

How does the Barcelona DORI align with the work in GraspOS?

Thanasis Vergoulis, ATHENA RC
Chief Technical Manager of the GraspOS project
13/11/2024 – GraspOS CoP meeting

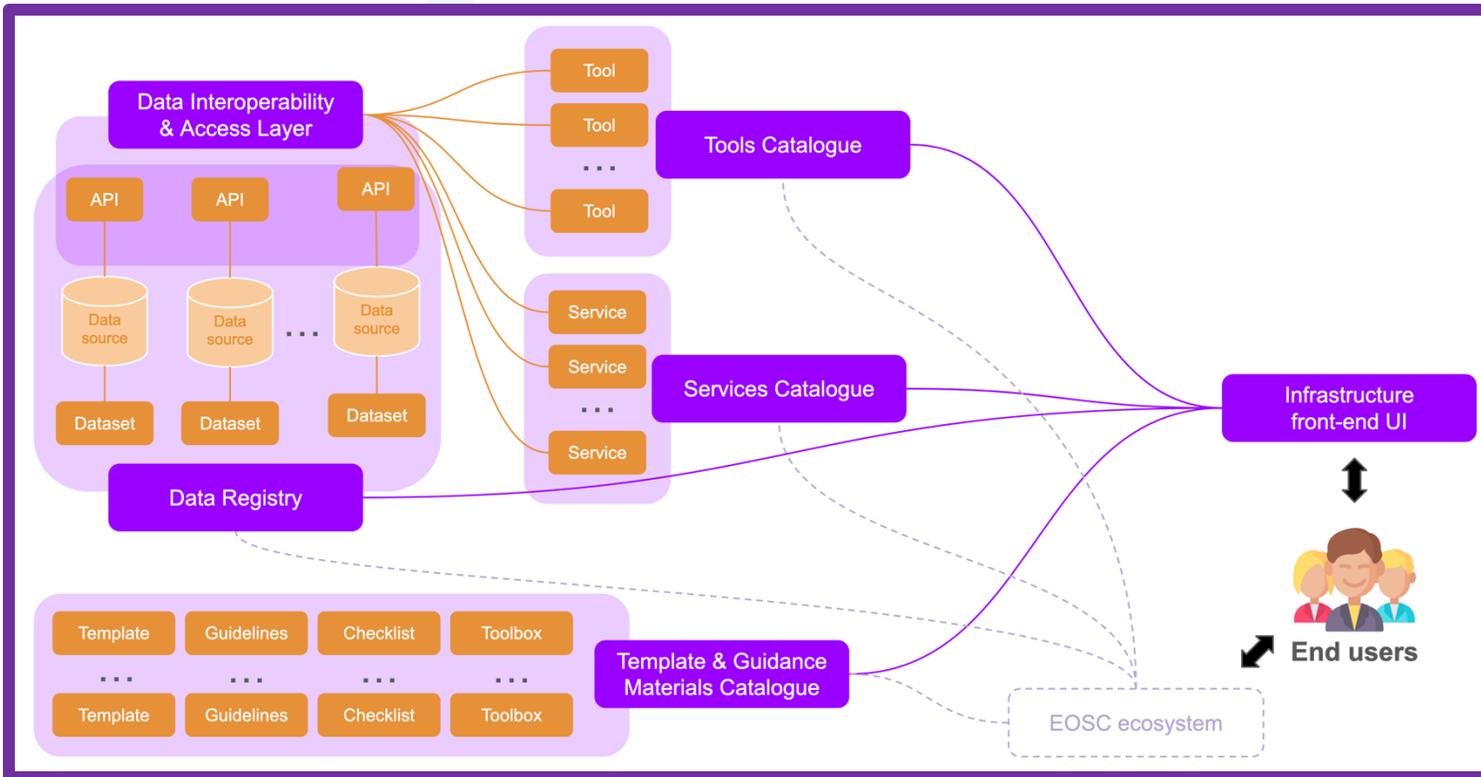

graspOS

GraspOS in a nutshell

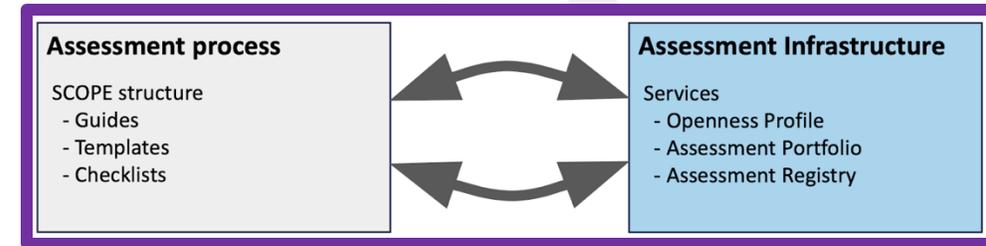

Mission:

Develop, assesses and put into operation an **open federated infrastructure** to support and enable policy reforms for “Open-Science-aware” Responsible Research Assessment.

GraspOS & Barcelona DORI: mutual benefits

GraspOS: building a **federated infrastructure of open resources**

- (meta)data, tools, services, guidance material, etc.
- **Well-aligned with DORI's vision** for a transition from closed to Open Research Information (ORI).

GraspOS contributes to DORI's vision in multiple ways:

- Delivers **new & improved data, tools, and services that enrich the ORI ecosystem**
- Aims to **make those resources easier to discover** for research assessment use cases
- It's **pilots offer concrete examples** of research organisations trying to reform their research assessment practices through the use of ORI.
- Investigates the effect of **interventions in research assessment that can incentivise researchers to create & share ORI** helping to further enrich the ecosystem.
- By contributing to EOSC's development towards the support of research assessment reform, it can **bridge DORI (and CoARA) to EOSC** and enrich the EOSC ecosystem accordingly.

DORI, as an initiative, **raises awareness & visibility on the need for the transition to ORI** and applies pressure for the required reform.

- Helps to streamline GraspOS project activities & increase the impact of its results.
- Its working groups may offer valuable feedback to GraspOS consortium from a wider pool of experts

GraspOS at DORI Conference (Paris, Sep '24)

Many GraspOS partners are **signatories or supporters of DORI** & have expressed their interest to participate in DORI's WGs.

GraspOS was **specifically mentioned** during the presentation of the CoARA WG Towards Open Infrastructures for Responsible Research Assessment (**OI4RRA**)

Emphasizing that the GraspOS infrastructure aims to enable & facilitate the **discovery of open research information to support RRA**.

Focused **presentations of GraspOS resources** from the DORI perspective.

E.g., OPERAS Metrics & PRISM, OpenCitations

Let's make it happen! Together.

THANK YOU
