What is a climate service?

We attribute to the term a broad meaning, which covers the **transformation of climate-related data** — together with other relevant information — **into customised products** such as projections, forecasts, information, trends, economic analysis, assessments (including technology assessment), counselling on best practices, development and evaluation of solutions and any other service in relation to climate that may be of use for the society at large. As such, these services include data, information and knowledge that **support adaptation, mitigation and disaster risk management** (DRM)

- European Roadmap for Climate Services

"Climate data is not climate information"

- *Francisco Doblas-Reyes*

Scientists

End-users

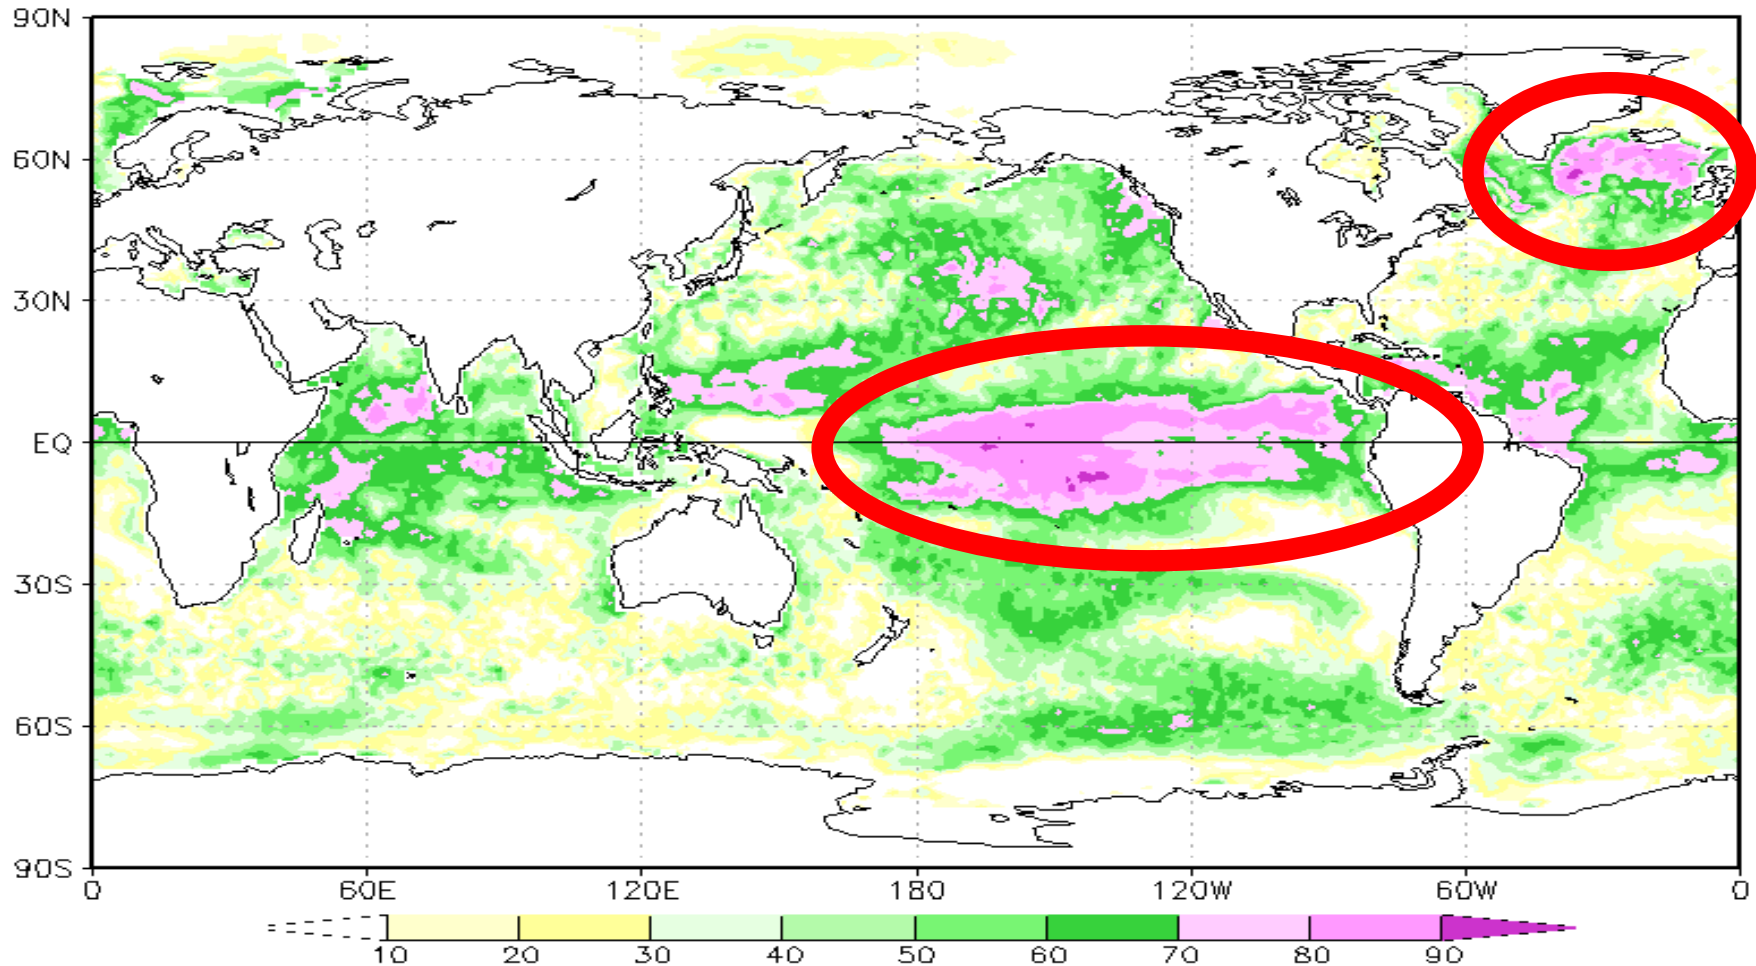

"Climate data is not climate information"

- Francisco Doblas-Reyes

Days Weeks Months Seasons Years Decades Centuries

Climate forecast improvements bring new opportunities

Temperature Forecast skill, 5 months into future

The Fundamental Challenge of Climate Services

- Find balance between what is *feasible* and what is *useful*
- Co-production is the key

Examples of Arctic Climate Services

Shipping

Tourism

Fisheries

Arctic Impact on Weather and Climate

The research leading to these results has received funding from the European Union Horizon 2020 research and innovation programme under grant agreement No 727852 (Blue Action)

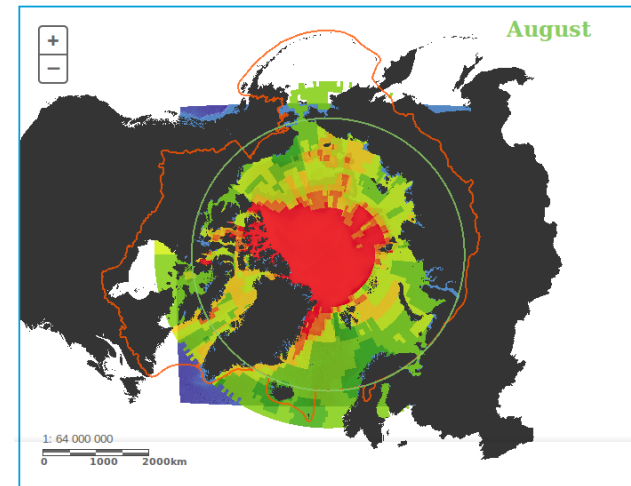

Polar-Low Storm-Forecasts (Erik Kolstad, Uni Research)

Monthly prediction of conditions for polar-low formation for use in shipping risk assessment tools

Polar Low in Barents Sea

Safety risk map

Winter Tourism Industry in Lapland (Ilona Mettinen, U. Lapland)

ARCTIC CENTRE
University of Lapland

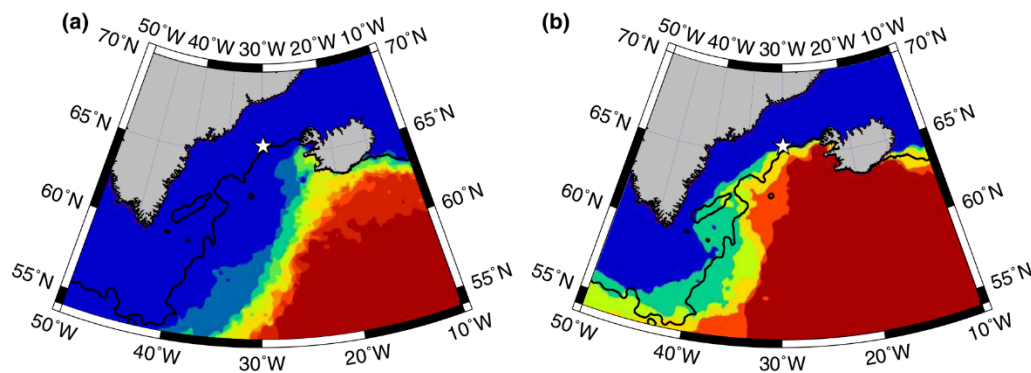

Seasonal forecasts for planning of
snow-making & storage activities

Climate Services for Fisheries (Mark Payne, DTU Aqua)

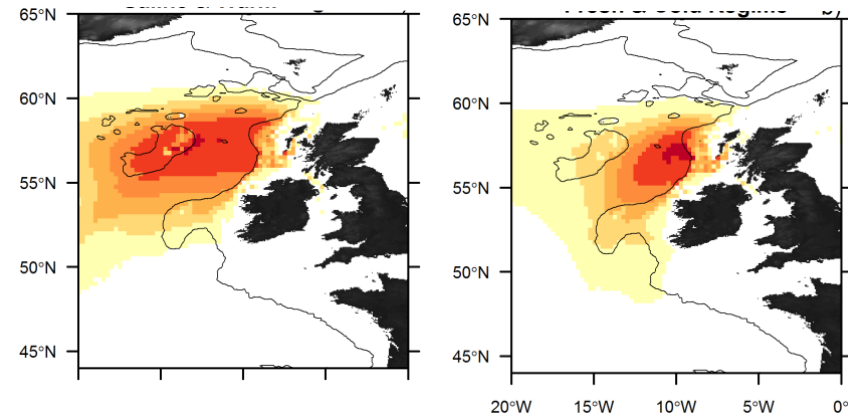

Annual forecasts of the distribution of commercially important fish stocks

Habitat shifts of Atlantic Bluefin Tuna

Introduction to Climate Services

Distribution forecasts of Blue Whiting
