Introduction

The project aims to develop Europe's expertise in using and applying energy-SSH. The platform unites those who 'demand' energy research, because they can use it to develop practical initiatives, with those who 'supply' that research. Each of the Platform Activities creates space for these two groups to meet and collaborate in 'shaping' the European energy agenda. This is supposed to build deep and shared understanding of what is needed and what is possible, as well as stretching their collective ambition.

Among those activities, the Platform has been coordinating 17 multi-stakeholder workshops in partnership with cities across Europe between October 2017 and May 2018. The aim was to gather for each workshop local actors involved in energy policies as well as interest groups, enterprises and local authority representatives. These multi-stakeholder workshops have been moderated using storytelling methods and were based on local issues in order to make them productive for attendees.

The goal was to help the Platform identify obstacles and needs that local stakeholders might have when engaging with energy-related social science and humanities perspectives.

The core of this confidential deliverable is to present the anonymized observations tables of the 17 workshops in alphabetical order. In complying we SHAPE ENERGY's Data Management Plan, we have only been able to include these conversational interaction tables because publishing the rest of our completed participant observation diaries would run the risk of breaching our consent agreements with our workshop participants (e.g. regarding confidentiality).
