datamite

DATA
Monetization, Interoperability, Trading & Exchange.

Unleashing the Monetisation Potential

DATAMITE delivers a modular, open-source and multi-domain Framework to improve data monetising, interoperability, trading and exchange in the form of software modules, training and business materials for European companies, empowering them to become new relevant players in the data economy.

OUR OBJECTIVES

DEVELOP
a modular open-source framework to improve the way companies manage and share their data to boost monetisation, supporting the European Initiative for Digital Commons.

CREATE
a Data Sharing module including a collection of tools to share and trade data, focused on data interoperability and sovereignty, aimed at different targets including EU Portals and other European initiatives.

PROVIDE
a collection of open-source modules for data governance, quality and security that can be easily integrated with existing systems and customized/extended with complementary algorithms and mechanisms.

DEPLOY AND EVALUATE
the achieved performance of DATAMITE in six different pilots and data sharing environments, validating as well the technical training material.

IMPROVE
the capabilities of EU companies by providing models, indicators and training materials to upskill personnel and improve corporate strategies for monetisation.
