## MUHAMMAD AL-XORAZMIY NOMIDAGI TOSHKENT AXBOROT TEXNOLOGIYALARI UNIVERSITETI FARG'ONA FILIALI

**Muassis:** Muhammad al-Xorazmiy nomidagi Toshkent axborot texnologiyalari universiteti Farg'ona filiali.

**Chop etish tili:** O'zbek, ingliz, rus. Jurnal texnika fanlariga ixtisoslashgan bo'lib, barcha shu sohadagi matematika, fizika, axborot texnologiyalari yo'naliشida maqolalar chop etib boradi.

**Учредитель:** Ферганский филиал Ташкентского университета информационных технологий имени Мухаммада ал-Хоразми.

**Язык издания:** узбекский, английский, русский.

Журнал специализируется на технических науках и публикует статьи в области математики, физики и информационных технологий.

**Founder:** Fergana branch of the Tashkent University of Information Technologies named after Muhammad al-Khorazmi.

**Language of publication:** Uzbek, English, Russian.

The magazine specializes in technical sciences and publishes articles in the field of mathematics, physics, and information technology.

2024 yil, Tom 1, №4  
Vol.1, Iss.4, 2024 y

ELEKTRON ILMIY JURNALI

ELECTRONIC SCIENTIFIC JOURNAL

«Al-Farg'oniy avlodlari» («The descendants of al-Fargani», «Potomki al-Fergani») O'zbekiston Respublikasi Prezidenti administratsiyasi huzuridagi Axborot va ommaviy kommunikatsiyalar agentligida 2022-yil 21 dekabrda 054493-son bilan ro'yxatdan o'tgan.

Jurnal OAK Rayosatining 2023-yil 30 sentabrdagi 343-sonli qarori bilan Texnika fanlari yo'naliشida milliy nashrlar ro'yxatiga kiritilgan.

Tahririyat manzili:  
151100, Farg'ona sh.,  
Aeroport ko'chasi 17-uy,  
202A-xona  
Tel: (+99899) 998-01-42

Qo'lyozmalar taqrizlanmaydi va qaytarilmaydi.

FARG'ONA - 2024 YIL

## TAHRIR HAY'ATI

**Maxkamov Baxtiyor Shuxratovich,**

Muhammad al-Xorazmiy nomidagi Toshkent axborot texnologiyalari universiteti rektori, iqtisodiyot fanlari doktori, professor

**Muxtarov Farrux Muhammadovich,**

Muhammad al-Xorazmiy nomidagi Toshkent axborot texnologiyalari universiteti Farg'ona filiali direktori, texnika fanlari doktori

**Arjannikov Andrey Vasilevich,**

Rossiya Federatsiyasi Sibir davlat universiteti professori, fizika-matematika fanlari doktori

**Satibayev Abdugani Djunusovich,**

Qirg'iziston Respublikasi, Osh texnologiyalari universiteti, fizika-matematika fanlari doktori, professor

**Rasulov Akbarali Maxamatovich,**

Muhammad al-Xorazmiy nomidagi TATU Farg'ona filiali Axborot texnologiyalari kafedrasи professori, fizika-matematika fanlari doktori

**Yakubov Maksadxon Sultaniyazovich,**

Muhammad al-Xorazmiy nomidagi TATU «Axborot texnologiyalari» kafedrasи professori, t.f.d., professor, xalqaro axborotlashtirish fanlari Akademiyasi akademigi

**G'ulomov Sherzod Rajaboyevich,**

Muhammad al-Xorazmiy nomidagi TATU Kiberxavfsizlik fakulteti dekani, Ph.D., dotsent

**G'aniyev Abduxalil Abdujaliovich,**

Muhammad al-Xorazmiy nomidagi TATU Kiberxavfsizlik fakulteti, Axborot xavfsizligi kafedrasи t.f.n., dotsent

**Zaynidinov Hakimjon Nasritdinovich,**

Muhammad al-Xorazmiy nomidagi TATU Kompyuter injiniringi fakulteti, Sun'iy intellekt kafedrasи texnika fanlari doktori, professor

**Abdullahov Abdujabbor,**

Andijon mashinosozlik instituti, Iqtisod fanlari doktori, professor

**Qo'ldashev Obbozjon Hakimovich,**

O'zbekiston milliy universiteti huzuridagi Yarimo'tkazgichlar fizikasi va mikroelektronika ilmiy-tadqiqot instituti, texnika fanlari doktori, professor

**Ergashev Sirojiddin Fayazovich,**

Farg'ona politexnika instituti, elektronika va asbobsozlik kafedrasи professori, texnika fanlari doktori, professor

**Polvonov Baxtiyor Zaylobiddinovich,**

Muhammad al-Xorazmiy nomidagi TATU Farg'ona filiali Ilmiy ishlар va innovatsiyalar bo'yicha direktor o'rinnbosari

**Zulunov Ravshanbek Mamatovich,**

Muhammad al-Xorazmiy nomidagi TATU Farg'ona filiali Dasturiy injiniring kafedrasи dotsenti, fizika-matematika fanlari nomzodi

**Abdullaev Temurbek Marufovich,**

Muhammad al-Xorazmiy nomidagi TATU Axborot texnologiyalari kafedra mudiri, texnika fanlar bo'yicha falsafa doktori

**Zokirov Sanjar Ikromjon o'g'li,**

Muhammad al-Xorazmiy nomidagi TATU Farg'ona filiali Ilmiy tadqiqotlar, innovatsiyalar va ilmiy-pedagogik kadrlar tayyorlash bo'limi boshlig'i, fizika-matematika fanlari bo'yicha falsafa doktori

**Abstract.** In the course of this study, a mathematical model of solar activity was created at the specified coordinates for a certain time, with the development of an appropriate algorithm of action. In the course of the study, a function was created with respect to a spherical coordinate system based on an approximate model of the planet and its irradiation system. Subsequently, empirically obtained boundary conditions were set for the function, so that a certain general form was turned into a particular form in the class of linear functions.

**Keywords:** mathematical modeling, solar constant, functional dependence

### INTRODUCTION

During the development of solar energy, it became possible to actively observe the growing need to consider the system for creating new renewable energy power plants, which include solar, wind, wave, BU and other systems [1-2; 4]. Each of them currently has a different degree of activity and creation algorithm. So, among such systems, solar panels deserve attention regarding their need to consider solar activity in the specified zone [3; 9].

Initially, it is necessary to take into account the concept of the solar constant, that is, the energy radiated from the Sun, which falls on a square meter [5-8; 11]. This parameter, calculated in  $\text{W/m}^2$ , is a

constant and is valid on the Earth's surface at the equator during the vernal equinox or solstice [10]. Also, in addition, there are some additional empirical results that can be used, which as a result should create a common function in a spherical coordinate system of 3 variables, which will eventually make it possible to model solar activities in these coordinates, which is relevant.

### MATERIALS AND METHODS

In the course of the study, methods of physical and mathematical modeling, analysis, empirical research were used, establishing the general form of the function with further substitution of boundary conditions and obtaining a particular form of the

function. The experimental results were used as research materials.

## RESEARCH

To model the described phenomenon, a spherical coordinate system is introduced, depending on the indicators of three variables, demonstrating the following parameters (1), while forming an equation of the form (2).

$$\begin{aligned}\varphi_1 - \text{day}, \varphi_2 - \text{latitude from 0 in the center}, \\ \varphi_3 - \text{deviation } (-23.5, +23.5)\end{aligned}\quad (1)$$

$$x_1\varphi_1 + x_2\varphi_2 + x_3\varphi_3 = E \quad (2)$$

According to the empirical data obtained [1; 10-11], the following statements have been established reliably:

1. At the equator at noon GMT in the waters of the Gulf of Guinea on January 1, when measured from 2013 to 2023, with a deviation of 23.497 degrees of the Earth's axis, an average energy value of 1,412 W/m<sup>2</sup> was established;
2. In the specified coordinate "center of the world", when conducting similar measurements on July 1 during 2013-2023, an average energy value of 1,321 W/m<sup>2</sup> was established.
3. On the territory of the Republic of Uzbekistan, namely on the territory of the city of Ferghana, the city of Margilan, the city of Tashkent, the city of Samarkand and some other coordinates of the corresponding observatories, observation posts and laboratories, an average value was obtained, set during the last observations from 2018-2023 at 350 W/m<sup>2</sup> at noon on December 22 – the day of the winter solstices.

Based on what has been presented, it is appropriate to present for the 2 initial cases a formulation of the form (3).

$$\begin{cases} 90x_1 - 23,497x_3 = 1412 \\ 90x_1 + 23,497x_3 = 1321 \Rightarrow 180x_1 = \\ = 2733 \Rightarrow \begin{cases} x_1 = 15.18(3) \\ x_3 = -1.9364 \end{cases} \end{cases} \quad (3)$$

According to the data obtained, a part of the function is formed and using the third statement, an equation is formed with the solution (4), as well as the general form of the function (5).

$$\begin{aligned}90x_1 + 41x_2 - 23.497x_3 = 350 \Rightarrow \\ \Rightarrow x_2 = -25.902422\end{aligned} \quad (4)$$

$$E = 15.18(3)\varphi_1 - 25.902422\varphi_2 - 1.9364\varphi_3 \quad (5)$$

The resulting function is complex-valued when switching to a real set, due to the representation of the graph relative to the Republic of Uzbekistan – 41 degrees north latitude in three-dimensional form (Fig. 1) and direct projection (Fig. 2).

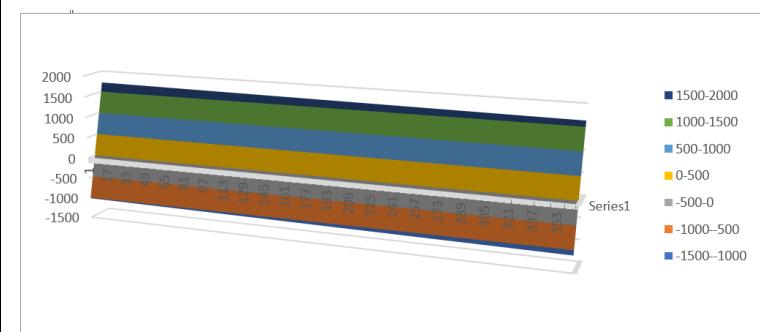

Fig. 1. Three-dimensional modeling of the graph (5)

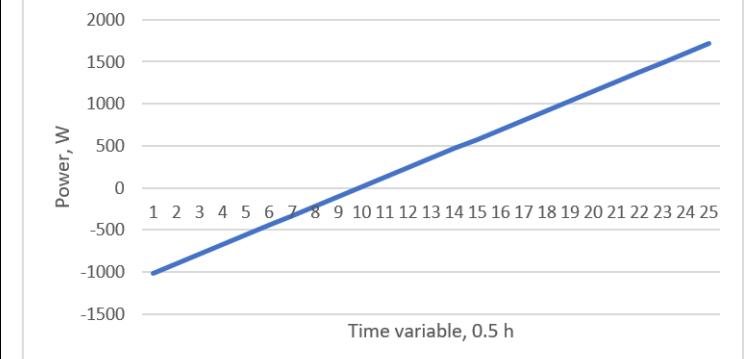

Fig. 2. Projection of the graph relative to (5)

The resulting formulations can indeed clearly show the system under study, taking into account the complex set, where it is possible for a function to participate while simultaneously in a spherical coordinate system.

## RESULTS

In order to switch to the actual set, it became necessary to use experimental indicators again. The value stated by the devices, namely, luximeters, exposure meters, photometers and various types of

solar cells showed the reduction of the type of function to the state (6).

$$E' = \frac{(15.18(3)\varphi_1 - 25.902422\varphi_2 - 1.9364\varphi_3) - E_0}{3} \quad (6)$$

Where,  $E_0$  – the average energy value of 1

$$- 2, equal to 1360 \frac{W}{m^2}.$$

Thus, it is possible to move to the stage of direct three-dimensional modeling in a real set.

## DISCUSSION

As a result of using the changes obtained, the function has changed, also making changes to the graph by projection relative to the time variable relative to different scales for readings on the scale of the whole day (Fig. 3) and year (Fig. 4).

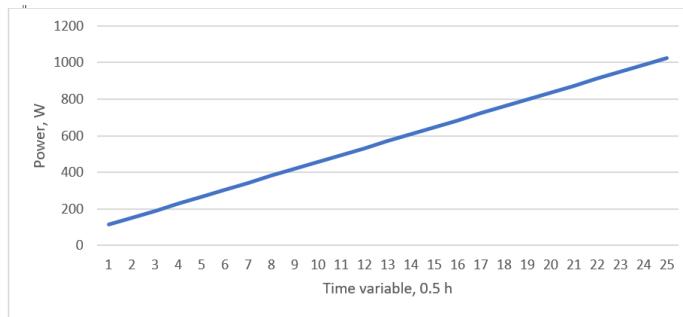

Fig. 3. Time chart throughout the year

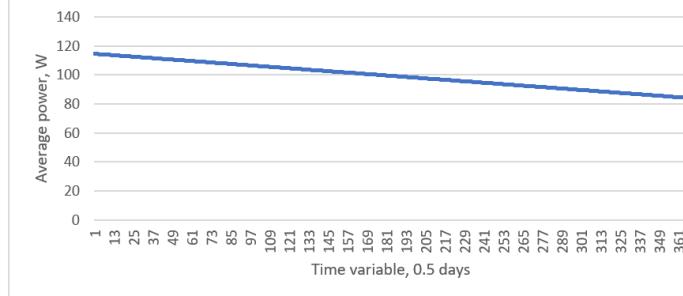

Fig. 4. Diagram by day throughout the year

Three-dimensional modeling of the modified system clearly shows the difference between the energy directed from the Sun and, with a known efficiency of the system, the possibility of generating indicators of actually generated energy. So, in the case of Figure 5, a simulated diagram is shown for the resulting function (6), taking into account all boundary conditions, which clearly shows the received capacities.

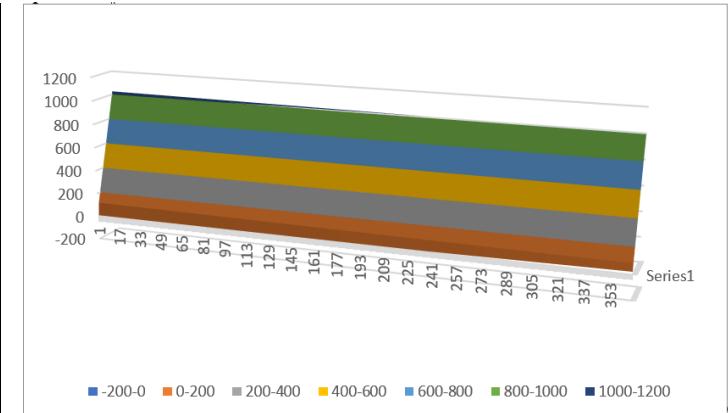

Fig. 5. Three-dimensional diagram of energy production

When considering in detail the efficiency of a solar battery, taking into account the use of crystalline or amorphous silicon, it is appropriate in the first case to take into account the laboratory efficiency of 56.4% and the empirically determined case of 24.6% in the case of crystalline silicon and 9.6% in the case of amorphous silicon. And since, based on the definition of efficiency, the ratio between the received and generated energy is represented, it is appropriate to create a graph of the generated power (Fig. 6).

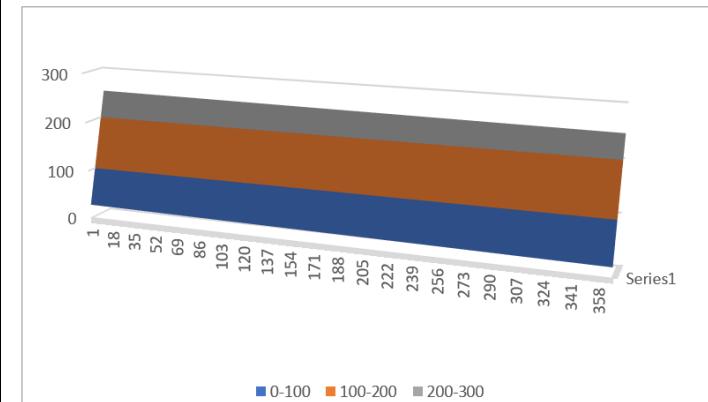

Fig. 6. Three-dimensional diagram of energy generation

Due to this, it is clearly possible to see the obtained simulation results on the territory of the Republic of Uzbekistan (41 meridians).

## ACKNOWLEDGMENTS

The authors are grateful to the researchers of the Ferghana Polytechnic Institute, namely Abdurakhmonov S. M., Ergashev S. F. and the researchers of Ferghana State University, namely

Karimov B. H., Karimov Sh. T. and colleagues from the Research Institute of FPM at NU for their cooperation.

## CONCLUSION

As a conclusion, it can be clearly noted that an organized study can later become a private model close to the analytical one. Or in the form of a discrete model, striving for the degree of analyticity of a physical and mathematical model for predicting the efficiency and energy indicators of solar activity in the specified coordinates.
