

Report from JPCOAR

Community Activities in Japan

Noboru Nakatani,

Tottori University Library, Japan

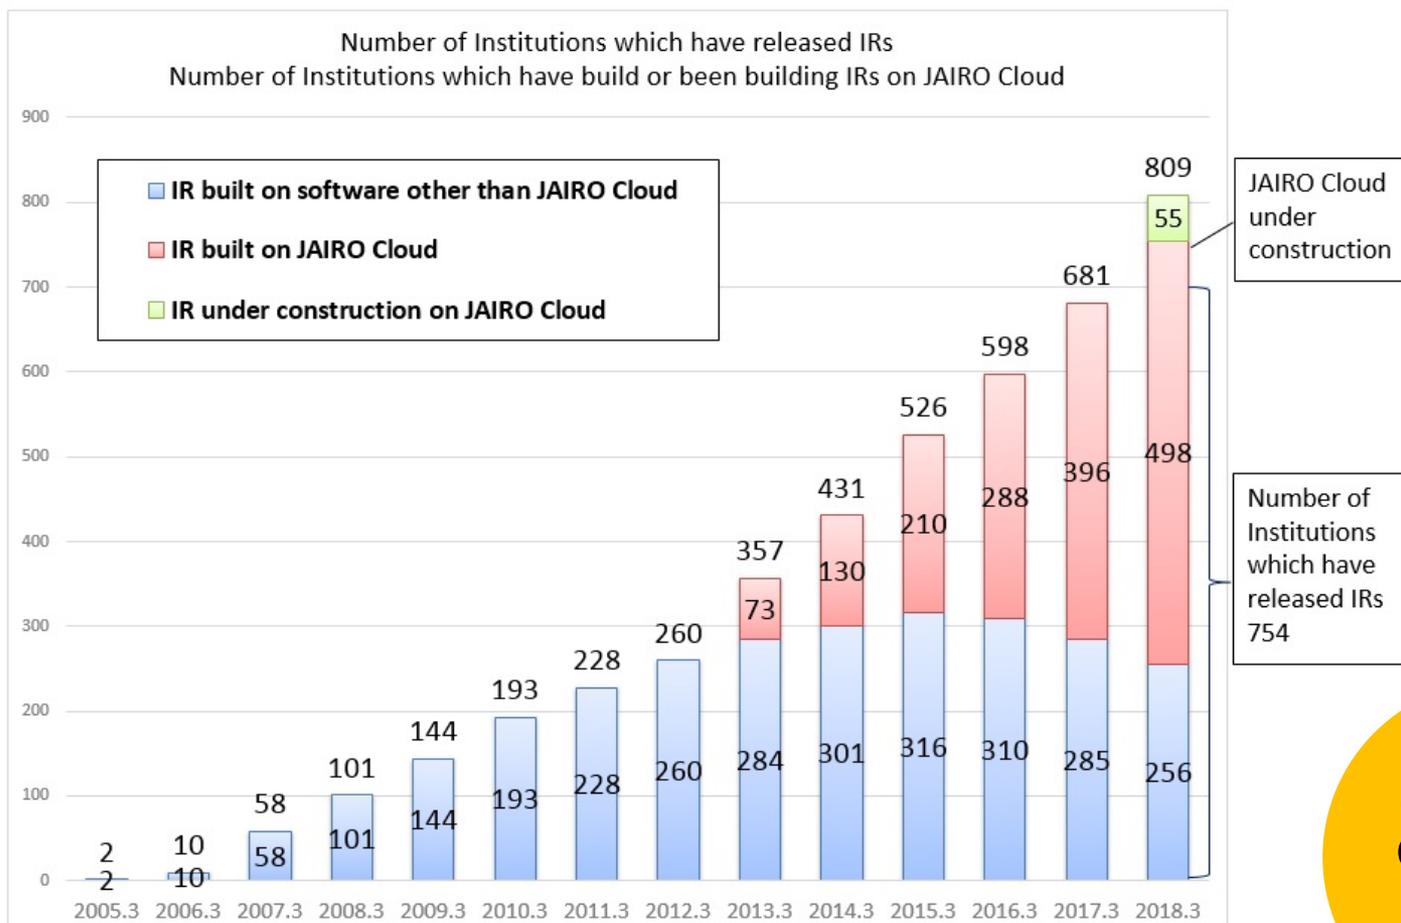

& JPCOAR - Japan Consortium for Open Access Repository

Topics

- Today's Institutional Repositories in Japan
- Focus on community: JPCOAR
- Activity of JPCOAR in 2018
 - Advanced development
 - Training
 - Promotion
 - Planning
- 2019 and later

Today's IRs in Japan

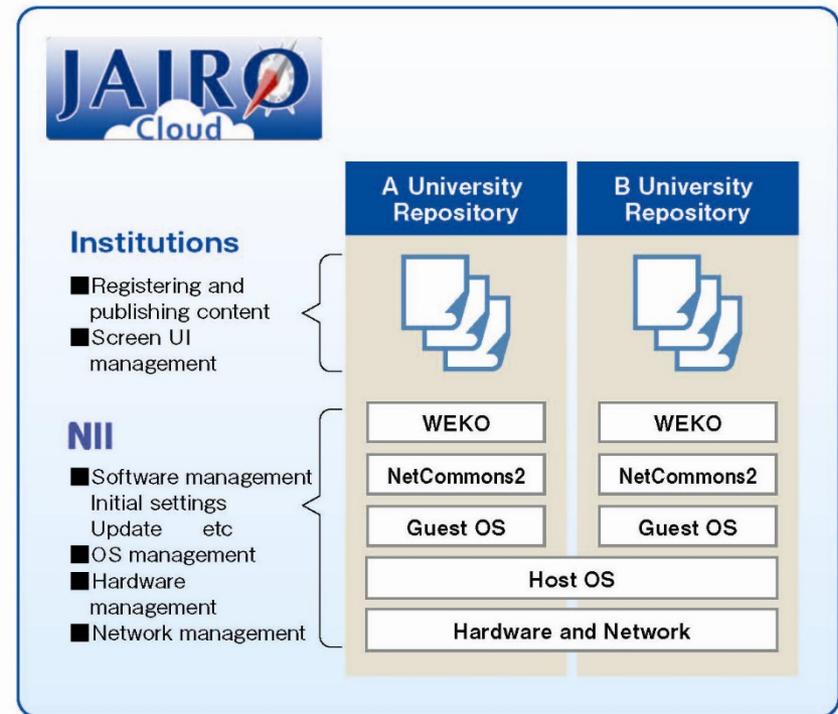

Institutional Repositories in Japan

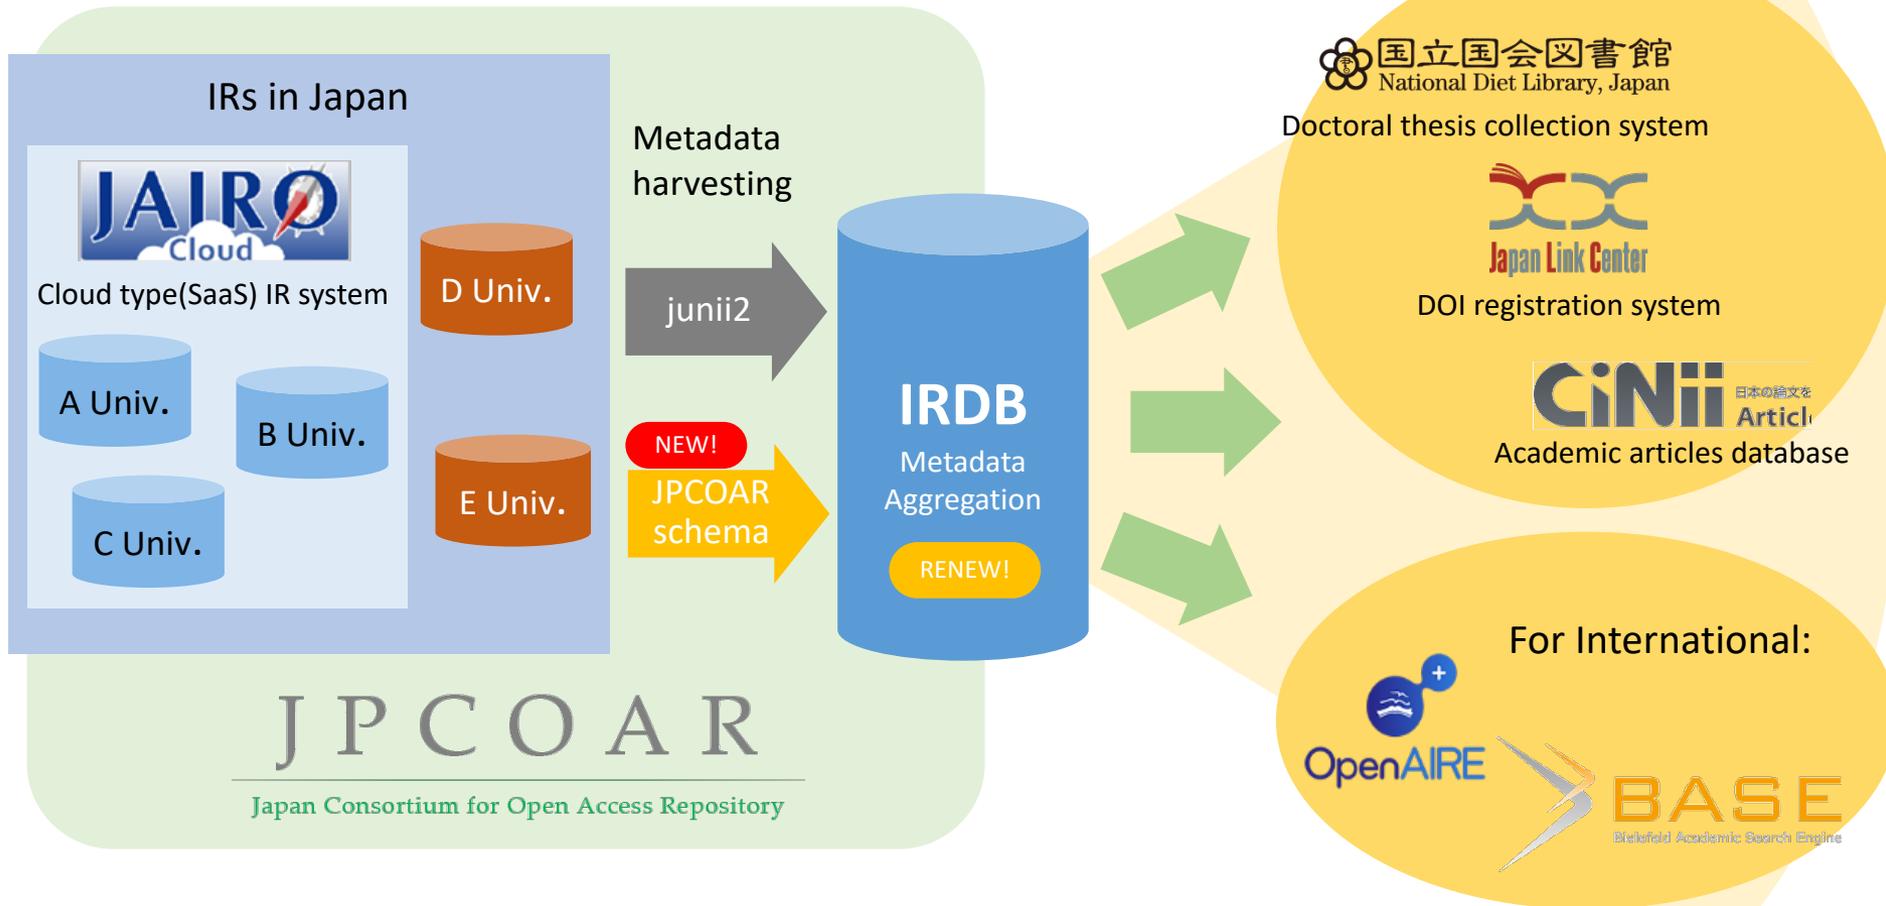

809
 Repositories!

JAIRO Cloud: IR cloud service for Japanese institutions

- developed by the National Institute of Informatics(NII, Japanese NREN)
- make it easy to launch IR in some small / less resources institutions
- adopted 60%↑ repositories

Repository Network

Focus on Community: JPCOAR

JPCOAR

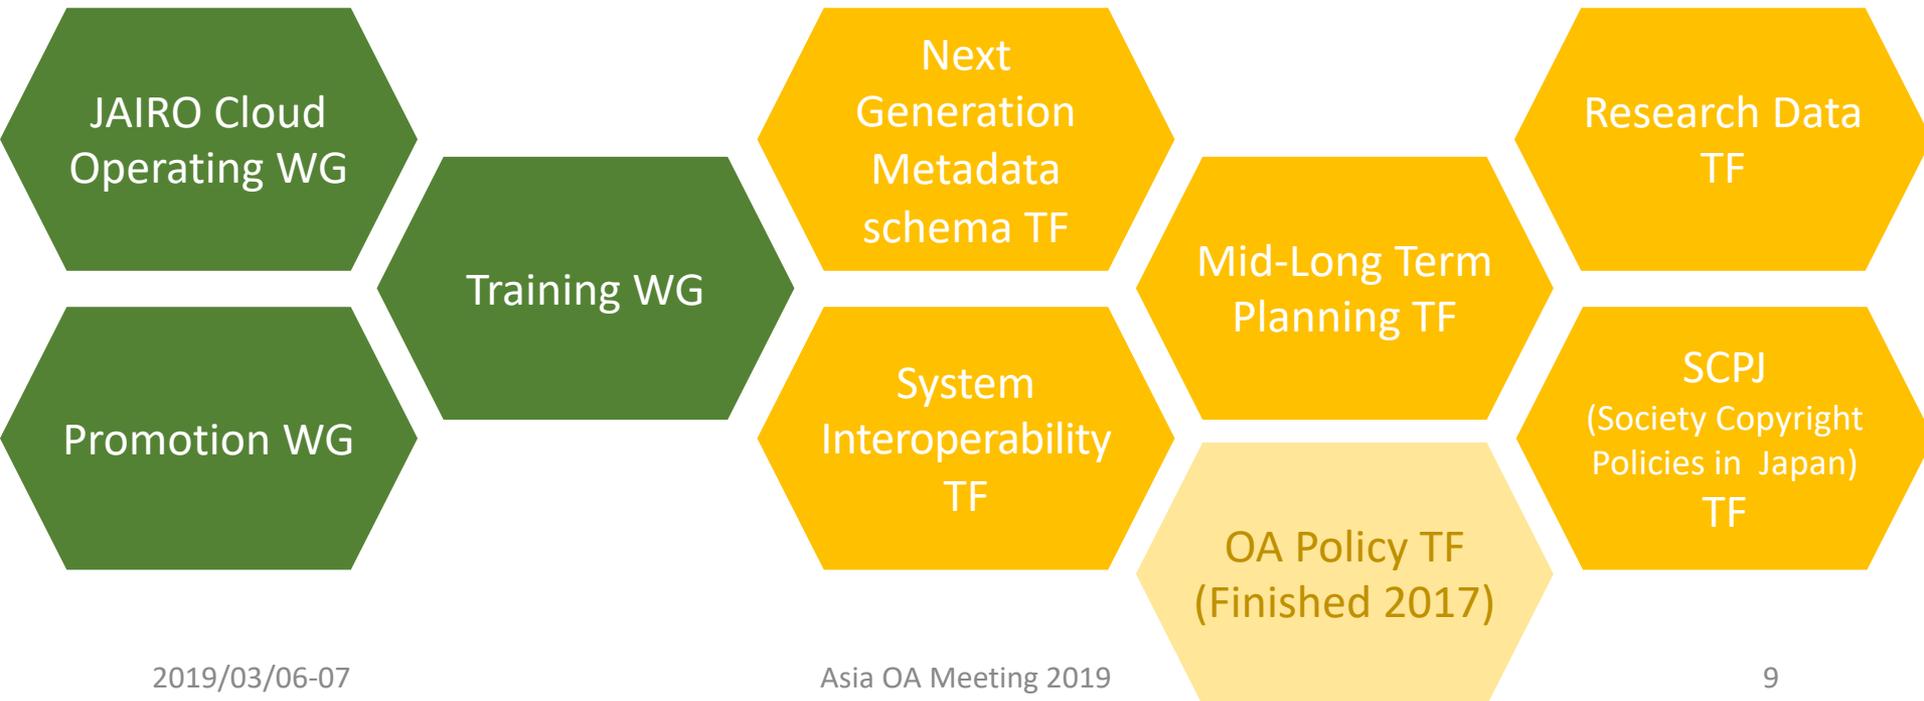

- Japan Consortium for Open Access Repository (2016.7~)
 - A nationwide community in Japan
 - <https://jpcoar.repo.nii.ac.jp/>
- Missions
 1. Accelerate Open Science and Scholarly Communication
 2. Co-operate JAIRO Cloud
 3. Increase and Enrich IR content
 4. Plan and Conduct Training Courses
 5. Collaborate with International Efforts
- **587** member institutions (2019.1)

JPCOAR Working Group & Task Force

- Working Group:
fundamental operation

- Task Force:
advanced development

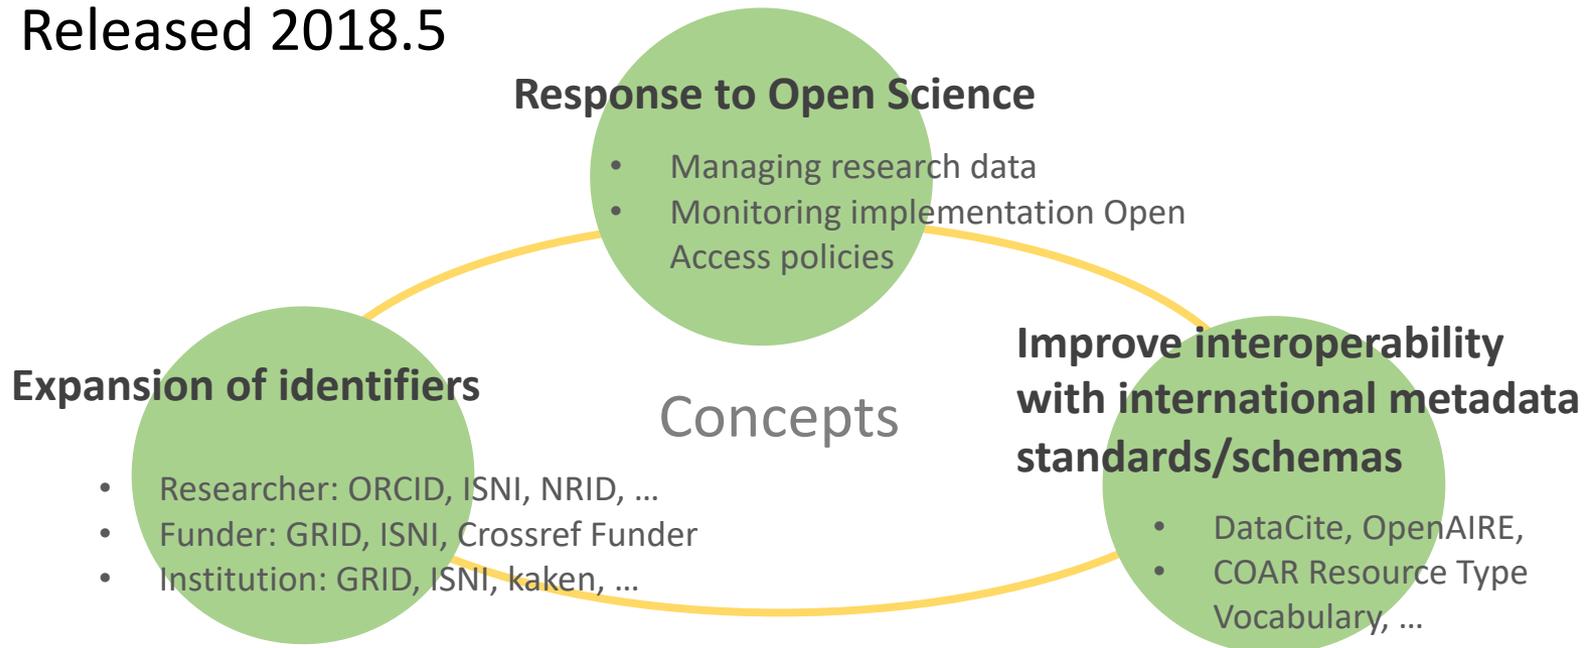

Activity of JPCOAR in 2018

Advanced Development

Metadata Schema: JPCOAR Schema

- A new Japanese metadata schema for the smooth international distribution of scholarly outputs
- Released 2018.5

Metadata Schema: JPCOAR Schema

The current state of doctoral theses published via Institutional Repositories in Japan

Change of publication method of doctoral theses
 The system of granting degrees in Japan is governed by the degree regulations (the Ordinance of the Ministry of Education, Science and Culture No. 3) since 1953. Doctoral degree recipients are required to publish their theses. The degree regulations were amended in March 2013, and the publication method changed from print to the Internet.

Before March 2013 (Print Publication)
 degree recipient → National Diet Library (NDL) → Institutional Library of each degree granting institution

After April 2013 (Internet Publication)
 degree recipient → Institutional Repository(IR) of each degree granting institution → National Diet Library (NDL)

Metadata distribution of doctoral theses

IR → NDL → IR → NDL → IR → NDL → IR → NDL

1. Degree recipients publish their thesis at each IR.
 2. IRDO(national aggregator) harvests metadata.
 3. NDL collects fulltext from IRs based on metadata provided from IRDO.
 *There is also a case to be sent to the NDL web form or paper if there is no IR to the institution.
 *The NDL is a legal deposit library of Japan.
 4. CINI Dissertations is a national database of doctoral theses in Japan, which integrates IRDO and NDL metadata.
 5. Users search CINI Dissertations - Fulltext links available if available. *Various web APIs are supported.

States of doctoral theses published via IRs

The publication rate via IRs is 52% in 2013 and 54% in 2014.
 The number of theses published via IRs has decreased through 2013-2016, the total number of degree recipient is still unknown.
 Reasons, why it can not be published in fulltext, are patent applications, journal submission, copyright etc.
 The number of IRs continue to increase. *All provided JAIRO Cloud(SaaS IR system) since 2012.
 The NDL estimated that the publication rate of doctoral theses is 68.2 percent. This rate is not limited to the publication via IRs.

About JPCOAR

Japan Consortium for Open Access Repository(JPCOAR) is established in 2016. It consists of about 500 institutions(University/Business and Research Institutions).

1. Accessible
 2. Co-operative
 3. Innovative
 4. Plan and Co
 5. International

JPCOAR releases schemas in 2017 to promote use.

The current state of doctoral theses published via Institutional Repositories in Japan: <http://id.nii.ac.jp/1458/00000114/>

COAR Annual Conference 2018

Next Generation Metadata schema TF

JPCOAR SCHEMA

JPCOAR Schema is a new Japanese metadata schema for the smooth international distribution of scholarly outputs instead of jumi2 which is the current standard schema for institutional repositories.

- Addition of new elements for monitoring implementation of Access policies and managing research data
- Expansion of identifiers
 Adoption of major identifiers and regional identifiers for researcher, funder and institution
- Hierarchizing schema architecture for some elements
 For precise describing association between creator name, creator ID, affiliation, etc.
- Focusing on interoperability with established international metadata standards/schemas
 Adoption of many vocabularies from established standards/schemas
 Particularly COAR Resource Type Vocabulary is adopted only a part, and regional vocabularies are left corresponding to Japanese scholarly environment (vocabularies in red)

Metadata Set	Controlled Vocabularies	Metadata Set	Controlled Vocabularies
Article	conference paper data paper departmental bulletin paper editorial journal article periodical review article	conference poster	working paper
Book	article book book part	Lecture Patent Report	
Cartographic	cartographic material Material map		
Conference	conference object Object conference proceedings		

We are going to consider adoption of new COAR Schema on the web site of the Institutional Repositories DataBase (IRDB).

The Guidelines for JPCOAR Schema on the web site is <https://www.coar-repositories.org/community/events/archive/coar-annual-meeting-2018/programme/>

JPCOAR Schema: <https://www.coar-repositories.org/community/events/archive/coar-annual-meeting-2018/programme/>

Training

研究データのライフサイクルと本教材との関係

【研究データのライフサイクル】

研究前 (Before Research) → 生成 (2) → 加工 (3) → 分析 (4) → 保存 (5) → 公開 (6) → 再利用 (6) → 研究後 (After Research)

【本教材の構成】

- 1章 序論
- 2章 サービス設計
- 3章 研究前の支援
- 4章 研究中の支援
- 5章 研究後の支援
- 6章 日常的な支援

1.2.1 オープンサイエンスの潮流

オープンサイエンス = オープンアクセス + オープンデータ

オープンサイエンスの推進体制の構築

1.4.1 研究データ管理 (RDM: Research Data Management.) とは

研究データ管理 = ある研究プロジェクトにおいて使用された、あるいは生成された情報を、どのように組織化、構造化、保管、管理していくのか、を指す言葉

1.3.1 研究データとは

研究データ = 研究の過程、あるいは研究の結果として収集・生成される情報 (※必要に応じて各機関の定義を確認)

1.5.1 研究データ管理サービスとは

研究データ管理サービス = 研究者により生み出される研究データを適切に管理できるように、研究を支援するスタッフが協働して必要なサービスを提供すること

• The UK Data Service, Research data lifecycle <http://www.data-archive.ac.uk/create-manage/life-cycle>
 • Marlette van Selm, RDM Support - basic training course for information specialists <http://dx.doi.org/10.6084/m9.figshare.1285313> を元に加工

Planning

Next 3y Vision & Plan (draft)

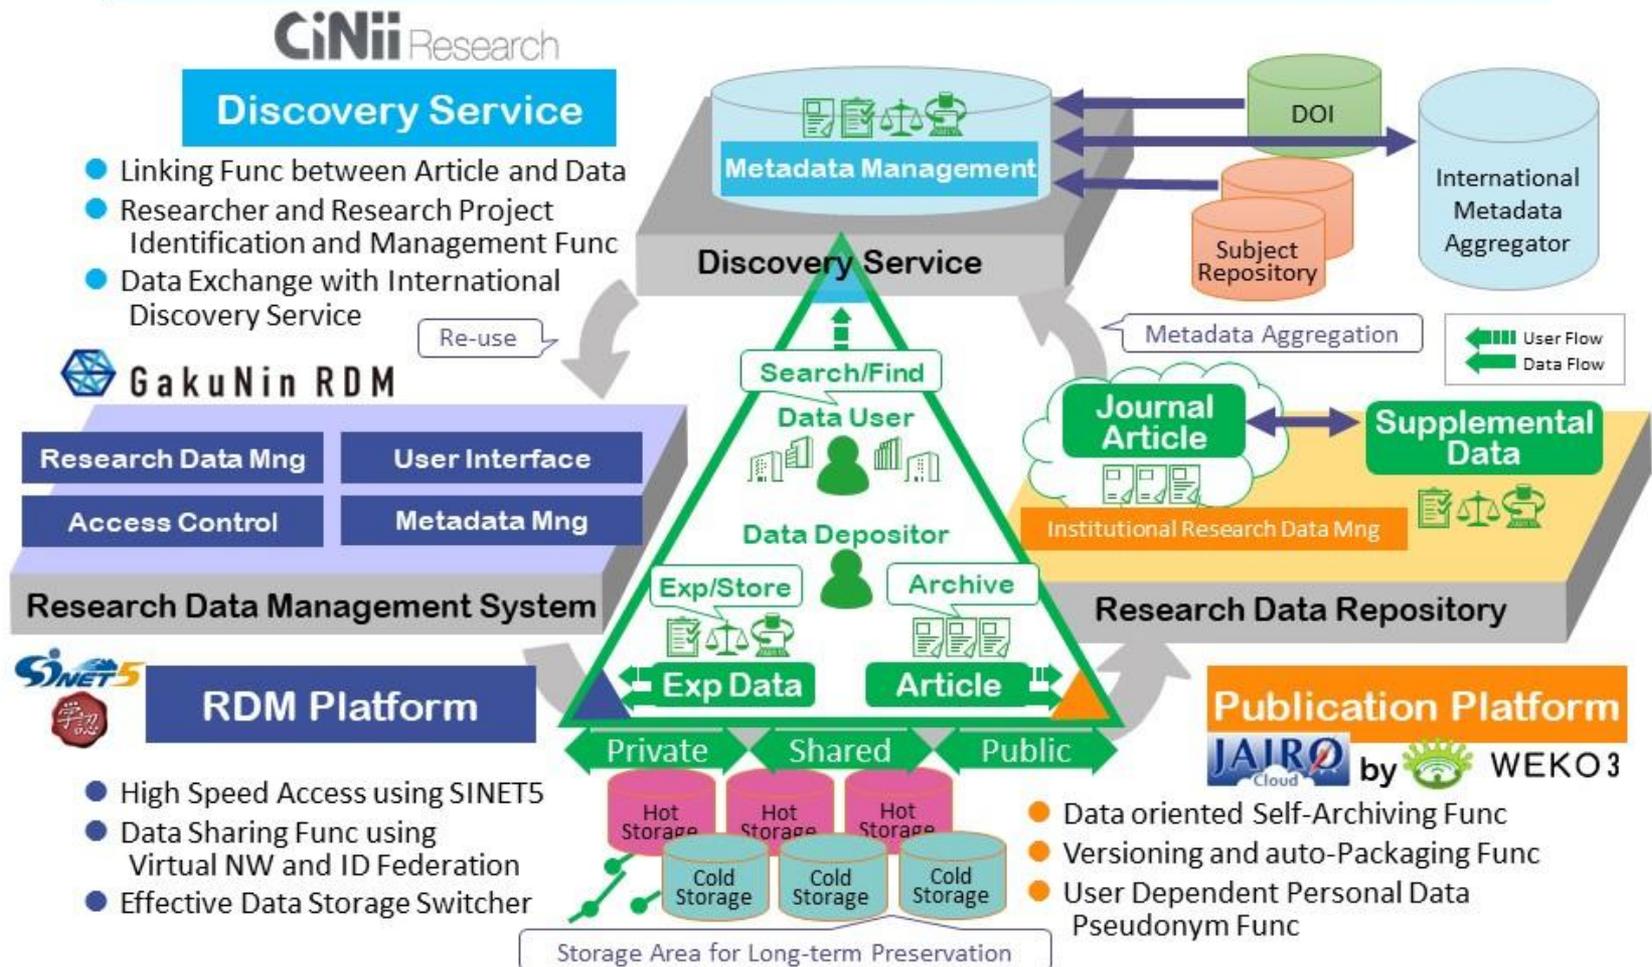

- Vision (pickup)
 - Further promotion for Open Access
 - Corresponding to diversification of IR contents / Improving value of contents
 - Human resource development
- Plan for achieve
 1. Enhance the supporting system and establish the research data distribution foundation to promote Open Science
 2. Take control of infrastructure promoting Open Science
 3. Strengthen the function as a community supporting open access repositories
 4. Develop human resources those can correspond to promote Open Access and Open Science
 5. Strengthen the foundation for stable management promoting association activities

2019 and later
