Human – AI teaming in quality control

Does the current piece have any kind of defect?

Good sample	Current piece	Known similar image
		
		Label: good

NO DEFECT DOUBLE PRINT INTERRUPTED PRINT UNABLE TO TELL OTHER DEFECT

AI Act and Applying the FRAIA Framework

Ethics & legal analysis questionnaire (Fundamental Rights & Algorithms Impact Assessment)

- I. WHY? Intended effects of the system
- II. WHAT? [Data (input)]; Algorithm (throughput)]
- III. HOW? Implementation and use of algorithm (output)
- IV. Fundamental Rights impact assessment

Human – AI teaming: best of both

- Linked Data and Knowledge
- Natural Interfaces Interaction
- Active Trust Management
- Human in the AI Loop
- XR
- Context Management
- FAIR AI & Bias Management

Shared spaces – context – affordances - values – targets – understanding – actions

STAR: Lessons Learned from Human-Centric AI Use Cases in Manufacturing

STAR Evaluation Methodology for Human-Centric AI in Manufacturing

1. Define the unit of analysis and identify use cases
2. Establish a multidisciplinary team of relevant stakeholders
3. Identify and validate relevant 'performance categories' based on goals & requirements
4. Conduct evaluation and feed outcomes to relevant teams

Can inform and steer all different life-cycle phases!

Source: Waschull, S., & Emmanouilidis, C. (2023). Assessing human-centricity in AI enabled manufacturing systems a socio-technical evaluation methodology. 22nd International Federation of Automatic Control World Congress (IFAC WC 2023), 56(2), 1791–1796.

STAR Co-creation Methodology applied in practice

1. Define the unit of analysis and identify use cases
2. Establish a multidisciplinary team of relevant stakeholders
3. Identify and validate relevant evaluation criteria
