating ideas of failure, self-reproach, or self depreciation

☐3

☐4 Persistent self-accusations, or definite but still rational ideas of guilt or sin; increasingly pessimistic about the future

☐5

☐6 Delusions of ruin, remorse, or unredeemable sin; self-accusations which are absurd and unshakable

10. Suicidal thoughts

Representing the feeling that life is not worth living, that a natural death would be welcome, suicidal thoughts, and preparations for suicide.
Suicidal attempts should not in themselves influence the rating.

☐0 Enjoys life or takes it as it comes

☐1

☐2 Weary of life; only fleeting suicidal thoughts

☐3

☐4 Probably better off dead; suicidal thoughts are common, and suicide is considered as a possible solution, but without specific plans or intentions

☐5

☐6 Explicit plans for suicide when there is an opportunity; active preparations for suicide

Young Mania Rating Scale YMRS

Date of assessment |2|0|0|_|_|_|_| year mm dd

1. Elevated Mood

|_| 0 - Absent

1 - Mildly or possibly increased on questioning

2 - Definite subjective elevation; optimistic, self-confident; cheerful; appropriate to content

3 - Elevated; inappropriate to content; humorous

4 - Euphoric; inappropriate laughter; singing

2. Increased Motor Activity - Energy

|_| 0 - Absent

1 - Subjectively increased

2 - Animated; gestures increased

3 - Excessive energy; hyperactive at times; restless (can be calmed)

4 - Motor excitement; continuous hyperactivity (cannot be calmed)

3. Sexual Interest

|_| 0 - Normal; not increased

1 - Mildly or possibly increased

2 - Definite subjective increase on questioning

3 - Spontaneous sexual content; elaborates on sexual matters; hypersexual by self report

4 - Overt sexual acts (towards patients, staff, or interviewer)

4. Sleep

|_| 0 - Reports no decrease in sleep

1 - Sleeping less than normal amount by up to one hour

2 - Sleeping less than normal by more than one hour

3 - Reports decreased need for sleep

4 - Denies need for sleep

☐ 0 - Absent

2 - Subjectively increased

4 - Irritable at times during the interview; recent episodes of anger or annoyance on ward or in usual environment

6 - Frequently irritable during the interview; short, curt throughout

8 - Hostile, uncooperative; interview impossible

6. Speech (Rate and Amount)

☐ 0 - No increase

2 - Feels talkative

4 - Increased rate or amount at times, verbose at times

6 - Push; consistently increased rate and amount; difficult to interrupt

8 - Pressured; uninterruptible, continuous speech

7. Language - Thought Disorder

☐ 0 - Absent

1 - Circumstantial; mild distractibility; quick thoughts

2 - Distractible; loses goal of thought; change topics frequently; racing thoughts

3 - Flight of ideas; tangentiality; difficult to follow; rhyming, echolalia

4 - Incoherent; communication impossible

8. Content

☐ 0 - Normal

2 - Questionable plans, new interests

4 - Special project(s); hyperreligious

6 - Grandiose or paranoid ideas; ideas of reference

8 - Delusions; hallucinations

Barnes Akathisia Rating Scale

BARS

Ref. Barnes TRE. A rating scale for drug-induced akathisia. Br J Psychiatry. 1989; 154: 672-676.

Date of assessment |2|0|0| | | | | | (year mm dd)

A. Objective

Normal occasional fidgety movements of the limbs ☐0

Presence of characteristic restless movements: shuffling or tramping movements of the legs and feet, or swinging of one leg while sitting, and/or rocking from foot to foot or 'walking on the spot' when standing, but movements present for less than half the time observed ☐1

Observed phenomena, as described above, which are present for at least half the observation period ☐2

Subject is constantly engaged in characteristic restless movements, and/or has the inability to remain seated or standing without walking or pacing, during the time observed ☐3

B. Subjective

Awareness of restlessness

Absence of inner restlessness ☐0

Non-specific sense of inner restlessness ☐1

Subject is aware of an inability to keep the legs still, a desire to move the legs, and/or complains of inner restlessness aggravated specifically by being required to stand still ☐2

Awareness of an intense compulsion to move most of the time and/or reports a strong desire to walk or pace most of the time ☐3

Distress related to restlessness

No distress ☐0

Mild ☐1

Moderate ☐2

Severe ☐3

continues

Visit No. 2

AW02:09

Barnes Akathisia Rating Scale, continued

BARS

C. Global clinical assessment of akathisia

Absent

No evidence of awareness of restlessness. Observation of characteristic movements of akathisia in the absence of a subjective report of inner restlessness or compulsive desire to move the legs should be classified as pseudoakathisia ☐ 0

Questionable

Non-specific inner tension and fidgety movements ☐ 1

Mild akathisia

Awareness of restlessness in the legs and/or inner restlessness worse when required to stand still. Fidgety movements present, but characteristic restless movements of akathisia not necessarily observed. Condition causes little or no distress ☐ 2

Moderate akathisia

Awareness of restlessness as described for mild akathisia above, combined with characteristic restless movements such as rocking from foot to foot when standing. Subject finds the condition distressing ☐ 3

Marked akathisia

Subjective experience of restlessness includes a compulsive desire to walk or pace. However, the Subject is able to remain seated for at least five minutes. The condition is obviously distressing ☐ 4

Severe akathisia

The Subject reports a strong compulsion to pace up and down most of the time. Unable to sit or lie down for more than a few minutes. Constant restlessness which is associated with intense distress and insomnia ☐ 5

Simpson-Angus Scale

SAS

Ref. Modified from Simpson GN, Angus JWS. A rating scale for extrapyramidal side effects. Acta Psychiatr Scand. 1970;212 (suppl):11-19

Date of assessment |2|0|0| | | | | | (year mm dd)

1. Gait

- Normal ☐ 0
- Mild diminution in swing while the Subject is walking ☐ 1
- Obvious diminution in swing suggesting shoulder rigidity ☐ 2
- Stiff gait with little or no arm swing noticeable ☐ 3
- Rigid gait with arms slightly pronated; or stooped-shuffling gait with propulsion and repropulsion ☐ 4
- Not ratable ☐ 9

2. Arm dropping

- Normal, free fall with loud slap and rebound ☐ 0
- Fall slowed slightly with less audible contact and little rebound ☐ 1
- Fall slowed, no rebound ☐ 2
- Marked slowing, no slap at all ☐ 3
- Arms fall as though against resistance; as though through glue ☐ 4
- Not ratable ☐ 9

3. Shoulder shaking

- Normal ☐ 0
- Slight stiffness and resistance ☐ 1
- Moderate stiffness and resistance ☐ 2
- Marked rigidity with difficulty in passive movement ☐ 3
- Extreme stiffness and rigidity with almost a frozen joint ☐ 4
- Not ratable ☐ 9

continues

Pittsburgh Sleep Quality Index PSQI

Reprinted from Buysse DJ, Reynolds CF, Monk TH, Berman SR, Kupfer DJ. (1989). The Pittsburgh sleep quality index: A new instrument for psychiatric practice and research. Psychiatry Research: 28(2), 193-213, with permission of Elsevier Sceince.

Instructions: The following questions relate to your usual sleep habits during the past month only. Your answers should indicate the most accurate reply for the majority of days and nights in the past month. Please answer all questions.

Date of assessment |2|0|0| | | | | (year mm dd)

1. During the past month, when have you usually gone to bed at night?

USUAL BED TIME |_|_| : |_|_| (24-hour clock)

2. During the past month, how long (in minutes) has it usually taken you to fall asleep each night?

NUMBER OF MINUTES |_|_|_|

3.During the past month, when have you usually gotten up in the morning?

USUAL GETTING UP TIME |_|_| : |_|_| (24-hour clock)

4. During the past month, how many hours of *actual sleep* did you get at night? (This may be different than the number of hours you spend in bed.)

HOURS OF SLEEP PER NIGHT |_|_|

For each of the remaining questions, check the one best response. Please answer all questions.

5. **During the past month, how often have you had trouble sleeping because you....**

	Not during the past month	Less than once a week	Once or twice a week	Three or more times a week
a. Cannot get to sleep within 30 minutes	☐ 0	☐ 1	☐ 2	☐ 3
b. Wake up in the middle of the night or early morning	☐ 0	☐ 1	☐ 2	☐ 3
c. Have to get up to use the bathroom	☐ 0	☐ 1	☐ 2	☐ 3
d. Cannot breathe comfortably	☐ 0	☐ 1	☐ 2	☐ 3
e. Cough or snore loudly	☐ 0	☐ 1	☐ 2	☐ 3
f. Feel too cold	☐ 0	☐ 1	☐ 2	☐ 3
g. Feel too hot	☐ 0	☐ 1	☐ 2	☐ 3
h. Had bad dreams	☐ 0	☐ 1	☐ 2	☐ 3
i. Have pain	☐ 0	☐ 1	☐ 2	☐ 3

Quality of Life Enjoyment and Satisfaction Questionnaire - Short Form QLESSF

Available from Jean Endicott, Ph.D., Dept. of Research Assessment and Training, Unit 123, 1051 Riverside Drive, New York, NY 10032, USA

Date of assessment |2|0|0| | | | | (year mm dd)

General Activities
Taking everything into consideration, during the past week how satisfied have you been with your... (indicate one box only)

Overall level of satisfaction

	Very poor	*Poor*	*Fair*	*Good*	*Very good*
Physical health	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
mood	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
work	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
household activities	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
social relationship	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
family relationship	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
leisure time activities	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
ability to function in daily life	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
sexual drive, interest and/or performance*	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
economic situation	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
living/housing situation*	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
ability to get around physically without feeling dizzy or unsteady or falling*	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
your vision in terms of ability to do work or hobbies*	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
overall sense of well being	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
medications, if not taking any , indicate here ☐ 0 and leave item blank	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5
How would you rate your overall life satisfaction and contentment during the past week	☐ 1	☐ 2	☐ 3	☐ 4	☐ 5

*If satisfaction is very poor, poor, or fair on these items, please UNDERLINE the factor(s) associated with a lack of satisfaction

Hamilton Rating Scale for Depression HAMD

Date of assessment |2|0|0| | | | | | (year mm dd)

1. Depressed mood (sadness, hopeless, helpless, worthless)

☐0 Absent

☐1 These feeling states indicated only on questioning

☐2 These feeling states spontaneously reported verbally

☐3 Communicates feeling states non-verbally (ie, through facial expression, posture, voice, and tendency to weep)

☐4 Subject reports virtually only these feeling states in his spontaneous verbal and non-verbal communication

2. Feeling of guilt

☐0 Absent

☐1 Self-reproach, feels he has let people down

☐2 Ideas of guilt or rumination over past errors or sinful deeds

☐3 Present illness is a punishment. Delusions of guilt

☐4 Hears accusatory or denunciatory voices and/or experiences threatening visual hallucinations

3. Suicide

☐0 Absent

☐1 Feels life is not worth living

☐2 Wishes he were dead or any thoughts of possible death to self

☐3 Suicide ideas or gesture

☐4 Attempts at suicide (any serious attempt rates 4)

continues

Study code 5077US/0049 Subj initials ..... E code |E|0|0| | | | |

Hamilton Rating Scale for Depression, continued HAMD

4. Insomnia early

☐0 No difficulty falling asleep

☐1 Complains of occasional difficulty falling asleep (eg, more than 30 minutes)

☐2 Complains of nightly difficulty falling asleep

5. Insomnia middle

☐0 No difficulty

☐1 Subject complains of being restless and disturbed during the night

☐2 Waking during the night - any getting out of bed rates 2 (except for purposes of voiding)

6. Insomnia late

☐0 No difficulty

☐1 Waking in early hours of the morning but goes back to sleep

☐2 Unable to fall asleep again if he gets out of bed

7. Work and activities

☐0 No difficulty

☐1 Thoughts and feelings of incapacity, fatigue or weakness related to activities; work or hobbies

☐2 Loss of interest in activity; hobbies or work - either directly reported by Subject, or indirect in listlessness, indecision and vacillation (feels he has to push self to work or activities)

☐3 Decrease in actual time spent in activities or decrease in productivity

☐4 Stopped working because of present illness.

continues

AW02:09

Hamilton Rating Scale for Depression, continued HAMD

8. Retardation: psychomotor
(slowness of thought and speech; impaired ability to concentrate; decreased motor activity)

☐0 Normal speech and thought

☐1 Slight retardation at interview

☐2 Obvious retardation at interview

☐3 Interview difficult

☐4 Complete stupor

9. Agitation

☐0 None

☐1 Fidgetiness

☐2 Playing with hands, hair, etc

☐3 Moving about, can't sit still

☐4 Hand wringing, nail-biting, hair-pulling, biting of lips

10. Anxiety (psychological)

☐0 No difficulty

☐1 Subjective tension and irritability

☐2 Worrying about minor matters

☐3 Apprehensive attitude apparent in face or speech

☐4 Fears expressed without questioning

11. Anxiety somatic

Physiological concomitants of anxiety (ie, effects of autonomic overactivity, "butterflies", indigestion, stomach cramps, belching, diarrhea, palpitations, hyperventilation, paresthesia, sweating, flushing, tremor, headache, urinary frequency). Avoid asking about possible medication side effects (ie, dry mouth, constipation)

☐0 Absent

☐1 Mild

☐2 Moderate

☐3 Severe

☐4 Incapacitating

12. Somatic symptoms (gastrointestinal)

☐0 None

☐1 Loss of appetite but eating without encouragement from others. Food intake about normal

☐2 Difficulty eating without urging from others. Marked reduction of appetite and food intake

13. Somatic symptoms general

☐0 None

☐1 Heaviness in limbs, back, or head; backaches, headache, muscle aches; loss of energy and fatigability

☐2 Any clear-cut symptom rates 2

14. Genital symptoms

(symptoms such as: loss of libido; impaired sexual performance; menstrual disturbances)

☐0 Absent

☐1 Mild

☐2 Severe

15. Hypochondriasis

☐0 Not present

☐1 Self-absorption (bodily)

☐2 Preoccupation with health

☐3 Frequent complaints, requests for help, etc

☐4 Hypochondriacal delusions

16. Loss of weight)

A. When rating by history

☐0 No weight loss

☐1 Probable weight loss associated with present illness

☐2 Definite (according to Subject) weight loss

☐3 Not assessed

17. Insight

☐0 Acknowledges being depressed and ill

☐1 Acknowledges illness but attributes cause to bad food, climate, overwork, virus, need for rest, etc

☐2 Denies being ill at all

Montgomery-Asberg Depression Rating Scale MADRS

Date of assessment |2|0|0| | | | | (year mm dd)

1. Apparent sadness

Representing despondency, gloom, and despair (more than just ordinary transient low spirits), reflected in speech, facial expression, and posture.
Rate by depth and inability to brighten up.

☐0 No sadness

☐1

☐2 Looks dispirited but does brighten up without difficulty

☐3

☐4 Appears sad and unhappy most of the time

☐5

☐6 Looks miserable all the time; extremely despondent

2. Reported sadness

Representing reports of depressed mood, regardless of whether it is reflected in appearance or not. Includes low spirits, despondency, or the feeling of being beyond help and without hope. Rate according to intensity, duration, and the extent to which the mood is reported to be influenced by events.

☐0 Occasional sadness in keeping with the circumstances

☐1

☐2 Sad or low but brightens up without difficulty

☐3

☐4 Pervasive feelings of sadness or gloominess. The mood is still influenced by external circumstances

☐5

☐6 Continuous or unvarying sadness, misery, or despondence

continues

Visit No. 3

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

3. Inner tension

Representing feelings of ill-defined discomfort, edginess, inner turmoil, mental tension mounting to either panic, dread, or anguish.
Rate according to intensity, frequency, duration, and the extent of reassurance called for.

☐0 Placid; only fleeting inner tension

☐1

☐2 Occasional feelings of edginess and ill-defined discomfort

☐3

☐4 Continuous feelings of inner tension or intermittent panic which Subject can only master with some difficulty

☐5

☐6 Unrelenting dread or anguish; overwhelming panic

4. Reduced sleep

Representing the experience of reduced duration or depth of sleep compared to Subject's own normal pattern when well.

☐0 Sleeps as usual

☐1

☐2 Slight difficulty dropping off to sleep or slightly reduced, light or fitful sleep

☐3

☐4 Sleep reduced or broken by at least two hours

☐5

☐6 Less than two or three hours sleep

continues

Study code 5077US/0049 Subj initials ..... E code |E|0|0| | | | | |

Visit No. 3

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

5. Reduced appetite

Representing the feeling of a loss of appetite compared with when well.
Rate by loss of desire for food or the need to force oneself to eat.

☐0 Normal or increased appetite

☐1

☐2 Slightly reduced appetite

☐3

☐4 No appetite; food is tasteless

☐5

☐6 Needs persuasion to eat at all

6. Concentration difficulties

Representing difficulties in collecting one's thoughts mounting to incapacitating lack of concentration.
Rate according to intensity, frequency, and degree of incapacity produced.

☐0 No difficulties in concentrating

☐1

☐2 Occasional difficulties in collecting one's thoughts

☐3

☐4 Difficulties in concentrating and sustaining thought which reduces ability to read or hold a conversation

☐5

☐6 Unable to read or converse without great difficulty

continues

Visit No. 3

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

7. Lassitude

Representing a difficulty getting started or slowness initiating and performing everyday activities.

☐0 Hardly any difficulty in getting started; no sluggishness

☐1

☐2 Difficulties in starting activities

☐3

☐4 Difficulties in starting simple routine activities which are carried out with effort

☐5

☐6 Complete lassitude; unable to do anything without help

8. Inability to feel

Representing the subjective experience of reduced interest in the surroundings, or activities that normally give pleasure. The ability to react with adequate emotion to circumstances or people is reduced.

☐0 Normal interest in the surroundings and in other people

☐1

☐2 Reduced ability to enjoy usual interests

☐3

☐4 Loss of interest in the surroundings; loss of feelings for friends and acquaintances

☐5

☐6 The experience of being emotionally paralyzed; inability to feel anger, grief, or pleasure; and a complete or even painful failure to feel for close relatives

continues

Study code 5077US/0049 Subj initials ..... E code |E|0|0| | | | | |

Visit No. 3

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

9. Pessimistic thoughts

Representing thoughts of guilt, inferiority, self-reproach, sinfulness, remorse and ruin.

☐0 No pessimistic thoughts

☐1

☐2 Fluctuating ideas of failure, self-reproach, or self depreciation

☐3

☐4 Persistent self-accusations, or definite but still rational ideas of guilt or sin; increasingly pessimistic about the future

☐5

☐6 Delusions of ruin, remorse, or unredeemable sin; self-accusations which are absurd and unshakable

10. Suicidal thoughts

Representing the feeling that life is not worth living, that a natural death would be welcome, suicidal thoughts, and preparations for suicide.
Suicidal attempts should not in themselves influence the rating.

☐0 Enjoys life or takes it as it comes

☐1

☐2 Weary of life; only fleeting suicidal thoughts

☐3

☐4 Probably better off dead; suicidal thoughts are common, and suicide is considered as a possible solution, but without specific plans or intentions

☐5

☐6 Explicit plans for suicide when there is an opportunity; active preparations for suicide

Young Mania Rating Scale YMRS

Date of assessment |2|0|0| | | | | (year mm dd)

1. Elevated Mood

|_| 0 - Absent

1 - Mildly or possibly increased on questioning

2 - Definite subjective elevation; optimistic, self-confident; cheerful; appropriate to content

3 - Elevated; inappropriate to content; humorous

4 - Euphoric; inappropriate laughter; singing

2. Increased Motor Activity - Energy

|_| 0 - Absent

1 - Subjectively increased

2 - Animated; gestures increased

3 - Excessive energy; hyperactive at times; restless (can be calmed)

4 - Motor excitement; continuous hyperactivity (cannot be calmed)

3. Sexual Interest

|_| 0 - Normal; not increased

1 - Mildly or possibly increased

2 - Definite subjective increase on questioning

3 - Spontaneous sexual content; elaborates on sexual matters; hypersexual by self report

4 - Overt sexual acts (towards patients, staff, or interviewer)

4. Sleep

|_| 0 - Reports no decrease in sleep

1 - Sleeping less than normal amount by up to one hour

2 - Sleeping less than normal by more than one hour

3 - Reports decreased need for sleep

4 - Denies need for sleep

continues

AW02:09

Young Mania Rating Scale, continued YMRS

5. Irritability

|_| 0 - Absent

2 - Subjectively increased

4 - Irritable at times during the interview; recent episodes of anger or annoyance on ward or in usual environment

6 - Frequently irritable during the interview; short, curt throughout

8 - Hostile, uncooperative; interview impossible

6. Speech (Rate and Amount)

|_| 0 - No increase

2 - Feels talkative

4 - Increased rate or amount at times, verbose at times

6 - Push; consistently increased rate and amount; difficult to interrupt

8 - Pressured; uninterruptible, continuous speech

7. Language - Thought Disorder

|_| 0 - Absent

1 - Circumstantial; mild distractibility; quick thoughts

2 - Distractible; loses goal of thought; change topics frequently; racing thoughts

3 - Flight of ideas; tangentiality; difficult to follow; rhyming, echolalia

4 - Incoherent; communication impossible

8. Content

|_| 0 - Normal

2 - Questionable plans, new interests

4 - Special project(s); hyperreligious

6 - Grandiose or paranoid ideas; ideas of reference

8 - Delusions; hallucinations

└┘ 0 - Absent, cooperative

2 - Sarcastic; loud at times, guarded

4 - Demanding; threats on ward

6 - Threatens interviewer; shouting during interview; interview difficult

8 - Assaultive; destructive; interview impossible

10. Appearance

└┘ 0 - Appropriate dress and grooming

1 - Minimally unkempt

2 - Poorly groomed; moderately dishevelled; overdressed

3 - Dishevelled; partly clothed; garish make-up

4 - Completely unkempt; decorated; bizarre garb

11. Insight

└┘ 0 - Present; admits illness; agrees with need for treatment

1 - Possibly ill

2 - Admits behaviour change, but denies illness

3 - Admits possible change in behaviour, but denies illness

4 - Denies any behaviour change

☐4 Difficulties in starting simple routine activities which are carried out with effort

☐5

☐6 Complete lassitude; unable to do anything without help

8. Inability to feel

Representing the subjective experience of reduced interest in the surroundings, or activities that normally give pleasure. The ability to react with adequate emotion to circumstances or people is reduced.

☐0 Normal interest in the surroundings and in other people

☐1

☐2 Reduced ability to enjoy usual interests

☐3

☐4 Loss of interest in the surroundings; loss of feelings for friends and acquaintances

☐5

☐6 The experience of being emotionally paralyzed; inability to feel anger, grief, or pleasure; and a complete or even painful failure to feel for close relatives

Study code 5077US/0049 Subj initials ..... E code E 0 0

Visit No. 4

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

9. Pessimistic thoughts

Representing thoughts of guilt, inferiority, self-reproach, sinfulness, remorse and ruin.

☐0 No pessimistic thoughts

☐1

☐2 Fluctuating ideas of failure, self-reproach, or self depreciation

☐3

☐4 Persistent self-accusations, or definite but still rational ideas of guilt or sin; increasingly pessimistic about the future

☐5

☐6 Delusions of ruin, remorse, or unredeemable sin; self-accusations which are absurd and unshakable

10. Suicidal thoughts

Representing the feeling that life is not worth living, that a natural death would be welcome, suicidal thoughts, and preparations for suicide.
Suicidal attempts should not in themselves influence the rating.

☐0 Enjoys life or takes it as it comes

☐1

☐2 Weary of life; only fleeting suicidal thoughts

☐3

☐4 Probably better off dead; suicidal thoughts are common, and suicide is considered as a possible solution, but without specific plans or intentions

☐5

☐6 Explicit plans for suicide when there is an opportunity; active preparations for suicide

Total score item 1-10 ☐☐

Young Mania Rating Scale YMRS

Date of assessment 2 0 0 (year) (mm) (dd)

1. Elevated Mood

☐ 0 - Absent

1 - Mildly or possibly increased on questioning

2 - Definite subjective elevation; optimistic, self-confident; cheerful; appropriate to content

3 - Elevated; inappropriate to content; humorous

4 - Euphoric; inappropriate laughter; singing

2. Increased Motor Activity - Energy

☐ 0 - Absent

1 - Subjectively increased

2 - Animated; gestures increased

3 - Excessive energy; hyperactive at times; restless (can be calmed)

4 - Motor excitement; continuous hyperactivity (cannot be calmed)

3. Sexual Interest

☐ 0 - Normal; not increased

1 - Mildly or possibly increased

2 - Definite subjective increase on questioning

3 - Spontaneous sexual content; elaborates on sexual matters; hypersexual by self report

4 - Overt sexual acts (towards patients, staff, or interviewer)

4. Sleep

☐ 0 - Reports no decrease in sleep

1 - Sleeping less than normal amount by up to one hour

2 - Sleeping less than normal by more than one hour

3 - Reports decreased need for sleep

4 - Denies need for sleep

5. Irritability

☐ 0 - Absent

2 - Subjectively increased

4 - Irritable at times during the interview; recent episodes of anger or annoyance on ward or in usual environment

6 - Frequently irritable during the interview; short, curt throughout

8 - Hostile, uncooperative; interview impossible

6. Speech (Rate and Amount)

☐ 0 - No increase

2 - Feels talkative

4 - Increased rate or amount at times, verbose at times

6 - Push; consistently increased rate and amount; difficult to interrupt

8 - Pressured; uninterruptible, continuous speech

7. Language - Thought Disorder

☐ 0 - Absent

1 - Circumstantial; mild distractibility; quick thoughts

2 - Distractible; loses goal of thought; change topics frequently; racing thoughts

3 - Flight of ideas; tangentiality; difficult to follow; rhyming, echolalia

4 - Incoherent; communication impossible

8. Content

☐ 0 - Normal

2 - Questionable plans, new interests

4 - Special project(s); hyperreligious

6 - Grandiose or paranoid ideas; ideas of reference

8 - Delusions; hallucinations

9. Disruptive - Aggressive Behaviour

☐ 0 - Absent, cooperative

2 - Sarcastic; loud at times, guarded

4 - Demanding; threats on ward

6 - Threatens interviewer; shouting during interview; interview difficult

8 - Assaultive; destructive; interview impossible

10. Appearance

☐ 0 - Appropriate dress and grooming

1 - Minimally unkempt

2 - Poorly groomed; moderately dishevelled; overdressed

3 - Dishevelled; partly clothed; garish make-up

4 - Completely unkempt; decorated; bizarre garb

11. Insight

☐ 0 - Present; admits illness; agrees with need for treatment

1 - Possibly ill

2 - Admits behaviour change, but denies illness

3 - Admits possible change in behaviour, but denies illness

4 - Denies any behaviour change

Hamilton Rating Scale for Depression HAMD

Date of assessment |2|0|0| | | | | | (year mm dd)

1. Depressed mood (sadness, hopeless, helpless, worthless)

☐0 Absent

☐1 These feeling states indicated only on questioning

☐2 These feeling states spontaneously reported verbally

☐3 Communicates feeling states non-verbally (ie, through facial expression, posture, voice, and tendency to weep)

☐4 Subject reports virtually only these feeling states in his spontaneous verbal and non-verbal communication

2. Feeling of guilt

☐0 Absent

☐1 Self-reproach, feels he has let people down

☐2 Ideas of guilt or rumination over past errors or sinful deeds

☐3 Present illness is a punishment. Delusions of guilt

☐4 Hears accusatory or denunciatory voices and/or experiences threatening visual hallucinations

3. Suicide

☐0 Absent

☐1 Feels life is not worth living

☐2 Wishes he were dead or any thoughts of possible death to self

☐3 Suicide ideas or gesture

☐4 Attempts at suicide (any serious attempt rates 4)

Montgomery-Asberg Depression Rating Scale MADRS

Date of assessment |2|0|0| | | | | | | | |
year mm dd

1. Apparent sadness

Representing despondency, gloom, and despair (more than just ordinary transient low spirits), reflected in speech, facial expression, and posture.
Rate by depth and inability to brighten up.

☐0 No sadness

☐1

☐2 Looks dispirited but does brighten up without difficulty

☐3

☐4 Appears sad and unhappy most of the time

☐5

☐6 Looks miserable all the time; extremely despondent

2. Reported sadness

Representing reports of depressed mood, regardless of whether it is reflected in appearance or not. Includes low spirits, despondency, or the feeling of being beyond help and without hope. Rate according to intensity, duration, and the extent to which the mood is reported to be influenced by events.

☐0 Occasional sadness in keeping with the circumstances

☐1

☐2 Sad or low but brightens up without difficulty

☐3

☐4 Pervasive feelings of sadness or gloominess. The mood is still influenced by external circumstances

☐5

☐6 Continuous or unvarying sadness, misery, or despondence

continues

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

3. Inner tension

Representing feelings of ill-defined discomfort, edginess, inner turmoil, mental tension mounting to either panic, dread, or anguish.
Rate according to intensity, frequency, duration, and the extent of reassurance called for.

☐0 Placid; only fleeting inner tension

☐1

☐2 Occasional feelings of edginess and ill-defined discomfort

☐3

☐4 Continuous feelings of inner tension or intermittent panic which Subject can only master with some difficulty

☐5

☐6 Unrelenting dread or anguish; overwhelming panic

4. Reduced sleep

Representing the experience of reduced duration or depth of sleep compared to Subject's own normal pattern when well.

☐0 Sleeps as usual

☐1

☐2 Slight difficulty dropping off to sleep or slightly reduced, light or fitful sleep

☐3

☐4 Sleep reduced or broken by at least two hours

☐5

☐6 Less than two or three hours sleep

continues

5. Reduced appetite

Representing the feeling of a loss of appetite compared with when well.
Rate by loss of desire for food or the need to force oneself to eat.

☐0 Normal or increased appetite

☐1

☐2 Slightly reduced appetite

☐3

☐4 No appetite; food is tasteless

☐5

☐6 Needs persuasion to eat at all

6. Concentration difficulties

Representing difficulties in collecting one's thoughts mounting to incapacitating lack of concentration.
Rate according to intensity, frequency, and degree of incapacity produced.

☐0 No difficulties in concentrating

☐1

☐2 Occasional difficulties in collecting one's thoughts

☐3

☐4 Difficulties in concentrating and sustaining thought which reduces ability to read or hold a conversation

☐5

☐6 Unable to read or converse without great difficulty

Montgomery-Asberg Depression Rating Scale MADRS

Date of assessment |2|0|0| | | | | (year mm dd)

1. Apparent sadness

Representing despondency, gloom, and despair (more than just ordinary transient low spirits), reflected in speech, facial expression, and posture.
Rate by depth and inability to brighten up.

☐0 No sadness

☐1

☐2 Looks dispirited but does brighten up without difficulty

☐3

☐4 Appears sad and unhappy most of the time

☐5

☐6 Looks miserable all the time; extremely despondent

2. Reported sadness

Representing reports of depressed mood, regardless of whether it is reflected in appearance or not. Includes low spirits, despondency, or the feeling of being beyond help and without hope. Rate according to intensity, duration, and the extent to which the mood is reported to be influenced by events.

☐0 Occasional sadness in keeping with the circumstances

☐1

☐2 Sad or low but brightens up without difficulty

☐3

☐4 Pervasive feelings of sadness or gloominess. The mood is still influenced by external circumstances

☐5

☐6 Continuous or unvarying sadness, misery, or despondence

continues

Study code 5077US/0049 Subj initials ..... E code |E|0|0| | | | |

Visit No. 6

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

3. Inner tension

Representing feelings of ill-defined discomfort, edginess, inner turmoil, mental tension mounting to either panic, dread, or anguish.
Rate according to intensity, frequency, duration, and the extent of reassurance called for.

☐0 Placid; only fleeting inner tension

☐1

☐2 Occasional feelings of edginess and ill-defined discomfort

☐3

☐4 Continuous feelings of inner tension or intermittent panic which Subject can only master with some difficulty

☐5

☐6 Unrelenting dread or anguish; overwhelming panic

4. Reduced sleep

Representing the experience of reduced duration or depth of sleep compared to Subject's own normal pattern when well.

☐0 Sleeps as usual

☐1

☐2 Slight difficulty dropping off to sleep or slightly reduced, light or fitful sleep

☐3

☐4 Sleep reduced or broken by at least two hours

☐5

☐6 Less than two or three hours sleep

continues

Visit No. 6

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

5. Reduced appetite

Representing the feeling of a loss of appetite compared with when well.
Rate by loss of desire for food or the need to force oneself to eat.

☐0 Normal or increased appetite

☐1

☐2 Slightly reduced appetite

☐3

☐4 No appetite; food is tasteless

☐5

☐6 Needs persuasion to eat at all

6. Concentration difficulties

Representing difficulties in collecting one's thoughts mounting to incapacitating lack of concentration.
Rate according to intensity, frequency, and degree of incapacity produced.

☐0 No difficulties in concentrating

☐1

☐2 Occasional difficulties in collecting one's thoughts

☐3

☐4 Difficulties in concentrating and sustaining thought which reduces ability to read or hold a conversation

☐5

☐6 Unable to read or converse without great difficulty

continues

Visit No. 6

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

7. Lassitude

Representing a difficulty getting started or slowness initiating and performing everyday activities.

☐0 Hardly any difficulty in getting started; no sluggishness

☐1

☐2 Difficulties in starting activities

☐3

☐4 Difficulties in starting simple routine activities which are carried out with effort

☐5

☐6 Complete lassitude; unable to do anything without help

8. Inability to feel

Representing the subjective experience of reduced interest in the surroundings, or activities that normally give pleasure. The ability to react with adequate emotion to circumstances or people is reduced.

☐0 Normal interest in the surroundings and in other people

☐1

☐2 Reduced ability to enjoy usual interests

☐3

☐4 Loss of interest in the surroundings; loss of feelings for friends and acquaintances

☐5

☐6 The experience of being emotionally paralyzed; inability to feel anger, grief, or pleasure; and a complete or even painful failure to feel for close relatives

continues

Study code 5077US/0049 Subj initials ..... E code E 0

Visit No. 6

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

9. Pessimistic thoughts

Representing thoughts of guilt, inferiority, self-reproach, sinfulness, remorse and ruin.

☐0 No pessimistic thoughts

☐1

☐2 Fluctuating ideas of failure, self-reproach, or self depreciation

☐3

☐4 Persistent self-accusations, or definite but still rational ideas of guilt or sin; increasingly pessimistic about the future

☐5

☐6 Delusions of ruin, remorse, or unredeemable sin; self-accusations which are absurd and unshakable

10. Suicidal thoughts

Representing the feeling that life is not worth living, that a natural death would be welcome, suicidal thoughts, and preparations for suicide.
Suicidal attempts should not in themselves influence the rating.

☐0 Enjoys life or takes it as it comes

☐1

☐2 Weary of life; only fleeting suicidal thoughts

☐3

☐4 Probably better off dead; suicidal thoughts are common, and suicide is considered as a possible solution, but without specific plans or intentions

☐5

☐6 Explicit plans for suicide when there is an opportunity; active preparations for suicide

Total score item 1-10 ☐☐

Young Mania Rating Scale YMRS

Date of assessment |2|0|0| | | | | (year mm dd)

1. Elevated Mood

└┘ 0 - Absent

1 - Mildly or possibly increased on questioning

2 - Definite subjective elevation; optimistic, self-confident; cheerful; appropriate to content

3 - Elevated; inappropriate to content; humorous

4 - Euphoric; inappropriate laughter; singing

2. Increased Motor Activity - Energy

└┘ 0 - Absent

1 - Subjectively increased

2 - Animated; gestures increased

3 - Excessive energy; hyperactive at times; restless (can be calmed)

4 - Motor excitement; continuous hyperactivity (cannot be calmed)

3. Sexual Interest

└┘ 0 - Normal; not increased

1 - Mildly or possibly increased

2 - Definite subjective increase on questioning

3 - Spontaneous sexual content; elaborates on sexual matters; hypersexual by self report

4 - Overt sexual acts (towards patients, staff, or interviewer)

4. Sleep

└┘ 0 - Reports no decrease in sleep

1 - Sleeping less than normal amount by up to one hour

2 - Sleeping less than normal by more than one hour

3 - Reports decreased need for sleep

4 - Denies need for sleep

5. Irritability

☐ 0 - Absent

2 - Subjectively increased

4 - Irritable at times during the interview; recent episodes of anger or annoyance on ward or in usual environment

6 - Frequently irritable during the interview; short, curt throughout

8 - Hostile, uncooperative; interview impossible

6. Speech (Rate and Amount)

☐ 0 - No increase

2 - Feels talkative

4 - Increased rate or amount at times, verbose at times

6 - Push; consistently increased rate and amount; difficult to interrupt

8 - Pressured; uninterruptible, continuous speech

7. Language - Thought Disorder

☐ 0 - Absent

1 - Circumstantial; mild distractibility; quick thoughts

2 - Distractible; loses goal of thought; change topics frequently; racing thoughts

3 - Flight of ideas; tangentiality; difficult to follow; rhyming, echolalia

4 - Incoherent; communication impossible

8. Content

☐ 0 - Normal

2 - Questionable plans, new interests

4 - Special project(s); hyperreligious

6 - Grandiose or paranoid ideas; ideas of reference

8 - Delusions; hallucinations

Pittsburgh Sleep Quality Index PSQI

Reprinted from Buysse DJ, Reynolds CF, Monk TH, Berman SR, Kupfer DJ. (1989). The Pittsburgh sleep quality index: A new instrument for psychiatric practice and research. Psychiatry Research: 28(2), 193-213, with permission of Elsevier Sceince.

Instructions: The following questions relate to your usual sleep habits during the past month only. Your answers should indicate the most accurate reply for the majority of days and nights in the past month. Please answer all questions.

Date of assessment |2|0|0| | | | | | (year mm dd)

1. During the past month, when have you usually gone to bed at night?

USUAL BED TIME | | | : | | (24-hour clock)

2. During the past month, how long (in minutes) has it usually taken you to fall asleep each night?

NUMBER OF MINUTES | | |

3.During the past month, when have you usually gotten up in the morning?

USUAL GETTING UP TIME | | | : | | (24-hour clock)

4. During the past month, how many hours of *actual sleep* did you get at night? (This may be different than the number of hours you spend in bed.)

HOURS OF SLEEP PER NIGHT | | |

For each of the remaining questions, check the one best response. Please answer all questions.

5. **During the past month, how often have you had trouble sleeping because you....**

	Not during the past month	Less than once a week	Once or twice a week	Three or more times a week
a. Cannot get to sleep within 30 minutes	☐ 0	☐ 1	☐ 2	☐ 3
b. Wake up in the middle of the night or early morning	☐ 0	☐ 1	☐ 2	☐ 3
c. Have to get up to use the bathroom	☐ 0	☐ 1	☐ 2	☐ 3
d. Cannot breathe comfortably	☐ 0	☐ 1	☐ 2	☐ 3
e. Cough or snore loudly	☐ 0	☐ 1	☐ 2	☐ 3
f. Feel too cold	☐ 0	☐ 1	☐ 2	☐ 3
g. Feel too hot	☐ 0	☐ 1	☐ 2	☐ 3

Hamilton Rating Scale for Depression HAMD

Date of assessment |2|0|0| | | | | (year mm dd)

1. Depressed mood (sadness, hopeless, helpless, worthless)

☐0 Absent

☐1 These feeling states indicated only on questioning

☐2 These feeling states spontaneously reported verbally

☐3 Communicates feeling states non-verbally (ie, through facial expression, posture, voice, and tendency to weep)

☐4 Subject reports virtually only these feeling states in his spontaneous verbal and non-verbal communication

2. Feeling of guilt

☐0 Absent

☐1 Self-reproach, feels he has let people down

☐2 Ideas of guilt or rumination over past errors or sinful deeds

☐3 Present illness is a punishment. Delusions of guilt

☐4 Hears accusatory or denunciatory voices and/or experiences threatening visual hallucinations

3. Suicide

☐0 Absent

☐1 Feels life is not worth living

☐2 Wishes he were dead or any thoughts of possible death to self

☐3 Suicide ideas or gesture

☐4 Attempts at suicide (any serious attempt rates 4)

continues

AW02:09

Hamilton Rating Scale for Depression, continued HAMD

4. Insomnia early

☐0 No difficulty falling asleep

☐1 Complains of occasional difficulty falling asleep (eg, more than 30 minutes)

☐2 Complains of nightly difficulty falling asleep

5. Insomnia middle

☐0 No difficulty

☐1 Subject complains of being restless and disturbed during the night

☐2 Waking during the night - any getting out of bed rates 2 (except for purposes of voiding)

6. Insomnia late

☐0 No difficulty

☐1 Waking in early hours of the morning but goes back to sleep

☐2 Unable to fall asleep again if he gets out of bed

7. Work and activities

☐0 No difficulty

☐1 Thoughts and feelings of incapacity, fatigue or weakness related to activities; work or hobbies

☐2 Loss of interest in activity; hobbies or work - either directly reported by Subject, or indirect in listlessness, indecision and vacillation (feels he has to push self to work or activities)

☐3 Decrease in actual time spent in activities or decrease in productivity

☐4 Stopped working because of present illness.

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

7. Lassitude

Representing a difficulty getting started or slowness initiating and performing everyday activities.

☐0 Hardly any difficulty in getting started; no sluggishness

☐1

☐2 Difficulties in starting activities

☐3

☐4 Difficulties in starting simple routine activities which are carried out with effort

☐5

☐6 Complete lassitude; unable to do anything without help

8. Inability to feel

Representing the subjective experience of reduced interest in the surroundings, or activities that normally give pleasure. The ability to react with adequate emotion to circumstances or people is reduced.

☐0 Normal interest in the surroundings and in other people

☐1

☐2 Reduced ability to enjoy usual interests

☐3

☐4 Loss of interest in the surroundings; loss of feelings for friends and acquaintances

☐5

☐6 The experience of being emotionally paralyzed; inability to feel anger, grief, or pleasure; and a complete or even painful failure to feel for close relatives

continues

Visit No. 7

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

9. Pessimistic thoughts

Representing thoughts of guilt, inferiority, self-reproach, sinfulness, remorse and ruin.

☐0 No pessimistic thoughts

☐1

☐2 Fluctuating ideas of failure, self-reproach, or self depreciation

☐3

☐4 Persistent self-accusations, or definite but still rational ideas of guilt or sin; increasingly pessimistic about the future

☐5

☐6 Delusions of ruin, remorse, or unredeemable sin; self-accusations which are absurd and unshakable

10. Suicidal thoughts

Representing the feeling that life is not worth living, that a natural death would be welcome, suicidal thoughts, and preparations for suicide.
Suicidal attempts should not in themselves influence the rating.

☐0 Enjoys life or takes it as it comes

☐1

☐2 Weary of life; only fleeting suicidal thoughts

☐3

☐4 Probably better off dead; suicidal thoughts are common, and suicide is considered as a possible solution, but without specific plans or intentions

☐5

☐6 Explicit plans for suicide when there is an opportunity; active preparations for suicide

Young Mania Rating Scale YMRS

Date of assessment |2|0|0| | | | | |
year mm dd

1. Elevated Mood

└┘ 0 - Absent

1 - Mildly or possibly increased on questioning

2 - Definite subjective elevation; optimistic, self-confident; cheerful; appropriate to content

3 - Elevated; inappropriate to content; humorous

4 - Euphoric; inappropriate laughter; singing

2. Increased Motor Activity - Energy

└┘ 0 - Absent

1 - Subjectively increased

2 - Animated; gestures increased

3 - Excessive energy; hyperactive at times; restless (can be calmed)

4 - Motor excitement; continuous hyperactivity (cannot be calmed)

3. Sexual Interest

└┘ 0 - Normal; not increased

1 - Mildly or possibly increased

2 - Definite subjective increase on questioning

3 - Spontaneous sexual content; elaborates on sexual matters; hypersexual by self report

4 - Overt sexual acts (towards patients, staff, or interviewer)

4. Sleep

└┘ 0 - Reports no decrease in sleep

1 - Sleeping less than normal amount by up to one hour

2 - Sleeping less than normal by more than one hour

3 - Reports decreased need for sleep

4 - Denies need for sleep

Hamilton Rating Scale for Anxiety HAMA

Date of assessment |2|0|0| | | | | (year mm dd)

Anxious mood

Worries, anticipation of the worst, fearful anticipation, irritability ☐

Tension

Feelings of tension, fatigability, startle response, moved to tears easily, trembling, feelings of restlessness, inability to relax ☐

Fears

Of dark, of strangers, of being left alone, of animals, of traffic, of crowds ☐

Insomnia

Difficulty in falling asleep, broken sleep, unsatisfying sleep and fatigue on waking, dreams, nightmares, night terrors ☐

Intellectual

Difficulty in concentration, poor memory ☐

Depressed mood

Loss of interest, lack of pleasure in hobbies, depression, early waking, diurnal swing ☐

Somatic (Muscular)

Pains and aches, twitchings, stiffness, myoclonic jerks, grinding of teeth, unsteady voice, increased muscular tone ☐

Somatic (Sensory)

Tinnitus, blurring of vision, hot and cold flushes, feelings of weakness, pricking sensation ☐

Cardiovascular symptoms

Tachycardia, palpitations, pain in chest, throbbing of vessels, fainting feelings, sighing, dyspnea ☐

Hamilton Rating Scale for Depression HAMD

Date of assessment |2|0|0| | | | | (year mm dd)

1. Depressed mood (sadness, hopeless, helpless, worthless)

☐0 Absent

☐1 These feeling states indicated only on questioning

☐2 These feeling states spontaneously reported verbally

☐3 Communicates feeling states non-verbally (ie, through facial expression, posture, voice, and tendency to weep)

☐4 Subject reports virtually only these feeling states in his spontaneous verbal and non-verbal communication

2. Feeling of guilt

☐0 Absent

☐1 Self-reproach, feels he has let people down

☐2 Ideas of guilt or rumination over past errors or sinful deeds

☐3 Present illness is a punishment. Delusions of guilt

☐4 Hears accusatory or denunciatory voices and/or experiences threatening visual hallucinations

3. Suicide

☐0 Absent

☐1 Feels life is not worth living

☐2 Wishes he were dead or any thoughts of possible death to self

☐3 Suicide ideas or gesture

☐4 Attempts at suicide (any serious attempt rates 4)

(slowness of thought and speech; impaired ability to concentrate; decreased motor activity)

☐0 Normal speech and thought

☐1 Slight retardation at interview

☐2 Obvious retardation at interview

☐3 Interview difficult

☐4 Complete stupor

9. Agitation

☐0 None

☐1 Fidgetiness

☐2 Playing with hands, hair, etc

☐3 Moving about, can't sit still

☐4 Hand wringing, nail-biting, hair-pulling, biting of lips

10. Anxiety (psychological)

☐0 No difficulty

☐1 Subjective tension and irritability

☐2 Worrying about minor matters

☐3 Apprehensive attitude apparent in face or speech

☐4 Fears expressed without questioning

continues

AW02:09

Hamilton Rating Scale for Depression, continued HAMD

11. Anxiety somatic

Physiological concomitants of anxiety (ie, effects of autonomic overactivity, "butterflies", indigestion, stomach cramps, belching, diarrhea, palpitations, hyperventilation, paresthesia, sweating, flushing, tremor, headache, urinary frequency). Avoid asking about possible medication side effects (ie, dry mouth, constipation)

☐0 Absent

☐1 Mild

☐2 Moderate

☐3 Severe

☐4 Incapacitating

12. Somatic symptoms (gastrointestinal)

☐0 None

☐1 Loss of appetite but eating without encouragement from others. Food intake about normal

☐2 Difficulty eating without urging from others. Marked reduction of appetite and food intake

13. Somatic symptoms general

☐0 None

☐1 Heaviness in limbs, back, or head; backaches, headache, muscle aches; loss of energy and fatigability

☐2 Any clear-cut symptom rates 2

14. Genital symptoms

(symptoms such as: loss of libido; impaired sexual performance; menstrual disturbances)

☐0 Absent

☐1 Mild

☐2 Severe

AW02:09

Montgomery-Asberg Depression Rating Scale MADRS

Date of assessment |2|0|0| | | | | | | | |
year mm dd

1. Apparent sadness

Representing despondency, gloom, and despair (more than just ordinary transient low spirits), reflected in speech, facial expression, and posture.
Rate by depth and inability to brighten up.

☐0 No sadness

☐1

☐2 Looks dispirited but does brighten up without difficulty

☐3

☐4 Appears sad and unhappy most of the time

☐5

☐6 Looks miserable all the time; extremely despondent

2. Reported sadness

Representing reports of depressed mood, regardless of whether it is reflected in appearance or not. Includes low spirits, despondency, or the feeling of being beyond help and without hope. Rate according to intensity, duration, and the extent to which the mood is reported to be influenced by events.

☐0 Occasional sadness in keeping with the circumstances

☐1

☐2 Sad or low but brightens up without difficulty

☐3

☐4 Pervasive feelings of sadness or gloominess. The mood is still influenced by external circumstances

☐5

☐6 Continuous or unvarying sadness, misery, or despondence

continues

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

3. Inner tension

Representing feelings of ill-defined discomfort, edginess, inner turmoil, mental tension mounting to either panic, dread, or anguish.
Rate according to intensity, frequency, duration, and the extent of reassurance called for.

☐0 Placid; only fleeting inner tension

☐1

☐2 Occasional feelings of edginess and ill-defined discomfort

☐3

☐4 Continuous feelings of inner tension or intermittent panic which Subject can only master with some difficulty

☐5

☐6 Unrelenting dread or anguish; overwhelming panic

4. Reduced sleep

Representing the experience of reduced duration or depth of sleep compared to Subject's own normal pattern when well.

☐0 Sleeps as usual

☐1

☐2 Slight difficulty dropping off to sleep or slightly reduced, light or fitful sleep

☐3

☐4 Sleep reduced or broken by at least two hours

☐5

☐6 Less than two or three hours sleep

continues

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

5. Reduced appetite

Representing the feeling of a loss of appetite compared with when well.
Rate by loss of desire for food or the need to force oneself to eat.

☐0 Normal or increased appetite

☐1

☐2 Slightly reduced appetite

☐3

☐4 No appetite; food is tasteless

☐5

☐6 Needs persuasion to eat at all

6. Concentration difficulties

Representing difficulties in collecting one's thoughts mounting to incapacitating lack of concentration.
Rate according to intensity, frequency, and degree of incapacity produced.

☐0 No difficulties in concentrating

☐1

☐2 Occasional difficulties in collecting one's thoughts

☐3

☐4 Difficulties in concentrating and sustaining thought which reduces ability to read or hold a conversation

☐5

☐6 Unable to read or converse without great difficulty

continues

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

7. Lassitude

Representing a difficulty getting started or slowness initiating and performing everyday activities.

☐0 Hardly any difficulty in getting started; no sluggishness

☐1

☐2 Difficulties in starting activities

☐3

☐4 Difficulties in starting simple routine activities which are carried out with effort

☐5

☐6 Complete lassitude; unable to do anything without help

8. Inability to feel

Representing the subjective experience of reduced interest in the surroundings, or activities that normally give pleasure. The ability to react with adequate emotion to circumstances or people is reduced.

☐0 Normal interest in the surroundings and in other people

☐1

☐2 Reduced ability to enjoy usual interests

☐3

☐4 Loss of interest in the surroundings; loss of feelings for friends and acquaintances

☐5

☐6 The experience of being emotionally paralyzed; inability to feel anger, grief, or pleasure; and a complete or even painful failure to feel for close relatives

Montgomery-Asberg Depression Rating Scale MADRS

Date of assessment |2|0|0| | | | | | (year mm dd)

1. Apparent sadness

Representing despondency, gloom, and despair (more than just ordinary transient low spirits), reflected in speech, facial expression, and posture.
Rate by depth and inability to brighten up.

☐0 No sadness

☐1

☐2 Looks dispirited but does brighten up without difficulty

☐3

☐4 Appears sad and unhappy most of the time

☐5

☐6 Looks miserable all the time; extremely despondent

2. Reported sadness

Representing reports of depressed mood, regardless of whether it is reflected in appearance or not. Includes low spirits, despondency, or the feeling of being beyond help and without hope. Rate according to intensity, duration, and the extent to which the mood is reported to be influenced by events.

☐0 Occasional sadness in keeping with the circumstances

☐1

☐2 Sad or low but brightens up without difficulty

☐3

☐4 Pervasive feelings of sadness or gloominess. The mood is still influenced by external circumstances

☐5

☐6 Continuous or unvarying sadness, misery, or despondence

continues

Montgomery-Asberg Depression Rating Scale, continued MADRS

3. Inner tension

Representing feelings of ill-defined discomfort, edginess, inner turmoil, mental tension mounting to either panic, dread, or anguish.
Rate according to intensity, frequency, duration, and the extent of reassurance called for.

☐0 Placid; only fleeting inner tension

☐1

☐2 Occasional feelings of edginess and ill-defined discomfort

☐3

☐4 Continuous feelings of inner tension or intermittent panic which Subject can only master with some difficulty

☐5

☐6 Unrelenting dread or anguish; overwhelming panic

4. Reduced sleep

Representing the experience of reduced duration or depth of sleep compared to Subject's own normal pattern when well.

☐0 Sleeps as usual

☐1

☐2 Slight difficulty dropping off to sleep or slightly reduced, light or fitful sleep

☐3

☐4 Sleep reduced or broken by at least two hours

☐5

☐6 Less than two or three hours sleep

continues

AW02:09

Montgomery-Asberg Depression Rating Scale, continued MADRS

5. Reduced appetite

Representing the feeling of a loss of appetite compared with when well.
Rate by loss of desire for food or the need to force oneself to eat.

☐0 Normal or increased appetite

☐1

☐2 Slightly reduced appetite

☐3

☐4 No appetite; food is tasteless

☐5

☐6 Needs persuasion to eat at all

6. Concentration difficulties

Representing difficulties in collecting one's thoughts mounting to incapacitating lack of concentration.
Rate according to intensity, frequency, and degree of incapacity produced.

☐0 No difficulties in concentrating

☐1

☐2 Occasional difficulties in collecting one's thoughts

☐3

☐4 Difficulties in concentrating and sustaining thought which reduces ability to read or hold a conversation

☐5

☐6 Unable to read or converse without great difficulty

7. Lassitude

Representing a difficulty getting started or slowness initiating and performing everyday activities.

☐0 Hardly any difficulty in getting started; no sluggishness

☐1

☐2 Difficulties in starting activities

☐3

☐4 Difficulties in starting simple routine activities which are carried out with effort

☐5

☐6 Complete lassitude; unable to do anything without help

8. Inability to feel

Representing the subjective experience of reduced interest in the surroundings, or activities that normally give pleasure. The ability to react with adequate emotion to circumstances or people is reduced.

☐0 Normal interest in the surroundings and in other people

☐1

☐2 Reduced ability to enjoy usual interests

☐3

☐4 Loss of interest in the surroundings; loss of feelings for friends and acquaintances

☐5

☐6 The experience of being emotionally paralyzed; inability to feel anger, grief, or pleasure; and a complete or even painful failure to feel for close relatives

continues

AW02.09

Montgomery-Asberg Depression Rating Scale, continued MADRS

9. Pessimistic thoughts

Representing thoughts of guilt, inferiority, self-reproach, sinfulness, remorse and ruin.

☐0 No pessimistic thoughts

☐1

☐2 Fluctuating ideas of failure, self-reproach, or self depreciation

☐3

☐4 Persistent self-accusations, or definite but still rational ideas of guilt or sin; increasingly pessimistic about the future

☐5

☐6 Delusions of ruin, remorse, or unredeemable sin; self-accusations which are absurd and unshakable

10. Suicidal thoughts

Representing the feeling that life is not worth living, that a natural death would be welcome, suicidal thoughts, and preparations for suicide.
Suicidal attempts should not in themselves influence the rating.

☐0 Enjoys life or takes it as it comes

☐1

☐2 Weary of life; only fleeting suicidal thoughts

☐3

☐4 Probably better off dead; suicidal thoughts are common, and suicide is considered as a possible solution, but without specific plans or intentions

☐5

☐6 Explicit plans for suicide when there is an opportunity; active preparations for suicide

Young Mania Rating Scale YMRS

Date of assessment |2|0|0| | | | | (year mm dd)

1. Elevated Mood

|_| 0 - Absent

1 - Mildly or possibly increased on questioning

2 - Definite subjective elevation; optimistic, self-confident; cheerful; appropriate to content

3 - Elevated; inappropriate to content; humorous

4 - Euphoric; inappropriate laughter; singing

2. Increased Motor Activity - Energy

|_| 0 - Absent

1 - Subjectively increased

2 - Animated; gestures increased

3 - Excessive energy; hyperactive at times; restless (can be calmed)

4 - Motor excitement; continuous hyperactivity (cannot be calmed)

3. Sexual Interest

|_| 0 - Normal; not increased

1 - Mildly or possibly increased

2 - Definite subjective increase on questioning

3 - Spontaneous sexual content; elaborates on sexual matters; hypersexual by self report

4 - Overt sexual acts (towards patients, staff, or interviewer)

4. Sleep

|_| 0 - Reports no decrease in sleep

1 - Sleeping less than normal amount by up to one hour

2 - Sleeping less than normal by more than one hour

3 - Reports decreased need for sleep

4 - Denies need for sleep

Hamilton Rating Scale for Depression HAMD

Date of assessment |2|0|0| | | | | (year mm dd)

1. Depressed mood (sadness, hopeless, helpless, worthless)

☐0 Absent

☐1 These feeling states indicated only on questioning

☐2 These feeling states spontaneously reported verbally

☐3 Communicates feeling states non-verbally (ie, through facial expression, posture, voice, and tendency to weep)

☐4 Subject reports virtually only these feeling states in his spontaneous verbal and non-verbal communication

2. Feeling of guilt

☐0 Absent

☐1 Self-reproach, feels he has let people down

☐2 Ideas of guilt or rumination over past errors or sinful deeds

☐3 Present illness is a punishment. Delusions of guilt

☐4 Hears accusatory or denunciatory voices and/or experiences threatening visual hallucinations

3. Suicide

☐0 Absent

☐1 Feels life is not worth living

☐2 Wishes he were dead or any thoughts of possible death to self

☐3 Suicide ideas or gesture

☐4 Attempts at suicide (any serious attempt rates 4)

continues

AW02:09

Hamilton Rating Scale for Depression, continued HAMD

4. Insomnia early

☐0 No difficulty falling asleep

☐1 Complains of occasional difficulty falling asleep (eg, more than 30 minutes)

☐2 Complains of nightly difficulty falling asleep

5. Insomnia middle

☐0 No difficulty

☐1 Subject complains of being restless and disturbed during the night

☐2 Waking during the night - any getting out of bed rates 2 (except for purposes of voiding)

6. Insomnia late

☐0 No difficulty

☐1 Waking in early hours of the morning but goes back to sleep

☐2 Unable to fall asleep again if he gets out of bed

7. Work and activities

☐0 No difficulty

☐1 Thoughts and feelings of incapacity, fatigue or weakness related to activities; work or hobbies

☐2 Loss of interest in activity; hobbies or work - either directly reported by Subject, or indirect in listlessness, indecision and vacillation (feels he has to push self to work or activities)

☐3 Decrease in actual time spent in activities or decrease in productivity

☐4 Stopped working because of present illness.

Young Mania Rating Scale, continued YMRS

5. Irritability

☐ 0 - Absent

2 - Subjectively increased

4 - Irritable at times during the interview; recent episodes of anger or annoyance on ward or in usual environment

6 - Frequently irritable during the interview; short, curt throughout

8 - Hostile, uncooperative; interview impossible

6. Speech (Rate and Amount)

☐ 0 - No increase

2 - Feels talkative

4 - Increased rate or amount at times, verbose at times

6 - Push; consistently increased rate and amount; difficult to interrupt

8 - Pressured; uninterruptible, continuous speech

7. Language - Thought Disorder

☐ 0 - Absent

1 - Circumstantial; mild distractibility; quick thoughts

2 - Distractible; loses goal of thought; change topics frequently; racing thoughts

3 - Flight of ideas; tangentiality; difficult to follow; rhyming, echolalia

4 - Incoherent; communication impossible

8. Content

☐ 0 - Normal

2 - Questionable plans, new interests

4 - Special project(s); hyperreligious

6 - Grandiose or paranoid ideas; ideas of reference

8 - Delusions; hallucinations

Young Mania Rating Scale, continued YMRS

9. Disruptive - Aggressive Behaviour

└┘ 0 - Absent, cooperative

2 - Sarcastic; loud at times, guarded

4 - Demanding; threats on ward

6 - Threatens interviewer; shouting during interview; interview difficult

8 - Assaultive; destructive; interview impossible

10. Appearance

└┘ 0 - Appropriate dress and grooming

1 - Minimally unkempt

2 - Poorly groomed; moderately dishevelled; overdressed

3 - Dishevelled; partly clothed; garish make-up

4 - Completely unkempt; decorated; bizarre garb

11. Insight

└┘ 0 - Present; admits illness; agrees with need for treatment

1 - Possibly ill

2 - Admits behaviour change, but denies illness

3 - Admits possible change in behaviour, but denies illness

4 - Denies any behaviour change

Hamilton Rating Scale for Anxiety

HAMA

Date of assessment |2|0|0| | | | | |
year mm dd

Anxious mood

Worries, anticipation of the worst, fearful anticipation, irritability ☐

Tension

Feelings of tension, fatigability, startle response, moved to tears easily, trembling, feelings of restlessness, inability to relax ☐

Fears

Of dark, of strangers, of being left alone, of animals, of traffic, of crowds ☐

Insomnia

Difficulty in falling asleep, broken sleep, unsatisfying sleep and fatigue on waking, dreams, nightmares, night terrors ☐

Intellectual

Difficulty in concentration, poor memory ☐

Depressed mood

Loss of interest, lack of pleasure in hobbies, depression, early waking, diurnal swing ☐

Somatic (Muscular)

Pains and aches, twitchings, stiffness, myoclonic jerks, grinding of teeth, unsteady voice, increased muscular tone ☐

Somatic (Sensory)

Tinnitus, blurring of vision, hot and cold flushes, feelings of weakness, pricking sensation ☐

Cardiovascular symptoms

Tachycardia, palpitations, pain in chest, throbbing of vessels, fainting feelings, sighing, dyspnea ☐

Clinical Global Impressions CGI

Date of assessment |2|0|0| | | | | | |
year mm dd

1. Severity of illness

Considering your total clinical experience with this particular population, how mentally ill is Subject at this time?

- Not assessed ☐ 0
- Normal, not at all ill ☐ 1
- Borderline mentally ill ☐ 2
- Mildly ill ☐ 3
- Moderately ill ☐ 4
- Markedly ill ☐ 5
- Severely ill ☐ 6
- Among the most extremely ill Subjects ☐ 7

2. Global improvement

Rate total improvement whether or not, in your judgment, it is due entirely to drug treatment
Compared to Subject's condition at admission to the project, how much has Subject changed?

- Not assessed ☐ 0
- Very much improved ☐ 1
- Much improved ☐ 2
- Minimally improved ☐ 3
- No change ☐ 4
- Minimally worse ☐ 5
- Much worse ☐ 6
- Very much worse ☐ 7

AW02:09

Barnes Akathisia Rating Scale

BARS

Ref. Barnes TRE. A rating scale for drug-induced akathisia. Br J Psychiatry. 1989; 154: 672-676.

Date of assessment |2|0|0| | | | | | (year mm dd)

A. Objective

Normal occasional fidgety movements of the limbs ☐ 0

Presence of characteristic restless movements: shuffling or tramping movements of the legs and feet, or swinging of one leg while sitting, and/or rocking from foot to foot or 'walking on the spot' when standing, but movements present for less than half the time observed ☐ 1

Observed phenomena, as described above, which are present for at least half the observation period ☐ 2

Subject is constantly engaged in characteristic restless movements, and/or has the inability to remain seated or standing without walking or pacing, during the time observed ☐ 3

B. Subjective

Awareness of restlessness

Absence of inner restlessness ☐ 0

Non-specific sense of inner restlessness ☐ 1

Subject is aware of an inability to keep the legs still, a desire to move the legs, and/or complains of inner restlessness aggravated specifically by being required to stand still ☐ 2

Awareness of an intense compulsion to move most of the time and/or reports a strong desire to walk or pace most of the time ☐ 3

Distress related to restlessness

No distress ☐ 0

Mild ☐ 1

Moderate ☐ 2

Severe ☐ 3

continues

Study code 5077US/0049 Subj initials ..... E code |E|0|0| | | | | |

Visit No. 10

AW02:09

Barnes Akathisia Rating Scale, continued BARS

C. Global clinical assessment of akathisia

Absent

No evidence of awareness of restlessness. Observation of characteristic movements of akathisia in the absence of a subjective report of inner restlessness or compulsive desire to move the legs should be classified as pseudoakathisia ☐0

Questionable

Non-specific inner tension and fidgety movements ☐1

Mild akathisia

Awareness of restlessness in the legs and/or inner restlessness worse when required to stand still. Fidgety movements present, but characteristic restless movements of akathisia not necessarily observed. Condition causes little or no distress ☐2

Moderate akathisia

Awareness of restlessness as described for mild akathisia above, combined with characteristic restless movements such as rocking from foot to foot when standing. Subject finds the condition distressing ☐3

Marked akathisia

Subjective experience of restlessness includes a compulsive desire to walk or pace. However, the Subject is able to remain seated for at least five minutes. The condition is obviously distressing ☐4

Severe akathisia

The Subject reports a strong compulsion to pace up and down most of the time. Unable to sit or lie down for more than a few minutes. Constant restlessness which is associated with intense distress and insomnia ☐5

Simpson-Angus Scale

SAS

Ref. Modified from Simpson GN, Angus JWS. A rating scale for extrapyramidal side effects. Acta Psychiatr Scand. 1970;212 (suppl):11-19

Date of assessment |2|0|0| | | | | (year mm dd)

1. Gait

- Normal ☐ 0
- Mild diminution in swing while the Subject is walking ☐ 1
- Obvious diminution in swing suggesting shoulder rigidity ☐ 2
- Stiff gait with little or no arm swing noticeable ☐ 3
- Rigid gait with arms slightly pronated; or stooped-shuffling gait with propulsion and repropulsion ☐ 4
- Not ratable ☐ 9

2. Arm dropping

- Normal, free fall with loud slap and rebound ☐ 0
- Fall slowed slightly with less audible contact and little rebound ☐ 1
- Fall slowed, no rebound ☐ 2
- Marked slowing, no slap at all ☐ 3
- Arms fall as though against resistance; as though through glue ☐ 4
- Not ratable ☐ 9

3. Shoulder shaking

- Normal ☐ 0
- Slight stiffness and resistance ☐ 1
- Moderate stiffness and resistance ☐ 2
- Marked rigidity with difficulty in passive movement ☐ 3
- Extreme stiffness and rigidity with almost a frozen joint ☐ 4
- Not ratable ☐ 9

continues

AW02:09

Simpson-Angus Scale, continued

SAS

4. Elbow rigidity

- Normal ☐ 0
- Slight stiffness and resistance ☐ 1
- Moderate stiffness and resistance ☐ 2
- Marked rigidity with difficulty in passive movement ☐ 3
- Extreme stiffness and rigidity with almost a frozen joint ☐ 4
- Not ratable ☐ 9

5. Wrist rigidity

- Normal ☐ 0
- Slight stiffness and resistance ☐ 1
- Moderate stiffness and resistance ☐ 2
- Marked rigidity with difficulty in passive movement ☐ 3
- Extreme stiffness and rigidity with almost a frozen joint ☐ 4
- Not ratable ☐ 9

6. Head rotation

- Loose, no resistance ☐ 0
- Slight resistance to movement although the time to rotate may be normal ☐ 1
- Resistance is apparent and the time of rotation is shortened ☐ 2
- Resistance is obvious and rotation is slowed ☐ 3
- Head appears stiff and rotation is difficult to carry out ☐ 4
- Not ratable ☐ 9

continues

9. Salivation

Normal	☐ 0
Excess salivation so that pooling takes place if mouth is open and tongue is raised	☐ 1
Excess salivation is present and might occasionally result in difficulty in speaking	☐ 2
Speaking with difficulty because of excess salivation	☐ 3
Frank drooling	☐ 4
Not ratable	☐ 9

10. Akathisia

No restlessness reported or observed	☐ 0
Mild restlessness observed, e.g. occasional jiggling of the foot occurs when Subject is seated	☐ 1
Moderate restlessness observed, e.g. on several occasions, jiggles foot, crosses and uncrosses legs, or twists a part of the body	☐ 2
Restlessness is frequently observed, e.g. the foot or leg moving most of the time	☐ 3
Restlessness persistently observed, e.g. Subject cannot sit still, may get up and walk	☐ 4
Not ratable	☐ 9

Pittsburgh Sleep Quality Index PSQI

Reprinted from Buysse DJ, Reynolds CF, Monk TH, Berman SR, Kupfer DJ. (1989). The Pittsburgh sleep quality index: A new instrument for psychiatric practice and research. Psychiatry Research: 28(2), 193-213, with permission of Elsevier Sceince.

Instructions: The following questions relate to your usual sleep habits during the past month only. Your answers should indicate the most accurate reply for the majority of days and nights in the past month. Please answer all questions.

Date of assessment |2|0|0| | | | | | (year mm dd)

1. During the past month, when have you usually gone to bed at night?

USUAL BED TIME |_|_| : |_|_| (24-hour clock)

2. During the past month, how long (in minutes) has it usually taken you to fall asleep each night?

NUMBER OF MINUTES |_|_|_|

3.During the past month, when have you usually gotten up in the morning?

USUAL GETTING UP TIME |_|_| : |_|_| (24-hour clock)

4. During the past month, how many hours of *actual sleep* did you get at night? (This may be different than the number of hours you spend in bed.)

HOURS OF SLEEP PER NIGHT |_|_|

For each of the remaining questions, check the one best response. Please answer all questions.

5. **During the past month, how often have you had trouble sleeping because you....**

	Not during the past month	Less than once a week	Once or twice a week	Three or more times a week
a. Cannot get to sleep within 30 minutes	☐ 0	☐ 1	☐ 2	☐ 3
b. Wake up in the middle of the night or early morning	☐ 0	☐ 1	☐ 2	☐ 3
c. Have to get up to use the bathroom	☐ 0	☐ 1	☐ 2	☐ 3
d. Cannot breathe comfortably	☐ 0	☐ 1	☐ 2	☐ 3
e. Cough or snore loudly	☐ 0	☐ 1	☐ 2	☐ 3
f. Feel too cold	☐ 0	☐ 1	☐ 2	☐ 3
g. Feel too hot	☐ 0	☐ 1	☐ 2	☐ 3
h. Had bad dreams	☐ 0	☐ 1	☐ 2	☐ 3
i. Have pain	☐ 0	☐ 1	☐ 2	☐ 3
j. Other reason(s), please describe:	☐ 0	☐ 1	☐ 2	☐ 3

Pittsburgh Sleep Quality Index, continued PSQI

6. During the past month, how would you rate your sleep quality overall?

Very good	Fairly good	Fairly bad	Very bad
☐ 0	☐ 1	☐ 2	☐ 3

7. During the past month, how often have you taken medicine (prescribed or "over the counter") to help you sleep?

Not during the past month	Less than once a week	Once or twice a week	Three or more times a week
☐ 0	☐ 1	☐ 2	☐ 3

8. During the past month, how often have you had trouble staying awake while driving, eating meals, or engaging in social activity?

Not during the past month	Less than once a week	Once or twice a week	Three or more times a week
☐ 0	☐ 1	☐ 2	☐ 3

9. During the past month, how much of a problem has it been for you to keep up enthusiasm to get things done?

No problem at all	Only a very slight problem	Somewhat of a problem	A very big problem
☐ 0	☐ 1	☐ 2	☐ 3

10. Do you have a bed partner or roommate?

No bed partner or roommate	Partner/roommate in other room	Partner in same room, but not same bed	Partner in same bed
☐ 0	☐ 1	☐ 2	☐ 3

INFORMED CONSENT
AGREEMENT TO BE IN A RESEARCH STUDY

NAME OF DRUG/DEVICE COMPANY:	AstraZeneca Pharmaceuticals LP
CITY AND STATE:	Wilmington, DE
NUMBER AND NAME OF STUDY:	5077US/0049; "A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL™) in the Treatment of Patients with Bipolar Depression"
STUDY DOCTOR:	Richard H. Weisler, M.D.
ADDRESS OF STUDY SITE:	2841 Plaza Place, Suite 100 Raleigh, NC 27612
TELEPHONE NUMBERS, DAYTIME & AFTER HOURS:	919-872-5900

Introduction

You have been asked to participate in a clinical research study. For you to be able to decide to be part of this study, you should understand enough about its risks and benefits to make an informed judgment. This process is known as informed consent. This consent form describes the purpose, procedures, possible benefits and risks of the study. Once you understand the study, you will be asked to sign this form if you wish to participate. If you are in any other research study, you cannot take part in this study.

Your healthcare provider may be a doctor for this research project, and as a doctor, if you choose to be a subject in the study, is interested both in your clinical welfare (safety and health) and in the conduct of this study. The doctor is being paid by AstraZeneca to conduct this study. Before entering this study or at any time during the study, you may ask for a second opinion about your care from another doctor who is in no way associated with this study. You are not under any obligation to participate in a research project offered by your doctor nor will your treatment be affected by not participating. At any time during the study you may decide you no longer want to participate in this study; in other words, you may say "no".

If you are not completely truthful with the study doctor and study staff regarding your health history, you may harm yourself by participating in this study.

Read this information carefully and please ask any questions to the study doctor or the study staff.

Purpose of the Research Study

You have been asked to participate in this research study because you have been diagnosed with bipolar disorder and are currently having a depressive episode (feeling depressed). This research study is designed to determine how effective quetiapine (Seroquel™) is compared to placebo (a non-drug tablet, like a sugar pill that will look like quetiapine) for the treatment of your depressive episode. This study will also look at how safe quetiapine is in treating bipolar depression, as well as examine the effects of quetiapine on your overall ability to function and sleep.

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
SEPTEMBER 17, 2002**

There will be approximately 600 patients enrolled from approximately 75 sites.

Quetiapine (Seroquel) is an antipsychotic drug developed by AstraZeneca Pharmaceuticals (AstraZeneca). Seroquel is under investigation for use in treating bipolar disorders, but was approved by the United States Food and Drug Administration (FDA) for the treatment of schizophrenia. "Investigational" means the formulation being tested has not been approved by the United States Food and Drug Administration (FDA) for sale as a prescription or over-the-counter medication. Information from previous studies suggests it has antidepressant actions (the way it works in your body).

What Will Happen During The Study

If you choose to participate in this research study as a subject, you will first undergo several screening procedures that will be done over a period of at least 1 day and possibly a few days. These tests will determine if you are eligible to participate in the study. You will have to stop any medications that you were receiving for your bipolar disease from the time you are screened for the study through the end of the study. As a result of the washout (stopping your medications) your condition may worsen.

Once you have been enrolled in this study you will randomly (like the flip of a coin) be assigned to one of three treatments. The treatment will be either 600 mg of quetiapine per day, 300 mg quetiapine per day, or placebo. Your chance of receiving quetiapine is twice that of placebo, that is, you have a 66% chance of receiving quetiapine and a 33% chance of receiving pills that contain no active drug. Neither you nor your study doctor or research nurse will know if you are taking quetiapine or placebo. Your condition may worsen as a result of receiving either placebo or study drug.

This is an outpatient (not in a hospital) study of 9 weeks duration plus 1 day for final assessments. You will come into the clinic on the first day of each week for assessments and to receive your study drug for the following week.

At your first visit (screening visit), the study doctor will need to see whether you should participate. The study doctor will ask you questions about your medical condition and perform the following tests:

- Your medical history and a physical examination. For your own safety, it is your responsibility to tell the doctor all of your past and present diseases, allergies and medical conditions that you are aware of and all drugs and medications that you currently take.
- Measure your height, weight, blood pressure, and heart rate.
- Take a blood sample (through a needle in a vein) for routine testing of hematology, (red and white blood cells), fasting (no food or drink except water for 12 hours before the blood draw) and clinical chemistry (tests of lipid levels, glucose, insulin and liver and thyroid function).
- If you are a woman, you may also have a blood test for pregnancy; if this test is positive, you will not be able to participate in this study.
- An electrocardiogram (ECG - an electrical tracing of your heart function).
- Three question and answer tests: one to rate your depression, one to see how you sleep, and one to rate the severity of your condition.

You will be asked to stop all of your medications previously used to treat your depressive episode.

If you are determined to be eligible to participate in the study, you will return to the study doctor's office at Visit 2 (anywhere from

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
SEPTEMBER 17, 2002**

30 days after your first visit), you will be given study drug which will be either quetiapine (Seroquel) or placebo, and the following tests will be done:

- seven evaluations (question and answer) of your mental condition, involuntary limb movements, and how well you sleep during the night
- a repeat ECG and/or blood tests [hematology (red and white blood cells) and fasting clinical chemistry (tests lipid levels, glucose, insulin, liver and thyroid function)] if they were abnormal at screening

At your visit during Weeks 2 through 8 you will also be given these tests:

- six evaluations for your mental condition, overall functioning, and how well you sleep during the night

Additional tests will also be given at Weeks 3, 5, 6, and 8 for limb movements.

On Day 57, the last day of the study, you will be given the following tests:

- physical examination
- routine testing of hematology (red and white blood cells) and fasting clinical chemistry (tests of lipid levels, glucose, insulin, and liver and thyroid function)
- electrocardiogram
- nine evaluations for your mental condition, overall functioning, and limb movements, and how well you sleep during the night

Possible Side Effects and Risks of the Treatment

As a result of stopping the medications you are currently taking, your condition may worsen. Your condition may worsen as a result of taking placebo.

All therapies may cause some side effects or other reactions. You should know about possible risks and discomforts associated with quetiapine (Seroquel) before you decide to participate in this study.

The most common side affects reported in people taking quetiapine (Seroquel) are:

- headache
- sleepiness
- dizziness
- constipation
- dry mouth
- decreased blood pressure on standing (symptoms may be dizziness, fast heart rate, and fainting)
- increased heart rate

A very rare side effect of antipsychotic drugs, including quetiapine (Seroquel), is Neuroleptic Malignant Syndrome. The symptoms are high fever, stiff muscles, fast heart rate, high or low blood pressure, sweating, and possibly kidney failure. Sometimes this illness results in death. Another rare side effect of antipsychotic drugs is a disorder called tardive dyskinesia, which causes uncontrollable body movements such a lip and tongue smacking. Sometimes the movements are permanent.

Some people treated with Seroquel have had mild and temporary increases in liver chemicals (seen in their blood stream).

Animal studies have shown a slight risk of developing cloudiness in the lens but this increased risk has not been seen in patients taking the medication in clinical research studies. Other side effects may occur, some of which are not known and cannot be predicted. With your full cooperation regarding the instructions given by your physician, frequent examination, and the performance of laboratory tests, the chance of these unwanted side effects

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
SEPTEMBER 17, 2002**

happening can be minimized, or if they happen they can be treated quickly.

In addition to the side effects for the study drug quetiapine (Seroquel), there may be other risks to you that are not known at the present time, including life threatening reactions.

During the screening period, on Day 1 of the study, and upon completion of the study, approximately 2 ½ tablespoons (36 ml) of blood (38 ml for women) will be drawn from a vein in your arm using standard medical procedures. The risks of venipuncture (inserting a needle in your vein to take blood) include the occurrence of discomfort and/or bruising at the site of the puncture and, less commonly, fainting, the formation of a small blood clot or swelling of the vein and surrounding tissue, or bleeding from the puncture site. There also could be infection at the site.

If you are not completely truthful with the study doctor and study staff regarding any side effects, you may harm yourself by participating in this study.

New Findings

You will be informed of any new information about the study drug that becomes known during the course of this study, which might affect your willingness to continue participation.

Women of Childbearing Potential

There might be unknown risks to an unborn child or breast-fed child if you are or if you become pregnant during the study.

Due to these risks, you must not participate in this study if you are pregnant or plan to become pregnant during the research study period, or are breast-feeding a child.

If you are a woman of child-bearing potential:

- By signing this consent form, you confirm to the best of your knowledge that you are not pregnant now and you do not intend to become pregnant during this study.
- A pregnancy test will be done to confirm that you are not pregnant before your participation in this study.

If you are a sexually active female of childbearing potential, you need to be using a reliable method of contraception. Reliable methods include:

- oral contraceptive
- long-term injectable or implantable hormonal contraceptive
- condom and diaphragm
- condom and foam
- condom and sponge
- intrauterine device (IUD)
- tubal ligation

If at any time during this study you think you might be pregnant, or later learn that you were pregnant during the study, you must contact the study doctor immediately for further instructions regarding your participation in this study and follow up.

Possible Benefits of the Study

You will not experience any direct health benefits during or following completion of this study. However, your participation will provide information about the study treatment(s) and bipolar depression that may benefit others.

Alternatives to Participating in this Study

Although there are approved treatments for mania alone (eg: lithium, valproic acid) and depression alone (SSRIs), there are no approved medications for depression associated with bipolar disorder.

Payment for Injury Related to the Study

If you experience any side effect or injury, notify your study doctor immediately so that you can receive appropriate medical treatment.

If you suffer any side effect or other physical injury resulting directly from the research study drug, AstraZeneca will provide reimbursement for the reasonable costs of medical treatment if:

- You took the study drug as instructed by your study doctor
- Your injury was not deliberately caused
- The study doctor was immediately notified about your injury
- You followed the medical advice of the study doctor

You will not be reimbursed for lost wages or other damages or losses or for medical expenses that have been covered by your medical or hospital insurance or by third party or governmental programs providing such coverage. No other form of compensation is offered from AstraZeneca except remedies available under the law. Compensation for medical expenses is not an admission of fault or liability by AstraZeneca or anyone else.

Legal Rights

You will not lose any of your legal rights as a research subject by signing this consent form.

Additional Costs

The study drug, study doctor's visits, and laboratory tests related to this study will be provided at no cost to you. Neither your insurance company nor you will be charged for the services provided in the normal course of the conduct of this study.

Your Participation in the Study

Your participation in this study is entirely voluntary. You cannot be forced to be in this study. You may not want to be in this study or you may leave the study at any time without punishment or loss of benefits to which you are entitled and without affecting your future medical care. The study doctor, the Drug Company, IntegReview, or the FDA may take you out of the study without your permission at any time for the following reasons:

- if you do not follow the instructions of the study doctor
- if it is discovered that you do not meet the study requirements
- if the study is cancelled
- if it appears to be medically harmful to you

If you leave the study or if you are taken out of the study for any reason, you may be asked to return to the study doctor's office for a final visit. This is to make sure that you are in good health.

You must return all unused study drug and the containers to your study doctor.

Payment for Participation

You will not be paid for your participation in this study.

Release Of Your Medical Records And Privacy (Confidentiality)

All study data will be kept confidential; however, authorized personnel from AstraZeneca, its representatives, the FDA, other Department of Health and Human Services agencies, government agencies in other countries, and IntegReview, the Institutional Review Board (IRB) may have access to the data. The data and results from this study may

Subject Initials: _____

New Findings

You will be told about any significant new findings about the study drug. This information can help you decide if you wish to continue your participation in the study.

Experimental Subject's Bill of Rights

As a subject involved in an investigational drug study, you have the following rights.

1. Be informed of the nature and purpose of the experiment.
2. Be given an explanation of the procedures to be followed in the medical experiment, and any drug or device to be used.
3. Be given a description of any attendant discomforts and risk reasonably to be expressed from the experiment.
4. Be given an explanation of any benefits to the subject reasonably to be expected from the experiment, if applicable.
5. Be given a disclosure of any appropriate alternative procedures, drugs, or devices that might be advantageous to the subject, and their relative risks and benefits.
6. Be informed of the avenues of medical treatment, if any, available to the subject after the experiment if complications should arise.
7. Be given an opportunity to ask any questions concerning the experiment or the procedures involved.
8. Be instructed that consent to participate in the medical experiment may be withdrawn at any time. The subject may discontinue participation in the medical experiment without prejudice.
9. Be given a copy of a signed and dated written consent form when one is required.
10. Be given the opportunity to decide to consent or not to consent to a medical experiment without the intervention of any

element of force, fraud, deceit, duress, coercion, or undue influence on the subject's decision.

The Reason for Institutional Review Boards and Informed Consent

What is a consent form?
The Informed Consent document contains the required information as found in and required by the United States regulations regarding the protection of human subjects (Code of Federal Regulations, Title 21, Part 50-Protection of Human Subjects). As required by this regulation, the informed consent must be reviewed and approved by an Institutional Review Board (IRB).

What is an Institutional Review Board (IRB)?
An Institutional Review Board (IRB) is any board, committee or other group which reviews, approves, and does continuing review of biomedical research involving human subjects. The primary purpose of such review is to guarantee the protection of the rights and welfare of the human subjects.

IRBs were established as the result of unfair treatment of human subjects. Prior to this, other committees existed as a requirement of the United States Public Health Service (USPHS) policy established in 1965. IRBs are regulated by the Food and Drug Administration and the National Institutes of Health (NIH).

What does an IRB mean to me?
The purpose of the IRB is to inform and protect human subjects through the information provided in the informed consent document. Therefore, the IRB is acting as a supporter for the research subject. This means that the IRB, during its review of the informed consent document, has the right and responsibility to ensure that the research subject is fully informed of the procedures involved in the study as well as the risks and other treatments that are available if participation in the study is refused.

How can I tell that an IRB has reviewed and approved this study?
The date that IntegReview approved the study design as well as the information in this Informed Consent document is printed on the top of each page of this Informed Consent form. **THIS DOES NOT MEAN THE IRB HAS APPROVED YOUR PARTICIPATION IN THE STUDY.** It is a FDA requirement that the study design (Protocol), Informed Consent form, any advertising materials, and other instructions to the subject (Subject Instructions, Patient Diaries, etc.) be reviewed and approved by an IRB. Although IRB approval is granted for the study doctor to conduct the study, you must evaluate the information in this Informed Consent form for yourself and decide whether or not you wish to participate.

IntegReview, the IRB for this study
IntegReview is an independent IRB whose board members are individuals who work in the Austin community. IntegReview provides services nation-wide to research professionals.

FDA regulations require that the committee have at least five members with varying backgrounds to provide complete and adequate review of research activities.

To fulfill these requirements the IntegReview Board currently includes physicians, pharmacists, Ph.Ds., a toxicologist (someone who studies the harmful effects of chemicals), a psychologist, an oral surgeon, and lay members (non-scientific).

The telephone number of the Chair is available in every informed consent document in the contacts section. You may contact the Chair with concerns regarding your rights as a subject.

Agreement to Be in the Study

This consent form contains important information to help you decide if you want to be in the study. If you have any questions that are not answered in this consent form, ask one of the study staff.

A. Do you understand the information in this consent form? _____

B. Have you been able to ask questions and talk about the study? _____

C. Have all of your questions been answered to your satisfaction? _____

D. Do you think you received enough information about the study? _____

E. Do you understand that you can leave the study at any time without giving a reason and without affecting your medical care? _____

F. Do you understand that your medical records from this study may be reviewed by the Drug Company and by government authorities? _____

If you answered NO to any of these six questions, you should not sign this consent form.

When you sign this consent form you agree that:

- you have had a chance to ask questions
- you understand English
- you want to be in the study

You will not lose any of your legal rights by signing this consent form.

_____

Signature of Study Subject or Legally Authorized Representative Date (Month/Day/Year)
DO NOT SIGN AFTER SEPTEMBER 10, 2003

STUDY PARTICIPANT SURVEY
(OPTIONAL)
INFORMED CONSENT DOCUMENT AND PROCESS

As mentioned in the informed consent document, IntegReview is an ethical review board responsible for ensuring the safety and welfare of subjects involved in medical and biomedical research. We spend a great deal of time reviewing the informed consent document to make sure you are given enough information to make an informed decision whether or not you wish to participate in the study. In addition, we want to be sure the document is easy to read and understand.

You can assist us in this process by providing feedback regarding your experience as a research study subject. The following questions are designed to let our board members know how to improve the informed consent documents.

Please provide as much information as you feel is necessary. *This information will be kept confidential by IntegReview.* ***You may use additional pages if needed.***

1. Your age: _____

2. Highest level of education completed: _____

3. Two column format of informed consent document: ☐ Easier to read than one column

   ☐ More difficult to read than one column ☐ No difference between one or two column format

4. Words/phrases were understood: ☐ Yes ☐ No

What words/phrases did you **not** understand? _____

5. Did the study doctor or one of the staff explain what you did not understand? ☐ Yes ☐ No

6. Overall ease of reading informed consent document: ☐ Excellent ☐ Good ☐ Satisfactory ☐ Poor

7. Were you offered/allowed to take the informed consent document home to read and/or discuss with family members/friends? ☐ Yes ☐ No

8. If no, would you have preferred the option? ☐ Yes ☐ No

9. Did the study doctor or one of the study staff read the informed consent to you? ☐ Yes ☐ No

10. Did you feel you had enough time to read the informed consent before you were asked to make a decision? ☐ Yes ☐ No

11. Did you feel comfortable asking questions after you read the informed consent document? ☐ Yes ☐ No

12. Was there information not in the document that you feel should have been included? ☐ Yes ☐ No
If so, please explain: _____

What suggestions do you have for IntegReview that would improve the informed consent document and the process of obtaining informed consent? _____

Introduction

You have been asked to participate in a clinical research study. For you to be able to decide to be part of this study, you should understand enough about its risks and benefits to make an informed judgment. This process is known as informed consent. This consent form describes the purpose, procedures, possible benefits and risks of the study. This form will also explain how your medical information will be used and who may see it. Once you understand the study, you will be asked to sign this form if you wish to participate and to allow your medical information to be collected, used and shared with certain persons involved in the study. If you are in any other research study, you cannot take part in this study.

Your healthcare provider may be an investigator (or your study doctor) for this research project, and as an investigator he/she is interested both in your clinical welfare (safety and health) and in the conduct of this study. Your study doctor is being paid by AstraZeneca to conduct this study. Before entering this study or at any time during the study, you may ask for a second opinion about your care from another doctor who is in no way associated with this study. You are not under any obligation to participate in a research project offered by your doctor nor will your treatment be affected by not participating. At any time during the study you may decide you no longer want to participate in this study; in other words, you may say "no".

If you are not completely truthful with the study doctor and study staff regarding your health history, you may harm yourself by participating in this study.

Read this information carefully and please ask any questions to the study doctor or the study staff.

Purpose of the Research Study

You have been asked to participate in this research study because you have been diagnosed with bipolar disorder and are currently having a depressive episode (feeling depressed). This research study is designed to determine how effective quetiapine (Seroquel™) is compared to placebo (a non-drug tablet, like a sugar pill that

**APPROVED BY
INTEGREVIEW
MARCH 21, 2003**

will look like quetiapine) for the treatment of your depressive episode. This study will also look at how safe quetiapine is in treating bipolar depression, as well as examine the effects of quetiapine on your overall ability to function and sleep.

There will be approximately 740 patients screened to obtain 530 enrolled patients from approximately 75 sites.

Seroquel™ was approved by the United States Food and Drug Administration (FDA) in 1997 for the treatment of schizophrenia. For the purposes of this study, it is being tested for the treatment of depressive episodes related to bipolar disorder. Therefore, it is an 'investigational product'. 'Investigational' means the formulation and/or indication being tested has not been approved by the United States Food and Drug Administration (FDA) for sale as prescription and/or over-the-counter medication. However, information from previous studies suggests it has antidepressant actions (the way it works in your body).

For the purpose of this study, the medication you may receive is an investigational product. Investigational products are similar to controlled substances, in that, if prescribed, they should not be distributed to others. In addition, if you decide you would like to stop taking the medication, you will be asked to return all unused investigational product.

What Will Happen During The Study

This is an outpatient (not in the hospital) study. It consists of a screening phase that lasts from 7 up to 28 days, depending on your current medication, followed by an eight week treatment phase.

If you decide to participate in this research study as a subject, you will first undergo a series of screening procedures that will be done over a period of at least 1 day. These procedures will determine if you are eligible to participate in the study.

The screening phase of this study starts once you have signed this consent form. The screening phase consists of a series of routine tests and psychiatric assessments. As a result of conducting these tests and assessments, your study doctor may determine you should not participate. In this case, you will be provided with other options for the treatment of your condition. For your own safety, it is your responsibility to tell the doctor all of your past and present diseases, allergies, medical conditions (that you are aware of), and all drugs (including non-prescribed drugs) that you are currently taking.

The screening phase entails the following psychiatric and other medical assessments:

- A thorough interview, inquiring about your current and past mental/medical conditions. This will help your doctor determine your correct diagnosis.
- Two additional, question and answer, assessments that will rate the severity of your depression and to check for possible symptoms of mania.
- A complete medical history review, including diseases or conditions that may be unrelated to your bipolar disorder.
- A physical exam, including an eye exam. If you have a history of cataracts, you should inform your study doctor.
- Measurement of your height, weight, blood pressure and heart rate.
- Collection of a blood sample (through a needle in a vein) for routine testing of hematology (red and white blood cells), fasting (no food or drink except water for 12 hours before the blood draw) clinical chemistry (tests of lipid levels, glucose, insulin, creatinine, and liver and thyroid function).

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
MARCH 21, 2003**

- If you are a woman, you will also have a blood test for pregnancy; if this test is positive, you will not be able to participate in this study.
- An electrocardiogram (ECG – an electrical tracing of your heart function).
- Collection of a urine sample in order to test for illicit substances of abuse. The results of this test will be kept confidential. It is a required test in order to ensure your safety and cannot be used against you in a court of law. If you have used an illicit substance of abuse, you should inform your study doctor. If you have any issues with this test being performed, discuss them with your study doctor prior to deciding to participate in this study. Illicit substance use is not permitted in this study.
- You will be asked to stop all of your medications currently used to treat your depressive episode and/or your bipolar disorder. You will be required to not use these medications from the time you are screened for the study throughout your participation. Your study doctor will instruct you in discontinuing the use of your current medications in order to ensure your safety. If you notice a worsening in your symptoms during this period, contact your study doctor immediately.
- If abnormal results are reported from the ECG, labs or urine sample, you may be asked to return to the office for a retest. Any abnormal results reported to your study doctor will be discussed with you in order for you to obtain the proper follow-up.

Once the initial screening phase is complete and your study doctor has determined you are eligible to proceed in the study, you will return to your study doctor's office for Visit 2. This will occur anywhere from 7-28 days after your first visit. At Visit 2, the final screening will occur and your study doctor will assess whether you will be able to participate in the study.

The final screening assessment consists of the following:

- Your study doctor will repeat the same two, question and answer, assessments which rate the severity of your depression and to check for possible symptoms of mania, that were conducted at your initial screening visit.

Once these assessments are complete and your study doctor has determined you are eligible to participate, you will be randomly (like the flip of a coin) assigned to one of the three treatments. The treatments will be either 600 mg of quetiapine per day, 300 mg of quetiapine per day, or placebo. Your chance of receiving quetiapine is twice that of placebo, that is, you have a 66% chance of receiving quetiapine and a 33% chance of receiving pills that contain no active drug. Neither you nor your study doctor or research nurse will know if you are taking quetiapine or placebo. Your condition may worsen as a result of receiving either placebo or study drug.

In addition to being randomized to treatment, the following psychiatric and medical assessments will be conducted at Visit 2:

- Six evaluations (question and answer) of your mental condition, involuntary limb movements, how well you sleep at night and your quality of life will be conducted. The sleep assessment is a self-assessment questionnaire, which means you will complete it on your own.
- Your blood pressure and heart rate will be recorded.

You will then be asked to come back to your study doctor's office on a weekly basis for the course of 8 weeks. Study medication is dispensed at each study visit during the treatment phase.

**APPROVED BY
INTEGREVIEW
MARCH 21, 2003**

Visits 3 through 10 will consist of the following:

- The same two, question and answer, assessments which rate the severity of your depression and possible symptoms of mania will be conducted at each study visit. In addition, another depression assessment will be conducted along with an anxiety assessment.
- Your blood pressure and heart rate will be recorded.

In addition to the above assessments, the assessments of your sleep and quality of life will be conducted again at Visit 6.

At your final visit, Visit 10, the following psychiatric and medical assessments will be conducted:

- Physical Exam
- Testing of hematology (red and white blood cells) and fasting clinical chemistry (tests of lipid levels, glucose, insulin, creatinine, liver and thyroid function).
- Electrocardiogram (ECG)
- Weight, blood pressure and heart rate
- A final evaluation of all the psychiatric assessments, including sleep assessment, will be conducted at this visit.

If you decide, at any point during the treatment phase of the study, that you no longer want to participate, or if you are taken out of the study, you will be asked to return to your study doctor's office for a final visit. This is to make sure you are in good health and you have not experienced any negative health effects as a result of your study participation.

Possible Side Effects and Risks of the Treatment

As a result of stopping the medications you are currently taking, your condition may worsen. Your condition may worsen as a result of taking placebo.

All therapies may cause some side effects or other reactions. You should know about possible risks and discomforts associated with quetiapine (Seroquel™) before you decide to participate in this study.

The most common side affects reported in people taking quetiapine (Seroquel™) are:

- headache
- sleepiness
- dizziness
- constipation
- dry mouth
- decreased blood pressure on standing (symptoms may be dizziness, fast heart rate, and fainting)
- increased heart rate

A very rare side effect of antipsychotic drugs, including quetiapine (Seroquel™), is Neuroleptic Malignant Syndrome. The symptoms are high fever, stiff muscles, fast heart rate, high or low blood pressure, sweating, and possibly kidney failure. Sometimes this illness results in death. Another rare side effect of antipsychotic drugs is a disorder called tardive dyskinesia, which causes uncontrollable body movements such a lip and tongue smacking. Sometimes the movements are permanent.

Some people treated with Seroquel™ have had mild and temporary increases in liver chemicals (seen in their blood stream).

Animal studies have shown a slight risk of developing cloudiness in the lens of the eye, but this increased risk has not been seen in patients taking the medication in clinical research studies. Other side effects may occur, some of which are not known and cannot be predicted. With your full cooperation regarding the

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
MARCH 21, 2003**

instructions given by your physician, frequent examination and the performance of laboratory tests, if these unwanted side effects happen, they can be treated quickly and the potential for your discomfort can be minimized.

In addition to the side effects for the study drug quetiapine (Seroquel™), there may be other risks to you that are not known at the present time.

During the screening period, and upon completion of the study, approximately 2 ½ tablespoons (36 ml) of blood (38 ml for women) will be drawn from a vein in your arm using standard medical procedures. The risks of venipuncture (inserting a needle in your vein to take blood) include the occurrence of discomfort and/or bruising at the site of the puncture and, less commonly, fainting, the formation of a small blood clot or swelling of the vein and surrounding tissue, or bleeding from the puncture site. There also could be infection at the site.

If you are not completely truthful with the study doctor and study staff regarding any side effects, you may harm yourself by participating in this study.

New Findings

You will be informed of any new information about the study drug that becomes known during the course of this study, which might affect your willingness to continue participation.

Women of Childbearing Potential

There might be unknown risks to an unborn child or breast-fed child if you are or if you become pregnant during the study.

Due to these risks, you must not participate in this study if you are pregnant or plan to become pregnant during the research study period, or are breast-feeding a child.

If you are a woman of child-bearing potential:

- By signing this consent form, you confirm to the best of your knowledge that you are not pregnant now and you do not intend to become pregnant during this study.
- A pregnancy test will be done to confirm that you are not pregnant before your participation in this study.

If you are a female of childbearing potential, you need to be using a reliable method of contraception. Reliable methods include:

- oral contraceptive
- long-term injectable or implantable hormonal contraceptive
- condom and diaphragm
- condom and foam
- condom and sponge
- intrauterine device (IUD)
- tubal ligation

If at any time during this study you think you might be pregnant, or later learn that you were pregnant during the study, you must contact the study doctor immediately for further instructions regarding your participation in this study and follow up.

Possible Benefits of the Study

You will not experience any direct health benefits during or following completion of this study. However, your participation will provide information about the study treatment(s) and bipolar depression that may benefit others.

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
MARCH 21, 2003**

Alternatives to Participating in this Study

Although there are approved treatments for mania alone (eg: lithium, valproic acid) and depression alone (SSRIs), there are no approved medications for depression associated with bipolar disorder.

Payment for Injury Related to the Study

If you experience any side effect or injury, notify your study doctor immediately so that you can receive appropriate medical treatment.

If you suffer any side effect or other physical injury resulting directly from the research study drug, AstraZeneca will provide reimbursement for the reasonable costs of medical treatment if:

- You took the study drug as instructed by your study doctor
- Your injury was not deliberately caused
- The study doctor was immediately notified about your injury
- You followed the medical advice of the study doctor

You will not be reimbursed for lost wages or other damages or losses or for medical expenses that have been covered by your medical or hospital insurance or by third party or governmental programs providing such coverage. No other form of compensation is offered from AstraZeneca except remedies available under the law. Compensation for medical expenses is not an admission of fault or liability by AstraZeneca or anyone else.

Legal Rights

You will not lose any of your legal rights as a research subject by signing this consent form.

Additional Costs

The study drug, study doctor's visits, and laboratory tests related to this study will be provided at no cost to you. Neither your insurance company nor you will be charged for the services provided in the normal course of the conduct of this study.

Your Participation in the Study

Your participation in this study is entirely voluntary. You cannot be forced to be in this study. You may not want to be in this study or you may leave the study at any time without punishment or loss of benefits to which you are entitled and without affecting your future medical care. The study doctor, the Drug Company, IntegReview, or the FDA may take you out of the study without your permission at any time for the following reasons:

- if you do not follow the instructions of the study doctor
- if it is discovered that you do not meet the study requirements
- if the study is cancelled
- if it appears to be medically harmful to you

If you leave the study or if you are taken out of the study for any reason, you will be asked to return to the study doctor's office for a final visit. This is to make sure that you are in good health.

You must return all unused study drug and the containers to your study doctor.

Payment for Participation

You will not be paid for your participation in this study.

Confidentiality And Authorization To Collect, Use And Disclose Your Medical Information

The following sections explain how your medical information will be collected, used and shared with certain other persons involved in the study and describes your rights, including the right to see your medical information.

Purpose Of This Authorization

You are being asked to permit the collection, use and sharing of your medical information so that the safety and effectiveness of the study drug can be evaluated as described on page 2 ("Purpose of the Research Study").

What Does Medical Information Mean?

Your medical information is information about your physical or mental health or condition. It includes your previous medical records and information about you created or collected during the study (for example, the dates or results of various tests or examinations). This information may identify you because it may contain, for example, your name, address, telephone number, photograph, date of birth, social security number, race or ethnic origin or other unique identifiers.

Use And Disclosure Of Your Medical Information

If you sign this form, you allow the study doctor to collect and use your medical information to carry out this study. You also allow the study doctor to share your medical information with:

- the study sponsor, including its affiliates, its representatives and its contractors who work on behalf of the study sponsor to conduct the study
- other doctors and health care professionals who are involved in the study
- the Institutional Review Board (IRB) that watches over the study; and
- government agencies overseeing this study or the study drug, including the Food and Drug Administration (FDA), other Department of Health and Human Services agencies, and government agencies in the United States and other countries.

Will Persons Looking At Your Medical Information Be Able To Identify You?

That part of your medical information sent by the study doctor to the study sponsor ("study data") usually does not identify you personally (for example, by name, address, or social security number). Instead, the study doctor will use your initials, date of birth and an assigned code number on the study data sent to the study sponsor. However, the study sponsor, its representatives and contractors, regulatory authorities and other supervising bodies may look at all your medical information at the study doctor's site. The reason these persons may look at your medical information is to make sure the study has been done properly and that study data has been collected correctly, or for other reasons allowed by law.

Notice On Re-disclosure Of Your Medical Information And Confidentiality

Federal law provides that the study doctor can only share your medical information with those persons whom you have permitted to see it. However, if you sign this form, those persons may share your medical information with other persons. Federal law does not protect you against this. (The laws of your state may provide additional privacy protection.)

Publication Of Study Results

Except as explained above, your medical information will be kept confidential. The data and results from this study may also be

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
MARCH 21, 2003**

presented at meetings or in publications, but in those presentations people taking part in the study will not be identified by name.

Your Right To See And/Or Copy Your Medical Information

You have the right to see and copy your medical information related to the study for as long as the study doctor holds this information. However, you may not be able to see some of your records related to the study until after the study has been completed, otherwise it could spoil the study.

Withdrawing Your Authorization

You may withdraw your Authorization (permission) regarding your medical information at any time by writing to the study doctor at the following address: 700 Spring Forest Road, Suite 125, Raleigh, NC 27609. If you withdraw this Authorization, the study doctor will no longer use your medical information or share it with others under the Authorization for this study, unless the study doctor needs to do so to protect the study data. However, the study sponsor may still use information about you that was shared with the study sponsor before you withdrew your Authorization. If you withdraw your Authorization, you cannot continue to take part in the study.

Expiration Of Your Authorization

Your Authorization does not have an expiration date.

Whom To Contact

For answers to questions about this research or to report a research related injury, contact:

Richard H. Weisler, M.D.
919-872-5900 daytime and after hours

To protect the rights and safety of subjects involved in research projects the FDA requires approval of this Informed Consent document by an Institutional Review Board (IRB). This means the IRB has approved the information provided in the Informed Consent for use when enrolling subjects into this study. IntegReview Ethical Review Board has approved this research study and informed consent document. IntegReview is a group of scientific and non-scientific people that review research studies. Ethical review boards must follow the Food and Drug Administration (FDA) rules regarding the protection of the rights and welfare of human subjects involved in medical research studies. Questions about your rights as a study subject may be addressed to:

Chairperson

Experimental Subject's Bill of Rights

As a subject involved in an investigational drug study, you have the following rights.

1. Be informed of the nature and purpose of the experiment.
2. Be given an explanation of the procedures to be followed in the medical experiment, and any drug or device to be used.
3. Be given a description of any attendant discomforts and risk reasonably to be expressed from the experiment.
4. Be given an explanation of any benefits to the subject reasonably to be expected from the experiment, if applicable.

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
MARCH 21, 2003**

5. Be given a disclosure of any appropriate alternative procedures, drugs, or devices that might be advantageous to the subject, and their relative risks and benefits.

6. Be informed of the avenues of medical treatment, if any, available to the subject after the experiment if complications should arise.

7. Be given an opportunity to ask any questions concerning the experiment or the procedures involved.

8. Be instructed that consent to participate in the medical experiment may be withdrawn at any time. The subject may discontinue participation in the medical experiment without prejudice.

9. Be given a copy of a signed and dated written consent form when one is required.

10. Be given the opportunity to decide to consent or not to consent to a medical experiment without the intervention of any element of force, fraud, deceit, duress, coercion, or undue influence on the subject's decision.

The Reason for Institutional Review Boards and Informed Consent

What is a consent form?
The Informed Consent document contains the required information as found in and required by the United States regulations regarding the protection of human subjects (Code of Federal Regulations, Title 21, Part 50-Protection of Human Subjects). As required by this regulation, the informed consent must be reviewed and approved by an Institutional Review Board (IRB).

What is an Institutional Review Board (IRB)?
An Institutional Review Board (IRB) is any board, committee or other group which reviews, approves, and does continuing review of biomedical research involving human subjects. The primary purpose of such review is to guarantee the protection of the rights and welfare of the human subjects.

IRBs were established as the result of unfair treatment of human subjects. Prior to this, other committees existed as a requirement of the United States Public Health Service (USPHS) policy established in 1965. IRBs are regulated by the Food and Drug Administration and the National Institutes of Health (NIH).

What does an IRB mean to me?
The purpose of the IRB is to inform and protect human subjects through the information provided in the informed consent document. Therefore, the IRB is acting as a supporter for the research subject. This means that the IRB, during its review of the informed consent document, has the right and responsibility to ensure that the research subject is fully informed of the procedures involved in the study as well as the risks and other treatments that are available if participation in the study is refused.

How can I tell that an IRB has reviewed and approved this study?
The date that IntegReview approved the study design as well as the information in this Informed Consent document is printed on the top of each page of this Informed Consent form. **THIS DOES NOT MEAN THE IRB HAS APPROVED YOUR PARTICIPATION IN THE STUDY.** It is a FDA requirement that the study design (Protocol), Informed Consent form, any advertising materials, and other instructions to the subject (Subject Instructions, Patient Diaries, etc.) be reviewed and approved by an IRB. Although IRB approval is granted for the study doctor to conduct the study, you must evaluate the information in this Informed

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
MARCH 21, 2003**

Consent form for yourself and decide whether or not you wish to participate.

IntegReview, the IRB for this study
IntegReview is an independent IRB whose board members are individuals who work in the Austin community. IntegReview provides services nation-wide to research professionals.

FDA regulations require that the committee have at least five members with varying backgrounds to provide complete and adequate review of research activities.

To fulfill these requirements the IntegReview Board currently includes physicians, pharmacists, Ph.Ds., a toxicologist (someone who studies the harmful effects of chemicals), a psychologist, an oral surgeon, and lay members (non-scientific).

The telephone number of the Chair is available in every informed consent document in the contacts section. You may contact the Chair with concerns regarding your rights as a subject.

Agreement to Be in the Study

This consent form contains important information to help you decide if you want to be in the study. If you have any questions that are not answered in this consent form, ask one of the study staff.

A. Do you understand the information in this consent form? _____

B. Have you been able to ask questions and talk about the study? _____

C. Have all of your questions been answered to your satisfaction? _____

D. Do you think you received enough information about the study? _____

E. Do you understand that you can leave the study at any time without giving a reason and without affecting your medical care? _____

F. Do you understand that your medical records from this study may be reviewed by the Drug Company and by government authorities? _____

If you answered NO to any of these six questions, you should not sign this consent form.

When you sign this consent form you agree that:

- you have had a chance to ask questions
- you understand English
- you want to be in the study

You will not lose any of your legal rights by signing this consent form.

_____

Signature of Study Subject or Legally Authorized Representative — Date (Month/Day/Year)

DO NOT SIGN AFTER SEPTEMBER 10, 2003

_____

Printed Name of Study Subject

_____

Signature of Person Explaining Informed Consent — Date (Month/Day/Year)

STUDY PARTICIPANT SURVEY
(OPTIONAL)
INFORMED CONSENT DOCUMENT AND PROCESS

As mentioned in the informed consent document, IntegReview is an ethical review board responsible for ensuring the safety and welfare of subjects involved in medical and biomedical research. We spend a great deal of time reviewing the informed consent document to make sure you are given enough information to make an informed decision whether or not you wish to participate in the study. In addition, we want to be sure the document is easy to read and understand.

You can assist us in this process by providing feedback regarding your experience as a research study subject. The following questions are designed to let our board members know how to improve the informed consent documents.

Please provide as much information as you feel is necessary. *This information will be kept confidential by IntegReview.* ***You may use additional pages if needed.***

1. Your age: _____

2. Highest level of education completed: _____

3. Two column format of informed consent document: ☐ Easier to read than one column

   ☐ More difficult to read than one column ☐ No difference between one or two column format

4. Words/phrases were understood: ☐ Yes ☐ No

What words/phrases did you **not** understand? _____
_____
_____
_____

5. Did the study doctor or one of the staff explain what you did not understand? ☐ Yes ☐ No

6. Overall ease of reading informed consent document: ☐ Excellent ☐ Good ☐ Satisfactory ☐ Poor

7. Were you offered/allowed to take the informed consent document home to read and/or discuss with family members/friends? ☐ Yes ☐ No

8. If no, would you have preferred the option? ☐ Yes ☐ No

9. Did the study doctor or one of the study staff read the informed consent to you? ☐ Yes ☐ No

10. Did you feel you had enough time to read the informed consent before you were asked to make a decision? ☐ Yes ☐ No

11. Did you feel comfortable asking questions after you read the informed consent document? ☐ Yes ☐ No

12. Was there information not in the document that you feel should have been included? ☐ Yes ☐ No
If so, please explain: _____
_____
_____
_____

What suggestions do you have for IntegReview that would improve the informed consent document and the process of obtaining informed consent? _____

NUMBER AND NAME OF STUDY:	5077US/0049; "A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL™) in the Treatment of Patients with Bipolar Depression"
STUDY DOCTOR:	Janice Miller, M.D.
ADDRESS OF STUDY SITE:	Clinical Neuroscience Solutions, Inc. 5601 Corporate Way, Bldg. 2, Suite # 210 West Palm Beach, FL 33407
TELEPHONE NUMBERS, DAYTIME & AFTER HOURS:	561-616-9595

Introduction

You have been asked to participate in a clinical research study. For you to be able to decide to be part of this study, you should understand enough about its risks and benefits to make an informed judgment. This process is known as informed consent. This consent form describes the purpose, procedures, possible benefits and risks of the study. Once you understand the study, you will be asked to sign this form if you wish to participate. If you are in any other research study, you cannot take part in this study.

Your healthcare provider may be an investigator (or your study doctor) for this research project, and as an investigator he/she is interested both in your clinical welfare (safety and health) and in the conduct of this study. Your study doctor is being paid by AstraZeneca to conduct this study. Before entering this study or at any time during the study, you may ask for a second opinion about your care from another doctor who is in no way associated with this study. You are not under any obligation to participate in a research project offered by your doctor nor will your treatment be affected by not participating. At any time during the study you may decide you no longer want to participate in this study; in other words, you may say "no".

If you are not completely truthful with the study doctor and study staff regarding your health history, you may harm yourself by participating in this study.

Read this information carefully and please ask any questions to the study doctor or the study staff.

Purpose of the Research Study

You have been asked to participate in this research study because you have been diagnosed with bipolar disorder and are currently having a depressive episode (feeling depressed). This research study is designed to determine how effective quetiapine (Seroquel™) is compared to placebo (a non-drug tablet, like a sugar pill that will look like quetiapine) for the treatment of your depressive episode. This study will also look at how safe quetiapine is in treating bipolar depression, as well as examine the effects of

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
FEBRUARY 21, 2003**

quetiapine on your overall ability to function and sleep.

There will be approximately 740 patients screened to obtain 530 enrolled patients from approximately 75 sites.

Seroquel™ was approved by the United States Food and Drug Administration (FDA) in 1997 for the treatment of schizophrenia. For the purposes of this study, it is being tested for the treatment of depressive episodes related to bipolar disorder. Therefore, it is an 'investigational product'. 'Investigational' means the formulation and/or indication being tested has not been approved by the United States Food and Drug Administration (FDA) for sale as prescription and/or over-the-counter medication. However, information from previous studies suggests it has antidepressant actions (the way it works in your body).

For the purpose of this study, the medication you may receive is an investigational product. Investigational products are similar to controlled substances, in that, if prescribed, they should not be distributed to others. In addition, if you decide you would like to stop taking the medication, you will be asked to return all unused investigational product.

What Will Happen During The Study

This is an outpatient (not in the hospital) study. It consists of a screening phase that lasts from 7 up to 28 days, depending on your current medication, followed by an eight week treatment phase.

If you decide to participate in this research study as a subject, you will first undergo a series of screening procedures that will be done over a period of at least 1 day. These procedures will determine if you are eligible to participate in the study.

The screening phase of this study starts once you have signed this consent form. The screening phase consists of a series of routine tests and psychiatric assessments. As a result of conducting these tests and assessments, your study doctor may determine you should not participate. In this case, you will be provided with other options for the treatment of your condition. For your own safety, it is your responsibility to tell the doctor all of your past and present diseases, allergies, medical conditions (that you are aware of), and all drugs (including non-prescribed drugs) that you are currently taking.

The screening phase entails the following psychiatric and other medical assessments:

- A thorough interview, inquiring about your current and past mental/medical conditions. This will help your doctor determine your correct diagnosis.
- Two additional, question and answer, assessments that will rate the severity of your depression and to check for possible symptoms of mania.
- A complete medical history review, including diseases or conditions that may be unrelated to your bipolar disorder.
- A physical exam, including an eye exam. If you have a history of cataracts, you should inform your study doctor.
- Measurement of your height, weight, blood pressure and heart rate.
- Collection of a blood sample (through a needle in a vein) for routine testing of hematology (red and white blood cells), fasting (no food or drink except water for 12 hours before the blood draw) clinical chemistry (tests of lipid levels, glucose, insulin, creatinine, and liver and thyroid function).
- If you are a woman, you will also have a blood test for pregnancy; if this test is positive, you will not be able to participate in this study.

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
FEBRUARY 21, 2003**

- An electrocardiogram (ECG – an electrical tracing of your heart function).
- Collection of a urine sample in order to test for illicit substances of abuse. The results of this test will be kept confidential. It is a required test in order to ensure your safety and cannot be used against you in a court of law. If you have used an illicit substance of abuse, you should inform your study doctor. If you have any issues with this test being performed, discuss them with your study doctor prior to deciding to participate in this study. Illicit substance use is not permitted in this study.
- You will be asked to stop all of your medications currently used to treat your depressive episode and/or your bipolar disorder. You will be required to not use these medications from the time you are screened for the study throughout your participation. Your study doctor will instruct you in discontinuing the use of your current medications in order to ensure your safety. If you notice a worsening in your symptoms during this period, contact your study doctor immediately.
- If abnormal results are reported from the ECG, labs or urine sample, you may be asked to return to the office for a retest. Any abnormal results reported to your study doctor will be discussed with you in order for you to obtain the proper follow-up.

Once the initial screening phase is complete and your study doctor has determined you are eligible to proceed in the study, you will return to your study doctor's office for Visit 2. This will occur anywhere from 7-28 days after your first visit. At Visit 2, the final screening will occur and your study doctor will assess whether you will be able to participate in the study.

The final screening assessment consists of the following:

- Your study doctor will repeat the same two, question and answer, assessments which rate the severity of your depression and to check for possible symptoms of mania, that were conducted at your initial screening visit.

Once these assessments are complete and your study doctor has determined you are eligible to participate, you will be randomly (like the flip of a coin) assigned to one of the three treatments. The treatments will be either 600 mg of quetiapine per day, 300 mg of quetiapine per day, or placebo. Your chance of receiving quetiapine is twice that of placebo, that is, you have a 66% chance of receiving quetiapine and a 33% chance of receiving pills that contain no active drug. Neither you nor your study doctor or research nurse will know if you are taking quetiapine or placebo. Your condition may worsen as a result of receiving either placebo or study drug.

In addition to being randomized to treatment, the following psychiatric and medical assessments will be conducted at Visit 2:

- Six evaluations (question and answer) of your mental condition, involuntary limb movements, how well you sleep at night and your quality of life will be conducted. The sleep assessment is a self-assessment questionnaire, which means you will complete it on your own.
- Your blood pressure and heart rate will be recorded.

You will then be asked to come back to your study doctor's office on a weekly basis for the course of 8 weeks. Study medication is dispensed at each study visit during the treatment phase.

**APPROVED BY
INTEGREVIEW
FEBRUARY 21, 2003**

Visits 3 through 10 will consist of the following:

- The same two, question and answer, assessments which rate the severity of your depression and possible symptoms of mania will be conducted at each study visit. In addition, another depression assessment will be conducted along with an anxiety assessment.
- Your blood pressure and heart rate will be recorded.

In addition to the above assessments, the assessments of your sleep and quality of life will be conducted again at Visit 6.

At your final visit, Visit 10, the following psychiatric and medical assessments will be conducted:

- Physical Exam
- Testing of hematology (red and white blood cells) and fasting clinical chemistry (tests of lipid levels, glucose, insulin, creatinine, liver and thyroid function).
- Electrocardiogram (ECG)
- Weight, blood pressure and heart rate
- A final evaluation of all the psychiatric assessments, including sleep assessment, will be conducted at this visit.

If you decide, at any point during the treatment phase of the study, that you no longer want to participate, or if you are taken out of the study, you will be asked to return to your study doctor's office for a final visit. This is to make sure you are in good health and you have not experienced any negative health effects as a result of your study participation.

Possible Side Effects and Risks of the Treatment

As a result of stopping the medications you are currently taking, your condition may worsen. Your condition may worsen as a result of taking placebo.

All therapies may cause some side effects or other reactions. You should know about possible risks and discomforts associated with quetiapine (Seroquel™) before you decide to participate in this study.

The most common side affects reported in people taking quetiapine (Seroquel™) are:

- headache
- sleepiness
- dizziness
- constipation
- dry mouth
- decreased blood pressure on standing (symptoms may be dizziness, fast heart rate, and fainting)
- increased heart rate

A very rare side effect of antipsychotic drugs, including quetiapine (Seroquel™), is Neuroleptic Malignant Syndrome. The symptoms are high fever, stiff muscles, fast heart rate, high or low blood pressure, sweating, and possibly kidney failure. Sometimes this illness results in death. Another rare side effect of antipsychotic drugs is a disorder called tardive dyskinesia, which causes uncontrollable body movements such a lip and tongue smacking. Sometimes the movements are permanent.

Some people treated with Seroquel™ have had mild and temporary increases in liver chemicals (seen in their blood stream).

Animal studies have shown a slight risk of developing cloudiness in the lens of the eye, but this increased risk has not been seen in patients taking the medication in clinical research studies. Other side effects may occur, some of which are not known and cannot be predicted. With your full cooperation regarding the

**APPROVED BY
INTEGREVIEW
FEBRUARY 21, 2003**

instructions given by your physician, frequent examination and the performance of laboratory tests, if these unwanted side effects happen, they can be treated quickly and the potential for your discomfort can be minimized.

In addition to the side effects for the study drug quetiapine (Seroquel™), there may be other risks to you that are not known at the present time.

During the screening period, and upon completion of the study, approximately 2 ½ tablespoons (36 ml) of blood (38 ml for women) will be drawn from a vein in your arm using standard medical procedures. The risks of venipuncture (inserting a needle in your vein to take blood) include the occurrence of discomfort and/or bruising at the site of the puncture and, less commonly, fainting, the formation of a small blood clot or swelling of the vein and surrounding tissue, or bleeding from the puncture site. There also could be infection at the site.

If you are not completely truthful with the study doctor and study staff regarding any side effects, you may harm yourself by participating in this study.

New Findings

You will be informed of any new information about the study drug that becomes known during the course of this study, which might affect your willingness to continue participation.

Women of Childbearing Potential

There might be unknown risks to an unborn child or breast-fed child if you are or if you become pregnant during the study.

Due to these risks, you must not participate in this study if you are pregnant or plan to become pregnant during the research study period, or are breast-feeding a child.

If you are a woman of child-bearing potential:

- By signing this consent form, you confirm to the best of your knowledge that you are not pregnant now and you do not intend to become pregnant during this study.
- A pregnancy test will be done to confirm that you are not pregnant before your participation in this study.

If you are a female of childbearing potential, you need to be using a reliable method of contraception. Reliable methods include:

- oral contraceptive
- long-term injectable or implantable hormonal contraceptive
- condom and diaphragm
- condom and foam
- condom and sponge
- intrauterine device (IUD)
- tubal ligation

If at any time during this study you think you might be pregnant, or later learn that you were pregnant during the study, you must contact the study doctor immediately for further instructions regarding your participation in this study and follow up.

Possible Benefits of the Study

You will not experience any direct health benefits during or following completion of this study. However, your participation will provide information about the study treatment(s) and bipolar depression that may benefit others.

Alternatives to Participating in this Study

Although there are approved treatments for mania alone (eg: lithium, valproic acid) and depression alone (SSRIs), there are no approved

Subject Initials: _____

**APPROVED BY
INTEGREVIEW
FEBRUARY 21, 2003**

medications for depression associated with bipolar disorder.

Payment for Injury Related to the Study

If you experience any side effect or injury, notify your study doctor immediately so that you can receive appropriate medical treatment.

If you suffer any side effect or other physical injury resulting directly from the research study drug, AstraZeneca will provide reimbursement for the reasonable costs of medical treatment if:

- You took the study drug as instructed by your study doctor
- Your injury was not deliberately caused
- The study doctor was immediately notified about your injury
- You followed the medical advice of the study doctor

You will not be reimbursed for lost wages or other damages or losses or for medical expenses that have been covered by your medical or hospital insurance or by third party or governmental programs providing such coverage. No other form of compensation is offered from AstraZeneca except remedies available under the law. Compensation for medical expenses is not an admission of fault or liability by AstraZeneca or anyone else.

Legal Rights

You will not lose any of your legal rights as a research subject by signing this consent form.

Additional Costs

The study drug, study doctor's visits, and laboratory tests related to this study will be provided at no cost to you. Neither your insurance company nor you will be charged for the services provided in the normal course of the conduct of this study.

Your Participation in the Study

Your participation in this study is entirely voluntary. You cannot be forced to be in this study. You may not want to be in this study or you may leave the study at any time without punishment or loss of benefits to which you are entitled and without affecting your future medical care. The study doctor, the Drug Company, IntegReview, or the FDA may take you out of the study without your permission at any time for the following reasons:

- if you do not follow the instructions of the study doctor
- if it is discovered that you do not meet the study requirements
- if the study is cancelled
- if it appears to be medically harmful to you

If you leave the study or if you are taken out of the study for any reason, you will be asked to return to the study doctor's office for a final visit. This is to make sure that you are in good health.

You must return all unused study drug and the containers to your study doctor.

Payment for Participation

You will not be paid for your participation in this study.

Release Of Your Medical Records And Privacy (Confidentiality)

All study data will be kept confidential; however, authorized personnel from AstraZeneca, its representatives, the FDA, other Department of Health and Human Services agencies, government agencies in other countries, and IntegReview, the Institutional Review Board (IRB) may have access to the data. The data and results from this study may also be presented at meetings or in publications,

but in those presentations study participants will not be identified by name.

Whom To Contact

For answers to questions about this research or to report a research related injury, contact:

Janice Miller, M.D.
561-616-9595 daytime and after hours

To protect the rights and safety of subjects involved in research projects the FDA requires approval of this Informed Consent document by an Institutional Review Board (IRB). This means the IRB has approved the information provided in the Informed Consent for use when enrolling subjects into this study. IntegReview Ethical Review Board has approved this research study and informed consent document. IntegReview is a group of scientific and non-scientific people that review research studies. Ethical review boards must follow the Food and Drug Administration (FDA) rules regarding the protection of the rights and welfare of human subjects involved in medical research studies. Questions about your rights as a study subject may be addressed to:

Chairperson
IntegReview
1825 Fortview Road, Suite 110
Austin, Texas 78704
512-326-3001 between 8 a.m. and 5 p.m.

Experimental Subject's Bill of Rights

As a subject involved in an investigational drug study, you have the following rights.

1. Be informed of the nature and purpose of the experiment.
2. Be given an explanation of the procedures to be followed in the medical experiment, and any drug or device to be used.
3. Be given a description of any attendant discomforts and risk reasonably to be expressed from the experiment.
4. Be given an explanation of any benefits to the subject reasonably to be expected from the experiment, if applicable.
5. Be given a disclosure of any appropriate alternative procedures, drugs, or devices that might be advantageous to the subject, and their relative risks and benefits.
6. Be informed of the avenues of medical treatment, if any, available to the subject after the experiment if complications should arise.
7. Be given an opportunity to ask any questions concerning the experiment or the procedures involved.
8. Be instructed that consent to participate in the medical experiment may be withdrawn at any time. The subject may discontinue participation in the medical experiment without prejudice.
9. Be given a copy of a signed and dated written consent form when one is required.
10. Be given the opportunity to decide to consent or not to consent to a medical experiment without the intervention of any element of force, fraud, deceit, duress, coercion, or undue influence on the subject's decision.

The Reason for Institutional Review Boards and Informed Consent

What is a consent form?
The Informed Consent document contains the required information as found in and required by the United States regulations regarding the protection of human subjects (Code of Federal Regulations, Title 21, Part 50-Protection of Human Subjects). As required by this regulation, the informed consent must be reviewed and approved by an Institutional Review Board (IRB).

What is an Institutional Review Board (IRB)?
An Institutional Review Board (IRB) is any board, committee or other group which reviews, approves, and does continuing review of biomedical research involving human subjects. The primary purpose of such review is to guarantee the protection of the rights and welfare of the human subjects.

IRBs were established as the result of unfair treatment of human subjects. Prior to this, other committees existed as a requirement of the United States Public Health Service (USPHS) policy established in 1965. IRBs are regulated by the Food and Drug Administration and the National Institutes of Health (NIH).

What does an IRB mean to me?
The purpose of the IRB is to inform and protect human subjects through the information provided in the informed consent document. Therefore, the IRB is acting as a supporter for the research subject. This means that the IRB, during its review of the informed consent document, has the right and responsibility to ensure that the research subject is fully informed of the procedures involved in the study as well as the risks and other treatments that are available if participation in the study is refused.

How can I tell that an IRB has reviewed and approved this study?
The date that IntegReview approved the study design as well as the information in this Informed Consent document is printed on the top of each page of this Informed Consent form. **THIS DOES NOT MEAN THE IRB HAS APPROVED YOUR PARTICIPATION IN THE STUDY.** It is a FDA requirement that the study design (Protocol), Informed Consent form, any advertising materials, and other instructions to the subject (Subject Instructions, Patient Diaries, etc.) be reviewed and approved by an IRB. Although IRB approval is granted for the study doctor to conduct the study, you must evaluate the information in this Informed Consent form for yourself and decide whether or not you wish to participate.

IntegReview, the IRB for this study
IntegReview is an independent IRB whose board members are individuals who work in the Austin community. IntegReview provides services nation-wide to research professionals.

FDA regulations require that the committee have at least five members with varying backgrounds to provide complete and adequate review of research activities.

To fulfill these requirements the IntegReview Board currently includes physicians, pharmacists, Ph.Ds., a toxicologist (someone who studies the harmful effects of chemicals), a psychologist, an oral surgeon, and lay members (non-scientific).

The telephone number of the Chair is available in every informed consent document in the contacts section. You may contact the Chair with concerns regarding your rights as a subject.

Agreement to Be in the Study

This consent form contains important information to help you decide if you want to be in the study. If you have any questions that are not answered in this consent form, ask one of the study staff.

A. Do you understand the information in this consent form? _____

B. Have you been able to ask questions and talk about the study? _____

C. Have all of your questions been answered to your satisfaction? _____

D. Do you think you received enough information about the study? _____

E. Do you understand that you can leave the study at any time without giving a reason and without affecting your medical care? _____

F. Do you understand that your medical records from this study may be reviewed by the Drug Company and by government authorities? _____

If you answered NO to any of these six questions, you should not sign this consent form.

When you sign this consent form you agree that:

- you have had a chance to ask questions
- you understand English
- you want to be in the study

You will not lose any of your legal rights by signing this consent form.

_____

Signature of Study Subject or Legally Authorized Representative Date (Month/Day/Year)
DO NOT SIGN AFTER SEPTEMBER 10, 2003

_____

Printed Name of Study Subject

_____

Signature of Person Explaining Informed Consent Date (Month/Day/Year)

You will be given a copy of this informed consent to keep.

Addendum to Informed Consent
Consent to Perform

AstraZeneca Trial 5077US/0049 "A Multicenter, Double-blind, Randomized, Placebo-controlled, Double-dummy Trial of the Use of Quetiapine Fumarate (SEROQUEL™) in the Treatment of Patients with Bipolar Depression"

Part of this study involves the use of a computer to answer some questions about your depression. This is a computer-based self-report measure of depression severity that you will perform after you have answered the questions asked by a study clinician. It may help ensure that your study doctor accurately assessed your depression.

There is no direct benefit to you in having these tests performed. None of the results will be reported in the Clinical Trial Report that is written at the end of the study. None of the results will be provided to you, your family, the investigator, or to any other physician who is treating you or may treat you in the future. Neither your insurance company nor your employer will have any access to these test results.

Participation in this part of the study is optional. You will receive the same treatment and care under the study protocol whether or not you decide to perform the computer-based self-report. If you decide to participate, you will be asked to do this at each visit after one of the severity of depression interviews is done. It will take about 15 minutes of your time.

I have read and I understand this section.

I consent to the computer- based self-report described in this section.

You will not lose any of your legal rights by signing this consent form

STUDY PARTICIPANT SURVEY
(OPTIONAL)
INFORMED CONSENT DOCUMENT AND PROCESS

As mentioned in the informed consent document, IntegReview is an ethical review board responsible for ensuring the safety and welfare of subjects involved in medical and biomedical research. We spend a great deal of time reviewing the informed consent document to make sure you are given enough information to make an informed decision whether or not you wish to participate in the study. In addition, we want to be sure the document is easy to read and understand.

You can assist us in this process by providing feedback regarding your experience as a research study subject. The following questions are designed to let our board members know how to improve the informed consent documents.

Please provide as much information as you feel is necessary. *This information will be kept confidential by IntegReview.* ***You may use additional pages if needed.***

1. Your age: _____

2. Highest level of education completed: _____

3. Two column format of informed consent document: ☐ Easier to read than one column

   ☐ More difficult to read than one column ☐ No difference between one or two column format

4. Words/phrases were understood: ☐ Yes ☐ No

What words/phrases did you **not** understand? _____

_____

_____

_____

5. Did the study doctor or one of the staff explain what you did not understand? ☐ Yes ☐ No

6. Overall ease of reading informed consent document: ☐ Excellent ☐ Good ☐ Satisfactory ☐ Poor

7. Were you offered/allowed to take the informed consent document home to read and/or discuss with family members/friends? ☐ Yes ☐ No

8. If no, would you have preferred the option? ☐ Yes ☐ No

9. Did the study doctor or one of the study staff read the informed consent to you? ☐ Yes ☐ No

10. Did you feel you had enough time to read the informed consent before you were asked to make a decision? ☐ Yes ☐ No

11. Did you feel comfortable asking questions after you read the informed consent document? ☐ Yes ☐ No

12. Was there information not in the document that you feel should have been included? ☐ Yes ☐ No
If so, please explain: _____

_____

_____

_____

What suggestions do you have for IntegReview that would improve the informed consent document and the process of obtaining informed consent? _____

_____

_____

(7/6/02 Revision)

HOME ADDRESS: REDACTED

OFFICE ADDRESS:
Mood Disorders Program
11400 Euclid Avenue, Suite 200
Cleveland, Ohio 44106

Telephone: 216/844-2865
Home: REDACTED
FAX 216/844-2875
E-mail: jrc8@po.cwru.edu

DATE & PLACE OF BIRTH: February 7, 1953
Cleveland, Ohio

EDUCATION:

9/72 – 5/76	B.S. Xavier University (major in biology, summa cum laude)
7/76 – 6/80	M.D. Ohio State University College of Medicine (degree awarded with honors in psychiatry)
7/80 – 6/84	Resident in Psychiatry Cleveland Clinic Foundation Cleveland, Ohio
7/82 - 6/83	Chief Resident Department of Psychiatry Cleveland Clinic Foundation Cleveland, Ohio
7/83 – 6/84	Chief Resident Department of Psychiatry Cleveland Clinic Foundation Cleveland, Ohio
7/84 – 6/86	Research Fellowship, Intramural Program Section on Clinical Neuroendocrinology, Phil Gold, M.D. Biological Psychiatry Branch, Director, Robert Post, M.D. National Institute of Mental Health Bethesda, Maryland

PROFESSIONAL EXPERIENCE:

11/89 - Present	Director, Mood Disorders Program Department of Psychiatry University Hospitals of Cleveland Cleveland, Ohio
5/96 - Present	Professor of Psychiatry with tenure Case Western Reserve University School of Medicine Cleveland, Ohio
9/96 - Present	Co-Director, Stanley Foundation Bipolar Disorders Clinical Research Center Case Western Reserve University School of Medicine Cleveland, Ohio
9/94 – 9/00	Vice Chairman, Clinical Affairs Department of Psychiatry University Hospitals of Cleveland Cleveland, Ohio
5/97 – 5/98	Associate Medical Director for Behavioral Health QualChoice Health Plan, Inc. Cleveland, Ohio
12/94 – 5/97	President & Chief Executive Office University Behavioral Health Care, Inc. Cleveland, Ohio
5/89 – 5/96	Associate Professor of Psychiatry Case Western Reserve University School of Medicine Cleveland, Ohio
12/89 – 1/95	Medical Director, Adult Inpatient Unit University Hospitals of Cleveland Cleveland, Ohio
7/86 – 11/89	Head, Manic Depressive Clinic Department of Psychiatry Cleveland Clinic Foundation Cleveland, Ohio

COMMUNITY SERVICE:

6/02 – Present	External Advisor to Canadian Consortium on Bipolar Disorder
9/00 – Present	Member, Chapter Professional Advisors Committee, DMDA
1/97 - Present	Medical Advisor, Alliance Mentally Ill of Metro Cleveland

	National Alliance for the Mentally Ill Cleveland, Ohio
9/92 - Present	Member, Scientific Advisory Board National Depressive and Manic Depressive Association Chicago, Illinois
9/92 - Present	Medical Advisor, Alliance for the Mentally Ill of Cuyahoga County National Alliance for The Mentally Ill Cleveland, Ohio
1/87 - Present	Professional Advisor, Cleveland Chapter National Depressive and Manic Depressive Association Cleveland, Ohio

PHARMACEUTICAL CONSULTATION/ADVISORY BOARDS:

5/91 - Present	Abbott Pharmaceuticals Chicago, Illinois
7/94 - Present	Glaxo Wellcome London, England
8/97 - Present	Eli Lilly Indianapolis, IN
11/97 - Present	Janssen-Cilag Brussels, Belgium
4/97 – 4/00	Parke Davis/Warner Lambert Ann Arbor, Michigan
4/98 - Present	Robert Wood Johnson Pharmaceutical Research Institute New Jersey
4/99	SmithKline Beecham Pharmaceuticals London, United Kingdom
3/99 - Present	TAP Holdings, Inc. Chicago, Illinois
6/99 - Present	UCB, Pharma Atlanta, Georgia
9/00 – Present	Astra Zeneca New Jersey
5/00 – Present	Novartis New Jersey

7/00	Teva Pharmaceuticals Israel
7/00 – Present	Shire Laboratories, Inc. Rockville, MD
1/01 – Present	Elan Pharmaceuticals

COMMITTEE INVOLVEMENT:

5/00 – 3/01	Behavioral Health Peer Review Committee QualChoice Health Plan, Inc University Hospitals Health System
7/00 – 7/01	Impaired Physicians/Provider Committee University Hospitals of Cleveland
6/92 - Present	Executive Committee Department of Psychiatry University Hospitals of Cleveland
6/92 - Present	Pharmacy and Therapeutics Committee University Hospitals of Cleveland
5/95 – 3/01	Clinical Quality Improvement Committee QualChoice Health Plan, Inc. University Hospitals Health System
5/98 – 3/01	Credentialing Committee QualChoice Health Plan, Inc. University Hospitals Health System
6/97 - Present	Board of Trustees Clinical Neuroscience Research Foundation Department of Psychiatry
6/94 - Present	Board of Trustees University Psychiatrists of Cleveland, Inc. Department of Psychiatry Practice Plan
3/96 – 9/98	Managed Care Contracting Committee University Faculty Practice Association Case Western Reserve University University Hospitals of Cleveland
4/95 – 4/96	Ad Hoc Grant Reviewer Medical Research Council of Canada
5/94 – 7/98	Medical Advisory Council

	QualChoice Health Plan, Inc. University Hospitals Health System
1/90 – 7/92	Chairman, Electroconvulsive Therapy Committee Department of Psychiatry University Hospitals of Cleveland
4/90 – 4/91	Depression Panel, Council on Scientific Affairs American Medical Association Chicago, Illinois
1/90 – 3/93	Education Committee Department of Psychiatry University Hospitals of Cleveland
7/89 – 9/97	Examiner, American of Psychiatry and Neurology Deerfield, Illinois
7/86 – 11/89	Human Research Committee, CNS, Cleveland Clinic Foundation
7/86 – 11/89	Education Committee Department of Psychiatry Cleveland Clinic Foundation

HONORS & AWARDS:

6/93	Annual Staff Teacher of the Year, Department of Psychiatry, CWRU School of Medicine, University Hospitals of Cleveland
9/91	National Young Investigator Research Award, National Depressive and Manic Depressive Association
6/89	Annual Staff Teacher of the Year Award, Department of Psychiatry, Cleveland Clinic Foundation
6/88	Annual Staff Teacher of the Year Award, Department of Psychiatry, Cleveland Clinic Foundation
6/84	Richard M. Steinhilber, M.D. Resident Research Award, Department of Psychiatry, Cleveland Clinic Foundation
6/80	Award for outstanding performance in psychiatry, Ohio State University College of Medicine
6/76	Graduated Summa Cum Laude and with honors in biology and philosophy, Xavier University
7/74	Northeast Ohio Heart Association Medical Student Research Award, Cleveland Clinic Foundation

6/73	Northeast Ohio Heart Association Medical Student Research Award, Cleveland Clinic Foundation

RESEARCH

NIMH/FEDERAL FUNDED:

1. Center for Excellence in the Treatment of Bipolar Disorder and Other Serious Mental Illnesses Accompanied by Alcohol/Drug Abuse Across the Life Cycle. PI – Joseph R. Calabrese, M.D., Co-PI – Robert Findling, M.D.

Source:	Health Resources and Services Administration (HRSA), U.S. Dept. HHS
Project Dates:	1/1/02
Total Amount:	$984,488

The primary objective of this project is to fund the start-up costs, as well as ongoing development costs, associated with the development of a research-oriented treatment center for dual diagnosis bipolar disorder across the life cycle.

2. Combination Therapy in Rapid Cycling Bipolar Disorder (R21). PI – Joseph R. Calabrese, M.D.

Source:	R21 (Exploratory/Development Grant) MH-62650
Project Dates:	2/1/2002 – 1/311/2005
Total Award:	$573,750

The primary objective of this study is to compare the efficacy of the triple regimen lithium/divalproex/blinded lamotrigine to lithium/divalproex/placebo in the acute and continuation treatment of patients with rapid cycling bipolar disorder over a six month randomized phase.

3. Double, Longitudinal Evaluation of the Efficacy and Safety of the Combination of Lithium and Depakote Versus Lithium Monotherapy in Rapid-Cycling Bipolar Patients Who Are Abusing Alcohol, Cannabis, and/or Cocaine (RO1-S). PI – Joseph R. Calabrese, M.D.

Source:	R01 MH-50165S (Supplement)
Project Dates:	10/1/97 – 12/01
Contracted Amount:	$674,938

The primary objective of this study is to compare the efficacy of the combination of lithium and divalproex as compared to lithium monotherapy in the prevention of episodes in patients with rapid cycling bipolar disorder who are currently abusing alcohol, cannabis, and/or cocaine.

4. Double-Blind, Longitudinal Evaluation of the Efficacy and Safety of Depakote and Lithium in Rapid-Cycling Bipolar Patients (RO1). PI – Joseph R. Calabrese, M.D.

Source:	R01 MH-50165
Project Dates:	4/95 to 12/01
Contracted Amount:	$1,232,471

The primary objective of this study was to compare the efficacy of lithium monotherapy to divalproex monotherapy in the prevention of episodes in patients with rapid cycling bipolar disorder.

5. Systematic Treatment Enhancement Program (STEP) for Bipolar Disorder - A NIMH multicenter study designed to carry out a series of health effectiveness trials. Site PI – Joseph R. Calabrese, M.D.

Source:	MH-98-DS-001 (subcontract from Mass. Gen'l Hospital)
Project Dates:	8/99 to 3/2004
Contracted Amount:	$628,329

The primary objective of this study is to improve the treatment of bipolar disorder by 1) implementing model practice procedures across a network of clinicians, 2) determine the most effective somatic and psychosocial intervention strategies for the depressed phase of the illness, 3) determine which interventions most effectively prevent relapse, 4) provide a systematic means for the translation of novel treatments into clinician practice, and 5) estimate the costs and quality of life outcomes in both the acute and long-term setting.

6. Pediatric Bipolar Collaborative Mood Stabilizer Trial. Coordinating PI, Robert Kowatch, Site PI, Robert Findling, Senior Advisor/Medical Monitor – Joseph R. Calabrese, M.D. 10%

Source:	R01 MH-60814

Project Dates:	9/00 to 9/04
Contracted Amount:	$1,000,000

The primary objective of this project is to compare the efficacy of lithium, divalproex, and placebo in the acute management of mania and mixed states in children and adolescents with bipolar I disorder to test the hypothesis that divalproex and lithium are equal in efficacy and both are superior to placebo.

7. Clinical Research Center for the Study of Major Psychoses. Co-PI. - Psychopharmacology Core Joseph R. Calabrese, M.D. Herbert Meltzer, M.D. – Center Director

Source:	NIMH
Project Dates:	9/92 to 8/94

FOUNDATION SUPPORT:

1. Multicenter Study of Lithium, Divalproex, and Blinded Lamotrigine versus Lithium, Divalproex, and Placebo in the Acute and Continuation Care of Patients with Rapid Cycling Bipolar Disorder Comorbid with Alcohol, Cannabis, and/or Cocaine Abuse or Dependence– A Two Site Study. Co-PI – Joseph R. Calabrese, M.D.

Source:	Stanley Foundation
Project Dates:	8/00 – 8/02
Contracted Amount:	$800,000

2. Multicenter Study of Lithium, Divalproex, and Blinded Lamotrigine versus Lithium, Divalproex, and Placebo in the Acute and Continuation Care of Patients with Rapid Cycling Bipolar Disorder – A Two Site Study. PI – Joseph R. Calabrese, M.D.

Source:	Stanley Foundation
Project Dates:	8/00 – 8/02
Contracted Amount:	$300,000

3. Pilot Study on the Longitudinal Evaluation of the Efficacy and Safety of Depakote and Lithium in Rapid-Cycling Bipolar Patients. PI – Joseph R. Calabrese, M.D.

Source:	Stanley Foundation
Project Dates:	7/94 - 7/97
Contracted Amount:	$150,000

4. The Stanley Foundation Clinical Research Center (Co-Director with Robert Findling, MD)

   Efficacy of Lithium vs. Divalproex in the Prevention of Recurrence in Bipolar Disorder in Children and Adolescents. Co-PI - Joseph R. Calabrese, M.D.

   Efficacy of Divalproex vs. Placebo in the Prevention of the Syndrome of Bipolar Disorder in Sub-syndromal Children at High-Risk. Co-PI - Joseph R. Calabrese, M.D.

   The Identification of Subsyndromal Mood Disorders in Children at High Risk for Developing Bipolar Disorder. Co-PI - Joseph R. Calabrese, M.D.

Source:	Stanley Foundation

Projected Dates:	7/96 - 7/01
Contracted Amount:	$1,825,000

5. Affective Instability: Quantification, Conceptualization, and Clinical Significance. Co-PI - Joseph R. Calabrese, M.D.

Source:	NARSAD
Projected Dates:	7/94 - 7/96
Contracted Amount:	$60,000/year

PHARMACEUTICAL SUPPORT:

1. An International, Multicenter, Large Simple Trial (LST) to Compare the Cardiovascular Safety of Ziprasidone and Olanzapine. PI – Joseph R. Calabrese, M.D.

Source:	Pfizer
Project Dates:	5/02-5/04
Contracted Amount:	$17,100

2. A Double-Blind, Randomized, Multicenter, Parallel-Dose Study to Evaluate the Efficacy and Safety of Zonisamide 300mg and 600mg/day and Placebo in Subjects with Bipolar 1 Disorder Currently Experiencing a Recurrent Manic or Mixed Episode. PI – Joseph R. Calabrese, M.D.

Source:	Elan
Project Dates:	5/02-5/04
Contracted Amount:	$89,348

3. A double-blind, multicenter, placebo- and active controlled acute and extension study of MK-0869 in the treatment of patients with major depressive disorder with melancholic features. PI – Joseph R. Calabrese, M.D.

Source:	Merck
Project Dates:	10/01 – 2/03
Contracted Amount:	$122,287

4. Olanzapine in Treatment Refractory Mania. PI – Joseph R. Calabrese, M.D.

Source:	Lilly
Project Dates:	5/1/01 – 4/02
Contracted Amount:	$241,000

5. A Double-Blind Placebo Controlled Maintenance Study Comparing the Effectiveness of the SSRIs to Escitalopram in the Prevention of Major Depressive Episodes. PI – Joseph R. Calabrese, M.D.

Source:	Forest Labs
Project Dates:	10/00 – 10/01
Contracted Amount:	$125,000

6. A Double-Blind Controlled Study Comparing Two Doses of Lamotrigine to Placebo in the Treatment of Bipolar I Depression (40910). PI – Joseph R. Calabrese, M.D.

Source:	Glaxo Wellcome
Project Dates:	11/00 – 11/01
Contracted Amount:	$150,000

7. A Multicenter Study of the Efficacy and Safety of Levetiracetam in Acute Mania in Adults with Bipolar Disorder. PI – Joseph R. Calabrese, M.D.

Source:	UCB Pharma
Project Dates:	11/00 – 11/0
Contracted Amount:	$100,000

8. Phase II Multicenter Randomized Comparison of Three Doses of TAK-637 (a substance P antagonist) Versus Placebo in the Treatment of Subjects with Major Depressive Disorder. Principal Investigator.

Source:	Tap Holdings Inc.
Project Dates:	3/00 – 2/01
Contracted Amount:	$183,880

9. Flexible Dose Comparison of the Safety and Efficacy of Lu 26-054, Citalopram, and Placebo in the Treatment of Major Depression. PI – Joseph R. Calabrese, M.D.

Source:	Forest Laboratories, Inc.
Project Dates:	9/99 – 4/00
Contracted Amount:	$87,800

10. Placebo-Controlled Evaluation of the Safety and Efficacy of Lu 26-054 in the Prevention of Depression Relapse. PI – Joseph R. Calabrese, M.D.

Source:	Forest Laboratories, Inc.
Project Dates:	9/99 – 9/01
Contracted Amount:	$135,558

11. A Multicentre, Double-Blind, Placebo-Controlled, Flexible-Dose Evaluation of the Safety and Efficacy of Lamotrigine in the Long Term Treatment of Patients Who Have Bipolar Disorder With Rapid Cycling (611). PI – Joseph R. Calabrese, M.D.

Source:	Glaxo Wellcome, Inc.
Projected Dates:	1/99 - 5/99
Contracted Amount:	$80,000

12. A Multicenter, Double-Blind, Placebo-Controlled Evaluation of the Safety and Efficacy of Lamotrigine Compared to Placebo in the Treatment of an Acute Hospitalized Manic or Mixed Episodes in Patients Who Have Bipolar Disorder (609). PI – Joseph R. Calabrese, M.D.

Source:	Glaxo Wellcome, Inc.
Projected Dates:	1/99 - 1/2000
Contracted Amount:	$125,000

13. An Open-Label Evaluation of the Efficacy, Safety and Dosing of Citalopram in Outpatients With Depression. PI – Joseph R. Calabrese, M.D.

Source:	Forest Laboratories, Inc.
Projected Dates:	7/98 - 3/99
Contracted Amount:	$30,000

14. Citalopram Treatment of Depressed Patients Discontinued For Paroxetine Adverse Events. PI – Joseph R. Calabrese, M.D.

Source:	Forest Laboratories, Inc.
Projected Dates:	7/98 - 3/99
Contracted Amount:	$30,000

15. Citalopram Treatment of Depressed Patients Discontinued From Fluoxetine For Adverse Events. PI – Joseph R. Calabrese, M.D.

Source:	Forest Laboratories, Inc.
Projected Dates:	7/98 - 3/99
Contracted Amount:	$30,000

16. A Multicentre, Double-Blind, Placebo-Controlled, Fixed-Dose Evaluation of the Safety and Efficacy of Lamotrigine in the Long Term Treatment of Patients Who Have Bipolar I and II Disorder With Rapid Cycling (614). PI – Joseph R. Calabrese, M.D.

Source:	Glaxo Wellcome, Inc.
Projected Dates:	4/96 - 7/99
Contracted Amount:	$98,028

17. An Open, Multicentre, Flexible-Dose Continuation Study of Lamotrigine in Patients with Bipolar Disorder (604). PI – Joseph R. Calabrese, M.D.

Source:	Glaxo Wellcome, Inc.
Projected Dates:	6/96 - 7/98
Contracted Amount:	$48,600

18. A Multicentre, Double-Blind, Placebo-Controlled, Randomized, Fixed-Dose Evaluation of the Safety and Efficacy of Lamotrigine in the Long Term Prevention of Relapse and Recurrence of Depression and/or Mania in Patients with Bipolar I Disorder Presenting Depressed (605). PI – Joseph R. Calabrese, M.D.

Source:	Glaxo Wellcome, Inc.
Projected Dates:	5/97 - 10/99
Contracted Amount:	$192,215

19. A Multicentre, Double-Blind, Double Dummy, Placebo and Lithium-Controlled, Randomized, Fixed-Dose Evaluation of the Safety and Efficacy of Lamotrigine in the Long-Term Prevention of Relapse and Recurrence of Mania and/or Depression in Patients with Bipolar I Disorder Presenting Manic (606). PI – Joseph R. Calabrese, M.D.

Source:	Glaxo Wellcome, Inc.
Projected Dates:	5/97 - 10/99
Contracted Amount:	$136,771

20. A Double-Blind Controlled Study Comparing Lamotrigine to Placebo in the Treatment of Bipolar I

Depression (602). PI – Joseph R. Calabrese, M.D.

Source:	Glaxo Wellcome, Inc.
Projected Dates:	7/97 - 7/99
Contracted Amount:	$132,070

21. An Open, Multicentre, Prospective Evaluation of the Spectrum of Efficacy of Lamotrigine in Bipolar I and II Disorder (601). PI – Joseph R. Calabrese, M.D.

Source:	Burroughs Wellcome
Project Dates:	12/94 - 12/96
Contracted Amount:	$61,812

22. Olanzapine Added to Mood Stabilizers in the Treatment of Bipolar Disorder. PI – Joseph R. Calabrese, M.D.

Source:	Lilly Research
Project Dates:	9/1/97 - 9/1/99
Contracted Amount:	$226,250

23. Gabapentin Adjunctive Treatment in Patients with Bipolar Disorder. PI – Joseph R. Calabrese, M.D.

Source:	Parke-Davis / Werner Lambert
Projected Dates:	5/96 - 7/97
Contracted Amount:	$62,060

24. Topiramate Pilot, Open-Label Safety and Tolerability Trial in Adults with Acute Mania Protocol. PI – Joseph R. Calabrese, M.D.

Source:	R.W. Johnson Pharmaceutical Research Institute
Projected Dates:	12/96 – 5 /97
Contracted Amount:	$24,706

25. Double-Blind, Placebo-Controlled, Parallel Group, Comparative Study of Venlafaxine and Fluoxetine in Depressed Outpatients to Measure Onset of Clinical Activity. PI – Joseph R. Calabrese, M.D.

Source:	Wyeth Ayerst
Projected Dates:	9/95 - 9/96
Contracted Amount:	$249,102

26. Double-Blind, Longitudinal Evaluation of the Efficacy and Safety of Depakote Versus Lithium and Placebo in Bipolar Disorder. PI – Joseph R. Calabrese, M.D.

Source:	Abbott Laboratories
Project Dates:	5/93 to 4/96
Contracted Amount:	$307,544

27. A Double-Blind, Placebo-Controlled, Comparison of Imipramine and Paroxetine in the Treatment of Bipolar Depression. PI – Joseph R. Calabrese, M.D.

Source:	SmithKline Beecham
Project Dates:	1/94 to 1/95

Contracted Amount: $119,280

28. Amesergide/Fluoxetine/Placebo in Major Depressive Disorder. PI – Joseph R. Calabrese, M.D.

Source:	Lilly Research Laboratories
Project Dates:	4/92 to 12/92
Contracted Amount:	$352,150

29. A Phase II, Multicenter, Randomized, Double-Blind, Dose Finding Study of Three Different Doses of Roxindole vs. Placebo in Outpatient Suffering from Depression. PI – Joseph R. Calabrese, M.D.

Source:	E. Merck
Project Dates:	5/93 to 6/94
Contracted Amount:	$137,525

30. A Pilot Study Evaluating the Safety and Efficacy of Clozapine in the Acute Management of Refractory Bipolar and Schizoaffective Mania. Co-PI - Joseph R. Calabrese, M.D.

Source:	Sandoz Pharmaceuticals
Project Dates:	12/92 to 12/93
Contracted Amount:	$75,250

31. Comparison of the Efficacy and Safety of Depakote and Lithium in the Treatment of the Manic Phase of Bipolar Disorders: A Placebo-Controlled Study. PI – Joseph R. Calabrese, M.D.

Source:	Abbott Laboratories
Project Dates:	8/90 to 5/92
Contracted Amount:	$97,440

32. Safety of Valproate in Manic Patients: A Retrospective Case Study. PI – Joseph R. Calabrese, M.D.

Source:	Abbott Laboratories
Project Dates:	1/92 to 6/92
Contracted Amount:	$45,625

33. Valproate Therapy in Patients Previously Randomized to Depakote in Abbott Study M87-016 or M88-267: A Retrospective Cohort Study. PI – Joseph R. Calabrese, M.D.

Source:	Abbott Laboratories
Project Dates:	3/92 to 7/92
Contracted Amount:	$2,441

34. DSM-IV Rapid-Cycling Study. Co-PI - Joseph R. Calabrese, M.D.

Source:	MacArthur Foundation
Project Dates:	5/91 to 8/91
Contracted Amount:	$1,000

35. A Multicentre, Randomized, Double-Blind, Placebo-Controlled Comparison of Paroxetine and Fluoxetine in the Treatment of Major Depressive Disorder. PI – Joseph R. Calabrese, M.D.

Source: SmithKline Beecham Pharmaceuticals

Project Dates:	**4/91 to 2/92**
Contracted Amount:	**$116,120**

36. Biology of Mania: Mechanism of Action of Mood Stabilizers. PI – Joseph R. Calabrese, M.D.

Source:	Abbott Laboratories
Project Dates:	8/90 to 5/92
Contracted Amount:	$5,000

37. Double-Blind, Placebo-Controlled Trial of Fluoxetine in the Treatment of Borderline Personality Disorder. Co-PI - Joseph R. Calabrese, M.D.

Source:	Lilly Research Laboratories
Project Dates:	9/90 - 12/91
Contracted Amount:	$47,833

HCA GRANT to evaluate the applicability of evoked potentials and computer enhancement of EEG in psychiatric hospitals. 1989, completed.

PRINCIPAL INVESTIGATOR – 48 patient double-blind study for Wellbutrin-Burroughs Wellcome Company, 1987. Study established 300 mg. daily dosage as effective. Study completed.

PRINCIPAL INVESTIGATOR – Prozac humanitarian protocol, Eli Lilly Company 1987. Study completed.

PRINCIPAL INVESTIGATOR – 150 plus patients Wellbutrin humanitarian protocol, Burroughs Wellcome Company, Research Triangle Park, North Carolina 1984-1988. Protocol # 39-A.

PRINCIPAL INVESTIGATOR – A double-blind, placebo-controlled, dose ranging evaluation of Ondansetron vs. Diazepam in the treatment of generalized anxiety disorder – Glaxo Pharmaceuticals, Inc., 1991 and completed. Protocol S3A-210.

PRINCIPAL INVESTIGATOR – A double-blind, placebo-controlled evaluation of an investigational compound vs. placebo in the treatment of generalized anxiety disorder – Ciba-Geigy, 1991 and completed.

PRINCIPAL INVESTIGATOR – A double-blind, placebo-controlled evaluation of an investigational compound vs. Ativan in the treatment of generalized anxiety disorder – Eli Lilly and Company, 1991 and completed.

PRINCIPAL INVESTIGATOR – A double-blind, placebo-controlled evaluation of the safety and efficacy of Ondansetron in the treatment of primary degenerative dementia of the Alzheimer's type – Glaxo Pharmaceuticals, Inc., 1991 and completed. Protocol # S3A-222.

PRINCIPAL INVESTIGATOR – An open-label multi-center non-randomized safety study of Nefazodone in patients with mood disorders – Bristol Myers Squibb Pharmaceuticals, 1992 and completed. Protocol # CN-104-138-009.

PRINCIPAL INVESTIGATOR – A multi–center dose response evaluation of the safety and efficacy of Bupropion HCI sustained-release vs. placebo in depressed outpatients - Burroughs Wellcome Company, 1992 and completed. Protocol #93

PRINCIPAL INVESTIGATOR – A double-blind, placebo-controlled multi-center trial of the safety and efficacy of Buspar in anxious patients with co-existing depressive symptoms – Bristol Myers Squibb Pharmaceuticals, Inc., 1992-1993. Protocol # CN-101-045.

PRINCIPAL INVESTIGATOR – A Multi-Center Trial to Evaluate the Efficacy and Safety of Sertraline in the Treatment of Major Depression – Roerig Pharmaceuticals, 1991-1993. Protocol # R-0198.

PRINCIPAL INVESTIGATOR – Short and long-term discontinuation of Alprazolam in the treatment of panic disorders with agoraphobia –Upjohn Pharmaceuticals, 1992 and completed. Protocol # M2000/0474.

PRINCIPAL INVESTIGATOR – The safety and efficacy of Nefazodone in preventing relapse of patients with major depression – Bristol Myers Squibb Pharmaceuticals, 1992 and completed.

PRINCIPAL INVESTIGATOR – A randomized double-blind, placebo-controlled study of the safety and efficacy of two doses of Ondansetron vs. placebo in the treatment of social phobia – Glaxo pharmaceuticals, inc., 1992 and completed. Protocol # S3A-342.

PRINCIPAL INVESTIGATOR – A placebo-controlled study on Nefazodone vs. placebo in severely depressed inpatients – Bristol Myers Squibb Pharmaceutical Research, 1992 and completed. Protocol # CN-105-101.

PRINCIPAL INVESTIGATOR - A placebo-controlled study of Valnacrone vs. placebo in the treatment of Alzheimer's patients – Hoechst-Roussel Pharmaceutical Company, 1992 and completed. Protocol # HP029-303.

PRINCIPAL INVESTIGATOR – The safety and efficacy of Depakote in the prevention of mania in patients with bipolar disorder – Abbott laboratories, 1993 and completed. Protocol # M92-822.

PRINCIPAL INVESTIGATOR – A multi-center evaluation of the safety and efficacy of two flexible doses of Wellbutrin sustained release vs. placebo in depressed outpatients – Burroughs Wellcome Company, 1993 and completed.

PRINCIPAL INVESTIGATOR – A multi-center evaluation of the safety and efficacy of two flexible doses of Wellbutrin sustained release vs. placebo in depressed outpatients – Burroughs Wellcome Company, 1993 and completed.

PRINCIPAL INVESTIGATOR – The safety and efficacy of 12.5 and 25 mg. of Sumatriptan suppositories in acute treatment of multiple migraine attacks – Glaxo Pharmaceuticals, 1993 and completed. Protocol # S2B-353.

PRINCIPAL INVESTIGATOR – Double-blind study of Sertraline vs. placebo in the treatment of patients with panic disorder – Pfizer Pharmaceuticals, 1994 and completed. Protocol # 93-CE21-0629-030.

PRINCIPAL INVESTIGATOR – One year open label extension study of Sertraline followed by a double-blind comparison of Sertraline and placebo in outpatients with panic disorder – Pfizer Pharmaceuticals, 1994 and completed. Protocol #1803-95-12R2.

PRINCIPAL INVESTIGATOR – Clinical evaluation of extended-release oral Physostigmine in the treatment of patients with dementia of the Alzheimer's type – Forest Laboratories, Inc., 1994 and completed. Protocol # 1028B

PRINCIPAL INVESTIGATOR – One-year open label extension study of extended release oral Physostigmine in the treatment of patients with dementia of the Alzheimer's type – Forest laboratories, inc., 1995 and completed. 1995: Collaboration with Duke University Medical Center, Dr. K. Ranga Krishnan and Dr. Jonathan R. T. Davidson for the purpose of sharing research projects.

PRINCIPAL INVESTIGATOR – A prospective, multi-center, open-label study of Serzone (Nefazodone) in the management of patients with symptoms of depression in general psychiatric practices – Bristol Myers Squibb Pharmaceuticals, Inc., 1994 and completed.

PRINCIPAL INVESTIGATOR – Fluoxetine in depressed patients who failed Sertraline – Eli Lilly laboratories, 1994 and completed. Protocol # B1Y-MC-HCHF.

PRINCIPAL INVESTIGATOR – A double-blind comparison of Sertraline and placebo in outpatients with post-traumatic stress disorder – Pfizer Pharmaceuticals, 1994 and completed. Protocol # 93-CE21-0640-0641.

PRINCIPAL INVESTIGATOR –Double-blind, placebo-controlled fixed dose evaluation of the safety and efficacy of oral Ondansetron in the treatment of patients with panic disorder – Glaxo Pharmaceuticals, 1994 and completed. Protocol # S3AA-3009.

PRINCIPAL INVESTIGATOR – Open-label study of oral Ondansetron in the treatment of patients with panic disorder – an additional 18-month study for patients who completed the initial double-blind study – 1995 and completed.

PRINCIPAL INVESTIGATOR – Venlafaxine-ER in the treatment of adult patients with major depressive illness – Wyeth Ayerst Research, 1994 and completed. Protocol # 0600-B-209-US.

PRINCIPAL INVESTIGATOR – Venlafaxine-ER in the treatment of adult patients with generalized anxiety disorder – Wyeth Ayerst Research, 1995 and completed. Protocol # 0600-B-210-US.

PRINCIPAL INVESTIGATOR – A phase III, 14 day, multi-center, randomized, double-blind, comparative, placebo-controlled, parallel group, safety, tolerance, and efficacy study of 5 mg and 10 mg of CL 284,846 (Zaleplon), compared with 5 mg of Zolpidem in

elderly patients with insomnia, with a 12 month open-label extension phase. Wyeth Ayerst. Protocol # W-AR 897A1-306-US (formerly ACY D79-22). 1995.

PRINCIPAL INVESTIGATOR – A double-blind study of Valproate vs. Lithium in the treatment of patients with bipolar disorder – Abbot laboratories, 1994 and completed. Protocol # M93-111.

PRINCIPAL INVESTIGATOR – A double-blind study of Nefazodone vs. placebo, qd and bid dosing – Bristol Myers Squibb, 1994 and completed.

CO-INVESTIGATOR – An open-label pilot study of Fluvoxamine in the treatment of patients with posttraumatic stress disorder – Upjohn/Solvay Pharmaceuticals, 1995 and completed. Protocol # 114-8-25.

CO-INVESTIGATOR – A comparison study of Flesinoxan vs. Buspirone vs. placebo in the treatment of generalized anxiety disorder – Solvay pharmaceuticals, 1995, completed. Protocol # 128-2-07.

CO-INVESTIGATOR – A double-blind study of Gabapentin vs. placebo in the treatment of patients with social phobia – Parke Davis Pharmaceuticals, 1996, completed. Protocol # 945-203.

CO-INVESTIGATOR – A double-blind study of E2020 vs. placebo in the treatment of primary dementia of the Alzheimer's type – Pfizer Pharmaceuticals, 1996, completed.

PRINCIPAL CO-INVESTIGATOR – An open-label study of ENA713, dose titration study in the treatment of primary dementia of the Alzheimer's type - Sandoz Pharmaceuticals, 1996, completed.

PRINCIPAL INVESTIGATOR – An open-label pilot study of Nefazodone in posttraumatic stress disorder – Bristol Myers Squibb Pharmaceutical Company 1996, completed. Protocol # CN104-138-009.

PRINCIPAL INVESTIGATOR – A comparison study of Pindalol vs. Prozac in the treatment of major depression in adults – Eli Lilly Pharmaceuticals, 1996, completed.

PRINCIPAL INVESTIGATOR – A double-blind study of Lamictal in the treatment of bipolar patients in depressed phase – Glaxo Wellcome, Inc., 1996, completed. Protocol # 105-602.

PRINCIPAL INVESTIGATOR – One-year open label extension study of Lamictal in the treatment of bipolar patients in depressed phase – Glaxo Wellcome inc., 1996, completed. Protocol # 105-604.

PRINCIPAL INVESTIGATOR – Clinical trial of Paroxetine in the treatment of patients with panic disorder – Smithkline Beecham, Inc. October 1996 and completed. Protocol # 29060-495.

PRINCIPAL INVESTIGATOR – A twenty-four week, double-blind, placebo-controlled multi-center study to evaluate the efficacy and safety of Sertraline in outpatients with major depression following recent myocardial infarction. Pfizer Pharmaceuticals, 1996, completed. Protocol # 96-R-0052

CO-INVESTIGATOR – with Dr. Eileen P. Ahearn, M.D., Ph.D. in genetic research of bipolar patients and their families – 1997, completed.

CO-INVESTIGATOR – with Ranga Krishnan, M.D. and Bernard Carroll, M.D. in the NIH study of late life depression 1997 and in progress.

PRINCIPAL INVESTIGATOR – Double-blind study of Serzone in the treatment of panic disorder - Bristol Myers Squibb Pharmaceutical, 1997, completed.

PRINCIPAL INVESTIGATOR – Double-blind study of Olanzapine in addition to Lithium or Valproate in the treatment of bipolar disorder – Eli Lilly and Company, 1997, completed.

PRINCIPAL INVESTIGATOR – A ten week, double-blind, placebo-controlled multi-center study to evaluate the efficacy and safety of oral CP-93,393-1 in outpatients with generalized anxiety disorder 129-110-568 – Pfizer, 1997.

PRINCIPAL INVESTIGATOR – Double-blind study of Zoloft in the treatment of depression in elderly adults – Pfizer Pharmaceuticals 1997, completed.

PRINCIPAL INVESTIGATOR – Double-blind study of an investigational compound for the treatment of depression in the adult population – Sanofi Pharmaceuticals 1997, completed. Protocol # DRI 2412.

PRINCIPAL INVESTIGATOR – with Dr. Jonathan R. T. Davidson – open label study of Remeron in the treatment of adults with posttraumatic stress disorder – Organon Pharmaceuticals 1997, completed. Protocol # WIRB 9070440.

PRINCIPAL INVESTIGATOR – Double-blind study of the use of Ziprasidone in the use of patients with mania – Pfizer Pharmaceuticals, 1998 and in progress.

PRINCIPAL INVESTIGATOR – Clinical trial of an investigational compound for treatment of patients with susceptibility for Alzheimer's disease – Merck Pharmaceuticals 1998 and in progress.

PRINCIPAL INVESTIGATOR – Clinical trial of Olanzapine or placebo in the treatment of patients with bipolar disorder – inpatient trial – Eli Lilly and Company 1997 and in progress.

CO-INVESTIGATOR – Six-month open label treatment with Fluoxetine followed by randomization to Fluoxetine or Placebo for patients with posttraumatic stress disorder, 1997 and in progress. NIMH grant with Dr. Jonathan R. T. Davidson.

PRINCIPAL INVESTIGATOR – Clinical trial of Depakote CR in the treatment of inpatients with bipolar disorder – Abbott Laboratories 1998, completed.

PRINCIPAL INVESTIGATOR – Randomized double-blind, placebo-controlled clinical trial of an investigative compound for the treatment of major depression in adults – Merck Germany, 1998, completed. Protocol # 68-843-009.

PRINCIPAL INVESTIGATOR – Placebo-controlled clinical trial of Gabapentin in the treatment of inpatients with mania – Parke Davis Research, 1999, completed.

CO-PRINCIPAL INVESTIGATOR – with Duke University for trial of Hypericum in adults with major depression sponsored by NIH. 1999 completed. Protocol # R-0552.

PRINCIPAL INVESTIGATOR – Placebo-controlled trial of Paroxetine for the treatment of generalized anxiety disorder in adults, Smithkline Beecham research. 1999 completed.

PRINCIPAL INVESTIGATOR – Long-term open-label treatment of Major Depression with R-Fluoxetine Hydrochloride for evaluation of safety, Eli Lilly and Company, 1999 and completed.

PRINCIPAL INVESTIGATOR - R-Fluoxetine versus Placebo in the treatment of generalized anxiety disorder, Eli Lilly and Company, 1999 and completed. Protocol # H5Z-MC-LUAH WIRB 99080.

PRINCIPAL INVESTIGATOR – Randomized, double-blind study with Olanzapine added to mood stabilizers in the treatment of bipolar disorder, Lilly, 1999 and completed. Protocol # F1D-MC-HGFU.

PRINCIPAL INVESTIGATOR – Randomized, double-blind, placebo-controlled multi-center trial to demonstrate the clinical efficacy and safety of two different doses of Ginkgo biloba special extract Egb 761 in patients suffering from dementia of the alzheimer's type according to DSM-IV and NINCDS / ADRDA criteria, Schwabe, 1999 and completed. Protocol # 523001.01.030.

PRINCIPAL INVESTIGATOR – A three-week, multi-center, randomized, double-blind, placebo-controlled, parallel-group safety and efficacy study of Extended-Release Carbamazepine in patients with bipolar disorder, Shire Laboratories, 1999 in progress. Protocol # 150-301.

PRINCIPAL INVESTIGATOR – A three-week, multi-center, randomized, double-blind, placebo-controlled, parallel-group safety and efficacy study of Extended-Release Carbamazepine in Lithium-Failure patients with bipolar disorder, Shire Laboratories, 1999 and completed. Protocol #105-302.

PRINCIPAL INVESTIGATOR – A six-month, open-label, multi-center study of Extended-Release Carbamazepine in patients with bipolar disorder – An extension of Protocols 105.301 and 105.302, Shire Laboratories, 1999, in progress. Protocol # 105-303.

PRINCIPAL INVESTIGATOR – A multi-center, randomized, double-blind, placebo controlled study of Aripiprazole in the maintenance treatment of patients with bipolar disorder – Bristol Myers Squibb, 2000, in progress. Protocol # CN 138-010.

PRINCIPAL INVESTIGATOR – Safety and efficacy of Depakote as combination therapy in the treatment of psychosis associated with schizophrenia – Abbott Laboratories, 2000 and completed. Protocol # M99-010 WIRB 991080.

PRINCIPAL INVESTIGATOR – A multi-center, randomized, double-blind, placebo controlled study of flexible doses of Aripiprazole in the treatment of hospitalized patients with acute mania – Bristol Myers Squibb, 2000, in progress. Protocol # CN-138-009.

PRINCIPAL INVESTIGATOR – A multi-center, randomized, double-blind safety and tolerability study of flexible doses of Aripiprazole and Olanzapine in the treatment of patients with acute schizophrenia, Bristol Myers Squibb, 2000 in progress. Protocol #138-002. Amendment 4.

PRINCIPAL INVESTIGATOR – With Eileen P. Ahearn, M.D., Ph.D. of genetic research of psychiatric illness sponsored by Richard H. Weisler, M.D., 2000 and completed. National Association for Research in Schizophrenia and Depression grant.

PRINCIPAL INVESTIGATOR – A study of Mirtazapine in the treatment of posttraumatic stress disorder, Duke University Medical Center/NIH, 2000 in progress.

PRINCIPAL INVESTIGATOR – A multi-center, double-blind, placebo-controlled, fixed-dose evaluation of the safety, efficacy, and tolerability of Lamictal (Lamotrigine) in the treatment of a major depressive episode in patients with type I bipolar disorder, Glaxo Wellcome, Inc., 2000 in progress. Protocol # SCA40910.

PRINCIPAL INVESTIGATOR – A double-blind, placebo-controlled, comparative efficacy study of Venlafaxine ER and Sertraline in producing remission in outpatients with major depressive disorder, Wyeth Ayerst Research, 2000 in progress. Protocol # 0600B1-414-US.

PRINCIPAL INVESTIGATOR – The efficacy and safety of flexible dosage ranges of Risperidone vs. Placebo in the treatment of manic episodes associated with bipolar I disorder, Janssen Pharmaceutica Products, L.P., 2000 in progress. Protocol # RIS-USA-239.

PRINCIPAL INVESTIGATOR – A nine-week, open label, multi-center, safety study of single dosage ranges of Risperidone in the treatment of manic episodes associated with bipolar I disorder, Janssen Pharmaceutica Products, L.P., 2000 in progress. Protocol #RIS-INT-81.

PRINCIPAL INVESTIGATOR – A multi-center, double-blind, randomized, placebo-controlled trial of the safety and efficacy of Seroquel (Quetiapine Fumarate) as add-on therapy with Lithium or Divalproex in the treatment of acute mania, AstraZeneca Pharmaceuticals LP, 2000 in progress. Protocol # 5077IL/0099 WIRB 20001003.

PRINCIPAL INVESTIGATOR – An open-label randomized assessment of the efficacy and tolerability of Venlafaxine Extended Release in Serotonin-Selective Reuptake Inhibitor (SSRI)-Failure patients with major depression, Wyeth Ayerst Laboratories, 2000 in progress. Protocol # 0600B1-915.

PRINCIPAL INVESTIGATOR – Granisetron for the treatment of Paroxetine-associated sexual dysfunction in men: A preliminary open trial, SmithKline Beecham, 2000 and completed. Protocol # 29060/731

PRINCIPAL INVESTIGATOR – Phase II multi-center, randomized comparison of TAK-637 versus Placebo in the treatment of subjects with major depressive disorder, TAP Pharmaceutical Products Inc., 2000 and completed. Protocol # TAK-637-99-301.

PRINCIPAL INVESTIGATOR – Open label long-term safety study of Venlafaxine ER in children and adolescents with major depressive disorder, Wyeth Ayerst Research, 2000 in progress. Protocol # 0600B1-395-US.

PRINCIPAL INVESTIGATOR – Double-blind, placebo-controlled study of Venlafaxine ER in children and adolescents with generalized anxiety disorder, 2000 in progress. Protocol # 0600B2-397-US.

PRINCIPAL INVESTIGATOR – A double-blind, placebo-controlled, parallel-group, flexible-dose study of Venlafaxine ER in adolescent outpatients with social anxiety disorder, Wyeth Ayerst Research, 2000 in progress. Protocol # 0600B4-389-US.

PRINCIPAL INVESTIGATOR – A double-blind study, placebo-controlled study of a flexible dose of Venlafaxine ER in adult outpatients with generalized anxiety disorder, Wyeth Ayerst Research, 2000 and completed.

PRINCIPAL INVESTIGATOR – A double-blind, multi-center, acute study of two doses of L-830982 versus Lorazepam and Placebo in the treatment of outpatients with

generalized anxiety disorder, Merck & Company, 2000 and completed. Protocol # 066-01 WIRB 20001446.

PRINCIPAL INVESTIGATOR – An open-label study of the safety, tolerability, and efficacy of up to 90 mg Buspirone Hydrochloride Extended Release in patients with generalized anxiety disorder, Biovail Laboratories, 2000 & 2001 and completed. Protocol #B99.CT0L.008.BUS.P02.

PRINCIPAL INVESTIGATOR – Duloxetine once-daily dosing versus placebo in the acute treatment of major depression, Eli Lilly and Company, 2000 and completed. Protocol No F-15-MC-HMBH.

PRINCIPAL INVESTIGATOR – Genetic Research Study of Psychiatric Illness, sponsored -Richard H. Weisler, M.D.. Protocol No: WIRB 9990472, 2000.

OFFICES HELD AND HONORS AWARDED

UNC Psychiatry Department/ Board of Visitors 2000 and continuing.

National Depressive and Manic-Depressive Board of Scientific Advisors

President, Medical staff – Holly Hill Hospital, Raleigh, North Carolina, 1986-1987.

Chairman, Department of Psychiatry – Wake Medical Center, Raleigh, North Carolina, 1986-1987.

Vice-President, Medical staff – Holly Hill Hospital, Raleigh, North Carolina, 1984.

Secretary, Medical staff – Holly Hill Hospital, Raleigh, North Carolina, 1984.

Secretary, Raleigh Academy of Psychiatry, 1982-1983.

Member, Wake Medical Education Foundation Board of Directors, 1986 – present.

Member, Medical Executive Committee, Holly Hill Hospital, 1981-1989.

Member, Scientific Board of Advisors, North Carolina Depressive and Manic-Depressive Association, 1994 –present.

Member, Medical Executive Committee, Wake Medical Center, 1986-1987.

Outstanding Teacher Award, University of North Carolina, Department of Psychiatry, Chapel Hill, North Carolina, 1982.

Member, International Who's Who in Medicine.

Member, Triangle Area Who's Who in Medicine

PRESENTATIONS AND WORKSHOPS

1977- Present – Presented over 700 invited lectures, grand rounds, and case conferences, nationally and internationally. Lectures include discussion on bipolar disorders, major depressive episodes, anxiety disorders, genetics of psychiatric disorders, sleep disorders, attention deficit disorders, smoking cessation, psychosis, and managed care, with emphasis on pharmacotherapy, diagnosis and treatment. Other topics include psychotherapy for borderline personality disorders, cognitive therapy, and research updates.

National Speakers Bureau – Glaxo Smith Kline, Bristol Myers Squibb Pharmaceuticals, Pfizer Pharmaceuticals, Abbott Laboratories, Organon Pharmaceuticals, Solvay Pharmaceuticals, Eli Lilly and Company, Wyeth Ayerst, Forrest Laboratories, Marketing Consultant and/or Scientific Consultant – Training of Pharmaceutical Representatives and Marketing Departments – Glaxo Smith Kline, Burroughs Wellcome Company, Upjohn Pharmaceuticals, Wyeth Ayerst Research, Bristol Myers Squibb, Smith Kline Beecham Pharmaceuticals, and Eli Lilly and Company, Organon, and Glaxo Wellcome Pharmaceuticals.

1972 Honors Thesis – Tulane University, "Role Relevant Skills Variable as a Predictor of Hypnotic Susceptibility"

1980 Stress Management Workshop, IBM Management, with William Hollister, M.D.

1988 Present – Local and National Public Radio and Television Appearances for discussion of depressive and anxiety disorder, pharmacotherapy, and environmental medicine.

POSTERS

1996 Managed Care Article in Psychiatric Times.
MRI Article co-authored with Dr. Eileen P. Ahearn.
Wyeth Ayerst Research Article on Use of Effexor in Generalized Anxiety.
POSTER: Venlafaxine XR for Use in Major Depressive Episodes.
POSTER: Open Label Fluoxamine in PTSD – NCDEU.

1997 POSTER: "Double-Blind Comparison of Sertraline and Placebo in Patients with Post Traumatic Stress Disorder (PTSD)" – Co-authored with Jonathan Davidson, M.D., Peter Londborg, Teri Pearlstein, Carolyn Sikes, Gail Farfel. Presented in December 1997 at the American College of Neuropharmacology Meeting, Kanuela, Hawaii.

1997 North Carolina Depressive and Manic-Depressive Association – Brochure for Teens about Depressive Illness entitled "Sometimes It Isn't Easy" Abstract, ACNP.

1998 POSTER ABSTRACT: "Cost Effectiveness of Divalproex Sodium vs. Lithium in Long-Term Therapy for Bipolar Disorder". Presented at ACNP 1998 Annual Meeting.

1998 POSTER ABSTRACT: " Lamotrigine: Evidence for Antidepressant Activity in Bipolar Disorder". Co-authored with J Apter, J Downs, D Goldstein, I Kolin, B. Lydiard, S McElroy, D Rudd, T. Shiovitz, T Suppes, H Udelman, C Zarate.

1999 Poster presentation at ACNP Meeting in Puerto Rico -"A Pilot Study of Mirtazapine in Post traumatic Stress Disorder". Paper submitted.

ABSTRACTS

1992 "Treatment Strategies for Lithium-Resistant Bipolar Depression" Presented at the symposium management of patients who are non-responders to or non-tolerators of initial antidepressant therapy –McLean, Virginia Journal of Clinical Psychiatry.

1994 ABSTRACT: "Use of Lamotrigine in the Treatment of Bipolar Disorder": Presented at the Annual Meeting for the American Psychiatric Association held in Philadelphia, Pennsylvania in May, 1994. Initial report of Lamotrigine use in Bipolar Disorder.

1997 "A Placebo-Controlled Study of Gabapentin in Social Phobia" – Paper co-authored with Atul Pande, Jonathan Davidson, J. Greist, J. Jefferson, S. Sutherland Paper. Submitted.

1999 "A Double-Blind Placebo-Controlled Study of Lamotrigine Monotherapy in Outpatients with Bipolar I Depression" – Results of this trial published in the Journal of Clinical Psychiatry February 1999.

1999 ABSTRACT: "Pregabalin, A Novel Agent in the Treatment of Generalized Anxiety Disorder: A Placebo-Controlled Trial" ACNP Meeting Poster 2000. Co-authored wit AC Pande, J Crockatt, DE Feltner, CA Janney, WT Smith, PD Londborg, RJ Bielski, DL Zimbroff, JT Davidson, ML Dumaw.

1999 ABSTRACT: "Time to Onset of Antidepressant Action with Venlafaxine: Analysis of Data". Submitted to Journal of Clinical Psychopharmacology. Co-authored with R. Entsuah, K Rickels, WT Smith, L. Aguiar.

2000 ABSTRACT: "Investigation of Notch3 as a Candidate Gene for Bipolar Disorder Using Brain Hyperintensities as an Endophenotype". Co-authored with EP Ahearn, MC Speer, YT Chen, DC Steffens, F Cassidy, S VanMeter, JM Provenzale, KR Krishnan.

2000 ABSTRACT: "A Comparison of the Safety and Efficacy of Divalproex Sodium and Olanzapine in the Treatment of Bipolar Disorder". Coauthored J Zajecka, J Davidson, KW Sommerville, G Sachs, A Swann, P Wozniak. ACNP Meeting.

PUBLICATIONS

1990 "A Fixed Dose (300 mg) Efficacy Study of Bupropion and Placebo in Depressed Outpatients. Co-authored with CG Lineberry, JA Johnston, RN Raymond, JS Carman, WF Boyer, Burroughs Wellcome Company. The Journal of Clinical Psychopharmacology, May 1990, 51 (5) p194-9.

1991 "A 102-Center Prospective Study of Seizure in Association with Bupropion". Collaboration with JA Johnston, CG Lineberry, JA Ascher, J Davidson, MA Khayrallah, JP Feighner, P. Stark, Burroughs. Burroughs Wellcome Company. The Journal of Clinical Psychiatry, Nov 1991, 52 (11): 450-6.

"Roundtable Discussion Comparing Currently Available Antidepressants and an Ideal Antidepressant, "The Journal of Clinical Psychiatry Evolving Standards of Antidepressant Therapy-Monograph Series: May, 1991, Vol. 9, No. 1.

"A Profile of Bupropion: A Nonserotonergic Alternative, "The Journal of Clinical Psychiatry Monograph Series: May, 1991, Vol. . 9, No. 1."

1992 "Treatment Strategies for Lithium-Resistant Bipolar Depression", Journal of Clinical Psychiatry Monograph, May 1992 10 (1) p27-32.

1994 "Comparison of Bupropion and Trazodone for the Treatment of Major Depression": Journal of Clinical Psychopharmacology, June 1994, 14 (3) p170-9. Coauthored with JA Johnston, CG Lineberry, B Samara, RJ Branconnier, AA Billow.

1994 "Efficacy of Buspirone in Generalized Anxiety Disorder with Co-existing Depressive Symptoms": Journal of Clinical Psychiatry, (United States) July 1996 57 (7) p287-91. Co-authored with JJ Sramek, M Tansman, A Suri, M Hornig-Rohan, JD Amsterdam, Stahl.

1995 "Economic Evaluation of Drug Treatment for Psychiatric Disorders: The New Clinical Trial Protocol" Co-authored with GA Zarkin, HG Grabowski, J Mauskopf and HA Bannerman. Psychopharmacology: The Fourth Generation of Progress 1995, p1897-1905.

1996 "Understanding and Treating Mania and Depression in Bipolar Disorder" Case Study, Primary Psychiatry, June 1996.

1996 "Treatment of Post Traumatic Stress Disorder with Nefazodone", In Press International Clinical Psychopharmacology (England), May 1998, 13 (3) p111-3 – Co-Authored with Jonathan Davidson M.D., Mary Malik, Ph.D., Kathryn M. Connor, M.D

1997 "Adjunctive Use of Olanzapine in Mood disorders: 5 Case Reports" Written in collaboration with Eileen P. Ahearn, M.D., Ph.D., Jonathan R. T. Davidson, M.D., and Charles D. Wallace, M.D. Annals of Clinical Psychiatry (United States). Dec1997, 9 (4) p259-62.

1997 Presented at the American Psychiatric Association: "Efficacy of Once-Daily Venlafaxine Extended Release (XR) for Symptoms of Anxiety in Depressed Outpatients " Written by John Feighner, M.D. with research conducted by Richard H. Weisler, M.D. and other. Submitted.

1997 "Efficacy and Tolerability of Once-Daily Venlafaxine Extended Release (XR) in Outpatients with Major Depression – Journal of Clinical Psychiatry, 58:9, September 1997. Michael Thase for the Venlafaxine XR 209 Study Group.

1997 "Fluoxetine Treatment of Patients With Major Depressive Disorder Who Failed Initial Treatment With Sertraline". Co-authored by Michael E. Thase, M.D., Sharon Blomgren, M.D., Martin A. Birkett, Jerry T. Apter, M.D., Rosalinda G. Tepner. Journal of Clinical Psychiatry 1997; 58:16-21.

1998 "Fluvoxamine in Civilians with Post Traumatic Stress Disorder. Written in collaboration with Jonathan R. T. Davidson, M.D., Mary Malik, Ph.D., Larry A. Tupler, Ph.D. Journal of Clinical Psychopharmacology (United States), Vol. 18 (1) p93-5, February 1998.

1998 "Familial Leukoencephalopathy in Bipolar Disorder" – Submitted to American Journal of Psychiatry (United States) 155 (11) p1605-7, November 1998. Written by Eileen P. Ahearn, M.D., Ph.D. in collaboration with David C. Steffens, M.D., Frederick Cassidy, M.D., Susan A. Van Meter, M.D., James M. Provenzale, M.D., Michael F. Seldin, M.D., Ph.D., and K. Ranga Rama Krishnan, M.D. Study conducted in conjunction with Eileen P. Ahearn, M.D., Ph.D., K. Ranga Rama Krishnan, M.D. and others from Duke UniversityMedical Center, Dept of Psychiatry and Behavioral Sciences, and the Dept. of Medicine, Division of Molecular Medicine and Human Genetics of the University Of California.

1998 "Successful Outcome Following Long Term Lamotrigine Treatment of Severe Bipolar Disorder": 3 case reports – Submitted to the Annals of Psychiatry.

Written in collaboration with Jonathan R.T. Davidson M.D., Eileen P. Ahearn, M.D., Ph.D. and Charles D. Wallace, M.D

1998 "Psychometric Properties of the Social Phobia Inventory (SPIN)": A New Self-Rating Scale. The British Journal of Psychiatry, London, United Kingdom. Co-authored with Kathryn Connor, M.D, Jonathan Davidson, M.D. Andrew Sherwood, Ph.D., Erik Churchhill, Andrew Sherwood, Edna Foa, Atul Pande, Brinda Wita, and Larry Tupler, April 2000, 176 p379-86.

1998 "A Double-Blind Placebo-Controlled Study of Lamotrigine Monotherapy in Outpatients with Bipolar I Depression " in collaboration with J.R. Calabrese, M.D. C. L. Bowden, M.D. G. S. Sachs M.D., J. A. Ascher; M.D. E. Monaghan; G. D. Rudd; MS PharmD for the Lamictal 602 Study Group – Presented in part at the 1999 Annual Meeting of the American Psychiatric Association.

1998 Draft manuscript of the Physostigmine Study 1028 – "A 24-Week Randomized Trial of Controlled-Release Physostigmine in Alzheimer's Disease" with Dr. Leon J. Thal and the Physostigmine Study Group.

1998 "Outcome Update: A Comparative Cost-Effectiveness Study of Depakote and Usual Care Versus Lithium and Usual Care in the Treatment of Bipolar Disorder (Abbott Study M93-111)". Co-authored with DA Revicki, RM Hirschfeld, PE Keck, EP Ahearn.

1999 "Safety Profile of Sustained-Release Bupropion in Depression: Results of Three Clinical Trials. In collaboration with EC Settle, SM Stahl, SR Batey, JA Johnston, JA Ascher. Clinical Therapy. March 1999, 21 (3): p454-63.

1999 "Treatment of Social Phobia with Gabapentin: Placebo-Controlled Study" (United States), Aug 1999, 19 (4) p341-8. Journal of Clinical Psychopharmacology.

1999 "Social Phobia: Issues in Assessment and Management" Epilepsia Vol. 40, Suppl. 6 1999. in collaboration with Kathryn M. Conner, M.D., Jonathan R. T. Davidson, M.D., Suzanne Sutherland, M.D.

1999 "Nefazodone in Post-Traumatic Stress Disorder: Results from Six Open-Label Trials". Co-authored with R. Hidalgo, M. A. Hertzberg, T. Mellman, F. Petty, P. Tucker, S. Zisook, S. Chen, E. Churchill and J. Davidson. Lippincott, Williams, & Wilkins Publishers. – International Clinical Psychopharmacology, Vol. 14., No. 2 March 1999.

1999 "Alternative Therapy Use by Psychiatric Outpatients" – Research report for publication in the Journal of Nervous and Mental Disease, Vol. 187, No. 11. p692-95. 1999. Written by Patricia R. Knaudt, M.D., Kathryn M. Connor, M.D., L. Eric Churchill, M.S., Jonathan R. T. Davidson, M.D.

1999 "Potential Neurostabilizing Effects of Donepezil's in Patients with Alzheimer's Disease: Measurement of N-acetylaspartate Levels Using Proton Magnetic Resonance Spectroscopy in a Randomized, Placebo-Controlled Trial . Written in collaboration with K. R. Krishnan, P. M. Doraiswamy, J. Mintzer, Xin Yu, C. Perdomo, J. R. Leni, S. Rogers. Paper submitted to American Journal of Psychiatry.

2000 Behavior Therapy for Obsessive-Compulsive Disorder Guided by a Computer or by a Clinician Compared with Relaxation as a Control. Collaboration with JH Greist, IM Marks, L. Baer, KA Kobak, KW Wenzel, MJ Hirsch, JM Mantle.

2000 "A Pilot Study of Mirtazapine in Post traumatic Stress Disorder". (United States) Jan 1999, issue of International Clinical Psychopharmacology 14 (1) p29-31. Co-authored with KM Connor, JT Davidson, EP Ahearn.

2000 "A Comparison of the Safety and Efficacy of Divalproex Sodium and Olanzapine in the Treatment of Bipolar Disorder". Coauthored J Zajecka, J Davidson, KW Sommerville, G Sachs, A Swann, P Wozniak. Paper Submitted to American Journal of Psychiatry.

2001 "MRI Correlates of Suicide Attempt History in Unipolar Depression". Co-authored EP Ahearn, KR Jamison, DC Steffens, F Cassidy, JM Provenzale, A Lehman, BJ Carroll, KR Krishnan. Biological Psychiatry. 16:28:56 p1-5.

2001 Zaleplon, A Novel Nonbenzodiazepine Hypnotic, Effectively Treats Insomnia in Elderly Patients Without Causing Rebound Effects". Written in collaboration with Sonia Ancoli-Israel, Ph.D., James K. Walsh, Ph.D., Richard M. Mangano, Ph.D., and Masamoto Fujimori, M.D., for the Zaleplon Clinical Study Group. The Primary Care Companion to The Journal of Clinical Psychiatry, Vol. 1, No. 4, pp. 114-120, August 1999.

LAWRENCE D. GINSBERG, M.D.
CURRICULUM VITAE
M.D. Texas License Number G7406

PROFESSIONAL ACTIVITIES:

1. President of Red Oak Psychiatry Associates, P.A. January 1991 - present.
2. Psychiatrist in private practice 1985 - present.
3. Medical Director, Gulf Pines Behavioral Health Services, March 1, 1994 - March 1998.
4. Assistant Medical Director, Gulf Pines Hospital, January 1991 - February 1994.
5. Clinical Director of Adolescent Services, Gulf Pines Hospital, November 1986-February 1994.
6. Chief of Staff, Gulf Pines Hospital, 1989 and 1991.
7. Peer Reviewer for Spectrum Review Services, January 1994 - present.
8. Peer Reviewer for One Health Plan of Texas, August 1996 - present.
9. Consultant, Texas Board of Medical Examiners, March 1997 - present.
10. Medical Director of Compliance and Quality Management, Cypress Creek Hospital, March 2, 1998 - present.

PROFESSIONAL MEMBERSHIPS:

American Medical Association; American Psychiatric Association; Texas Psychiatric Society; Houston Psychiatric Society; Harris County Medical Society, American Academy of Psychiatry and the Law; Texas Medical Association; American Society of Addiction Medicine; American College of Physician Executives; American Society for Adolescent Psychiatry; American College of Legal Medicine; American College of Forensic Examiners; American Society of Clinical Psychopharmacology

PUBLICATIONS:

The Effect of Steroidal and Nonsteroidal Anti-Inflammatory Agents on Ultraviolet-Induced Inflammation, Eaglestein, W.H., Ginsberg, L.D., and Mertz, P.M., Archives of Dermatology, Vol. 115, December, 1979.

Decisions Without Data, Ginsberg, L.D., Chapter in Psychiatry: A Problem-Oriented Approach, Moffic, S., Silverman, S., and Adams, G., Medical Exam Publishing Company, January, 1986.

Ginsberg, L., Adler, L., Casat, C., Huey, L., Lee, D.M., Earl, N., Montgomery, P.: Lamotrigine: Evidence for Mood Stabilization in Bipolar I Depression. Poster presented at NCDEU 2001.

Ginsberg, L.: Topiramate Use in Refractory Bipolar Disorder. Poster to be presented at American Psychiatric Association Institute on Psychiatric Services in October 2002.

EDUCATION:

University of Miami, Coral Gables, Florida, B.S. in Chemistry, magna cum laude, 1974-1977
University of Miami School of Medicine, M.D., 1977-1981

POST GRADUATE TRAINING:

Internship - University of Miami Affiliated Hospitals, Miami, Florida, Pediatric Internship, 1981-1982
Residency - Baylor College of Medicine, Department of Psychiatry, Houston, Texas, 1982-1985

CERTIFICATION:

Certified by examination in Addiction Medicine by The American Society of Addiction Medicine, April 1991 and, Recertified 2001, Diplomate Board Certified Forensic Examiner, The American Board of Forensic Examiners, July 1996, Diplomate of American Board of Forensic Medicine, The American Board of Forensic Medicine, Dec. 1996 Certified Medical Review Officer, the Medical Review Officer Certification Council, August 1997.

AREAS OF SPECIAL INTEREST:

Psychopharmacology, Addiction Medicine, Forensic Psychiatry, Administrative Psychiatry

RESEARCH EXPERIENCE:

Co-investigator with James Claghorn, MD (1988 - 1989) for the following Phase III inpatient trials:
Anafranil (clomipramine)
Clozaril (clozapine)
Luvox (favoxamine/fluvoxamine)

Co-investigator with Kenneth Blum, Ph.D. (1992) for the following inpatient Phase IV trial:
Neurecover

Principal investigator (1992) for the following pre and post clinical trials for Quintiles:
Zoloft (sertraline)

Principal investigator (1996-1997) for a post-clinical study for Strategic Advantage Inc.:
ReVia

Principal investigator (1997-1998) for a phase IV outpatient open-label randomized study for Zeneca:
Seroquel (quetiapine)

Principal investigator (1998) for a Phase II outpatient double-blind, placebo controlled study for Glaxo-Wellcome:
1555U88/GW320659

Principal investigator (1998-2000) for three Phase II-III long-term outpatient studies for Glaxo-Wellcome:
Lamictal (lamotrigine)

Principal investigator (1998-1999) for a Phase II-III inpatient double-blind, placebo controlled study for Glaxo-Wellcome:
Lamictal (lamotrigine)

Principal investigator (1998-1999) for a Phase II outpatient open label, uncontrolled dose titration pediatric study for GlaxoWellcome:
1555U88/GW320659

Principal investigator (1999) for a Phase IIIb outpatient double-blind, placebo controlled, fixed dose comparison study for SmithKline Beecham:
Paxil (paroxetine)

Principal investigator (1999-2000) for a Phase II inpatient/outpatient randomized, double-blind, placebo and active controlled efficacy and safety study for Novartis:
Zomaril (iloperidone)

Principal investigator (1999) for a Phase II outpatient, open-label safety and efficacy study for Hoechst Marion Roussel:
M100907

Principal investigator (2000) for an outpatient, double-blind, randomized, parallel, placebo-controlled study for Eli Lilly and Company:
Prozac (fluoxetine)

Principal investigator (2000) for a child/adolescent outpatient, randomized, double-blind efficacy and safety study for Organon:
Remeron (mirtazapine)

Principal investigator (1999-2001) for an outpatient, randomized, double-blind study for Eli Lilly and Company:
Prozac and Zyprexa (fluoxetine and olanzapine)

Principal investigator (1999-2001) for a Phase III outpatient, placebo controlled study for Pfizer:
Pregabalin

Principal investigator (2000-2001) for a Phase III outpatient, placebo controlled study for Pfizer:
Pregabalin

Principal investigator (1999-2001) for a Phase II/III outpatient sustained efficacy, placebo controlled study for Pfizer:
Pregabalin

Principal investigator for an ongoing outpatient open label study for Pfizer:
Pregabalin

Principal investigator (2000) for an outpatient open-label study for Alza:
Concerta (methylphenidate HCL)

Principal investigator (2000) for a randomized, double-blind, placebo and active treatment controlled study for Pharmacia & Upjohn:
Reboxetine

Principal investigator (2001) for an inpatient randomized, double-blind, placebo controlled study for Bristol-Myers-Squibb:
Aripiprazole

Principal investigator (2001) for an ongoing randomized, double-blind, fixed dose study for Bristol-Myers-Squibb:
Aripiprazole

Principal investigator (2000 – 2001) for a double-blind, placebo controlled efficacy study for Eli Lilly and Co.:
Duloxetine

Principal investigator (2000- 2002) for an outpatient, double-blind, placebo controlled fixed dose study for GlaxoSmithKline:
Lamictal (lamotrigine)

Principal investigator for an ongoing outpatient, double-blind, placebo controlled pediatric study for Wyeth-Ayerst:
Effexor XR (venlafaxine)

Principal investigator (2001) for an outpatient, double-blind, placebo controlled and open label study for Sepracor:
Zopiclone

Principal investigator (2001) for an outpatient, double-blind, placebo controlled comparison study for GlaxoSmithKline:
Paxil CR (paroxetine)

Principal investigator (2000) for an outpatient, double-blind, placebo controlled study for Pfizer/Parke-Davis:
Pagoclone

Principal investigator for an outpatient, open-label study with a double-blind extension phase for Wyeth-Ayerst:
Effexor XR (venlafaxine)

Principal investigator for an ongoing outpatient, double-blind, placebo comparison study for Wyeth-Ayerst:
Effexor XR (venlafaxine)

Principal investigator (2001) for an outpatient, open-label pediatric study for Shire:
Adderall XR

Principal investigator (2001) for an outpatient, open-label pediatric study for:
Metadate CD

Principal investigator for an outpatient, double-blind, placebo controlled adolescent study for Wyeth-Ayerst:
Effexor XR (venlafaxine)

Principal investigator (2001- 2002) for an outpatient, double-blind, placebo controlled flexible dose study for GlaxoSmithKline:
Paxil CR (paroxetine)

Principal investigator (2001-2002) for an outpatient, double-blind, placebo controlled study for Pfizer:
Pagoclone

Principal investigator for an ongoing outpatient, double-blind, placebo controlled study for GlaxoSmithKline:
Vilazodone

Principal investigator for an ongoing outpatient, randomized, open-label study for Neurocrine Biosciences:
NBI34060-IR-0105

Principal investigator for an ongoing inpatient, randomized, double-blind, dose-ranging study for Bristol-Myers-Squibb:
Intramuscular Aripiprazole

Principal investigator for an ongoing inpatient, randomized, double-blind study for Bristol-Myers-Squibb:
Aripiprazole

Principal investigator for an ongoing outpatient, randomized, double-blind, placebo controlled study for Alkermes:
Medisorb Naltrexone

Principal investigator (2002) for an outpatient, double-blind, placebo controlled fixed dose study for Pharmacia/ORION Pharma:
Deramciclane

Principal investigator (in start-up phase) for an ongoing outpatient, double-blind, randomized placebo controlled study for UCB Pharma, Inc.:
Levetiracetam

Principal investigator for an ongoing outpatient, double-blind, randomized efficacy and safety study for Eli Lilly and Co.:
OFC (Olanzapine-Fluoxetine Combination)

Principal investigator (in start-up phase) for an ongoing inpatient, randomized, double-blind, placebo controlled, parallel-dose study for Elan Pharmaceuticals:
Zonisamide

Principal investigator (2002) for a retrospective efficacy study in refractory bipolar disorder for Ortho-McNeil:
Topamax (topiramate)

Principal investigator for an ongoing post-marketing study comparing cardiovascular safety for Pfizer:
Zyprexa & Geodon

Principal investigator (in start-up phase) for an inpatient, double-blind, randomized placebo controlled study for Shire Pharmaceutical:
Over Encapsulated Carbatrol (carbamazepine extended-release)

LECTURES AND/OR CONSULTANT PANELS FOR PHARMACEUTICAL COMPANIES:

Alza
Astra Zeneca
Bristol-Myers-Squibb
Cephalon
Celltech
Eli Lilly
Forest Pharmaceuticals
GlaxoSmithKline
Janssen
Novartis
Organon
Pharmacia & Upjohn
Pfizer
Shire
Solvay
Wyeth
UCB Pharma

CONTROLLED SUBSTANCE REGISTRATION CERTIFICATE
UNITED STATES DEPARTMENT OF JUSTICE
DRUG ENFORCEMENT ADMINISTRATION
WASHINGTON, D.C. 20537

Sections 304 and 1008 (21 U.S.C. 824 and 958) of the Controlled Substances Act of 1970, as amended, provide that the Attorney General may revoke or suspend a registration to manufacture, distribute, dispense, import or export a controlled substance.

IRVING S. KOLIN, M.D.

1065 WEST MORSE BOULEVARD, Suite 202
WINTER PARK, FLORIDA 32789

EDUCATION

UNIVERSITY OF BUFFALO SCHOOL OF ARTS AND SCIENCES
Buffalo, New York
1957-1961
Major: Psychology
Degree: B.A. cum laude, Phi Beta Kappa

STATE UNIVERSITY Of NEW YORK SCHOOL OF MEDICINE
Buffalo, New York
1961-1965
Degree: M.D.

INTERNSHIP

STRAIGHT PEDIATRICS, CORNELL UNIVERSITY MEDICAL COLLEGE,
NEW YORK HOSPITAL
525 E. 68th Street, New York, New York 10021
July 1965 –July 1966

RESIDENCY

PSYCHIATRY, CORNELL IJNIVERSITY MEDICAL COLLEGE,
NEW YORK HOSPITAL, PAYNE WHITNEY CLINIC
525 E. 68th Street, New York, New York 10021
July 1966 – July 1969

CHILD PSYCHIATRY, CORNELL UNIVERSITY MEDICAL COLLEGE
NEW YORK HOSPITAL, PAYNE WHITNEY CLINIC
525 E. 68th Street, New York, New York 10021
July 1968 – July 1969

TEACHING POSITIONS

TEACHING FELLOW, PSYCHIATRY
CORNELL UNIVERSITY MEDICAL COLLEGE
New York, New York 1967 - 1969

CLINICAL PROFESSOR, DEPARTMENT OF PSYCHOLOGY
VISITING FACULTY, UNIVERSITY OF CENTRAL, FLORIDA
Orlando, Florida 1973 - 1975

S/Kolin 10/03/02

TEACHING POSITIONS (Continued)

TEACHING FACULTY, MEDICAL RESIDENT PROGRAM
ORLANDO REGIONAL MEDICAL CENTER
Orlando, Florida 1977 to present

TEACHING FACULTY, FAMILY PRACTICE RESIDENCY PROGRAM
FLORIDA HOSPITAL
Orlando, Florida 1984 to 1990

CLINICAL INSTRUCTOR, PSYCHIATRY
UNIVERSITY OF FLORIDA COLLEGE OF MEDICINE
Gainesville, Florida 1971 - 1972

CLINICAL ASSISTANT PROFESSOR, DEPARTMENT OF PSYCHIATRY
UNIVERSITY OF FLORIDA COLLEGE OF MEDICINE
Gainesville, Florida 1972 - 1986

COURTESY CLINICAL ASSOCIATE PROFESSOR, DEPT. OF
PSYCHIATRY UNIVERSITY OF FLORIDA COLLECE OF MEDICINE
Gainesville, Florida 1986 to present

TEACHING FACULTY, THE OSLER INSTITUTE
PSYCHIATRIC BOARD REVIEW COURSES,
1994 to present

BOARD CERTIFIED

Diplomate, American Board of Psychiatry and Neurology
Adult Psychiatry, 1972

Diplomate, American Board of Psychiatry and Neurology
with Added Qualifications in Geriatric Psychiatry, 1992

Diplomate, American Board of Psychiatry and Neurology
with Added Qualifications in Addiction Psychiatry, 1993

Diplomate, American Board of Psychiatry and Neurology
with Added Qualifications in Forensic Psychiatry, 1994

BOARD EXAMINATIONS COMMITTEE

Part II Examiner, Oral Examination, American Board of Psychiatry and Neurology, 1979, 1980, 1983, 1984 and 1987

CERTIFICATION

Certification by Examination American Society of Addiction Medicine, 1987

Certification by Examination American Board of Quality Assurance and Utilization Review, 1991

Diplomate, American Academy of Pain Management, 1991

Certification by Examination American Society of Adolescent Psychiatry, 1993

Senior Disability Analyst and Diplomate, American Board of Disability Analysts, 1997

Certification by Examination American Society of Clinical Psychopharmacology, 1998

RESEARCH POSITIONS

Resident Research Fellow, Cornell University Medical College, Department of Psychiatry, 1966-69

Principal Investigator, Wallace Laboratories, 1975-78

Principal Investigator, Upjohn Incorporated, 1980 to 1996

University of Central Florida Institutional Review Board (for the use of Human Subjects in Research), 1980 - 1981

Principal Investigator, Burroughs Wellcome Company, 1987 to 1990

Principal Investigator, G.H. Besselaar Associates, 1987 to 1990

Principal Investigator, Sandoz Pharmaceuticals Corp., 1991 - 1993

Principal Investigator, International Clinical Research Associates, 1991 to 1994

RESEARCH POSITIONS (Continued)

Principal Investigator, Imperial Chemical Industries Pharmaceuticals Group, 1992 - 1993

Principal Investigator, ClinTrials, Inc., 1992 - 1994

Principal Investigator, TAP Pharmaceuticals, Inc., 1993 - 1994

Principal Investigator, Dupont Merck Pharmaceutical Co., 1993, 1995-1996

Principal Investigator, Boehring Ingelheim, 1995

Principal Investigator, Janssen Research Foundation, 1995 - 1997

Principal Investigator, Hoechst Marion Roussel, Inc. Pharmaceuticals, 1996 - 1998

Principal Investigator, Worldwide Clinical Trials, Inc., 1996 - 1998

Principal Investigator, Pharmacia & Upjohn, 1996 - 1999

Principal Investigator, Eisai America, Inc., 1996 - 1997

Principal Investigator, Zeneca Pharmaceuticals, 1997

Principal Investigator, Bristol-Myers Squibb Company, 1997 - 1999

Principal Investigator, Titan Pharmaceuticals, Inc., 1997

Principal Investigator, IBAH, Inc., 1997

Principal Investigator, Bayer Corporation, 1998

Principal Investigator, Novartis Pharmaceuticals Corporation, 1998 - 1999

Principal Investigator, Forest Laboratories, 1998

Principal Investigator, Somerset Pharmaceuticals, 1998

Principal Investigator, Solvay Pharmaceuticals, 1998

Principal Investigator Parke-Davis, 1999 - 2000

RESEARCH POSITIONS (Continued)

Principal Investigator, Wyeth-Ayerst Research, 2000

Principal Investigator, Eli Lilly/NIMH, 1995 to present

Principal Investigator, Quintiles Pacific, Inc. 1996 to present

Principal Investigator, Pfizer, 1996 to present

Principal Investigator, Glaxo Wellcome, Inc., 1997 to present

Principal Investigator, Otsuka Maryland Research Institute, 1997 - present

Principal Investigator, Organon, 2000

RESEARCH TRIALS

Fixed-Dose, Double-Blind Study Comparing Efficacy of Deanol Tablets vs. Placebo in the Treatment of Depressive Disorder - 1977

Double-Blind Comparison of Alprazolam and Diazepam for Subchronic Withdrawal From Alcohol - 1981

Fixed~Dose, Double-Blind Study Comparing Efficacy and Safety of Alprazolam Tablets vs. Imipramine - 1983

A Phase II, Parallel Group, Placebo Controlled Study to Evaluate the Efficacy and Safety of Antianxiety Medication in Outpatients with Generalized Anxiety Disorder - 1987

Prospective Open Evaluation of the Seizure Incidence with Bupropion Hydrochloride - 1987

Fixed-Dose, Double-Blind Study Comparing Efficacy of Antidepressant vs. Placebo in the Treatment of Geriatric Depression - 1987

Fixed-Dose, Double-Blind Study Comparing Efficacy and Safety of Antianxiety Tablets vs. Placebo in the Treatment of Panic Disorder, Using Once Daily Dosing - 1991

Randomized Double-Blind, Placebo-Controlled Study Comparing Efficacy and Safety of Antianxiety Medication in the Treatment of Generalized Anxiety Disorder – 1992

RESEARCH TRIALS (Continued)

Double-Blind, Placebo-Controlled Comparison of Low and High Dosage Regimens of Seroquel in the Treatment of Hospitalized Patients With Subchronic or Chronic Schizophrenia - 1992

Open Label Study of the Safety of Antianxiety Medication in the Treatment of Generalized Anxiety Disorder - 1993

A Randomized Comparative Study of Paroxetine in the Treatment of Depression as used in a Clinical Practice Setting - 1993

Short and Long Term Study of Alprazolam in the Treatment of Panic Disorder with Agoraphobia - 1992 - 1994

Double-Blind, Fixed Dose, Comparing Antianxiety Medication (2, 4, and 8 mg/day), with Placebo in Generalized Anxiety Disorder - 1993

Safety Surveillance Study for Wellbutrin Sustained Release #28, 676 Study #208 - 1993 - 1994

An Open-Label, Long-Term Safety Study of Antianxiety Medication In the treatment of Generalized Anxiety Disorder- 1994

Dupont Merck Pharmaceutical Company DUP 393-101 "An Open Label Usage Study of Trexan*R* (ReVia) as Adjunctive Treatment with Psychosocial Therapy for Individuals with Alcoholism - 1993 to 1995

Fixed-Dose, Placebo-Controlled Study of Antidepressant Capsules in the Treatment of Mixed Anxiety and Depressive Disorder - 1994 to 1995

Eli Lilly/NIMH Open Label Olanzapine Trial - 1995 - 1996

Double-Blind, Placebo-Controlled Clinical Dose-Finding Trial Comparing Fixed Dosages of Antipsychotic Medication - 1995-1996

Multicenter, Randomized, Double-Blind, Placebo-Controlled Study of Opiate Antagonist 50 mg, Administered Once Daily with a Nicotine Patch as Adjunctive Treatment of Psychosocial Therapy for Prevention of Smoking Relapse - 1996

Placebo-Controlled Trial of Antidepressant and Fluoxetine in the Treatment of Patients with Major Depression - 1996

RESEARCH TRIALS (Continued)

Phase II of Multicenter, Randomized, Double-Blind, Placebo and Active Controlled Study of Antipsychotic in Schizophrenic and Schizoaffective Patients - 1996

An Open-Label, Multicenter Clinical Trial Evaluating the Safety and Efficacy of Donepezil Hydrochloride (E2020) in Patients With Alzheimer's Disease - 1996 - 1997

A Multicenter, Double-Blind, Placebo-Controlled, Fixed-Dose Evaluation of the Safety and Efficacy of an Anticonvulsant in the Treatment of A Major Depressive Episode in Patients Suffering From Bipolar Disorder - 1997

An Open, Multicenter, Flexible Dose Continuation Study of An Anticonvulsant in Patients with Bipolar Disorder - 1997

A Multicenter, Double-Blind, Placebo-Controlled, Randomized, Fixed-Dose Evaluation of the Safety and Efficacy of an Anticonvulsant in the Long-Term Prevention of Relapse and Recurrence of Depression and/or Mania in Patients With Bipolar I Disorder - 1997

A Multicenter, Double-Blind, Double-Dummy, Placebo and Lithium-Controlled, Randomized, Flexible-Dose Evaluation Of the Safety and Efficacy of an Anticonvulsant in the Long-Term Prevention of Relapse and Recurrence of Mania and/or Depression in Patients with Bipolar I Disorder - 1997

A Double-Blind, Randomized Trial of Three Fixed Doses of Transdermal 5HT1 Agonist Compared to Placebo in the Treatment of Anxious Outpatients - 1997

A Multicenter, Randomized, Double-Blind, Placebo and Active Controlled Study of Antipsychotic Medication in Schizophrenic and Schizoaffective Patients - 1997

A Multicenter, Open-Label, Long-Term Followup, Safety Study Of Antipsychotic Medication in Schizophrenic and Schizoaffective Patients Who Participated in the Study 100907PR0015 (9/24/96) – 1997

A Comparison of Risperidone and Haloperidol for Prevention of Relapse in Subjects with Schizophrenia and Schizoaffective Disorders - 1997

A Double-Blind Flexible Dose Study of Transdermal 5HTI Agonist in the Treatment of Children With Attention-Deficit Hyperactivity Disorder – 1997

RESEARCH TRIALS (Continued)

An Open-Label, Long Term, Flexible Dose Safety Study of Transdermal 5HT1 Agonist in the Treatment of Childhood Attention-Deficit Hyperactivity Disorder - 1997

A Multicenter, Double-Blind, Randomized Comparison of Zolmitriptan and Sumatriptan in the Acute Treatment of Multiple Migraine Headaches - 1997

A Double-Blind Placebo Controlled, Parallel Group Study to Evaluate the Efficacy of a Second Sumatriptan Succinate Tablet (25 or 50 mg) in the Acute Treatment of Migraine - 1997

A Phase II Double-Blind Placebo-Controlled Study of Antipsychotic Medication in the Treatment of Psychosis - 1997

An Open-Label Follow-On Study of the Long Term Safety of Antipsychotic Medication in Patients with Psychosis- 1997 to present

A Double-Blind Placebo-Controlled, Haloperidol-Referenced Study of the Safety and Efficacy of Three Doses of Antipsychotic Medication Administered to Schizophrenic Patients for 42 Days - 1997

An Open-Label Assessment of the Long-Term Safety of Antipsychotic Medication - 1997

Antidepressant versus placebo in the treatment of Major Depressive Disorder - 1997

ChE Inhibitor in Alzheimer's Disease - 1998

A Double-Blind, Placebo-Controlled, Parallel Group Assessment of the Safety and Efficacy of Antidepressant Transdermal System in Patients with Major Depression - 1998

A Multicenter, Placebo and Active Control, Double-Blind Randomized Study of the Efficacy and Safety of Antipsychotic Medication in Schizophrenic and Schizoaffective Patients - 1998

A Multicenter, Open-Label, Long-Term Follow-Up Safety Study Of Antipsychotic Tablets in Schizophrenic and Schizoaffective Subjects Who Participated in Double Blind Antipsychotic - 1998

RESEARCH TRIALS (Continued)

CELEXA Clinical Experience Trial, Protocol CIT-MD4-98-I5-000 Parke-Davis - 1998

A Prospective, Randomized, Double-Blind, Placebo-and-Active Controlled, Multicenter Study to Evaluate the Efficacy and Safety Of Three Fixed Doses of Antipsychotic Medication (4, 8, and 12 mg/d) Given b.i.d. for 42 days to Schizophrenic Patients With Acute or Subacute Exacerbation, Followed by a Double-Blind, Active-Controlled, Flexible-Dose, Long-Term, 6-Month Phase with Antipsychotic Medication (4, 8, 12, or 16 mg/d) given q.d. - 1998

A Phase III, Open-Label, Treatment-Switching Study from Orally Administered Antipsychotic Monotherapy to Orally Administered Antipsychotic Medication Monotherapy in the Treatment of Chronic Schizophrenic and Schizoaffective Patients. Otsuka America Pharmaceutical, Inc. - 1999

An Open-Label Follow-on Study of the Long-Term Safety of Antipsychotic Medication Administered Orally in Patients with Psychotic Disorders or Psychotic Behaviors of Dementia. Otsuka America Pharmaceutical, Inc. - 1999

A Double-Blind, Placebo-Controlled, Parallel Assessment of the Safety And Efficacy of an Antidepressant Transdermal System in Patients with Major Depression - 1999

An Open-Label Study to Assess the Safety of an Antidepressant Transdermal System in Patients with Major Depression - 1999

The Multiple-Dose Pharmacokinetics of an Antidepressant in Children and Adolescents - 1999

A Randomized, Multicenter, Double-Blind, Placebo-Controlled, Fixed-Dose 7-Week Evaluation of the Efficacy and Safety of an Anticonvulsive Agent in Treatment of a Major Depressive Episode in Unipolar Depressed Patients - 1999

A Multicenter, Randomized, Double-Blind, Parallel Group, Placebo-Controlled Study Evaluating the Efficacy and Safety Of Two Fixed Dose Ranges of an Anticonvulsive Agent (15-30 MG and 45-60 MG) in Children and Adolescents (AGED 6 to 17) With Generalized Anxiety Disorder – 1999

RESEARCH TRIALS (Continued)

A Sustained Efficacy Study of an Antianxiety Agent in Patients With Generalized Anxiety Disorder- 1999 - 2001

A Placebo-Controlled Study of an Antianxiety Agent and Paroxetine In Patients with Panic Disorder - 1999 - 2001

Open-Label Safety Study of an Antianxiety Agent in Patients With Anxiety Disorders - 1999 - 2001

A Double-Blind, Placebo-Controlled Study of a Flexible Dose Of an Antidepressant in Adult Outpatients with Generalized Social Anxiety Disorder - 2000 - 2001

A Double-Blind, Placebo-Controlled Study of a Flexible Dose of An Antidepressant in Adolescent Outpatients with Generalized Social Anxiety Disorder - 2000 - 2001

A Multicenter, Randomized, Double-Blind, Placebo-Controlled, Efficacy and Safety Study of an Antidepressant in Outpatient Children and Adolescents with Major Depressive Disorder - 2000 - 2001

A Multicenter, Double-Blind, Placebo-Controlled Fixed Dose Evaluation of the Safety and Efficacy and Tolerability of an Anticonvulsive Agent in the treatment of a Major Depressive Episode in Patients with Type I Bipolar Disorder - 2001

A Multicenter, Randomized, Double-Blind Placebo-Controlled study of the Efficacy and Safety of antidepressant orally disintegrating tablets in subjects with Major Depressive Disorder - 2001

A Double-Blind, Placebo-Controlled, Parallel-groups, flexible dose study of an Antidepressant in Adolescents with Panic Disorder - 2001

A Multicenter, Randomized, Double-Blind, Placebo-Controlled, fixed dose, efficacy and safety study of an Antidepressant in outpatient children and adolescents with Major Depressive Disorder - 2001

(NOTE: Some trade names of medication withheld pursuant to sponsor agreements)

Education

St. Mary's University, San Antonio, Texas; BA in Biology, graduated Magna cum laude, 1982.

University of Texas Medical School at Houston, Houston, Texas; M.D.,1986.

Residency

Department of Psychiatry, University of Texas Medical School at Houston, Houston, Texas; 1986-1990.

Psychiatry Resident in Training Examination (PRITE), overall national percentile scores:
1989: psychiatry -- 97, neurology -- 96;
1988: psychiatry -- 97, neurology -- 98.

PGY4 activities included one year of clinical EEG interpretation, supervised by Edward L. Reilly, M.D. and Nashaat Boutros, M.D.

Fellowship

Biological Psychiatry Branch, National Institute of Mental Health, Bethesda, Maryland; 6/90 - 7/91.

Fellowship provided training in conducting clinical drug trials and in the correlation of quantitative EEG with neuro-imaging and in the neuroscience of anxiety and affective disorders. Fellowship supervised by Robert M. Post, M.D.

Board Eligibility Certification

American Board of Psychiatry and Neurology, Board Certified, February, 1993. Board Certificate Number: 36730.
American Medical Electroencephalographic Association, Board Eligible, 7/90.

Publications

Fry J, Scharf M, Berkowitz D, Brown D, Claghorn J, Ferguson, J, Karacan I, Lahmeyer H, Mendels, J, Pascualy R, Vogel G, Walsh, J, and Wooten V: A Phase III, 28 Day, Multicenter, Randomized, Double-Blind Comparator-and Placebo-Controlled, Parallel-Group Safety, Tolerability, and Efficacy Study of 5, 10, and 20 MG of Zaleplon, Compared With 10 MG of Zolpidem or Placebo, In Adult Outpatients with Insomnia; Sleep. 1998; 21 (suppl):262.

Brown D, Gutierrez-Esteinou R, Hong-Lin Su, and O'Brien B: The safety and efficacy of risperidone 8mg QD and 4 mg QD compared to placebo in the treatment of schizophrenia; Presented at ACNP in San Juan, Puerto Rico, December 1996.

Presentations

"Safety of Risperidone as Add-on Therapy to Mood Stabilizers in the Maintenance Treatment of Bipolar Disorder" and "Risperidone vs. Placebo as Combination Therapy to Mood Stabilizers In The Treatment of Manic Phase of Bipolar Disorder: Focus on Efficacy" for the American Psychiatric Association's Annual Scientific Poster Session in Chicago, 5/00.

"Update on the Treatment of Schizophrenia" for Austin Association of Psychiatric Nurses, CEU program, Austin, Texas 6/98.

"Update on the Treatment of Depression" for Internal Medicine Grand Rounds, Brackenridge Hospital, Sponsored by Central Texas Medical Foundation and Eli Lilly and Company, Austin, Texas, 3/98.

"Advances in the Treatment of Bipolar Disorder" for Austin Manic Depressive Association, Austin, Texas, 2/98.

"Atypical Neuroleptics" for Austin Chapter of The National Alliance for Mental Illness, Austin, Texas, 2/98.

"New Treatments for Schizophrenia" for Primary Care Physicians, Fairfield, Texas, 8/97.

"New Treatment for Schizophrenia" for Primary Care Physicians, Waco, Texas, 7/97.

"New Treatments for Alzheimer's Disease" for National Alzheimer's Association -Austin Chapter, Austin, Texas, 3/97.

"Bipolar Disorder and Kindling" for Austin Manic Depressive Association, Austin, Texas, 2/97.

"Pharmacotherapy for Depression" for Austin Association of Physician Assistants, Austin, Texas, 9/95.

"New Treatments for Schizophrenia" for Medco Behavioral Health, Houston, Texas, 8/95; Dallas, Texas, 9/95.

"Successful Strategies for Patient Enrollment and Retainment" for Janssen Research Foundation, West Palm Beach, Florida, 12/95.

"Psychiatric Presentations of Epilepsy" for Seton Hospital Grand Rounds, Austin, Texas, 11/95.

"Advances in the Treatment of Bipolar Disorder" for the Depressive-Manic Depressive Association of Austin, Austin, Texas, 10/95.

"Pharmacology of Geriatric Depression" for the Waco Veterans Administration Medical Center/ telecast to the Temple Veterans Administration Medical Center, Waco, Texas, 7/95.

"Pharmacotherapy Update for Therapists" for Personal Performance Consultants, Austin, Texas, 4/95.

"Interview on Bipolar Disorder" for Good Morning, Austin, K-BVO Television Station, Austin, Texas, 3/95.
"Kindling and Bipolar Disorder" for St. David's Hospital Family Practice Department, Austin, Texas, 10/94.

"Biological Explanations for Mood Disorders" for the Texas Alliance for the Mentally Ill 1993 Convention, Austin, Texas, 9/93.

Biology and Bipolar Disorder" for C.P.C. Capital Hospital Spring Lecture Series, Austin, Texas, 3/93.

Mark Ryan 01/14/02

"Kindling Hypothesis" for the University of Arkansas School for Medical Sciences (UAMS) Symposium, "Current Perspectives on Bipolar Disorder," Little Rock, Arkansas, 3/92.

"Pharmacological Treatment of Post-Traumatic Stress Disorder" for the UAMS Symposium, "Panic Disorder in Minorities and the Underserved," Little Rock, Arkansas, 6/92.

Participation in Clinical Research

F1D-MC-HGJX, A Comparison of Fasting Triglyceride Levels in Cohorts with Schizophrenia and Related Disorders Treated Chronically with Olanzapine, Risperidone, and Typical Antipsychotics, Principal Investigator, Sponsored by Lilly Resarch Laboratories, 2001-present.

SB-659746-A/014, A randomized, double-blind, parallel-group, placebo-controlled flexible-dose study evaluating efficacy and safety of SB-659746-A in patients with major depressive disorder, Principal Investigator; Sponsored by GlaxoSmithKline, 2001-present.

061-00, A double-blind, multicenter, placebo- and active-controlled acute and extension study of 2 doses of MK-0869 in the treatment of patients with major depressive disorder, Principal Investigator; Sponsored by Merck & Co., Inc., 2001-present.

CN138-050, Randomized, double-blind, dose-ranging study of intramuscular aripiprazole in the treatment of acute agitation in patients with a diagnosis of schizophrenia, schizoaffective, or schizophreniform disorder, Principal Investigator, Sponsored by Bristol-Myers Squibb, 2001-present.

DRI3650, A double-blind, placebo- and paroxetine-controlle, multicenter, dose-ranging study evaluating the efficacy and safety of SR142801 in outpatients with major depressive disorder, Principal Investigator; Sponsored by Sanofi Synthelabo Research, 2001-present.

5077US/0043, A multicenter, double-blind, randomized comparison of the efficacy and safety of Quetiapine Fumarate (Seroquel) and Risperidone (Risperdal) and the treatment of patients with schizophrenia, Principal Investigator; Sponsored by AstraZeneca Pharmaceuticals LP, 2001-present.

SCT-MD-17, An open label extension study of the safety and efficacy of LU 26-054 in patients with generalized anxiety disorder, Principal Investigator; Sponsored by Janssen Research Foundation, 2001-present.

RIS-USA-265, An open label, long term safety trial of Risperidone long acting microspheres in the treatment of subjects diagnosed with schizophrenia, Principal Investigator; Sponsored by Janssen Research Foundation, 2001-present.

RIS-USA-259, Open label trial exploring a switching regimen from oral neuroleptics, other than Risperidone to Risperidone depot microspheres, Principal Investigator; Sponsored by Janssen Research Foundation, 2001-present.

F1D-EW-LOBE(b), A study to assess the safety, tolerability and pharmacokinetics of single and multiple doses of an intramuscular formulation of depot Olanzapine (Pamoate Salt) in stable schizophrenic subjects, Principal Investigator; Sponsored by Lilly Research Laboratories, 2001-present.

BR29060-785, A double-blind, placebo controlled, fixed-dosage study comparing the efficacy and tolerability of Paroxetine CR and Citalopram to placebo in the treatment of major depressive disorder with anxiety, Principal Investigator; Sponsored by GlaxoSmithKline, 2001.

SCT-MD-06, Flexible dose comparison of the safety and efficacy of Escitalopram and placebo in the treatment of generalized anxiety disorder, Principal Investigator; Sponsored by Forest Laboratories, Inc. 2001-present.

5077IL/0099, A multicenter, double-blind, randomized, placebo-controlled trial of the safety and efficacy of Seroquel (Quetiapine Fumarate) as add-on therapy with lithium or Divalproex in the treatment of acute mania, Principal Investigator; Sponsored by AstraZeneca, 2001.

01/14/02

5077IL/0041, A multicenter, double-blind, randomized comparison of the efficacy and safety of sustained-release formulation Quetiapine Fumarate (Seroquel) and placebo in the treatment of patients with schizophrenia, Principal Investigator; Sponsored by AstraZeneca, 2001-present.

RIS-USA-235, A randomized trial of oral Risperidone versus intramuscular Haloperidol in the emergency treatment of acute psychosis, Principal Investigator; Sponsored by Janssen Research Foundation, 2001.

F1D-US-HGJB, A controlled trial of Olanzapine versus Quetiapine in the treatment of schizophrenic and schizoaffective subjects with prominent negative symptoms, Principal Investigator; Sponsored by Lilly Research Laboratories, 2000-present

CN138-047, A multicenter, randomized, double-blind, placebo controlled, 26 week study of a fixed dose of Aripiprazole in the treatment of stabilized patients with chronic schizophrenia, Principal Investigator; Sponsored by Bristol-Myers Squibb Pharmaceutical Research Institute, 2000-present.

RIS-USA-239, The efficacy and safety of flexible dosage ranges of Risperidone vs placebo in the treatment of manic episodes associated with bipolar I disorder, Principal Investigator; Sponsored by Janssen Research Foundation, 2000-present.

RIS-INT-81, A nine-week, open-label, multi-center, safety study of flexible dosage ranges of Risperidone in the treatment of manic episodes associated with Bipolar I Disorder, Principal Investigator; Sponsored by Janssen Research Foundation, 2000-present.

A1601048, A multicenter, double-blind, randomized, placebo-controlled parallel group comparative study of the efficacy and safety of oral Eletriptan (40 MG) and Sumatriptan (100 MG) given for the acute treatment of migraine, Principal Investigator; Sponsored by Pfizer Pharmaceuticals Group, 2000-2001.

387GCNS0069-012, Pharmacogenomics blood sampling protocol, Principal Investigator; Sponsored by Pharmacia & Upjohn Company, 2000-2001.

387GCNS0069-011, PNU-101387G: Double-blind, randomized, placebo- and Olanzapine-controlled, dose-finding study in the treatment of psychotic disorders, Principal Investigator; sponsored by Pharmacia & Upjohn Company, 2000-2001.

950E-CNS-0005-087, Open-label Reboxetine continuation therapy, Principal Investigator; sponsored by Pharmacia & Upjohn Company, 2000-2001.

M2020/0046, Reboxetine, placebo, and Paroxetine comparison in patients with Major Depressive Disorder, Principal Investigator; sponsored by Pharmacia & Upjohn Company, 2000-2001.

M2020/0047, Reboxetine, placebo, and Paroxetine comparison in patients with Major Depressive Disorder, Principal Investigator; sponsored by Pharmacia & Upjohn Company, 2000.

950ECNS0323-001, Pharmacogenomics blood sampling protocol, Principal Investigator; sponsored by Pharmacia & Upjohn Company, 2000-2001.

041505, Long-term maintenance of subjects with schizophrenia with Org5222, Principal Investigator; sponsored by Organon Inc., 2000-present.

041013, A double blind, three-armed, fixed-dose, placebo controlled dose-finding study with sublingual Org 5222 in subjects with acute phase schizophrenia, Principal Investigator; sponsored by Organon Inc., 2000-present.

M99-082, A double-blind, placebo-controlled study of Depakote in the treatment of behavioral agitation in elderly patients with dementia, Principal Investigator; sponsored by Abbott Laboratories, 2000-2001.

04/4/02

CN138-010, A multicenter, randomized, double-blind, placebo controlled study of Aripiprazole in the maintenance of patients with bipolar disorder; Principal Investigator, sponsored by Bristol-Myers Squibb Pharmaceutical Research Institute, 2000-present.

M99-010, Safety and efficacy of Depakote as combination therapy in the treatment of psychosis associated with schizophrenia; Principal Investigator, sponsored by Abbott Laboratories, 2000-2001.

CN138-007, A multicenter, randomized, double-blind, placebo controlled study of two fixed doses of Aripiprazole in the treatment of patients with acute mania; Principal Investigator; sponsored by Bristol-Myers Squibb Pharmaceutical Research Institute, 2000-present.

CN138-001-031, A multicenter, randomized, double-blind, placebo controlled study of three fixed doses of Aripiprazole in the treatment of patients with acute schizophrenia; Principal Investigator; sponsored by Bristol-Myers Squibb Pharmaceutical Research Institute, 2000.

RIS-USA-196, Risperidone depot (microspheres) in the treatment of subjects with schizophrenia or schizoaffective disorder, Principal Investigator; sponsored by Janssen Research Foundation, 1999-present.

RIS-USA-121, Risperidone depot (microspheres) vs. placebo in the treatment of subjects with schizophrenia, Principal Investigator; sponsored by Janssen Research Foundation, 1999-2001.

H5Z-MC-LUAB, R-Fluoxetine versus placebo in the treatment of major depression, Principal Investigator; sponsored by Eli Lilly and Company, 1999-2001.

1008-84, Open-label safety study of Pregabalin (CI-1008) in patients with anxiety disorders, Principal Investigator; sponsored by Parke-Davis Pharmaceutical Research, 1999-2001.

1008-92, A placebo-controlled study of Pregabalin and Paroxetine in patients with panic disorder, Principal Investigator; sponsored by Parke-Davis Pharmaceutical Research, 1999 –2001.

173-98-203, A phase II, randomized, double-blind, placebo-controlled, fixed dose study of oral OPC 14523 and Prozac in the treatment of outpatients with moderate depression, Principal Investigator; sponsored by Otsuka America Pharmaceuticals, Inc, 1999 –2001.

128-116B, A 260- week (5-year), open extension study evaluating the safety and outcome of 40-200 mg daily of oral Ziprasidone or 1-8 mg BID of oral Risperidone daily in the treatment of subjects who have participated in previous Ziprasidone clinical trials, Principal Investigator; sponsored by Pfizer Pharmaceuticals, 1999 – present.

2918, A comparison of the efficacy and safety of befloxatone 2.5mg OD versus placebo in outpatients with moderate to severe major depressive disorders; a randomized, double-blind, 8-week multi-center phase II trial, Principal Investigator; sponsored by Synthelabo Research, 1999.

EMD 128 130-008, A double-blind, randomized, multicenter, parallel group design study to evaluate the efficacy and safety of two dose ranges of EMD 128 130 in comparison with placebo and Haloperidol in the treatment of schizophrenia, Principal Investigator; sponsored by Merck KGaA, 1999-2000.

RIS-INT-50, Risperidone versus Olanzapine in the treatment of schizophrenia in elderly subjects, Principal Investigator; sponsored by Janssen Research Foundation, 1999.

F1D-MC-HGGU, Olanzapine versus Risperidone and placebo in the treatment of psychosis and associated behavioral disturbances in patients with dementia, Principal Investigator; sponsored by Eli Lilly and Company, 1999-present.

041002, A double-blind, five-armed, fixed-dose, active- and placebo-controlled dose-finding study with sublingual Org 5222 in subjects with acute phase schizophrenia, Principal Investigator; sponsored by Organon Inc., 1999-2000.

Harold Brown 01/19/06

041500, Extension to 041002, Principal Investigator; sponsored by Organon Inc., 1999-2000.

F1D-MC-HGGL(a), Allelic Variation in schizophrenia, Principal Investigator; sponsored by Eli Lilly and Company, 1999.

S1420015, A randomized, double-blind, placebo-controlled, parallel group study to measure the efficacy and safety of nicotine gum (2mg and 4mg for smoking cessation by gradual reduction, Principal Investigator; sponsored by Smith-Kline Beecham, 1999.

NKP608A-141, A randomized, double-blind, dose-range finding, multicenter, parallel-group, active and Placebo-controlled trial of the safety and efficacy of NKP608A in patients with moderate to severe major depressive disorder, Principal Investigator; sponsored by Novartis Pharmaceuticals, 1999.

NKP608A-107, A multicenter, randomized, double-blind, parallel-group, placebo-controlled, dose-range finding trial to evaluate the safety and efficacy of 4 doses of NKP608A in patients with social phobia, Principal Investigator; sponsored by Novartis Pharmaceuticals, 1999.

31-98-218, An open-label, follow-on study of the long-term safety of Aripiprazole in patients with chronic schizophrenia, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1998-present.

31-98-217, a multi-center, randomized, double-blind, active-controlled study to compare the long-term maintenance effects and safety of Aripiprazole and Haloperidol following acute relapse in schizophrenic patients, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1998-1999.

31-98-204, An open-label pilot study to determine tolerability of oral Aripiprazole in patients with first-episode schizophrenia or schizoaffective disorder, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1998-present.

31-98-222, An open-label follow-on study of the long-term safety of Aripiprazole administered orally in patients with psychotic disorders or psychotic behaviors of dementia, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1998-present.

F1D-US-HGHQ, A phase IIIb, multicenter, randomized, double-blind, parallel study of the efficacy of Olanzapine verses Divalproex in the treatment of acute mania, Principal Investigator; sponsored by Eli Lilly and Company, 1998-2000.

M97-696, Evaluation of the efficacy and safety of Depakote ER in the treatment of the manic phase of bipolar disorder: a placebo-controlled study, Principal Investigator; sponsored by Abbott Laboratories,1999.

97-M-05, A six-month open-label safety trial of *d-threo*-methylphenidate hydrochloride (*d*-MPH) in children with symptoms of attention deficit hyperactivity disorder (ADHD), Principal Investigator; sponsored by Celgene Corporation, 1999.

DFI 3024, A double-blind and Haloperidol-controlled, multicenter study evaluating the safety and efficacy of SR 46349B in schizophrenic patients, Principal Investigator; sponsored by Sanofi Pharmaceuticals, 1998-2000.

DFI 3138, A double-blind, placebo and Haloperidol-controlled, multicenter study evaluating the safety and efficacy of SR 142801 in schizophrenic patients, Principal Investigator; sponsored by Sanofi Pharmaceuticals, 1998-2000.

31-98-220, An open-label follow-on study of the long-term safety of Aripiprazole administered orally in patients with Psychosis, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1998-present.

31-98-213, An open-label study of the neurocognitive effects of Aripiprazole compared to Olanzapine administered orally in patients with psychosis, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1998-2000.

04/14/02

31-97-203, An open-label follow-on study of the long-term safety of Aripiprazole in patients with psychosis, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc, 1998-present.

31-97-202, A phase III double-blind placebo-controlled study of Aripiprazole in the treatment of psychosis, with Risperidone as active control, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1998.

F1D-MC-HGHW, A double-blind randomized comparison of the efficacy and safety of short-acting intramuscular Olanzapine, short-acting intramuscular Lorazepam and intramuscular placebo in acutely agitated patients diagnosed with mania associated with bipolar disorder, Principal Investigator; sponsored by Eli Lilly and Company, 1998-2000.

F1D-MC-HGGN, The comparative efficacy of Olanzapine, Risperidone, and Haloperidol for cognition in schizophrenia, Principal Investigator; sponsored by Eli Lilly and Company, 1998-2000.

ILP-3000, A prospective, randomized, double-blind, placebo- and active-controlled, multicenter study to evaluate the efficacy and safety of three fixed doses of Iloperidone (4,8, and 12 mg/d) given BID for 42 days to schizophrenic patients with acute or subacute exacerbation, followed by a double-blind, active-controlled, flexible-dose, long-term, 20 week phase with Iloperidone (4, 8, 12, or 16 mg/d) given q.d, Principal Investigator; sponsored by Novartis Pharmaceuticals, 1998 –1999.

ILP-3007, part 2, A prospective, randomized, double-blind, active-controlled, flexible-dose, parallel-group, multicenter study to evaluate the safety, tolerability and efficacy of Iloperidone compared with Risperidone (both 0.5 to 4.0 mg/d given b.i.d.) in treating psychotic and behavioral symptoms in institutionalized elderly patients with dementia, Principal Investigator; sponsored by Novartis Pharmaceuticals, 1998-2000.

128-108E-719, A 156 (3 year), double-blind extension study evaluating the safety and efficacy of two dose regimens of oral Ziprasidone (CP,88,059-1) (80-120 mg, QD, and 40-80 mg, BID) and Haloperidol (5-20 mg daily in the maintenance treatment of outpatients with schizophrenia or schizoaffective disorder who have successfully completed protocol 128-108, Principal Investigator; sponsored by Pfizer Pharmaceuticals, 1996-1999.

160-108, UK-116, 044, A multi-center, randomized, open-label, comparative study of the safety, toleration, and efficacy of oral Eletriptan for long term treatment of subjects with acute migraine, Principal Investigator; sponsored by Pfizer Pharmaceuticals, 1997-1999.

128-108, Forty-week, double-blind study evaluating the safety and efficacy of two dose regiments of oral Ziprasidone (CP88, 059-1) (80-120 mg, QD, and 40-80 mg, BID) and Haloperidol (5-20 mg daily) in the maintenance treatment of outpatients with schizophrenia or schizoaffective disorder, Principal Investigator; sponsored by Pfizer Pharmaceuticals, 1996.

31-94-202, A dose ranging study of the efficacy and tolerability of OPC – 14597 in acutely relapsing hospitalized schizophrenic patients, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1995-1997.

E2020-A001-313, An open-label, multi-center clinical trial evaluating the safety and efficacy of Donepezil Hydrochloride in patients with Alzheimer's disease; Principal Investigator; sponsored by Pfizer Pharmaceuticals, 1997.

31-95-201, An open-label study of the tolerability and safety of OPC-14597in schizophrenic patients, Principal Investigator; sponsored by Otsuka America Pharmaceutical, Inc., 1995-1996.

BRL-029060/648, A 12 week, double-blind, placebo controlled, parallel group study to assess the efficacy and tolerability of Paroxetine in patients suffering from posttraumatic stress disorder (PTSD); Principal Investigator, sponsored by Smith-Kline Beecham, 1999.

BRL 029060/641, A randomized, double-blind, placebo-controlled, fixed dosage trial to evaluate the efficacy and tolerability of 20 and 40 mg/day Paroxetine in patients with generalized anxiety disorder, Principal Investigator; sponsored by Smith-Kline Beecham, 1999.

EMD 68 843-009, A double-blind, randomized, multicenter, parallel designed study to evaluate the efficacy and safety of individual maximum tolerated doses of EMD 68 843 in comparison with placebo and fluoxetine in outpatients with major depressive disorder, Principal Investigator; sponsored by Merck KGaA, 1998-1999.

EMD 68 843-010, A double-blind, randomized, multicenter, parallel designed study to evaluate the efficacy and safety of individual maximum tolerated doses of EMD 68 843 in comparison with placebo and fluoxetine in outpatients with major depressive disorder, Principal Investigator; sponsored by Merck KGaA, 1998-1999.

M97-817, An open-label extension study of Depakote in the treatment of signs and symptoms of mania in elderly patients with dementia, Principal Investigator; sponsored by Abbott Laboratories, 1998-1999.

M97-738, A double-blind, placebo-controlled study of Depakote in the treatment of signs and symptoms of mania in elderly patients with dementia, Principal Investigator; sponsored by Abbott Laboratories, 1998-1999.

B1Y-US-HCIR, Fluoxetine versus placebo in geriatric nursing home and assisted living patients with major depression, Principal Investigator; sponsored by Eli Lilly and Company, 1998 - 1999.

128-602, A phase III, randomized, placebo-controlled study evaluating the safety and outcome of treatment with oral Ziprasidone in subjects with mania who are receiving Lithium, Principal Investigator; sponsored by Pfizer Pharmaceuticals, 1998 - 1999.

128-602E-0243, An open extension study evaluating the safety and outcome of 40-160 mg daily of oral Ziprasidone in the Treatment of subjects who have participated in protocol 602, Principal Investigator; sponsored by Pfizer Pharmaceuticals, 1998 - 1999.

RIS-USA-102, The safety and efficacy of Risperdal (Risperidone) vs. placebo vs. Haloperidol as add-on therapy to mood stabilizers in the treatment of the manic phase of bipolar disorder, Principal Investigator; sponsored by Janssen Research Foundation, 1998-1999.

M100907/3005, A multicenter, open-label, long-term follow-up safety study of M100907 tablets in schizophrenic and schizoaffective subjects who participated in protocol M100907/3001 or protocol M100907/3002, Principal Investigator; sponsored by Hoechst Marion Roussel, 1998 – 1999.

M100907/3001, A multicenter, placebo and active control, double-blind, randomized study of the efficacy, safety and pharmacokenetics of M100907 (10 and 20 mg per day) in schizophrenic and schizoaffective patients (3001), Principal Investigator; sponsored by Hoechst Marion Roussel, 1998 – 1999.

B1Y-MC-HCIZ, Weekly enteric-coated Fluoxetine Hydrochloride versus daily Fluoxetine or placebo in the continuation treatment of major depressive disorder, Principal Investigator; sponsored by Eli Lilly and Company, 1998 – 1999.

160-103, A multicenter, double-blind, randomized, placebo-controlled, paralleled group study of the efficacy and safety of escalating the dose of oral Eletriptan in subjects with acute migraines, Principal Investigator; sponsored by Pfizer Pharmaceuticals, 1997-1999.

RIS-USA-113, Risperidone versus Olanzapine in the treatment of schizophrenia, Principal Investigator; sponsored by Janssen Research Foundation, 1997-1999.

RIS-USA-112, Risperidone versus Olanzapine in the treatment of schizophrenia, Principal Investigator; sponsored by Janssen Research Foundation 1997-1998

CURRICULUM VITAE

9/17/02

NAME: JOHN S. CARMAN, M.D.

SOCIAL SECURITY NUMBER: REDACTED

DATE AND PLACE OF BIRTH: March 3, 1945; Teaneck, New Jersey

HOME ADDRESS: REDACTED

WORK ADDRESS: Carman Research, 4015 South Cobb Drive, Suite 245, Smyrna, Georgia 30080

MARITAL STATUS: Married

EDUCATION AND TRAINING:

1963 - 1967 - B.S., Magna cum Laude in Chemistry, University of Notre Dame; South Bend, Indiana
1967 - 1971 - M.D., State University of New York, Upstate Medical Center (UMC); Syracuse, New York
1971 - 1974 - Resident in Psychiatry, University of North Carolina Memorial Hospital; Chapel Hill, North Carolina

FULL TIME PROFESSIONAL POSITIONS:

1973 - 1974 - Clinical Associate and Admissions Coordinator, Biological Psychiatry Branch, National Institute of Mental Health (NIMH); Bethesda, Maryland
1974 - 1978 - Clinical Associate and Ward Administrator, Laboratory of Clinical Psychopharmacology, Division of Special Mental Health Research, Intramural Research Program, NIMH; Washington, D.C.
1978 - 1981 - Associate Professor in Psychiatry, University of Alabama in Birmingham (UAB); Birmingham, Alabama
1979 - 1981 - Clinical Service Coordinator, Adult Inpatient Psychiatric Unit, University Hospital, UAB
1979 - 1981 - Preceptor in Clinical Psychopharmacology, UAB
1981 - Director, Psychopharmacology Clinic, UAB
1981 - 1983 - Director, Adult Treatment Service, Brawner Psychiatric Institute (BPI); Smyrna, Georgia
1981 - 1999 - Active Staff, Brawner Psychiatric Institute (BPI); Smyrna, Georgia
1982 - 1983 - Director of Geropsychiatry, Brawner Psychiatric Institute (BPI); Smyrna, Georgia
1982 - 1988 - Clinical Assistant Professor of Psychiatry, Emory University, School of Medicine
1984 - 1988 - Director of Research, Center for Psychiatry Studies; Smyrna, Georgia
1988-Present- Director, Carman Research; Smyrna, Georgia
1996-Present- Active Staff, Ridgeview Institute; Smyrna, Georgia
2000 - 2000 - Active Staff, Charter Midtown; Atlanta, Georgia

OTHER PROFESSIONAL EXPERIENCE AND ACTIVITIES:

1967 - Research Fellow in Pediatric Endocrinolgy, Suny Upstate Medical Center
1968 - Research Fellow in Psychologic Testing, Suny Upstate Medical Center
1969 - Research Fellow in Anesthesiology, Suny Upstate Medical Center
1969 - 1971 - Medical Extern, Onandaga County Penitentiary; Jamesville, New York
1975 - 1976 - Staff Psychiatrist, Alexandria Mental Health Center, Virginia
1977 - 1978 - Staff Psychiatrist, Mount Vernon Mental Health Center, Virginia
1980 - 1981 - Leader, Psychiatric Resident's Sensitivity Training Group, UAB
1980 - 1981 - PSRO Committee, Neuroscience Program, UAB
1981- General Clinical Research Center - Scientific Advisory Committee, UAB
1981 - 1982 - Clinical Management Committee, BPI
1981 - 1996 - Institutional Review Board for Research Involving Human Subjects, BPI

HONORS AND AWARDS:

1966 - 1967 - Student President, College of Science, University of Notre Dame
1963 - 1967 - Academic Tuition Scholarship at Notre Dame
1967 - 1971 - New York State Regents Scholarship in Medicine at Suny Upstate Medical Center
1978 - Clinical Science A.E. Bennett Award from the Society of Biological Psychiatry
1979 - Curt P. Richter Award from the International Society of Psychoneuroendocrinology
1998 - Exemplary Psychiatrist Award: NAMI and NAMI-Austell-Douglasville South Cobb

BOARD CERTIFICATIONS:

1972 - National Board of Medical Examiners 120376
1977 - American Board of Psychiatry and Neurology 16066

MEDICAL LICENSURES:

1971 - 1974 - North Carolina
1975 - 1980 - Virginia #25724
1978-Present- Alabama 8550
1981-Present- Georgia 023143

MEMBERSHIPS:

American Medical Association
American Psychiatric Association
Society of Biological Psychiatry
International Society of Psychoneuroendocrinology

MILITARY SERVICE:

1973 - 1978 - Assistant Surgeon (04), U.S. Public Health Service, Honorable Discharge

RESEARCH GRANTS OR CONTRACTS AWARDED:

I. INDICATION: MAJOR DEPRESSIVE DISORDER

Drug	# Of Studies	Pivotal *	Company
Bupropion	3	*	Burroughs Wellcome
BW647	2		Burroughs Wellcome
Oxaprotaline	1		Ciba Geigy
Trazodone	1		Mead Johnson
Adinazolam	1		Upjohn
Fluoxetine	1		Eli Lilly
Indalpine	1		Rorer
Citalopram	1		Pfizer
Citalopram	1	*	Lundbeck
Citalopram	1	*	Forest
Mianserin	1		Organon
Etoperidone	3		McNeil
Dothiepin	1		Boots

RESEARCH GRANTS OR CONTRACTS AWARDED - Cont'd:

I. INDICATION: MAJOR DEPRESSIVE DISORDER - Cont'd

Drug	# Of Studies	Pivotal *	Company
Mirtazepine	2	*	Organon
Gepirone	2		Bristol Meyers
Venlafaxine	4	*	Wyeth Ayerst
Venlafaxine ER	2	*	Wyeth Ayerst
Fluvoxamine	2		Reid Rowell/Solvay
MDL72394	1		Merrell Dow
Zalospirone	1		Wyeth Ayerst
Ipsapirone	1		Miles/Bayer
Ipsapirone ER	2		Miles/Bayer
Sertraline	3		Pfizer
Paroxetine	2		SmithKline Beecham
Org4428	2		Organon
A75200	1		Abbott
Flesinoxan	1		Solvay
Filbaurin	1	*	Boehringer Ingelheim
CP93,393	1		Pfizer
(MK 0869)	5	*	Merck
YM992	1		Yamanouchi USA

RESEARCH GRANTS OR CONTRACTS AWARDED - Cont'd:

I. INDICATION: MAJOR DEPRESSIVE DISORDER - Cont'd

Drug	# Of Studies	Pivotal *	Company
NS 2389	1		NeuroSearch
SR46349B	1		Sanofi
SR 142801	1		Sanofi
CP 122721	1		Pfizer
CP 448187	1		Pfizer
Selegiline STS	2		Somerset
NPS 1506	1	*	NPS
OPC 14523	1		Otsuka
Prozac SR	1		Eli Lilly
Olanzapine/Prozac	1		Eli Lilly
KW-6002	2		Kyowa
Escitalopram	1		Forest
Org 33062 ER	2		Organon
INN 00835	1		Innapharma
Org 34517	1		Organon
C-1073 (Mifepristone)	1		Corcept
Risperidone	1		Janssen

RESEARCH GRANTS OR CONTRACTS AWARDED - Cont'd:

II. INDICATION: MANIA

Drug	# Of Studies	Pivotal *	Company
BW234	1		Burroughs Wellcome
Ziprasidone	1		Pfizer
Olanzapine	2		Eli Lilly
Depakote	1		Abbott
Topiramate	1		R.W. Johnson
Seroquel	1		Astra Zeneca

III. INDICATION: SCHIZOPHRENIA/SCHIZOAFFECTIVE DISORDER

Drug	# Of Studies	Pivotal *	Company
Pimozide	1		Sandoz
Mellaril Concentrate	1		Sandoz
Remoxipride	1		Merck
Risperidone	4	*	Janssen
Seroquel	6	*	Astra Zeneca
Olanzapine	1	*	Eli Lilly
Sertindole	2		Abbott
Ziprasidone	3	*	Pfizer
Aripiprazole	3		Otsuka
ORG 5222	5		Organon
M100907	1		Hoechst

RESEARCH GRANTS OR CONTRACTS AWARDED - Cont'd:

III. INDICATION: SCHIZOPHRENIA/SCHIZOAFFECTIVE DISORDER - Cont'd

Drug	# Of Studies	Pivotal *	Company
SR 46349 B	1		Sanofi
SR 142801	1		Sanofi
MK 0869	1		Merck
Depakote potentiation	1		Abbott
Iloperidone	1		Novartis

IV. INDICATION: GENERALIZED ANXIETY DISORDER

Drug	# Of Studies	Pivotal *	Company
Alpidem	1		Lorex
Gepirone	1		Bristol-Meyers
Ipsapirone	1		Miles/Bayer
Adinazolam SR	1		Upjohn
Zalospirone	1		Wyeth-Ayerst
Abecarnil	2		Sandoz
LY237733	1		Eli Lilly
Buspar BID	1		Bristol Meyers
DN2327	1		TAP
Adatanserin	1		Wyeth-Ayerst
Venlafaxine ER	1	*	Wyeth-Ayerst
CP93,393	1		Pfizer

RESEARCH GRANTS OR CONTRACTS AWARDED - Cont'd:

IV. INDICATION: GENERALIZED ANXIETY DISORDER - Cont'd

Drug	# Of Studies	Pivotal *	Company
Flesinoxan	1		Solvay
L-830982	1		Merck
Pregabalin	1		Parke-Davis
Lu 26-054	2		Forest
Deramciclane	1		Pharmacia
Gabitril™	1		Cephalon

V. INDICATION: PANIC DISORDER

Drug	# Of Studies	Pivotal *	Company
Xanax SR	1		Upjohn
Paroxetine	1	*	SmithKline Beecham
Paroxetine CR	1		SmithKline Beecham
Sertraline	1	*	Pfizer
Pregabalin	1		Parke-Davis
Venlafaxine ER	1		Wyeth-Ayerst

VI. INDICATION: ALZHEIMER'S DISEASE

Drug	# Of Studies	Pivotal *	Company
Metrifonate	1		Miles/Bayer
Tacrine GTTS	1		Parke Davis
Lazabemide	1		Protodigm

RESEARCH GRANTS OR CONTRACTS AWARDED - Cont'd:

VI. INDICATION: ALZHEIMER'S DISEASE - Cont'd

Drug	# Of Studies	Pivotal *	Company
Exelon	1		Novartis
Idebenone	1		Takeda
Memantine	1		Merz

VII. INDICATION: SOCIAL PHOBIA

Drug	# Of Studies	Pivotal *	Company
Venlafaxine ER	1		Wyeth-Ayerst

VIII. INDICATION: PREMENSTRUAL DYSPHORIC DISORDER

Drug	# Of Studies	Pivotal *	Company
Drospirenone	1		Berlex

PRESENTATIONS:

1. Carman, J.S., Post, R.M., Goodwin, F.K., Bunney, W.E., Teplitz, T.A.: Calcium, ECT, Lithium and Mood. The Annual Meeting of the American Psychiatric Association, New Research Program, Detroit, Michigan, May, 1974.

Lakeside Alternatives
Princeton Plaza, 3 West
1800 Mercy Drive
Orlando, Florida 32808

LifeStream Behavioral Center
2020 Tally Road
Leesburg, Florida 34748

BIRTH: June 7, 1961, Philadelphia, PA

CITIZENSHIP: United States

EDUCATION:

1983-1989 M.D. University of Virginia, School of Medicine
Charlottesville, VA; Alpha Omega Alpha Medical Honor Society

1979-1983 B.S. (Biology), Haverford College, Philadelphia, PA

PROFESSIONAL TRAINING:

1993-1994 Chief Resident, Dept. of Psychiatric Medicine, University of Virginia
Charlottesville, VA

1990-1994 Psychiatry Residency, University of Virginia, Health Sciences Center
Charlottesville, VA

1989-1993 Internal Medicine Residency, University of Virginia, Health Sciences Center
Charlottesville, VA

1989-1990 Internship, University of Virginia, Health Sciences Center
Charlottesville, VA

ACADEMIC AND PROFESSIONAL:

1999 **Clinical Assistant Professor, Dept. of Psychiatry and Behavioral Medicine**
University of South Florida, Tampa, FL

1999- **Instructor, Dept. of Psychology**
University of Central Florida, Orlando, FL

1998-2002 **Medical Director and Director of Psychopharmacology Research,** Lakeside Alternatives Behavioral Healthcare Systems, Orlando FL

1998	**Medical Director and President** CORE Research, Inc., Orlando, FL
1996-1998	**Co-Medical Director, Co-Director of Psychopharmacology Research Program and Vice President,** Psychiatric Institute of Florida, Orlando, FL
1995-1996	**Director of Psychiatric Medicine and Psychiatry Grand Rounds Coordinator** Florida Hospital, Center for Psychiatry Orlando, FL
1994-1995	**Director of Consultation-Liaison Psychiatry, Dept. of Psychiatry** Biologic Sciences Division, University of Chicago, Chicago, IL
1994-1995	**Director of Adult Inpatient Services, Dept. of Psychiatry** Biologic Sciences Division University of Chicago, Chicago, IL
1994-1995	**Director of Psychiatric Medicine, Dept. of Psychiatry** Biologic Sciences Division University of Chicago, Chicago, IL
1994-1995	**Assistant Professor, Dept. of Psychiatry** Biologic Sciences Division University of Chicago, Chicago, IL
1993-1994	**Chief Resident, Dept. of Psychiatric Medicine** University of Virginia Charlottesville, VA
1993-1994	**Consulting Psychiatrist, HIV Clinic, Division of Infectious Disease, Dept. of Internal Medicine** University of Virginia Health Sciences Center Charlottesville, VA
1992-1993	**Psychiatry Clerkship Coordinator** University of Virginia, School of Medicine, Charlottesville, VA
1992	**National Depression Screening Day Coordinator** University of Virginia Dept. of Psychiatric Medicine, Charlottesville, VA

HOSPITAL APPOINTMENTS:

1998-present	Director, Medical Grand Rounds, Lakeside Alternatives, Orlando, FL
1998-present	Medical Director, Lakeside Alternatives, Orlando, FL
1997-present	Medical Director, Clozaril Clinic, Lakeside Alternatives, Orlando, FL
1995-present	Medical Staff, Florida Hospital, Orlando, FL
1997-1998	Medical Director, Partial Hospitalization Program Lakeside Alternatives Behavioral Healthcare System Orlando, FL
1996-1998	Medical Staff, Charter Behavioral Center Systems, Orlando, FL
1996-1997	Medical Staff, University Behavioral Center, Orlando, FL

1996-1997	Medical Staff, Lakewood Adult Care Center, Orlando, FL
1995-1996	Assistant Professor, University of Chicago Hospitals Chicago, IL
1993-1994	Central Virginia Training Center, Lynchburg, VA
1990-1994	Medical Staff, Western State Hospital, Staunton, VA
1989-1994	Resident Physician, University of Virginia Hospitals Charlottesville, VA

HONORS:

1999	Distinguished Clinical Professional Award, Mental Health Association of Central Florida
1998-1999	Editorial Board, *Medicine and Behavior*
1997	Fellow, Academy of Psychosomatic Medicine
1995	Distinguished Service Award, Florida Hospital, Center for Psychiatry, Orlando, FL
1995-1996	Assistant Editor, *Medical Update for Psychiatrists* (Elsevier)
1994	NAMI Effective Legislative Fellow Award, 103rd Congress, Washington, DC
1994	Coordinator, US Senate Working Group on Mental Health, Washington, DC
1994	Legislative Fellow for Health Policy, US Senator Paul Wellstone, 103rd Congress Washington, DC
1994	William Sorum Award for outstanding contribution to Members-in Training American Psychiatric Association
1993-1994	Chief Resident, Dept. of Psychiatric Medicine, University of Virginia Charlottesville, VA
1993-1994	Chair, Member-in-Training Representative Committee, American Psychiatric Association
1992-1993	Member-in-Training Representative, Southeastern US, American Psychiatric Association
1990	PRIDE Award for Outstanding Patient Care, University of Virginia Hospitals Charlottesville, VA
1989	Merck Award for Outstanding Medical Scholarship, University of Virginia, School of Medicine, Charlottesville, VA
1988	Alpha Omega Alpha, Medical Honor Society, University of Virginia, School of Medicine, Charlottesville, VA
1981-1982	Assistant to the President, Haverford College, Haverford, PA
1981-1982	Student Council, Haverford College, Haverford, PA

1980-1983	Resident Advisor, Haverford College, Haverford PA
1979	All-League, Pennsylvania Scholastic Tennis

COMMITTEES:

1998-present	Chair, Peer Review Committee, Lakeside Alternatives, Orlando, FL
1998-present	Chair, Medical Staff Committee, Lakeside Alternatives, Orlando, FL
1998-present	Co-Chair, Pharmacy Committee, Lakeside Alternatives, Orlando, FL
1995-present	Scientific Program Committee, American Psychiatric Association
1995-1998	Joint Commission on Government Relations, American Psychiatric Association
1997	Chair, Early Career Psychiatrist Committee, Florida Psychiatric Society
1995-1997	Corporation for the Advancement of Psychiatry Board
1995-1996	Quality Assurance Committee, Center for Psychiatry, Florida Hospital, Orlando, FL
1995-1996	Medical Executive Committee, Center for Psychiatry, Florida Hospital Orlando, FL
1994-1995	Utilization Review Committee, University of Chicago Hospitals
1994-1995	Quality Assurance Committee, Dept. of Psychiatry, University of Chicago
1994-1995	Residency Training Committee, Dept. of Psychiatry, University of Chicago
1994-1995	Executive Committee, Dept. of Psychiatry, University of Chicago
1995	US Senate Working Group on Mental Health, 103rd Congress
1993-1994	Assembly Executive Committee, American Psychiatric Association
1993-1994	Planning Committee, American Psychiatric Association
1993-1994	Chair, Assembly Member-in-Training Committee, American Psychiatric Association
1992-1993	Membership Committee, American Psychiatric Association
1992-1993	Assembly Member-in-Training Committee, American Psychiatric Association
1988-1991	Admissions Committee, University of Virginia, School of Medicine
1981-1983	Student Council, Haverford College, Haverford, PA

PROFESSIONAL ORGANIZATIONS:

Florida Psychiatric Society

Association of Geriatric Psychiatry

American Medical Association

Florida Medical Association

Academy of Psychosomatic Medicine, Fellow 11/96

Association of Medicine and Psychiatry

National & Local Alliance for the Mentally Ill.

National & Local Mental Health Association

CERTIFICATION:

National Board of Medical Examiners; July 1, 1990, Diplomate # 377171

American Board of Internal Medicine; December 6, 1993, Diplomate # 150744

American Board of Psychiatry and Neurology; October 30, 1995, Diplomate # 41674

LICENSURE:

Drug Enforcement Agency; 1989, number available upon request

Virginia Medical License; June 29, 1990, # 0101045374

Pennsylvania Medical License; July 24, 1992, # MD-047674-L

Illinois Medical License; July 31, 1994, # 003-036-089225-01 (Inactive)

Florida Medical License; July 3, 1995, # ME-0068720

RESEARCH TRAINING:

1993-1994	A Randomized Comparative Study of Paroxetine in the Treatment of Depression as Used in a Clinical Practice Setting; Anita Clayton, MD and Catherine Leslie, MD, Dept. of Psychiatric Medicine, University of Virginia, Charlottesville, VA
1988-1989	Development of Mesolimbic and Mesocortical Dopamine Systems; James P. Bennett, MD, PhD and Catherine Leslie, MD, Depts. of Neurology, Pharmacology, and Psychiatric Medicine, University of Virginia, Charlottesville, VA

1984	Role of Thromboxane A2 in Renal Vasoconstriction; E. Darracot Vaughn, MD Cornell University, School of Medicine, New York, NY
1982-1983	E. coli 16s rRNA Structure and Function; Dr. Melvin Santer, Haverford College, Haverford, PA

CLINICAL RESEARCH:

Clinical Trials Investigator

1) Double-Blind, Randomized Comparison and Placebo Controlled Studies:

a) Seroquel vs chlorpromazine in the treatment of subjects with treatment-resistant schizophrenia

b) A comparison of the effects on sexual functioning of Wellbutrin SR (bupropion HCl) and sertraline in outpatients with moderate to severe recurrent major depression

c) Safety and efficacy of lamotrigine in the treatment of a major depressive episode in patients with bipolar disorder

d) Safety and efficacy of lamotrigine in the long-term prevention of mood episodes in patients with bipolar disorder with rapid cycling

e) Efficacy and safety of lamotrigine, desipramine, and placebo in outpatients with unipolar depression

f) Aripirazole in the treatment of psychosis

g) Clozaril vs Zyprexa in the reduction of suicidality in patients with schizophrenia and schizoaffective disorder who are at risk for suicide

h) Depakote in the treatment of signs and symtoms of mania in elderly patients with dementia

i) Efficacy and safety of Seroquel, haloperidol, and placebo in elderly subjects residing in nursing homes with Alzheimer's dementia and psychosis or other psychoses

j) Safety and efficacy of lamotrigine compared to placebo and lithium in the treatment of an acute manic or mixed episode in patients who have bipolar disorder

k) Olanzapine vs placebo added to mood stabilizers in the treatment of bipolar disorder

l) Safety and outcome of treatment with oral ziprasidone in subjects with mania who are receiving lithium

m) OPC-14523 vs. Prozac in the treatment of patients with moderate depression

n) Ro 64-0796 used in elderly subjects for the prevention of clinical influenza during influenza season

o) Safety and efficacy of SR 46349B in schizophrenic patients

p) Safety and efficacy of SR 141716B in schizophrenic patients

2) Single-Blind Studies

a) Intramuscular ziprasidone vs haloperidol followed by treatment with oral ziprasidone vs haloperidol in subjects with a diagnosis of psychotic disorder

b) Intramuscular ziprasidone in subjects with psychosis and acute agitation

3) Outcome & Extension Studies

a) Paroxetine in the treatment of depression in a clinical practice setting

b) Seroquel vs usual care health outcomes in subjects with schizophrenia and schizoaffective disorder

c) Risperidone vs haloperidol for prevention of relaspe in subjects with schizophrenia and schizoaffective disorder

d) Safety and efficacy of donepezil in patients with Alzheimer's disease

e) Outcome of oral ziprasidone in the treatment of subjects who have participated in previous ziprasidone clinical trials

f) Long-term safety of aripiprazole in patients with psychosis

g) Flexible-dose continuation study of Lamictal (lamotrigine) in patients with bipolar disorder

h) Safety and outcome of 40-160mg daily of oral ziprasidone in the treatment of subjects with mania

i) Open-label, treatment-switching study from oral antipsychotic monotherapy to oral aripiprazole in the treatment of chronic schizophrenic and schizoaffective patients

j) Open-label, follow-on study of the long-term safety of aripiprazole orally in patients with psychotic disorders or psychotic behaviors of dementia

k) Olanzapine versus placebo in the prevention of relapse in bipolar disorder

l) Cost-effectiveness and functional outcomes.olanzapine in the treatment of schizophrenia in usual clinical practice: a randomized clinical study

Curriculum Vitae

Professional Experience:

February, 2002- present	**Chief Executive Officer,** **Midwest Clinical Research Center. LLC** 9000 North Main Street, Suite 234 Dayton, Ohio 45415
April, 2001-present	**Adjunct Associate Professor of Pharmaceutical Services** College of Pharmacy University of Cincinnati 3223 Eden Avenue Cincinnati, Ohio 45267
March, 2000-July, 2002	**Assistant Director of Clinical Affairs, Mental Health Service Line** Cincinnati VA Medical Center 3200 Vine Street Cincinnati, Ohio 45220
December, 1997-March, 2000	**Director, General Psychiatry Division** Cincinnati VA Medical Center 3200 Vine Street Cincinnati, Ohio 45220
September, 1988-present	**Associate Professor of Clinical Psychiatry** Department of Psychiatry University of Cincinnati College of Medicine 231 Bethesda Avenue Cincinnati, Ohio 45267
May, 1993-December, 1997	**Director, Ambulatory Care Psychiatry** Cincinnati VA Medical Center 3200 Vine Street Cincinnati, Ohio 45220
September, 1991-May, 1993	**Acting Chief of Psychiatry** Cincinnati VA Medical Center 3200 Vine Street Cincinnati, Ohio 45220
July, 1983-June, 1992	**PGY-1 Coordinator**

8/30/02

Department of Psychiatry
University of Cincinnati College of Medicine
231 Bethesda Avenue
Cincinnati, Ohio 45267

January, 1989-September, 1991 — **Director, MHC/HCMI**
Cincinnati VA Medical Center
3200 Vine Street
Cincinnati, Ohio 45220

September, 1987-December, 1988 — **Associate Director, Ambulatory Care Psychiatry**
Cincinnati VA Medical Center
3200 Vine Street
Cincinnati, Ohio 45220

March, 1980-August, 1988 — **Assistant Professor of Clinical Psychiatry**
Department of Psychiatry
University of Cincinnati College of Medicine
231 Bethesda Avenue
Cincinnati, Ohio 45267

March, 1980-June, 1981 — **Medical Director, Psychiatric Evaluation Center**
Cincinnati VA Medical Center
3200 Vine Street
Cincinnati, Ohio 45220

July, 1979-March, 1980 — **Staff Psychiatrist/Instructor**
Rollman Psychiatric Institute
3009 Burnet Avenue
Cincinnati, Ohio 45219

Education and Training:

July, 1976-June, 1979 — Rollman Psychiatric Institute, Cincinnati, Ohio
Psychiatric Residency

December, 1975-May, 1976 — University of Cincinnati Medical College, Cincinnati, Oh
Anesthesia Residency

July, 1974-January, 1975 — Safdarjang Hospital, New Delhi, India
Medicine Residency

July, 1968-June, 1973 — Armed Forces Medical College, Pune, India
Medical Student, lead to MD

Examinations:

- FLEX July, 1977
- ECFMG June, 1975

Board Certification:

November, 1982 American Board of Psychiatry & Neurology

Served as an Examiner for the Board November, 1993 and June, 1995

Licensure:

- Ohio 42602
- Kentucky 19281

Publications:

Book Chapter Baker, D. G., and **D'Souza, B.** (1993).
Treatment of the VA Patient.
In: **Manual of Clinical Psychiatry**, APA Press, Washington, D.C.

Presentations:

- November, 1993. TQI and Use of TQM Tools. Knoxville VA Medical Center, Knoxville, Iowa.
- May, 1993. History of Suicide Attempts: A Trait Variable? (poster). American Psychiatric Association Annual Meeting, San Francisco, California.
- May, 1987. Revamping the Residency Curriculum (workshop). American Psychiatric Association Annual Meeting, Chicago, Illinois.
- April, 1986. Outpatient Treatment of Chronically Mentally Ill Veterans. Allen Park VA Medical Center, Detroit, Michigan.
- November, 1984. Psychopharmacology Review. Armed Forces Medical College, Pune, India.

Grant Writing/Workgroups:

Member of Committee for Homeless Mentally Ill Veterans Program
(Wrote proposal and obtained $500,000 funding for new program)

Member of Task Force for MEDIPP Proposal for Adult Day Health Care Program

VA Consultant for Development of Clinical Indicators
Washington, D.C., April, 1992

Clinical Trials:

- XXX: Phase III, Randomized, Double-blind, Placebo-Controlled study of the Safety and Efficacy of patients with Major Depressive Disorders with psychotic features.
  Sponsor: Corcept Therapeutics Incorporated
- XXX: Phase III, Randomized, Double-Blind, Placebo-Controlled Study of Safety and Efficacy of XXX in Patients with Major Depressive Disorder with Psychotic Features Who are not Receiving Antidepressants or Antipsychotics.
  Sponsor: Corcept Therapeutics Incorporated
- XXX: A Phase III, Open-Label Study of the Safety and Efficacy of XXX in Patients with Major Depressive Disorder with Psychotic Features Who Have Previously Demonstrated a Rapid Response to either C-1073 or Placebo in Study C-1073-02 or C-1073-03.
  Sponsor: Corcept Therapeutics Incorporated
- Phase I, Double-blind, Randomized, Parallel Group Study of CSF 5-H1AA Concentrations during CP-448, 187 Challenge in Healthy Volunteers.
  Sponsor: Pfizer

- Placebo-Controlled Evaluation of the Safety and Efficacy of XXX in the Prevention of Depression Relapse.
  Sponsor: Forest Laboratories

- Fixed Dose Comparison of the Safety and Efficacy of XXX, Citalopram, and Placebo in the Treatment of Major Depressive Disorder.
  Sponsor: Forest Laboratories

- An Open-Label Follow-on Study of the Long-Term Safety of Aripiprazole in Patients with Chronic Schizophrenia.
  Sponsor: Otsuka America Pharmaceutical, Inc.

- A Multi-Center, Randomized, Double-Blind, Active-Controlled Study to Compare the LongTermMaintenance Effects and Safety of Aripiprazole and Haloperidol Following Acute Relapse in Schizophrenic Patients.
  Sponsor: Otsuka America Pharmaceutical, Inc.

- TAP Holdings, Inc. "Phase II Multicenter Randomized Comparison of XXX Versus Placebo in the Treatment of Subjects with Major Depressive Disorder"

- An Eight-Week, Double-Blind, Placebo-Controlled Study of 2, 20, 50, and 100 mg Flibanserin b.i.d. and Paroxetine q.d. in Patients with Major Depressive Disorder .
  Sponsor: Boehringer-Ingelheim Pharmaceuticals, Inc.

- Double-Blind, Placebo-Controlled Study of Venlafaxine and Fluoxetine in Geriatric Outpatients with Major Depression .
  Sponsor: Wyeth-Ayerst Laboratories

- Safety and Efficacy of Risperidone 8 mg QD and 4 mg QD Compared to Placebo in the Treatment of Schizophrenia .
  Sponsor: Janssen Research Foundation

- Dose-Response Study in the Treatment of Negative Symptoms of Schizophrenia with XXX .
  Sponsor: Boehringer Ingelheim/The Upjohn Company

- A Placebo-Controlled, Double-Blind, Parallel-Group Safety and Efficacy Trial of XXX in Posttraumatic Stress Disorder .
  Sponsor: Ciba-Geigy Corp.

- A Multicenter, Randomized, Double-Blind, Study of XXX Versus Placebo in the Treatment of Acutely Manic Patients with Bipolar Disorder.
  Bristol-Myers Squibb

- An Open-Label Follow-On Study of the Long-Term Safety of XXX in Patients with Psychosis.
  Otsuka America Pharmaceutical

- A Phase III Double-Blind Placebo Controlled Study of XXX in the Treatment of Psychosis.
  Otsuka America Pharmaceutical

- A Multicenter, Randomized, Double-Blind, Placebo Controlled Study of Three Fixed Doses of XXX in the Treatment of Patients with Acute Schizophrenia.
  Bristol-Myers Squibb

- A Multicenter, Randomized, Double-Blind, Placebo Controlled Study of Two Fixed Doses of XXX in the Treatment of Hospitalized Patients With Acute Mania.
  Bristol-Myers Squibb

- A Multicenter, Randomized, Double-Blind, Placebo Controlled Study of XXX in the Maintenance Treatment of Patients With Bipolar Disorder..
  Bristol-Myers Squibb

- A Double-Blind, Placebo-Controlled, Multicenter Study of the Long-Term Efficacy of XXX in the Maintenance of Antidepressant Effect in Geriatric Outpatients With Major Depressive Disorder.
  Merck

- A Double-Blind, Three-Armed, Fixed-Dose, Placebo-Controlled Dose-Finding Study with Sublingual XXX in Subjects with Acute Phase Schizophrenia..
  Organon

- Long-term Maintenance of Subjects with Schizophrenia with XXX
  Organon

- The Efficacy and Safety of flexible dosage ranges of Risperidone vs. Placebo in the treatment of manic episodes associated with Bipolar I Disorder..
  Janssen Pharmaceutica Products

- A 9-Week, Multicenter, Safety Trial of Flexible Dose Ranges of Risperidone in the Treatment of Manic Episodes Associated with Bipolar I Disorder.
  Janssen Pharmaceutica Products

- A Multicenter, Double-Blind, Randomized Comparison of the Efficacy and Safety of Sustained-release Formulation Quetiapine Fumarate (SEROQUEL™) and Placebo in the Treatment of Patients with Schizophrenia..
  AstraZeneca Pharmaceuticals

Military Experience:

February, 1988	Commissioned as Captain in the US Army Reserves. Colonel in the Air Force Reserve, Medical Corps.
May, 1990	Combat Casualty Care Course Fort McCoy, Wisconsin
December, 1992	Advanced Cardiac Life Support Certification Wright Patterson Air Force Base, Dayton, Ohio
April, 1997	Graduate of Air War College Maxwell Air Force Base, Montgomery, Alabama

BIRTHPLACE: Philadelphia, Pennsylvania

MARITAL STATUS: Married, one daughter

MEDICAL SPECIALTY: Medical Specialty: Psychiatry

EDUCATION:

Medical: Karnatak University, Jawarharlal Nheru Medical College, Belgaum, Karnatak State, India.
Degree:Bachelor of Medicine & Bachelor of Surgery (MBBS) 1976-1981.

Internship: State University of New York at Stony Brook Clinical Campus. Nassau County Medical Center, East Meadow. 1986-1987

Residency: State University of New York at Stony Brook Clinical Campus. Nassau County Medical Center, East Meadow. 1987-1990.

Fellowship: Medical University of South Carolina. Clinical Research Program in Anxiety Disorders with James C. Ballenger M.D. & R. Bruce Lydiard Ph.D. M.D. 1990-1992.

MEDICAL LICENSURE:

South Carolina - 14837
New York - 180 498
Virginia - 44985
North Carolina - 39796
Education Commission for Foreign Medical Graduates 1982
Federal Licensing Examination (FLEX)

SPECIALITY CERTIFICATION:

Diplomat, American Board of Psychiatry and Neurology 1998 #45089

FACULTY APPOINTMENTS:

1990-1992	Instructor in Psychiatry, Medical University of South Carolina. July 1990-June 1992
1992-2002	Assistant Professor in Psychiatry, Medical University of South Carolina. July 1992-present
1997-2002	Medical Director - MUSC Clinical Research Associates, 712 Richland Street, Suite J, Columbia, SC 29201.

HOSPITAL APPOINTMENTS:

1990-1992	Clinical and Research Fellow in Psychiatry, Medical University of South Carolina
1992-2002	Attending Physician, Department of Psychiatry, Medical University of South Carolina

MAJOR COMMITTEE ASSIGNMENTS:

2000- 2002	Full Member MUSC IRB Board

PROFESSIONAL MEMBERSHIP:

Member South Carolina Medical Association (SCMA)
Member Drug Information of America (DIA)
Member Association of Clinical Research Professionals (ACRP)

RESEARCH EXPERIENCE:

2000-2002 **Principal investigator,** Forrest Laboratories "Flexible Dose Comparison of the Safety and Efficacy of Lu 26-054, Racemic Citalopram, and Placebo in the treatment of GAD."

2000-2002. **Principal investigator,** Pfizer, "A Randomized, Double-Blind, Placebo-Controlled, Flexible Dosage Study To Evaluaate The Efficacy And Tolerability Of Sertraline In Subjects Diagnosed With DSM-IV Generalized Anxiety Disorder."

2000-2002 **Principal investigator**, Wyeth-Ayerst Research, Inc., "A six-month, double-blind, placebo-controlled, parallel-group comparison of Venlafaxine ER capsules and placebo in outpatients with Generalized Social Anxiety disorder."

2000-2002 **Principal investigator,** Sanofi-Synthelabo Inc. "DRI 3650: A double-blind, placebo and paroxetine controlled multicenter, dose ranging study evaluating the efficacy and safety of SR142801 in outpatient with Major Depressive Disorder.

1998-2000 **Principal investigator**, Biovail Laboratories "A double-blind, randomized, placebo-controlled, parallel group, fixed-dose study of the safety, tolerability and efficacy of 30 mg and 90 mg buspirone hydrochloride extended release compared to placebo in patients with generalized anxiety disorder."

2000-2001 **Principal investigator**, Biovail Laboratories "A double-blind, randomized, placebo-controlled, parallel group, fixed-dose study of the safety, tolerability and efficacy of 30 mg and 90 mg buspirone hydrochloride extended release compared to placebo in patients with generalized anxiety disorder. A three month extension"

1998-2000 **Principal investigator**, Biovail Laboratories "A double-blind, randomized, placebo-controlled, parallel group, fixed-dose study of the safety, tolerability and efficacy of 30 mg and 90 mg buspirone hydrochloride extended release compared to placebo in patients with generalized anxiety disorder. A nine month extension"

1999-2001 **Principal investigator**, Solvay Pharmaceuticals "A study of low dose flesinoxan, in patients with generalized anxiety disorder (GAD;DSMIV). A randomized double-blind, placebo controlled, parallel-group, multicenter study to assess efficacy and safety."

1999-2000 **Principal Investigator**, Glaxo Wellcome "A Randomized, Multicenter,

Double-blind, Placebo Controlled, Fixed Dose, 7-week Evaluation of the Efficacy and Safety of Lamotrigine in Treatment of a Major Depressive Episode in Unipolar Depressed Patients"

1992-1997 **Principal investigator**, "Imipramine vs.Placebo in the treatment of Social Phobia" Unfunded

1995-1997 **Principal Investigator**, Upjohn Company "Pramipexole vs Placebo in the Treatment of Major Depression"

1997-1998 **Principal Investigator**, Glaxo Wellcome "Wellbutrin-SR open label in the Treatment of Social Phobia"

1998-1999 **Principal Investigator**, Bristol-Myers Squibb, "A double-blind, randomized flexible-dose trial of Buspirone transdermal or alprazolam compared to placebo in the treatment of anxious outpatients.

2000-2002 Co-Investigator, HR 9624, AstraZeneca 5099IL/0041 "A Multicenter, Double-Blind, Randomized Comparison of the Efficacy and Safety of Sustained-Release Formulation Quetiapine Fumarate (Seroquel) and Placebo in the Treatment of Patients with Schizophrenia."

2000- 2002 Co-Investigator, HR 9215, AstraZeneca 5099IL/0099 " A Multicenter, Double-Blind, Randomized, Placebo-controlled Trial of the Safety and Efficacy of Seroquel (Quetiapine Fumarate) as Add-on Therapy with Lithium or Divalproex in the Treatment of Acute Mania"

2000-2002 Co-Investigator, Janssen, Weight Gain, "Effects of Risperidone and Olanzapine on Weight Gain, Physical Health, Outcome in a Community Sample of Severely and Persistently Ill Patients.

2000-2002 Co- Investigator, NIH/NIMH, "Clinical Antipsychotic Trials of Intervention Effectiveness (CATIE)."

2000-2002 Co-Investigator, R.W. Johnson, "A placebo controlled 12 week study of the safety and efficacy of two doses of topiramate versus placebo for the treatment of acute mania or mixed episodes in subjects with bipolar I disorder with optimal open-label extension.

2000-2000 Co-Investigator, GlaxoWellcome, "A multi-center, double-blind, placebo-controlled, randomized, flexible-dose evaluation of the safety and efficacy of lamotrigine in the long-term prevention of relapse and recurrence of mania and/or depression in patients with bipolar I disorder."

2000-2001 Co- Investigator, Warner-Lambert Co., "Placebo-controlled study of Pregabalin and Paroxetine in patients with panic disorder."

2000-2001 Co- Investigator, Pfizer, Co., "A six-week, double-blind, placebo controlled, multi-center study to evaluate the safety and efficacy of 3 doses of CP-448,187 (0.5, 3, and 10 mg) and Fluoxetine in subjects with major depressive disorder."

2000-2002 Co-investigator, NIH (NCCAM) "R-21 Project: Screening Herbs for Drug Interactions." (P.I. John S. Markowitz Pharm.D.)

1999-2002 Co- Investigator, NIH/NIMH, "Systematic Treatment Enhancement Program, Bipolar disorder (STEP BD)."

1999-2001 Co-investigator, Forrest Laboratories "Flexible Dose Comparison of the Safety and Efficacy of Lu 26-054, Racemic Citalopram, and Placebo in theTreatment of Major Depressive Disorder"

1999-2001 Co-investigator, Forrest Laboratories, "Flexible Dose Comparison of the Safety and Efficacy of Lu 26-054, Citalopram, and Placebo in the Treatment of Panic Disorder".

1999-2002 Co-investigator, Glaxo-Wellcome, " Open Label, Safety and Effectiveness of Bupropion-SR for Panic Disorder."

1999-2000 Co-Investigator, Solvay Pharmaceuticals, "A twelve week, randomized, double-blind, placebo-controlled, flexible-dose study Flovoxamine-CR in the treatment of Generalized Social Anxiety Disorder."

1999-2000 Co- Investigator, Bristol Myers Squibb, " An open-label comparison of the efficacy of Serzone vs. Zoloft in patients with generalized anxiety disorder."

1999-2000 Co-Investigator, Solvay Pharmaceuticals, "A study of low dose Flesinoxan in patients with generalized anxiety disorder (GAD; DSM A randomized, double-blind, placebo-controlled, parallel-group, multi center to assess the efficacy and safety."

1999-2000 Co-Investigator, Forest Labs, Inc., "A flexible-dose comparison of the safety and efficacy of LU 26-054, Citalopram, and placebo in the treatment of major depressive disorder."

1999-2000 Co- Investigator, Forest Labs, Inc., "A flexible-dose comparison of the safety and efficacy of LU 26-054, citalopram, and placebo in the treatment of panic disorder."

1999-2000	Co-Investigator, Pharmacia & Upjohn, " Open label reboxetine rescue and continuation therapy."
1999-2001	Co-Investigator, Eli Lilly, "Long term open label treatment with r Fluoxetine for the evaluation of safety."
1999-2000	Co-Investigator, Warner Lambert/Parke Davis, "Pregabalin and paroxetine in patients with panic disorder."
1999-2001	Co-Investigator, Forest Labs, Inc. "LU-26-054 in the prevention of depression relapse."
1999-2002	Co-Investigator, Parke-Davis, "Open-label safety study of Pregabalin (CI-1008) in patients with anxiety disorders."
1999-2003	Co-Investigator, Parke-Davis, "A placebo-controlled study of Pregabalin and Alporazolam in patients with generalized anxiety disorder."
1999- 2000	Co-investigator, Parke-Davis Pharmaceuticals "A Placebo-Controlled Study of Pregabalin and Paroxetine in Patients with Panic Disorder"
1999- 2000	Co-investigator, Parke-Davis Pharmaceuticals "A Placebo-Controlled Study of Pregabalin, Alprazolam and Placebo in Patients with Generalized Anxiety Disorder"
1999-2000	Co-investigator, Pfizer Inc. A Multi-Centered Randomized Double-Blind Placebo Controlled trial of Sertraline for Acute Treatment of DSM-IV Generalized Social Phobia in Outpatients "
1999- 2001	Co-investigator, Solvay Pharmaceuticals." Venlafaxine vs Placebo in the treatment of Social Phobia."
1999-2000	Co-investigator, Eli Lilly & Co. "Open Label R-fluoxetine in the Treatment of Major Depression."
1999-2000	Co-investigator, Pharmacia & Upjohn Inc. " A Placebo-Controlled Study of Reboxetine vs Placebo in the treatment of Major Depression in patients resistant to Fluoxetine."
1999-2001	Co-Investigator, Pharmacia & Upjohn, "Reboxetine vs. placebo in the treatment of major depressive disorder resistant to Fluoxetine."

1999-1999 Co-investigator, Novartis. A Randomized, Double-Blind, Dose-Range Finding, Multicenter, Parallel Group, Active and Placebo Controlled Trial of the Safety and Efficacy of NKP608A in Patients with Moderate to Severe Major Depressive Disorder."

1998-1999 Co-Investigator, Glaxo Wellcome, "A multi-center, double-blind, placebo-controlled, randomized, fixed-dose evaluation of the safety and efficacy of Lamotrigine in the long-term prevention of relapse and recurrence of depression and/or mania in patients with bipolar I disorder."

1998-2000 Co- Investigator, Neurosearch, "A double-blind, randomized, placebo-controlled, safety, tolerability, and pilot efficacy study of NS 2710 (ME3127) Compared to placebo in patients with generalized anxiety disorder."

1998-2000 Co-Investigator, Novartis Pharmaccuticals Corporation. "Safety and efficacy of 4 doses of NKP608A in Social Phobia."

1998-2001 Co- Investigator, Novartis Pharmaceuticals Corporation, "NKP608A in patients with moderate to severe major depressive disorder."

1998-2000 Co-Investigator, SmithKline Beecham Corporation, "Paroxetine vs. placebo treatment of outpatients with IBS."

1998-1999 Co-Investigator, Vanderbilt University, "An eight-week, multi center, parallel-group, double-blind, placebo-controlled study of St. john's wort in outpatients with DSM-IV major depression."

1998- 1999 Co-investigator, Sanofi-Synthelabo SA "Befloxatone vs. Placebo in Outpatients with Moderate to Severe Major Depressive Disorder."

1998- 1999 Co-investigator, Parke-Davis Pharmaceuticals "An Open Label Evaluation of the Efficacy, Safety, and Dosing of Citalopram in Outpatients with Depression."

1998- 1999 Co-investigator, Forest Laboratories "A Placebo-Controlled Study of Pregabalin and Placebo in Patients with Social Phobia."

1998- 1999 Co-investigator, Forest Laboratories "Citalopram Treatment of Depressed Outpatients Discontinued from Paroxetine for Adverse Events."

1998- 1999 Co-investigator, Forest Laboratories "Citalopram Treatment of Depressed Outpatients Discontinued from Fluoxetine for Adverse Events."

1998- 1999 Co-investigator, Forest Laboratories "Citalopram Treatment in Major Depression in Fluoxetine Nonresponders."

1998- 1999 Co-investigator, Forest Laboratories "An Open Label Extension of Citalopram Treatment in Depressed Patients Discontinued from Fluoxetine or Paroxetine."

1997-1998 Co-Investigator, SmithKline Beecham, "A Randomized, Double-Blind, Fixed Dose Comparison of 20, 40, and 60 mg Daily of Paroxetine and Placebo in Generalized Social Phobia."

1997-1998 Co-Investigator, Parke-Davis Pharmaceutical, "Gabapentin Adjunctive Treatment in Patients with Bipolar Disorder."

1997–1998 Co-Investigator, GlaxoWellcome, "Open Label Bupropion Hydrochloride Sustained Release Tablets in Premenstrual Dysphoric Disorder."

1997–1998 Co-Investigator, GlaxoWellcome, "Open Label, Flexible Dosing of Wellbutrin SR in the Treatment of Generalized Social Phobia."

1997-1998 Co-Investigator, Bristol-Myers Squibb, "double-blind, Randomized Trial of Three Fixed Doses of Transdermal Buspirone vs. Placebo in Anxious Outpatients."

1997-1998 Co-Investigator, Organon, Inc., "Double-Blind, Placebo-Controlled, Fixed Dose Response Study to Define the Antidepressant Effectiveness and Sedative Properties of Remeron™ in Outpatients with Major Depression.

1997–1999 Co-Investigator, Bristol-Myers Squibb, "Flexible Dose Nefazodone vs. Placebo in Panic Disorder."

1996-1997 Co-Investigator, GlaxoWellcome. "A Multi-Center, Double-Blind, Placebo Controlled, Fixed Dose Evaluation of the Safety and Efficacy of Lamictal (Lamotrigine) in the Treatment of Major Depressive Episode in Patients Suffering from Bipolar Disorder."

1996-1997 Co-Investigator, Parke-Davis Pharmaceutical. "Placebo-Controlled Trial of Gabapentin in Patients with Panic Disorder."

1996-1998 Co-Investigator, GlaxoWellcome. "An Open, Multi-Center, Flexible Dose Continuation Study of Lamictal (Lamotrigine) in Patients with Bipolar

Disorder."

1992-2000 Co-Investigator, National Institutes of Mental Health. "Drug Treatment of Co-existing Panic and Major Depression."

1996–1997 Co-Investigator, Smith Kline Beecham, "Clinical Effects of Immediate Release Paroxetine and Modified Release Paroxetine in the Treatment of Major Depression."

1996–1997 Co-Investigator, SmithKline Beecham, "Flexible Dosing Trial to Evaluate the Efficacy of Modified Release Paroxetine in the Treatment of Panic Disorder."

1996–1997 Co-Investigator, University of Pittsburgh, "Psychometric Evaluation for the Structured Interview Guide for the Ham A Rating Scale (SIGH-A) in Anxiety Disorder Subjects."

1996–1998 Co-Investigator, Interneuron Pharmaceuticals, Inc., "Placebo Controlled Parallel Groups Trial of Three Doses of Pagaclone in Patients with Panic Disorder."

1996–1998 Co-Investigator, Wyeth Ayerst Research, "Venlafaxine ER in GAD Outpatients."

1996–1998 Co-Investigator, Pfizer, "Double-Blind Placebo Controlled Fixed Dose Sertraline in Premenstrual Syndrome."

1995-1996 Co-Investigator, Bristol-Myers Squibb. "Open-Label Study of Serzone in Outpatients with Depression"

1995-1996 Co-Investigator, Akzo Nobel. "An Eight-Week Placebo-Controlled Study of ORG 4428 in Outpatients with Major Depression"

1995-1996 Co-Investigator, Akzo Nobel. "A Long-Term, Placebo-Controlled Study of ORG 4428 in Outpatients with Major Depression"

1995-1996 Co-Investigator, SmithKline Beecham. "Comparison of Paroxetine and Placebo in the Treatment of Generalized Social Phobia"

1994–1995 Co-Investigator, Parke-Davis. "A Double-Blind, Placebo-Controlled, Six-Week Study of Oral CI-988 in Patients with Panic Disorder."

1994–1995 Co-Investigator, Pfizer, Inc. "Sertraline Treatment Followed by Double-Blind Comparison of Sertraline and Placebo in the Prevention of Relapse in Outpatients with Obsessive Compulsive Disorder"

1994–1995 Co-Investigator, Immunobiology Research Institute. "Basal Levels of

Corticotropin-Releasing Factor and Thymopoietin in Patients with Panic Disorder"

1994–1995 Co-Investigator, Immunobiology Research Institute. "Basal Levels of Corticotropin-Releasing Factor and Thymopoietin in Patients with Depression"

1994–1995 Co-Investigator, Immunobiology Research Institute. "Basal Levels of Corticotropin-Releasing Factor and Thymopoietin in Patients with Generalized Anxiety Disorder"

1994–1995 Co-Investigator, Pfizer, Inc. "12-Week, Double-Blind Comparison of Two Sertraline Dose Regimens in Non-Responder Outpatients with Obsessive Compulsive Disorder"

1994–1996 Co-Investigator, Solvay Pharmaceuticals. "Flesinoxan in the Treatment of Generalized Anxiety Disorder" (M.R. Ware, PI)

1994–1996 Co-Investigator, Pfizer, Inc. "Double-Blind Flexible Dose Parallel Comparison of Placebo and Sertraline (maximum dose 100 mg) in Outpatients with Panic Disorder"

1994–1996 Co-Investigator, Pfizer, Inc. "One Year Open-Label Extension Study of Sertraline Followed by Double-Blind Comparison of Sertraline and Placebo in Outpatients with Panic Disorder"

1994-1996 Co-Investigator, National Institutes of Mental Health. "IBS: Association with Psychiatry Disorders and Trauma."

1994–1997 Co-Investigator, Eli Lilly & Co.. "Fluoxetine *v.* Placebo in the Treatment of Panic Disorder"

1994-1999 Co-Investigator, National Institute on Alcohol Abuse and Alcoholism. "Alcohol and Social Phobia: Treatment of Dual-Diagnosis."

1993–1994 Co-Investigator, Pfizer Inc. "A Double-Blind Comparison of Sertraline vs Paroxetine in Outpatients with Major Depression"

1993–1994 Co-Investigator, Upjohn Company. "Adinazolam in Social Phobia"

1993–1994 Co-Investigator, Solvay Pharmaceuticals. "Fluvoxamine in the Treatment of Depression: A Double-Blind Multicenter Comparison with Sertraline in Outpatients"

1993–1994 Co-Investigator, SmithKline Beecham. "Comparative Study of Paroxetine vs.

Clomipramine and Placebo in the Treatment of OCD"

1993–1994 Co-Investigator, SmithKline Beecham. "Long-term Treatment with Paroxetine of Outpatients with OCD: An Extension of the Comparative Study"

1993–1994 Co-Investigator, SmithKline Beecham. "Fixed Doses of Paroxetine (10 mg, 20 mg, 40 mg) vs. Placebo in Panic Disorder"

1993–1994 Co-Investigator, SmithKline Beecham. "Continuation Study of Fixed Doses of Paroxetine (10 mg, 20 mg, 40 mg) vs. Placebo in the Treatment of Panic Disorder"

1993–95 Co-Investigator, Glaxo. "A Double-Blind, Placebo-Controlled Dose Escalation Study of the Safety and Efficacy of Oral Ondansetron in the Treatment of Patients with Panic Disorder"

1992–1994 Co-Investigator, Roche Inc. "Moclobemide vs Placebo in the Treatment of Social Phobia"

1992–1994 Co-Investigator, Roche Inc. "Moclobemide vs Placebo in the Treatment of Panic Disorder" (J.C. Ballenger, PI)

1992–1993 Co-Investigator, Glaxo, Inc. "Ondansetron vs Placebo in the Treatment of Social Phobia"

1992–1993 Co-Investigator, Ciba-Geigy, Inc. "Brofaramine vs Placebo in the Treatment of Social Phobia"

1992–1995 Co-Investigator, Pfizer, Inc. "Sertraline, Desipramine, and Placebo in the Treatment of Outpatients with Obsessive-Compulsive Disorder and Major Depression"

1992–1994 Co-Investigator, Sandoz, Inc. "Abecarnil and Alprazolam in GAD: Long-term Treatment"

1992–1993 Co-Investigator, E. Lilly, Inc. "Fluoxetine, Amesergide and Placebo in the Treatment of Depressed Outpatients with Normal vs. Short REM Latency"

1992–1994 Co-Investigator, Parke-Davis, Inc. "A Double-Blind, Placebo-Controlled, Study of Oral CI-988 in Patients with Panic Disorder"

1992–1994 Co-Investigator, Glaxo, Inc. "CSF Monoamine Metabolites in Social Phobia"

1992–1995 Co-Investigator, Hoffman-LaRoche, Inc. "Librax vs. Librium, Quarzan and Placebo in the Treatment of Irritable Bowel Syndrome"1988–1990 Co-Investigator, Sandoz Inc., "Safety and Efficacy of ZK112–179 vs Placebo in

the Treatment of Generalized Anxiety"

1990–1991 Co-Investigator, Searle Inc. "Efficacy and Safety of SC-48274 0.25, 1 mg and 5 mg Twice Daily in Patients with Generalized Anxiety Disorder"

1990–1991 Co-Investigator, Upjohn Company. "Evaluation of Xanax SR 4 mg, 6 mg, and placebo in the Treatment of Panic Disorder with Agoraphobia"

1990–1992 Co-Investigator, Wyeth-Ayerst. "Venlafaxine vs. Placebo in Panic Disorder"

1990–present Co-Investigator for substudy, NIH RR01070-15-19 General Clinical Research Center (Scatter Bed Costs) for RO1AA07825. "Imipramine Treatment of Alcoholics with Panic Disorder"

1990–1992 Co-Investigator, Pfizer Inc. "Sertraline, Amitriptyline, and Placebo in Outpatients with Depression"

1990–1992 Co-Investigator, Pfizer Inc. "Sertraline, Clomipramine, and Placebo in Outpatients with Obsessive Compulsive Disorder"

1990–1991 Co-Investigator, Pfizer Inc. "Open Study of Sertraline in Depressed Outpatients Discontinued from Fluoxetine"

1990–1992 Co-Investigator, Pfizer Inc. "Follow-Up Study of Sertraline in Outpatients with Obsessive Compulsive Disorder"

1990–1992 Co-Investigator, Glaxo Inc. "Ondansetron vs. Diazepam and Placebo in the Treatment of Generalized Anxiety Disorder"

1990–1992 Co-Investigator, Bristol-Myers, Inc. "Nefazodone vs Placebo in the Treatment of Depressed Outpatients"

1989–1991 Co-Investigator, Sandoz, Inc. "ZK112–179 Alprazolam and Placebo in the Treatment of Panic Disorder" (J.C. Ballenger, PI)

1989–1991 Co-Investigator, Sandoz, Inc. "ZK112–179 Alprazolam and Placebo in the Treatment of Generalized Anxiety Disorder"

1989–1994 Co-Investigator, NIAAA (RO1AA07825-01A1), "Imipramine Treatment of Alcoholics with Panic Disorder"

1988–1990 Co-Investigator, Pfizer, Inc. "Sertraline vs. Placebo in the Treatment of Obsessive-Compulsive Disorder"

1999-2000 Co-Investigator, GlaxoWellcome, "A randomized, multi-center, double blind, placebo-controlled, fixed-dose 7-week evaluation of the efficacy and safety of Lamotrigine in treatment of a major depressive episode in unipolar depressed patients."

REVIEWER:

Depression & Anxiety
Psychiatric Research
Journal of Clinical Psychiatry

TEACHING ACTIVITIES:

Medical Students:

1992-1997	Small Group Leader- Behavior and Medicine. For medical students.
1993-2002	Anxiety Disorders. Psychiatry Clerkship Lecture Series for medical students.
1992-1994	Introduction to Medicine, Interviewing skills, for medical students
1998	Introduction to Medicine, Interviewing skills, for medical students
2000-2002 (BSMP)	Small Group Leader- Behavioral Sciences in Medical Practice
1999-2002	Small Group Leader- Longitudinal Patient Care Experience (LPCE)

Psychiatry Residents:

1999-onwards	Herbal Remedies- fourth year psychiatry residents
1993-1995 residents.	Cross-Cultural Psychiatry. Lectures to 3rd. year psychiatry
1993-2002	Obsessive-Compulsive Disorder. Anxiety disorders Seminar for third year psychiatry residents.
1994-2002	Obsessive-Compulsive Disorder. Anxiety disorders Seminar for second year psychiatry residents.

Physician Assistant Students:

1994-2002	Anxiety & Somatoform Disorders-Physicians Assistant Course in Psychiatry.

Postgraduate:

1995- 2002	Supervision, Anxiety Disorders Fellows, Department of Psychiatry, Medical University of South Carolina, Charleston, South Carolina

Dental Student:

2000-Summer	Mentor, dental student on Bruxism and anxiety disorders.

Academic Appointment:

2000-2002 Director, Anxiety Disorders Seminar Series for psychiatry residents, Medical University of South Carolina.

CONTINUING MEDICAL EDUCATION:

1997-2001	Weekly Anxiety Disorders Seminar and Journal Club Series, Clinical Psychopharmacology Research Division, Department of Psychiatry, Medical University of South Carolina.

EXTRAMURAL PROFESSIONAL ACTIVITIES:

1997	Speakers Bureau Glaxo-Wellcome Inc. Laboratories
2002	Speakers Bureau Wyeth-Ayerst Laboratories
2000	Speakers Bureau Forrest Pharmaceuticals, Inc.
2001	Speakers Bureau Pfizer Inc.
1999	Speakers Bureau, Projects in Knowledge Inc.

COMMUNITY SERVICES:

1990- onward	Clinical Assessments: National Depression Screening Day
1991- onward	Clinical Assessments: National Anxiety Screening Day

Presentations:

May 8th. 1999	"Stress Management" Vanderhorst Memorial C.M.E. Church. Part of "The Woman in Me" workshop.
December 1St. 1998	"Stress Management" Our Lady of Mercy Community Outreach Center. Johns Island.
April 7th. 1999	"Stress Management" Santee Cooper Health Fair,

CURRICULUM VITAE

October 2002

Personal Data

Name: Frederick W. Reimherr

Business Address: University of Utah School of Medicine
Department of Psychiatry
Mood Disorders Clinic
30 North 1900 East, Room 5R218
Salt Lake City, UT. 84132-2502

Business Phone: (801) 581-8806
Home Phone: REDACTED
Fax (801) 585-7830
E-mail fred.reimherr@hsc.utah.edu

Date of Birth: February 21, 1946

Place of Birth: Yonkers, N.Y.

Citizenship: United States of America

Social Security Number: REDACTED

Medical License: Utah - 156060-1205
State Controlled Substance - 156060-8905

Education

Institution	Degree	Year	Field
Haverford College Haverford, Pennsylvania	B.A.	1964 - 68	Chemistry
Case Western Reserve University School of Medicine Cleveland, Ohio	M.D.	1968 - 72	Medicine
University of Utah College of Medicine	Internship	1972 - 73	Pediatrics
University of Utah College of Medicine	Residency	1973 - 76	Psychiatry

F. Reimherr - 12/15/02

Board Certification

Psychiatry, 1983

Professional Positions

1976 - 1981	Staff Psychiatrist	Sugarhouse Unit Salt Lake City Community Mental Health Center
1981 - 1986	Staff Psychiatrist	Sugarhouse Unit Salt Lake County Mental Health Center
1976 - 1979	Instructor in Psychiatry	College of Medicine University of Utah
1977 - 1980	Psychiatric Consultant	Fremont County Mental Health Center Riverton and Lander, Wyoming
1977 - 1979	Psychiatric Consultant	Public Health Service Wind River Indian Reservation Lander, Wyoming
1978 - 1980	Psychiatric Consultant	Wyoming State Training School Lander, Wyoming
1980 - 1994	Assistant Professor (Clinical)	University of Utah Dep. Of Psychiatry
1985 - present	Director	University of Utah Mood Disorder Clinic Department of Psychiatry
1987 - 1996	Medical Director	United Behavioral Clinics United Health Care Salt Lake City, Utah
1988 - present	Designated Mental Health Examiner	Department of Social Services State of Utah

1994 - present	Associate Professor (Clinical)	Department of Psychiatry

Editorial and Review Experience

Referee	American Journal of Psychiatry Hospital Formulary Journal of Nervous and Mental Disease Medical Letter on Drugs and Therapeutics Biological Psychiatry
Site Visitor	1986 Clinical Research Center Grant National Institute of Health
Grant Review	1988 Office of Orphan Products Development

Research and Grant Awards

Cylert in the Treatment of Adults with Hyperactivity
1975 - 1976
Abbott Research Laboratories
Co-Investigator

Studies of Hyperactivity in Adults
1978 - 1981
National Institute of Mental Health
Co-Investigator

Training Grant in Psychiatry
1980 - 1983
National Institute of Mental Health
Program Director

MK-212 in the Treatment of Patients with Major Depression
1981 - 1982
Merck Sharp and Dohme Research Laboratories
Principal Investigator

12/11/2002

The Use of Fluoxetine in the Treatment of Outpatients with Major Depression, Unipolar Type, Double-Blind Trial with Long-term Open Extension
1981 - 1983
E. Lilly Research Laboratories
Co-Investigator

Studies of Hyperactivity in Adults
1981 - 1984
National Institute of Mental Health
Co-Investigator

The Use of Oxaprotiline in the Treatment of Inpatients with Major Depression; Assessment of Onset of Action, Initial Double-Blind Trial with Long-term Open Extension
1982 - 1983
Ciba-Geigy Corporation
Principal Investigator

Open Evaluation of Tomoxetine in the Treatment of Inpatients with Major Depression, Unipolar Type, Initial Inpatient Trial with Long-term Outpatient Extension
1982 - 1983
E. Lilly Research Laboratories
Co-Investigator

The Use of Oxaprotiline in the Treatment of Outpatients with Major Depression, with Significant Retardation, Initial Double-Blind Trial with Long-term Open Extension
1982 - 1984
Ciba-Geigy Corporation
Co-Investigator

MK-801 in the Treatment of Attention Deficit Disorder, Residual Type
1983 - 1984
Merck Sharp and Dohme Research Laboratories
Principal Investigator

Double-Blind Trial of Tomoxetine in the Treatment of Outpatients with Major Depression, Unipolar Type, Initial Double-Blind Trial with Long-term Double-Blind Extension
1984 - 1985
E. Lilly Research Laboratories
Co-Investigator

12/16/2002

The Use of Multiple Dosage Levels of Fluoxetine in the Treatment of Outpatients with Major Depression, Unipolar Type, Double-Blind Trial with Long-term Open Extension
1984 - 1985
E. Lilly Research Laboratories and International Clinical Research Corporation
Co-Investigator

Double-Blind Trial of Nefazodone at Multiple Dose Levels in the Treatment of Inpatients with Major Depression, Unipolar Type
1984 - 1985
Bristol Myers
Principal Investigator

Double-Blind Trial of Sertraline in the Treatment of Outpatients with Major Depression, Unipolar Type, Initial Double-Blind Trial with Long-term Open Extension
1984 - 1985
Pfizer Central Research
Principal Investigator

Double-Blind Trial of AM versus PM Dosing of Fluoxetine in the Treatment of Outpatients with Major Depression, Unipolar Type
1984 - 1985
E. Lilly Research Laboratories
Co-Investigator

Double-Blind Trial of 5-hydroxytryptophan in the Treatment of Outpatients with Major Depression, Unipolar Type
1985 - 1989
FDA Orphan Drug Division
Principal Investigator

The Assessment of the Risk Associated with Phospholipdosis in Patients Chronically Treated with Fluoxetine, Imipramine or Amiodarone
1986
E. Lilly Research Laboratories
Principal Investigator

Double-Blind Trial of Etoperidone in the Treatment of Outpatients with Major Depression, Unipolar Type, Short-term Double-Blind Trial with Long-term Double-Blind Extension
1986 - 1987
McNeil Pharmaceutical Corporation

Double-Blind Trial of Fluoxetine in the Treatment of Outpatients with Bulimia
1986 - 1987
E. Lilly Research Laboratories
Principal-Investigator

CL-844 in the Treatment of Attention Deficit Disorder, Residual Type
1986 - 1987
Warner Lambert
Principal Investigator

Double-Blind Trial of Fluvoxamine in the Treatment of Outpatients with Major Depression, Unipolar Type, Short-term Double-Blind Trial with Long-term Double-Blind Extension
1986 - 1988
Kali-Duphar
Principal Investigator

Double-Blind Trial of Ipsapirone in the Treatment of Outpatients with Generalized Anxiety Disorder
1987 - 1988
G.H. Besselaar Associates and Bayer
Principal Investigator

Assessment of the Risk of Seizures in Patients with Depression Treated with Bupropion
1987 - 1989
Burroughs Wellcome and International Clinical Research Corporation
Principal Investigator

The Use of Dothiepin in Outpatients with Depression
1987 - 1989
Boots Pharmaceutical, Marion Laboratories, and International Clinical Research Corporation Principal Investigator

Double-Blind Trial of Nefazodone at 2 Dose Levels in the Treatment of Outpatients with Major Depression, Unipolar Type
1987 - 1990
Bristol Myers
Principal Investigator

Double-Blind Trial of Sertraline in the Treatment of Elderly Outpatients with Major Depression, Unipolar Type
1987 - 1990
Pfizer and International Clinical Research Corporation
Principal Investigator

F. Reimherr 12/16/2002

Fluoxetine Versus Placebo: Long term Treatment of Bulimia Nervosa
1988 - 1990
E. Lilly Research Laboratories
Principal Investigator

Randomized, Double-Blind, Comparison of Venlafaxine Amitriptyline and Placebo in Inpatients with Major Depression
1989 - 1990
Wyeth-Ayerst
Principal Investigator

Risperidone (R 64 766) in the Treatment of Chronic Schizophrenic Patients - An International Multicenter Placebo-Controlled Double-Blind Parallel Group Study Versus Haloperidol
1989 - 1991
Janssen Research Foundation
Principal Investigator

A Double-Blind, Multicenter Trial of Gepirone, Imipramine and Placebo in the Treatment of Depressed Outpatients
1989 - 1991
Bristol Myers
Principal Investigator

A Double-Blind Multicenter Trial of Nefazodone, Fluoxetine and Placebo in the Treatment of Depressed Outpatients
1989 - 1992
Bristol Myers
Principal Investigator

An Open Multicenter Trial of Nefazodone in the Treatment of Patients with Mood Disorders
1989 - 1993
Bristol Myers
Principal Investigator

Genetic and Neurobiological Investigation of Schizophrenia
1989 - 1993
NIMH
Co-Investigator

A Double-Blind Multicenter Trial of Gepirone, Fluoxetine and Placebo in the Treatment of Depressed Outpatients
1989
Bristol Myers
Principal Investigator

Fluoxetine Versus Placebo: Long-Term Treatment of Major Depressive Disorder
1990 - 1992
E. Lilly Research Laboratories
Principal Investigator

Open Study of Sertraline in Depressed Outpatients Discontinued From Fluoxetine
1991 - 1992
Pfizer and International Clinical Research Corporation
Principal Investigator

A Prospective Randomized Double-Blind, Placebo-Controlled, Multicenter Parallel-Groups Comparison of The Efficacy and Safety of Abecarnil Low Dose (3.0-9.0 mg) High Dose (7.5 - 22.4) and Buspirone
1991 - 1992
Sandoz Pharmaceuticals Corporation
Principal Investigator

Fixed-Dose, Double-Blind Study Comparing Efficacy and Safety of Xanax SR Tablets Versus Placebo in the Treatment of Panic Disorder Using Once Daily Dosing
1991
Upjohn
Principal Investigator

Double-Blind, Dose Ranging Trial Comparing CGS-18102A to Placebo in Patients with Generalized Anxiety Disorder
1991 - 1993
Ciba-Geigy Corporation
Principal Investigator

A Multicenter Evaluation of the Safety and Efficacy of 150 mg/day and 300 mg/day of Bupropion HCL Sustained-Release Versus Placebo in Depressed Outpatients
1991 - 1993
Burroughs Wellcome
Principal Investigator

12/8/2002

A Prospective, Multicenter, Open-label Study of the Safety of Abecarnil (5.0-17.5 mg.) in Outpatients with Generalized Anxiety Disorder
1991 - 1993
Sandoz Pharmaceuticals Corporation
Principal Investigator

Short and Long-term Discontinuation of Alprazolam in the Treatment of Panic Disorder with Agoraphobia
1992 - 1993
Upjohn
Principal Investigator

A Double-Blind Dose-Response Study to Determine the Safety and Efficacy of Fixed Doses (Range 75 to 900 mg/day) of Moclobemide in Patients with Panic Disorder with or without Agoraphobia
1992 - 1993
Hoffman-La Roche
Principal Investigator

Evaluation of the Safety and Efficacy of 150 mg/day and 300mg/day of Bupropion HCL Sustained-Release vs. Placebo in Depressed Outpatients
1992 - 1993
Burroughs Wellcome
Principal Investigator

A Double-Blind Dose-Response Study to Determine the Safety and Efficacy of Fixed doses (Range 75 to 900 mg/day) of Moclobemide in Patients with Social Phobia
1992 - 1993
Hoffman-La Roche
Principal Investigator

A Randomized, Double-Blind, Placebo-Controlled Study of the Safety and Efficacy of Two Doses of Ondansetron Versus Placebo in the Treatment of Social Phobia
1992 - 1994
Glaxo Incorporated
Principal Investigator

Molecular Genetics of Manic-Depression
1992 - 1994
NIMH
Co-Investigator

The Safety and Efficacy of Nefazodone in Preventing Relapse of Patients With Major Depression: A Multicenter, Double-Blind, Placebo-Controlled Discontinuation Study
1992 - 1995
Bristol-Myers
Principal Investigator

Safety Surveillance Study for Wellbutrin Sustained Release
1993
Burroughs Wellcome
Principal Investigator

Double-Blind Comparison of Tandospirone GUTS and Placebo in the Treatment of Outpatients with Major Depression
1993 - 1995
Pfizer and International Clinical Research Corporation
Principal Investigator

A Double-Blind, Placebo-Controlled Study of the Safety and Efficacy of Ondansetron in the Treatment of Social Phobia
1993 - 1995
Glaxo, Inc.
Principal Investigator

Olanzapine versus Haloperidol in the Treatment of Schizophrenia and other Psychotic Disorders
1993 - 1996
Lilly Research Laboratories
Principal Investigator

A Multicenter Fixed Dose Study of BMS-181101 in Depressed Patients: A Double-Blind Placebo Controlled Fixed Dose Study of BMS-181101 in Outpatients with Major Depressive Disorder
1994 - 1995
Bristol-Myers
Principal Investigator

Double-Blind, Placebo-Controlled. Parallel-Group. T.I.D. Dose-Finding Study of Adatanserin Hydrochloride Capsules in Outpatients with Generalized Anxiety Disorder
1994 - 1995
Wyeth-Ayerst
Principal Investigator

An Open-Label Trial of the Efficacy of Venlafaxine in Patients with Adult Attention Deficit and Hyperactivity Disorder
1994 - 1995
University of Utah
Department of Psychiatry
Principal Investigator

A Double-Blind, Placebo-Controlled, Fixed Dose Evaluation of the Safety and Efficacy of Oral Ondansetron in the Treatment of Patients with Panic Disorder
1994 - 1995
Glaxo Inc.
Principal Investigator

A Prospective, Multicenter Open-Label Study of Serzone (Nefazodone) in the Management of Depression in General Psychiatric Practices
1994 - 1995
Bristol-Myers
Principal Investigator

Flesinoxan in the Treatment of Generalized Anxiety Disorder: A Multi-center, Double-Blind Parallel Placebo-Controlled Dose Range Study in Outpatients
1995 - 1996
Sylvia Pharmaceuticals
Principal Investigator

An Open-Label Trial of the Efficacy of Serzone in Patients with Generalized Anxiety Disorder
1995 - 1996
University of Utah
Department of Psychiatry
Principal Investigator

A Multicenter Placebo-Controlled Study of Relapse-Prevention by Long-Term Treatment with High or Low Doses of ORG 4428 in Outpatients with Recurrent Major Depressive Episode
1995 - 1996
Pharmaco RS
Principal Investigator

Risperidone QD vs BID Dosing in Schizophrenia
1995 - 1996
Janssen
Principal Investigator

12/18/2002

A Three Month Open Label Study of the Tolerability and Safety of OPAQUE in Schizophrenic Patients
1995 - 1996
Otsuka
Principal Investigator

A Dose-Ranging Study of the Efficacy and Tolerability of OPAQUE in Acutely Relapsed Hospitalized Schizophrenic Patients
1995 - 1996
Otsuka
Principal Investigator

Dose-Ranging Study of Pramipexole in Combination with Maintenance Haloperidol for the Treatment of Negative Symptoms of Schizophrenia
1995 - 1997
Upjohn
Principal Investigator

Double Blind, Placebo Controlled, Parallel-Group Comparison of Venlafaxine Extended-Release Capsules and Buspirone in Outpatients with Generalized Anxiety Disorder
1996 - 1998
Wyeth-Ayerst
Principal Investigator

A Double-Blind, Placebo-Controlled, Study of Venlafaxine and Fluoxetine in Outpatients with Major Depression
1997 - 1997
Wyeth-Ayerst
Principal Investigator

A Double-Blind, Placebo-Controlled, Flexible Dosing Trial to Evaluate the Efficacy of Modified Release Paroxetine in the Treatment of Panic Disorder
1997 - 1998
Eli Lilly
Principal Investigator

Double-Blind, Placebo-Controlled Study of the Safety and Efficacy of LY354740 and Lorazepam in Outpatients with Generalized Anxiety Disorder
1997 - 1998
Eli Lilly
Principal Investigator

A Double-Blind Trial of Three Fixed Doses of Nefazodone and Placebo in the Treatment of Patients with Panic Disorder
1997 - 1999
Bristol-Myers Squibb
Principal Investigator

A Double-Blind, Randomized, Placebo-Controlled Flexible Dose Trial of 30 RM Transdermal Buspirone Patches in Treatment of Anxious Outpatient
1997 - 1999
Bristol-Myers Squibb
Principal Investigator

A Multicenter, Double-Blind, Placebo-Controlled, Randomized, Fixed-Dose Evaluation of the Safety and Efficacy of Lamotrigine in the Long-Term Prevention of Relapse and Recurrence of Depression and/or Mania in Patients with Bipolar I Disorder
1997 - 2001
Glaxo Wellcome
Principal Investigator

A Multicenter, Double-Blind, Double-Dummy, Placebo and Lithium-Controlled, Randomized, Flexible-Dose Evaluation Of The Safety And Efficacy Of Lamotrigine In The Long-Term Prevention Of Relapse And Recurrence Of Mania And/Or Depression In Patients With Bipolar I Disorder
1997 - 2001
Glaxo-Wellcome
Principal Investigator

A Multicenter, Placebo-Controlled Study Of Relapse Prevention By Long-Term Treatment With The Recommended Dose Of Remeron In Outpatients With Major Depressive Episode
1997 - 1999
Organon Inc.
Principal Investigator

A Multicenter, Double-Blind Placebo-Controlled Comparison of the Effects on Sexual Functioning of Wellbutrin (Bupropion Hal) Sustained Release and Sertraline in Outpatients with Moderate to severe Recurrent Major Depression
1997 - 1998
Glaxo Wellcome
Principal Investigator

A Double-Blind, Placebo-Controlled, Multicenter Study Evaluating the Efficacy and Safety of SR 2B in Outpatients with Major Depression
January 1998 - July 1998
Sanofi Research Division
Principal Investigator

A Multicenter, Open-label, Long-term, Safety and Efficacy Study of M100907 Tablets Once Daily In Subjects With Schizophrenia Or Other Psychotic Disorders
1998 - 2000
Hoechst Marion Roussel, Inc.
Principal Investigator

A Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Dose-Ranging Study of Four Oral Doses of 1555U88 (2.5, 5.0, 10, and 20MG per day) in the Treatment of Attention Deficit/Hyperactivity Disorder in Adults
1998 - 1999
Glaxo Wellcome, Inc.
Principal Investigator

A Phase I Study of the Safety and Tolerance of Single Doses of Intranasal PH80
1998 - 2000
Cheri Pharmaceuticals
Co-Investigator

Reboxetine Versus Placebo And Fluoxetine In A Controlled, Randomized, Double-Blind, Multicenter Study Of Treatment In Major Depressive Disorders
1998 - 1999
Pharmacia & Upjohn
Principal Investigator

A Placebo Controlled, 8-Week Clinical Trial of Wellbutrin SR In The Treatment Of Adults With Attention Deficit Hyperactivity Disorder Combined With A Six Month Extension For Treatment Responders
1998 - 2000
Glaxo-Welcome & Mood Disorders Clinic
Principal Investigator

A Double-Blind, Randomized, Multicenter, Parallel Design Study to Evaluate The Efficacy and Safety of Three dose Ranges of EMD 68 843 in Comparison with Placebo and Fluoxetine in Outpatients With Major Depressive Disorder
1998 - 1999
Merck KGaA
Principal Investigator

A Multicenter, Double-Blind, Placebo-Blind, Placebo-Controlled Comparison of the Safety and Efficacy and Effects on Sexual Functioning of Wellbutrin (Bupropion HCL) Sustained Release (SR) and Fluoxetine in Outpatients with Moderate to Severe Recurrent Major Depression
1999 - 2000
Glaxo Wellcome
Principal Investigator

A Double-Blind, Placebo Controlled, Randomized to Determine the Safety and Efficacy of Topiramate in Treating Patients with Bulimia Nervosa
1999 - 2001
Ortho-McNeil Pharmaceuticals
Principal Investigator

The Combination of Olanzapine and Fluoxetine in Treatment Resistant Depression Without Psychotic Features
1999 - 2001
Lilly Research Laboratories
Principal Investigator

Safety of Two Dose Ranges of EMD 128 130 in Comparison with Placebo and Haloperidol in the Treatment of Schizophrenia
1999 - 2000
Merck KGaA
Principal Investigator

A Multicenter, Double-Blind, Placebo Controlled, Randomized Fixed Dose Study of Nefazodone ER in the Treatment of Depressed Patients
1999 - 2001
Bristol Myers Squibb
Principal Investigator

Olanzapine Versus Placebo in the Prevention of Relapse in Bipolar Disorder
1999 - 2001
Lilly/Parexel
Principal Investigator

A Double-Blind, Placebo-Controlled, Study of a Flexible Dose of Venlafaxine ER in Adult Outpatients with Generalized Social Anxiety Disorder
1999 - 2001
Wyeth Ayerst
Principal Investigator

12/12/2002

A Multicenter, Double-Blind, Placebo Controlled, Randomized Fixed Dose Study of Nefazodone ER in the Treatment of Depressed Patients
1999 - 2000
Bristol Myers Squibb
Principal Investigator

Open-Label Safety Study of Pregabalin in Patients with Anxiety Disorders (Panic)
1999 -2001
Warner Lumber Division of Parke Davis
Principal Investigator

A Placebo-Controlled Study of Pregabalin Dosed BID and TID in Patients with Generalized Anxiety Disorder
1999 - 2001
Warner Lumber Division of Parke Davis
Principal Investigator

A Placebo-Controlled Study of Pregabalin and Paroxetine in Patients with Panic Disorder
1999 - 2001
Warner Lumber Division of Parke Davis
Principal Investigator

A Multicenter, Double-Blind, Placebo and Sertraline Controlled, Randomized, Parallel Group Design, Flexible Dose Trial of Nefazodone ER in the Treatment of Depressed Patients -
1999 - 2001
Bristol Myers Squibb
Principal Investigator

Open Label Safety Study of Pregabalin in Patients with Generalized Anxiety Disorder
1999-2001
Warner Lumber Division of Parke Davis
Principal Investigator

A Double-Blind, Multi-Center Extension Trial in Subjects Who Suffer From Major Depressive Disorder with Atypical Features who Participated in the Placebo and Fluoxetine Controlled Study of ORG 33062 ER
2000 - Present
Organon
Principal Investigator

A Double-Blind, Multi-center, Randomized, Placebo-Controlled, Efficacy and Safety Study of ORG 33062 ER and Fluoxetine in Subjects Who Suffer from Major Depressive Disorder with Atypical Features
2000 - Present
Organon
Principal Investigator

Phase III Randomized, double-Blind Comparison of Placebo and Tomoxetine in Adult Outpatients with DSM-IV Attention Deficit/Hyperactivity Disorder
2000 - 2001
Eli Lilly
Principal Investigator

A Long-term, Open-Label Safety Study of Tomoxetine Hydrochloride in Adult Outpatients with DSM-IV Attention-Deficit/Hyperactivity Disorder
2000-Present
Eli Lilly
Principal Investigator

A Multicenter, Parallel, Double-Blind, Placebo-Controlled, 6-Week Randomized Comparison of 3 Fixed Doses of GW650250A (8, 16, and 32mg/day), Fluoxetine 20 mg/day and Placebo for the Outpatient Treatment of Moderate to Severe Recurrent Depression
2000-Present
Glaxo Welcome
Principal Investigator

A Multicenter, Double-Blind, Placebo-Controlled, Fixed-Dose Evaluation of the Safety, Efficacy and Tolerability of Lamictal (Lamotrigine) in the Treatment of a Major Depressive Episode in Patients with Type I Bipolar Disorder
2000-2002
Glaxo SmithKline
Principal Investigator

An Open Assessment of Buspirone in Adult Outpatients with DSM-IV Attention-Deficit/Hyperactivity Disorder (ADHD) for 8 weeks with up to 16 Weeks Extended Observation
2001-Present
University of Utah Health Sciences Center
Mood Disorders Clinic
Principal-Investigator

F. Reimherr 12/11/2002

A Controlled Trial of Olanzapine versus Ziprasidone in the Treatment of Schizophrenia and Schizoaffective Subjects with Comorbid Depression
2001 – Present
Eli Lilly and Company
Principal-Investigator

A Double-Blind, Randomized, Placebo-Controlled 3-Month Clinical Trial of Venlafaxine ER and Sertraline in the Treatment of Posttraumatic Stress Disorder
2001 – Present
Wyeth-Ayerst
Principal-Investigator

A Randomized, Double-Blind, Parallel-Group, Placebo-Controlled Study Evaluating Efficacy and Safety of SB-659746-A (10 Mg/Day and 20 Mg/Day) and Citalopram (20 Mg/Day) in Patients with Major Depressive Disorder
2002 – Present
SmithKline Beecham
Principal-Investigator

A Randomized, Double-Blind, Multicenter, Placebo-Controlled 12-Week Study of the Safety and Efficacy of Two Doses of Topiramate for the Treatement of Acute Manic or Mixed Episodes in Subjects with Bipolar I Disorder with an Optional Open-Label Extention
2002 – Present
Ingenix
Principal-Investigator

A Randomized, Double-Blind, Placebo-Controlled, Phase II Study to Evaluate the Efficacy, Safety, and Tolerability of CP-601,927 in Adults with Attention Deficit/Hyperactivity Disorder
2002 – Present
Pfizer Inc.
Principal-Investigator

Comparative Effectiveness of Antipsychotic Medications in Patients with Schizophrenia
2002 – Present
University of North Carolina (NIMH)
Principal-Investigator

Efficacy and Tolerability of Olanzapine, Quetiapine and Risperidone in the Treatment of First Episode Psychosis: A Randomized Double Blind 52 Week Comparison
2002 – Present
University of North Carolina (NIMH)
Principal-Investigator

A Double-Blind Study of Treatment Optimization with Atomoxetine Hydrochloride in Adults with DSM-IV Attention-Deficit/Hyperactivity Disorder
2002 – Present
Eli Lilly
Principal-Investigator

F. R. – 12/10/2002

Scholastic Honors

1964 Pennsylvania State Scholarship Winner

Administrative Experience

1976-1979 - Member Research Committee, Salt Lake City Community Mental Health Center

1979-1980 - Director Residency Training, University of Utah Medical Center, Department of Psychiatry

1980-1982 - Chairman - Peer Review and Records Evaluation Committee, Salt Lake County Mental Health Center

1981-1986 - Member, Residency Training Committee, University of Utah Medical Center, Department of Psychiatry

1982-1997 - Member, Pharmacy and Therapeutics Committee, University of Utah Medical Center

1987-1990 - Member, Drug Utilization Review Sub-Committee, Pharmacy and Therapeutics Committee, University of Utah Medical Center

1987-1989 - Member, Ad-hoc Committee to Establish Standards for Psychiatric Hospitalization formed by Utah State Medical Association, Utah Professional Review Organization, and Utah Psychiatric Association

1996-present - Member, Ad-hoc Committee to Review Psychiatric Treatment provided by the Utah State Office of Crime Reparations Association

Professional Organizations

Utah Psychiatric Association - past member

American Psychiatric Association - past member

American Association for the Advancement of Behavior Therapy - past member

American Society for Clinical Trials - past member

American Society of Clinical Psychopharmacology - Current member

12/16/2002

Teaching Responsibilities

Regular lectures in third year medical student rotation in Psychiatry

Periodic lectures in Main Residency Lecture Series

Supervisor of third year residents during year long outpatient rotation at Salt Lake Community Mental Health, 1976-86

Supervise Residents and medical students during elective research rotations
Currently have 2 residents and finishing a medical student elective

While serving as Director of Residency Training, planned new programs in Psychiatry Department of Residency Program:

1. Training in rural psychiatry
2. Service to patients with chronic mental illness
3. Evaluation of teaching performance
4. Evaluation of residency performance
5. Evaluation training sites
6. Developed and implemented residency committee to oversee Residency Training Program

Supervise medical students during 3rd year rotation in Mood Disorder Clinic

CURRICULUM VITAE

Abbey Strauss, M.D.

Comprehensive NeuroScience, Inc.
8200 Jog Road, Suite 101
Boynton Beach, FL 33437
561-731-0158

Education:

1981 - 1985	Beth Israel Medical Center New York, NY Internship and Psychiatric Residency
1981	Medical University of South Carolina Charleston, SC Doctor of Medicine
1972	New York University New York, NY Masters of Social Work
1969	Ohio State University Columbus, Ohio BA in general psychology
	Piqua Central High School Piqua, Ohio

Professional Experience:

Feb 2002 – Present	Investigator Comprehensive NeuroScience, Inc. Boynton Beach, FL
1994 - Jan 2002	Investigator ICSL - Clinical Studies Boynton Beach, FL
1986 - Present	Private Practice Boca Raton, FL Psychopharmacological, forensic and pain control emphasis. Psychiatric Consultant on a number of felony cases associated with cocaine abuse and general psychiatric problems.

Professional Experience:
(cont'd):

1997 - Present	Regional Director (Southeast United States) *Physician's For Social Responsibility* (US Affiliate of the International Physicians for the Prevention of Nuclear War - Winner 1985 Nobel Peace Price),
1992 - 1993	Quality Assurance Committee Fair Oaks Hospital Delray Beach, FL
	Faculty, Fair Oaks Hospital Institute of Advance Studies Delray Beach, Florida
1988	Forensic Evaluator Training University of South Florida
	Professional Speaker for McNeil Laboratories, Sandoz Pharmaceutical and Abbott Laboratories, Cosensys, Wyeth, Lilly, Purdue and other professional organizations
	Many community lectures and Continuing Education Seminars to nursing groups and lay organizations
1987	Substance Abuse Awareness Committee Psychiatric Consultant Boca Raton Community Hospital Boca Raton, FL
1986 - 1988	Executive Committee Fair Oaks Hospital Delray Beach, FL
1986	Reviewer American Journal of Family Therapy
	Psychiatrist Regent's Park Nursing Home Boca Raton, FL

Professional Experience:
(cont'd):

1986 - 1991	Psychiatrist North Broward Detention Center
1984 - 1985	New York University Graduate School of Social Work
1984 - 1985	Gracie Square Hospital New York, NY
1972 - 1976	Pee Dee Mental Health Center Florence, SC
1967 - 1968	Columbus Children's Psychiatric Hospital Columbus, Ohio

Professional Memberships/Organizations:

American Psychiatric Association, General Member
Florida Psychiatric Association
New York Academy of Sciences
American Academy of Psychiatry and the Law
Who's Who in Medicine
American Association of Orthopsychiatry
American Academy of Pain Management
American Sleep Disorders Association

Licenses/Certification:

1988	Board Certified American Board of Psychiatry & Neurology
1982	Diplomat National Board of Medical Examiners
	Florida State Medical License; ME0045950

Research Papers/Presentations:

1982	Propranolol and Anxiety Beth Israel Medical Center (NY) Annual Research Meeting
1985	NMR Study of Human Erythrocyte in Affective Disorders Beth Israel Medical Center (NY) On-Going Research Seminar
1985	NMR Study of Human Erythrocyte in Affective Disorders Grand Rounds Presentation Beth Israel Medical Center (NY)
1985	NMR Study of Human RBC's in Affective Disorders IVth World Congress of Biological Psychiatry Philadelphia
1986	NMR Study of Human RBC's in Affective Disorders New Research Meeting Washington, DC
1985 - 1987	Consultant RBC/NMR and Bipolar Disorders Beth Israel Medical Center (NY)
1988	Interviewed by CBS News "60 Minutes" as the psychiatrist involved with the "Cara" case Aired Autumn

Awards:

1994	Exemplary Psychiatrist Award from the National Alliance for the Mentally Ill Arlington,VA

Research Experience:

A Thirty Day Open-Label Multicenter Observational Study Assessing the Safety of xxxx Sustained Release (10 mg or 30 mg) Tablets Administered Every Twelve Hours (q12 hours) in Patients Experiencing Chronic Pain

Research Experience:
(cont'd)

A Three Month, Open-Label, Multicenter, Compassionate-Use Study Assessing the Safety of xxxx Sustained Release (10 mg or 30 mg) Tablets Administered Every Twelve Hours (q12 hours) in Patients Experiencing Chronic Pain

A Forty-Eight Week Study to Compare the Efficacy and Safety of xxxx (xxxx) with Placebo in Outpatients with Alzheimer's Disease

A Twenty-Four Week Study to Compare the Efficacy and Safety of xxxx (xxxx) with Placebo in Outpatients with Vascular Dementia

A Double-Blind, Placebo-Controlled, Safety, Tolerability and Efficacy Study of xxxx Following Four-Week, Step-Wise Dose Escalations in Patients with Probable Alzheimer's Disease

An Open-Label, Multicenter, Extended Evaluation of the Safety and Efficacy of xxxx In Patients with Alzheimer's Disease

An Open-Label, Six-Month Extension of xxxx Studies xxxx and xxxx to Prospectively Evaluate the Long-Term Safety, Tolerability, and Efficacy of 1 Through 6 mg B.I.D. (2-12 mg/day) xxxx in Outpatients with Probable Alzheimer's Disease

An Open-Label, Six-Month Extension of xxxx Studies xxxx (U.S. Centers Only), xxxx and xxxx to Prospectively Evaluate the Long-Term Safety, Tolerability, and Efficacy of 1 through 6 mg B.I.D. (2/12 mg/day) xxxx in Outpatients with probable Alzheimer's Disease

A Prospective, Randomized, Multicenter, Double-Blind, Placebo-Controlled, Parallel-Group Comparison of the Efficacy and Safety of Three Fixed-Doses of xxxx, 3 mg, 6 mg, and 9 mg per day in Patients with Probable Mild to Moderate Alzheimer's Disease

xxxx Experience with Safety and Tolerability (QUEST) in Schizophrenia.

Research Experience:
(cont'd)

A Phase III, Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Safety, Tolerance, and Efficacy Study of 5 and 10 mg of xxxx and 5 mg of xxxx (xxxx) in Elderly Outpatients with Insomnia with an Open-Label Extension Phase for a Maximum Duration of Twelve Months

A Multicenter, Double-Blind, Placebo-Controlled Study of the Cardiovascular Safety and Tolerability of xxxx in Otherwise Healthy Migraineurs

A 15 Week, Multicenter, Randomized, Double-Blind, Placebo-Controlled Evaluation of the Safety and Efficacy of xxxx in Patients with Alzheimer's Disease

A 30 Week, Multicenter, Randomized, Double-Blind, Placebo-Controlled, Evaluation of the Safety and Efficacy of xxxx in Patients with Alzheimer's Disease

A Randomized, Comparative, Multicenter, Safety and Contraceptive Efficacy Study of Two Cyclophasic xxxx/xxxx Regimens, and One Triphasic xxxx/xxxx Regimens (xxxx) and xxxx 1/20

xxxx Versus xxxx and xxxx in Major Depression:
Comparison of Discontinuation-Emergent Signs and Symptoms

A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Multicenter, Single-Dose, Dose-Range-Finding Study to Assess the Efficacy and Tolerability of xxxx in the Acute Treatment of Migraine

Comparison of xxxx, Continuous Combined Hormone Replacement Therapy, and Placebo in Early Postmenopausal Women: Effects on Bone, Endometrium, Menopausal Symptoms and Lipids

A Randomized, Double-Blind, Multicenter, Placebo-Controlled Menopausal Symptom Study of Three Doses of xxxx/xxxx (xxxx) Patches in a Sequential Hormone Replacement Therapy (HRT) Regimen

Research Experience:
(cont'd)

A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Multicenter, Dose-Range-Finding Study to Assess the Efficacy, Tolerability and Safety of xxxx (Administered As A Single Dose of 0.5 MG, 2.5 MG, or 5.0 MG) In The Treatment of Acute Migraine

A Multicenter, Double-Blind, Randomized, Placebo-Controlled, Parallel-Group Study of the Efficacy and Safety of Escalating the Dose of Oral xxxx in Subjects with Acute Migraine

A Multicenter, Randomized, Open-Label, Comparative, Study of the Safety, Toleration and Efficacy of Oral xxxx for Long Term Treatment of Subjects with Acute Migraine

A Randomized, Double-Blind, Parallel Trial Comparing xxxx 5/10 Mg Once Daily, xxxx 5/20 Mg Once Daily, xxxx xxxx 30 Mg Once Daily, and xxxx xxxx 0 Mg Once Daily In Patients Age 1-80 With Essential Hypertension Inadequately Controlled With xxxx xxxx 30 Mg Once Daily Followed By A Single-Blind Extension of xxxx 5/20 Mg Once Daily

A Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel-Group Study to Determine the Efficacy and Safety of xxxx in the Treatment of Osteoporosis in Elderly Women

Evaluation of Endometrial Histology and Bone Mineral Density (BMD) in Post Menopausal Women Receiving xxxx/xxxx Hormone Replacement Therapy (HRT)

A Double-Blind, Randomized, Placebo-Controlled, Multicenter Study Comparing the Efficacy and Safety of Oral Tablets of xxxx/xxxx xxxx as well as xxxx Alone Against Placebo in the Prevention of Osteoporosis in Postmenopausal Women

A Multicenter, Double-Blind, Placebo-Controlled, Parallel-Group Study Comparing the Efficacy and Safety of 3 Dosage Combinations of xxxx xxxx Plus xxxx xxxx for the Treatment of Vasomotor Symptoms of Menopause (Hot Flash Frequency and Intensity)

Research Experience:
(cont'd)

A Randomized, Double-Blind, Active-Controlled, Parallel-Group, Multicenter Study Assessing Menstrual Cycle Control and Ovulation Suppression Associated with Vaginal Administration of 5 Dose-Combinations of xxxx xxxx and xxxx xxxx

Evaluation of the Safety and Efficacy of Adding xxxx xxxx (8 to 16 mg) to xxxx in the Treatment of Patients with Severe (JNC-V) Hypertension: A Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel-Design Study with an Open-Label, Long Term Extension

A Randomized, Double-Blind, Placebo-Controlled, Four-Arm Dose-Finding Study Investigating the Efficacy and Safety of Three Doses of xxxx in Patients with Alzheimer's Disease

A Double-Blind, Randomized, Parallel-Group, Multicenter, Dose Finding Study Comparing the Efficacy and Safety of 1 mg xxxx - xxxx in Combination with Low Doses of xxxx xxxx with that of 1 mg xxxx - xxxx Alone on the Endometrium in Postmenopausal Women

Multinational, Multicentre, Double-Blind, Randomized, Placebo-Controlled, Parallel-Group Study to Compare xxxx 80 mg o.d. Titrated to 160 mg o.d. with xxxx 50 mg o.d. Titrated to 100 mg o.d. in Patients with Mild to Moderated Essential Hypertension

Randomized, Double-Blind, Double-Dummy, Active-Controlled Multi-Site Crossover Investigation Comparing the Efficacy of xxxx xx (xxxx xx10 mg OR 30 mg Tablets) Administered Every Twelve Hours to xxxx xx (xxxx 5 mg Tablets) Administered Every Six Hours in Patients with Chronic Pain

Double-Blind, Randomized, Placebo-Controlled Evaluation of the Safety, Tolerability, and Pharmacokinetics of xxxx (xxxx) in Patients with Alzheimer's Disease

A Double-Blind, Placebo-Controlled, Randomized, Dose Titration Study to Evaluate the Safety and Efficacy of xxxx

Research Experience:
(cont'd)

An Eight-Week, Multicenter, Parallel-Group, Double-Blind, Placebo-Controlled Study of xxxx in the Treatment of Elderly Outpatients with DSM-IV Major Depression

A Multicenter, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Efficacy and Safety of xxxx(xxx xx xx) in the Treatment of Moderate to Severe Vasomotor Symptoms and Atrophic Conditions Associated with the Menopause

A Randomized, Double-Blind, Placebo-Controlled, Eighteen Week, Safety and Efficacy Trial of xxxx (xx-xxx) 1.5 mg/Day with Uptitration to 6 mg/Day as Adjunctive Therapy to Insulin and Compared to Insulin Alone in Type II Diabetes Mellitus Patients (Non-Insulin Dependent Diabetes Mellitus, NIDDM)

A 24 Week, Multicenter, Randomized, Double-Blind, Placebo-Controlled Evaluation of the Efficacy and Safety of xxxx xxxx (xxxxx) in Patients with Dementia Associated with Cerebrovascular Disease

An Open Label, Randomized Dose Comparative Phase II Study of Low Dose xxxx

An Active Comparator and Placebo-Controlled, Parallel-Group, 6-Week Double Blind Study, Conducted Under In-House Blinding Conditions, to Assess the Efficacy, Safety and Tolerability of xxxx in Patients Aged 80 and Over with Osteoarthritis of the Knee or Hip

An Open-Label Extension Study to Evaluate the Long-Term Safety and Tolerability of xxxx-xx in Patients with Mild to Moderate Alzheimer's Disease

xxxx (xxxx) Experience with Safety and Tolerability (xxxx) with Outpatients With DSM IV Psychosis

An Open-Label, Non-Comparative, Multicenter, Study to Evaluate Contraceptive Efficacy, Cycle Control and Safety of an One-Compartment All-xxxx Vaginal Ring

Research Experience:
(cont'd)

A Multicenter, Double-Blind, Randomized Comparison of Continuous Oral xxxx-xxxx Combinations and Continuous Oral xxxx, examining the Effect on the Endometrium, Symptoms and Bleeding Patterns in Postmenopausal Women.

A Multicenter, Double-Blind, Controlled, Randomized Study to Determine Efficacy in the Relief of Hot Flushes in Women Receiving xxxx xxxx Compared to Oral Conjugated Estrogens.

A Twelve Month, Double-Blind, Placebo-Controlled, Investigation of the Safety And Efficacy of xxxx Transdermal System (1.0mg/cm^2 x 20 cm^2) in Patients with Dementia of the Alzheimer's Type (Twenty-Four Month Open-Label Extension)

A Twelve Month, Double-Blind, Placebo-Controlled, Investigation of the Safety and Efficacy of xxxx Transdermal System (1.0mg/cm^2 x 20 cm^2) in Patients with Dementia of the Alzheimer's Type.

A Multicenter, Randomized, Double-Blind, Eight Week Comparative Efficacy and Safety Study of xxxx 40 mg and xxxx 20 mg in Study Subjects with Erosive Esophagitis.

A Multicenter, Open-Label Long Term Safety Study of xxxx 40 mg in Subjects with Healed Erosive Esophagitis.

A Multicenter, Double-Blind, Double-Dummy, Randomized, Parallel-Group Trial to Compare the Efficacy and Safety of Three Doses of xxxx (3.75, 7.5, and 15 mg) with Placebo in Patients with Osteoarthritis of the Knee or Hip; and xxxx (100mg) as an Active Control Assess Trial Sensitivity.

A Multicenter, Double-Blind, Double-Dummy, Randomized, Parallel-Group to Compare the Efficacy and Safety of Three Doses of xxxx (7.5, 15, and 22 mg) with xxxx (150 mg) with Placebo in Patients with Rheumatoid Arthritis; and with xxxx (150 mg) as an Active Control to Assess Trial Sensitivity.

Phase II Double-Blind, Placebo-Controlled, 4-Week Multiple Dose Evaluation of xxxx for Its Safety, Toleration and Efficacy for Increasing IGF-1 in Older Normal Men and Women.

Xxxx in the Treatment of Skin/Soft Tissue Infections: An Open Label, Randomized, Dose Comparative Phase II Study of Low Dose xxxx.

Research Experience:
(cont'd)

Safety and Efficacy of Fixed Combination xxxx/xxxx Products as First Line Therapy in Patients With Type 2 Diabetes Mellitus Who Have Inadequate Glycemic Control With Diet and Exercise.

A Triple-Blind, Randomized, Parallel, Pilot Study of xxxx versus xxxx Treatment Regimens in Patients with Mild to Moderate Essential Hypertension

The Comparative Efficacy of xxxx, xxxx, and xxxx for Cognition in Schizophrenia.

Allelic Variation in Schizophrenia.

A Double-Blind, Placebo-Controlled, Parallel-Group Assessment of the Safety and Efficacy of Two Doses of the xxxx Transdermal System (10 mg and 20 mg) in Patients with Major Depression.

A Two-Week, Double-Blind, Placebo-Controlled Trial of the Effects of xxxx 20, 50, and 100 mg BID on Cognitive Tests in Depressed Geriatric Patients.

A Multicenter, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate xxxx in Patients with Probable Alzheimer's Disease of Mild to Moderate Severity.

A Randomized, Placebo-Controlled, Parallel-Group, Multiple-Dose Study of the Effects of xxxx and xxxx in Non-Insulin Dependent Diabetic Patients.

The Safety and Activity of Three Doses of xxxx Compared to Acyclovir in the Treatment of Herpes Zoster in Immunocompetent Adults.

A Comparative Efficacy and Safety Study of xxxx 40 mg and xxxx 20 mg in Study Subjects with Erosive Esophagitis

A Multicenter, Double-Blind, Randomized Study of Continuous Transdermal xxxx Combinations, Compared to Continuous Transdermal xxxx, to Examine the Safety and Effect on the Endometrium Symptoms and Bleeding Patterns in Postmenopausal Women.

A Double-Blind, Placebo-Controlled, Ranedomized Trial to Determine the Effects of a Range of Doses of xxxx Novel Oral Dose form (Biphasic Tablet) Administered Either Once or Twice a Day in Patients with Type 2 Diabetes Who Have Inadequate Glycemic Control with Diet and Exercise.

Research Experience:
(cont'd)

A Multicenter, Randomized, Placebo-Controlled, Double-Blind, Dose-Ranging Study to Assess the Effect of xxxx on Insulin and Ovarian Androgen Production in Obese Woman with Polycystic Ovary Syndrome (PCOS).

A Double-Blind Randomized, Stratified, Parallel-Group Study to Assess the Incidence of PUB's During Chronic Treatment with xxxx or xxxx in Patients with Rheumatoid Arthritis; U.S. Cohort.

A Multicenter, Double-Blind, Randomized Parallel-Group Fixed Dose Study to Prospectively Evaluate the Efficacy, Safety and Tolerability of xxxx Monotherapy, Compared to xxxx Monotherapy in Patients with Type 2 Diabetes Mellitus Inadequately Controlled With Diet.

Multicenter, Randomized, Double-Blind, xxxx Controlled Study of the Efficacy and Safety of xxxx in Subjects with Major Depressive Disorder Who are at Least 65 Years of Age.

A Randomized, Double-Blind, Active-and-Placebo-Controlled, Parallel-Group, Multicenter Study Assessing the Safety and Protective Effect on the Endometrium of 4 Dosage Combinations of xxxx plus xxxx.

A Comparative Trial of xxxx, xxxx and xxxx in Early Postmenopausal Women: A Randomized, Open, Multicenter Study

A Multicenter, Double-Blind, Randomized, Placebo-Controlled, Dose-Finding Study of xxxx in Patients with Essential Hypertension.

A Multicenter, Randomized, Double-Blind, Parallel-Group Study comparing Two 12-Hour xxxx Formulations for the Treatment of Patients with Moderate to Severe Chronic Pain.

A Phase II, Multicenter, Randomized, Double-Blind, Placebo-Controlled, Multiple-Dose Study of a Novel Formulation of Molecular xxxx for the Treatment of Moderate or Severe, Symptomatic Fibrocystic Breast Disease in Otherwise Healthy, Euthyroid, Premenopausal Woman.

Research Experience:
(cont'd)

Double-Blind, Placebo-Controlled, Parallel-Group Comparison of the Efficacy and Safety of xxxx, xxxx, and Placebo with an Open Label Extension in the Treatment of Osteoarthritis of the Knee and/or Hip.

Evaluation of the Antihypertensive Efficacy of xxxx in Comparison to xxxx: A Multicenter, Double-Blind, Randomized, Parallel-Group, Forced-Titration Study.

A Prospective, Multinational, Multicenter, Double-Blind, Randomized, Active-Controlled Trial in Patients with Essential Hypertension to Compare the Effects of xxxx 80 and 160 mg, with or Without the Addition of xxxx, Once Daily to That of xxxx 5 and 10 mg Once Daily, with or Without the Addition of xxxx, on Cardiovascular Morbidity and Mortality.

An Open-Label Study to Assess the Safety of the xxxx Transdermal System in Patients with Major Depression.

A Multicenter, Randomized, Double-Dummy, Parallel Groups Study of xxxx (xxxx oral extended release capsules) in Patients with Chronic, Moderate to Severe Pain.

A Multicenter, Non-Randomized, Open-Extension Study of xxxx (xxxx oral extended release capsules in Patients with Chronic, Moderate to Severe Pain Who Have Completed a Prior xxxx Clinical Trial.

A 1-Year, Randomized, Placebo- and Active-Comparator-Controlled, Parallel Group, Double-Blind, Two-Part Study to Assess the Safety and Efficacy of xxxx Versus xxxx in Patients with Osteoarthritis.

An Open-Label, Repeated-Dose Trial to Characterize the Efficacy and Safety, and Impact on Quality of Life Measures of xxxx (xxxx) in Patients with Chronic Low Back Pain.

Safety, Efficacy, and Impact on Quality of Life of Long-Term Administration of xxxx (xxxx) in Patients with Chronic Low Back Pain.

A Double-Blind, Placebo and xxxx-Controlled, Multicenter Study Evaluating the Efficacy and Safety of xxxx in Patients with Major Depressive Disorder.

Research Experience:
(cont'd)

A Phase lll Double-Blind Efficacy and Safety Study of One Dose of xxxx (10 mg) Compared to Placebo in Subjects with Primary Hypercholesterolemia.

A Multicenter, Randomized, Controlled Clinical Trial Comparing the Safety and Efficacy of xxxx to xxxx 3.75 mg in Women with Endometriosis-Associated Pain.

A Phase III, Randomized, Multicenter, Placebo-Controlled, Double-Blind Clinical Trial to Study the Efficacy and Safety of xxxx for the Treatment of Hot Flashes Following Surgical or Chemical Castration of Prostate Cancer Patients and its Impact on the Quality of Life in These Patients.

A 24-Week, Randomized, Double-Blind, Multicenter, Trial to Evaluate the Efficacy and Safety of Starting and Maximum Doses of xxxx and xxxx in the Treatment of High Risk Hypercholesterolemic Subjects.

A 12-Week, Multicenter, Randomized, Double-Blind, Placebo-Controlled Trial to Evaluate the Efficacy and Safety of xxxx (5, 10, 20, 40, and 80 mg) in the Treatment of Subjects with Hypertriglyceridemia.

A Double-Blind, Randomized, Placebo-Controlled, Parallel-Group, Fixed-Dose Study of the Efficacy, Safety, and Tolerability of 30 mg and 90 mg xxxx Extended Release Compared to Placebo in Patients with Generalized Anxiety Disorder.

An Open-Label Study of the Safety, Tolerability, and Efficacy of up to 90 mg xxxx Extended Release in Patients with Generalized Anxiety Disorder.

A Multicenter, Randomized, Double-Blind, Active Control Trial to Evaluate the Safety and Efficacy of xxxx as First Line Therapy in Patients with Type 2 Diabetes Mellitus Who Have Inadequate Glycemic Control with Diet and Exercise.

Ninety Day Safety Study of xxxx in Male and Female Parkinson's Patients on xxxx + xxxx.

An Innovative Approach to the Treatment of Post-Herpetic Neuralgia: An Open-Label Study of xxxx.

Research Experience:
(cont'd)

A Double-Blind, Randomized, Placebo-Controlled Clinical Trial in Postmenopausal Women to Demonstrate the Efficacy of Intravaginal Rings Releasing xxxx with Respect to Postmenopausal Vasomotor Symptoms.

Xxxx Versus Placebo and xxxx in the Acute Treatment of Major Depression.

A Prospective, Double-Blind, Randomized, Parallel Efficacy Study of a xxxx Treatment Regimen Versus Placebo in the Treatment of Patients with Isolated Systolic Hypertension.

A Placebo Controlled, Parallel-Group, 4-Week, Trial Conducted Under Double Blind Conditions to Assess the Efficacy and Safety of xxxx in Patients with Chronic Low Back Pain.

A Multicenter, Double-Blind, Placebo-Controlled Study of the Tolerability and Effect of xxxx in Parkinson's subjects with End-of-Dose Wearing off Symptoms Occurring no Earlier than 4 Hours After Their Most Recent xxxx Dose.

Evaluation of Daily Dose of xxxx 7.5 mg Compared to Placebo in the Treatment of Symptomatic Post-Menopausal Women.

Xxxx, Placebo, and xxxx Comparison in Patients with Major Depressive Disorder.

A Single Dose, Double-Blind, Safety and Efficacy Study of xxxx, xxxx and xxxx in Subjects with Acute Migraine Attacks.

Randomized, Multicenter, Multi-Dose, Double-Blind, Double-Dummy, Parallel-Group Study Comparing the Efficacy and Safety of Sustained-Release xxxx to Placebo in the Treatment of Pain Associated with Osteoarthritis.

Long-Term, Open-Label, Safety and Tolerability Study of xxxx in Subjects with Primary Hypercholesterolemia.

A Comparative Efficacy Study of xxxx (40 mg qd) and xxxx (30 mg qd) in Patients with Erosive Esophagitis.

An Open-Label, Multinational, Multicenter, Extension Trial to Assess the Long-Term Safety and Efficacy of xxxx in Subjects in the xxxx Clinical Trial Program.

Research Experience:
(cont'd)

A Multicenter, Randomized, Double-Blind, Active Control Trial to Compare the Safety and Efficacy of a New Formulation of xxxx Tablets (500/1.25mg) to xxxx as First Line Therapy in Patients with Type 2 Diabetes Mellitus Who Have Inadequate Glycemic Control with Diet and Exercise.

Xxxx Cardiovascular Treatment Assessment Versus xxxx.

A Double-Blind Randomized Study to Evaluate the Effects of Fixed Combination xxxx Therapy in Subjects with Type 2 Diabetes Mellitus Who Have Inadequate Glycemic Control on Half-Maximum to Maximum of the Labeled Doses of xxxx Monotherapy.

Patient Treatment Preference for and Satisfaction with Migraine Headache Therapy: xxxx Tablets Versus Current xxxx Therapy.

A 13-Week, Multicenter, Randomized, Double-Blind, Double-Dummy, Placebo-Controlled, Parallel Group Trial of 2 Doses of xxxx (200 and 400 mg qd) in Patients with Rheumatoid Arthritis Using xxxx (200 mg bid) as a Comparator.

A Randomized, Open-Label, Comparative, Multicenter Trial to Evaluate Contraceptive Efficacy, Cycle Control, Safety and Acceptability of a Monophasis xxxx containing 200 µg xxxx and 20 µg xxxx, Compared to a xxxx Containing 100 µg xxxx and 20 µg xxxx.

A Six-Week, Double-Blind, Placebo-Controlled Multicenter Study to Evaluate the Safety and Efficacy of 3 Doses of xxxx (0.5, 3 and 10mg) and xxxx in Subjects with Major Depressive Disorder.

A Randomized, Double-Blind, xxxx and Placebo-Controlled Study of the Efficacy and Safety of xxxx in Outpatients with Generalized Anxiety Disorder.

Open-Label xxxx Continuation Therapy in Patients with Major Depression Disorder.

Pharmacogenomics Blood Sampling Protocol.

A Randomized, Double-Blind, Parallel-Group, Placebo Controlled Evaluation of xxxx and Over-Encapsulated xxxx, Alone and in Combination in the Acute Treatment of a Migraine Attack.

Research Experience:
(cont'd)

A Multicenter, Multinational, Open-Label, Extension Study of Oral xxxx for the Treatment of Opioid-Induced Constipation in Patients with Chronic, Non-Malignant or Malignant Pain.

Open-Label, Multicenter, Multi-Dose Study Evaluating the Long Term Efficacy and Safety of xxxx SR (Titrated Doses) in the Treatment of Pain Associated with Osteoarthritis.

A Double-Blind, Placebo- and xxxx-Controlled, Multicenter, Dose-Ranging Study Evaluating the Efficacy and Safety of xxxx in Outpatients with Major Depressive Disorder.

A Double-Blind, Placebo Controlled, 3-Arm Fixed Dose Study of xxxx CR Continuous Treatment (12.5mg and 25mg/day) for Premenstrual Dysphoric Disorder.

A Double-Blind, Placebo-Controlled, Randomized, Multicenter Study to Investigate the Safety and Efficacy of xxxx in Non-Constipated Patients with Established Irritable Bowel Syndrome.

A Randomized Comparator, Controlled, Double-Blind, Study of the Liver Safety of xxxx Versus xxxx with xxxx and Insulin as Part of Step Therapy in Subjects with Type 2 (Non-Insulin Dependent) Diabetes.

A Multicenter, Randomized, Double-Blind Clinical Trial Comparing the Safety and Efficacy of xxxx Tablets to xxxx Plus xxxx Therapy in Patients with Type 2 Diabetes Mellitus Who Have Inadequate Glycemic Control with xxxx Monotherapy.

A Phase IIB, Six-Week, Double-Blind, Placebo- and xxxx-Controlled Multicenter Study to Evaluate the Safety and Efficacy of Oral xxxx in Outpatients with Major Depressive Disorder.

A Six-Week, Double-Blind, Placebo-Controlled Multicenter Study to Evaluate the Safety and Efficacy of 3 Doses of xxxx (0.5, 3 and 10 mg) and xxxx in Subjects with Major Depressive Disorder.

A 3-Month, Double-Blind, Placebo-Controlled, Fixed Dose, Extension Study of xxxx (12.5mg and 25mg/day) Continuous Treatment for PMDD Patients Completing Studies xxxx, xxxx or xxxx.

Research Experience:
(cont'd)

A Phase II, Randomized, Double-Blind, Vehicle-Controlled, Dose Frequency Response Study of Topical xxxx Gel Applied to Anogential Herpes Lesions Once, Twice or Three Times Per Week for One Recurrence to Prevent Future Recurrences.

A Randomized, Double-Blind, Parallel, Placebo-Controlled, Multicenter Trial to Study the Efficacy, Safety and Steady State Pharmacokinetics of xxxx (dose Levels: 80 mg, 120 mg, 160 mg and 640 mg) in Patients with Essential Hypertension.

Antihypertensive Efficacy of Adding xxxx to xxxx in Comparison to Up-titration of xxxx: A Multicenter Trial using xxxx vs xxxx to Evaluate the Effects on Lowering Blood Pressure.

A 24 Week, Multicenter, Randomized, Double-Blind, Placebo-Controlled Evaluation of the Safety and Efficacy of xxxx in Patients with Severe Alzheimer's Disease Followed by a 12 Week Open-Label Extension Period.

Placebo Controlled Evaluation of xxxx in the Treatment of Alzheimer's Disease: Safety and Efficacy of a Controlled Release Formulation.

A Randomized, 26 Week, Double-Blind, Placebo-Controlled Trial to Evaluate the Safety and Efficacy of xxxx in the Treatment of Dementia Secondary to Cerebrovascular Disease.

A Randomized, Double-Blind, Safety, and Efficacy Pilot Study of xxxx Versus xxxx as First-Line Antihypertensive Therapy in Patients with Type 2 Diabetes Mellitus and Hypertension.

A Placebo-Controlled Dose-Titration Efficacy and Tolerability Study of xxxx in Patients with Probable Alzheimer's Disease.

Multicenter, Randomized, Double-Blind, Active Controlled Trial to Compare the Efficacy and Safety of 104 Weeks of xxxx Plus xxxx vs
xxxx Plus xxxx in Drug Naïve Subjects with Type 2 Diabetes Mellitus who have Inadequate Glycemic Control with Diet and Exercise.

A 52 Week Prospective, Randomized, Multicenter, Double-Blind, Placebo-Controlled, Parallel-Group Comparison of the Efficacy, Tolerability and Safety of 3-12 mg/day of xxxx Capsules in Patients with Probable Vascular Dementia.

Research Experience:
(cont'd)

A 13 Week, International, Multicenter, Randomized Double-Blind, Double-Dummy, Placebo-Controlled, Parallel Group Trial Assessing the Safety and Efficacy of 2 Doses xxxx (200 mg and 400 mg od) in Patients with Knee Primary Osteoarthritis, Using xxxx (200 mg od) as a Comparator.

A 26-Week, International, Multicenter, Randomized, Double-Blind, Double-Dummy Parallel Group Active Controlled Endoscopic Study of Gastroduodenal Effects of xxxx (400 mg and 800 mg) in Patients with Rheumatoid Arthritis Using xxxx (800 mg tid) and xxxx (200 mg bid) as Comparators.

A Phase IIB, Seven Week, Double-Blind, Placebo- and xxxx Controlled Multicenter Study to Evaluate the Safety and Efficacy of Oral xxxx in Outpatients with Major Depressive Disorder and Associated Somatic Symptoms.

Preliminary Efficacy Study in Pre-Menopausal Women with Normal or Impaired Sexual Function Due to Acquired Arousal and/or Orgasm Disorder Comparing xxxx 1.0 mg to Placebo: Double-Blind with 8 Week Home Treatment Phase.

Phase III Study of xxxx Subcutaneous Injection in Women with Endometriosis in the US and Canada.

Phase III Contraception Study of xxxx Subcutaneous Injection in Women of Childbearing Potential in the Americas (Including a Bone Mineral Density (BMD) Substudy Comparing the Effects of xxxx and xxxx) Also Including a Return of Ovulation Substudy.

Effects of Oral xxxx on Lipoproteins in Subjects with Type II Diabetes Mellitus Who are Receiving Statin Therapy.

A Phase 2, Multicenter, Double-Blind, Placebo-Controlled, Dose-Finding Study of xxxx in the Treatment of High-Grade Squamous Intra-Epithelial Lesions of the Uterine Cervix.

Prospective, Randomized, Double-Blind Multicenter, Comparative Trial to Evaluate the Efficacy and Safety of xxxx Once-Daily (QD) Modified Release Tablets 1000 Mg Versus Conventional xxxx 500 mg Tablets BID in the 7-14 Day Treatment of Patients with Complicated Urinary Tract Infections (cUTI) or Acute Uncomplicated Pyelonephritis.

Research Experience:
(cont'd)

Open-Label Pilot Study Assessing the Efficacy and Safety of New Formulations of xxxx in the Treatment of Low Back Pain.

A Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Safety and Efficacy of Three Doses of xxxx (0.3 mg, 0.45 mg, and 0.625 mg Modified Release Tablets) Compared with Placebo in Hysterectomixed Postmenopausal Women for the Prevention of Osteoporosis.

Double-Blind, Placebo-Controlled, Parallel Group, Dose Ranging Comparison of the Efficacy and Safety of Extended Release xxxx and Placebo in the Treatment of Osteoarthritis of the Knee and/or Hip.

A Multicenter, Double-Blind, Placebo-Controlled, Randomized Study to Determine Efficacy in the Relief of Hot Flashes in Women Receiving Oral xxxx Tablets.

An Open-Label Extension Trial to Assess the Long-Term Safety of a Controlled Release Formulation of xxxx in the Treatment of Alzheimer's Dementia.

A Double-Blind, Multicenter, Randomized, Placebo-Controlled, Parallel Group Study of the Effects of xxxx on Safety and Efficacy in Patients with Mild to Moderate Hypertension.

A Multinational, Multicenter, Randomized, Double-Blind, Parallel Group, Active Controlled, Comparative Trial, to Assess the Endometrial Histological Profile Following Treatment with xxxx Versus xxxx plus xxxx in Postmenopausal Women.

A Seven-Week, Double-Blind, Extension of xxxx: A Phase IIB, Seven-Week, Double-Blind, Placebo and xxxx-Controlled Multicenter Study to Evaluate the Safety and Efficacy of Oral xxxx in Outpatients with Major Depressive Disorder and Associated Somatic Symptoms.

A Double-Blind Placebo-Controlled, Parallel Group Design Study of Two Doses of xxxx vs. Placebo for the Treatment of Sexual Dysfunction (Hypoactive Desire) in Postmenopausal Women.

A Double-Blind, Placebo-Controlled, Parallel Group Design Study of Two Doses of xxxx vs. Placebo for the Treatment of Sexual Dysfunction (Arousal Disorder) in Postmenopausal Women.

Research Experience:
(cont'd)

A Double-Blind, Randomized, Parallel Group Study of xxxx 10 mg OD Versus Placebo in the Management of Acute Urinary Retention in Patients with a First Episode Due to BPH.

A Randomized, Double-Blind, Dose Ranging, Dose Comparison-Controlled Trial to Determine the Safety and Efficacy of xxxx in Patients with Type 2 Diabetes.

A Phase II Study on Analgesic Efficacy, Safety and Tolerability of xxxx: a Six Week, Randomized, Double-Blind, Placebo-Controlled, Dose-Finding, Multicenter Study Comparing xxxx with xxxx and with xxxx in Subjects with Osteoarthritis of the Knee.

Research Experience

- Open Label Trials on Anafranil for Obsessive Compulsive Disorder in Adults and Adolescents.
- Open Label Trials on Buspar for Anxiety Disorders in Adults.
- A Multicenter, Double-blind, Randomized Comparison of the Efficacy and Safety of XXX and XXX in the Treatment of Patients with Schizophrenia
- A Controlled Trial of XXX Versus XXX in the Treatment of Schizophrenic and Schizoaffective Subjects with Comorbid Depression.
- A Phase III, Randomized, Double-Blind, Placebo-Controlled Study of Safety and Efficacy of XXX in Patients with Major Depressive Disorder with Psychotic Features Who are not Receiving Antidepressants or Antipsychotics
- A Phase III, Open-Label Study of the Safety and Efficacy of XXX in Patients with Major Depressive Disorder with Psychotic Features Who Have Previously Demonstrated a Rapid Response to either XXX or Placebo.
- A Randomized, Double-Blind, Multiple Dose Study of the Relative Bioavailability and Tolerability of a Slow-Release Formulation and a Medium-Release Formulation of XXX in Patients with Schizophrenia or Schizoaffective Disorder.

CURRICULUM VITAE

LASZLO GYULAI, M.D.

Associate Professor
Departments of Psychiatry and Radiology
University of Pennsylvania

Home Address: REDACTED

Office Address: Division of Mood and Anxiety Disorders

3535 Market Street, Suite 670
Philadelphia, PA 19104-3309
(215) 746-6415

Social Security Number: REDACTED

Education:

1967-73	M.D. Summa Cum Laude Semmelweis Medical University, Budapest, Hungary
1978-80	Philosophy - Post Graduate Training Eotvos L. University, Budapest, Hungary

Postgraduate Training:

2/85-6/85	Intern in Psychiatry University of Pennsylvania Medical Center - Philadelphia
6/85 - 2/86	Intern in Medicine Mercy Catholic Medical Center - Philadelphia
2/86 - 2/89	Resident in Psychiatry University of Pennsylvania Medical Center - Philadelphia

Faculty Appointments:

1973-80	Assistant Professor of Physiology Experimental Research Department, II Institute of Physiology, Semmelweis Medical University,

	Budapest, Hungary
1980-82	Research Associate in Neurology, Cerebrovascular Research Center, University of Pennsylvania Medical Center
1982-85	Research Associate, Johnson Research Foundation Department of Biochemistry and Biophysics, University of Pennsylvania
1985-89	Assistant Instructor, Department of Psychiatry, University of Pennsylvania Medical Center
1989	Instructor, Department of Psychiatry, University of Pennsylvania Medical Center
1989-1999	Assistant Professor of Psychiatry at the University of Pennsylvania Medical Center, Department of Psychiatry, University of Pennsylvania School of Medicine
1999-present	Associate Professor of Psychiatry at the University of Pennsylvania Medical Center, Department of Psychiatry, University of Pennsylvania School of Medicine
1991-present	Associate Professor of Psychiatry in Radiology, Department of Radiology, University of Pennsylvania Medical Center

Hospital and Administrative Appointments:

1976-80	Director, Research Training Program for Medical Students Semmelweis Medical University, Budapest, Hungary
1987-89	House Physician, Northwestern Institute, Fort Washington, Pennsylvania
1988-89	Psychiatric Consultant, Child Guidance Clinic, University of Pennsylvania, Philadelphia
1989-present	Attending Psychiatrist, Hospital of the University of Pennsylvania
1990-91	Co-Director, Bipolar Disorders Unit, Mood and Anxiety Disorders Section, Department of Psychiatry, University of Pennsylvania Medical Center.
1991-present	Director, Bipolar Disorders Program, Mood and Anxiety Disorders Section, Department of Psychiatry, University of Pennsylvania Medical Center.
1998 to 2000	Attending Psychiatrist, Presbyterian Medical Center, University of Pennsylvania Medical Center

Specialty Certification:

1991	American Board of Psychiatry and Neurology

Licensure: Commonwealth of Pennsylvania

Medical Registration: ECFMG, FLEX

Awards, Honors and Membership in Honorary Societies:

1989	National Psychiatric Endowment Fund, Annual Laughlin Award for Merit (N.P.E.F. Fellow)
1990	Young Investigator Award National Alliance for Research in Schizophrenia and Depression
1992	University Research Foundation Award
1994,1995,1996, 2002	Selected as one of the "Best Doctors in Philadelphia" by Philadelphia Magazine
1995	Theodore and Vada Stanley Foundation Research Award
1996-present	Board Examiner for American Board of Psychiatry and Neurology
1997	Patricia Kind Foundation Research Award
1997	University Research Foundation Award
1998,2000	Best Doctors in the US, Woodward/ White Publication
1999	Achievement Award, Jonathan Philip Ford Foundation
2000	Professional of the Year, New Directions/NDMDA Delaware
2001	Selected for inclusion in the Who's Who, Starthmore
2002	Research Award, Jonathan Philip Ford Foundation
2002	

Memberships in Professional and Scientific Societies:

National Societies:

American Psychiatric Association
Society of Nuclear Medicine

Local Societies:

American Suicide Foundation, Member, Scientific Advisory Council for the Greater Philadelphia Chapter

National Scientific Committees:

Member, Reviewer, Institutional Development Grant Program, North Carolina Biotechnology Center, 1997 .
Advisor, Administrator for Special Programs, Office of Vocational Rehabilitation, Commonwealth of Pennsylvania, 1997
Member, Data Monitoring Board for " Reducing the Efficacy-Effectiveness Gap in Bipolar Disorder" (P.I.:Dr. Mark S. Bauer) Department of Veterans Affairs, Washington D.C.,1998-current
Member of Advisory Board, Abbott Laboratories, Glaxo-Wellcome, Bristol-Meyers-Squibb
Grant Reviewer, Department of Veterans Affairs, Washington D.C

Academic Committees at the University of Pennsylvania:

1989-1994	Member, Residency Recruitment Subcommittee, Department of Psychiatry
1991-1994	Member, Research Committee, Department of Psychiatry
1992-1999	Member, Committee on Undergraduate Education
1998-2000	Member, Faculty Senate
1998-2000	Member, Faculty Senate Executive Committee
1998-2000	Observing member, Medical Faculty Senate Steering Committee
1999	Member, Committee on Committees, Faculty Senate Executive Committee
1999-2000	Co-Chair, Ad-Hoc Committee on Parity in Health Insurance for Mental Health, Medical Faculty Senate Steering Committee
1999-current	Program Directors Committee, Department of Psychiatry

Major Teaching and Clinical Responsibilities :

Clinical

1990 to present	In charge of the Clinical Program at the Bipolar Disorders Program
1990 to present	Attending Psychiatrist, Hospital of the University of Pennsylvania
1990 to present	Consultation Service of the Bipolar Disorders Program for psychiatrists and other physicians in the Mid-Atlantic Region, US, and abroad
1998 to 2000	Attending Psychiatrist of the Affective Disorders Team at the Inpatient Service, Department of Psychiatry, UPMC

Teaching:

Residency

1989,1990-91	Course Director, Inpatient Psychotherapy: Course of six lectures for residents, Department of Psychiatry, Hospital of the University of Pennsylvania
1990-97	Course Director, Resident's Bipolar Clinic - a one-year Specialty training program for Residents in Bipolar Disorder
1989-present	Clinical Supervision of residents for outpatient, inpatient care and consultation service
1994-97	Clinical supervision of fellows and psychologists at the Cognitive Therapy Center
1990- present	Lectures on Bipolar Disorders for PGYII., III and IV

	Residents
2000-current	Course Director, Professors' Rounds (Inpatient Program)
2000-current	Module Director, Neuroscience and Psychopharmacology Course, Mood Disorders Module

Medical Students

1974-1980	Lecturer and Instructor on medical physiology for medical students annually, II. Department of Physiology, Semmelweis Medical University, Budapest
1976 - 1980	Course Director, Experimental Methods, Research Scientist Training Program for Medical Students, Semmelweis Medical University, Budapest
1988 -present	Supervision of medical students on Inpatient Unit of the Department of Psychiatry, Hospital of the University of Pennsylvania
1991- 1995	Integrative Neuroscience Course, Leader, Small Group, School of Medicine, University of Pennsylvania
1991,1992,1994,1997,1998,1999,2000,2001	Lectures on Bipolar Disorder and Treatment of Mania Pharmacology 100, University of Pennsylvania
1996-97	Penn Medical Scholars Program, Preceptor
1996-current	Advisor, Medical Student Research Track
1998, 1999	Course Director, the Affective Disorders Panel for the Integrative Neuroscience Course
1996,1997,1998,1999,2000,2001	Lectures on Phenomenology, Diagnosis and Course of Affective Disorders, Integrative Neuroscience Course

Principal Investigator on Grants and contracts:

National Institute of Mental Health:

Systematic Treatment Enhancement Program for Bipolar Disorder, NIMH-98-DS-001, PI at the U. Pennsylvania Site. (PI for the whole project: Gary Sachs M.D., Massachusetts General Hospital, Harvard University)

Thyroid Axis and Episodic Behavior. NIMH 1P01MH44210-01; 7/1/89-6/30/94 (Co-Investigator; PI: Peter C. Whybrow, MD)

A Collaborative Genomic Study of Bipolar Disorder. NIMH 1RO1MH5955301;10/01/98-9/30/99 (Co-Investigator; PI: Wade

Berrettini, MD,PhD)

Foundations:

Treatment of rapid cycling bipolar disorder with thyroid hormones. Stanley Foundation; 7/1/95-6/30/97

Measurement of regional brain lithium concentration in humans in vivo by localized lithium-7 magnetic resonance Spectroscopy. Whitaker Foundation;11/1/89-10/30/92

Brain lithium metabolism in rapid cycling bipolar disorder - An in Vivo 7-lithium magnetic resonance study. NARSAD; 7/1/90-6/30/1992;

Lithium NMR Spectroscopy in Rapid Cycling Bipolar Disorders. Research Foundation, University of Pennsylvania; 5/27/92-5/26/93

Quantitative analysis of daily mood fluctuations in bipolar disorder – methods to improve diagnosis and treatment. University of Pennsylvania Research Foundation. 6/15/97-6/15/98

Pharmaceutical Companies:

Safety and Efficacy of Depakote in the Prevention of Mania in Patients with Bipolar Disorder. Abbott Laboratories; 7/1/93-9/30/96

A Double-Blind, Placebo-Controlled, Comparison of Imipramine and Paroxetine in the Treatment of Bipolar Depression. SmithKline Beecham Pharmaceuticals; 11/1/93-6/30/97

Comparative Cost-Effectiveness Study of Depakote and Usual Care Versus Lithium and Usual Care in the Treatment of Bipolar Disorder. Abbott Laboratories; 5/1/96-6/30/98

Gabapentin adjunctive treatment in patients with bipolar disorder; Parke Davis; 6/15/96-3/31/98

Chronobook data analysis and management study.Parke-Davis; 4/15/97-6/30/98

Lamictal (lamotrigine) in Bipolar Disorder (fixed dose) (605): A multicentre, double-blind, placebo-controlled, randomised, fixed –dose evaluation of the safety and efficacy of lamotrigine in the long-term prevention of relapse and recurrence of depression and/or mania in patients with Bipolar I disorder. Glaxo-Wellcome; 11/1/97-2001

Lamictal (lamotrigine in Rapid Cycling Bipolar Disorder (614): A multicenter, double-blind, placebo-controlled flexible-dose, parallel-group evaluation of the safety and efficacy of lamotrigine in the long-term prevention of mood episodes in patients with bipolar disorder with rapid cycling. Glaxo-Wellcome; 11/1/97-5/28/99

Depakote ER in the Treatment of the manic phase of bipolar disorder: Evaluation of the efficacy and safety of depakote CR in the treatment of the manic phase of bipolar disorder: A placebo-controlled study.Abbott Laboratories; 11/1/98-6/30/99

A multicenter, double-blind, placebo controlled, flexible-dose evaluation of the safety and efficacy of lamictal (lamotrigine) in the long-term treatment of patients who have bipolar disorder with rapid cycling. Glaxo-Wellcome; 2/1/99-6/30/99

A multicenter, randomized, double-blind, placebo-controlled study of two fixed doses of aripiprazole in the treatment of patients with acute mania, Bristol-Myers Squibb Company, 3/1/00-3/1/2001

A multicenter, randomized, double-blind, placebo-controlled study of aripiprazole in the maintenance treatment of patients with bipolar disorder, Bristol-Myers Squibb Company, 3/1/00-3/1/2001

A Multicenter, Double-Blind, Randomized, Placebo-Controlled Trial of the Safety and Efficacy of Seroquel (Quetiapine Fumarate) as Add-On Therapy with Lithium or Divalproex in the Treatment of Acute Mania, Astra-Zeneca, 8/1/00-8/1/2001

A Multicenter, Double-Blind, Placebo-Controlled, Fixed-Dose Evaluation of the Safety, Efficacy and Tolerability of LAMICTAL (Lamotrigine) in the Treatment of a Major Depressive Episode in Patients with Type I Bipolar Disorder, GlaxoSmithKline, 1/30/00-2002

Bipolar Disorder Effectiveness Study (BIDES), Eli Lilly, 2002-

A Multicenter, Randomized, Double-Blind Study of Aripiprazole versus Placebo in the Treatment of Acutely Manic Patients with Bipolar Disorder Bristol-Myers Squibb Company, 2002-

CLINICAL TRIALS EXPERIENCE

Drug, Generalized Anxiety Disorder, Phase III , 1988.

Drug, Obsessive-Compulsive Disorder, Phase IV Open Label Trial, 1989.

Drug, Co-Morbidity, Open Label Panic Trial, 1992.

Drug, Panic Disorder, Double-Blind Phase III, 1992.

Drug, Major Depression, Open Label Phase IV, Pfizer-Roerig, 1991.

Drug, Timed-Release, Major Depression, Phase III Double-Blind, 1996.

Oral *Drug*, Chronic Pain, Phase III Double-Blind, 1997.

Drug, Major Depression, Double-Blind Phase II, 1998.

Drug, Migraine Headache, Phase IV Open Label,1998.

Drug, Posttraumatic Stress Disorder (PTSD), Phase III Double-Blind, 1999.

Drug, Major Depressive Disorder, Phase III Double-Blind, Organon, 1999.

Drug, Generalized Anxiety Disorder, Phase III Double-Blind, 1999.

Drug, Major Depressive Disorder Double-Blind, 1999.

Drug, Major Depressive Disorder Resistant to *Drug*, 1999.

Drug, ADHD, Double Blind, Placebo Controlled Parallel-Group Study, 1999.

Drug, ADHD, Double Blind, Placebo-Controlled Study of Modified Release, 1999

A Placebo-controlled Study of *Drug* Dosed BID and TID in Patients with Generalized Anxiety Disorder, 1999.

A Placebo-Controlled Study of *Drug* and *Drug* in Patients with Panic Disorder, 1999.

A Multicenter Trial to Evaluate the Efficacy, Tolerability and Subject Satisfaction with *Drug* in the Treatment Of Migraine Headache Attacks in Neurology Practices, 1999.

Drug, Placebo, and *Drug* Comparison In Patients with Major Depressive Disorder (M/2020/0046). 2000.

A Double-Blind, Placebo-Controlled, Fixed Dose study of *Drug* or Continuous Treatment (12.5 mg and 25mg) for Premenstrual Dysphoric Disorder. (Protocol 29060/677). 2000.

Three month Double Blind, Placebo-Controlled, Fixed Dose, Extension of *Drug* Continuous Treatment for Premenstrual Dysphoric Disorder for Patients Completing Protocol 29060/667, 668, or 689. 2000.

A Multicenter, Double-Blind, Placebo-controlled, Safety and Efficacy Study of *Drug* Transdermal System in Pediatric patients with Attention Deficit Hyperactivity Disorder. Protocol N17-010. 2000.

A long-term, Open-label Study of *Drug* Transdermal System in Pediatric Patients with Attention Deficit Hyperactivity Disorder Protocol N17-011. 2000.

A Multicenter, Open-Label, Six Month Extension Study to assess the Long-Term Safety of *Drug* in children and

Adolescents with Major depressive Disorder (MDD) or Obsessive Compulsive Disorder (OCD). Protocol 29060/716. 2000.

A 16 Week Double-Blind, Placebo Controlled Study to Investigate the Efficacy And Tolerability of *Drug* in the Treatment of Children and Adolescents With Social Anxiety Disorder/Social Phobia. Protocol 29060/676. 2000.

Drug versus Placebo in Treatment of Major Depression. Protocol H5Z-MC-LUAB(c). 2000.

An Open-Label Evaluation of the Long-term Safety of Oral *Drug* 1 mg Twice Daily as short-Term Prophylactic Treatment for Menstrually-Associated Migraines. Protocol S2W40027. 2000.

Open-Label *Drug* continuation Therapy. Protocol 950E-0005-087. 2000.

A Randomized, Double-blind, placebo-controlled study of *drug* as mono-therapy Assessment of Reducing Cholesterol (MONARCH), 2001.

A Double-Blind, placebo controlled, fixed-dosage study comparing the efficacy and tolerability of *drug* and *drug* to placebo in the treatment of Major Depressive Disorder with anxiety, 2001.

A Well-Controlled Safety and Efficacy Study of *Drug* in Subjects with Mild to Moderate Alzheimer's Disease, 2001.

Multicenter, Randomized, Double-blind, Parallel group, Multiple dose Comparison study of *drug*, *drug*, and placebo in patients with Moderate to Severe Acute Migraine Headache, 2001.

A Randomized, Double-Blind, Placebo-Controlled, Flexible Dosage Trial to Evaluate the Efficacy and Tolerability of *drug* in Patients with Generalized Anxiety Disorder (GAD), 2001.

A 6-Week, Double-Blind, Randomized, Multicenter, Fixed-Dose, Placebo-Controlled Study of *drug* Dosed Twice a

Day in Patients with Generalized Anxiety Disorder, 2001.

A Randomized, Double-Blind, Parallel-Group, Placebo-Controlled Study Evaluating Efficacy and Safety of Three doses of *drug* versus Placebo in Patients with Major Depressive Disorder, 2001.

A Double-Blind, Placebo-Controlled, Parallel-Group, Flexible-Dose Study of *drug* in Adolescent Outpatients with Panic Disorder, 2001.

A Double-Blind, Multicenter, Placebo- and Active-Controlled Acute and Extension study of two doses of *drug* in the treatment of Patients with Major Depressive Disorder, 2001.

A Multicenter, Double-Blind, Placebo-Controlled Safety and Efficacy Study of *drug* in Pediatric Patients with Attention Deficit Hyperactivity Disorder, 2001.

Open Label Study of *drug* in Children with ADHD, 2001.

A 12-week, multicenter, randomized, double-blind, placebo-controlled, parallel-group, study to evaluate the efficacy and safety of flexible dosing of *drug* at 500 mg to 1500 mg b.i.d. in the treatment of subjects with painful diabetic neuropathy, 2001.

A 4-Week, Double-Blind, Randomized, Placebo-Contolled, Parallel Study to Evaluate the Efficacy and Safety of *drug* in Children and Adolescents with Attention-Deficit/ Hyperactivity Disorder, Followed by an 8 week Open Label Extension, 2002.

*Drug*30 mg and *Drug* 60 mg once daily versus placebo in Generalized Anxiety Disorder. A Randomized Double-Blind Placebo-Controlled and *drug* controlled Fixed-Dose Parallel Group MultiCenter Study of 10 weeks (Including a 2 week Single Blind Placebo Period), 2002.

A Study to Evaluate the Efficacy, Safety and Maintenance Effect of Risperidone Augmentation of SSRI Monotherapy in Young and Older Adult Patients with Unipolar Treatment-Resistant Depression, 2002. (Janssen Protocol RIS-INT-93)

Drug 60 mg (or 30 mg) once daily in the treatment of Generalized Anxiety Disorder. An Open Label Multicenter Safety Study of 5 months, including a 1-month drug free follow-up period, 2002. (Pharmacia Protocol 3013038)

A Phase III Multi-center, Randomized, Double-blind, Parallel Group Study of drug 20 mg, drug 40 mg and Placebo in Patients with Multiple Moderate or Severe Acute Migraine Headaches, 2002. (Pharmacia Protocol VALA-0513-138)

The Effect of *drug* on Bone Mineral Density in Pediatric Subjects with Anorexia Nervosa: A Double-Blind, Placebo-Controlled Study Protocol CAPSS-169, 2002. (Ortho-McNiel Pharmaceutical, Inc.)

A 6 ½ Month, Multicenter, Randomized, Double-blind, Placebo-Controlled Comparison of 300 mg/day of Extended- release *Drug* and Placebo for the prevention of Seasonal Affective Disorder in Subjects with a History of Seasonal Affective Disorder, 2002.(GlaxoSmithKline Protocol AK 130930/36)

LEON I. ROSENBERG, M.D.
CURRICULUM VITAE

EDUCATION:

May 1978	Medical School SUNY-Upstate Medical School at Syracuse Doctor of Medicine
June 1974	Undergraduate School Harvard University, Cambridge, Massachusetts Bachelor of Arts Degree cum laude in Biology
June 1970	High School Oceanside Senior High School, Oceanside, New York Regents Graduate

TRAINING:

July 1981 to June 1983	Child Psychiatry Fellowship Division of Child Psychiatry Hahnemann University Hospital Philadelphia, Pennsylvania
July 1979 to June 1981	Adult Psychiatry Residency Department of Psychiatry Hospital of the University of Pennsylvania Philadelphia, Pennsylvania
July 1978 to June 1979	Psychiatric Categorical Internship (Rotating Internship with Emphasis in Psychiatry) Long Island Jewish-Hillside Hospital Glen Oaks, New York

CLINICAL EXPERIENCE:

1983 to Present	Private Practice Center for Emotional Fitness Moorestown, New Jersey Geriatric, Adult, Adolescent and Child Psychiatry Individual, Marital, Family and Group Therapy Forensic Evaluations & Treatment Research Studies in Psychopharmacology
2001 to Present	Privileges Center for Emotional Fitness/South Philadelphia Office Philadelphia, Pennsylvania Research Studies in Pharmacology

Phone: 856-608-8800 • Fax: 856-231-8182 •

July 1983 to January 2000	Memorial Hospital of Burlington County Active Medical Staff - Department of Psychiatry Consultations and In-Patient Care
July 1989 to December 1990	Acting Chairman Department of Psychiatry
January 1985 to 2001	Long-Term Care Consultant to Nursing Homes, Residential Care Facilities and Group Homes
July 1983 to January 1985	Drenk Memorial Guidance Center, Mt. Holly, New Jersey Staff Psychiatrist
July 1982 to June 1984	Private Practice - Part-Time 424 Pine Street, Philadelphia, Pennsylvania Adult Psychiatry

CLINICAL DRUG STUDIES AND RESEARCH PROGRAMS:

3/95 to 4/96	Wyeth-Ayerst PMS Study in association with The University of Pennsylvania Department of Psychiatry, Private Practice Research Group.
3/95 to 9/95	Open-Label Study of Management of Patients with Symptoms of Depression in General Psychiatric Practices, International Clinical Research Corporation.
3/97 to 6/98	Bristol-Myers Squibb Double-Blind Study of Treatment of Children with Attention-Deficit Hyperactivity Disorder.
3/97 to 9/98	Bristol-Myers Squibb Study of Treatment of Children with Attention-Deficit Hyperactivity Disorder. Open-Label, Long-Term Flexible Dose Safety.
9/97 to 3/98	PPD Pharmaco Study of Safety and Tolerability in Psychotic Patients.
10/97 to 11/99	Eli Lilly & Company, Double-Blind, Placebo-Control Study of Geriatric Nursing Home Patients with Major Depression.
11/97 to 7/98	Zeneca Pharmaceuticals Double-Blind, Placebo-Control Study of Geriatric Nursing Home Patients with Alzheimer's Dementia and Psychoses and Other Selected Idiopathic and Organic Psychoses.
12/97 to 12/98	Eli Lilly & Company Study of Management of Behavioral Disturbances and/or Psychosis in Demented Nursing Home Patients.
4/98 to 4/99	Hoechst Marion Roussel, a Multicenter, Placebo and Active Control Randomized Study of Efficacy and Safety in Schizophrenic and Schizoaffective Patients.
4/98 to 9/99	Hoechst Marion Roussel, a Multicenter, Open-Label, Long-Term Follow-up Safety Study of Schizophrenia and Schizoaffective Subjects.
9/98 to 8/00	Eli Lilly & Co, Multicenter, Double Blinded Study of the Treatment of Posttraumatic Stress Disorder.
9/98 to 11/98	Multicenter, Double Blinded Efficacy and Tolerability Study of Depressed Outpatients.

10/98 to 4/99	Roche, A Double-Blind, Randomized, Placebo-Controlled Study of Elderly Subjects for Prevention of Clinical Influenza during the Flu Season.
10/98 to 1/00	Merck, A Double-Blind, Randomized, Placebo-Controlled Evaluation of the Efficacy and Safety of Two Dose Range study Drug in Comparison with Placebo and Haloperidol in the Treatment of Schizophrenia.
5/99 to 4/00	Somerset Pharmaceuticals, A Double-Blind, Placebo-Controlled, Parallel-Group Assessment of the Safety and Efficacy of Two Doses of Study Drug in Patients with Major Depression.
4/99 to 12/00	Medeva Development, Double-Blind, Placebo-Controlled Study of Children with ADHD.
9/99 to 10/00	Somerset Pharmaceuticals, Open-Label Study to Assess the Safety in Patients with Major Depression.
8/99 to 8/01	Eli Lilly & Company, Double-Blind Combination in the Treatment of Resistant Depression Without Psychotic Features
8/99 to 10/01	Eli Lilly & Company, Double-Blind Study of Treatment of Bipolar Disorder
10/99 to 3/01	Parke-Davis, Double-Blind Sustained for Efficacy in Treatment of Social Phobia
10/99 to 2002	Parke-Davis, Open Label for Efficacy in Treatment of Social Phobia
11/99 to 9/00	Organon, Double-Blind in Treatment of Children and Adolescents with Major Depressive Disorder
12/99 to 10/00	Eli Lilly & Company, Double-Blind in the Treatment of Major Depression in Adults
1/00 to 9/00	Novartis, Double-Blind in Children with ADHD
6/00 to 6/01	Eli Lilly & Company Double-Blind Study of Adult Patients with Attention-Deficit/Hyperactivity Disorder
6/00 to Present	Eli Lilly & Company, Open-Label Study of Outpatients with ADHD Ages 6 to 18 Years
6/00 to 4/01	Eli Lilly & Company, Double-Blind Study of Treatment of Bipolar I Depression
6/00 to 10/01	Parke-Davis Double-Blind Study of Patients with Panic Disorder
6/00 to 8/00	Parke-Davis, Double-Blind Study of Elderly Patients with Generalized Anxiety Disorder
7/00 to 6/01	Parke-Davis, Double-Blind Study of Patients with Generalized Anxiety Disorder
11/00 to Present	Eli Lilly & Company, Open-Label Study of ADHD Children Ages 6 to 18

11/00 to 9/01	Wyeth-Ayerst, Double-Blind Study of Children and Adolescents with Major Depressive Disorder
11/00 to 10/01	Wyeth-Ayerst, Double-Blind Study of Children and Adolescents with Generalized Anxiety Disorder
3/00 to Present	Wyeth-Ayerst, Double-Blind Study of Children and Adolescents with Social Anxiety Disorder
8/00 to 2002	Pfizer, Double-Blind Study of Patients with Generalized Anxiety Disorder ages 18 and above
8/00 to Present	Wyeth-Ayerst, Double-Blind Study of the Treatment of Posttraumatic Stress Disorder
8/00 to 2001	Shire Pharmaceutical, Open-Label Study of Children with ADHD
9/01 to Present	Merck Research, Double-Blind, Placebo and Active-Controlled, Acute and Extension Study of 2 Doses in the Treatment of Patients with Major Depressive Disorder
10/01 to Present	Wyeth-Ayerst, Double-Blind, Placebo-Controlled, Parallel-Group, Flexible-Dose Study of Adolescent Outpatients with Panic Disorder
03/02 to Present	Eli Lilly & Company Duloxetine Once-Daily Dosing Versus Placebo in Patient with Major Depression and Pain
04/02 to Present	Eli Lilly & Company The Study of Olanzapine Plus Fluoxetine in Combination for Treatment-Resistant Depression Without Psychotic Features
04/02 to Present	Eli Lilly & Company A Double-Blind Study of Treatment with Optimization with Atomoxetine Hydrochloride In Adults with DSM-IV Attention-Deficit/Hyperactivity Disorder

CERTIFICATIONS:

American Board of Psychiatry and Neurology

Board Certified Psychiatry
June 1986

Board Certified Geriatric Psychiatry
December 1995

Board Certified Forensic Psychiatry
June 1996

Board Eligible Child Psychiatry
June 1983

The American Board of Addiction Medicine
Board Certified December 1993

LICENSURE:

Licensed to Practice Medicine In New Jersey
June 1983 (MA-42361)

Licensed to Practice Medicine in the Commonwealth of Pennsylvania
October 1979 (MD-022896-E)

AFFILIATIONS:

1988 to Present	Center for Emotional Fitness, P.A. President, Medical Director
1983 to 1999	Memorial Hospital of Burlington County Active Medical Staff
1987 to Present	Deborah Heart and Lung Center, Browns Mills, New Jersey Psychiatric Consultant
1994 to Present	Rancocas Hospital, Willingboro, New Jersey Active Medical Staff
2000 to Present	Hampton Hospital, Rancocas, NJ Active Medical Staff

PROFESSIONAL SOCIETIES & BOARDS:

1980 to Present	American Medical Association
1980 to Present	American Psychiatric Association
1984 to Present	Burlington County Medical Society
1983 to Present	New Jersey Psychiatric Society
1990 to Present	American Academy of Psychiatry and Law
1993 to Present	International Society for Traumatic Stress Studies
1996 to Present	Camden County Mental Health Board

CURRICULUM VITAE

TERENCE ARTHUR KETTER, M.D.

11/21/02

OFFICE ADDRESS: Department of Psychiatry and Behavioral Sciences
Stanford University School of Medicine
Stanford, California 94305-5723
Telephone: (650) 723-2515
Fax: (650) 723-2507

BORN: April 20, 1950. Toronto, Ontario, Canada

CITIZEN OF: United States of America

MARITAL STATUS: Married, 1984
Wife: REDACTED
REDACTED

EDUCATION AND TRAINING:

1969-1973	University of Toronto, Toronto, Canada B.Sc. (Mathematics) 1973
1974-1976	University of Sydney, Sydney, Australia M.Sc. (Mathematics) 1976
1980-1984	University of Toronto, Toronto, Canada M.D. 1984
1984-1985	University of California, San Francisco Department of Psychiatry, Internship
1985-1988	University of California, San Francisco Department of Psychiatry, Residency
1988-1995	National Institute of Mental Health, Bethesda Intramural Research Program Biological Psychiatry Branch, Senior Staff Fellow

CURRENT POSITIONS:

1997-Present	Associate Professor Department of Psychiatry and Behavioral Sciences Stanford University School of Medicine Stanford, California
1995-Present	Chief, Bipolar Disorders Clinic Department of Psychiatry and Behavioral Sciences Stanford University School of Medicine Stanford, California

PROFESSIONAL EXPERIENCE:

1999-Present	Voting Member Administrative Panel on Human Subjects in Medical Research Stanford University School of Medicine Stanford, California

1995-1996	Acting Associate Professor Department of Psychiatry and Behavioral Sciences Stanford University School of Medicine Stanford, California
1992-1995	Chief, Unit on Brain Imaging Section on Psychobiology Biological Psychiatry Branch National Institute of Mental Health, Bethesda
1990-1995	Chief, 3 West Clinical Research Unit Section on Psychobiology Biological Psychiatry Branch National Institute of Mental Health, Bethesda
1988-1995	Private Medical Practice Pharmacotherapy of Mood and Anxiety Disorders Washington, D.C., and Bethesda, MD
1993-1994	Chair, Physician-Nurse Committee National Institutes of Health Clinical Center, Bethesda
1992-1995	Member, Physician-Nurse Committee National Institutes of Health Clinical Center, Bethesda
1988-1990	Unit Administrator 3 West Clinical Research Unit Section on Psychobiology Biological Psychiatry Branch National Institute of Mental Health, Bethesda
1988-1989	Psychiatric Consultant Clinical Epilepsy Section Medical Neurology Branch National Institute of Neurological Disorders and Stroke, Bethesda
1987-1988	Senior Resident Behavioral Neurosciences Service Langley Porter Psychiatric Institute Department of Psychiatry University of California, San Francisco
1987-1988	Psychiatric Consultant Northern California Epilepsy Center Department of Neurology University of California, San Francisco
1987-1988	Resident Representative Executive Medical Board Department of Psychiatry University of California, San Francisco
1987-1988	Vice-President, Residents' Association Department of Psychiatry University of California, San Francisco

HONORS AND FELLOWSHIPS:

Undergraduate	University of Toronto Varsity Fund Scholarship 1969-73 Governor General's Silver Medal (First standing in graduating class in Erindale College, University of Toronto)
Graduate	Commonwealth of Australia Research Fellowship 1974-76
Pre-medical	Carl Manning Book Prize 1980 (First standing in organic chemistry in Erindale College, University of Toronto)
Medical School	Walter F. Watkins Scholarship 1982
Residency	Creative Resident Award 1987-88 (Creative achievement by a resident in psychiatry, University of California, San Francisco)
Fellowship	American College of Neuropsychopharmacology Mead Johnson Travel Award Fellow 1994

SOCIETY MEMBERSHIPS:

1987 - Present	American Psychiatric Association
1987 - 1988 1996 - Present	Northern California Psychiatric Society
1988 - 1995	Washington Psychiatric Society
1992 - Present	Society of Biological Psychiatry
1992 - Present	International Society for Neuroimaging in Psychiatry
1994 - Present	American Society of Clinical Psychopharmacology
1994 - Present	American Association for the Advancement of Science
1994 - Present	American Academy of Clinical Psychiatrists
1995 - Present	American Epilepsy Society
1996 - Present	Association for Convulsive Therapy
1996 - Present	National Depressive and Manic-Depressive Association
1996 - Present	National Alliance for the Mentally Ill
1996 - Present	West Coast College of Biological Psychiatry
1996 - Present	American Neuropsychiatric Association
1997 - Present	Canadian Psychiatric Association
1998 - Present	International Society for Magnetic Resonance Imaging in Medicine
1999 - Present	International Society for Bipolar Disorders
2001 - Present	Child & Adolescent Bipolar Foundation

MEDICAL LICENSES:

California	March 10, 1986	#G56822
District of Columbia	September 20, 1988	#17541
Maryland	October 13, 1988	#D37533

BOARD CERTIFICATION:

1988 Specialist Certificate in Psychiatry (# 370484)
Royal College of Physicians and Surgeons of Canada

1989 Specialist Certificate in Psychiatry (# 31895)
American Board of Psychiatry and Neurology

1989 Fellow of Royal College of Physicians & Surgeons of Canada (F.R.C.P.C.)

JOURNAL REFEREE:

1991-Present	Neuropsychiatry, Neuropsychology, and Behavioral Neurology
1993-Present	Biochemical Pharmacology
1995-Present	Journal of Clinical Psychopharmacology
1996-Present	Drug Safety
1996-Present	Human Psychopharmacology
1996-Present	Journal of Affective Disorders
1997-Present	Psychiatric Times
1997-Present	Journal of Neuropsychiatry and Clinical Neurosciences
1997-Present	Archives of General Psychiatry
1997 - Present	Psychiatry Research
1997 - Present	Biological Psychiatry
1998-Present	Life Sciences
1998 - Present	Journal of Psychiatric Research
1998 - Present	Journal of Clinical Psychiatry
1998 - Present	Bipolar Disorders
1999 - Present	Harvard Review of Psychiatry
1999 - Present	Expert Opinion on Pharmacotherapy
2000 – Present	Southern Medical Journal
2000 – Present	Depression and Anxiety
2000 – Present	Schizophrenia Research
2000 – Present	Neuropsychopharmacology

EDITORIAL BOARDS

2000-Present	Bipolar Disorders
2000-Present	Journal of Psychiatric Research
2001-Present	Journal of Affective Disorders

EXTERNAL GRANT REVIEWER:

1993-Present	Ontario Mental Health Foundation
1997-Present	Canadian Psychiatric Research Foundation
1997-Present	Department of Veterans Affairs
1998	American Psychiatric Association (1998 Annual Meeting, Research Colloquium for Junior Investigators Applications)
2000-Present	Medical Research Council of Canada
2001-Present	Veterans' Administration Merit Review Committee

BIBLIOGRAPHY OF TERENCE A. KETTER, M.D.

PART I: ABSTRACTS AND PRESENTATIONS

PART II: PUBLICATIONS

PART I: ABSTRACTS AND PRESENTATIONS

1) **Ketter TA**: Complex partial seizures and panic disorder. UCSF symposium: The medical / psychiatric interface of panic. 8th Annual National Conference on Phobias and Related Anxiety Disorders, San Francisco, Oct. 22-25, 1987. Abstract.

2) Kanas N, Deri J, **Ketter T**, and Fein G: Outcome of short-term outpatient groups for schizophrenics. American Group Psychotherapy Association Annual Meeting, San Francisco, Feb. 21-25, 1989. Abstract.

3) Bromfield EB, **Ketter TA**, Balish M, Sato S, Leiderman DB, and Theodore WH: Simple partial status epilepticus with psychosensory and psychoaffective manifestations. American Epilepsy Society Annual Meeting, Boston, December 3-6, 1989. Abstract.

4) **Ketter TA**, Laxer KD: Psychopathology in pseudoepileptic seizures and epilepsy. Pseudoepileptic Seizure Symposium, Fort Lauderdale, March 1-3, 1990. Abstract.

5) Bromfield EB, Altshuler L, Leiderman DB, Balish M, **Ketter TA**, Devinsky O, Post RM, Theodore WH: Cerebral metabolism and depression in patients with complex partial seizures. American Epilepsy Society Annual Meeting, San Diego, November 12-14, 1990. Abstract. Epilepsia 1990;31(5):625-626.

6) **Ketter TA**: Psychiatric aspects of epilepsy. American College of Neuropsychiatrists Spring Meeting, Scottsdale, March 21-24, 1991. Abstract.

7) Post RM, Weiss SR, **Ketter TA**, George MS, Clark M, Rosen J: The temporal lobes and affective disorders. The Temporal Lobes and Limbic System - Basic and Clinical Perspectives. Copenhagen, Denmark, September 19-20, 1991. Abstract.

8) Post RM, Weiss SR, **Ketter TA**, Pazzaglia PJ, Denicoff K: Impact of affective illness on gene expression: rationale for long-term prophylaxis. . 4th European College of Neuropsychopharmacology Congress, Monte Carlo, Monaco, October 6-9, 1991. European Neuropsychopharmacology 1991;1:214-216.

9) Post RM, George MS, **Ketter TA**, Denicoff K, Leverich G, Mikalauskas K: Mechanisms underlying recurrence and cycle acceleration in affective disorders: implications for long-term treatment. British Association for Pharmacology Meeting, London, November 21,1991. Abstract.

10) **Ketter TA**, Barnett J, Schroeder DH, Hinton ML, Chao J, Post RM: Carbamazepine induces bupropion metabolism. 145th Annual Meeting of the American Psychiatric Association, Washington, May 2-7, 1992. Abstract NR563. Page 186.

11) **Ketter TA**, Malow BA, White SR, Post RM, Theodore WH: Anticonvulsant withdrawal-emergent psychopathology. 44th Annual Meeting of the American Academy of Neurology, San Diego, May 3-9, 1992. Abstract 1029P. Neurology 1992;42(Suppl 3):450.

12) Post RM, **Ketter TA**, Pazzaglia PJ, Denicoff K, George MS, Marangell L, Weiss SR: Anticonvulsants in refractory mood disorders. 2nd International Conference on Refractory Depression, The Hague and Amsterdam, June 24-26, 1992. Abstract.

13) **Ketter TA**, Potter WZ: Pharmacologic issues in the treatment of bipolar disorder. 42nd Annual Meeting of the Canadian Psychiatric Association, Montreal, September 16-18,1992. Abstract.

14) Post RM, **Ketter TA**, Pazzaglia PJ, George MS, Marangell L, Weiss SR: Receptor, ion channel, and neuropeptide targets for drug development: implications from the anticonvulsant model. 31st Annual Meeting of the American College of Neuropsychopharmacology, San Juan, Puerto Rico, December 14-18, 1992. Abstract. Page 9.

15) Post RM, **Ketter TA**, Pazzaglia PJ, George MS, Marangell L, Denicoff K: New developments in the use of anticonvulsants as mood stabilizers Symposium on antiepileptic drugs in psychiatry, Freiberg, Germany, January 29-30, 1993. Abstract.

16) **Ketter TA**, Malow BA, Flamini R, White SR, Post RM, Theodore WH: Carbamazepine withdrawal-emergent psychopathology. 45th Annual Meeting of the American Academy of Neurology, New York, April 25-May 1, 1993. Abstract 163S. Neurology 1993;43(Suppl 2):A194.

17) Post RM, **Ketter TA**, George MS: Psychiatric syndromes and the limbic system. 45th Annual Meeting of the American Academy of Neurology, New York, April 25-May 1, 1993. Abstract.

18) **Ketter TA**, Andreason PJ, George MS, Herscovitch P, Post RM: Paralimbic rCBF increases during procaine-induced psychosensory & emotional experiences. 48th Annual Convention and Scientific Program of the Society of Biological Psychiatry, San Francisco, May 19-23, 1993. Abstract 107. Biol Psychiatry 1993;33(Suppl 6A):66A.

19) George MS, **Ketter TA**, Gill D, Herscovitch P, Post RM: The neuroanatomy of facial emotion recognition. 146th Annual Meeting of the American Psychiatric Association, San Francisco, May 22-27, 1993. Abstract NR16. Page 63.

20) **Ketter TA**, Andreason PJ, George MS, Marangell LB, Pazzaglia PJ, Post RM: Reduced resting frontal lobe CBF in mood disorders. 146th Annual Meeting of the American Psychiatric Association, San Francisco, May 22-27, 1993. Abstract NR298. Page 135.

21) George MS, **Ketter TA**, Gill D, Marangell LB, Pazzaglia PJ, Post RM: Blunted CBF with emotion recognition in depression. 146th Annual Meeting of the American Psychiatric Association, San Francisco, May 22-27, 1993. Abstract NR114. Page 88.

22) **Ketter TA**, Andreason PJ, George MS, Pazzaglia PJ, Marangell LB, Post RM: Blunted CBF response to procaine in mood disorders. 146th Annual Meeting of the American Psychiatric Association, San Francisco, May 22-27, 1993. Abstract NR297. Pages 134-135.

23) Pazzaglia PJ, Post RM, **Ketter TA**, George MS, Marangell LB: Nimodipine in affective illness. 146th Annual Meeting of the American Psychiatric Association, San Francisco, May 22-27, 1993. Abstract NR714. Page 239.

24) Post RM, Pazzaglia PJ, **Ketter TA**, George MS, Marangell LB: Carbamazepine and nimodipine in refractory bipolar illness: efficacy and mechanisms. 1st International Congress on Hormones, Brain, and Neuropsychopharmacology, Rhodes, Greece, September 13-17, 1993. Abstract.

25) Parekh P, Spencer J, George MS, Gill DS, **Ketter TA**, Post RM: rCBF correlates of EEG frequencies before and after i.v. procaine. Society of Neuroscience Annual Meeting, November 7-12, 1993. Abstract 501.9, M-46. Page 239.

26) George MS, **Ketter TA**, Parekh PI, Ring, HA, Rosinsky N, Pazzaglia PJ, Marangell LB, Post RM: Differences in performance and regional brain activation in controls and mood disordered subjects while performing a classic and emotional Stroop. 32nd Annual Meeting of the American College of Neurosychophamacology, Honolulu, December 13-17, 1993. Abstract.

27) Post RM, Pazzaglia PJ, **Ketter TA**, Marangell LB, George MS: Efficacy of the L-type calcium channel blocker nimodipine in recurrent affective disorders. 32nd Annual Meeting of the American College of Neurosychophamacology, Honolulu, December 13-17, 1993. Abstract.

28) George MS, **Ketter TA**, Post RM: An overview of brain activation studies in mood disorders. 49th Annual Convention and Scientific Program of the Society of Biological Psychiatry, Philadelphia, May 18-22, 1994. Abstract 157. Biol Psychiatry 1994;35(9):658.

29) **Ketter TA**, George MS, Andreason PJ, Herscovitch P, Post RM: Blunted paralimbic resting & procaine-activated rCBF in healthy females compared to males. 49th Annual Convention and Scientific Program of the Society of Biological Psychiatry, Philadelphia, May 18-22, 1994. Abstract 120. Biol Psychiatry 1994;35(9):648.

30) George MS, **Ketter TA**, Parekh P, Post RM: Regional blood flow correlates of transient self-induced sadness or happiness. 49th Annual Convention and Scientific Program of the Society of Biological Psychiatry, Philadelphia, May 18-22, 1994. Abstract 119. Biol Psychiatry 1994;35(9):647.

31) **Ketter TA**, George MS, Pazzaglia PJ, Marangell LB, Andreason PJ, Post RM: PET activation studies in mood disorders. 147th Annual Meeting of the American Psychiatric Association, Philadelphia, May 21-26, 1994. Abstract. Symposium 105D. Page 184.

32) George MS, **Ketter TA**, Post RM: Brain imaging in mania. 147th Annual Meeting of the American Psychiatric Association, Philadelphia, May 21-26, 1994. Abstract. Symposium 73C. Page 142.

33) **Ketter TA**, George MS, Andreason PJ, Parekh P, Pazzaglia PJ, Marangell LB, Callahan AM, Cohen RM, Herscovitch P, Post RM: rCMRglu in unipolar versus bipolar depression. 147th Annual Meeting of the American Psychiatric Association, Philadelphia, May 21-26, 1994. Abstract NR444. Page 172.

34) Callahan AM, **Ketter TA**, George MS, Marangell LB, Pazzaglia PJ, Andreason PJ, Parekh P, Horwitz B, Herscovitch P, Post RM: Cholesterol and cerebral metabolism in mood disorders. 147th Annual Meeting of the American Psychiatric Association, Philadelphia, May 21-26, 1994. Abstract NR188. Page 104.

35) George MS, **Ketter TA**, Parekh PI, Horwitz B, Herscovitch P, Cloninger CR, Post RM: Personality traits correlate with resting rCBF. 147th Annual Meeting of the American Psychiatric Association, Philadelphia, May 21-26, 1994. Abstract NR450. Page 173.

36) **Ketter TA**, George MS, Andreason PJ, Horwitz B, Parekh P, Pazzaglia PJ, Marangell LB, Callahan AM, Cohen RM, Herscovitch P, Post RM: Depression and frontal rCMRglu correlate inversely. 147th Annual Meeting of the American Psychiatric Association, Philadelphia, May 21-26, 1994. Abstract NR443. Pages 171-172.

37) Marangell LB, **Ketter TA**, George MS, Pazzaglia PJ, Callahan AM, Andreason PJ, Parekh P, Horwitz B, Herscovitch P, Post RM: Thyroid indices and cerebral metabolism in mood disorders. 147th Annual Meeting of the American Psychiatric Association, Philadelphia, May 21-26, 1994. Abstract NR187. Page 104.

38) Post RM, **Ketter TA**, Denicoff, K, Pazzaglia PJ, Marangell LB, George MS, Callahan, A: Anticonvulsants: state of the art. 1st International Conference on Bipolar Disorder, Pittsburgh, June 23-34, 1994. Abstract.

39) **Ketter TA**, George MS, Andreason PJ, Horwitz B, Herscovitch P, Post RM: Positive correlations between procaine-induced paralimbic rCBF increases and psychosensory and emotional experiences. 19th Congress of Collegium Internationale Neuro-Psychopharmacologicum, Washington, June 27-July 1, 1994. Abstract O-84-107. Neuropsychopharmacology 1994;10(3S Part 2):28S.

40) Post RM, Leverich, GS, **Ketter TA**, Denicoff, K, Marangell LB, George MS, Pazzaglia PJ, Callahan, A, Weiss, SRB: The empirical and theoretical rationales for lifetime prophylaxis in bipolar affective disorder. 19th Congress of Collegium Internationale Neuro-Psychopharmacologicum, Washington, June 27-July 1, 1994. Abstract S-30-128. Neuropsychopharmacology 1994;10(3S Part 1):160S.

41) George MS, **Ketter TA**, Davis CL, Rubinow DR, Andreason PJ, Pazzaglia PJ, Marangell LB, Callahan, Herscovitch P, Horwitz B, Post RM: CSF somatostatin correlates with regional cerebral metabolism in mood disorder subjects. 19th Congress of Collegium Internationale Neuro-Psychopharmacologicum, Washington, June 27-July 1, 1994. Abstract P-117-101. Neuropsychopharmacology 1994;10(3S Part 2):178S.

42) **Ketter TA**, George MS, Andreason PJ, Marangell LB, Pazzaglia PJ, Callahan AM, Parekh P, Herscovitch P, Post RM: Carbamazepine-induced decreases in regional cerebral glucose metabolism in affective disorders are influenced by mood states. 19th Congress of Collegium Internationale Neuro-Psychopharmacologicum, Washington, June 27-July 1, 1994. Abstract O-225-326. Neuropsychopharmacology 1994;10(3S Part 2):83S.

43) Marangell LB, George MS, Callahan AM, Pazzaglia PJ, **Ketter TA**, Post RM: Intrathecal thyrotropin-releasing hormone in the treatment of affective disorders: preliminary results of a clinical trial. 19th Congress of Collegium Internationale Neuro-Psychopharmacologicum, Washington, June 27-July 1, 1994. Abstract P-174-35. Neuropsychopharmacology 1994;10(3S Part 2):221S.

44) George MS, **Ketter TA**, Parekh PI, Herscovitch P, Post RM: Gender differences in rCBF during transient self-induced sadness or happiness in healthy women. American Neuropsychiatric Association Annual Meeting, Newport, R.I., July 23, 1994.

45) Lee C, Unser M, **Ketter TA**: A global approach to multivariate correlation analysis of PET brain images. Society of Photo- Optical Instrumentation Engineers (SPIE): Mathematical Methods in Imaging III Conference, San Diego, July 25-26, 1994. Abstract.

46) Post RM, **Ketter TA**, Callahan AM, Denicoff KD, Marangell L, George MS: Rational polypharmacy in bipolar affective disorder: a focus on prophylaxis. Rational Polypharmacy Conference, Durango, September 10-12, 1994. Abstract.

47) **Ketter TA**: Clinical pharmacology and pharmacokinetics of mood stabilizers. 44th Annual Meeting of the Canadian Psychiatric Association, Ottawa, September 21-23,1994. Abstract. CPA Annual Meeting Selected Symposia Highlights 1994:11-12.

48) **Ketter TA**: Anatomy and pharmacology of depression. 20th Annual Postgraduate Course of the American Academy of Clinical Psychiatrists , Washington, October 6-8,1994.

49) **Ketter TA**, Malow BA, Flamini R, Ko D, White SR, Stertz BE, Post RM, Theodore WH: Psychotropic effects of felbamate monotherapy in patients with epilepsy. American Epilepsy Society Annual Meeting, New Orleans, December 2-8,1994. Abstract C.06. Epilepsia 1994;35(Suppl 8):32.

50) Post RM, **Ketter TA**: Psychiatric effects of the anticonvulsant drugs: a focus on affective illness. In: Ferrendelli J: Psychiatric Aspects of Epilepsy. American Epilepsy Society Annual Meeting, New Orleans, December 2-8,1994.

51) **Ketter TA**, Pazzaglia PJ, George MS, Marangell LB, Callahan AM, Kimbrell T, Frye MA, Parekh PI, Andreason PJ, Herscovitch P, Post RM: Baseline cerebral hypometabolism may predict response to nimodipine in mood disorders. 33rd Annual Meeting of the American College of Neuropsychopharmacology, San Juan, Puerto Rico, December 12 - 16, 1994. Abstract. Page 149.

52) George MS, Parekh PI, Rosinsky N, **Ketter TA**, Kimbrell TA, Herscovitch P, Post RM: Right hemisphere activation when listening for emotional prosody: an O-15 water PET study in healthy volunteers. 47th Annual Meeting of the American Academy of Neurology, Seattle, May 6-13, 1995. Abstract 817S. Neurology 1995;45(Suppl 4):A389.

53) Theodore WH, Albert P, Stertz BE, Malow BA, Ko D, White SR, Flamini R, **Ketter TA**: Felbamate monotherapy: implications for antiepileptic drug development. 47th Annual Meeting of the American Academy of Neurology, Seattle, May 6-13, 1995. Abstract 718P. Neurology 1995;45(Suppl 4):A360.

54) Callahan AM, Frye MA, Marangell LB, George MS, **Ketter TA**, Kimbrell T, L'Herrou T, Pazzaglia PJ, Post RM: Differential mood and endocrine effects of intravenous versus intrathecal TRH. 50th Annual Convention and Scientific Program of the Society of Biological Psychiatry, Miami, May 17-20, 1995. Abstract 63. Biol Psychiatry 1995;37(9):609.

55) Kimbrell TA, George MS, Parekh PI, **Ketter TA**, Parekh PI, Herscovitch P, Post RM: Regional brain activity during self-induced anger and anxiety. 50th Annual Convention and Scientific Program of the Society of Biological Psychiatry, Miami, May 17-20, 1995. Abstract 93. Biol Psychiatry 1995;37(9):617.

56) Parekh PI, George MS, Willis M, Lalonde F, **Ketter TA**, Post RM: A functional MRI study of transient sadness in healthy adult women: brain activity due to mood versus the effort of changing mood. 148th Annual Meeting of the American Psychiatric Association, Miami, May 20-25, 1995. Abstract NR522. Page 195.

57) George MS, Kimbrell TA, Parekh PI, **Ketter TA**, Pazzaglia PJ, Callahan A, Frye M, Marangell L, Herscovitch P, Post RM: Actively depressed subjects have difficulty inducing, and blunted limbic rCBF during, transient sadness. 148th Annual Meeting of the American Psychiatric Association, Miami, May 20-25, 1995. Abstract NR167. Pages 99-100.

TERENCE A. KETTER
DEPT PSYC & BHVRL SCIENCES
STANFORD UNIV SCHL OF MED
STANFORD, CA 94305-5723

ORIGINAL ISSUANCE DATE
03/13/1986

RECEIPT NO.
02300042

Study Code: 5077US/0049
Country: USA
Centre No.: 22

CURRICULUM VITAE

Name: Arifulla Khan, MD

Birth: Bangalore, India
February 3, 1953

Citizenship: U.S.

Marital Status: Married [redacted]

Current Position: Principal Investigator

Addresses:

Northwest Clinical Research Center
(FID: 91-199-4554)
1900 - 116th Ave NE
Bellevue, WA 98004

Ph: Northwest Clinical Research Center -(425) 453-0404
Fax: (425) 453-1033
E-mail: akhan@nwcrc.net

4070 East Mercer Way
Mercer Island, WA 98040
Ph. (206) 236-1008
Fax. (206) 230-8204

Education:
National College (1967-1969)
Bangalore Medical College (1969-1975)
Bangalore University, India

Qualifications:
MBBS, Bangalore University, India, 1975
ECFMG, 1976
Visa Qualifying Examination, 1979
FLEX, 1982
American Board of Psychiatry and Neurology, 1987

Licensure:
Indian Medical Council (Karnataka State) #14, 297
Washington State - #21545

Clinical and Academic Experience:

9/75 - 9/76	Intern, Victoria and Combined Hospitals Bangalore University, India
9/77 - 9/81	Psychiatric Registrar Christchurch Clinical School University of Otago Christchurch, New Zealand
10/81 - 6/84	Resident/Chief Resident Department of Psychiatry University of Connecticut Farmington, Connecticut
10/84 - 8/87	Medical Director Voluntary Psychiatric Inpatient Unit Harborview Medical Center, Seattle, WA
11/84 - 6/90	Assistant Professor, Department of Psychiatry University of Washington, Seattle, WA
9/87 - 6/88	Medical Director, Inpatient Psychiatry Service Harborview Medical Center, Seattle, WA
6/88 - Present	Examiner/Senior Examiner, American Board of Psychiatry and Neurology (Part II)
7/88 - 1/95	Medical Director, Inpatient Psychiatry Service University of Washington Medical Center Seattle, WA
7/90 - 6/95	Associate Professor, Department of Psychiatry University of Washington, Seattle, WA
7/92 - 1/95	Associate Medical Director University of Washington Medical Center Seattle, WA
4/95 - Present	Medical Director Northwest Clinical Research Center Northwest Medical Education, Inc Bellevue, WA

6/95 - Present	Medical Staff at Overlake Hospital Medical Center 1035 – 116th Ave.NE Bellevue, WA 98004
6/95- Present	Research Affiliate/Consultant and Courtesy Medical Staff BHC Fairfax Hospital 10200 NE 132nd St. Kirkland, WA 98034
2/97- Present	Clinical Associate Professor Department of Psychiatry and Behavioral Sciences University of Washington, Seattle, WA
10/00 - Present	Adjunct Associate Professor Department of Psychiatry and behavioral Sciences Duke University School of Medicine, Durham, NC

Grants, Awards, and Research Experience:

6/84	Sandoz Award for superior academic achievement Department of Psychiatry, University of Connecticut
9/84 - 2/90	Clinical psychopharmacology sub-investigator in depressive disorders, Psychiatric Research Unit, Harborview Medical Center and University of Washington (PI - D. Dunner, MD)
3/85	Principal Investigator, Biomedical Research Support Grant from University of Washington for the study of treatment response to various antidepressants and placebo
8/87	Travel fellowship from the American College of Neuropsychopharmacology (ACNP)
10/88	Principal Investigator, ECT vs. pharmacotherapy in psychotic depression (R01 application, approved, not funded)
1/89-12/89	Co-Investigator, Sleep changes in Early Alzheimer's Disease (PI- Patricia Prinz, PhD, MHR01-33688)
3/91 - 10/91	Principal Investigator, The Washington Institute for Mental Illness Research and Training Grant for TRH in ECT and ECS

1/92 - 12/92	Principal Investigator, The Alcohol and Drug Abuse Institute, University of Washington, Grant for TRH in cognitively impaired alcoholics
6/94	Principal Investigator, Treatment of Depression Using Low-level Electrical Current or Alternating Magnetic Fields (patent filed)
3/90 - Present	*Principal Investigator* *Phase I, II and III Psychopharmacology Studies in depression, anxiety, insomnia, bipolar mood disorder, schizophrenia, Alzheimer's Disease, migraine, irritable bowel syndrome, PTSD, social phobia, pediatric depression, pediatric bipolar mood disorder*
3/01 Present	Extramural Reviewer, SBIR proposals, Ad Hoc committees NIMH

Research Experience

A Multicenter, Double-blind, Randomized Comparison of the Efficacy and Safety of XXXXX and Placebo in the Treatment of Patients with Schizophrenia

A Placebo-Controlled 12 week Study of the Safety and Efficacy of Two Doses of XXXXX Versus Placebo for the Treatment of Acute Manic or Mixed Episodes in Subjects with Bipolar I Disorder with an Optional Open-Label Extension

A Multicenter, Double-blind, Randomized Comparison of the Efficacy and Safety of XXXXX and XXXXX in the Treatment of Patients with Schizophrenia

A Randomized, Double-Blind, Multiple Dose Study of the Relative Bioavailability And Tolerability of a Slow-Release Formulation of XXXXX in Patients With Schizophrenia or Schizoaffective Disorder

The Effect of XXXXX on Bone Mineral Density in Pediatric Subjects with Anorexia Nervosa: A Double-Blind, Placebo Controlled Study

A Multicenter, Double-Blind, Placebo-Controlled Comparison of the Efficacy and Safety of Extended-Release XXXXX and Placebo Administered for Eight Weeks for the Treatment of Adult Outpatients with Major Depressive Disorder and the Symptoms of Decreased Energy, Pleasure, and Interest

An Open-Label Study Assessing XXXXX with Major Depressive Disorder who Discontinued Treatment with XXXXX or a XXXXX due to Intolerability

A Phase III, Randomized, Multi-Center, Double-Blind, Parallel-Group, Placebo-Controlled Safety and Efficacy Study of XXXXX in Children and Adolescents Aged 6-17 with Attention Deficit Hyperactivity Disorder (ADHD)

A Phase III, Open-Label Study of XXXXX in Children and Adolescents (aged 6-17) with Attention Deficit Hyperactivity Disorder (ADHD)

A Multi-Center, Double-Blind, Randomized, Placebo-Controlled, Double-Dummy Trial of the Use of XXXXX in the Treatment of Patients with Bipolar Depression

A Multi-Center, Randomized, Double-Blind, Placebo-Controlled, Parallel, Phase III Study Comparing the Efficacy of XXXXX with Placebo, Utilizing a 6-Week Acute Phase and an Optional 26-Week Open-Label Phase, on Adolescent Patients Age 13-17 Years Who Meet the Diagnostic Criteria for Schizophrenia According to the DSM-IV-TR

A Phase III, Randomized , Multi-Center, Double-Blind, Parallel-Group, Placebo-Controlled Safety and Efficacy Study of XXXXX in Adolescents Aged 13-17 with Attention Deficit Hyperactivity Disorder (ADHD)

An assessment of the efficacy and safety of two sublingual doses of XXXXX in subjects with schizophrenia (in an acutely exacerbated state) compared to placebo in a multicenter randomized, double-blind, fixed-dose, 6-week trial with a XXXXX positive control group.

Education

Fellowship: Child and Adolescent Psychiatry — 06/93-06/95
Los Angeles County/University of Southern California Medical Center
Los Angeles, CA

Residency: Adult Psychiatry — 06/90-06/93
Los Angeles County/University of Southern California Medical Center
Los Angeles, CA

Medical School — 09/85-06/90
University of Washington School of Medicine, Seattle, WA

B.A. Zoology — 09/80-06/83
University of Washington, Seattle, WA

Undergraduate — 09/78-06/80
Washington State University, Pullman, WA

Professional Experience

Private Practice — 06/96-Present
512 6th Street South, Suite 101
Kirkland, WA 98033

Consulting Psychiatrist for Behaviorally Disturbed Students — 02/00-Present
Fairfax Hospital-Fairfax School
Kirkland, WA

Medical Director of Child and Adolescent Service — 06/96-03/99
Fairfax Hospital
Kirkland, WA

Attending Physiatrist Van Nuys Psychiatric Hospital Van Nuys, CA	09/95-05/96
Psychiatrist Psychiatric Admissions/Consultant LAC/USC Medical Center	11/91-5/96
Consulting Psychiatrist Optimist Youth Home Los Angeles, CA	06/94-05/96

Certification

American Board of Psychiatry and Neurology — 01/96
Certificate No. 42103

10/28/03

PROTOCARE

ELLY R. LEE, MD
Investigator
Protocare Trials Irvine Center for Clinical Research
16259 Laguna Canyon Road
Irvine, CA 92618
(949) 753-1663

&

Protocare Trials Irvine Center for Clinical Research
16263 Laguna Canyon Road, Suite 150
Irvine, CA 92618
(949) 753-1663

EDUCATION:

1976–1981	Clinical Clerkships and Medical School Institute of Medicine (I) Burma Degree: M.D.
1973 –1976	Pre-medical Training Institute of Medicine (I) Burma

INTERNSHIP:

1981–1982	Rotating Internship Clinical Intern at the Departments of Medicine, Surgery, Pediatrics, Obstetrics, and Gynecology Rangoon General Hospital, Burma

RESIDENCY:

1992–1993	Psychiatric Chief Resident (PGY IV) Nassau County Medical Center State University of New York, Stonybrook East Meadow, New York
1989–1992	Psychiatric Resident (PGY I-III) Nassau County Medical Center State University of New York, Stonybrook New York, New York
1988–1989	Psychiatric Clinical Research Fellow Albert Einstein College of Medicine / Montefiore Medical Center Bronx, New York

LICENSURE:

California State Physician and Surgeon
License Number: A52179
Expiration Date: January 31, 2003

CERTIFICATION:

American Board of Psychiatry and Neurology: Board Eligible

CURRENT POSITION:

2000 – Present	Principal Investigator/Psychiatry Protocare Trials Irvine Center For Clinical Research Irvine, California
1999 – Present	Sub Investigator/Psychiatry Protocare Trials Irvine Center for Clinical Research Irvine, California

PROFESSIONAL EXPERIENCE:

1995 – 2000	Staff Psychiatrist General Psychiatry (Outpatient) Newport PsychCare Clinic Newport Beach, California
1993 – 1996	Staff Psychiatrist General Psychiatric Unit (In-patient) Orange County Community Hospital Buena Park, California

TEACHING AND ADMINISTRATION:

1992–1993	Member of Council of Chief Residents, Resident Selection Committee, Utilization Review and Quality Assurance, Pertinence Review Committees Nassau County Medical Center, New York
1991–1992	Resident Representative of Hospitality Committee Nassau County Medical Center, New York
1990–1993	Preceptor to junior residents and medical students State University of New York Stonybrook, New York

CLINICAL RESEARCH EXPERIENCE:

1. XXXXX versus Placebo in the Treatment of Generalized Anxiety Disorder.
   Principal Investigator

2. XXXXX versus Placebo in Posttraumatic Stress Disorder.
   Principal Investigator

3. XXXXX versus Placebo in the Treatment of Major Depression. (a)
   Principal Investigator

4. XXXXX Versus Placebo in the Treatment of Major Depression.(b)
   Principal Investigator

5. XXXXX Versus Placebo and XXXXX in the Acute Treatment of Major Depression
   Principal Investigator

6. Efficacy Study of XXXXX in Patient With Panic Disorder
   Subinvestigator

7. Dose Finding Study in Patients With Major Depressive Disorder
   Subinvestigator

8. Monitor Long Term Safety of XXXXX in Major Depressive Disorder
   Subinvestigator

9. XXXXX Versus Placebo in Treatment of Major Depressive Disorder Resistant to XXXXX.
   Principal Investigator

10. Sustained Efficacy Study of XXXXX in Patients With Panic Disorder With or Without Agoraphobia.
    Principal Investigator

11. A Seven-Week, Multicenter Study to Examine Study Drug in Patients with Major Depressive Disorder Receiving XXXXX or XXXXX.
    Principal Investigator

12. Open Label XXXXX Rescue and Continuation Therapy
    Principal Investigator

13. Double Blind, Multicenter, Dose Finding Acute and Extension Study of XXXXX Versus XXXXX and Placebo in the Treatment of Outpatients with Major Depressive Disorder.
    Principal Investigator

14. Multicenter, 10 Week, Randomized, Double Blind, Placebo Controlled Flexible Dose, Outpatient Study of XXXXX in Children and Adolescents with Major Depressive Disorder
    Principal Investigator

15. Multicenter, 24-Week Open Label Extension Study of XXXXX in Children and Adolescent Outpatients Previously Diagnosed with Major Depressive Disorder.
    Principal Investigator

16. XXXXX Versus Placebo in Childhood/Adolescent Depression
    Subinvestigator

17. Double Blind, Placebo Controlled Comparative Efficacy Study of XXXXX and XXXXX in Producing Remission in Outpatients with Major Depressive Disorder.
    Principal Investigator

18. Double Blind, Placebo-Controlled Study of XXXXX in Children and Adolescents with Generalized Anxiety Disorder.
    Sub-Investigator

19. A Randomized, Open Label, Parallel Groups, Outpatient Study To Examine the Long Term Safety and Tolerability of XXXXX for the Acute Treatment of Migraine in Adolescents.

Sub-Investigator

20. A Phase II Randomized, Multicenter, Placebo-And-Active Controlled Study of Oral XXXXX in Subjects With Major Depressive Disorder.
Principal Investigator

21. Phase III Contraception Study of XXXXX Subcutaneous Injection in Women of Childbearing Potential in the Americas (Including a Bone Mineral Density Substudy Comparing the Effects of XXXXX) Also Including a Return of Ovulation Substudy.
Sub-Investigator

22. A Double-Blind, Placebo Controlled, Parallel Group, Flexible-Dose Study of XXXXX Extended Release Capsules in Adult Outpatients with Panic Disorder
Principal Investigator

23. A Multicenter, Randomized, Double-Blind, Placebo Controlled Parallel – Group Trial To Assess the Efficacy of Oral XXXXX 2.5mg in the Acute Treatment of Migraine During the Mild Intensity Phase of an Attack in Patients Highly Disabled by Migraine (MIDAS Grades III or IV)
Sub-Investigator

24. Flexible Dose Comparison of the Safety and Efficacy of XXXXX and Placebo in the Treatment of Generalized Anxiety Disorder. # 3570
Principal Investigator

25. A Randomized, Double-Blind, Placebo Controlled Parallel, Two-Week Efficacy and Safety of XXXXX in Subjects with Primary Insomnia. # 3703
Sub-Investigator

26. A Long Term Extension Study to Evaluate the Safety of Oral XXXXX in Subjects with Major Depressive Disorder. # 2927x1
Principal Investigator

27. A 12 Week Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel Group Study to Evaluate the Efficacy and Safety of Flexible Dosing of XXXXX at 500 to 1500 mg B.I.D. in the Treatment of Subjects With Painful Diabetic Neuropathy. #3612
Sub-Investigator

28. A Phase III , Vehicle-Controlled Study of XXXXX XXXXX Applied 2 Times per Week for 1 Week for Each Recurrence of Herpes Genitalis Over 12 Months. # 3685
Sub-Investigator

29. Efficacy and Safety of a Flexible Dose of XXXXX versus Placebo in the Treatment of Psychosis in Alzheimer's Disease (#3583)
Principal Investigator

30. A Well Controlled Safety and Efficacy Study of XXXXX in Subjects with Mild to Moderate Alzheimer's Disease (#3261)
Principal Investigator

31. A Randomized, Double-Blind, Placebo-Controlled, Crossover Study to Evaluate the Effects of XXXXX 200 mg q.d., XXXXX 200 mg b.i.d. and Placebo in Patients With Treated Hypertension. (#3676)
Sub-Investigator

32. A Dose Ranging Study of XXXXX in Patients With Primary Hypercholesterolemia.

(# 3518)
Sub-Investigator

33. A 12-Week, Randomized, Parallel, Double-Blind, Placebo-Controlled, Multicenter Study of the Safety and Efficacy of 4 Doses of XXXXX in Patient With Type 2 Diabetes (#3576)
Sub-Investigator

34. A Randomized, Double-Blind, Multicenter Study Comparing the Glycemic Control Characteristics of XXXXX and XXXXX in Hypertensive Patients with Type II Diabetes Mellitus. (#3535)
Sub-Investigator

35. A Randomized, Double Blind, Placebo Controlled, Parallel Group Study to Evaluate the Safety and Impact on Quality of Life of 12 Weeks of XXXXX Therapy at Dosages of 200 and 300 mg Once Daily as Treatment for Adults With Excessive Sleepiness Associated with Shift Work Sleep Disorder, Followed by a 12-Month Open-Label Extension Period. (# 3643a1)
Principal Investigator

36. A Double Blind, Placebo-Controlled, Parallel-Group Safety and Efficacy Study Evaluating Three Dose Regimens of XXXXX, A Selective Alpha-Adrenergic Antagonist, In The Treatment of Benign Prostatic Hyperplasia (#3750)
Sub-Investigator

37. A Phase III, Double-Blind, Randomized, Placebo Controlled Study of XXXXX in Severely Obese Subjects. (#3696)
Sub-Investigator

38. An Open-Label Extension Study of the Safety and Efficacy of XXXXX in Patients With Generalized Anxiety Disorder. (#3597)
Principal Investigator

39. A Double-Blind, Randomized, Placebo-Controlled, 3-Month Clinical Trial of XXXXX and XXXXX in the Treatment of Post Traumatic Stress Disorder (#3536)
Principal Investigator

40. A 13-Week, International, Multicenter, Randomized, Double-Blind, Double-Dummy, Placebo-Controlled, Parallel Group Trial Assessing the Safety and Efficacy of 2 Doses of XXXXX (200 mg and 400mg od) in Patients With Primary Knee Osteoarthritis, Using XXXXX (200 mg od) as a Comparator. (# 3753) Sub-Investigator

41. A Phase III, Double-Blind, Randomized, Parallel Study Evaluating the Efficacy and Safety of XXXXX (xxxxx HCl tablets) Sublingual (2 and 3 mg) In the Treatment of Male Erectile Dysfunction. (#3806) Sub-Investigator

42. A Randomized, Double-Blind, Placebo-Controlled Evaluation of the Safety and Efficacy of XXXXX in Subjects With Acute Migraine Attack. (#3844) Sub-Investigator

43. A Double-Blind, Placebo-Controlled, Parallel Group, Dose Response Study to Evaluate the Efficacy and Safety of XXXXX Versus Placebo in the Treatment of Pain Associated with Diabetic Peripheral Polyneuropathy.(#1711) Sub-Investigator

44. Double-Blind, Placebo-Controlled, Parallel Group, Dose Ranging Comparison of the Efficacy and Safety of Controlled Release XXXXX and Placebo in the Treatment of Osteoarthritis of the Knee and/or Hip (#3881) Sub-Investigator

45. A Multicenter, Open-Label Study to Evaluate the Safety and Efficacy of XXXXX/XXXXX as an Oral Contraceptive (#2390) Sub-Investigator

46. Double-Blind, Placebo-Controlled Study of Sustained Release XXXXXX in Subjects with Symptoms of Overactive Bladder of Urgency, Frequency, and Urinary Incontinence (#3641) Sub-Investigator

47. A 6-Week, Double-Blind, Randomized, Multicenter, Fixed-Dose, Placebo-Controlled Study of XXXXX Dosed Once a Day in Patients With Generalized Anxiety Disorder (#3791) Principal Investigator

48. Evaluation of Safety and Efficacy of XXXXX in the Treatment of Chronic Pain in Patients With Painful Diabetic Neuropathy (#3758) Sub-Investigator

49. A Double-Blind, Randomized, Placebo-Controlled, 3-Month Clinical Trial of XXXXX and XXXXX in the Treatment of Post Traumatic Stress Disorder (#3635) Principal Investigator

50. A Double-Blind, Multicenter, Randomized, Parallel Group, Phase III Study to Evaluate the Safety and Efficacy of XXXXX in Comparison to XXXXX in Patients with Non-Insulin Dependent Diabetes Mellitus (NIDDM) (#2867) Sub-Investigator

51. A Double-Blind, Randomized, Placebo and Active Controlled, Parallel Group, Dose-Finding Study to Evaluate the Efficacy and Safety of Once Daily Dose Oral Administration of 5 mg, 10 mg, 25 mg and 50 mg of XXXXXX for 8 Weeks in Subjects With Mild to Moderate Essential Hypertension (# 3913) Sub-Investigator

52. A Randomized, Double-Blind, Placebo-Controlled, Flexible Dosage Trial to Evaluate the Efficacy and Tolerability of XXXXX in Patients With Generalized Anxiety Disorder (GAD) (#3971) Principal Investigator

53. A Phase III, Double-Blind, Randomized, Placebo Controlled Study of XXXXX in Overweight and Obese Subjects With a 12-month Open-Label Extension Phase. (#3696) Sub-Investigator

54. A Multicenter, Double-Blind, Randomized, Placebo-Controlled, Parallel Group Study of the Continuation of Benefit of Two Dosages of XXXXX Complex for the Prophylactic Treatment of Migraine Headaches. (#2372x2) Sub-Investigator

55. A Prospective, Multinational, Double-Blind, Randomized, Active Controlled Trial in Patients With Essential Hypertension to Compare the Effect of XXXXX 80 mg and 160 mg, With or Without the Addition of XXXXX, One Daily to That of XXXXX 5 and 10 mg once daily, With or Without the Addition of XXXXX, on Cardiovascular Morbidity and Mortality. (#2338) Sub-Investigator

56. A Multicenter, Prospective, Randomized, Double-Blinded, Parallel Group Study Comparing the Effects of XXXXX (5/20 mg) to XXXXX (5mg) and XXXXX (20mg) on Systolic Blood Pressure and Pulse Pressure in Patients with Systolic Hypertension. (#3980) Sub-Investigator

57. A Multi-Center, Double-Blind, Randomized, Placebo-Controlled Study to Evaluate the Lipid-Altering Efficacy, Safety and Tolerability of XXXXX When Added to Ongoing Therapy with an HMG-CoA Reductase Inhibitor in Patient With Primary Hypercholesterolemia, Known Heart Disease or Multiple Cardiovascular Risk Factors (#3452) Sub-Investigator

58. A Double-Blind, Multicenter, Placebo- and Active- Controlled Acute and Extension Study of XXXXX in the Treatment of Major Depressive Disorder With Melancholic Features (#3925) Principal Investigator

59. 12 Week, Multinational, Multicenter, Controlled, Open, 1:1:1 Randomized, Parallel Clinical Trial to Assess Noninferiority Between Pre and Post-Meal Administration of XXXXX and Pre-Meal Regular Human Insulin in Subjects With Type 1 Diabetes Mellitus Receiving Insulin XXXXX as the Basal Insulin Therapy (# 3974) Sub-Investigator

60. Clinical Protocol For A Double-Blind, Randomized, Parallel Group Comparison Study of the Safety of XXXXX Vs XXXXX in Treated Hypertensive Patients With Osteoarthritis (# 3871) Sub-Investigator

61. A Randomized, Double-Blind, Parallel Group, Placebo-Controlled Study of Evaluating Efficacy and Safety of Three Doses of XXXXX (5mg, 10mg, and 20mg) Versus Placebo in Patients With Major Depressive Disorder (# 3920) Principal Investigator

62. A Randomized, Double-Blind, Comparator-Controlled Study of XXXXX Vs XXXXXX in the Treatment of Subjects With Type 2 (Non-Insulin Dependent) Diabetes Mellitus and Mild Cardiac Disease (NYHA1) (#4055) Sub-Investigator

63. A Phase III, Open-Label Safety and Efficacy Study of XXXXX in Outpatients with ADHD, Ages 6 to 18 Years. (#2474) Principal Investigator

64. A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Fixed-Dose, Multicenter Study of Weight-Reducing Effect and Safety of XXXXX in Obese Patients With Untreated Dyslipidemia (#3813) Sub-Investigator

65. Systolic and Pulse Pressure Hemodynamic Improvement by Restoring Elasticity (#3783a1) Sub-Investigator

66. A Phase II, Randomized, Double-Blind, Placebo-Controlled Dose Ranging Study to determine the Efficacy, Safety, Tolerability and Pharmacokinetic of XXXXX in Patients With Type 2 Diabetes Mellitus (# 3833) Sub-Investigator

67. A Randomized, Double-Blind, Placebo-Controlled, Single-Attack, Parallel Group Evaluation of the Efficacy of XXXXXX 50 mg Tablets versus Placebo in the Treatment of Self-Described and/or Physician Diagnosed Sinus Headaches that Meet International Headache Society (IHS) Criteria for Migraine Headaches (# 4147) Sub-Investigator

68. Open-Label Extension Study of Sustained Release XXXXX in Subjects With Symptoms of Overactive Bladder (# 3641x1) Sub-Investigator

69. A 52-Week, Open-Label, Multicenter Study of the Long-Term Safety and Efficacy of XXXXX 200 mg T.I.D. in Patients With Constipation-Predominant and Alternating-Type Irritable Bowel Syndrome (# 4159) Sub-Investigator

70. A 16-Week, Randomized, Double-Blind, Placebo-Controlled, Flexible-Dose, Parallel Group, Multicenter Study With a Withdrawal Phase to Investigate the Safety and Efficacy of XXXXX 200 mg T.I.D. or 200 mg B.I.D. in Female Patients with Constipation-Predominant Irritable Bowel Syndrome (# 3633) Sub-Investigator

71. Long-Term, Open-Label, Safety Study of XXXXX in Patients 6 Years and Older (# 3552) Principal Investigator

72. Evaluation of Atherosclerotic Outcomes with XXXXXX Therapy (# 3832) Sub-Investigator

73. A Multicenter, Double-Blind, Randomized, Placebo-and Active-Controlled, Parallel Study to Evaluate the Lipid Altering Efficacy and Safety of XXXXX in Patients with Metabolic Syndrome and Dyslipidemia. (#4011) Sub-Investigator

74. Efficacy and Safety of XXXXX in Patient with Probable Alzheimer's Disease (#3822) Principal Investigator

75. Efficacy and Safety of XXXXX in Patients with Mild Cognitive Impairment (#3823) Principal Investigator

76. A Randomized, Double-Blind, Placebo-Controlled, Two-Year Parallel-Group Study to Evaluate the Efficacy and Safety of XXXXX in the Treatment and Modification of Progression of Benign Prostatic Hyperplasia, Followed by a Two-Year Open-Label Treatment Phase. (#2328) Subinvestigator

77. A Phase III/IV Extension – A Phase III, Parallel, Randomized, Multicenter, Open-Label Clinical Study to Evaluate the Safety of XXXXX Extended Oral Contraceptive Therapy – 84-Day Active Cycle (#2745x1) Subinvestigator

78. A Double-Blind, Placebo-Controlled, Parallel Group Design Dose-Ranging Study of Three Doses of XXXXX vs. Placebo for the Treatment of Sexual Dysfunction (Arousal Disorder) in Postmenopausal Women (# 4100) Principal Investigator

79. A Double-Blind, Placebo-Controlled, Parallel Group Design Dose-Ranging Study of Three Doses of XXXXX vs. Placebo for the Treatment of Sexual Dysfunction (Hypoactive Disorder) in Postmenopausal Women (#4101) Principal Investigator

80. A Multicenter, Eight-Week Treatment, Single Step Titration, Open-Label Study Assessing the Percentage of Patients Achieving Low Density Lipoprotein Cholesterol Target with XXXXX Starting Doses of 10 mg, 20 mg, 40 mg, and 80 mg.(# 4168) Sub-Investigator

81. A Randomized, Double-Blind, Placebo-Controlled Study of the Efficacy and Safety of XXXXX Tablets in Patients with Primary Hypercholesterolemia (# 3713) Sub-Investigator

82. A Double-Blind, Placebo-Controlled Study to Evaluate the Safety and Efficacy of XXXXX Versus Over-Encapsulated XXXXX in Subjects with Acute Migraine Attacks (#4293) Subinvestigator

83. A Phase III, Multi-Center, Randomized, Double-Blind, Parallel Group Study of XXXXX 20 mg, XXXXX 40 mg and Placebo in Patients with Multiple Moderate or Severe Acute Migraine Headaches (# 3695) Subinvestigator

84. A Randomized, Double-Blind, Dose Ranging, Placebo-Controlled Trial to Determine the Lipid-Lowering Efficacy and Safety of XXXXX Alone and in Combination with XXXXX in Subjects with Mixed Dyslipidemia (# 4204) Subinvestigator

85. A Multi-Center, Eight-Week Treatment, Single Step Titration, Open-Label Study Assessing the Percentage of Patients Achieving Low Density Lipoprotein Cholesterol Target with XXXXX Starting Doses of 10mg, 20mg, 40mg and 80mg (#4168) Sub-Investigator

86. A Double-Blind, Placebo-Controlled Study to Evaluate the Safety and Efficacy of XXXXX Versus Over-Encapsulated XXXXX in Subjects with Acute Migraine Headaches (#4293) Sub-Investigator

87. A Phase III, Randomized, Multicenter, Clinical Trial to Evaluate the Efficacy and Safety of Combination Oral Contraceptive Regimens Utilizing Ethinyl Estradiol During the Pill-Free Interval for Prevention of Pregnancy in Women. (#4330) Sub-Investigator

88. A Multicenter, Double-Blind, Randomized, Placebo-Controlled Study to Evaluate the Safety of the Hormone Replacement Therapy Combination Drug Product XXXXX in Postmenopausal Women with Concomitant Disease and Medication Known to Potentiate the Risk of Hyperkalemia. (#4300) Sub-Investigator

2002

89. A Randomized, Double-Blind, Multi-Center Study to Assess the Safety of Long-Term Administration of Two Dose Levels of XXXXX in Patients with Primary Insomnia. (#3930) Sub-Investigator

90. A Randomized, Double-Blind, Multi-Center, Fixed-Dose, Cross-Over Study to Investigate the Efficacy and Safety of 20mg of XXXXX Given on Demand in Comparison to 100mg of XXXXX Given on Demand in Males with Erectile Dysfunction and a Diagnosis of Diabetes Mellitus and/or Hypertension and/or Hyperlipidemia. (#3521) Sub-Investigator

91. An Open Label Study of Topical XXXXX 0.01% Gel Applied 2 Times per Week for 3 Weeks for Each Recurrence of Herpes Genitalis over 52 Weeks. (#4347) Sub-I

92. Randomized, Double-Blind, Parallel Groups, Multicenter Study to Compare the Efficacy and Safety of Monthly Oral Administration of 100mg and 150mg XXXXX with 2.5 mg Daily Oral XXXXX in Postmenopausal Osteoporosis. (#4267) Sub-I

93. Randomized, Double-Blind, Parallel Groups, Multicenter Study to Compare the Efficacy and Safety of Two IV XXXXX Dose Regimens (2mg q 2 mo., 3mg q 3mo.) with 2.5mg Daily Oral XXXXX in Postmenopausal Osteoporosis. (#4266) Sub-I

94. A Multicenter, Double-Blind, Randomized, Parallel Group, 28-Week Study to Evaluate the Efficacy and Safety of XXXXX and XXXXX Co-Administration Versus XXXXX in Patients with Hypercholesterolemia. (#4223) Sub-I

95. An Open-Label Extension of Study DEX-MD-02A to Investigate the Long-Term Safety and Efficacy of XXXXX 200mg T.I.D. in Female Patients with Constipation-Predominant Irritable Bowel Syndrome. (#3663x1) Sub-I

96. A Multinational, Randomized, Double-Blind, Parallel Group, Placebo Controlled 24 Week Study to Evaluate the Efficacy and Safety of Transdermal Testosterone (300 μg/day) in Women with Hypoactive Sexual Desire Disorder on Concurrent Estrogen Replacement Therapy Who Have Undergone Hysterectomy and Bilateral Oophorectomy. (#1727) Sub-I

97. A Multinational, Randomized, Double-Blind, Parallel Group, Placebo-Controlled 24-Week Study to Evaluate the Efficacy and Safety of Transdermal Testosterone (300μg/day) in Naturally Menopausal Women with Hypoactive Sexual Desire Disorder on Concurrent Oral Hormone Replacement Therapy. (#4337) Sub-I

98. A Double-Blind, Placebo-Controlled, Parallel Group Study to Evaluate Two Dose Levels (5mg and 20mg) of XXXXX Nasal Spray in the Acute Treatment of a Single Migraine Attack in Adolescent Migraineurs (12-17 Years of Age). (#4452) Sub-I

99. A Randomized, Double-Blind, Placebo-Controlled Study Evaluating Acetaminophen Extended Release (1950 mg/day and 3900 mg/day) in the Treatment of Osteoarthritis of the Hip or Knee. (#3993) Sub-I

100. A Randomized, Double-Blind, Placebo-Controlled, Efficacy and Safety Study of XXXXX Including 3-Months of Initial Drug Dosing, a 9-Month Off-Drug Treatment Period, and a 3-Month Re-Exposure Followed by a 3-Month Crossover in Overweight and Obese Subjects. (#4456) Sub-I

Curriculum Vitae

Please complete this form in English

First and family name	Leon Rubenfaer, MD
Present position	Principal Investigator/Medical Director
Address (Full office address incl. postal/zip code)	33497 23 Mile Rd, Suite #110 New Baltimore, MI 48047
Medical education	
Name of school	Wayne State University-College of Medicine
City, Country	Detroit, MI
Duration of education	4 year(s), month(s)
Degree attained	MD
Education completed in year	1966
Physician's reference/license number (if applicable)	4301027683 Physician License # for State of Michigan
Postgraduate training	
Type of training	Rotating Internship
Name of institution	Sinai Hospital of Detroit
City, Country	Detroit, MI-US
Duration of training	1 year(s), month(s)
Degree attained	
Training completed in year	1967
Type of training	Psychiatric Residency
Name of institution	Sinai Hospital of Detroit
City, Country	Detroit, MI-US
Duration of training	3 year(s), month(s)
Degree attained	
Training completed in year	1970

Curriculum Vitae

Full Name: **David M. Marks, M.D.**
Credentials: **Board-Certified in Psychiatry**
Position Title: **Medical Director/C.E.O.**
Address: **Optimum Health Services**
7200 Parkway Drive, Suite 116
La Mesa, CA 91942
Telephone Number: **619-667-4567**
Cellular Number: REDACTED
Facsimile Number: **619-667-4568**

9/10/02

Education:

Institution & Location	Degree	Year Conferred	Field of Study
University of California at San Diego San Diego, CA	**Fellowship**	**1999 - 2000**	**Consultation and Liaison Psychiatry**
Medical College of Pennsylvania / Clinical Neuroscience Research Unit Philadelphia, PA	**Senior Resident**	**1998 - 1999**	**Psychiatry**
University of California at San Diego San Diego, CA	**Resident**	**1995 - 1998**	**Psychiatry**
University of Texas Medical Branch Galveston, TX	**M.D.**	**1995**	
Rice University Houston, TX	**B.A.**	**1991**	**Psychology**

Research and Professional Experience:

Position	Institution/Employer & Location	Dates of Employment
Medical Director/C.E.O.	**Optimum Health Services, La Mesa, CA**	**10/00 - Present**
Assistant Medical Director	**Behavioral & Medical Research, LLC San Diego, CA**	**04/00 - 01/02**
Secretary/Treasurer of Medical Executive Committee	**Alvarado Parkway Institute La Mesa, CA**	**12/01 - Present**
Clinical Director of Intensive-Care Unit North	**Alvarado Parkway Institute La Mesa, CA**	**10/01 - Present**
Associate Medical Director	**Integrated Insights San Diego, CA**	**10/00 - Present**
Clinical Instructor	**UCSD Department of Psychiatry San Diego, CA**	**07/99 - Present**
Clinical Director of Research	**Alvarado Parkway Institute La Mesa, CA**	**01/01 - 10/01**
Medical Director	**Isis Center Short-term Residential Treatment Program San Diego, CA**	**08/99 - 04/00**
Director of Clinical Education	**Integra Managed Behavioral Health Care Organization San Diego, CA**	**09/98 - 06/99**
Staff Psychiatrist	**Charter Fairmount Institute Philadelphia, PA**	**09/98 - 06/99**

Staff Psychiatrist	**California Psychiatric Coverage San Diego, CA**	**10/97 - 07/98**
Staff Psychiatrist (volunteer position)	**St. Vincent De Paul Village San Diego, CA**	**12/97 - 06/98**
Instructor	**Psychopathology UCSD Medical School San Diego, CA**	**01/97 - 05/97**
Instructor	**DSM-IV for the Novice Practitioner UCSD Extension San Diego, CA**	**04/96**
Instructor	**Introduction to Patient Evaluation UTMB Medical School Galveston, TX**	**09/94 - 05/95**
Research Assistant	**Psychiatric Epidemiology Laboratory, UTMB Galveston, TX**	**05/91 - 08/91**
Research Assistant	**National Institutes of Health Student Research Forum, UTMB Galveston, TX**	**05/92 - 08/92**

Honors and Awards:
Fellowship to Explore Complementary Medicine, 1999
Journal of Clinical Psychiatry Resident Advisory Board, 1998
Commendation for Teaching, UCSD Department of Psychiatry, 1997
UTMB Clinical Pathology Conference Award, 1993; first place out of 200 medical students
National Merit Scholar, Rice University

Publications:
Marks, D.M. and Zisook, S., "Mood Disorders" in Psychiatry: Pearls of Wisdom, Boston Medical Publishing Corporation, 1999.

Clinical Trials Experience:

Principal Investigator on trials

A 6-Week, Double-Blind, Randomized, Fixed-Dose, Parallel-Group study of the Efficacy and Safety of Three Dose Levels of SM-13496 Compared to Placebo and Haloperidaol in Patients with Schizophrenia Who are Experiencing an Acute Exacerbation of Symptoms: Sumitomo Pharmaceuticals America, Ltd.

A Randomized, Open-Label, Dose-Blinded, Multicenter, 6-Month Study of Safety and Tolerability of 3 Dose Levels of SM-13496 in Patients with Schizophrenia: Sumitomo Pharmaceuticals America Ltd.

A Phase III, Three Week, Multicenter, Randomized, Double-Blind, Placebo Controlled, Parallel-Group Safety and Efficacy Study of Extended-Release Carbamazepine in the Treatment of Bipolar I Disorder: Shire Pharmaceutical Development Inc.

Nalfemene in the Treatment of Pathological Gambling. A Placebo-Controlled Dose-Response Study: Oy Contral Pharma Ltd.

Subinvestigator on trials

A Double-Blind, Randomized, Fixed-Dose, Placebo-Controlled, Parallel-Group, Six-Week Efficacy, Safety, and Tolerability Study of Two Dose Levels of SM-13496 in Patients with Schizophrenia by DSM-IV

Criteria who are Experiencing an Acute Exacerbation of Symptoms: Sumitomo Pharmaceuticals America Ltd.

Duloxetine vs. Placebo and Paroxetine in the Acute Treatment of Major Depression: Eli Lilly and Company.

Safety and Efficacy of Depakote as Combination Therapy in the Treatment of Psychosis Associated with Schizophrenia: Abbott.

A Randomized, Double-Blind, Placebo- and Risperidone-Controlled, Multicenter Study to Evaluate the Efficacy and Safety of Two Nonoverlapping Dose Ranges of Iloperidone Given b.i.d. for 42 Days to Schizophrenic Patients Followed by a Long-Term Treatment Phase with Iloperidone Given q.d.: Novartis Pharmaceuticals.

An Open-Label Randomized Assessment of The Efficacy and Tolerability of Venlafaxine Extended Release in Serotonin-Selective Reuptake Inhibitor (SSRI)-Failure Patients with Major Depression: Wyeth-Ayerst.

Fixed Dose Comparison of the Safety and Efficacy of LU 26-054, Citalopram, and Placebo in the Treatment of Major Depressive Disorder: Forest Laboratories.

An Open-Label Study of the Safety, Tolerability, and Efficacy of Up to 90 mg Buspirone HydrochlorideExtended Release in Patients with Generalized Anxiety Disorder: Biovail.

A Double-Blind, Placebo-Controlled, Fixed-Dose Study of Paroxetine CR Continuous Treatment (12.5mg and 25mg/day) for Premenstrual Dysphoric Disorder" Issue Date:27 August 1999; Modification No. 1:6 September 1999: Smith Kline Beecham.

A Phase III Randomized, Double-Blind Comparison of Placebo and Tomoxetine Hydrocholoride in Adult Outpatients with DSM-IV Attention-Deficit/Hyperactivity Disorder: Eli Lilly and Company.

A Long-Term, Open-Label Safety Study of Tomoxetine Hydrochloride in Adult Outpatients with DSM-IV Attention-Deficit/Hyperactivity Disorder: Eli Lilly and Company.

A Phase III Open-Label Safety and Efficacy Study of Tomoxetine Hydrochloride in Outpatients with ADHD, Ages 6 to 18 years: Eli Lilly and Company.

A Seven Week, Multi-Center Study to Examine Norepinephrine Transporter Inhibition in Patients with Major Depressive Disorder Receiving Paroxetine or Desipramine: Smith Kline Beecham.

Flexible Dose Comparison of the Safety and Efficacy of Lu 26-054 and Placebo in the Treatment of Generalized Anxiety Disorder: Forest Laboratories.

A Double-Blind, Placebo and Paroxetine Controlled, Multi-Center, Dose Ranging Study Evaluating the Efficacy and Safety of SR142801in Outpatients with Major Depressive Disorder: Sanofi.

A Phase 4, Multicenter, 6-Week, Double-Blind, Randomized, Placebo-Controlled, Parallel-Group Study to Evaluate the Safety and Efficacy of PROVIGIL™ (Modafinil) at Individually Titrated Doses of 100, 200, 300, or 400 mg/day as Adjunctive Therapy in Patients With Major Depressive Disorder Who Have Demonstrated a Partial Response to Antidepressant Therapy for a Current Major Depressive Episode: Cephalon.

Evaluation of the Safety and Efficacy of Lu26-054 in the Prevention of Depression Recurrence: Forest Laboratories.

The Efficacy and Safety of Single Dosage Ranges of Risperidone vs. Placebo in the Treatment of Manic Episodes Associated with Bipolar I Disorder: Janssen Research Foundation.

A Nine-Week, Open-Label, Multi-Center, Safety Study of Single Dosage Ranges of Risperidone in the Treatment of Manic Episodes Associated with Bipolar I Disorder: Janssen Research Foundation.

A Phase 3 Open-Label Safety and Efficacy Study of Tomoxetine Hydrochloride in Pediatric Outpatients (6 to 18 Years) with ADHD: Eli Lilly and Company.

A Phase III Multi-Center Randomized Comparison of TAK-637 Versus Placebo in the Treatment of Subjects with Major Depressive Disorder: Tap Holdings, Inc.

A Double-Blind, Multicenter, Randomized, Placebo-Controlled, Parallel Group Study of Efficacy and Safety of ORG 33062 ER and Paroxetine in Subjects who suffer from Major Depressive Disorder with Atypical Features: Organon.

A Double-Blind, Multi-Center Extension Trial in Subjects who suffer from Major Depressive Disorder with Atypical Features who Participated in the Placebo-and Paroxetine-Controlled Study of ORG 33062 ER: Organon.

Placebo-Controlled Olanzapine Monotherapy in the Treatment of Bipolar I Depression: Eli Lilly and Company.

A Phase IIB Seven-Week Double-Blind, Placebo- and Paroxetine-Controlled Multicenter Study to Evaluate the Safety and Efficacy of Oral CP-122,721 in Outpatients with Major Depressive Disorder and Associated Somatic Symptoms: Pfizer.

A Multicenter, Double-blind, Randomized Comparision of the Efficacy and Safety of Sustained-Release Formulation Quetiapine Fumurate (Seroquel TM) and Placebo in the Treatment of Patients with Schizophrenia: Astra Zeneca.

A Randomized, Double-Blind, Placebo-Controlled Trial to Evaluate the Efficacy and Safety of Galantamine in Subjects with Mild Cognitive Impairment (MCI) Clinically at Risk for Development of Probable Alzheimer's Disease: Janssen Research Foundation.

A Double-blind, Placebo and Paroxetine Controlled, Multicenter, Dose Ranging Study Evaluating the Efficacy and Safety of SR142801 in Outpatients with Major Depressive Disorder.

Evaluation of the Safety and Efficacy of Escitalopram in the Prevention of Depression Recurrence Protocol SCTMD-11 Fixed Dose Continuation Study of Escitalopram in the Treatment of Depressed Nonresponders: Forest Laboratories.

Placebo-Controlled Olanzapine Monotherapy in the Treatment of Bipolar I Depression: Eli Lilly and Company.

The Assessment of Sibutramine for the Treatment of Olanzapine-Associated Weight Gain in Subjects with Schizophrenia, Schizophreniform Disorder, Schizoaffective Disorder, and Bipolar I Disorder: Eli Lilly and Company.

A Double Blind, Placebo-controlled, Parallel-group, Flexible-dose Study of Venlafaxine ER in Adolescent Outpatients with Social Anxiety Disorder: Wyeth-Ayerst.

A four-week double-blind, placebo and active controlled, dose-ranging study of SL 65.1498-00, 3 doses (5,15, and 50 mg QD) and lorazepam (3mg QD) in outpatients with Generalized Anxiety Disorder (GAD): Sanofi-Synthelabo.

A Randomized, Double-blind, Placebo-Controlled Evaluation of the Safety and Efficacy of Memantine in Patients with Mild to Moderate Dementia of the Alzheimer's Type: Forest Laboratories.

A Multicenter, Randomized, Double-blind, Parallel Group, Multiple Dose Comparison Study of Valdecoxib 20mg, Valdecoxib 40mg, Sumatriptan 50mg and Placebo in Patients with Moderate or Severe Acute Migraine Headache. Pharmacia.

A Phase II, Randomized, Double-Blind, Palcebo-Controlled, Dose-Ranging Study of Fixed-Doses of Oral OPC-14523 and Prozac in the Treatment of Outpatients with Moderate Depression: Otsuka.

Multi-Center, Randomized, Double-Blind, Fluoxetine and Placebo-Controlled Study of the Efficacy and Safety of Remeron Soltab (Mirtazapine) Orally Disintegrating Tablets in Subjects with Major Depressive Disorder: Organon.

Topiramate Versus Placebo as Add-On Treatment of Subjects with Bipolar Disorder in the Outpatient Setting: Ortho-McNeil Pharmaceutical, Inc.

A Double-blind, Parallel-Group, Multicenter, Fixed-dose Study to Evaluate the Safety and Efficacy of Three Doses of INN 00835 in Subjects Diagnosed with Major Depressive Disorder. Innapharma, Inc.

A Phase IIB, Seven Week, Double-Blind, Placebo- and Paroxetine-Controlled Multicenter Study to Evaluate the Safety and Efficacy of Oral CP-122,721 in Outpatients with Major Depressive Disorder and Associated Somatic Symptoms: Pfizer, Inc.

An Open-Label Pilot Study of Modafinil in Patients with Schizophrenia: Cephalon, Inc.

A Randomized, Open-Label, Rater-Blinded Assessment of Optimal Treatment Change Strategy to Risperdone for Patients Intolerant of Olanzapine (Risperdal rescue study): Janssen Pharmaceutica.

A Double-Blind, Placebo-controlled, Multicenter Study of the Long-Term Efficacy of MK-0869 in the Maintenance of Antidepressant Effect in Geriatric Outpatients with Major Depressive Disorder: Merck and Company.

Gregory Warren Mattingly, M.D.
CURRICULUM VITAE

PERSONAL DATA

Birth date:	September 24, 1963
Wife:	REDACTED
Children:	
Work Address:	330 First Capitol Drive Suite 390 St. Charles, MO 63301-2847
Work Phone:	(636) 949-3894 or (636) 949-5760
Work Fax:	(636) 949-0729
Email:	REDACTED

Greg Mattingly MD
9/19/02

EDUCATION

1981-1985	University of Missouri-Rolla; B.S. in Chemical Engineering
1985-1989	Washington University School of Medicine, St. Louis, Missouri ; M.D.
1989-1993	Resident, Department of Psychiatry Washington University School of Medicine

ACADEMIC DISTINCTIONS

1981-1985	National Merit Scholarship
	President's Scholar, University of Missouri-Rolla
1982-1985	Alpha Chi Sigma Honorary Chemistry Society President, 1984-1985
1985	Summa Cum Laude, B.S. Chemical Engineering

1986-1989	Fulbright Scholarship
1991	Academy of Child and Adolescent Psychiatry National Leadership Award, Charter Fellowship
1992	Upjohn Neuropsychiatry Research Award
1993	Southern Psychiatric Association Research Award

ACADEMIC APPOINTMENTS

1992-present	Journal of Neuropsychiatry and Clinical Neurosciences Reviewer
1993-present	Clinical Faculty, Department of Psychiatry Washington University School of Medicine
1995-present	Psychopharmacology Instructor Washington University School of Medicine

ADMINISTRATIVE APPOINTMENTS

1998-2000	Medical Director, Adolescent Services, St. Joseph Health Center
1998-2000	Regional Director, Adolescent Behavioral Medicine SSM Health Care
1998-present	Medical Director Hobart and Associates EAP
1998-present	Medical Review Board, Blue Cross Blue Shield of Missouri
2000-present	Medical Review Board, Health Link Insurance Corporation
2001-present	Medical Director Adult Behavioral Medicine St. Joseph Health Center
2001-present	SSM Health Care Managed Care Contract Board
2002-present	Chairman, Department of Psychiatry St. Joseph Health Center

BOARD CERTIFICATIONS

1990	Diplomate, National Board of Medical Examiners

1996	Board Certified American Board of Psychiatry and Neurology
1997	Board Certified American Academy of Adolescent Psychiatry

PROFESSIONAL LICENSURE

1989	Missouri Medical License, #MD102964

HOSPITAL AFFILIATIONS

Barnes Hospital; St. Louis, MO
St. John's Mercy Hospital; Creve Coeur, MO
St. Joseph Health Center; St. Charles, MO

PRESENTATIONS

Cardiac Modified ECT for Geriatric Depression; Academy of Biological Psychiatry. Washington, C.C., 1992.

ECT and Neurological Illness: A Comprehensive Review; Southern Psychiatric Association, Hot Springs, VA, 1992.

Psychiatric Patients and Chronic Fatigue Syndrome. Is There an Overlap? American Psychiatric Association, San Francisco, CA, 1992.

The Interface between PTSD and Borderline Personality Disorder; American Psychiatric Association, San Francisco, CA, 1993.

Neurophysiology of Sleep Disorders; Grand Rounds, Farmington Regional Hospital, Farmington, MO, 1998.

Child and Adolescent Anxiety Disorders; Grand Rounds, St. Luke's Hospital, Town and Country, MO, 1998.

Pediatric Depression; Grand Rounds, St. John's Mercy Health Center, Creve Coeur, MO, 2000.

CLINICAL TRIALS EXPERIENCE

Washington University, Malcolm Bliss Mental Health Center Research Ward-Clinical Rater for 4 Different Double Blind, Placebo Controlled Antipsychotic Trials (1992-1993).

X-Company-An Open-Label, Multi-Center Study to Assess Tolerability, Efficacy and Quality of Life Associated with the Use of Compound A in Children with Attention Deficit Hyperactivity Disorder (ADHD) in a Community Practice Setting, Principal Investigator (2001).

X-Company-A Double-Blind, Randomized, Parallel-Group, Placebo-Controlled Study to Investigate the Safety and Efficacy of Compound A for the Prevention of an Affective Episode in Subjects with Bipolar 1 Disorder, Principal Investigator (2001).

X-Company-A Double Blind, Randomized, Parallel-Group, Placebo-Controlled Study to Investigate the Safety and Efficacy of Compound A for the Treatment of Acute Episodes of Major Depressive disorder, Subinvestigator (2001).

X-Company-A Randomized Open-Label, Parallel-Group, Multi-Center Study to Assess the Efficacy, Cardiac Safety and Side Effect Profile of Two Different Antipsychotics in the Treatment of Schizoprenia and Schizoaffective Disorder, Principal Investigator (2002).

X-Company-A Phase 1 Double Blind, Randomized, Multi-Center Inpatient Study of the Relative Bioavailability and Tolerability of a Slow-Release Formulation and a Medium-Release Formulation of Compound A in Patients with Schizophrenia or Schizoaffective Disorder, Principal Investigator (2002).

X-Company-A Double Blind Placebo Controlled Multi-Center Study to Evaluate the Efficacy and Tolerability of Compound A for Child and Adolescent Depression, Principal Investigator (2002).

CURRICULUM VITAE

Charles H. Merideth, M.D.
Affiliated Research Institute
8989 Rio San Diego Drive, Suite 350
San Diego, CA 92108
Phone: (619) 688-6565
Fax: (619) 688-6569

PROFESSIONAL LICENSURE:

California Medical License #C32377
DEA # AM4425802

BOARD CERTIFICATION:

10/1972 American Board of Psychiatry and Neurology

EDUCATION:

1960	DePauw University, Greencastle, Indiana Rector Scholarship, B.A. Summa Cum Laude
1961	Fullbright Scholarship, Anthropology Tuebingen University, Tuebingen, Germany
1965	Washington University School of Medicine, St. Louis, Missouri Jackson-Jackson Fellowship, M.D.

INTERNSHIPS AND RESIDENCIES:

1965-1966	Straight Medicine Internship, Michael Reese Hospital Chicago, Illinois
1966-1969	Psychiatry Residency, Barnes Hospital Washington University School of Medicine, St. Louis, Missouri

EXPERIENCE:

1994-Present	Medical Director, Affiliated Research Institute San Diego, California
1992-1993	Medical Director, Sunrise Recovery San Diego, California
1990-Present	Private Practice, Charles H. Merideth, M.D., Inc.
1971-1990	Private Practice, Psychiatric Centers at San Diego San Diego, California
1985-1989	Director of Research, Alvarado Parkway Institute San Diego, California
1976-1985	Medical Director, Psychiatric Unit, Villa View Community Hospital, San Diego, California
1978-1979	Chief of Staff, Villa View Community Hospital San Diego, California
1970-1971	Consultant, Child Guidance Center, Savannah, Georgia
1969-1971	Consultant, Alcoholism Clinic, Savannah, Georgia
1969-1971	Chief, Mental Hygiene Consultation, Service, U.S. Army Hospital, Fort Stewart, Georgia
1969-1971	Military Service, U.S. Army, Major, Medical Corps
1969	Chief, Consultation Service, Malcolm Bliss Mental Health Center, St. Louis, Missouri
1969	Ward Supervisor, Malcolm Bliss Mental Health Center, St. Louis, Missouri

APPOINTMENTS:

2002	Staff Psychiatrist, Paradise Valley Hospital 2400 E. 4th Street National City, CA 91950

APPOINTMENTS (CONTINUED):

2001	Staff Psychiatrist, Bay View Hospital 330 Moss Street Chula Vista, CA 91911
2000	Clinical Professor of Psychiatry, Loma Linda University, Loma Linda, California
1971-1978	Assistant Clinical Professor of Psychiatry, University of California, San Diego, California

"The Communication of Suicide Intent in Psychiatric Illness" was presented at a conference on Life History of Research in Psychopathology in St. Louis, Missouri, November 1970

CLINICAL RESEARCH EXPERIENCE:

1974-	Co-Investigator: (Flupenthixol Study) Hoffman-LaRouche Pharmaceutical.
1975-1976	Co-Investigator: (Limbitrol Study) Hoffman-La Roche Pharmaceutical.
1975	Co-Investigator: (Nomifensine Study) Protocol 308. A blind, outpatient, antidepressant study. Hoechst-Roussel Pharmaceutical.
1976-1977	Co-Investigator: (Alprazolam Study) Protocol 63226. A blind, outpatient, antidepressant study. Upjohn Pharmaceutical.
1976-1977	Co-Investigator: (Trazadone Study) Protocol 616. A Blind, Inpatient, Antidepressant Study. Mead Johnson Pharmaceutical.
1976-1977	Co-Investigator: (Trazadone Study) Protocol 63226. A Blind, Inpatient, Antidepressant Study, Mead Johnson Pharmaceutical.
1976	Co-Investigator: (Nomifensine Study) Protocol 3109. A Blind, Inpatient Antidepressant Study. Hoechst-Roussel Pharmaceutical.
1977-1979	Co-Investigator: (Nomifensine Study) Protocol 323. A Double-Blind, Inpatient Geriatric Antidepressant Study. Hoechst-Roussel Pharmaceutical.
1977-1982	Co-Investigator: (Trazadone Study) Protocol 720. A Blind, Long-Term, Outpatient Antidepressant Study. Mead Johnson Pharmaceutical.
1978-1979	Co-Investigator: (Clobazam Study) Protocol 302. A Double-Blind, Outpatient, Anxiolytic Study. Hoechst-Roussel Pharmaceutical.
1978-1979	Co-Investigator: (Lofepramine Study) Protocol 13. A Blind, Outpatient, Antidepressant Study. EM Laboratories.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1978-1979 Co-Investigator: (Nomifensine Study) Protocol 320. A Blind, Geriatric, Outpatient, Antidepressant Study. Hoechst-Roussel Pharmaceutical.

1979-1980 Co-Investigator: (Buspirone Study) Protocol 1049. A Blind, Outpatient, Anxiolytic Study. Mead Johnson Pharmaceutical.

1979-1980 Co-Investigator: (Hydergine Study) Protocol 58. A Blind, Geriatric, Outpatient, Antidepressant Study. Sandoz, Incorporated.

1979-1980 Co-Investigator: (Buspirone Study) Protocol 9966. A Blind, Outpatient, Anxiolytic Study. Mead Johnson Pharmaceutical.

1979-1981 Co-Investigator: (Mianserin Study) Protocols A and B. A Blind, Outpatient, Antidepressant Study with Long-Term Follow Up. Organon Laboratories.

1979-1980 Co-Investigator: (Wellbutrin Study) Protocols 14-01 and 17-01. A Blind Outpatient Antidepressant Study with Long-Term, Open Label Follow Up. Burroughs Wellcome Company.

1980- Co-Investigator: (Fluotracen Study) Protocol 03. A Blind, Outpatient Antidepressant Study. Sandoz Incorporated.

1980-1981 Co-Investigator: (Fluoxetine Study) Protocol 23. A Blind, Outpatient Antidepressant Study. Eli Lilly Pharmaceutical.

1980-1981 Co-Investigator: (Fluvoxamine Study) Protocol 1145510. A Blind, Inpatient Antidepressant Study. Duphar Laboratories.

1980-1982 Co-Investigator: (Zimelidine Study) Protocols 108-411. A Blind , Outpatient, Antidepressant Study with Long-Term Follow Up. Astra Pharmaceutical.

1981-1983 Co-Investigator: (Fluoxetine Study) Protocols 27 and 28. A Blind Outpatient Antidepressant Study with Crossover and Long-Term Options. Eli Lilly Pharmaceutical.

1981-1983 Co-Investigator: (Fluoxetine Study) Protocols 29 and 30. A Double-Blind, Inpatient Antidepressant Study with Crossover and Long-Term Options. Eli Lilly Pharmaceutical.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1981-1983 Co-Investigator: (Fluoxetine Study) Protocols 33 and 34. A Double Blind, Geriatric, Inpatient and Outpatient Antidepressant Study with Crossover and Long-Term Options. Eli Lilly Pharmaceutical.

1982- Co-Investigator: (LY 123508 Study) Protocols 06 and 07.

1982- Co-Investigator: (Trazadone Study) Protocol 1136. A Double-Blind, Outpatient, Antidepressant Study with Long-Term Follow Up. Mead Johnson Pharmaceutical.

1982-1983 Co-Investigator: (Adinazolam Study) Protocols 6309, 6311 and 6312. A Blind, Outpatient, Antidepressant Study with Long-Term Follow Up. Upjohn Pharmaceutical.

1982-1983 Co-Investigator: (Zimelidine Study) Protocol 108-303. A Blind, Geriatric, Inpatient and Outpatient Antidepressant Study. Astra Pharmaceutical.

1982-1989 Co-Investigator: (Wellbutrine Study) Protocol 39. An Open-Label, Humanitarian, Outpatient, Antidepressant Study. Burroughs Wellcome Company.

1983-1984 Co-Investigator: (Oxaprotiline Study) Protocol 14. A Blind, Outpatient, Antidepressant Study in Patients with a History of Alcoholism. Ciba-Geigy Pharmaceutical.

1983-1984 Co-Investigator: (Adinazolam Study) Protocol 6331. A Long-Term, Blind, Outpatient Antidepressant Study. Upjohn Pharmaceutical.

1983-1984 Co-Investigator: (Buspirone Study) Protocol 1604. A Double-Blind, Outpatient Anxiolytic Study. Mead Johnson Pharmaceutical.

1983-1984 Co-Investigator: (Moban (Molindone HCl) Study) A Blind, Outpatient, Anti-psychotic Study. DuPont Pharmaceutical.

1983-1985 Co-Investigator: (Oxaprotiline Study) Protocols 07 and 12. A Double-Blind, Outpatient, Antidepressant Study. Ciba-Geigy Pharmaceutical.

1983-1984 Co-Investigator: (Adinazolam Study) Protocol 6318. A Blind, Outpatient, Antidepressant Study. Upjohn Pharmaceutical.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1983-1984 Co-Investigator: (BW647U Study) Protocol 6318. A Blind, Outpatient, Antidepressant Study. Burroughs Wellcome Company.

1983-1984 Co-Investigator: (Tomoxetine Study) Protocols 5 and 10. A Blind, Outpatient, Antidepressant Study with Long Term Follow Up. Eli Lilly Pharmaceutical.

1984-1985 Co-Investigator: (Fluoxetine Study) Protocol 62. A Blind, Outpatient, Antidepressant Study. Eli Lilly Pharmaceutical.

1985-1986 Co-Investigator: (Fluoxetine Study) Protocol 79. A Blind, outpatient Antidepressant Study. Eli Lilly Pharmaceutical.

1985-1986 Co-Investigator: (Paroxetine Study) Protocol 09. A Fixed Dose, Blind, Outpatient, Antidepressant Study. Beecham Laboratories.

1985-1986 Co-Investigator: (Paroxetine Study) Protocols 03 and 04. A Blind, Outpatient, Antidepressant Study with Long-Term Follow-Up. Beecham Laboratories.

1985-1988 Co-Investigator: (Mianserin Study) Protocols 001-032 and 001-042. A Blind, Outpatient Antidepressant Study with Long-Term Follow Up. Organon Laboratories.

1986-1987 Co-Investigator: (Tomoxetine Study) Protocol B4Z-HFAG. A Blind, Fixed-Dose, Outpatient, Depression Study with Long-Term Extension. Lilly Pharmaceutical.

1987 Co-Investigator: (WY-45, 030 Study) Protocol 600A-204. Intermediate-Term Safety and Clinical Acceptability Study of WY-45, 030 Tablets in Depressed Patients. Wyeth Laboratories.

1987-1988 Co-Investigator: (Buspirone Study) Protocol 03AIL. A Blind, Outpatient, Anxiety Study. Bristol-Myers Company.

1987-1988 Co-Investigator: (Tomoxetine Study) Protocol B4Z-MC-HFAH. A Blind, Fixed Dose, Outpatient Depression Study with Long-Term Extension. Lilly Pharmaceutical.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1987-1988 Co-Investigator: (Wellbutrin Study) Protocol 84A. A Blind, Fixed Dose, Outpatient Depression Study. Burroughs Wellcome Company.

1987-1988 Co-Investigator: (WY 45, 030 Study) Protocol 600A-203. A Blind, Outpatient Depression Study. Wyeth Pharmaceutical.

1987-1988 Co-Investigator: (Wellbutrin Study) Protocol 84A. An Open-Label, Surveillance Study for Depressed Outpatients. Burroughs Wellcome Company.

1987-1988 Co-Investigator: (Dothiepin Study) Protocol BPI 1003. An Open-Label, Multi-Center Trial to Evaluate the Safety and Tolerability of Dothiepin in Doses of 200-300 mg/day for a 6-Week Period in Patients with Depression. The Boots Company.

1987-1988 Co-Investigator: (Dothiepin Study) Protocol BPI 1004. An Open-Label, Long-Term Extension Study of Dothiepin in Patients who have Previously Received Dothiepin for Depression in Study BPI 1003. The Boots Company.

1987-1989 Co-Investigator: (Idazoxan Study) Protocol CR87/026. A Blind, Parallel Group Comparison of Idazoxan and Placebo in Patients with Major Depressive Disorder. Reckitt & Colman.

1987 Co-Investigator: (Buspirone Study) Protocol CN101-006. A Placebo-Controlled Study to Assess a Concurrent Usage Schedule for Switching Patients from Alprazolam to Buspirone. Bristol-Myers Company.

1988 Co-Investigator: (Buspirone Study) Protocol CN101-008. A Placebo-Controlled Study to Assess a Concurrent Usage Schedule for Switching Patients from Alprazolam to Buspirone. Bristol-Myers Company.

1988 Co-Investigator: (Milacemide Study) Protocol IC7-87-02-016. A Multi-Center, Randomized, Blind, Parallel Group Dose Response Study of Milacemide in Patients with Mood Disorders Currently in a Major Depressive Episode. G.D. Searle & Company.

1988-1989 Co-Investigator: (CP-76,593 Study) Protocol 088-101. A Multi-Center, Blind, Placebo Controlled Trial of CP-76, 593 in the Treatment of Outpatients with Major Depressive Disorder. Pfizer, Inc.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1988-1989 Co-Investigator: (Enciprazine Study) Protocol 685-203-US. A Blind, Placebo Controlled, Parallel Group Dose-Determined Study of Enciprazine Tablets in Outpatients with Generalized Anxiety Disorder. Wyeth-Ayerst Research.

1988-1989 Co-Investigator: (Ritanserin Study) Protocol 55667/201E. Ritanserin vs. Placebo in the Treatment of Generalized Anxiety Disorder (GAD), A Blind, Parallel Group Phase II Study. Janssen Research Foundation.

1988-1989 Co-Investigator: (Ritanserin Study) Protocol 55667/201E. Ritanserin in the Treatment of Generalized Anxiety Disorder (GAD), an Open-Label Extension Study. Janssen Research Foundation.

1988-1989 Co-Investigator: (Venlafaxine Study) Protocol 600A-301-US. A Randomized, Blind Comparison of Venlafaxine, Imipramine, and Placebo Capsules in Outpatients with Major Depression. Wyeth-Ayerst Research.

1988-1989 Co-Investigator: (Venlafaxine Study) Protocol 60A-305-US. Long-Term Extension of a Blind Comparison of Venlafaxine, Imipramine, and Placebo Capsules in Outpatients with Major Depression. Wyeth-Ayerst Research.

1988 Co-Investigator: (Buspirone Study) Protocol CN101-016. A Blind Trial of Buspirone, Imipramine and Placebo in the Treatment of Depressed Outpatients. Bristol-Myers Company.

1990-1991 Co-Investigator: (Fluvoxamine Study) Protocol 114.01.06. Fluvoxamine in the Treatment of Depression, A Single Center, Blind, Placebo-Controlled Comparison with Imipramine in Outpatients. Reid-Rowell, Inc.

1989 Principal Investigator: (WY-47,846 Study) Protocol 656A-201-US. Open-Label, Outpatient, Antidepressant Study. Wyeth-Ayerst Research.

1990 Principal Investigator: (WY-47-846 Study) Protocol 656A-202-US. An Open-Label, Outpatient, Anxiolytic Study. Wyeth-Ayerst Research.

1990 Principal Investigator: (Wellbutrin Study) Protocol 88. The Safety and Efficacy of Wellbutrin and Fluoxetine in Depressed Outpatients. Burroughs Wellcome Company.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1992-1993 Principal Investigator: (Wellbutrin SR Study) Protocol 205. A Multi-Center, Dose Response Evaluation of the Safety and Efficacy of Bupropion HCl Sustained-Release Versus Placebo in Depressed Outpatients. Burroughs Wellcome Company.

1992-1993 Principal Investigator: (Wellbutrin Study) Protocol 93. A Multi-Center Evaluation of Bupropion (Wellbutrin) in Depressed Outpatients Non-Responsive to Tricyclic Antidepressants: Amitriptyline, Doxepin, Imipramine, Desipramine, or Nortriptyline. Burroughs Wellcome Company.

1993-1994 Principal Investigator: (DN-2327 Study) Protocol M92-826. A Multi-Center Study Comparing DN-2327 with Placebo in Generalized Anxiety Disorder. Abbott Labs/ Tap Pharmaceuticals Inc./ Besselaar

1993-1994 Principal Investigator: (Wellbutrin SR Study) Protocol 208. An Open-Label, Multi-Site Evaluation of Bupropion HCl Sustained-Release to Determine the Clinical Response, Functional Status and Incidence of Serious Adverse Events. Burroughs Wellcome Company.

1993-1994 Principal Investigator: (Olanzapine Study) Protocol F1D-MC-HGAJ (a). A Multi-Center Evaluation of the Safety and Efficacy of Olanzapine Compared with Haloperidol in the Treatment of Psychotic Disorders. Eli Lilly Company.

1993-1994 Principal Investigator: (DN-2327 Study) Protocol M93-007. An Open- Label, Outpatient Study on Generalized Anxiety Disorder. Abbott Labs/ Tap Pharmaceutical/ Besselaar.

1993-1994 Principal Investigator: (Wellbutrin SR Study) Protocol 212. A Multi-Center Evaluation of Bupropion HCl Sustained-Release Versus Placebo in Depressed Outpatients. Burroughs Wellcome Company.

1994-1995 Principal Investigator: (Sertindole Study) Protocol M93-098. A Double-Blind, Placebo-Controlled, Haldol-Referenced Study of the Safety and Efficacy of Two Doses of Sertindol in Schizophrenia Patients. Abbott Laboratories.

1994-1995 Principal Investigator: (Sertindole Study) Protocol M92-795. An Open-Label Assessment of the Long-Term Safety of Sertindol in the Treatment of Schizophrenic Patients. Abbott Laboratories.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1994-1995 Principal Investigator: (Ziprasidone) Protocol 128-108. A Blind, Haldol-Referenced Study of the Safety and Efficacy of Two Dose Regimens of Ziprasidone in the Maintenance and Treatment of Outpatients with Schizophrenia Disorder. Pfizer Central Laboratories.

1994-1995 Principal Investigator: (Ziprasidone Study) Protocol 128-114. A Blind, Placebo-Controlled Study Evaluating the Safety and Efficacy of Two Fixed Doses of Ziprasidone in the Acute Exacerbation of Schizophrenia and Schizoaffective Disorder. Pfizer Central Laboratories.

1994-1995 Principal Investigator: (Flesinoxan Study) Protocol 128.2.02. A Blind, Parallel, Placebo Controlled Comparison of Diazepam and Flesinoxan in the Treatment of Generalized Anxiety Disorder. Solvay Pharmaceuticals.

1994-1995 Principal Investigator: (Seroquel Study) Protocol 5077IL/0013. A Blind, Parallel, Multiple Fixed Dose Comparison of Seroquel and Haloperidol in the Treatment of Hospitalized Subjects with Acute Exacerbation of Chronic or Subchronic Schizophrenia. Zeneca Pharmaceuticals.

1994-1995 Principal Investigator: (Propentofylline Study) Protocol US 301. A Forty-Eight Week Efficacy and Safety Study of Propentofylline (HWA 285) in Patients with Alzheimer's Disease. Hoechst-Roussel Pharmaceuticals.

1994-1995 Principal Investigator: (Propentofylline Study) Protocol US 302. A Twenty-Four Week Efficacy and Safety Study of Propentofylline in Patients with Vascular Dementia. Hoechst-Roussel Pharmaceuticals.

1994-1995 Principal Investigator: (Zalaplon Study) A Placebo-Controlled Comparison of Ambien and Zalaplon in the Treatment of Insomnia. American Cyanamid Company.

1995-1996 Principal Investigator: (Sertindole Study) Protocol M94-222. An Open Label Assessment of the Long Term Safety of Sertindole. Abbott Laboratories.

1995-1996 Principal Investigator: (Pramipexole Study) Protocol M/2730/0046. A Dose-Response Study of Pramipexole in Combination with Maintenance Haloperidol for the Treatment of Negative Symptoms of Schizophrenia. The Upjohn Company.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1995-1996 Principal Investigator: (ORG 4428 Study) Protocol 057-004. An Eight-Week, Multi-Center, Active and Placebo-Controlled, Fixed Dose, Efficacy and Safety Study of ORG 4428 in Patients with Major Depression. Organon, Inc.

1995-1996 Principal Investigator: (ORG 4428 Study) Protocol 057-011. A Long Term, Multi-Center, Active and Placebo-Controlled, Fixed Dose Efficacy and Safety Study of ORG 4428 in Outpatients with Major Depression. Organon, Inc.

1995-1996 Principal Investigator: (Fluoxetine Study) Protocol B1Y-MC-HCHG (a). Fluoxetine/Placebo in Panic Disorder. Eli Lilly Laboratories.

1995-1996 Principal Investigator: (MK-462 Study) Protocol 022-012. A Randomized, Triple Blind, Placebo-Controlled, Outpatient Study to Examine the Safety and Efficacy of MK-462 10 mg p.o. and MK-462 5 mg p.o. for the Treatment of Acute Migraine and Migraine Recurrence. Merck & Co, Inc.

1995-1996 Principal Investigator: (L-745,870 Study) Protocol L-745-870. A Blind, Placebo Controlled, Safety, Tolerability and Preliminary Antipsychotic Activity Study of L-745,870 in Hospitalized Schizophrenic Patients. Merck & Co., Inc.

1995-1997 Principal Investigator: (Depakote Study) Protocol M93-111. A Comparative Cost Effectiveness Study of Depakote and Usual Care Versus Lithium and Usual Care in the Treatment of Bi-Polar Disorder. Abbott Laboratories.

1995-1996 Principal Investigator: (Risperdal Study) Protocol RIS-USA-56B. A Randomized Trial to Assess the Outcomes and Costs of Risperdal Versus Conventional Antipsychotic Therapy in Patients with Chronic Schizophrenia. Janssen Research Foundation.

1995-1996 Principal Investigator: (Mazapertine Study) Protocol MAZ-INT-01. Mazapertine Dose Finding Trial, Comparing Three Fixed Dosages of Mazapertine to Risperidone and Placebo: Multi-Center, Blind Parallel-Group Study. Janssen Research Foundation.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1995-1996 Principal Investigator: (Ziprasidone Study) Protocol 128-115. Phase III, Six Week, Blind, Multi-Center, Placebo-Controlled Study Evaluating the Safety and Efficacy of Three Fixed Doses of Oral Ziprasidone (CP-88, Q59-I) (20 mg b.i.d., 60 mg b.i.d., 100 mg b.i.d.) and Haloperidol in the Acute Exacerbation of Schizophrenia or Schizoaffective Disorder. Pfizer Central Laboratories.

1995-1996 Principal Investigator: (Luvox Study) Protocol S1143101. Establishment of the Oral Fluoxetine Dose Effect Relationship for Efficacy and Safety in Outpatients with Major Depressive Disorder. A Randomized, Blind, Placebo and Sertraline Controlled, Parallel Group, Multicenter study. Solvay Pharmaceuticals.

1995-1996 Principal Investigator: (Seroquel Study) Protocol 5077IL/0056. A Multicenter, Open Randomized Comparison of ICI 204, 636 (SEROQUEL) and Usual Care on Health Outcomes in subjects with Schizophrenia and Schizoaffective Disorder. Zeneca Pharmaceuticals.

1995-1996 Principal Investigator: (Wellbutrin Study) Protocol AKIA4003. A Multicenter, Blind, Present Randomized Pilot Study Comparing the Safety and Efficacy of Wellbutrin (Bupropion HCl) Sustained Release and Paroxetine in the Treatment of Elderly Outpatients with Moderate to Severe Recurrent Major Depression. Glaxo Wellcome.

1996- Principal Investigator: (Exelon Study) Protocol ENA-B-452. A Prospective, Multicenter, Open Label Pilot Present Study of the Safety and Efficacy of Exelon in Patients with Moderate to Severe Probable Alzheimer's Disease in a Long-Term Care Setting. Sandoz Pharmaceuticals.

1997- Principal Investigator: (Exelon Study) Protocol ENA-B-356. An Open Label Study to Evaluate the Safety and Efficacy of 1.5 mg b.i.d. through 6 mg b.i.d. of Exelon in Patients with Mild to Severe Probable Alzheimer's Disease in the Community Setting. Sandoz Pharmaceuticals.

1996-1997 Principal Investigator: (NXX-066 Study) Protocol SA-NXX-0013. A Randomized, Placebo-Controlled Present Blind 16 Week Study of the Safety and Tolerability of NXX-066 in Patients with Mild to Moderate Alzheimer's Disease. Astra USA.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1996-1997 Principal Investigator: (Paroxetine Study) Protocol PAR-494. A Blind, Placebo-Controlled Present Flexible Dosing Trial to Evaluate the Efficacy of Modified Release Paroxetine in the Treatment of Panic Disorder. SmithKline Beecham Pharmaceuticals.

1996-1997 Principal Investigator: (Paroxetine Study) Protocol PAR-487. A Blind, Placebo-Controlled Present Trial to Evaluate the Clinical Effects of Immediate Release Paroxetine and Modified Release Paroxetine in the Treatment of Major Depression in Elderly Patients. SmithKline Beecham.

1997 Principal Investigator: (Ziprasidone Study) Protocol 128-126, A Phase III, Randomized Study Comparing 2 Doses of Intramuscular Ziprasidone (2 mg and 20 mg) in Subjects with Psychosis and Acute Agitation. Pfizer, Inc.

1996 Principal Investigator: (Zolmitriptan Study) Protocol 311C11/0071. A Multi-Center, Blind, Randomized Comparison of Zolmitriptan (311C90, ZOMIG) and Sumatriptan in the Acute Treatment of Multiple Migraine Headaches. Zeneca Pharmaceuticals.

1997 Principal Investigator: (Alniditan Study) Protocol ALN-INT-17. A Randomized, Blind, Placebo-Controlled Trial to Evaluate the Efficacy and Safety of Alniditan (0.4, 0.8, or 1.4 mg) Given Subcutaneously in the Acute Treatment of Migraine. Janssen Research Foundation.

1997 Principal Investigator: (Alniditan Study) Protocol ALN-USA-18. Open Evaluation of the Long-Term Efficacy, Safety and Tolerability of 1.4 mg SC Alniditan in the Acute Treatment of Migraine Attacks. Janssen Research Foundation.

1997 Principal Investigator: (Propentofylline Study) Protocol HWA285-3018. A 48-Week Study to Compare the Efficacy and Safety of Propentofylline (HWA285) with Placebo in Outpatients with Alzheimer's Disease. Hoechst-Roussel Pharmaceuticals.

1997 Principal Investigator: (Wellbutrin Study) Protocol AK1A4002. A Multi-Center, Blind, Placebo-Controlled Comparison of the Effects of Sexual Functioning of Wellbutrin (Bupropion HCl) Sustained Release of Sertraline in Outpatients with Moderate to Recurrent Major Depression. Glaxo-Wellcome.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1998 Principal Investigator: (Risperdal Study) Protocol RIS-USA-102. The Safety and Efficacy of Risperdal (Risperidone) vs. Placebo vs. Haloperidol as Add on Therapy to Mood Stabilizers in the Treatment of the Manic Phase of Bipolar Disorder. Janssen Research Foundation.

1997 Principal Investigator: (Fluvoxamine Study) Protocol S1143102. A Multicenter, Blind, Placebo-Controlled, Parallel Group Study of the Safety, Tolerability, and Efficacy of Three Fixed Doses of Fluvoxamine vs. Placebo in Outpatients with Major Depressive Disorder. Solvay Pharmaceuticals.

1997-1998 Principal Investigator/Medical Director: (Aripiprazole Study) Protocol 31-97-201. A Phase III Double Blind, Placebo-Controlled Study of Aripiprazole in the Treatment of Psychosis. Otsuka America Pharmaceutical.

1997 Principal Investigator: (Aripiprazole Study) Protocol 31-97-203. An Open-Label, Follow-On Study of the Long Term Safety of Aripiprazole in Patients with Psychosis. Otsuka America Pharmaceutical.

1997 Principal Investigator: (Sertraline Study) Protocol R-0552. An Eight-Week, Multi-Center, Parallel-Group, Blind, Placebo-Controlled Study of Sertraline In Elderly Outpatients With DSM-IV Major Depression. Pfizer Pharmaceuticals.

1997 Principal Investigator: (MDL 100, 907 Study) Protocol 100907PR0015. A Multicenter, Randomized, Blind, Placebo-Controlled Study of MDL 100, 907 in Schizophrenic and Schizoaffective Patients. Hoechst Marion Roussel Pharmaceuticals.

1997 Principal Investigator: (Flibanserine Study) Protocol 511.11. An Eight-Week, Blind, Placebo-Controlled Study of 2, 20, 50 and 100 mg Flibanscrine b.i.d. and Paroxetine q.d. in Patients with Major Depressive Disorder. Boehringer Ingelheim Pharmaceuticals, Inc.

1997 Principal Investigator: (Celecoxib Study) Protocol PR #IQ5-97-02-001. Clinical Protocol for Blind, Randomized, Placebo-Controlled, Comparative Study of Celecoxib (SC-58635) for the Inhibition of Progression of Alzheimer's Disease. G.D. Searle Pharmaceuticals.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1997 Principal Investigator: (L-754-030 Study) Protocol MK-0869 (L-754, 030). A Blind, Multicenter, Dose-Finding Acute and Extension Study of MK-0869 (L-754-030) vs. Fluoxetine Hydrochloride and Placebo in the Treatment of Outpatients with Major Depressive Disorder. Merck & Co., Inc.

1997 Principal Investigator: (EMD 68 843 Study) Protocol EMD 68 843-009. A Blind, Randomized, Multicenter, Parallel Design Study to Evaluate the Efficacy and Safety of Individual Maximum Tolerated Doses of EMD 68 843 in Comparison with Placebo and Fluoxetine in Outpatients with Major Depressive Disorder. Merck Lipha.

1997 Principal Investigator: (M100907 Study) Protocol M100907/3001. A Multicenter, Placebo and Active Control, Blind, Randomized Study of the Efficacy, Safety and Pharmacokinetics of M100907 (10 and 20 mg/ day) in Schizophrenic and Schizoaffective Patients (3001). Hoechst Marion Roussel.

1997 Principal Investigator: (M100907 Study) Long Term Follow-up, Safety Study of M100907 Tablets in Schizophrenic and Schizoaffective Subjects who Participated in Protocol M100907/3001 or M100907/3002. Hoechst Marion Roussel.

1997 Principal Investigator: (ORG 5222 Study) Protocol 041002. A Blind, Five-Armed, Fixed-Dose, Active and Placebo Controlled Dose-Finding Study With Sublingual ORF 5222 in Subjects with Acute Phase Schizophrenia. Organon, Inc.

1997 Principal Investigator: (ORG 5222 Study) Protocol 041500. ORG 5222 for Humanitarian Use. Organon, Inc.

1997 Medical Director: (Sertindole Study) Protocol M95-372. A Double-Blind, Placebo-Controlled, Haldol-Referenced Study of the Safety and Efficacy of Sertindole in Schizophrenic Patients. Abbott Laboratories.

1998 Medical Director: (Flibanserine Study) Protocol 511.12. An Eight-Week, Double-Blind, Placebo-Controlled, Study of 2, 20, 50 and 100 mg Flibanscrine b.i.d. and Paroxetine q.d. in Patients with Major Depressive Disorder. Boehringer Ingelheim.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1998 Principal Investigator: (Lamictal Study) Protocol SCAA2008. A Multicenter, Blind, Placebo-Controlled Evaluation of the Safety and Efficacy of Lamictal (Lamotrigine) Compared to Placebo and Lithium in the Treatment of An Acute Manic or Mixed Episode in Patients who have Bi-Polar Disorder: Incorporating Participation in Genotype Research Which is Optional for Both Study Centers and Patients. Glaxo Wellcome Research and Development.

1998 Principal Investigator: (Pregabalin Study) A Placebo-Controlled Study of Pregabalin and Lorazepam in Patients With Generalized Anxiety Disorder (Protocol 1008-025). Parke-Davis Pharmaceutical Research.

1999 Principal Investigator/Medical Director: (Olanzapine (LY170053) Study) Protocol F1D-MC-HGGN. The Comparative Efficacy of Olanzapine, Risperidone, and Haloperidol for Cognition in Schizophrenia. Eli Lilly and Company.

1999 Medical Director: (Lamictal Study) Protocol SCAA2008 (105-609). A Multicenter, Blind, Placebo-Controlled Evaluation of the Safety and Efficacy of Lamictal (Lamotrigine) Compared to Placebo in the Treatment of An Acute Manic or Mixed Episode in Patients Who Have Bi-Polar Disorder. Glaxo Wellcome.

1999 Principal Investigator/Medical Director: (Aripiprazole Study) Protocol 31-98-213. An Open-Label Comparison of the Neurocognitive Effects of Aripiprazole to Olanzapine Administered Orally in Patients with Stable Psychosis. Otsuka America Pharmaceutical, Inc.

1998 Principal Investigator: (Aripiprazole Study) Protocol 31-98-217. A Multi-Center, Randomized, Blind, Active-Controlled Study to Compare the Long-term Maintenance Effects and Safety of Aripiprazole and Haloperidol Following Acute Relapse in Schizophrenia Patients. Otsuka America Pharmaceutical, Inc.

1998 Principal Investigator: (Aripiprazole Study) Protocol 31-98-218. Aripiprazole, An Open-Label Follow-up Study of the Long-Term Safety of Aripiprazole in Patients with Chronic Schizophrenia. Otsuka America Pharmaceutical, Inc.

1998 Principal Investigator/Medical Director: (Aripiprazole Study) Protocol 31-98-220. An Open-Label Follow-On Study of the Long-Term Safety of Aripiprazole Administered Orally in Patients with Psychosis. Otsuka America Pharmaceutical, Inc.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1998 Principal Investigator: (Iloperidone Study) Protocol ILP 2001. A Prospective, Randomized, Blind, Multicenter Study of Iloperidone to Evaluate the Safety of Two Titration Schedules and to Compare the Safety and Efficacy of b.i.d. and q.d. Regimens to Haloperidol in Patients with Schizophrenia. Novartis Pharmaceuticals Corporation.

1998 Principal Investigator/Medical Director: (Ziprasidone Study) Protocol R-0548. A Multi-Center, Placebo-Controlled, Double-Blind Study Comparing the Safety and Efficacy of Ziprasidone and Olanzapine in Subjects with Schizophrenia or Schizoaffective Disorder Needing Inpatient Care. Pfizer, Inc.

1998 Principal Investigator: (Selegeline Study) Protocol S9303-E113-98B. A Blind, Placebo-Controlled, Parallel Assessment of the Safety and Efficacy of the Selegiline Transdermal System in Patients with Major Depression. Somerset Pharmaceuticals, Inc.

1998 Principal Investigator: (Memantine Study) Protocol MRZ 90001-9605. Efficacy and Long-term Tolerability of Memantine in Patients with Moderately Severe to Severe Alzheimer's Disease (AD). Merz + Co., GmbH & Co.

1998 Principal Investigator: (MK-0869 Study) Protocol MK-0869. A Blind, Active and Placebo-Controlled, Safety, Tolerability, and Preliminary Antipsychotic Activity Study of MK-0869 in Hospitalized Schizophrenic Patients. Merck & Co., Inc.

1998 Principal Investigator: (Idebinone Study) Protocol CV-2619/PFNP-002. A Blind, 12-Month Safety and Efficacy Extension Study of Idebinone (CV-2619) 120 mg t.i.d., and 360 mg t.i.d. in Patients with Probable Alzheimer's Disease. Takeda America Research & Development Center, Inc.

1998 Principal Investigator: (Paroxetine Study) Protocol BRL 29060/641. A Randomized, Blind, Placebo-Controlled, Fixed Dosage Trial to Evaluate the Efficacy and Tolerability of 20 and 40 mg/day Paroxetine in Patients with Generalized Anxiety Disorder. SmithKline Beecham Pharmaceuticals.

1998 Principal Investigator: (Olanzapine Study) Protocol F1D-MC-HGGU. Olanzapine vs. Risperidone and Placebo in the Treatment of Psychosis and Associated Behavioral Disturbances in Patients with Dementia. Eli Lilly and Company, Inc.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1998 Principal Investigator: (Depakote Study) Protocol M97-696. Evaluation of the Efficacy and Safety of Depakote CR in the treatment of the Manic Phase of Bi-Polar Disorder: A Placebo-Controlled Study. Abbott Laboratories.

1998 Principal Investigator: (Ziprasidone Study) Protocol 128-127E. An Open Extension Study in the Treatment of Schizophrenic Subjects Who Have Participated in Previous Ziprasidone Clinical Trials. Pfizer, Inc.

1998 Principal Investigator: (Propentofylline Study) Protocol HWA285-3019. A 24 Week Study to Compare the Efficacy & Safety of Propentofylline (HWA285) with Placebo in Outpatients with Vascular Dementia. Hoechst-Roussel Pharmaceuticals.

1999 Principal Investigator: (Lamictal Study) Protocol SCAA2010. A Multi-Center, Blind, Placebo-Controlled, Flexible Dose Evaluation of the Safety and Efficacy of Lamictal (Lamotrigine) in the Treatment of a Major Depressive Episode in Patients Suffering from Bipolar Disorder. Glaxo Wellcome.

1998 Principal Investigator: (Galantamine Study) Protocol GAL-USA-10. Placebo Controlled Evaluation of Galantamine in the Treatment of Alzheimer's Disease: Safety and Efficacy Under a Slow-Titration Regimen. Janssen Research.

1998 Medical Director: (Lamictal Study) Protocol SCAA4005. An Evaluation of Lamotrigine vs. Carbamazepime, Phenytoin or Divalproex Sodium as Monotherapy Treatment for Epilepsy Patients who have Failed a Previous Course of Antiepileptic Drug Therapy. Glaxo Wellcome Pharmaceuticals.

2000 Medical Director: (Paroxetine Study) Protocol 29060-651. A Twelve-Week Double-Blind Fixed Dose Comparison of 20 and 40 mg Daily of Paroxetine and Placebo in Patients Suffering from Posttraumatic Stress Disorder. SmithKline Beecham Pharmaceuticals.

1998-1999 Medical Director: (Lamictal Study) Protocol SCAA2010. A Multi-Center, Blind, Placebo-Controlled, Flexible Dose Evaluation of the Safety and Efficacy of Lamictal (Lamotrigine) in the Treatment of a Major Depressive Episode in Patients Suffering from Bi-Polar Disorder. Glaxo Wellcome.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1998-1999 Medical Director: (M100907 Study) Protocol M100907/3001. A Multicenter, Placebo and Active Control, Blind, Randomized Study of the Efficacy, Safety and Pharmacokinetics of M100907 (10 and 20 mg/ day) in Schizophrenic and Schizoaffective Patients (3001). Hoechst Marion Roussel.

1998-1999 Medical Director: (Depakote Study) Protocol M97-696. Evaluation of the Efficacy and Safety of Depakote CR in the treatment of the Manic Phase of Bi-Polar Disorder: A Placebo-Controlled Study. Abbott Laboratories.

1998-1999 Principal Investigator/Medical Director: (Lamictal Study) Protocol SCAA20022. A Randomized, Multicenter, Blind, Placebo Controlled, Fixed Dose, 7 Week Evaluation of the Efficacy and Safety of Lamotrigine in Patients with Major Depression. Glaxo Wellcome.

1998-1999 Principal Investigator/Medical Director: (Iloperidone Study) Protocol ILP 3000. A Prospective, Randomized, Double-Blind, Placebo and Active-Controlled, Multi-Center Study to Evaluate the Efficacy and Safety of Three Fixed Doses of Iloperidone Given b.i.d. for 42 Days to Schizophrenic Patients with Acute or Subacute Exacerbation, Followed by a Double-Blind, Active-Controlled, Flexible Dose, Long-Term, Six-Month Phase with Iloperidone Given q.d. Novartis Pharmaceutical.

1999 Principal Investigator: (Remeron (Mirtazapine) Study) Protocol 003-900. A Multicenter, Randomized, Blind, Sertraline-Controlled Study of the Efficacy and Safety of Remeron (Mirtazapine) in Subjects with Major Depressive Disorder Who Failed on SSRI Treatment Due to Lack of Efficacy. Organon Pharmaceuticals.

1999 Principal Investigator: (MK-0869 Study) Protocol 039-00. A Double-Blind, Parallel, Placebo and Active-Controlled, Multicenter Study to Determine the Safety and Efficacy of MK 869 in Outpatients With Major Depressive Disorder and Anxiety. Merck & Co., Inc.

1999 Principal Investigator: (Galantamine Study) Protocol GAL-USA-11. Safety and Efficacy of Galantamine During Withdrawal in the Treatment of Alzheimer's Disease. Janssen Research Foundation.

1999 Principal Investigator/Medical Director: (Ziprasidone) R-0570. A Double-Blind Six-Month Continuation Protocol for Patients who Successfully Completed Protocol R-0548. Pfizer, Inc.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1999 Principal Investigator: (Belfloxatone Study) Protocol 2918. A Comparison of the Efficacy and Safety of Belfloxatone 2.5 mg OD vs. Placebo in Outpatients With Moderate to Severe Major Depressive Disorders; A Randomized, Double-Blind, 8-Week Multi-Center Phase II Trial. Synthelabo Research, Inc.

1999 Principal Investigator/Medical Director: (Ziprasidone Study) Protocol R-0585. A 52-Week (1 Year), Open Extension Study Evaluating the Safety and Efficacy of Continued Administration of 40-160 mg Daily of Oral Ziprasidone in the Treatment of Schizophrenic Patients Who have Participated in Previous Ziprasidone Clinical Trials. Pfizer, Inc.

1999 Principal Investigator/Medical Director: (Pregabalin Study) Protocol 1008-022. A Placebo-Controlled Study of Pregabalin in Patients with Acute Mania. Parke-Davis.

1999 Principal Investigator: (Paroxetine Study) Protocol 29060/648. A 12 Week, Double-Blind, Placebo Controlled, Parallel Group Study to Assess the Efficacy and Tolerability of Paroxetine in Patients Suffering from Posttraumatic Stress Disorder (PTSD). SmithKline Beecham.

1999 Principal Investigator: (Aripcept and Vitamin E Study) Protocol ADC-008. A Randomized, Blind, Placebo Controlled Trial to Evaluate the Safety and Efficacy of Vitamin E and Donepezil HCl (Aricept) to Delay Clinical Progression from Mild Cognitive Impairment (MCI) to Alzheimer's Disease (AD). Alzheimer's Disease Cooperative Study.

1999 Principal Investigator: (Aripiprazole Study) Protocol 173-98-203. A Phase III, Randomized, Double-Blind, Placebo-Controlled, Fixed-Dose Study of Oral OPC-14523 and Prozac in the Treatment of Outpatients with Moderate Depression. Otsuka America Pharmaceutical, Inc.

1999 Principal Investigator: (AIT-082 Study) Protocol 082-99-003. A Multicenter, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate AIT-082 in Patients with Probable Alzheimer's Disease of Mild to Moderate Severity. Neotherapeutics.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1999 Principal Investigator/Medical Director: (Selegeline Study) Protocol S9303-P9806. A Double-Blind, Placebo-Controlled, Parallel Group Assessment of the Selegiline Transdermal System in the Prevention of Relapse of Symptoms Associated with Major Depression. Somerset Pharmaceuticals, Inc.

1999 Principal Investigator/Medical Director: (Selegeline Study) Protocol S9303-9918. An Open-Label Study to Assess the Safety of the Selegiline Transdermal System in Patients with Major Depression. Somerset Pharmaceuticals, Inc.

1999 Principal Investigator/ Medical Director: (Pregabalin Study) Protocol 1008-088. A Sustained Efficacy Study of Pregabalin in Patients With Generalized Anxiety Disorder. Parke-Davis Pharmaceutical Research.

1999 Principal Investigator/Medical Director: (Pregabalin Study) Protocol 1008-084. Open-Label Safety Study of Pregabalin (CI-1008) in Patients with Anxiety Disorders. Parke-Davis Pharmaceutical Research.

1999 Principal Investigator: (Org 33062 Study) Protocol 134-002. A Double-Blind, Multicenter, Randomized, Placebo-Controlled, Efficacy and Safety Study of Org 33062 ER in Subjects with Major Depressive Disorder. Organon, Inc.

1999 Principal Investigator: (Org 33062 Study) Protocol 134-501. Open-Label Extension Trial in Subjects with Major Depressive Disorder Who Participated in One of the ORG 33062 ER Efficacy Trials. Organon, Inc.

1999 Principal Investigator: (Depakote Study) Protocol M99-045. Randomized, Double-Blind, Parallel Group, Multi-Center, Comparing the Use of Depakote and Zyprexa in the Treatment of Subjects with Bi-Polar Disorder Type I who are Hospitalized for an Acute Manic Episode. Abbott Laboratories.

1999 Medical Director: (Selegeline Study) Protocol S9303-E114. A Double-Blind, Placebo-Controlled, Parallel-Group Assessment of the Safety and Efficacy of Two Doses of the Selegiline Transdermal System (10 am and 20 mg) in Patients with Major Depression. Somerset Pharmaceuticals.

1999 Principal Investigator/Medical Director: (Org 5222) Protocol 041-002. A Double-Blind Five-Armed, Fixed-Dose, Active and Placebo-Controlled Dose-Finding Study with Sublingual Org 5222 in Subjects with Acute Phase Schizophrenia. Organon Pharmaceuticals.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

1999 Medical Director: (Fluoxetine Study) Protocol B1Y-MC-HCJL. Fluoxetine vs. Placebo in Posttraumatic Stress Disorder. Eli Lilly and Company.

1999 Medical Director: (Wellbutrin Study) Protocol AK1A4007. A Multi-Center, Double-Blind, Placebo-Controlled Comparison of the Safety and Efficacy and Effects on Sexual Functioning of Wellbutrin (Bupropion HCl) Sustained Release (SR) and Fluoxetine in Outpatients with Moderate to Severe Recurrent Major Depression. Glaxo Wellcome Pharmaceuticals.

1999 Medical Director: (Olanzapine Study) Protocol F1D-MC-HGHL. Olanzapine vs. Placebo in the Prevention of Relapse in Bi-Polar Disorder. Eli Lilly Pharmaceuticals.

1999 Medical Director: (Paroxetine Study) Protocol 29060-651. A 12-Week, Double-Blind, Fixed Dose Comparison of 20 and 40 mg Daily of Paroxetine and Placebo in Patients Suffering From Post Traumatic Stress Disorder (PTSD). SmithKline Beecham.

1999 Principal Investigator/Medical Director: (Org 5222 Study) Protocol 041-500. Org 5222 Long-Term Extension to Protocol 041-002. Organon Pharmaceuticals.

1999 Medical Director: (Selegeline Study) Protocol S9303-E113-98B. A Double-Blind, Placebo-Controlled Parallel Assessment of the Safety and Efficacy of the Selegeline Transdermal System in Subjects with Major Depression. Somerset Pharmaceuticals.

2000 Principal Investigator: (Venlafaxine ER) Protocol 0600B4-390-US. A Six-Month, Double-Blind, Placebo-Controlled, Parallel-Group Comparison of Venlafaxine ER Capsules and Placebo in Outpatients with Generalized Social Anxiety Disorder. Wyeth Ayerst.

2000 Principal Investigator/Medical Director: (Iloperidone Study) Protocol ILP3005. A Randomized, Double-Blind, Placebo- and Risperidone-Controlled, Multicenter Study to Evaluate the Efficacy and Safety of Two Nonoverlapping Dose Ranges of Iloperidone Given b.i.d. for 42 Days to Schizophrenic Patients Followed by a Long-Term Treatment Phase with Iloperidone given q.d. Novartis Pharmaceuticals.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

2000 Medical Director: (L-759274 Study) Protocol 026-00. A Double-Blind, Multicenter Study of Two Doses of L-759274 vs. Paroxetine Hydrochloride and Placebo in the Treatment of Outpatients with Major Depressive Disorder. Merck & Co., Inc.

2000 Medical Director: (Paroxetine Study) Protocol SB29060-701. A Randomized, Multicenter, Eight-Week, Double-Blind, Placebo-Controlled Flexible Dose Study to Evaluate the Efficacy and Safety of Paroxetine in Children and Adolescents with Major Depressive Disorder (MDD). SmithKline Beecham.

2000 Principal Investigator/Medical Director: (Lu 26-26-054 Study) Protocol SCT-MD-01. Fixed Dose Comparison of the Safety and Efficacy of Lu 26-054, Citalopram, and Placebo in the Treatment of Major Depressive Disorder. Forest Laboratories, Inc.

2000 Medical Director: (Org 33062 Study) Protocol 134-004. A Double-Blind, Multicenter, Randomized, Placebo-Controlled Efficacy and Safety Study of Org 33062 ER and Fluoxetine in Subjects with Major Depressive Disorder. Organon, Inc.

2000 Medical Director: (Org 33062 Study) Protocol 134-502. A Double-Blind Extension Trial in Subjects with Major Depressive Disorder who Participated in the Placebo-and Fluoxetine Controlled Study of Org 330762 ER (protocol 134-004). Organon, Inc.

2000 Principal Investigator/Medical Director: (Lu 26-26-054 Study) Protocol SCT-MD-05. Flexible Dose Comparison of the Safety and Efficacy of Lu 26-054 and Placebo in the Treatment of Generalized Anxiety Disorder. Forest Laboratories, Inc.

2000 Medical Director: (Paroxetine Study) Protocol 29060/676. A 16-Week Double-Blind, Placebo Controlled Study to Investigate the Efficacy and Tolerability of Paroxetine in the Treatment of Children and Adolescents with Social Anxiety Disorder/Social Phobia. SmithKline Beecham.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

2000 Medical Director: Protocol D1050006-P02, A Double-Blind, Randomized, Fixed Dose, Placebo-Controlled, Parallel-Group, 6-Week Efficacy, Safety and Tolerability Study of Two Dose Levels of SM-13496 in Patients with Schizophrenia by DSM-IV Criteria Who are Experiencing an Acute Exacerbation of Symptoms. Sumitomo Pharmaceuticals America, Ltd.

2000 Principal Investigator: (Depakote Study) Protocol M99-010. Safety and Efficacy of Depakote as Combination Therapy in the Treatment of Psychosis Associated with Schizophrenia. Abbott Laboratories.

2000 Principal Investigator/Medical Director: (Org 5222 Study) Protocol 041-013. A Double-Blind, Three-Armed, Fixed-Dose, Placebo-Controlled Dose-Finding Study with Sublingual Org 5222 in Subjects with Acute Phase Schizophrenia. Organon, Inc.

2000 Medical Director: Protocol 29060-716, A Multicenter, Open-Label, Six-Month Extension Study to Assess the Long-Term Safety of Paroxetine in Children and Adolescents with major Depressive Disorder (MDD) or Obsessive-Compulsive Disorder (OCD). SmithKline Beecham.

2000 Medical Director: Protocol TOPMAT-PHI-374, A Comparative Study of the Steady-State Pharmacokinetics of Lithium Before and During Multiple Oral Daily Topiramate (RWJ-17021) Dosing in Patients with Bipolar Disorder. R.W. Johnson Pharmaceutical research Institute

2000 Principal Investigator/Medical Director: (Org 5222 Study) Protocol 041-505. Long-Term Maintenance of Subjects with Schizophrenia with Org 5222. Organon, Inc.

2000 Principal Investigator: (Galantamine Study) Protocol GAL-USA-18. Open Label Use of Synthetic Galantamine in the Treatment of Alzheimer's Disease. Janssen Research Foundation.

2000 Principal Investigator/Medical Director: (Sertraline Study) Protocol A0501017. A Multicenter, Ten-Week, Randomized, Double-Blind, Placebo-Controlled, Flexible Dose Outpatient Study of Sertraline in Children and Adolescents with Major Depressive Disorder. Pfizer Central Research.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

2000 Principal Investigator/Medical Director: (Sertraline Study) Protocol A0501015. A Multicenter, 24-Week, Open-Label Extension Study of Sertraline in Children and Adolescent Outpatients Previously Diagnosed with Major Depressive Disorder. Pfizer Central Research.

2000 Principal Investigator/Medical Director: (LU 26-054 Study) Protocol SCT-MD-04. Flexible Dose Comparison of the Safety and Efficacy of LU 26-054, Citalopram, and Placebo in the Treatment of Panic Disorder. Forest Laboratories.

2000 Principal Investigator/Medical Director: (Seroquel Study) Protocol 0577IL/0099. A Multicenter, Double-Blind, Randomized Placebo-Controlled Trial of the Safety and Efficacy of Seroquel (Quetiapine Fumarate) as Add-On Therapy with Lithium or Divalproex in the Treatment of Acute Mania. Astra Zeneca Pharmaceuticals.

2000 Medical Director: (Rebboxetine Study) Protocol M2020-0047. Reboxetine, Placebo, and Paroxetine Comparison in Patients with Major Depressive Disorder. Pharmacia & Upjohn.

2000 Medical Director: (Reboxetine Study) Protocol 950E-CNS-0005-087. Open-Label Reboxetine Continuation Therapy. Pharmacia & Upjohn.

2000 Principal Investigator/Medical Director: (Buspirone Hydrochloride ER Study) Protocol B99-CT3.005.BUS P02. A Double-Blind, Randomized, Placebo-Controlled, Parallel-Group, Fixed-Dose Study of the Efficacy, Safety, and Tolerability of Buspirone Hydrochloride Extended Release Compared to Placebo in Patients with Generalized Anxiety Disorder. Biovail Laboratories, Inc.

2000 Principal Investigator/Medical Director: (Buspirone Hydrochloride ER Study) Protocol B99.CTOL.008.BUS.P02. An Open-Label Study of the Safety , Tolerability, and Efficacy of Up to 90 mg Buspirone Hydrochloride Extended Release in Patients with Generalized Anxiety Disorder. Biovail Laboratories, Inc.

2000 Medical Director: (Venlafaxine Study) Protocol 0600B4-392-US. A Double-Blind, Placebo-Controlled, Parallel-Group Comparison of Venlafaxine Extended-Release Capsules and Paroxetine in Outpatients with Generalized Anxiety Disorder. Wyeth-Ayerst Research.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

2000 Medical Director: (Aripiprazole Study) Protocol 173-98-203. A Phase II, Randomized, Double-Blind, Placebo-Controlled, Fixed-Dose Study of Oral OPC-14523 and Prozac in the Treatment of Outpatients with Moderate Depression. Otsuka America Pharmaceutical, Inc.

2000 Principal Investigator: Protocol 31-98-213. An Open-Label Comparison of the Neurocognitive Effects of Aripiprazole to Olanzapine Administered Orally in Patients with Stable Psychosis. Otsuka America Pharmaceutical, Inc.

2000 Principal Investigator/Medical Director: Protocol 31-98-220. An Open-Label Follow-On Study of the Long-Term Safety of Aripiprazole Administered Orally in Patients with Psychosis. Otsuka America Pharmaceutical, Inc.

2000 Principal Investigator: (Paroxetine Study) Protocol DRI3650. A Double-Blind, Placebo- and Paroxetine Controlled, Multicenter, Dose Ranging Study Evaluating the Efficacy and Safety of
SRI42801 in Outpatients with Major Depressive Disorder. Sanofi-Synthelabo

2000 Medical Director: (Topiramate Study) Protocol TOPMAT-PDMD-005. A Placebo-Controlled 12-Week Study of the Safety and Efficacy of Two Doses of Topiramate Versus Placebo for the Treatment of Acute Manic or Mixed Episodes In Subjects With Bipolar I Disorder With An Optional Open-Label Extension Protocol. The R.W. Johnson Pharmaceutical Research Institute.

2000 Medical Director: (Depakote Study) Protocol M99-082. A Double-Blind, Placebo-Controlled Study of Depakote® in the Treatment of Behavioral Agitation in Elderly Patients with Dementia. Abbott Laboratories.

2000 Medical Director: (LU 26-054 Study) Protocol SCT-MD-11. Evaluation of the Safety and Efficacy of LU 26-054 in the Prevention of Depression Recurrence. Forest Laboratories, Inc.

2000 Principal Investigator: (LU 26-054 Study) Protocol SCT-MD-17. An Open-Label Extension Study of the Safety and Efficacy of LU 26-054 Patients with Generalized Anxiety Disorder. Forest Laboratories, Inc.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

2000 Principal Investigator/Medical Director: (Lamictal Study) Protocol SCA40910. A Multicenter-Double-Blind, Placebo Controlled, Fixed-Dose Evaluation of the Safety, Efficacy, and Tolerability of Lamical (Lamotrigine) in the treatment of a Major Depressive Episode in Patients with Type I Bipolar Disorder. Glaxo Wellcome.

2000 Principal Investigator: (Topiramate Study) Protocol CAPSS-155. A comparison of the Efficacy and Safety of TOPAMAX® (Topiramate) Tablets Versus Placebo for the Prophylaxis of Migraine. Ortho-McNeil Pharmaceutical, Inc.

2000 Principal Investigator: (Galantamine Study) Protocol GAL-INT-10. A Placebo controlled evaluation of galantamine in the treatment of Alzheimer's Disease: Safety and Efficacy of a controlled release formulation. Janssen Research Foundation.

2000 Principal Investigator: (L-830982 Study) Protocol 008-00, A Double-Blind, Multicenter, Placebo-Controlled Study of L-830982 in the Treatment of Outpatients with Generalized Anxiety Disorder. Merck & Co., Inc.

2000 Medical Director: (Fluoxetine Study) Protocol 003048, A Multicenter, Randomized, Double-Blind, Fluoxetine and Placebo controlled Study of the Efficacy and Safety of Remeron Sol Tab (mirtazapine) Orally Disintegrating Tablets in Subjects with Major Depressive Disorder. Organon, Inc.

2001 Principal Investigator: (Seroquel Study) Protocol 5077IL/0099, A Multicenter, Double-Blind, Randomized, Placebo-Controlled Trial of Safety and Efficacy of SEROQUEL (Quetiapine Fumerate) as Add-on Therapy with Lithium or Divalproex in the Treatment of Acute Mania. Astra Zeneca Pharmaceuticals, Inc.

2001 Principal Investigator/Medical Director: (Seroquel Study) Protocol 5077IL/0041, A Multicenter, Double-Blind, Randomized Comparison of the Efficacy and Safety of Sustained-Release Formulation Quetiapine Fumerate (Seroquel ™) and Placebo in the Treatment of Patients with Schizophrenia. Astra Zeneca Pharmaceuticals, Inc.

2001 Principal Investigator/Medical Director: (Org 5222 Study) Protocol 041-013, A Double-Blind, Three-Armed, Fixed-Dose, Placebo Controlled Dose-Finding Study with Sublingual Org 5222 in Subject with Acute Phase Schizophrenia. Organon, Inc.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

2001 Medical Director: (L-330932 Study) Protocol 006-01, A Double-Blind, Multicenter Acute Study of Two Doses of L-330932 versus Larazapam and Placebo in the Treatment of Out Patients with Generalized Anxiety Disorder. Merck & Co., Inc.

2001 Principal Investigator: (Risperdal Study) Protocol RIS-USA-240, The Efficacy and Safety of Flexible Dose Ranges of Risperidone vs. Placebo or Divalproex Sodium in the Treatment of Manic or Mixed Episodes Associated with Bipolar I Disorder. Janssen Pharmaceutica Research Foundation.

2001 Principal Investigator: (Risperdal Study) Protocol RIS-USA-241, A 9-Week, Open-Label, Multicenter, Safety Trial of Flexible Dose Ranges of Risperidone in the Treatment of Manic or Mixed Episodes Associated with Bipolar I Disorder. Janssen Pharmaceutica Research Foundation.

2001 Medical Director: (Zopiclone Study) Protocol 190-049, A Twelve-Month, Open-Label Study of the Safety of (S) Zopiclone in Adult Subjects with Insomnia. Sepracor, Inc.

2001 Medical Director: (Risperdal Study) Protocol RIS-USA-209, A Randomized Double Blind Study to Evaluate the Anticholinergic Burden in Subjects with Psychosis of Dementia Treated with Risperidone or Olanzapine. Janssen Pharmaceutica, Inc.

2001 Medical Director/Principal Investigator: Protocol RIS-USA-259, Open Label Trial Exploring a Switching Regimen from Oral Neuroleptics, other than Risperidone, to Risperidone Depot Microspheres. Janssen Research Foundation.

2001 Medical Director/Principal Investigator: Protocol RIS-USA-265, An Open Label, Long Term Trial of Risperidone Long Acting Microspheres in the Treatment of Subjects Diagnosed with Schizophrenia. Johnson & Johnson Pharmaceutical Research & Development, L.L.C.

2001 Medical Director: Protocol 006B-1007-35, A Double-Blind, Randomized, Placebo-Controlled, 3-Month Clinical Trial of Venlafaxine ER and Sertraline in the Treatment of Posttraumatic Stress Disorder. Wyeth-Ayerst Pharmaceuticals.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

2001 Medical Director/Principal Investigator: Protocol 059-00, A Double-Blind, Multicenter, Placebo- and Active-Controlled Study of MK-0869 in the Treatment of Patients with Major Depressive Disorder with Melancholic Features. Merck & Company, Inc.

2001 Medical Director: Protocol 0600B-100735, A Double-Blind, Randomized, Placebo-Controlled, 3-Month Clinical Trail of Venlafaxine ER and Sertraline in the Treatment of Posttraumatic Stress Disorder. Wyeth-Ayerst Pharmaceuticals.

2001 Medical Director: Protocol 060-00, A Double-Blind, Multicenter, Placebo- and Active-Controlled Acute and Extension Study of MK-0869 in the Treatment of Patients with Major Depressive Disorder. Merck & Co., Inc.

2001 Medical Director: Protocol B01.CT3.016.BUS P02, Randomized, Double-Blind, Placebo-Controlled Parallel-Group, Fixed Dose Study of the Efficacy, Safety, and Tolerability of 60mg Buspirone Hydrochloride Extended Release Compared to Placebo in Patients with Generalized Anxiety Disorder Who Have Stable Disease Characteristics.

2001 Medical Director: Protocol F1D-US-HGJT, Olanzapine Versus Risperidone in the Treatment of Bipolar I Disorder, Manic or Mixed. Eli Lilly and Company

2001 Medical Director: Protocol 1043-012, A 6-Week, Double-Blind, Rancomized, Multicenter, Fixed-Dose, Placebo-Controlled Study of Pagoclone Dosed Twice a Day in Patients with Generalized Anxiety Disorder. Pfizer, Inc.

2001 Medical Director: Protocol 0600B4-392-US, A Double-Blind, Placebo-Controlled, Parallel Group Comparison of Venlafaxine in Outpatients with Generalized Social Anxiety Disorder. Wyeth-Ayerst Research.

2001 Medical Director: Protocol D10005-P01, A Double-Blind, Randomized, Fixed-Dose, Placebo-Controlled, Parallel Group, 6-Week, Efficacy, Safety and Tolerability of Two Dose Levels of SM-13496 in Patients with Schizophrenia by DSM-IV Criteria who are Experiencing an Acute Exacerbation of Symptoms. Sumitomo Pharmaceuticals

2001 Medical Director: Protocol 134-004 (02), A Double-Blind, Multi-center, Randomized, Placebo-Controlled, Efficacy and Safety Study of ORG 33062 ER and Fluoxetine in Subjects who suffer from Major Depressive Disorder with Atypical Features. Organon, Inc.

CLINICAL RESEARCH EXPERIENCE (CONTINUED):

2001 Medical Director: Protocol 134-502 (02), A Double-Blind, Multi-center Extension Trial in Subjects who shffer from Major Depressive Disorder with Atypical Features who Participated in the Placebo- and Fluoxetine Controlled Study of ORG 33062 ER. Organon, Inc.

2001 Medical Director: Protocol 173-00-221, A Phase II, Randomized, Double-Blind, Placebo-Controlled, Dose-Ranging study of Fixed Doses of Oral OPC-14523 and Prozac in the Treatment of Outpatients with Moderate Depression. Otsuke America Pharmaceutical, Inc.

2001 Medical Director: Protocol SB59746-A Study 003, A Randomized, Double-Blind, Placebo-Controlled, Flexible Dosage Trial to Evaluate the Efficacy and Tolerability of Paroxetine CR in Patients with Generalized Anxiety Disorder (GAD). GlaxoSmithKline.

2001 Medical Director: Protocol 190-048, A Randomized, Double-Blind, Placebo-Controlled Parallel, Two-Week Efficacy and Safety Study of (S)-Zopicione in Elderly Subjects with Primary Insomnia. Sepracor.

2001 Medical Director: Protocol 003-048, Multi-Center, Randomized, Double-Blind, Fluoxetine and Placebo-Controlled Study of the Efficacy and Safety of REMERON Sol Tab (mirtazapine) Orally Disintegrating Tablets in Subjects with major Depressive Disorder. Organon, Inc.

2001 Principal Investigator: Protocol 082-2001-001, A Placebo-Controlled, Dose-Titration, Efficacy and Tolerability Study of Neotrofin™ in Patients with Probable Alzheimer's Disease. NeoTherapeutics Inc.

2001 Medical Director: Protcol TOPMAT-PDMD-005, A Randomized, Double-Blind, Multicenter, Placebo-Controlled 12-Week Study of the Safety and Efficacy of Two Doses of Topirmamte for the Treatment of Acute Manic or Mixed Episodes in Subjects with Bipolar 1 Disorder with an Optional Open-Label Extension . R.W. Johnson Pharmaceutical Research Institute.

2002 Principal Investigator: Protocol 134-501.4, Protocol for the Open-label Extension Trial in Subjects with Major Depressive Disorder who Participated in One of the ORG 33062 ER Efficacy Trials (Amendment 4 Modification: Inclusion of Subjects with major Depressive Disorder Without Prior Participation in ORG 33062 Efficacy Trials) Organon.

Medical Board of California, Physician and Surgeon License, Certificate Number G23190

Academic Appointments

Clinical Professor
University of Southern California
Department of Psychiatry
Los Angeles, California
7/1/1998 – Present

Associate Professor
University of Southern California
Department of Psychiatry
Los Angeles, California
1980 – 1998

Associate Clinical Professor
University of Southern California
Department of Psychiatry
Los Angeles, California
1977 – 1980

Assistant Professor
University of Southern California
Department of Psychiatry
Los Angles, California
1973 – 1977

Instructor
Temple University Hospital
Department of Psychiatry
Philadelphia, Pennsylvania
1971 –1975

Teaching Appointments

University of Southern California
Los Angeles, California
1973 – 1997

- First Year Medical Students:
  Lecturer and Supervisor
  Sex Education Course
  Sex Therapy Lecture Course
  Summer Fellowship
- Third Year Medical Students:
  Supervisor, Psychiatric Outpatient Clinic
- Third Year Residents:
  Behavior Therapy Lecture Seminar
  Clinical Supervisor, Psychiatric Outpatient Clinic
- Resident Programs:
  Resident Follow-up Group Supervisor
  Resident Clinic Team Leader
  Resident Supervisor, Sex Therapy and Marital Counseling Clinic
  Resident Supervisor, Anxiety Disorders Clinic
  Research Supervisor, Clinical Case Conference and Demonstration

Temple University School of Medicine
Philadelphia, Pennsylvania
1971 – 1973

- Medical Students:
  Supervisor, Psychiatric Outpatient Department
- Third Year Medical Students:
  Behavior Therapy Lecture Seminar
- Second Year Residents:
  Supervisor, Outpatient Psychotherapy Section
- Lecturer:
  Summer Behavior Therapy Institute

Administrative Appointments

University of Southern California School of Medicine
Los Angeles, California
1973 – 1997

- Coordinator, Medical Student Psychiatric Outpatient Clinic Rotation
- Coordinator, Behavior Therapy Unit
- Coordinator, Sex Therapy and Marital Counseling Clinic
- Medical Care Evaluation Committee
- Acting Director, Psychiatric Outpatient Clinic
- Director, Anxiety Disorders Clinic
- Sex Education Committee
- Medical Care Evaluation Committee 1973 – 1978
- Third Year Psychiatry Clerkship Committee 1973 – 1977

Temple University School of Medicine
Philadelphia, Pennsylvania
1971 – 1973

- Coordinator, Third Year Psychiatric Clerkship
- Undergraduate Education Committee

Additional Professional Activities

Member
Harbor View Medical Center
Data Safety Monitoring Board: Protocol Improving Therapy for Panic Disorder in Primary Care.
Peter P. Roy-Byrne, M.D., Principal Investigator
Present

Lecturer

Awards

Teacher of the Year Award
University of Southern California + Los Angeles County Hospital
Los Angeles, California
Presented by: Psychiatric Residency Program
1996

Teacher of the Year Award
University of Southern California + Los Angeles County Hospital
Los Angeles, California
Presented by: Psychiatric Residency Program
1995

Excellence in Teaching Award
University of Southern California + Los Angeles County Hospital
Los Angeles, California
Presented by: The Third Year Class Psychiatric Residency Program
1994

Teacher of the Year Award
University of Southern California + Los Angeles County Hospital
Los Angeles, California
Presented by: The Senior Class Psychiatric Residency Program
1992

Sherwyn M. Woods, M.D. Teaching Award
University of Southern California + Los Angeles County Hospital
Los Angeles, California
Presented by: The Third Year Class Psychiatric Residency Program
1984

Distinguished Teacher Award
University of Southern California + Los Angeles County Hospital
Los Angeles, California
Issued by: Department of Psychiatry, Education division

1983

Outstanding Instructor Award
University of Southern California + Los Angeles County Hospital
Los Angeles, California
Issued by: Department of Psychiatry, Education Division
1981

Contracts and Grants

Inderal in the Treatment of General Anxiety Disorder, Ayerst Laboratories, Protocol No. 81-153-CR

Xanax Regular Tablets Versus Xanax Sustained Release (SR) in the Treatment of Panic Attacks with and without Phobias, The Upjohn Company, Protocol No. 4438

Immediate and Delayed Effects Following Discontinuation of Buspirone or Alprazolam Therapy in Generalized Anxiety Disorder Patients: A Multicenter Study, Bristol-Myers Squibb U.S. Pharmaceutical Group, Protocol No. 05149.

Fluvoxamine in the Treatment of Panic Disorder and Panic Disorder in Agoraphobia: A Multicenter Double-Blind, Placebo-Controlled Study in Outpatients, Kali-Duphar laboratories, Inc., Protocol No. H114.5535/3

A Double-Blind Comparison of the Efficacy of ZK112-119, Alprazolam, and Placebo in Outpatients with Generalized Anxiety Disorder, Sandoz Pharmaceuticals Corporation, Protocol No. B202

A Prospective, Randomized, Double-Blind, Placebo-Controlled, Multicenter, Parallel-Group Comparison of the Efficacy and Safety of Abecarnil and Alprazolam in Outpatients with Generalized Anxiety Disorder, Sandoz Pharmaceuticals, Protocol No. B351

A Double-Blind, Placebo-Controlled, Multicenter Trial Comparing 30 MG of Buspar Given Two Times Daily Versus Three Times Daily in Patients with Generalized Anxiety Disorder, Ciba-Geigy, Protocol No. 07

A Double-Blind, 12 Week, Parallel Comparison of Sertraline and Placebo in Outpatients with Obsessive Compulsive Disorder, Pfizer Pharmaceuticals, Protocol No. 91CE21-0546.

A Double-Blind, Placebo-Controlled Study to Determine the Efficacy and Safety of Fluparoxan (0.5, 2 & 8 MG BID) in the Treatment of Secondary (Acquired) Male Erectile Disorder, Glaxo, Inc., Protocol No. ADA-203.

A Randomized, Double-Blind, Placebo-Controlled Study of the Safety and Efficacy of Two Doses of Ondansetron Versus Placebo in the Treatment of Social Phobia, Glaxo, Inc., S3A-342.

A Placebo-Controlled, Double-Blind, Parallel Trial of Brofaromine Hydrochloride in Patients with Social Phobia, Ciba-Geigy, Protocol No. 04.

A Double-Blind, Comparison of Three Doses of Tandospirone GITS and Placebo in Outpatients with Major Depression, Pfizer Pharmaceuticals, Protocol No. 93CE30-0611.

Double-Blind, Placebo-Controlled, Parallel-Group, Dose-Finding Study of Venlafaxine Extended Release Capsules in Outpatients with Generalized Anxiety Disorder, Wyeth-Ayerst Research, Protocol No. 0600B2-210-US.

A Double-Blind, Placebo-Controlled Dose Escalation Study of the Safety and Efficacy of Oral Ondansetron in the Treatment of Patients with Panic Disorder, Glaxo, Inc., Protocol No. S3A-323.

Sertraline Treatment Followed by a Double-Blind Comparison of Sertraline and Placebo in the Prevention of Relapse in Outpatients with Obsessive Compulsive Disorder, Pfizer, Inc., Protocol No. 93CE21-0615.

12-Week, Double-Blind, Comparison of Two Sertraline Dose Regimens in "Nonresponder" Outpatients with Obsessive Compulsive Disorder, Pfizer, Inc., Protocol No. 93CE21-0643.

A Phase III, Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Safety, Tolerance, and Efficacy Study of 10 and 20 mg Zaleplon, Wyeth-Ayerst Research, Protocol No. 0897A1-307-US.

A Phase III, Multicenter, Long-Term, Open-Label, Safety and Tolerance Study of 10 or 20 mg of Zaleplon Administered Once Daily for a Maximum of 360 Days in Adult Outpatients with Insomnia, Wyeth-Ayerst Research, Protocol No. 0897A1-312-US.

A Phase II, Eight Week, Double-Blind, Placebo-Controlled Multicenter Study to Evaluate the Efficacy and Safety of Three Fixed Doses of Oral CP-93, 393-1 in Outpatients with Major Depressive Disorder, Pfizer, Inc., Protocol No. 129-106.

Double-Blind, Placebo-Controlled Study of Venlafaxine-ER and Venlafaxine OROS[7] in Outpatients with Major Depression, Wyeth-Ayerst Research, Protocol No. 0600C1-217-US.

Six-Month Double-Blind, Placebo-Controlled, Parallel-Group Comparison of Venlafaxine Extended Release Capsules and Placebo in Outpatients with Generalized Anxiety Disorder, Wyeth-Ayerst Research, Protocol No. 0600B2-218-US.

A Double-Blind, Placebo-Controlled Trial to Evaluate the Clinical Effects of Immediate Release Paroxetine and Modified Release Paroxetine in the Treatment of Major Depression, SmithKline Beecham Pharmaceuticals, Protocol No. 29060/448.

A Double-Bind, Placebo-Controlled, Flexible Dosing Trial to Evaluate the Efficacy of Modified Release Paroxetine in the Treatment of Panic Disorder, SmithKline Beecham Pharmaceuticals, Protocol No. 29060/497.

Placebo-Controlled, Parallel Group Trial of Three Doses of Pagoclone in Patients with DSM-IV Panic Disorder, Interneuron Pharmaceuticals Inc., Protocol No. IP456/004.

A Randomized, Double-Blind, Fixed Dose Comparison of 20, 40, and 60 mg Daily of Paroxetine and Placebo in the Treatment of Generalized Social Phobia, SmithKline Beecham Pharmaceuticals, Protocol No. 29060/454.

A Multicenter, Double-Blind, Placebo-Controlled, Dose-Ranging Study to Evaluate the Efficacy and Safety of Single Doses of SB-220453 in the Treatment of Acute Migraine, SmithKline Beecham Pharmaceuticals, Protocol No. 220453/006.

An Eight-Week, Double-Blind, Placebo-Controlled Study of 2, 20, 50, and 100 mg Flibanserin BID and Paroxetine QD in Patients with Major Depressive Disorder, Boehringer Ingelheim, Protocol No. 511.12.

A Double-Blind, Placebo-Controlled, Trial to Evaluate the Clinical Effects of Immediate Release Paroxetine and Modified Release Paroxetine in the Treatment of Major Depression in Elderly Patients, SmithKline Beecham Pharmaceuticals, Protocol No. 29060/487.

Double-Blind Placebo-Controlled, Multicenter Study Evaluating the Efficacy and Safety of SR58611A in Outpatients with Major Depression, Sanofi Research, Protocol No. DRI2412.

A Double-Blind, Placebo-Controlled, Comparative Study of an Extended Release Formulation of Venlafaxine and Imipramine on the Time of Onset of Antidepressant Response in Patients with Severe Depression, Wyeth-Ayerst Research, Protocol No. 0600B1-384-US.

A Double-Blind, Randomized Trial of Three Fixed Doses of Transdermal Buspirone Compared to Placebo in the Treatment of Anxious Outpatients, Bristol-Myers Squibb, Protocol No. CN101-094.

Fluoxetine Versus Placebo in Posttraumatic Stress Disorder, Eli Lilly & Company, Protocol No. B1Y-MC-HCHG.

A Double-Blind, Randomized, Multicenter, Parallel Design Study to Evaluate the Efficacy and Safety of Individual Maximum Tolerated Doses of EMD 68 843 in Comparison with Placebo and Fluoxetine in Outpatients with Major Depressive Disorder, Merck, Protocol No. EMD 68 843 009.

A Double-Blind, Randomized, Multicenter, Parallel Design Study to Evaluate the Efficacy and Safety of Three Dose Ranges of EMD 68 843 in Comparison with Placebo and Fluoxetine in Outpatients with Major Depressive Disorder, Merck, Protocol No. EMD 68 843 010.

A Multicenter, Double-Blind, Randomized Parallel Group Study of the Efficacy, Safety, Tolerability of a Flexible Dose Regimen of Flesinoxan Versus Placebo in Outpatients with Major Depressive Disorder with Fluoxetine as an Active Control, Solvay Pharmaceuticals, Protocol No. S1283101.

A Six-Week, Double-Blind, Placebo and Fluoxetine Controlled Multicenter Study to Evaluate the Safety and Efficacy of Oral CP-122-721 in Outpatients with Major Depressive Disorder, Pfizer Inc., Central Research Division, Protocol No. 165-112.

A Multicenter, Randomized, Double-Blind, Parallel-Group, Placebo-Controlled, Dose-Range Finding Trial to Evaluate the Safety and Efficacy of 4 Doses of NKP608A in Patients with Social Phobia, Novartis Pharmaceuticals Corporation, Protocol No. 107.

A Randomized, Double-Blind, Dose-Range Finding Multicenter Parallel-Group, Active and Placebo-Controlled Trial to Evaluate the Safety and Efficacy of NKP608A in Patients with Social Phobia, Novartis Pharmaceuticals Corporation, Protocol No. 141.

Comparison of the Efficacy and Safety of Befloxatone 2.5 mg OD Versus Placebo in Outpatients with Moderate to Severe Major Depressive Disorders; A Randomized, Double-Blind, 8-Week Multi-Center Phase II Trial, Synthelabo Research, Inc., Protocol No. 2918.

A Double-Blind, Randomized, Flexible Dose Trial of Buspirone Transdermal or Alprazolam Compared to Placebo in the Treatment of Anxious Outpatients, Bristol-Myers Squibb Pharmaceutical Research institute, Protocol No. CN101-101.

A 12-Week, Double-Blind, Fixed Dose Comparison of 20 and 40 mg Daily of Paroxetine and Placebo in Patients Suffering from Posttraumatic Stress Disorder, SmithKline Beecham Pharmaceuticals, Protocol No. 29060/648.

A Randomized, Double-Blind, Placebo-Controlled, Flexible Dosage Trial to Evaluate the Efficacy and Tolerability of Paroxetine in Patients with Generalized Anxiety Disorder, SmithKline Beecham Pharmaceuticals, Protocol No. 29060/642.

A Multicenter, Randomized, Double-Blind, Placebo-Controlled, Efficacy and Safety Study of Remeron in Outpatient Children and Adolescents with Major Depressive Disorder, Organon, Inc., Protocol No. 003-045.

A Multicenter, Double-Blind, Placebo and Sertraline Controlled, Randomized Parallel Group, Flexible Dose Trial of Nefazodone ER in the Treatment of Depressed Patients, Bristol-Myers Squibb, Protocol No. CN104-175.

A Multi-Center, Randomized, Double-Blind, Parallel Group, Placebo-Controlled Study Evaluating the Efficacy and Safety to Two Fixed Dose Ranges of Buspirone Hydrochloride (15-30 mg and 45-60 mg) in Children and Adolescents (Aged 6-17) with Generalized Anxiety Disorders, Bristol-Myers Squibb, Protocol No. CN101-125.

A Multicenter, Double-Blind, Flexible Dose Safety Trial Comparing Nefazodone ER to Nefazodone IR in the Treatment of Depressed Patients, Bristol-Myers Squibb, Protocol No. CN104-181.

Fluoxetine Versus Placebo in the Treatment of Posttraumatic Stress Disorder, Eli Lilly & Company, Protocol No. B1Y-MC-HCJL.

The Combination of Olanzapine and Fluoxetine in Treatment Resistant Depression Without Psychotic Features, Eli Lilly & Company, Protocol No. F1D-MC-HGHZ.

A Double-Blind, Multicenter, Placebo-Controlled Study of L-759274 in the Treatment of Outpatients with Major Depression Melancholic Features, Merck & Company, Protocol No. 027-00.

A Double-Blind, Placebo-Controlled Study of Patient Reported Sleep Effects of L-759274 in Older Patients with Chronic Primary Insomnia, Merck & Company, Protocol No. 028-00.

A Multicenter Randomized Double-Blind, Placebo Controlled Trial of Sertraline for Acute Treatment of DSM-IV Generalized Social Phobia in Outpatients, Pfizer, Inc., Protocol No. R0601.

Reboxetine (PNU-15590E) Versus Placebo in the Treatment of Major Depressive Disorder Resistant to Fluoxetine, Pharmacia & Upjohn, Protocol No. M/2020/0034.

Pharmacogenomics Blood Sampling Protocol, Pharmacia & Upjohn, Protocol No. 950ECNS0323-001.

Open-Label Reboxetine Rescue and Continuation Therapy, Pharmacia & Upjohn, Protocol No. 950ECNS0005-071.

A Double-Blind Placebo and Fluoxetine Controlled, Multicenter Study Evaluating the Efficacy and Safety of SR48968C in Patients with Major Depressive Disorder, Sanofi-Synthelabo Research, Protocol No. ACT3820.

A Double-Blind, Placebo-Controlled Comparative Efficacy Study of Venlafaxine ER and Sertraline in Producing Remission in Outpatients with Major Depressive Disorder, Wyeth-Ayerst Research, Protocol No. 0600B1-414-US.

A Double-Blind, Placebo-Controlled Study of Flexible Dose of Venlafaxine ER in Adolescent Outpatients with Generalized Social Anxiety Disorder, Wyeth-Ayerst Research, Protocol No. 0600B4-389-US.

A Six-Month, Double-Blind, Placebo-Controlled Parallel-Group Comparison of Venlafaxine Extended Release Capsules and Placebo in Outpatients with Generalized Social Anxiety Disorder, Wyeth-Ayerst Research, Protocol No. 0600B4-390-US.

A Double-Blind, Placebo-Controlled Study of Quatipine in Outpatients with Alzheimer's Dementia, Astro-Xenica.

R-fluoxetine Versus Placebo in the Treatment of Generalized Anxiety Disorder, Eli Lilly & Company, Protocol No. H5Z-MC-LUAH.

A Double-Blind, Multicenter, Acute Study of Two Doses of L-830982 Versus Lorazepam and Placebo in the Treatment of

Outpatients with Generalized Anxiety Disorder, Merck Research, Protocol No. 006-00.

A Double-Blind, Multi-Center, Randomized, Placebo-Controlled, Efficacy and Safety Study of ORG 33062 ER and Fluoxetine in Subjects Who Suffer from Major Depressive Disorder with Atypical Features, Organon Inc., Protocol 134-004.

A Double-Blind, Multi-Center Extension Trial in Subjects Who Suffer from Major Depressive Disorder with Atypical Features who Participated in the Placebo and Fluoxetine Controlled Study of Org 33062 ER (Protocol 134-004), Organon Inc, Protocol No. 134-502.

A Double-Blind, Randomized, Placebo and Paroxetine Controlled, Multicenter, Dose-Finding Trial with ORG 34517 in Outpatients with Moderate to Severe Major Depressive Disorder, Organon Inc., Protocol No. 28105.

Reboxetine, Placebo and Paroxetine Comparison in Patients with Depressive Disorder, Pharmacia & Upjohn, Protocol No. M20200046.

Open-Label Reboxetine Continuation Therapy, Pharmacia & Upjohn, Protocol No. 950ECNS0005-087.

The Effect of Reboxetine, Placebo, and Paroxetine on Cognitive Functioning in Patients with Major Depressive Disorder, James Ferguson, M.D., Protocol No. M20200047cog.

A Double-Blind, Placebo and Paroxetine Controlled Multicenter, Dose-Ranging Study Evaluating the Efficacy and Safety of SR142801 in Outpatients with Major Depressive Disorder, Sanofi-Synthelabo Research, Protocol No. DRI3650.

Double-Blind, Placebo-Controlled Study of Venlafaxine ER in Children and Adolescents with Major Depressive Disorder, Wyeth-Ayerst, Protocol No. 0600B1-394-US.

Double-Blind, Placebo-Controlled Study of Venlafaxine ER in Children and Adolescents with Generalized Anxiety Disorder, Protocol No. 0600B2-396-US.

A Double-Blind, Placebo-Controlled, Parallel-Group Comparison of Venlafaxine ER Capsules and Paroxetine in Outpatients with Generalized Social Anxiety Disorder, Wyeth-Ayerst Research, Protocol No. 0600B4-392-US.

A Single-Dose, Pharmacokinetic Trial of Remeron® (Mirtazapine) in Children and Adolescents with Major Depression, Organon Inc., Protocol No. 003-047.

A Double-Blind, Multicenter, Placebo and Active Controlled Acute and Extension Study of MK-0869 in the Treatment of Patients with Major Depressive Disorder with Melancholic Features, Merck & Co., Inc., Protocol No. 059-00.

A Worldwide, Multicenter, Double-Blind, Parallel, Active-Controlled, Long-Term Safety Study of MK-0869 in Outpatients with Major Depressive Disorder, Merck & Co., Inc., Protocol No. 066-00.

A Double-Blind, Randomized, Placebo-Controlled, 3-Month Clinical Trial of Venlafaxine ER and Sertraline in the Treatment of Post Traumatic Stress Disorder, Wyeth-Ayerst Pharmaceuticals, Protocol No. 0600B-100735.

Open-Label, Multiple Oral Dose Study to Assess the Steady State Pharmacokinetics of Org 33062 ER in Children and Adolescents with Major Depressive Disorder, Organon Inc., Protocol No. 28721.

A Randomized, Double-Blind, Placebo-Controlled, Flexible Dosage Trial to Evaluate the Efficacy and Tolerability of Paroxetine CR in Patients with Generalized Anxiety Disorder (GAD). Protocol Issue Date: 22 June 2001, GlaxoSmithKline, Protocol No. 29060/791.

A Randomized, Double-Blind, Parallel-Group, Placebo-Controlled Study Evaluating Efficacy and Safety of SB-29060 Controlled Release (12.5 and 25 mg/day) versus Placebo in Patients with Major Depressive Disorder, GlaxoSmithKline, Protocol No. 29060/810.

A Double-Blind, Placebo-Controlled, Parallel-Group, Flexible-Dose Study of Venlafaxine Extended-Release Capsules in Adult Outpatients with Panic Disorder, Wyeth-Ayerst Research, Protocol No. 0600B5-353-US.

A Double-Blind, Placebo-Controlled Comparative Efficacy Study of Venlafaxine ER and Sertraline in Producing Remission in Outpatients with Major Depressive Disorder, Wyeth-Ayerst Research, 0600B1-402-US.

A Phase IIB, Seven-Week, Double-Blind, Placebo and Paroxetine Controlled Multicenter Study to Evaluate the Safety and Efficacy of Oral CP-122, 721 in Outpatients with Major Depressive Disorder and Associated Somatic Symptoms, Pfizer, Inc., Protocol No. A1651008.

A Seven-Week, Double Blind, Extension of Protocol A1651008: A Phase IIB, Seven-Week, Double-Blind, Placebo and Paroxetine-Controlled Multicenter Study to Evaluate the Safety and Efficacy of Oral CP-122, 721 in Outpatients with Major Depressive Disorder and Associated Somatic Symptoms, Pfizer, Inc., Protocol No. A1651009.

A Double-Blind, Placebo-Controlled, Parallel Group Design Dose-Ranging Study of Three Doses of Lasofoxifene vs. Placebo for the Treatment of Sexual Dysfunction (Arousal Disorder) in Postmenopausal Women, Pfizer Inc., Protocol A2181015.

A Double-Blind, Placebo-Controlled, Parallel Group Design Dose-Ranging Study of Three Doses of Lasofoxifene vs. Placebo for the Treatment of Sexual Dysfunction (Hypoactive Desire) in Postmenopausal Women, Pfizer Inc., Protocol No. A2181021.

An Eight-Week, Double-Blind, Placebo-Controlled Multicenter Study to Evaluate the Safety and Efficacy of 2 Doses of CP-448, 187 (1.5 and 3 mg) and Paroxetine in Subjects with Major Depressive Disorder, Pfizer Inc., Protocol No. A2721008.

A Randomized, Double-Blind, Alprazolam and Placebo-Controlled Study of the Efficacy and Safety of CP-615, 003 in Outpatients with Generalized Anxiety Disorder, Pfizer Inc., Protocol No. A3381003.

A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Fixed-Dose Study of the Efficacy, Safety, and Tolerability of 60 mg Buspirone Hydrochloride Extended Release Compared to Placebo in Patients with Generalized Anxiety Disorder Who Have Stable Disease Characteristics, Biovail Corporation, Protocol No. B01.CT3.016.BUS P02.

A Four-Week, Double-Blind, Placebo and Active Controlled, Dose-Ranging Study of SL 65.1498-00, 3 Doses (5,15,50 mg per day) and Lorazepam (3 mg/day) in Out-Patients with Generalized Anxiety Disorder, Sanofi-Synthelabo Research, Protocol No. DRI4390.

Double-Blind, Comparison of the Safety and Efficacy of Escitalopram and Fluoxetine in the Treatment of Fluoxetine Nonresponders, Forest Laboratories, Protocol No. SCT-MD-21.

Two-Week Double-Blind Placebo-Controlled Study of Escitalopram in the Treatment of Severe Major Depression. Phase A: Double-Blind Comparison of the Safety and Efficacy of Escitalopram and Placebo After Two Weeks of Treatment of Patients with Severe Major Depression. Phase B: Double-Blind Comparison of the Safety and Efficacy of Escitalopram and Placebo After Eight Weeks of Treatment of Patients with Severe Major Depression, Forest Laboratories, Protocol No. SCT-MD-26.

An Open-Label Extension Study of the Safety and Efficacy of Escitalopram in Patients with Major Depressive Disorder, Forest Laboratories, Protocol No. SCT-MD-19.

Flexible Dose Comparison of the Safety and Efficacy of Escitalopram and Placebo in the Treatment of Generalized Anxiety Disorder, Forest Laboratories, Protocol No. SCT-MD-06.

An Open-Label Extension Study of the Safety and Efficacy of Lu 26-054 in Patients with Generalized Anxiety Disorder, Forest Laboratories, Protocol No. SCT-MD-17.

Deramciclane 30 mg and 60 mg Once Daily Versus Placebo in Generalized Anxiety Disorder. A Randomized Double-Blind Placebo and Buspirone–Controlled Fixed-Dose Parallel-Group Multicenter Study of 10 Weeks (Including a 2-Week Single-Blind Placebo Period), Pharmacia Corporation, Protocol No. DERA-5334-025.

Deramciclane 60 mg (or 30 mg) once daily in the treatment of generalized anxiety disorder. An open multicenter safety study of 5 months, including a 1 month drug-free follow-up period. Follow-up to studies 3013023 and 3013025, Pharmacia Corporation, Protocol No. DERA-5334-038.

The Study of Olanzapine and Fluoxetine in Combination for Treatment Resistant Depression Without Psychotic Features, Eli Lilly & Company, Protocol No. H6P-MMC-HDAO.

The Study of Olanzapine and Fluoxetine in Combination for Treatment Resistant Depression Without Psychotic Features, Eli Lilly & Company, Protocol No. F1J-US-HMCB.

A Phase III, Randomized, Double-Blind, Placebo-Controlled, Outpatient Study to Assess the Long-Term Safety and Efficacy of Two Dose Levels of NBI-34060 in Adult Patients with Primary Insomnia, Neurocrine Bioscience, Protocol No. NBI-34060-IR-0114.

CURRICULUM VITAE

WILLIAM JOHN PRIVITERA, M.D.

Office
FutureSearch Trials
4200 Marathon Blvd., Suite 200
Austin, TX 78756
Tel: 512-380-9925
Fax: 512-380-9935

EDUCATION

Bachelor of Arts, 1980, University of Texas at Austin (Psychology, Microbiology)
Doctor of Medicine, 1984, University of Texas Health Science Center at Houston
Internship in Psychiatry, 1984-1985, St. Mary's Hospital and Medical Center, San Francisco, CA
Residency in Psychiatry, 1985-1988, St. Mary's Hospital and Medical Center, San Francisco, CA
Fellowship in Electroconvulsive Therapy, 1989, Duke University Medical Center, Durham, NC

CERTIFICATION

Certified in Psychiatry by the American Board of Psychiatry and Neurology, July 1992

WORK EXPERIENCE

June 1986 to December 1988 – Contract Psychiatrist, Psychiatric Emergency Service, San Francisco General Hospital
August 1988 to September 1992 – Private Practice, San Francisco, California
November 1989 to September 1992 – Clinical Instructor in Psychopharmacology, University of California at San Francisco Family Practice Residency Program
October 1992 to Present – Private Practice, Austin, Texas
April 1993 to November 1995 – Medical Director, Geriatric Partial Hospitalization Program, St. David's Pavilion, Austin, Texas
July 1996 to April 1997 – Medical Director, Health and Wellness Center, Lockhart, Texas
April 1996 to February 1998 – Contract Psychiatrist, Austin Travis County Mental Health/Mental Retardation (Medication Support Service, Methadone Clinic, Anew/Champs Offender Program, CARE HIV Program, Intake Unit)

7/22/02

March 1998 to May 1999 – Staff Psychiatrist, Austin Travis County Mental Health/Mental Retardation, Director of Psychiatric Emergency Service and Inn/Cornerstone Unit
January 1999 to present – Medical Director for FUTURESEARCH TRIALS.

MEDICAL PRIVILEGES

Texas NeuroRehab Hospital, 1106 W. Dittmar Austin, Texas 78745

Shoal Creek Hospital, 3501 Mills Ave. Austin, Texas 78731

RESEARCH EXPERIENCE

A Multicenter, Double-Blind, Randomized Comparison of the Efficacy and Safety of an Atypical Antipsychotic and Risperidone in the Treatment of Patients with Scizophrenia

A Multicenter, Double-Blind, Randomized, Placebo-Controlled Trial of the Safety and Efficacy of an Atypical Antipsychotic as Add-On Therapy with Lithium or Divalproex in the Treatment of Acute Mania

Double-Blind Comparison of the Safety and Efficacy of an Investigational Antidepressant and Fluoxetine in the Treatment of Fluoxetine Nonresponders

Double-Blind Placebo-Controlled Study of an Investigational Antidepressant in the Treatment of Severe Major Depression

Flexible Dose Comparison of the Safety and Efficacy of an Investigational Antidepressant and Fluoxetine in the Treatment of Major Depressive Disorder

A Randomized, Double-Blind, Parallel-Group, Placebo-Controlled Study Evaluating Efficacy and Safety of a Novel Antidepressant and Citalopram (20mg/day) in Patients with Major Depressive Disorder

A Randomized, Double-Blind, Parallel-Group, Placebo-Controlled Study Evaluating Efficacy and Safety of a SSRI Controlled Release Formulation versus Placebo in Patients with Major Depressive Disorder

A Study to Evaluate the Efficacy, Safety and Maintenance Effect of an Atypical Antipsychotic Augmentation of SSRI Monotherapy in Young and Older Adult Patients with Unipolar Treatment-Resistant Depression

A Novel Antidepressant Once-Daily Dosing Versus Placebo in Patients with Major Depression and Pain

MK_1-Receptor Antagonist versus Active and Placebo Controls in Patients with Major Depressive Disorder with Melancholic Features

A Double-Blind, Placebo-Controlled, Multicenter Study of the Long-Term Efficacy of a MK_1-Receptor Antagonist in the Maintenance of Antidepressant Effect in Geriatric Outpatients With Major Depressive Disorder
An Anticonvulsant Versus Placebo as Add-On Treatment in Subjects with Bipolar Disorder in the Outpatient Setting

An Eight Week, Double-Blind, Placebo-Controlled Multicenter Study to Evaluate the Safety and Efficacy of 2 Doses of a 5-HT_{1D} (1.5 and 3MG) and Paroxetine in Subjects with Major Depressive Disorder

A Phase III, Randomized, Placebo-Controlled Study Evaluating the Safety and Outcome of Treatment with Oral Atypical Antipsychotic in Subjects with Mania

A Phase III, Three Week, MultiCenter, Randomized, Double-Blind, Placebo Controlled, Parallel Group Safety and Efficacy Study of an Extended-Release Anticovulsant in Treatment of Bipolar I Disorder

A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group Study of an Extended Release Single Ingredient Amphetamine in Adults with Attention Deficit Hyperactivity Disorder

A Four-week Double-blind, Placebo and Active Controlled, Dose-Ranging Study of 3 Doses of a Novel Anxiolytic and Lorazepam (3mg/day) in Outpatients with Generalized Anxiety Disorder

A Flexible Dose Comparison of the Safety and Efficacy of a Novel Antidepressant and Placebo in the Treatment of Generalized Anxiety Disorder

A Double-blind Comparison of a Novel Antidepressant and an SSRI in the Treatment of Generalized Anxiety Disorder

An Atypical Antipsychotic vs. Risperidone and Placebo in the Treatment of Psychosis and Associated Behavioral Disturbances in Patients with Dementia

A Placebo-Controlled 12-Week Study of the Safety and Efficacy of Two Doses of an Anticonvulsant in the Treatment of Acute Manic or Mixed Episodes in Subjects with Bipolar I Disorder with an Optional Open-Label Extension

A Double-Blind, Placebo-Controlled Dose Finding Study Evaluating the Safety and Efficacy of a Novel Antidepressant and a once daily dosing in the Treatment of Major Depressive Disorder

A Double-Blind, Placebo-Controlled Dose Finding Study Evaluating the Safety and Efficacy of a Novel Antidepressant in the Treatment of Major Depressive Disorder

A Double-Blind Inpatient Study of Flexible Doses of a Novel Antipsychotic versus Perphenazine in the Treatment of Patients with Treatment-Resistant Schizophrenia

A Double-Blind, Placebo-Controlled Dose Finding Study Evaluating the Safety and Efficacy of a Novel Antidepressant in the Treatment of Major Depressive Disorder

A Double-Blind Inpatient Study Evaluating the Safety and Efficacy of a Novel Antipsychotic versus Olanzapine in the Treatment of an Acute Episode of Schizophrenia

A Double-Blind Study Evaluating the Safety and Efficacy of a Novel Antidepressant verses Placebo and Paroxetine in the Treatment of Major Depression

A Double-Blind, Placebo Controlled Comparison of the Efficacy and Safety of a Short Acting Intramuscular Antipsychotic, Intramuscular Lorazepam and Intramuscular Placebo in Treating Agitation in Patients with Dementia of the Alzheimer's Type, Vascular Dementia and Mixed Dementia

A Six-Month, Open-Label, Multicenter Study of an Extended-Release Form of a Marketed Anticonvulsant in the Treatment of Patients with Bipolar Disorder

A Three-Week, Multicenter, Randomized, Double-Blind, Placebo-Controlled Parallel-Group Safety and Efficacy Study of an Extended-Release Form of a Marketed Anticonvulsant in Patients with Bipolar Disorder

The Efficacy of an Atypical Antipsychotic and Adjunctive Lorazepam, as needed, to Treat Acute Behavioral Agitation in Inpatients with Schizophrenia

A Multicenter, Randomized, Double-Blind, Sertraline Controlled Study of the Efficacy and Safety of an Antidepressant in Subjects with Major Depression Disorder Who Failed on SSRI Treatment Due to Lack of Efficacy

An Open-Label Study Evaluating the Prevalence of Hyperprolactinemia in Schizophrenic Patients Taking Antipsychotics

An Open-Label Study Evaluating the Effects of an Antipsychotic on Hyperprolactinemia and Associated Comorbidity in Patients with Schizophrenia and Schizoaffective Disorder

A Multicenter, Double-Blind, Randomized, Placebo-Controlled Trial of the Safety and Efficacy of an atypical antipsychotic as Add-On Therapy with Lithium or Divalproex in the Treatment of Acute Mania

A Double-Blind, Randomized, Parallel Study of the Safety, Tolerability and Preliminary Efficacy of an Anti-Androgen Compared to Placebo in Patients with Anorexia Nervosa

A Dose Ranging, Double-Blind Placebo-Controlled, Safety, Tolerability and Efficacy Study of a Novel Anti-Depressant in Patients with Major Depressive Disorder

A Three Week, Multicenter, Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Safety and Efficacy Study of a Mood Stabilizer in Lithium-Failure Patients with Bipolar Disorder

A Double-Blind, Randomized Comparison of the Efficacy and Safety of Sustained Release Atypical Antipsychotic and Placebo in the Treatment of Patients With Schizophrenia

A Controlled Trial of Atypical Antipsychotics in the Treatment of Schizophrenic and Schizoaffective Subjects with Prominent Negative Symptoms

A Novel Antidepressant Once-Daily Dosing Versus Placebo in the Acute Treatment of Major Depression

Flexible Dose Comparison of the Safety and Efficacy of a Novel SSRI and a marketed SSRI in the Treatment of major Depressive Disorder

Research Studies

- An Investigation of Thiothixine and Chlorpromazine on the Cognitive Disorders of the Process and Reactive Schizophrenics.
- A Controlled Comparative Study and Follow-Up of the Treatment of Dependence on Opiates in Iran.
- A Double-Blind Comparison of Tranylcypromine, Nortriptyline and Placebo in Depressed Outpatients.
- Comparative Efficacy and Side Effects of Amitriptyline vs Tranylcypromine vs. Their Combination in Treatment of Acutely Depressed in-patients.
- Family Therapy with Relapsing Schizophrenics.
- A Double-Blind Comparison of Slow Release Lithium (SRLI) and Rapid. Release Lithium (RRLI) with Particular Emphasis on Side Effects.
- Haloperidol Blood Levels in Relation to Clinical Effects.
- Cognitive Therapy vs. Notriptyline in Depression.
- An Open Trial of Deprenyl in MAOI—Responsive Depressive.
