

# Identification of organisations in bibliometric data

Martijn Visser and Clara Calero

**RISIS COURSE – Universities, research organizations and rankings**

28 June 2017

CWTS, Leiden

**Universiteit  
Leiden**

# Research organisations

- Higher education institutions
- Research organisations
- Hospitals
- Companies
- Governmental departments
- ....

# Hierarchical Structures

Collegiate Universities / Federal Universities

Universities

Campuses

# Public Research Organisations: definition

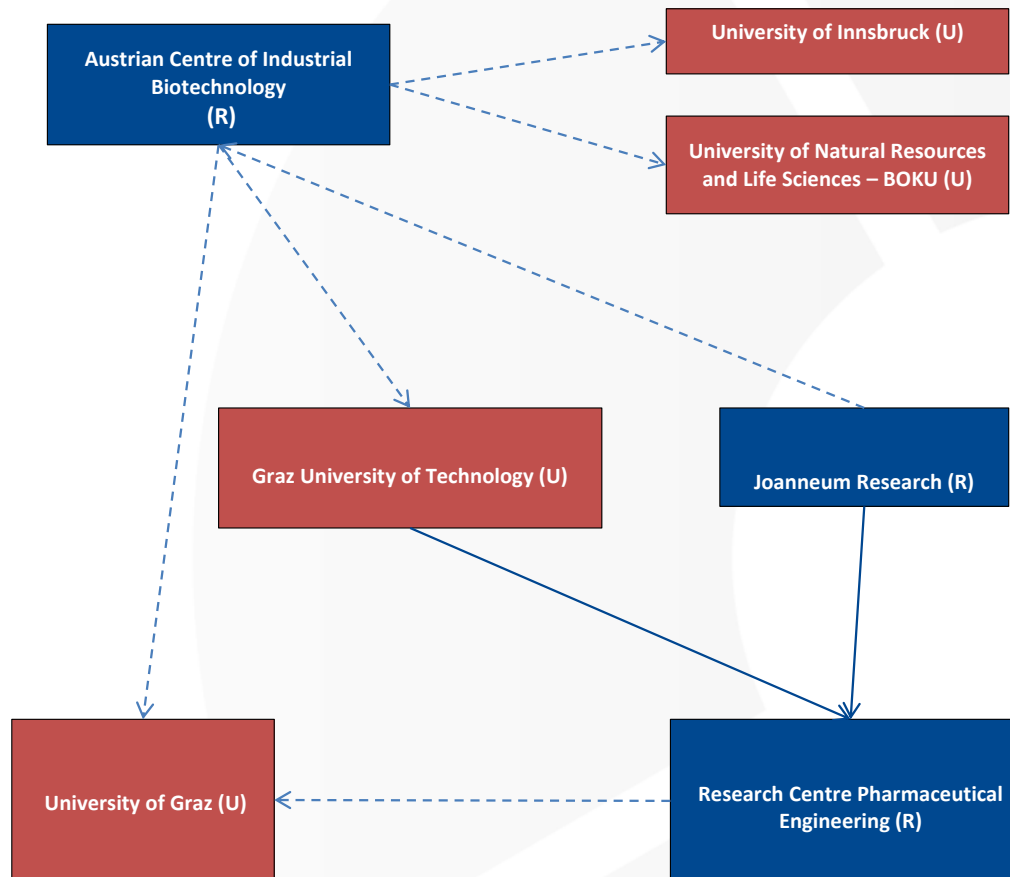

- Performs research activities as *a core activity*
- Is *independent* in the conduct of research
- Its research activities are *not for-profit* oriented

# Public Research Organisations: classification

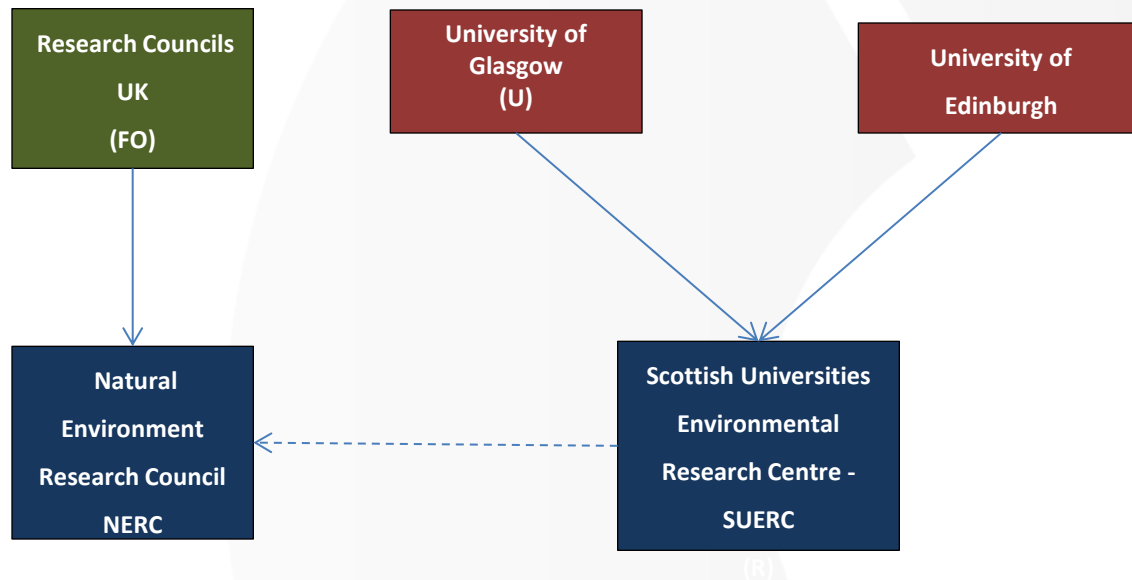

- Mission Oriented Centres (MOC) – organizations that carry out research in specific topics, owned or run by government department or ministries, also to support to policy making (included National Agencies and Federal Offices);
- Independent Research Institutes (IRI) – Centres carrying out basic and applied research focused on issues, at the boundaries between public and private sector;
- Public Research Centres and Councils (PRC) – Overarching institutions of considerable size performing research in several fields (ex. CNR, CNRS, Academies of Sciences);
- Research Technologies Organizations (RTO) – Industrial research institutes, semi-public or private not for profit, for the development and transfer of S&T to the private sector and society (ex. TNO, SINTEF).

	number institutes	annual turnover	funding	indus. ties	Univ. ties	Class OECD	Freq. pub.
Max Planck Society	82	1.3 b. €	40% federal 40% länder 20% third party	?	staff overlap	PRC*	>123,000
Fraunhofer Society	80 +	1.65 b. €	85% contract 15% government	?	?	RTO*	> 13,000
Helmholtz Association	17	3 b. €	63% federal 30% third party 7% länder	?	?	IRI	> 13,000
Leibnitz Association	87, independent!	1.3 b. €	33% federal 33% länder 33% third party	?	no	IRI	> 13,000
Academies of Science	?	?	government	?	staff overlap	PRC*	> 500
Government Institutes	100+ federal 38 länder	?	government	no	?	MOC	?

# Public Research Organisations: an example of relationships

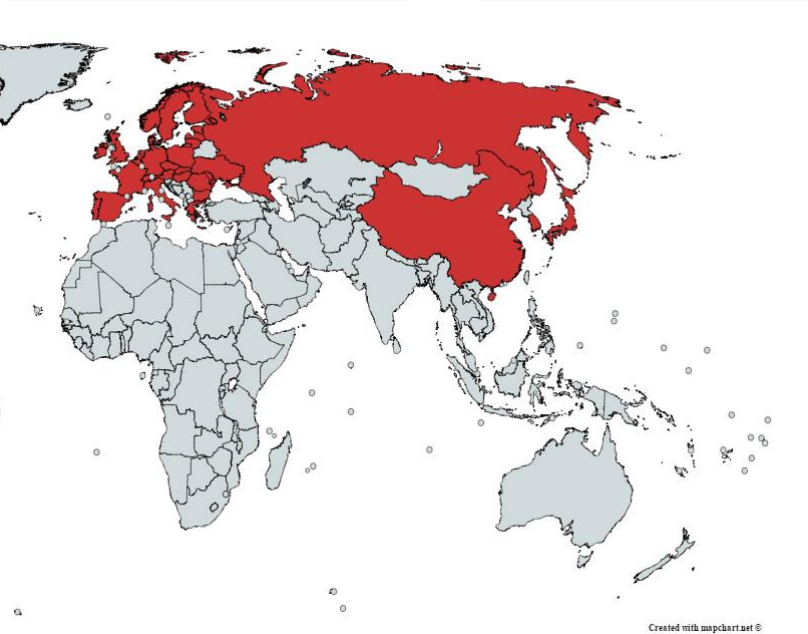

# Public Research Organisations: example

# Organisations

A world map with countries colored in light gray. Countries in red include the United Kingdom, Ireland, France, Germany, Poland, Czech Republic, Slovakia, Austria, Hungary, Switzerland, Italy, Spain, Portugal, Greece, Turkey, Russia, China, and Japan. The map is created with mapchart.net.

Created with mapchart.net

**RISIS**  
Research infrastructure for research  
and innovation policy studies

# Important differences between national research systems

- Institutional relationships between hospitals and medical faculties
- The role of public and private research institutes
- Distinction between higher education institutions

# Research organisations

- Name variations
  - Components (institutes, departments)
  - Mergers, splits, take-overs, split-offs
  - Affiliated institutes

# Example: Aarhus University

8452	AARHUS	AARHUS UNIV
4886	AARHUS	AARHUS UNIV HOSP
4496	AARHUS	UNIV AARHUS
1421	TJELE	DANISH INST AGR SCI
896	AALBORG	AALBORG HOSP
765	ROSKILDE	NATL ENVIRONM RES INST
431	SILKEBORG	NATL ENVIRONM RES INST
316	AARHUS	AARHUS KOMMUNE HOSP
273	AARHUS	AARHUS SCH BUSINESS
257	AALBORG	AARHUS UNIV HOSP
242	RISSKOV	UNIV AARHUS
238	SLAGELSE	DANISH INST AGR SCI
227	AARSLEV	DANISH INST AGR SCI
214	TJELE	RES CTR FOULUM
198	RONDE	NATL ENVIRONM RES INST
159	AARHUS	SKEJBY UNIV HOSP
155	AALBORG	AALBORG UNIV HOSP
130	RISSKOV	AARHUS UNIV HOSP
113	AARHUS	SKEJBY HOSP

- Ca. 700 different name variations
- More than half of these name variations just appear once
- Searching for “AARHUS UNIV” or “UNIV AARHUS” captures ca. 70% of all papers

# Important differences between WoS and Scopus

- Scopus performs less preprocessing of data extracted from publications
- Scopus provides an 'as-is' representation of author affiliations
- Scopus does not distinguish between reprint address and affiliation

## Scopus surplus

# Number of References and Citations

(articles, reviews and conference papers)

	Scopus	Scopus Surplus	%
Nr References	25.7	16.3	63%
Nr Citations (MCS)	14.7	2.1	13%

# Assignments object identification

# Counting methods

# Counting methods

- Full (or whole) counting:
  - A publication is fully assigned to each co-author
  - Example: A publication co-authored by three universities is assigned to each university with a weight of 1
- Fractional counting:
  - A publication is fractionally assigned to each co-author
  - Example: A publication co-authored by three authors from three different universities is assigned to each university with a weight of  $1/3 = 0.33$

# Field normalization at the publication level

- By definition, the mean normalized citation score of all publications in a field equals 1, i.e.,  $MNCS = 1$
- Also, provided that an appropriate approach for handling ties is used, the proportion of all publications in a field that belong to the top 10% equals 10%, i.e.,  $PP_{top\ 10\%} = 10\%$

# Field normalization at the country/institution level

- Consider a field and take all countries (or institutions) active in the field
- Assign each country a weight equal to its number of publications in the field
- The weighted average of countries' MNCS values should be 1
- The weighted average of countries'  $PP_{\text{top 10\%}}$  values should be 10%

# Example: Full counting

	Authors	Citations	Norm. citations
Publication 1	Country A	3	0.6
Publication 2	Country B	4	0.8
Publication 3	Countries A and B	8	1.6

- MNCS country A:  $(0.6 + 1.6) / 2 = 1.1$
- MNCS country B:  $(0.8 + 1.6) / 2 = 1.2$
- Average MNCS value:  $(1.1 + 1.2) / 2 = 1.15$
- All countries perform above the world average!

# Example: Fractional counting

	Authors	Citations	Norm. citations
Publication 1	Country A	3	0.6
Publication 2	Country B	4	0.8
Publication 3	Countries A and B	8	1.6

- MNCS country A:  $(1 \times 0.6 + 0.5 \times 1.6) / (1 + 0.5) = 0.93$
- MNCS country B:  $(1 \times 0.8 + 0.5 \times 1.6) / (1 + 0.5) = 1.07$
- Average MNCS value:  $(0.93 + 1.07) / 2 = 1$

# Assignments counting methods

# Intensity of collaboration

# Citation advantage of collaborative publications

# Full counting bonus per field of science

# Full counting bonus time trend

# Fractional counting in the CWTS Leiden Ranking

- Leiden Ranking uses author-based affiliation fractional counting

*BMJ Open* 2014;4:e004468 doi:10.1136/bmjopen-2013-004468

## Research methods

### Mapping patient safety: a large-scale literature review using bibliometric visualisation techniques

S P Rodrigues<sup>1</sup>, N J van Eck<sup>2</sup>, L Waltman<sup>2</sup>, F W Jansen<sup>1,3</sup>

#### ☐ Author Affiliations

<sup>1</sup>Department of Gynecology, Leiden University Medical Center, Leiden, The Netherlands

<sup>2</sup>Centre for Science and Technology Studies, Leiden University, Leiden, The Netherlands

<sup>3</sup>Department of BioMechanical Engineering, Delft University of Technology, Delft, The Netherlands

- The above publication is assigned to Leiden Univ. with a weight of 7/8 and to Delft Univ. of Technology with a weight of 1/8

# Full counting vs. fractional counting at the university level

# Full counting is biased in favor of biomedical research

# Full counting vs. fractional counting at the country level

# Summary

- Collaborative publications are cited more frequently than non-collaborative publications
- Full counting therefore yields higher citation scores than fractional counting
- Full counting is biased in favor of certain fields of science, in particular biomedicine
- Use fractional counting in analyses at the level of institutions or countries
