accessible,  
centralised data

# Data Science at The British Museum

## Set up

*Opened 1759 to all 'studious and curious persons'  
1<sup>st</sup> National Public Museum in the World*

## Today

One of the most visited museum in the world  
8 million objects  
2 million years of human history

## Starting point

### Didn't have ...

- No list of data sources
- No data access
- No databases
- No data warehouse

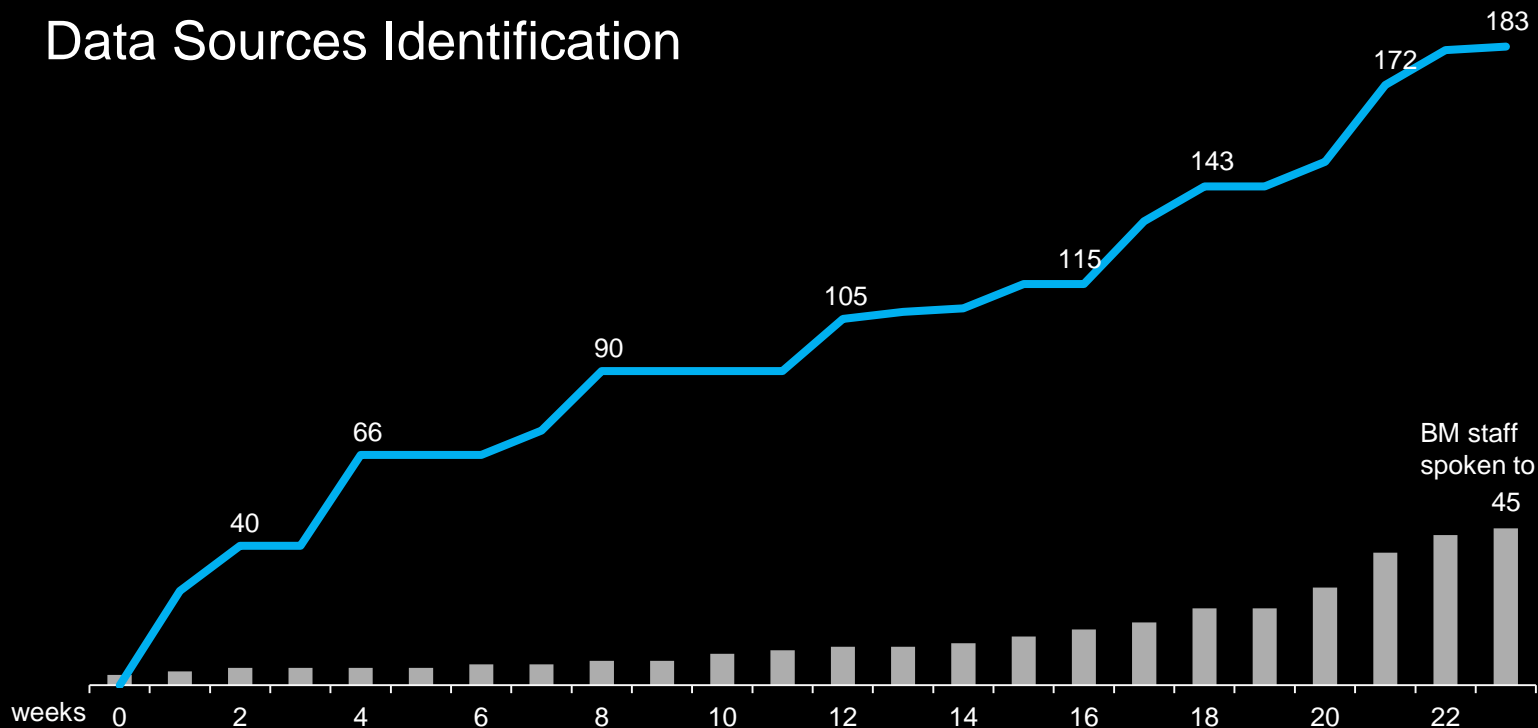

### Did have...

- R
- Data Scientist
- Big Data: Senior Product Manager
- What does “big data” mean to the museum?

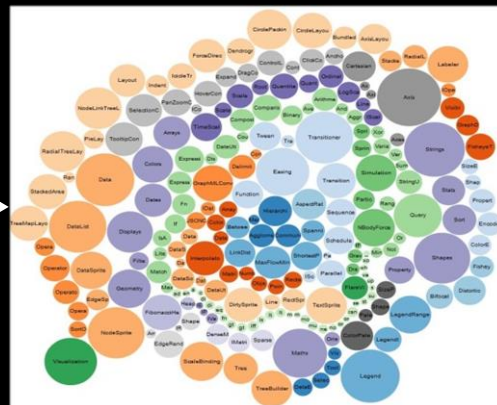

# Finding data

## Data Sources Identification

# Bubble Envy

# The British Museum

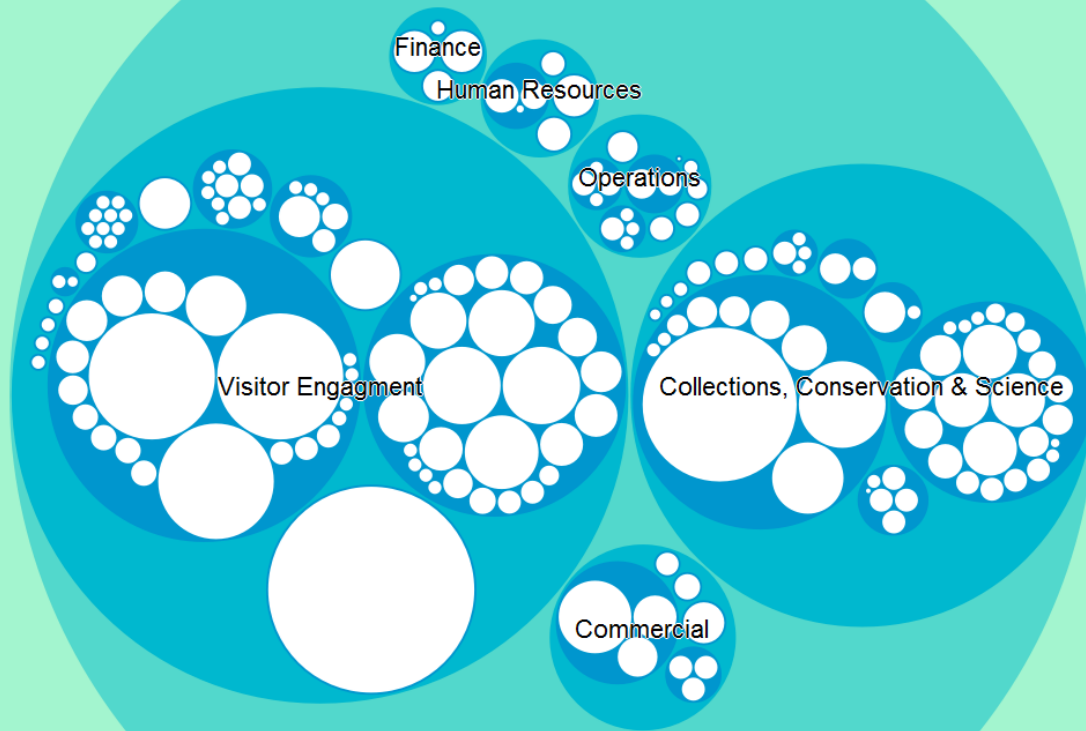

## British Museum Data Audit 2015

The big data team conducted a survey across the museum and found more than 250 data sources. This visualisation demonstrates the variety of data across the museum.

Valuing data

The British  
Museum

@alice\_data

Symbol - Noun Project: Dara Ullrich, DE

# Business Problems = Data Opportunities

We don't know who our visitors are?

Online = > 9 million

Offline = 6.8 million

We don't know what they do in the museum?

And we don't know the opportunities to generate revenue?

# Business Problems = Data Opportunities

We don't know who our visitors are?

Online = > 9 million

Offline = 6.8 million

“silos” and “wrangling”

data viz

We don't know what they do in the museum?

visitor movement

And we don't know the opportunities to generate revenue?

predictive modelling

## “silos” and “wrangling”

Multiple visitor data platforms

CSV exports from external platforms

No SQL

email

online  
shop

wi-fi

## “silos” and “wrangling”

Multiple visitor data platforms

CSV exports from external platforms

No SQL

*100's of columns*

email

*print format exports  
nested by timeslots*

online  
shop

*Split first and second name*

wi-fi

## No SQL = data.table

How many visitors are on multiple platforms?

Assess the visitor data siloing

*Why?*

*To improve engagement and access of the museum we need to examine our visitor data.*

# Visitor Movement

*62 galleries, 3 floors,  
largest covered public  
square in Europe with 6.8  
million visitors per year.*

# Visitor Movement

Wi-Fi presence  
used to sample  
visitor numbers

*1<sup>st</sup> to use R to  
connect to CISCO  
Presence API*

## Visitor M

Wi-Fi presence  
used to sample  
visitor number

1<sup>st</sup> to use R to  
connect to CISCO  
Presence API

# Nothing is perfect

# Predictive modelling

Can we predict ticket sales for exhibitions?

mixed effect modelling

- data wrangling
- modelling
- prediction

# Predictive modelling

First initial model created  
Predicted first exhibition sales  
Development continues ...

# Recommendations and Insights

## Audio guide

1 in 3 visits start at the  
Rosetta Stone

And 3 of the top visited  
stops are not on the  
“Top 10” tour

## Digital Signage

Audio guide  
starting direction

Promoting  
exhibition tickets  
at quiet times

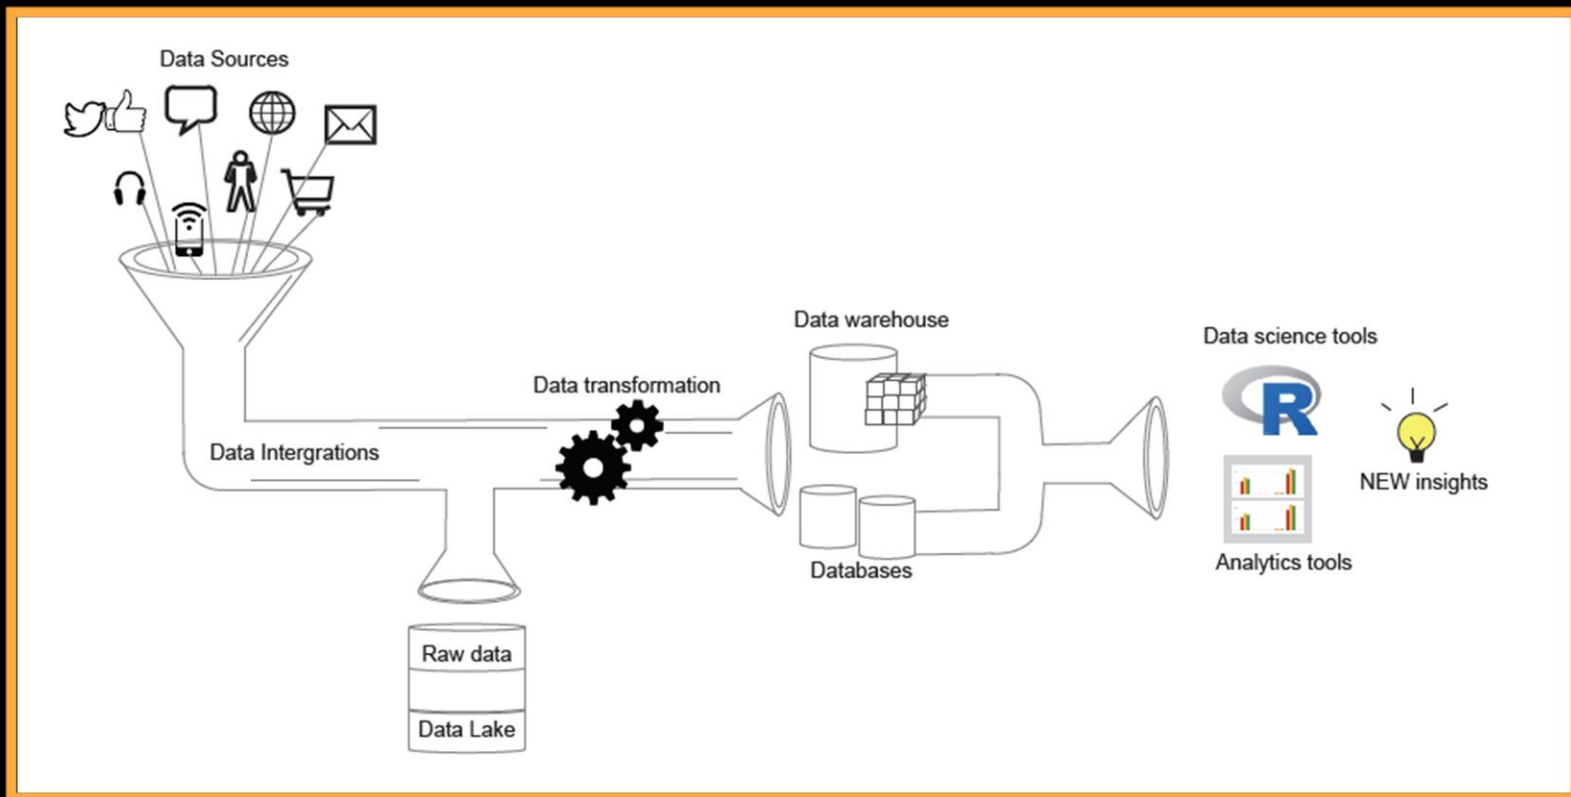

## Ticketing Trends

Peak and Off-peak times  
across exhibitions looking  
at ticketing capacity

Recommendation for filling  
quiet timeslots and  
investigation into time  
dependent ticketing pricing

De-siloed accessible data

**Monitoring**

**Analysis**

**Dashboards**

**Reporting**

**Visualisation**

## What next...

Support staff empowerment

- Data in the hands of decision makers
- De-siloed accessible centralised data

Data-driven decision making primarily for product and content development and optimization

Scoping opportunities for revenue generation

BUT Who knows?

**Internet of things**

e.g. Toilet door locks, Boilers, Visitor Flow Signs

**Machine Learning**

e.g. Predicting Visitor Numbers, Optimization, New Collection Discoveries

Data-Driven

decision makers

Problems to  
becoming  
data-driven

## DATA CULTURE

Transforming any organisation to be data-driven is about changing behaviours and habits.

## DATA ADVOCACY

Data value needs to be discovered and shared. By giving voices to data champions and advocates.

# support

High level support

Quick Wins

Find early adopters

Build trust

## Technical Evangelist

Technology orientated and use data frequently within their roles.

Supports data roles and adoption across the business

## Data Ambassador

Data is highly important to their role but not necessarily their main responsibility.

Adopting data techniques and sharing the value and insight data can provide.

## Business Data Advocates

Supports data application across business

Champion the use of data in high-level meetings and discussions

# listen & empathy

Listen to your stakeholders

Help them formulate

De-complicate keep it simple

# communicate

Comms series “Did you know”

Outreach

Encourage data ambassador

# process

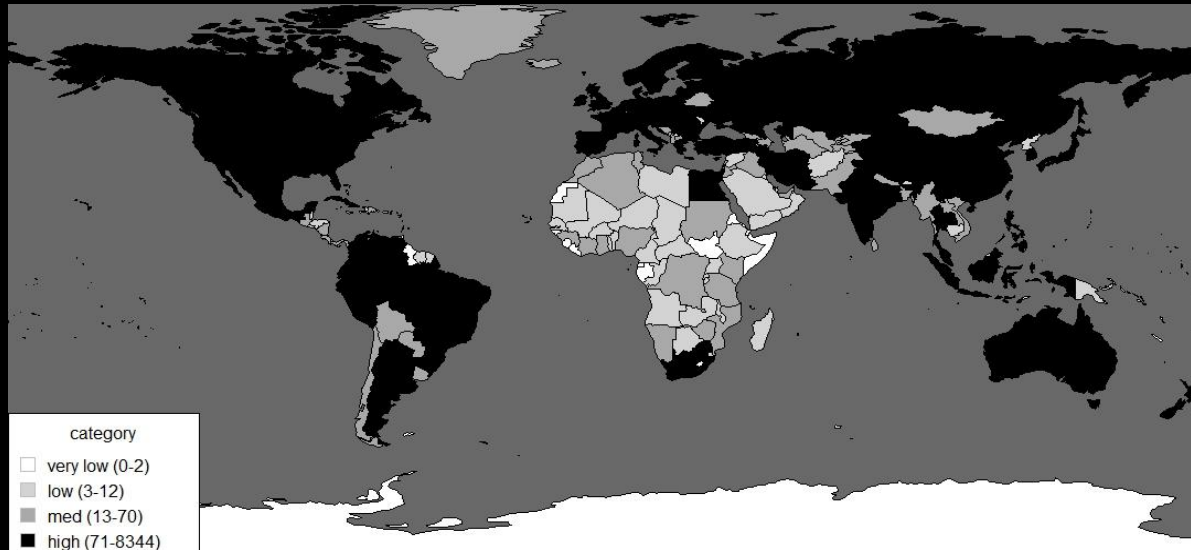

- 1  Identify a problem or question
- 2  Agree the business questions and/or hypothesis with stakeholders
- 3  Identify the data available
- 4  Decide how best to capture the data
- 5  Decide how to clean, transform and deal with gaps
- 6  Decide on how the data will be managed, stored, accessed, manipulated and scheduled
- 7  Analyze
- 8  Create report or visualization
- 9  Provide insights & storytelling back
- 10  Discuss how to embed these results into the business and/or future decision-making processes
- 11  Discuss how to better capture data in the future (new data or improve existing methods)
- 12  Can we close the project, or is there a new question?

Vision for the future

55,000 museums 180 countries
