

## Avian influenza Overview

# Literature search on phenotypic and genetic characterisation of AI viruses: Protocol and results

The aim of this document is to report on the literature searches performed in the context of the Avian Influenza Quarterly Reports updating on the avian influenza situation within the Union and worldwide published by EFSA, ECDC and EURL.

Literature searches are designed to provide information on phenotypic and genotypic characterisation of HPAI viruses circulating on other continents and regions (Africa, Asia, the Middle East) in domestic or wild birds or mammals (excluding humans).

## A.1. Search protocol

Bibliographic searches will be performed in PubMed database in order to retrieve peer reviewed literature. The search strings will combine concepts representing the Avian Influenza Viruses and populations of interest linked with the relevant Boolean operators.

Search terms will include a combination of free-text and subject index terms (Mesh terms). The results will be filtered using the date of introduction on the database in order to limit them to the relevant reporting period.

Two different search strings have been developed to identify the following:

- Phenotypic characterisation of HPAI viruses circulating in the EU in domestic and wild birds
- Phenotypic and genetic characterisation of HPAI viruses circulating on other continents in domestic or wild birds or mammals (excluding humans)

<b>Animals</b>	In order to simplify the retrieval of studies in animals, the search filter referenced below was used and adapted to include a better coverage of terms related to birds: Hooijmans CR, Tillema A, Leenaars M and Ritskes-Hoitinga M, 2010. Enhancing search efficiency by means of a search filter for finding all studies on animal experimentation in PubMed. Lab Anim, 44, 170-175. doi:10.1258/la.2010.009117 The search string is designed to retrieve studies in animal experimentation, but it also can be used to retrieve all type of studies in animals. It contains names of animals not relevant for avian influenza; these terms will not affect the results. However, the use of the already made filter simplifies the construction of the search string.
