Wider Than Before

Deeper Than Before

Better Than Before

KiDS@VST aims to image 1500 square degrees in 4 optical bands (complemented in the NIR with VIKING@VISTA).

Deeper and with better quality and higher spatial resolution than previous surveys.

Pixel scale $0.2''/\text{pxl}$
 Seeing $0.7''$ (r-band)
 Depth $r = 25$ (r-band)

Why KiDS?

KIDS-N

ATLAS-N

KIDS-W2

KIDS-S

DR1/2/3 (440

Sources: ~ 60

Galaxies: ~ 22 millions with photo-z
> 3 millions with high-quality photo-z
~ 1 millions with structural parameters

Ultra compact galaxies

Gravitational arcs/rings

Lensed quasars

Better Than Before
The census of ultra-compact massive galaxies

Hierarchical scenario and compact galaxies

Ultra-compact massive galaxies (UCMGs)

“LOCAL RED NUGGET”

- ✓ **Small**
- ✓ **Massive**
- ✓ **Old**

Trujillo et al. 2014

UCMGs definition

$$R_e < 1.5 \text{ kpc}$$

$$M_* > 8 \times 10^{10} M_\odot$$

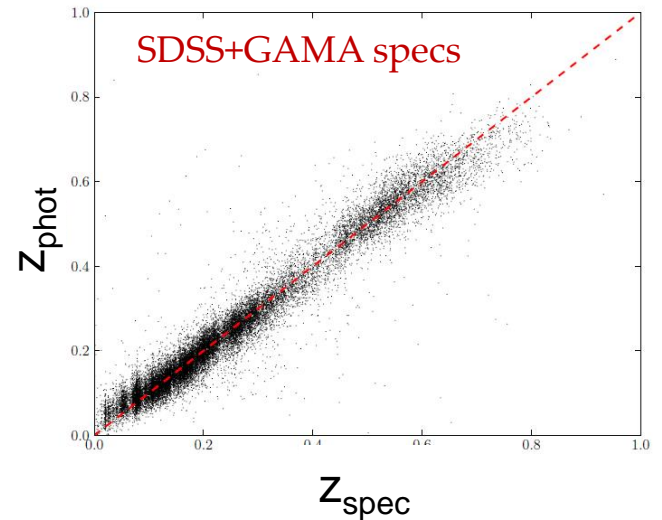

Data analysis

Photo-z

(machine learning, specs to train the network)

scatter ~ 0.03

Cavuoti et al. 2015, 2017

Stellar masses

(SED-fitting, using Lephare program)

Structural parameters

(2DPHOT, Sérsic fit, modelling the PSF)

La Barbera et al. 2008; Roy et al., MNRAS submitted

Some UCMG candidates

Complete at $z < 0.5$

Spectroscopic redshifts

Literature

New observations

Literature

From eROSITA Science Book

New observations

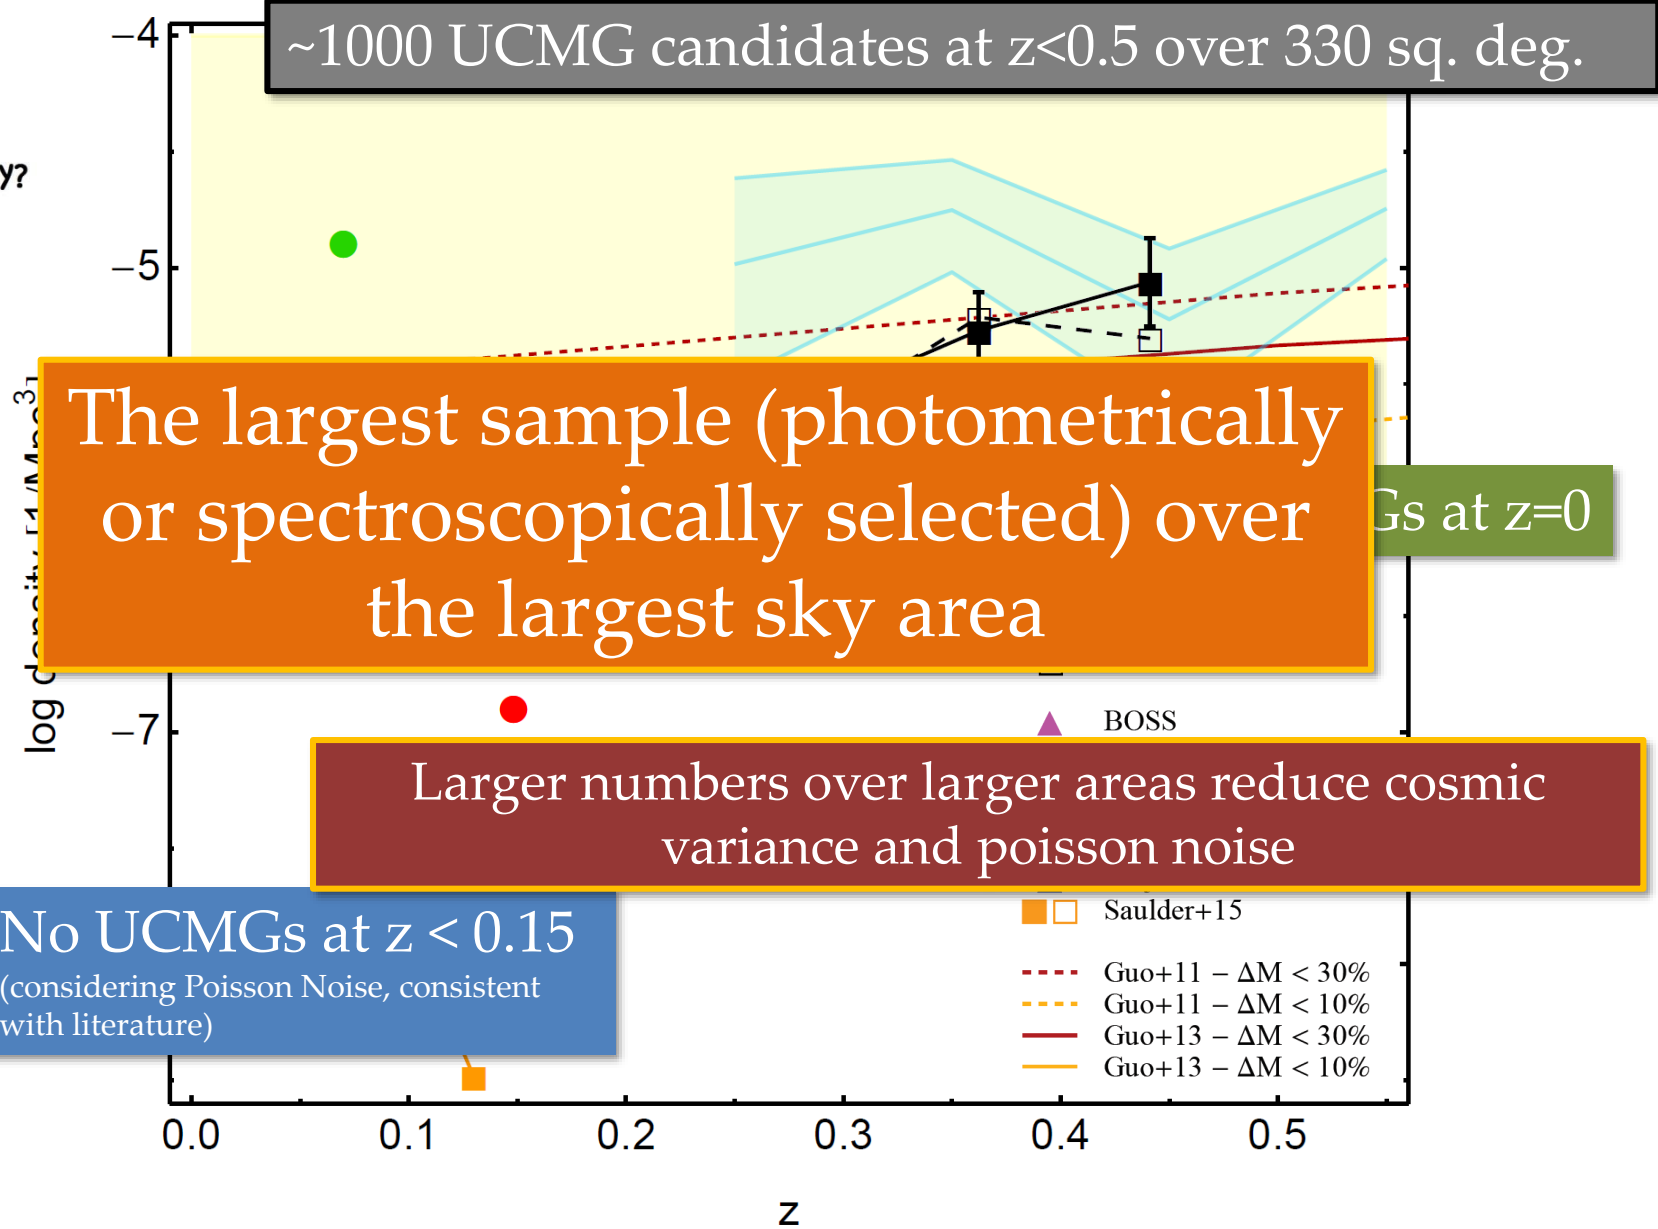

28 observed and reduced (TNG-1st, NTT)
 ~45 observed and to be reduced (TNG-2nd, INT)
 ~20 to be observed (TNG-3rd)

False Positive

False Negative

Finding strong gravitational lenses in the Kilo Degree Survey with Convolutional Neural Networks

Now: ~ 600 lenses known

KiDS: ~ 2400 lenses (*Petrillo+17*)

EUCLID (after two months)

Visual inspection

Automated search

cat

dog

Training sample: an issue

CNNs need large “training set”!

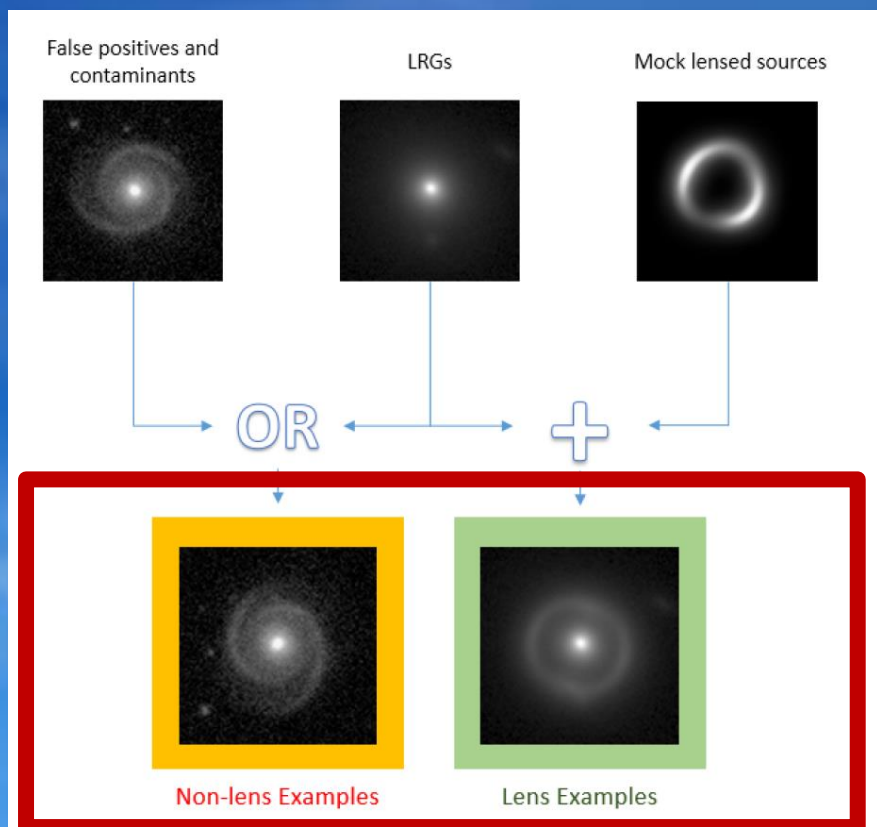

A few hundred of observed gravitational lenses

Mock gravitational lenses

The strategy

The lens sample

From $\sim 22,000$ color selected LRGs in KiDS DR3 (255 sq. deg.), in few minutes the CNN selects **746 lens candidates**.

We choose the best **56 lenses** with a joint visual inspection.

Prediction from LensPop (Collett 2015): ~ 50 LRG lenses in KiDS DR3 with $ER > 1.4''$.

Known lenses

J085446-012137

J114330-014427

J1403+0006

FALSE

On-going improvements

Just morphology

Morphology and colour

- ✓ Network architecture
- ✓ Sample selection
- ✓ Survey area (soon 900 sq. deg.; KiDS-DR4)
- ✓

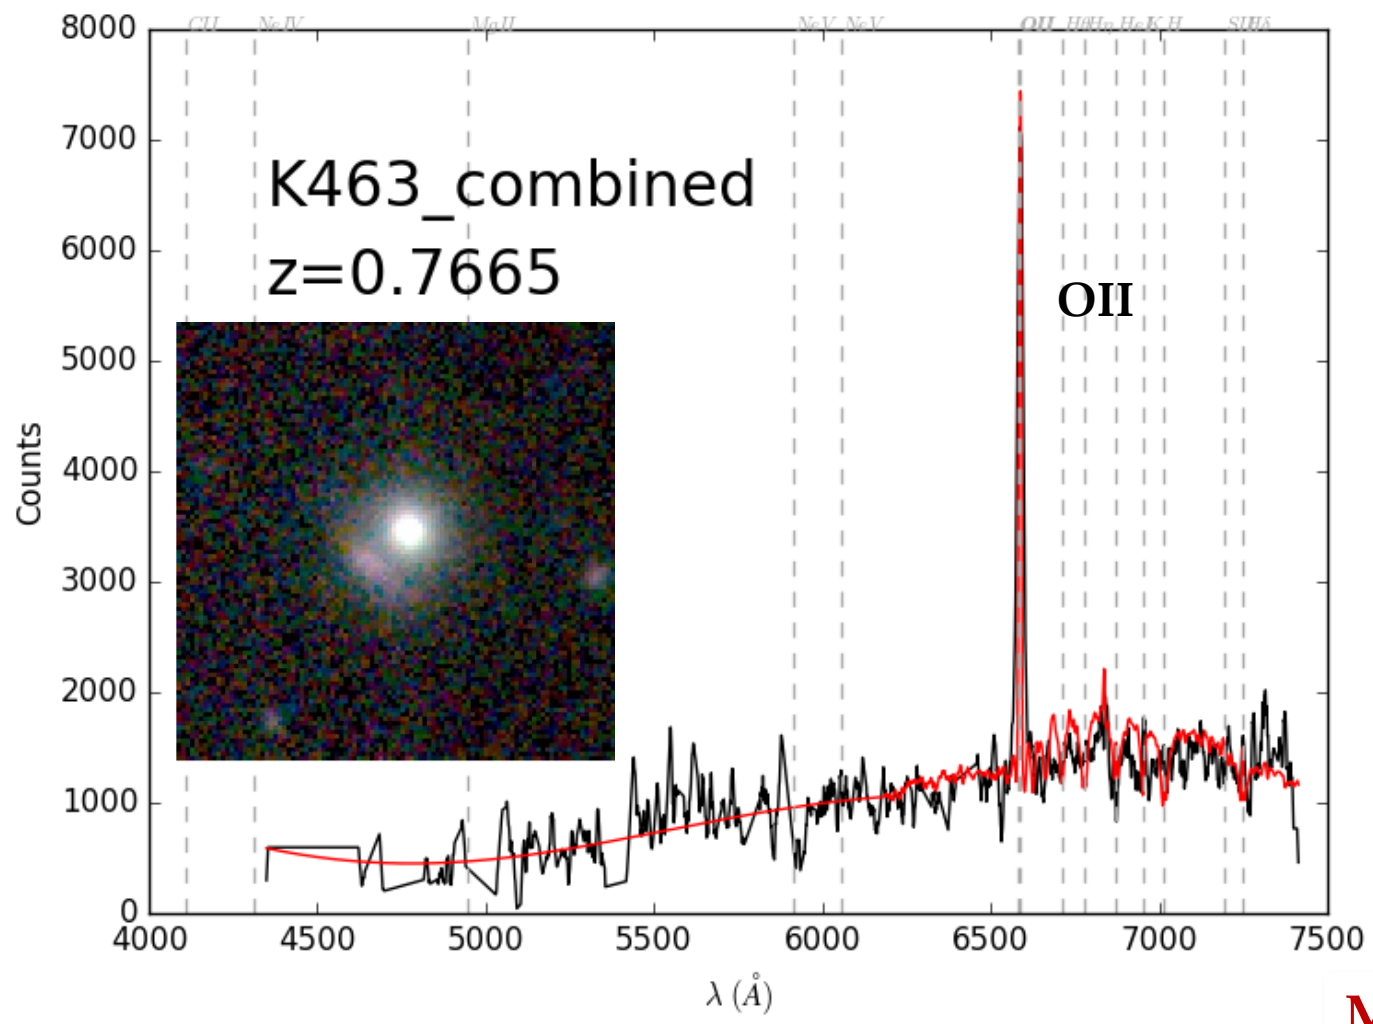

Some new candidates
