Abstract

All genus-group names proposed for the suborder Symphyta (Hymenoptera) through 1990 are listed alphabetically. The author, date, original reference, type species, and taxonomic placement are given for each. A systematic list of Symphyta is presented for placement of genera in the current classification of the suborder.

INTRODUCTION

The first complete list of world genus-group names of Symphyta and their type species was by Rohwer (1911a). Rohwer's work was important because he designated type species for many of the older genera, a practice which was not followed by many early authors. The number of genus-group names has more than doubled since Rohwer's publication. There has been no complete listing since that time, and descriptions since 1911 are scattered in the world literature; therefore, we here present an up-to-date list with their taxonomic placement. We hope this will alleviate the searching and work of future researchers. Even though we have attempted to list all the names proposed, there is the possibility that some were overlooked. We would appreciate being notified of any omissions.

This paper is in two sections. The first is an alphabetical list of generic names of Symphyta with their references, type species, and taxonomic placement, and the second is a systematic list of Symphyta. The International Code of Zoological Nomenclature, 3rd Edition, 1985, is followed.

ACKNOWLEDGMENTS

A text database management system "SIGMA" developed by Arikawa et al.(1988) was used for management of the data. Thanks are extended to officials of the Computer Center, Kyushu University, for allowing use of their computers, and Assoc. Prof. O. Tadauchi, who taught the senior author how to use the database. Special thanks are extended to Prof. K. Morimoto for allowing publication in *Esakia*.

Much of the literature work was done during a visit to the Smithsonian Institution, Washington, D. C., by the senior author in 1988.

We extend our thanks to the following for reviewing the manuscript: Dr. H. R. Wong, Canadian Forestry Service, Edmonton, Alberta, Canada; Dr. H. Goulet, Biosystematics Research Center, Agriculture Canada, Ottawa; Dr. M. A. Solis and Dr. E. E. Grissell, Systematic Entomology Laboratory, U. S. Department of Agriculture, Washington, D. C.

We dedicate this work to Prof. Emer. Y. Hirashima for his continual support and encouragement.

ALPHABETICAL LIST OF GENUS-GROUP NAMES OF SYMPHYTA

This list is complete through 1990. The entries are arranged as follows:

1. Genus name proposed.
2. Author of name.
3. Date and publication title with page(s). Abbreviations are from the World List of Scientific Periodicals (1963).
4. In parenthesis, pertinent information about the genus name, e.g.,
 - a) Preoccupied by, if a homonym.
 - b) Error, if an incorrect subsequent spelling. Even though these have no status in nomenclature, they are cited for reference.
 - c) Justified emendation, if a correction of an incorrect spelling.
 - d) Unjustified emendation, if not justified.
 - e) New name, if established to replace a homonym.
5. The type species of the genus, and kind of designation.
6. Taxonomic placement of the genus. Refer to the systematic list in the next section. If the genus is considered a synonym, the senior synonym will be given preceded by an equal "=" sign.

SYSTEMATIC LIST OF SYMPHYTA

The following list contains the placement of genera in the higher taxa. The author and year of description are given for each generic name. The arrangement is based on the most recent literature available for each group, though the authors' opinions are also apparent. This classification will not be agreeable to everyone but will serve as a guide for the placement of genera. Genera are arranged alphabetically within tribe, subfamily, or family.

Some of the more important references followed are: Rasnitsyn (1969) for superfamilies; Smith's (1978) world catalog of Siricidae, Xiphydriidae, and a number of other smaller families; Benson (1945a) for Pamphiliidae, (1938a) for Orussidae, (1946) for Cephidae, (1938c) for Cimbicidae, and (1945c) for Diprionidae; and Smith (1979a, b) for Tenthredinidae.
