

Co-Creative Decision Makers for 5.0 Organizations

WHY

It seeks to boost European innovation by promoting the transition of organizations from Industry 4.0 to Society 5.0 inspired frameworks. The principles of this new paradigm are utilized to support organizations from the healthcare, industry, and agri-food sectors by emphasizing sustainability, resilience, and human-centricity over the technology-driven focus of Industry 4.0. On this basis, CoDEMO 5.0 aims at fostering co-creation among socio-economic stakeholders, while also developing the necessary knowledge, skills, and competencies for cross-sectorial decision-makers.

HOW

Value Co-Creation Labs

6 national networks of socio-economic actors dedicated to 5.0 collaborative value creation will be established. The VCC Labs are physical installations based on the Digital Innovation Environment powered by OMiLAB, enhanced with 5.0 resources that facilitate multi-stakeholder collaboration.

5.0 Certification

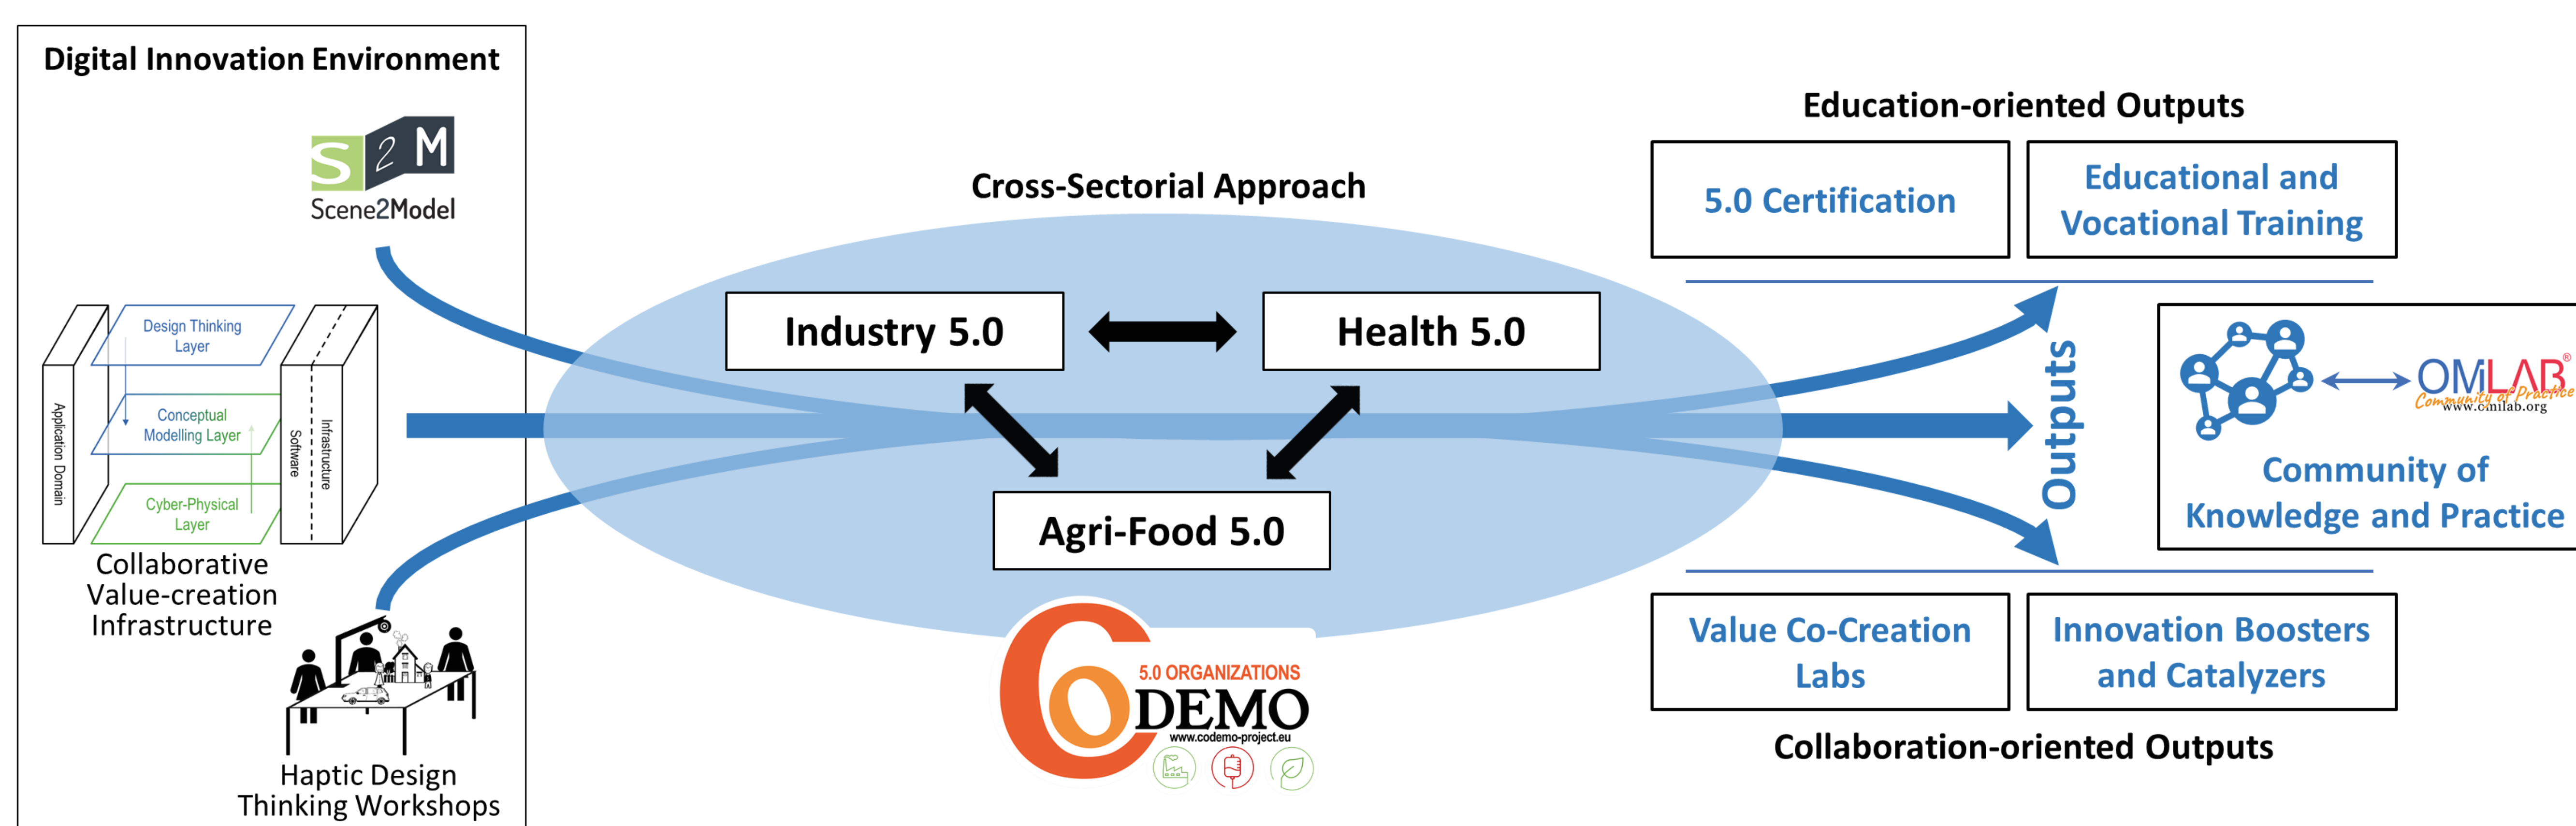

A unique European Open Badge Certification for Decision-Makers for 5.0 Organization will be created and experimented, with an objective of more than 450 badges at the end of the project. Materials and methodologies, covering knowledge, skills and competencies with a unique development frame, shared by all sectors of application (health, agritechology, industry) are included.

Innovation Boosters and Catalysts

A knowledge sharing platform dedicated to support both BOOSTERS (collaborative 5.0 networks and initiatives among socio-economic actors) and CATALYZERS (learning and educational activities for the certification and development of knowledge, skills and competences) will be developed and emphasized by an annual International Prize of Innovation.

Educational and Vocational Training

The learning content required for 5.0 organizational Decision-Makers is collaboratively designed by Higher Education Institutions (HEI) and Vocational Education and Training (VET) facilities, supported by the industry partners with case-study and praxis examples. 8 vocational training offers and 11 academic training curriculum will be implemented and experimented through 6 European countries.
