

*Description of Two Species of Land Shells from
Porto Rico, W. I.*

BY PROFESSOR EDWARD V. MARTENS.

[Communicated by Thomas Blund.]

Read May 21st, 1883.

NOTE BY THOS. BLUND.

In 1882 I forwarded to Prof. v. Martens several shells received long since from my late friend, Mr. Robert Swift, collected, I believe, in Porto Rico, and which I was unable satisfactorily to determine.

I had submitted the shells to Mr. G. W. Tryon, Jr., asking him to compare them with specimens in the Swift Collection, the property of the Academy of Natural Sciences, Philadelphia. Mr. Tryon found no similar forms in the Academy collections, but pointed out the alliance of one of the species with *Chondropoma Tortolense*, Pfr., especially with specimens so labelled, from the island of Anegada:—of this I informed Prof. v. Martens, when presenting the shells to the Berlin Zoological Museum.

In my correspondence with Prof. v. Martens, I mentioned that I was preparing notes on the Geographical Distribution of the Land Shells of the West Indies, with complete lists of the species of each island. He was kind enough to forward to me the descriptions subjoined, for insertion in my proposed paper.

The completion of that paper has, from various causes, been delayed; but I deem it desirable that the publication of the contribution of Prof. v. Martens should be no longer postponed.

Clitella concepta, nov. sp.

Testa ovato-conica, umbilicata, verticaliter confertim tenuiter et inequa-liter humiliata, pallide brunnea, fasciis compluribus rufis ornata; anfr. 7, priores duo levex, sequentes 4 regulariter crescentes, convexi, sutura pro-funda, utrinque prolongationibus lamellarum albis *concepta*; anfractus ultimus in $\frac{1}{4}$ peripherie solutum, oblique descendens; apertura subverticalis, fere ovata; peristoma duplex, externum late expansum, subundulatum, rufo-incaudatum, internum distincte porrectum. Operculum paucispirum, oblique radicum stratum.

Longitudo 18; diam. 8 $\frac{1}{2}$; aperturæ longitudo, inclusa peristomato externo, 8, latitudo 5 $\frac{1}{2}$; excluso, 4 et 2 $\frac{1}{2}$ mill.

Porto Rico. R. Swift.

Chondropoma Tortolense, Pfr.

(Mod. Pneum., Suppl. I, p. 142.)

Var. Major.

Testa paulum majora, fere unicolora, denticulis suturæ paulo magis pro-minentibus et magis fasciculatis, peristomatis externi lobo superiore et lobo columellari minoribus, distinctius pliculosis.

Longitudo 18; diameter 18; aperturæ longitudo, inclusa peristomate 7; latitudo 6; excluso, 5 et 4 mill.

Porto Rico.
