Abstract

In two recent decades, organizational performance has been an important subject. This intent resulted in many innovations in practical and researches approaches. Therefore, the purpose of this research was to predict of organizational performance through knowledge management in sports organizations (based on ACHIEVE model). The statistical popularly was all managers of sport and young's ministry, national Olympic committee, national Paralympics committee, national Olympic academy, and sport federations (N=331). Based on Morgan's table, 180 people were selected to this Research. The results of present study showed that there was significant relationship between knowledge management and organizational performance.

Generally, the results showed that knowledge management is an important predictor for organizational performance. Therefore, managers must do programs to increase of knowledge management of their employees.
