Using RISE for Service Evaluation - Experiences, Findings and Differences

Dr. Anneke Meyer

iD **https://orcid.org/0000-0003-3631-3546**

Rationale & Overview

1. RDM-Services at Leibniz University

2. Reasons for the self-evaluation with „Research Infrastructure Self-Evaluation Framework" (RISE)

3. Experiences & Findings

4. What I Missed

5. "Embedded RDM Service Model"

6. Discussion

1. (Integrated) Research Data Management Services

Research Support Services

Leibniz Information Centre/University Library

IT-Services

Research Data Management Team

2. Why the Self-Assessment in 2018?

- 2014-2018: we achieved our initial objectives but conditions evolve

- We needed to
    - Update road map documents
    - Identify gaps in support provision
    - Meet higher demands on the RDM Services

Using RISE

Advantages

- Saving time
- Maintaining to a standardized procedure
- Taking part in international discussions

Disadvantage

- It is not tailor-made for German specifics

3. Experiences

- Acceptance through DCC's high reputation

- RISE-questionnaire provides helpful guidance throughout the process

- Challenge: achieving consensus

  - Are we level 1- 2- 3? Do we want to reach the next level? What would be necessary?

Findings

- Excellent result: In most areas, we are approaching level two.

- Our strengths: Advisory services

- Room for improvement:

- Gaining expertise in legal advice for RDM

- Strengthening RDM in important organisational workflows, for example

  - Reviewing (Collaborative) Research Proposals

 - doctoral supervision agreements

More Details in the Report

- DOI:
  https://doi.org/10.15488/4205
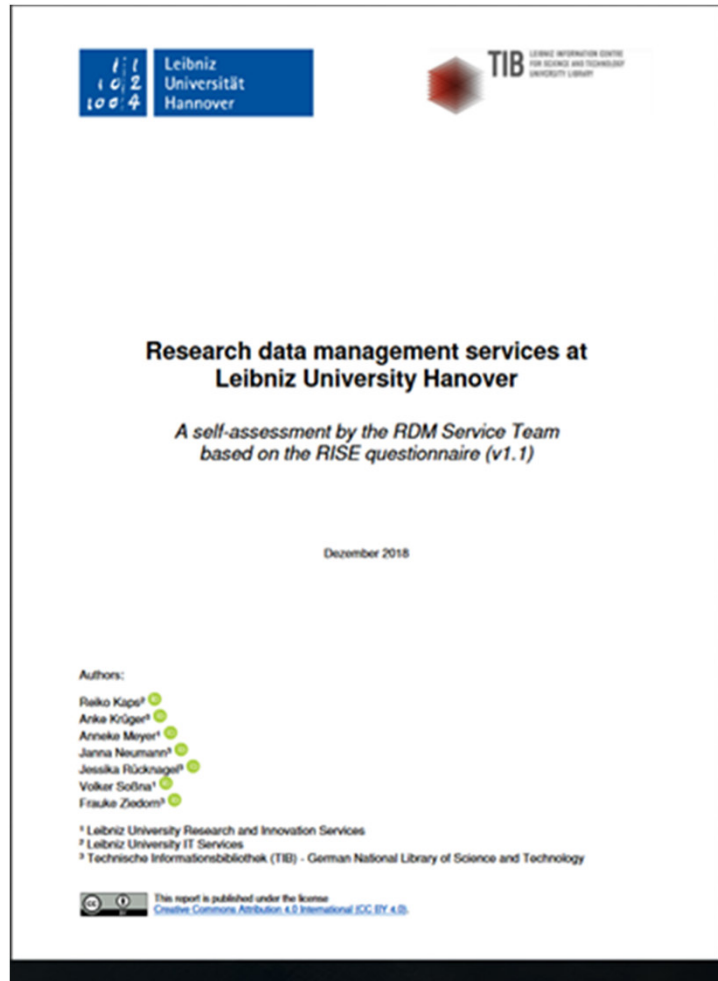

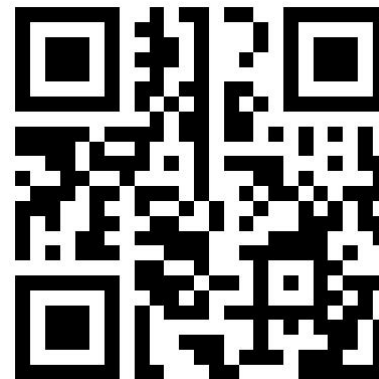

What I Missed

- Assessment of the "organisational embedding" of the Services

  - Who is in charge of the service? (determines the focus!)
  - How is it integrated
    - In already existing key services or key processes
    - In decisions of the Senior Management

Embedded RDM Service Model

RDM policy and strategy → Business plans and sustainability

Data management planning

Discovery

Active data management

Access and publishing

Appraisal and risk assessment

Preservation

Training

Advisory services

Organisational Embedding
