# From imaging previous works

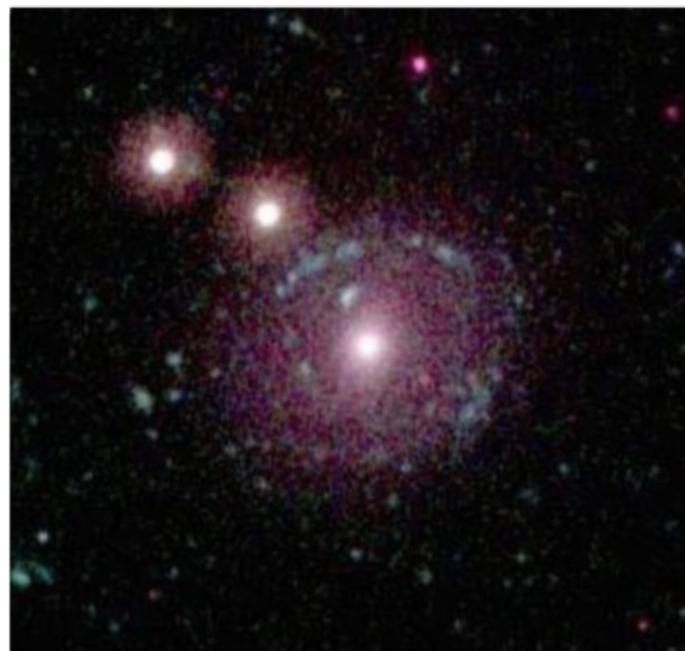

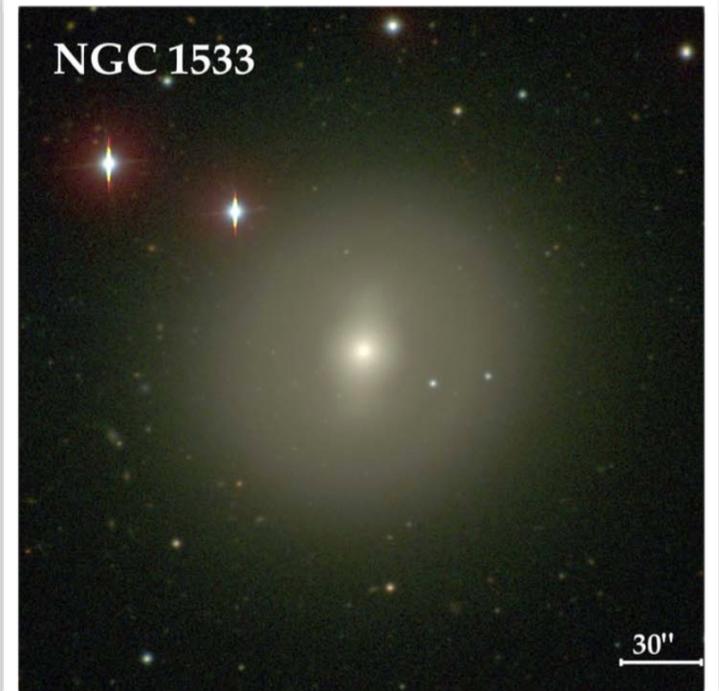

Direct  $K_s$ -band ( $\lambda \sim 2.15 \mu\text{m}$ ) image from NTT, image is in units of  $\text{mag arcsec}^{-2}$  and is displayed from  $\mu_{K_s} = 12.0$  to  $22.0 \text{ mag arcsec}^{-2}$ .  
FoV =  $4' \times 4'$

**Laurikainen et al. 2006**

du Pont telescope image, stacked image from Johnson B and V and Kron-Cousins R and I filters.  
FoV =  $4'.8 \times 4'.8$

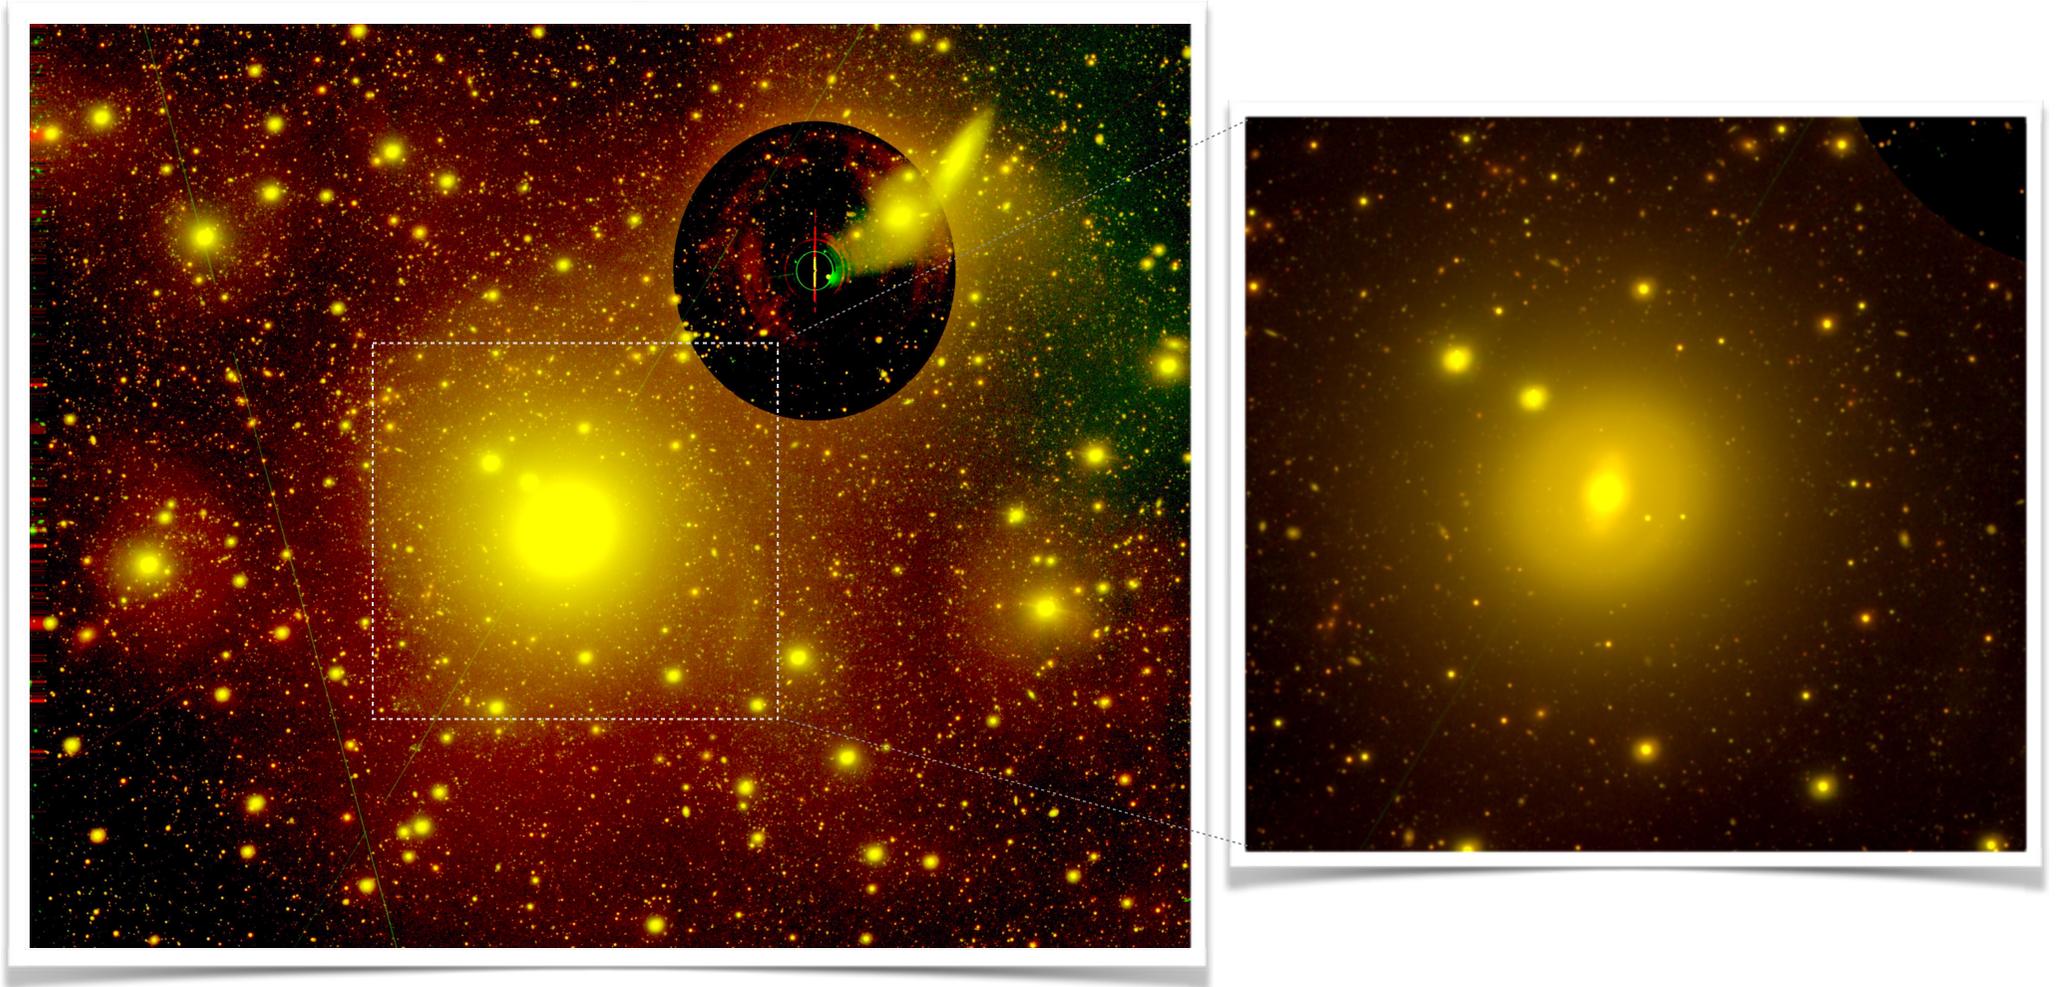

**Ho et al. 2011**

Swift-UVOT image, color composite image in the W2 (blue), M2 (green) and W1 (red) filters. FoV =  $5' \times 5'$

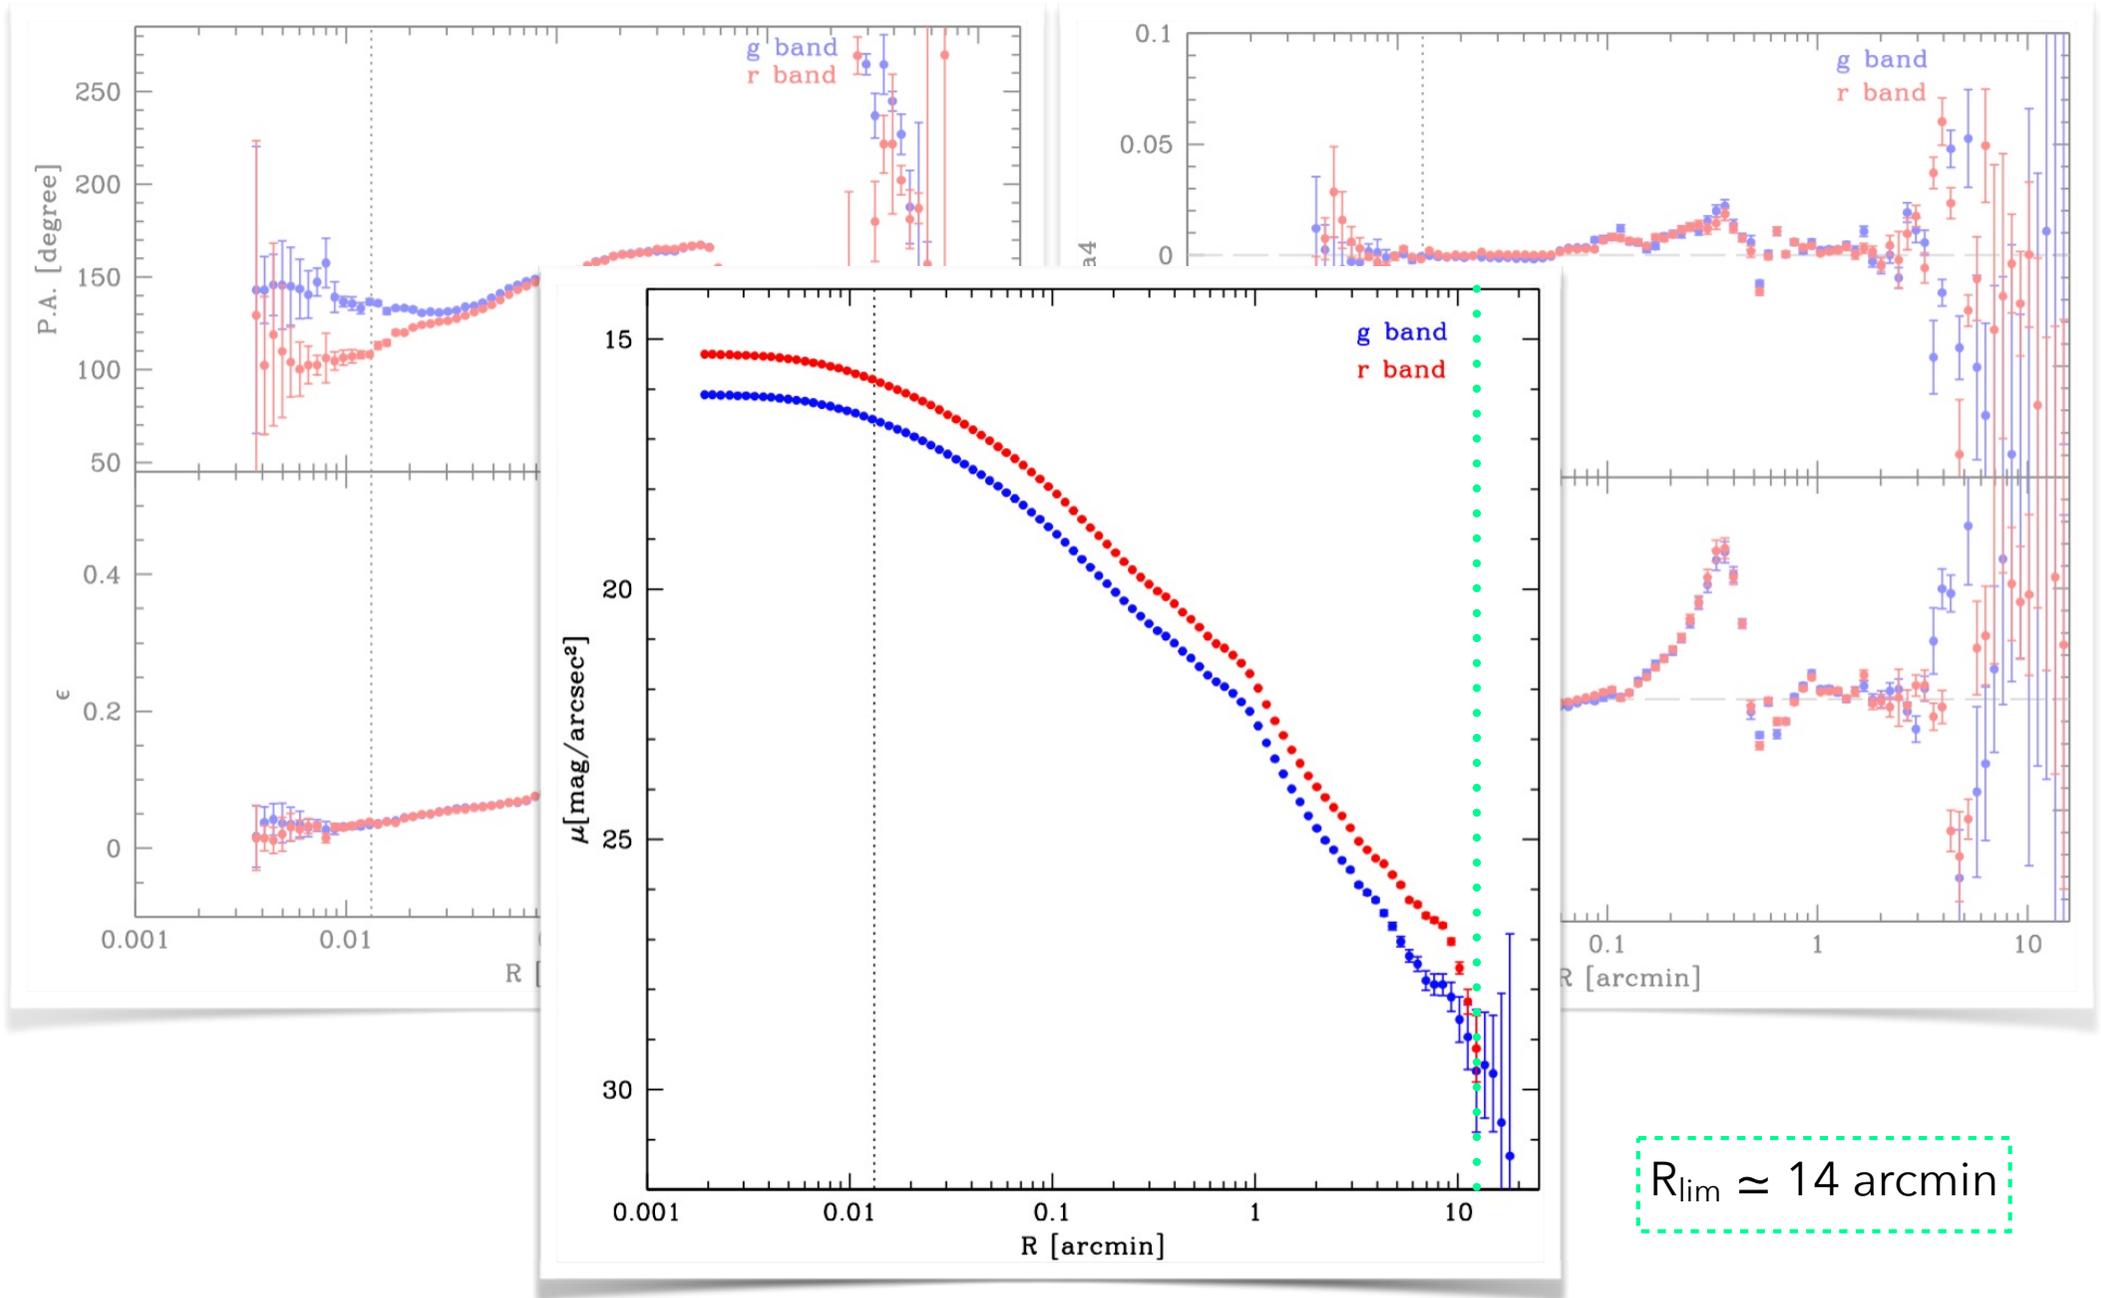

**Rampazzo et al. 2017**

# Imaging with VST

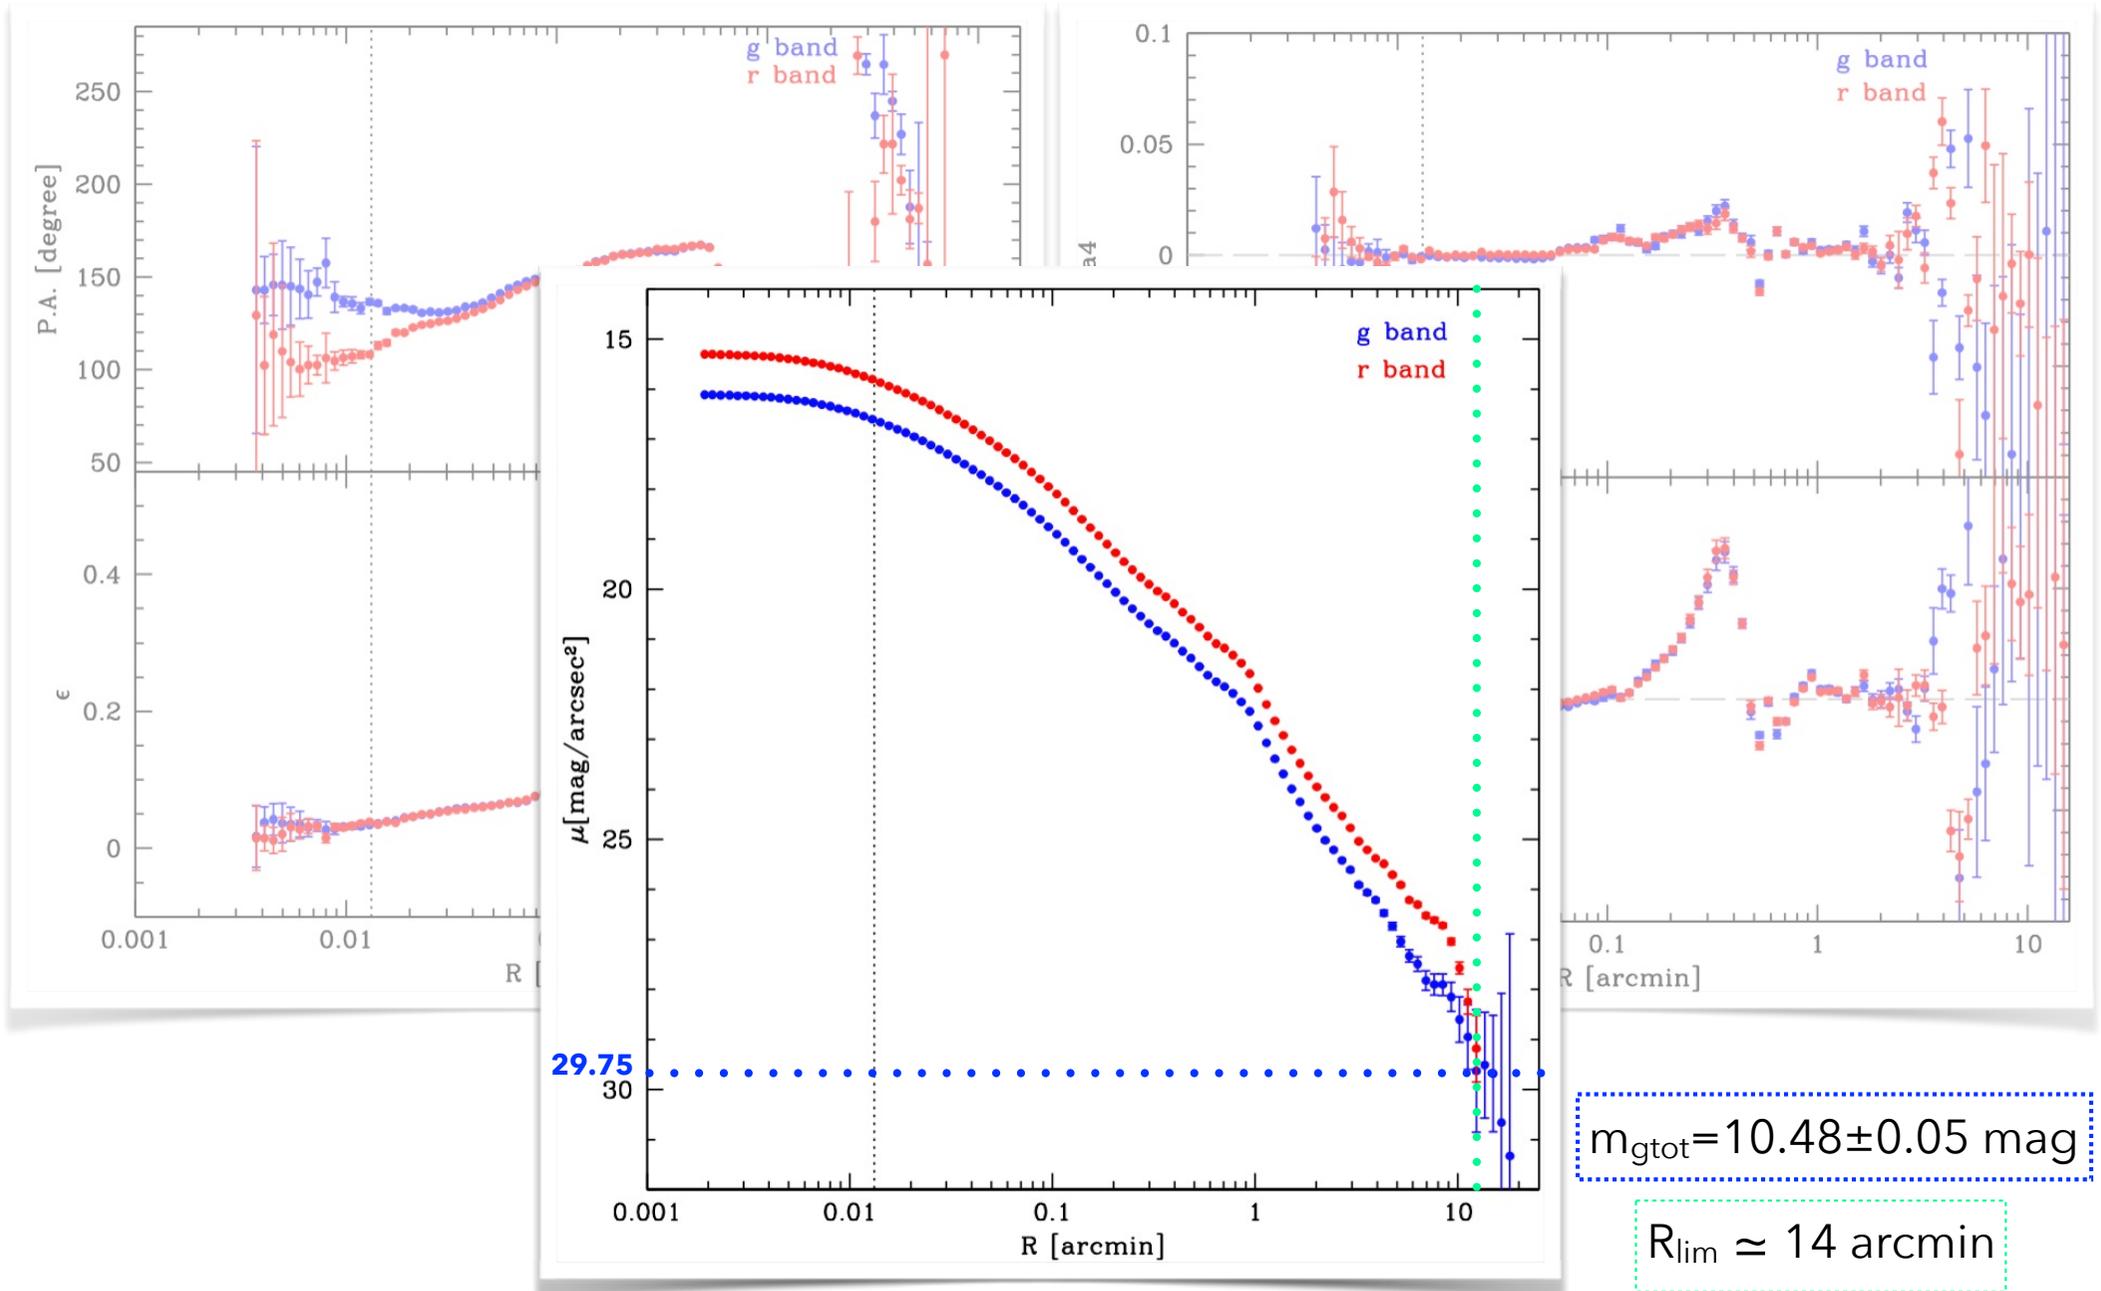

Colour composite image from g (green channel) and r (red channel) band VST image,  
24.15x18.9 arcmin.

# Conclusion - Colour composite and HI map

- NGC 1533 imaged in 21-cm with the ATCA
- HI associates with IC2038 (northern companion)
- NW and SE cloud
- Total HI mass of the system is  $7 \times 10^9 M_{\odot}$
- Radius of HI ring is from 2' to 11.7' from the optical center of NGC 1533
- 3 confirmed  $H\alpha$  very small isolated emission line regions in SE part (red dots); from SINGG

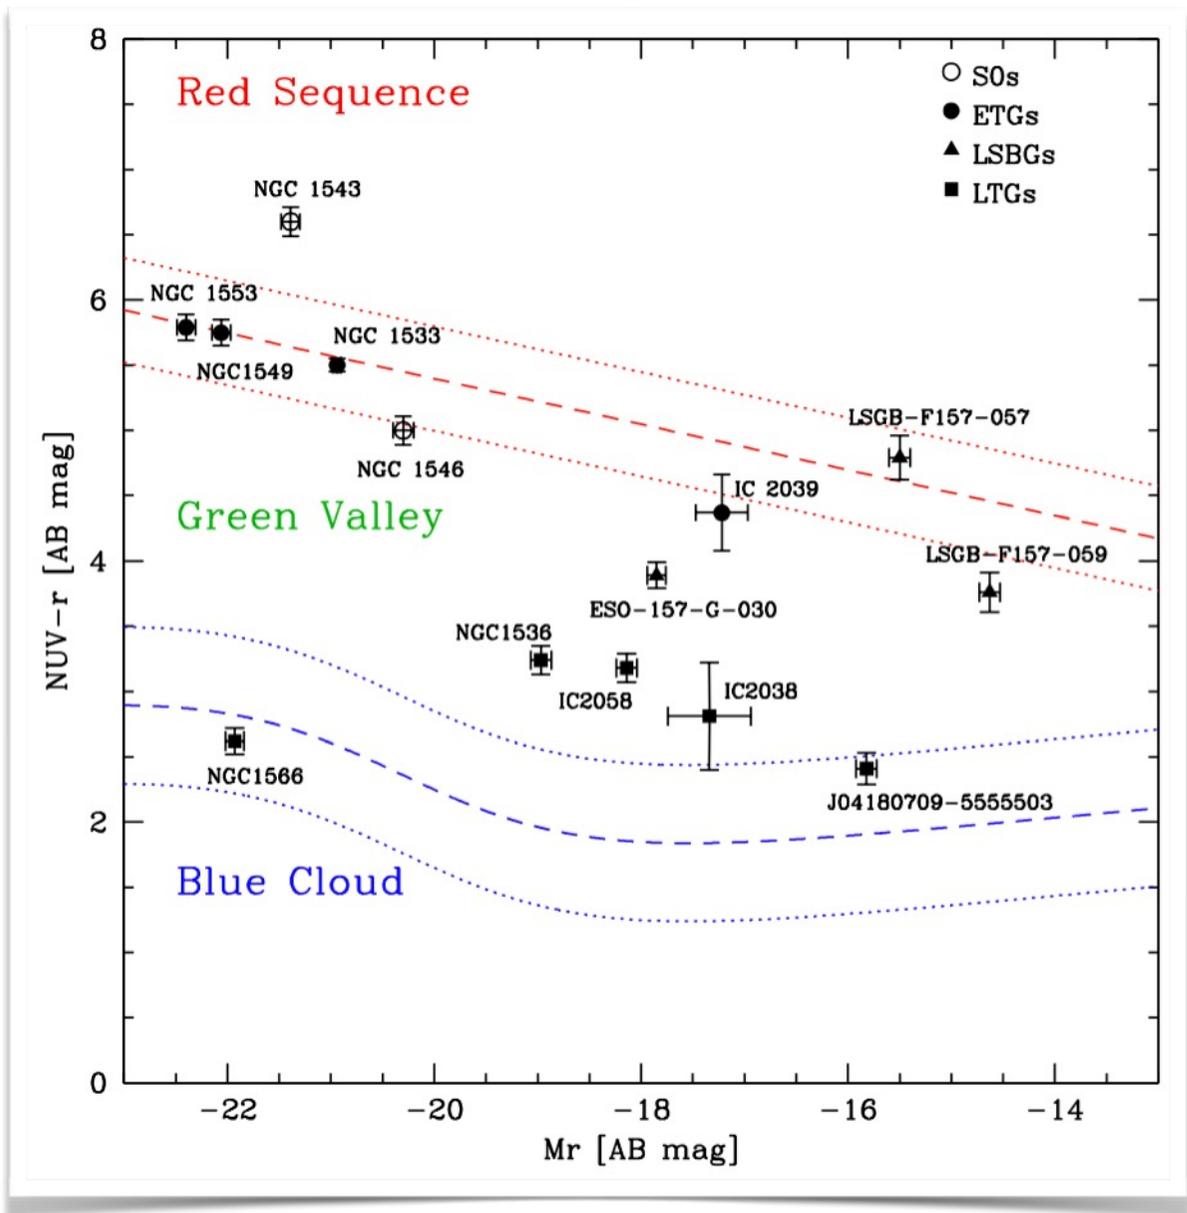

**Galactic recycling:  
the HI ring around NGC 1533**

Ryan-Weber, Webster & Bekki, 2003

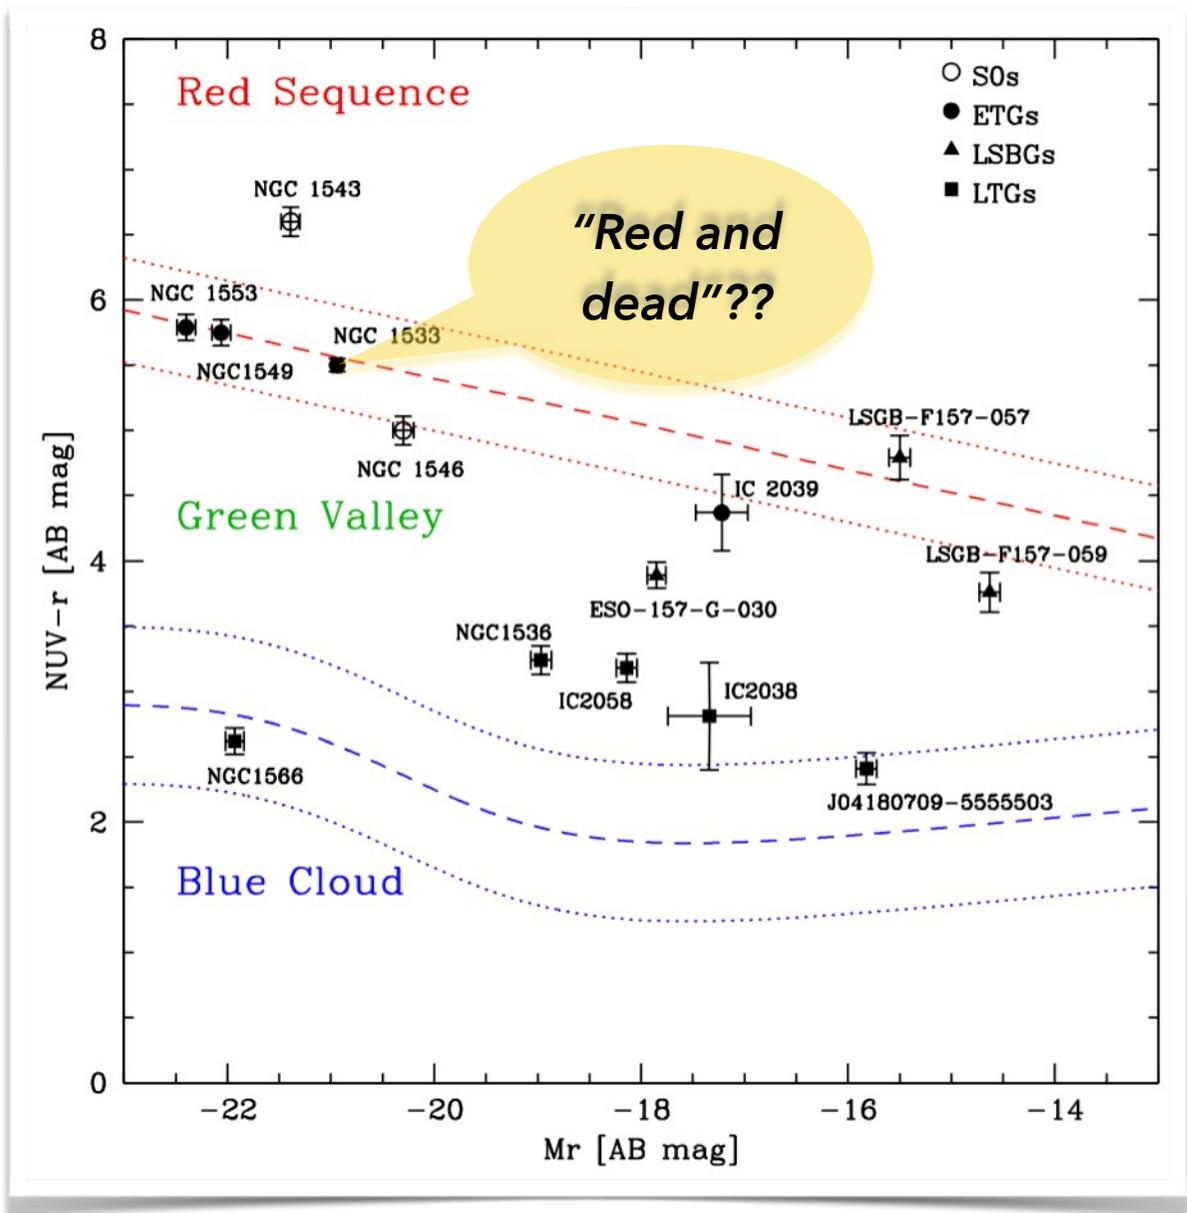

ATCA HI contours are 1.0 (bold), 1.5, 2.0, 2.5 and  $3.0 \times 10^{20} \text{ cm}^{-2}$  and have a resolution of about 1'

Werk et al, 2008
