

Repository Note

ZSA/IMB Programme Packet

Lawrence Ip

June 17th, 2026

This repository contains the ZSA/IMB programme papers as a preprint research packet. The papers should be read together with the accompanying Reader Orientation document, which provides the appropriate entry point into the programme architecture.

The repository contains, among other programme materials, the boundary-selection paper, the relative IMB bridge paper, the unit-resolved operation supplement, and the Reader Orientation paper. These materials are deposited together because they form a coordinated admissibility architecture rather than a set of unrelated manuscripts.

The repository DOI resolves to the programme repository containing the cited ZSA/IMB papers:

<https://doi.org/10.5281/zenodo.20510562>.

Where individual papers cite this DOI, the citation should be read as citation to the deposited programme packet, not as a claim that each manuscript has a distinct DOI.

For conceptual orientation, readers should begin with the Reader Orientation paper. For technical development, they should then proceed to the main ZSA manuscript, the relative IMB Bridge paper, and the Unit-Resolved Operation supplement.
