

moments, tables of the areas, ordinates and third and fourth differential coefficients of the normal curve, a table of $\psi(x)$ for Type B and a discussion of the dissection of a frequency distribution into components in which some approximate results are given and the suggestion of shortening the solution of the fundamental nonic by means of graphical work is made.

We have put forward the above criticisms to show the practical difficulties we have met in using the suggested methods; though these difficulties seem very important to us they do not blind us to the energy and ingenuity expended on the papers.

WILHELM FLIESS. *Der Ablauf des Lebens. Grundlegung zur exakten Biologie.* Leipzig, 1906, pp. 584 + viii.

As this is hardly the type of statistical work that will appeal to our readers it is unnecessary to criticise it.

W. P. E.

Theoretical.

DALY, R. A. Machine-made Line Drawings for the Illustration of Scientific Papers. Science, N. S., Vol. XXII, pp. 91—93. 1905.

Use of Hammond typewriter in making and lettering line diagrams in statistical and other work.

DANDENO, J. B. The Parachute Effect of Thistle-Down. Science, N. S., Vol. XXII, pp. 568—572. 1905.

An attempt to determine quantitatively the weight and surface area of the different parts of the down of the Canada thistle (*Carduus arvensis*), with special reference to the mechanics of seed dispersal.

DAVENPORT, C. B. Evolution without Mutation. Journ. exper. Zool. Vol. II, pp. 137—143. 1905.

—. The Origin of Black Sheep in the Flock. Science, N. S., Vol. XXII, pp. 674 & 675. 1905.

Using the data provided in Dr Alex. Graham Bell's "Sheep Catalogue" the author comes to the conclusion that "black wool colour in sheep behaves like a Mendelian recessive characteristic."

- DONCASTER, L. On the Colour-Variation of the Beetle *Gonioctena variabilis*. Proc. Zool. Soc. London, 1905, Vol. II, pp. 528—538. (Published, 1906.)
Notes sexual dimorphism in respect to coloration; some evidence of assortative mating; seasonal polymorphism; protective coloration. Confirms Bateson's earlier work on same form.
- . On the Inheritance of Tortoiseshell and Related Colours in *Cata*. Proc. Camb. Phil. Soc. Vol. XIII, pp. 35—38. 1904.
Discusses on Mendelian basis, the origin and inheritance of the "tortoiseshell" coat in *cata*.
- . On the Inheritance of Coat Colour in *Rata*. Proc. Camb. Phil. Soc. Vol. XIII, pp. 216—228, 1905.
Gives records and Mendelian interpretation of a series of rat-breeding experiments.
- FOURNIER, E. Hérédosyphilis de seconde génération. Bull. de l'Acad. Med. Paris, T. LXIX, No. 26. 1905.
Discussion of 116 cases of the inheritance of syphilis through two generations after that in which it was acquired.
- HALSTED, G. B. Biology and Mathematics. Science, N. S., Vol. XXII, pp. 161—167. 1905.
Generalities.
- HARPER, E. H. Studies in the Inheritance of Colour in Percheron Horses. Biol. Bull. Vol. IX, pp. 265—280. 1905.
Deals with problem of prepotency on the basis of Percheron stud-book records. Finds that the longest established colour (grey) is prepotent over black, and that the dam is prepotent over the sire in the ratio of about 5 to 4.
- HEYMAN, G. & WIERSMA, E. Beiträge zur speziellen Psychologie auf Grund einer Massenuntersuchung. Zeitschrift für Psychologie, Bd. XLII, 1906, pp. 1—127, and pp. 258—301.
Contains a great mass of material for the inheritance of psychical characters. The statistical treatment is very defective. It is now being reduced by biometric methods, but the value of the observations has yet to be settled.

- LOSSEN, H. Die Bluterfamilie Mampel in Kirchheim bei Heidelberg. Deutsche Zeitschr. f. Chirurgie, Bd. LXXVI, No. 1. 1905.
Inheritance of haemophilia.
- LUTZ, F. E. Assortative Mating in Man. Science, N. S., Vol. XXII, pp. 249 & 250. 1905.
Finds a correlation of .764 between the age of husband and wife at marriage. "If this be compared with that of stature (.280), span (.199), forearm (.198) or longevity (.223), it will make it possible to appreciate more clearly the precise extent of the unconscious assortative mating." Data from 2500 marriage records in Chicago license office records.
- MCCRACKEN, ISABEL. A Study of the Inheritance of Dichromatism in *Lina lapponica*. Journ. exper. Zool. Vol. II, pp. 117—136, 1 pl., 3 figg. 1905.

MORGAN, T. H. The Assumed Purity of the Germ Cells in Mendelian Results. *Science, N. S.*, Vol. xxii, pp. 877—879. 1905.

An attempt to interpret certain of Cuénot's recent results on mice. Questions "the assumption of the so-called purity of the germ cells, by means of which modern writers are explaining the Mendelian results."

MUMFORD, F. B. Influence of Size of Parent on Birth-weight. *Amer. Breeders' Assoc. Proc.* Vol. I, pp. 73—76. 1905.

Abstract of the results of a quantitative investigation on sheep to determine the factors which influence the size and weight of the young at birth.

PEARL, R. A Note on the Calculation of Certain Probable Errors. *Science, N. S.*, Vol. xxii, pp. 802 & 803. 1905.

Notes a simplification in the calculation of the probable errors of the analytical constants of the normal curve.

ROBINSON, B. Length of the Enteron (Small Intestine). *Medical Record*, Aug. 12, 1905.

Reports the results of autopsy measurements of the length of the small intestine in 450 males and 150 females. Finds great variation. Mean length 4 feet greater in ♂ than in ♀.

ROSS, R. The Logical Basis of the Sanitary Policy of Mosquito Reduction. *Science, N. S.*, Vol. xxii, pp. 690—699. 1905.

Discusses the problem of the local geographical distribution of Mosquitos from the standpoint of the mathematical theory of probability.

SPILLMANN, W. J. Mendel's Law in Relation to Animal Breeding. *Amer. Breeders' Assoc. Proc.* Vol. I, pp. 171—177. 1905.

Discusses the Mendelian inheritance of horned and polled condition in cattle.

SPILLMANN, W. G. A Mendelian Character in Cattle. *Science, N. S.*, Vol. xxiii, pp. 549—551. 1906.

The author presents data regarding the progeny got by polled Hereford bulls crossed with polled and horned cows. Concludes that it is "highly probable that the polled character is a dominant Mendelian unit character."

THORNDIKE, E. L. An Empirical Study of College Entrance Examinations. *Science, N. S.*, Vol. xxiii, pp. 839—845. 1906.

A study of the correlation between entrance examination marks, and the marks obtained by the same students in the later college work. The correlations are generally low.

WENTWORTH, A. H. A Study of the Metabolism of Atrophic Infants and Children. *Journ. Amer. Med. Assoc.* Vol. xlv, pp. 771—779. 1905.

Gives the weight in grams of an infant on each day for a period of three and a half months.

WILSON, E. B. Mendelian Inheritance and the Purity of the Gametes. *Science, N. S.*, Vol. xxiii, pp. 112 & 113. 1906.

A critical discussion of Morgan's (1905) paper.

WISSLER, C. The Spearman Correlation Formula. *Science, N. S.*, Vol. xxii, pp. 309—311. 1905.

A destructive criticism of Spearman's method of determining correlations. See *Biometrika*, Vol. III, p. 160.

WOLTERSTORFF, W. Triton blasii und die Mendel'schen Regeln. *C.R. 6^{me} Congr. internat. Zool. Berne*, pp. 255—258. 1905.

YERKES, R. M. & URBAN, F. M. Sex Differences in the Estimation of Time. *Science, N. S.*, Vol. xxii, pp. 843 & 844. 1905.

A preliminary report. The authors find that females tend to overestimate time intervals. Females are markedly more variable in time judgments than males.
