Session #8	22.01.2025 10:00-11:00 CET
Monitoring Open Science at university level for research assessment	***Rita Morais, Biljana Kosanović, Ana Đorđević, Nicolas Fressengeas***
	EUA, University of Belgrade, University of Lorraine

1. Updates from the community:

- In Finland, the Open Science monitoring has also been conducted on a national level since 2015. Link to the 2024 monitoring info: https://avointiede.fi/en/policies-materials/monitoring

2. Presentation + Collaborative notes from discussion:

- CoARA is not against the use of metrics but the inappropriate use of them "The Steering Board wrote something about this here: https://blogs.lse.ac.uk/impactofsocialsciences/2024/09/04/the-role-of-scientometrics-in-the-pursuit-of-responsible-research-assessment/ " The key is the level at which they are used
- National Open Science Policy are presented by Biljana, highlighting that the Ministry gave the mandate to Institutions to improve the research activities and track them.
- Ana, who is working at the University of Belgrade, shows how GraspOS services are used for research assessment, and in particular the role of the department repository called "Cherry". The green Open Access route is the one recommended for researchers, which helps them to track research activities.
- Nicolas highlights the issue of how open research increases the workload of researchers, this is usually not considered.

3. Links & Resources:

- Nicolas Fressengeas's slides : https://doi.org/10.5281/zenodo.14713171
