

University. This was done on the recommendation of the Mayor of the City, the Director of the Department of Public Safety, the Dean and Faculty of the Medical College and the President of the University. This step was taken in recognition of the need of more adequate training for women preparing to meet present day demands made upon the nursing profession, and in recognition of their obligation as departments of the city government to co-öperate, to make the highest use of the functions of the hospital and of the university in the interest of the health and education of the community which they serve. In addition to the professional diploma course, there is offered a five year combination course leading to the degree of Bachelor of Science and the diploma of a graduate nurse. The professional course of study has been re-organized to avoid the subordination of the study of the scientific basis and principles of nursing, to the material needs of the hospital. This plan liberates the pupil nurse from all ward duties for two semesters; one in the first and one in the second year, for full academic work. To this end, each year has been divided into three terms. A special course in Public Health Nursing is to be offered to graduate nurses. It will require two full semesters, eight months, to complete this course. The plan includes field work in the various public health nursing centers in Cincinnati.
