SALT Science Data Manager

SAAO/SALT

Southern African Large Telescope

Description

- Located in Sutherland South Africa
- 91 1m segments for 11m diameter
- fixed elevation

Advantages

- Economical
- Entirely Queue based
- Spectroscopic telescope
- Designed to explore the time domain

SALTICAM

Multi-mode imaging and acquisition camera. In full-frame mode, it has an 8x8' FOV. In slotmode, high-speed photometry (20 Hz) can be performed over a smaller field of view.

Darragh O'Donoghue

Robert Stobie Spectrograph

Highlights of RSS:

- UV Spectroscopy down to 3200 Å
- High throughput and resolution VPH gratings
- Fabry-Perot Modes
- Polarimetry
- High Speed

Ken Nordsieck, Ted Williams

High Resolution Spectrograph

	High Resolution Mode	Medium Resolution Mode	Low Resolution Mode	High Stability
Fiber Diameter (arcsec)	1.56	2.23	2.23	1.56
Resolution	66800	37000	16200	66800
S/N~10 in 1800s exposure	16.5	17	18	15

Astronomy Operations

- Head of AstroOps: Petri Vaisanen
- SALT Astronomers: Alexei Kniazev, Encarni Romero-Colmenero , Paul Kotze, Brent Miszalski, Eric Depagne
- SALT Science Data Manager: Steve Crawford
- User Software: Christian Hettlage
- IT Archive Support: Garith Dugmore

SALT Data Management

- I. **Preserve** and **archive** the data
- II. **Rapid deliver** of the data to the partners in the most useful form possible
- III. Provide tools to make the most **unique modes of SALT accessible**
- IV. **Monitor** the status of the telescope
- V. Provide **training** to the community

How do we do this?

- I. **Open Source, generalized** software but do not re-invent the wheel
- II. **Prioritize** on delivering our data
- III. Rely on our **community** for contributions and quality control
- IV. Provide **opportunities** for contributions
- V. **Virtualize** everything

Data Delivery

1. Partners located around the world
2. SALTFIRST runs during the night -- quick look reductions and makes the data available in real time
3. Data Pipeline
 - Run at 10 am next day
 - reduced data made available via ftp

Data Delivery

1. Partners located around the world
2. SALTFIRST runs during the night -- quick look reductions and makes the data available in real time
3. Data Pipeline
 - Run at 10 am next day
 - reduced data made available via ftp

Data Delivery

1. Partners located around the world
2. SALTFIRST runs during the night -- quick look reductions and makes the data available in real time
3. Data Pipeline
 - Run at 10 am next day
 - reduced data made available via ftp

Web Manager

SALT SOUTHERN AFRICAN LARGE TELESCOPE **Web Manager**

Home Login Register new user Manual Hello Guest !

Web Manager 1.00

Welcome to the Web Manager of the Southern African Large Telescope.

Here you can:

- Download the Phase II version of the PIPT 1.073 for writing your proposals:

Please note the following before downloading the PIPT.

- The values calculated in the RSS Simulator are approximate, so please use with care and watch this space for updates.
- You won't see any proposals you've created with PIPT versions earlier than 1.0, and you won't be able to open them. This will be fixed in a future version. If this is an issue, please export the proposal you need to a zip file and send it to [salthelp \(AT\) salt.ac.za](mailto:salthelp(AT)salt.ac.za).

- **PIPT 1.073 for Mac OS X**
- **PIPT 1.073 for Microsoft Windows**
- **PIPT 1.073 for Linux and other operating systems**

Please see below for installation instructions.

- Download **other proposal tools**.

Web Manager--php web interface to the science databased. It is designed for use by both the SALT astronomers and the user community.

SALT-DAS--Developed by VO India to provide interface for archival data

PySALT v0.47

PySALT is the Python/PyRAF software package for SALT data reduction and analysis. The next version of PySALT package includes:

PIPETOOLS

Tasks to automate running the pipeline

SALTRED

Basic CCD data Reductions

SLOTTOOLS

Slotmode photometry And analysis tools

SPECTOOLS

Tools to provide wavelength and flux calibrated data

FPTOOLS

Fabry-Perot related software (still in development)

pyhrs

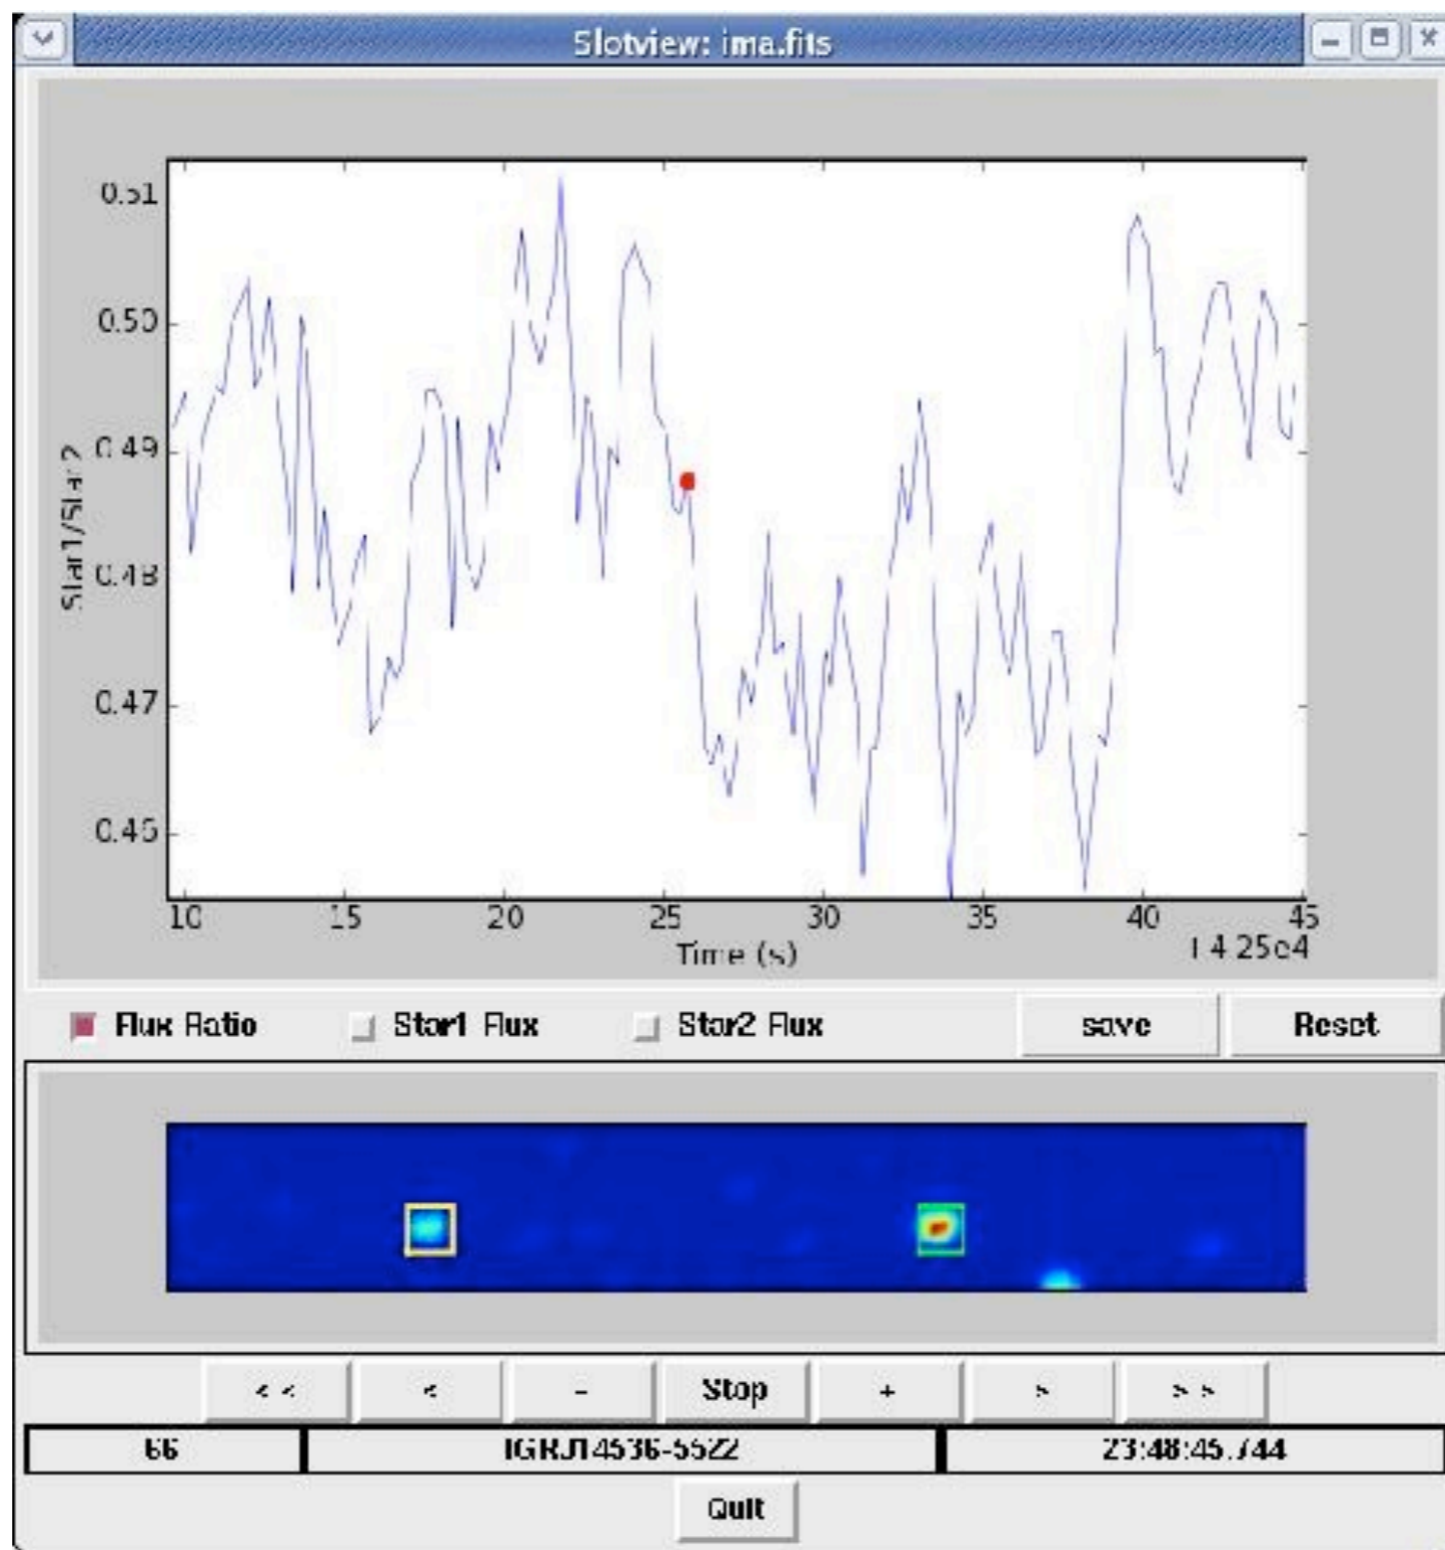

Tools for the high resolution spectrograph

<http://www.pysalt.salt.ac.za/>

<https://github.com/saltastro/pysalt>

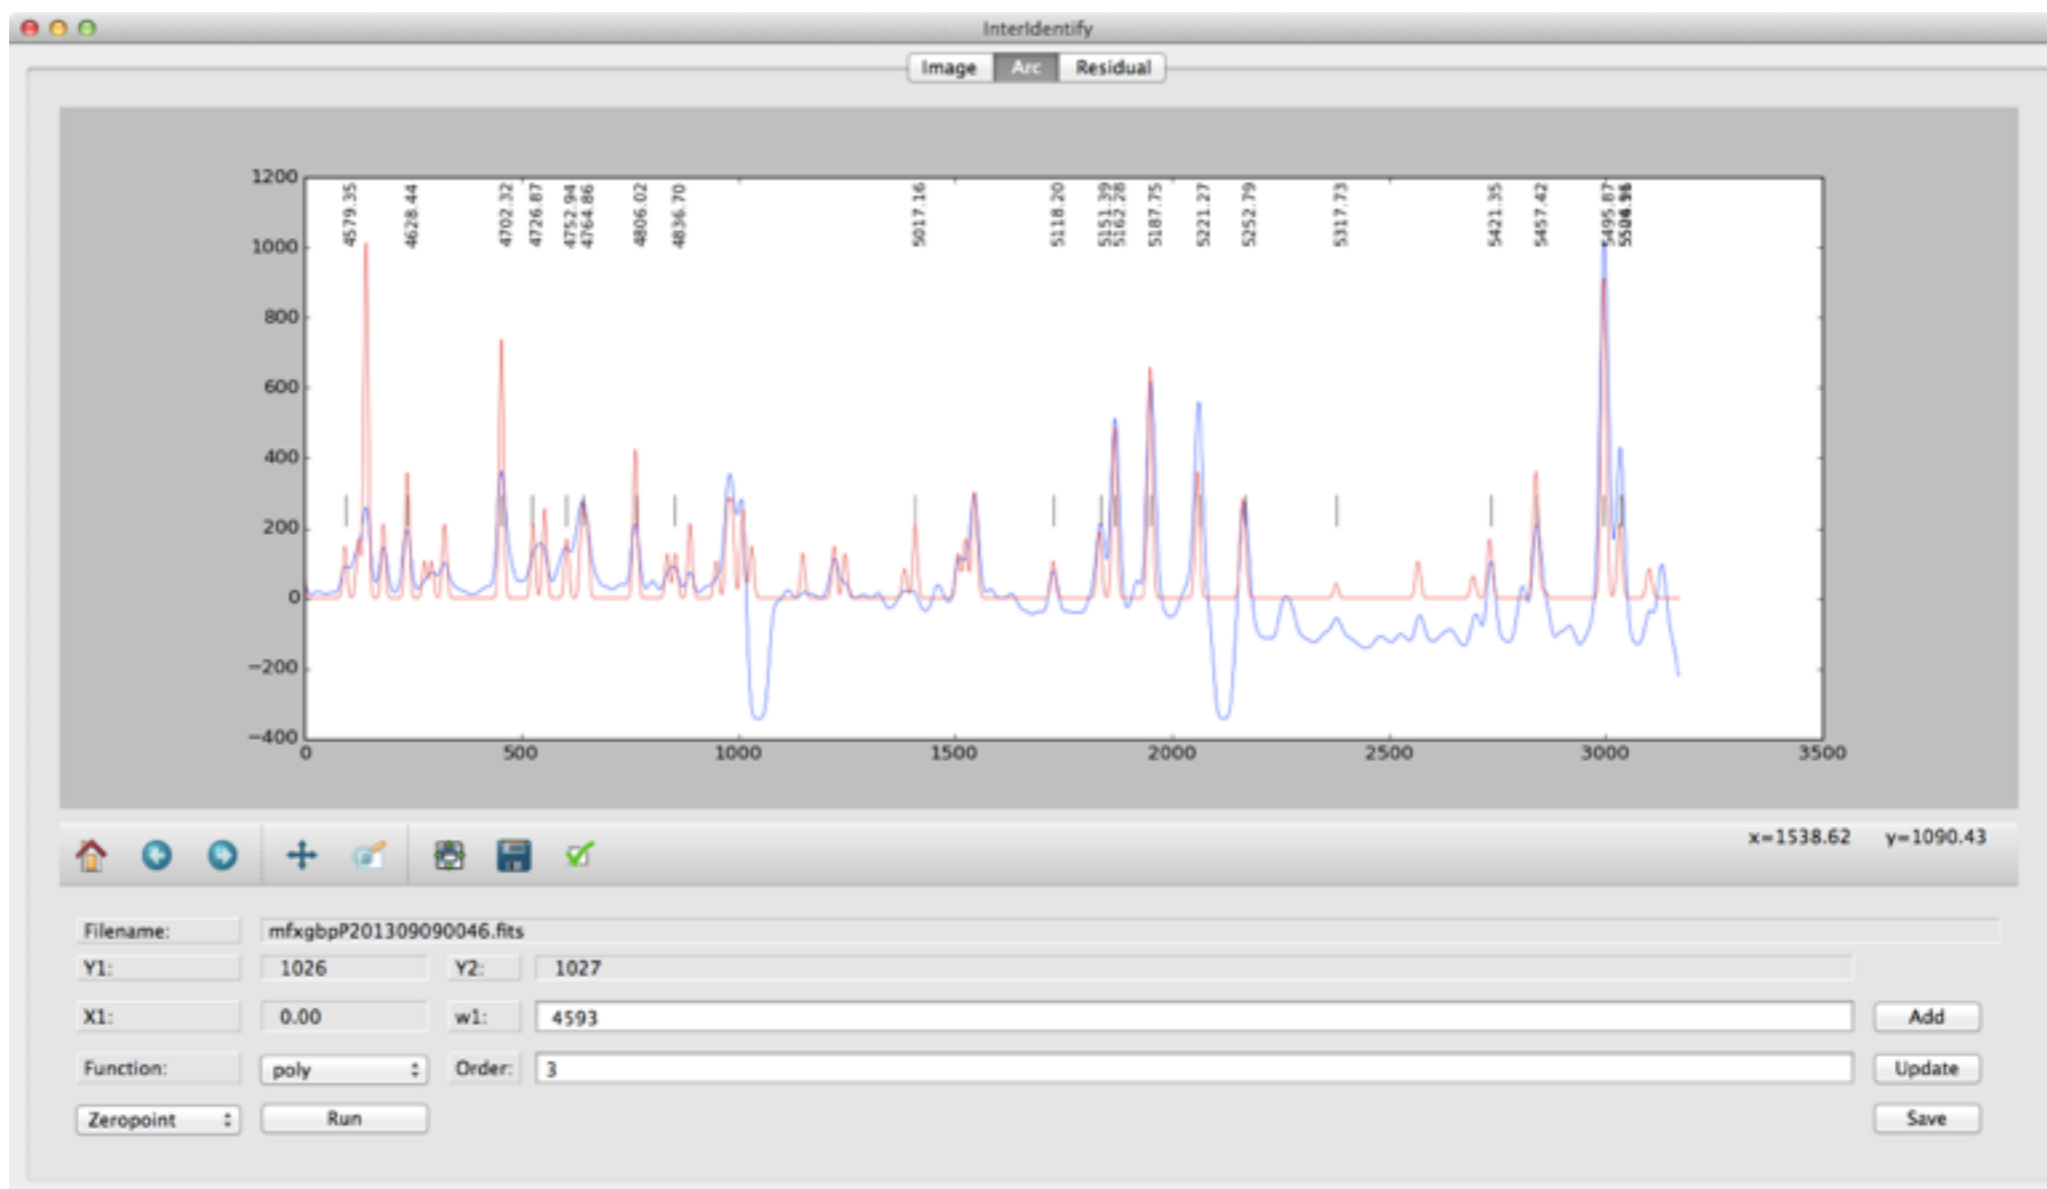

User Tools

Long-Slit Reductions

Open Source..and Generalized

ccdproc: Astropy affiliated package for reducing optical/IR CCD data

specreduce: Reduction software for data from optical spectrographs

PySpectrograph: Models for optical spectrographs

All code available on github and contributions welcomed!

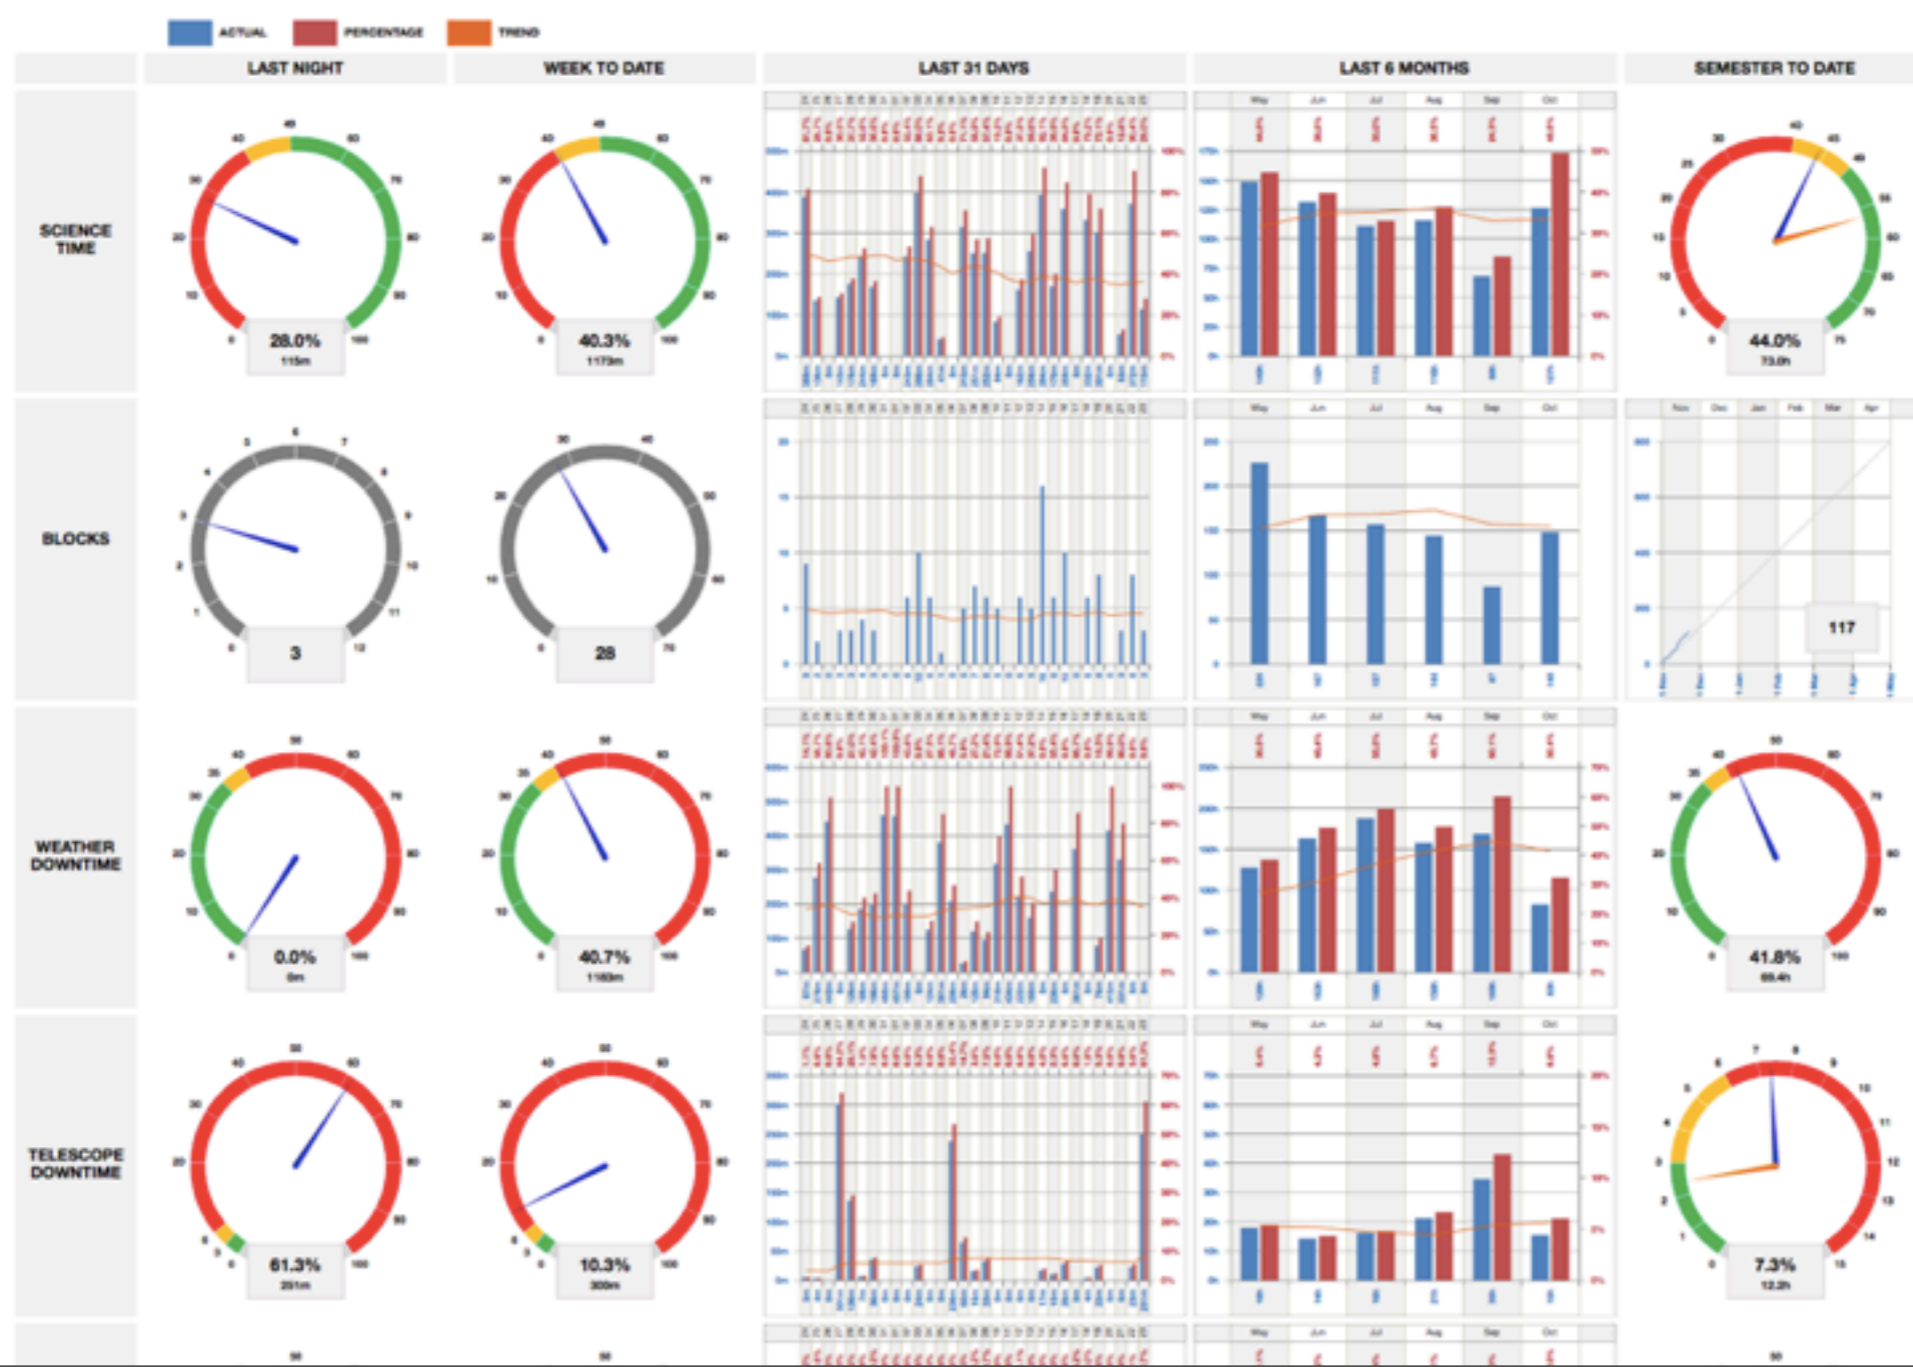

Data Monitoring

24 Nov 2015

The dashboard still is a work in progress and may contain bugs. Please send any bug reports and feature requests to Christian.

Community

Lessons Learned

I. Build on Previous Work

II. Pipelines = Papers

III. Community,
Collaboration, and Sharing

Summary

With the small operations cost, full service mode, availability of reduced data, SALT is a cost effective observatory.

SALT leverages existing software and user expertise to provide a range of services with the help from a very small operations team.
