

# Feasibility of Safety System within a Novel Personalised Decision Support Tool

## The Patient Empowerment Through Predictive Personalised Decision Support (PEPPER) Study

**Parizad Avari**<sup>1</sup>, Yenny Leal<sup>2</sup>, Marzena Wos<sup>2</sup>, Kumuthine Sivasithamparam<sup>1</sup>, Chengyuan Liu<sup>1</sup>, Pau Herrero<sup>1</sup>, Narvada Jugnee<sup>1</sup>, Maria Thomas<sup>1</sup>, Clare Martin<sup>3</sup>, Monika Reddy<sup>1</sup>, José Manuel Fernández-Real<sup>2</sup>; Nick Oliver<sup>1</sup>; Mercè Fernández<sup>2</sup>

## Declaration of Interest

- No conflicts of interest
- Project Funding: European Union's Horizon 2020 (Grant No 689810)

## Type 1 Diabetes

- Globally, 400 million people with diabetes; 5-10% with Type 1 diabetes
- Insulin treatment:
  - MDI (Basal-bolus regime) or
  - CSII (Insulin pump)
- In UK, structured education with CHO counting effective, but only ~27% achieve HbA1c <58mmol/mol
- Complex insulin dose calculation at mealtimes

# Patient Empowerment Through Predictive Personalised Decision Support (PEPPER)

- Six European partners
- €3.8m European Union Horizon H2020 project
- Multidisciplinary (clinicians, nurses, engineers, computer scientists)

# PEPPER: Safety System

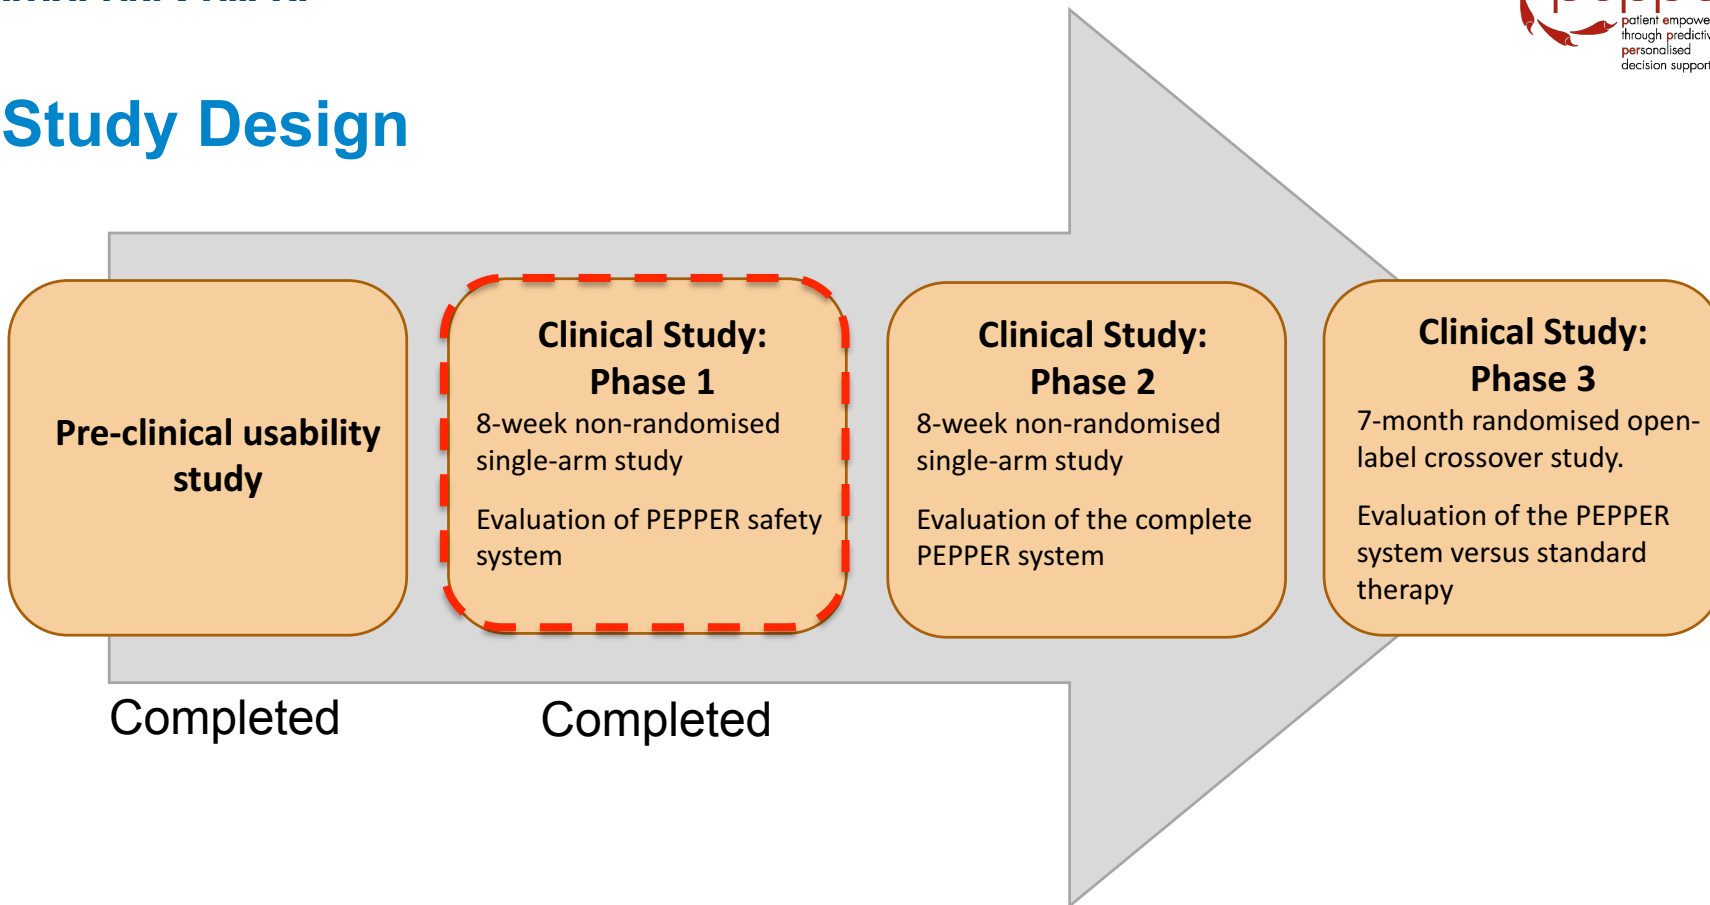

### PEPPER Clinical Platform

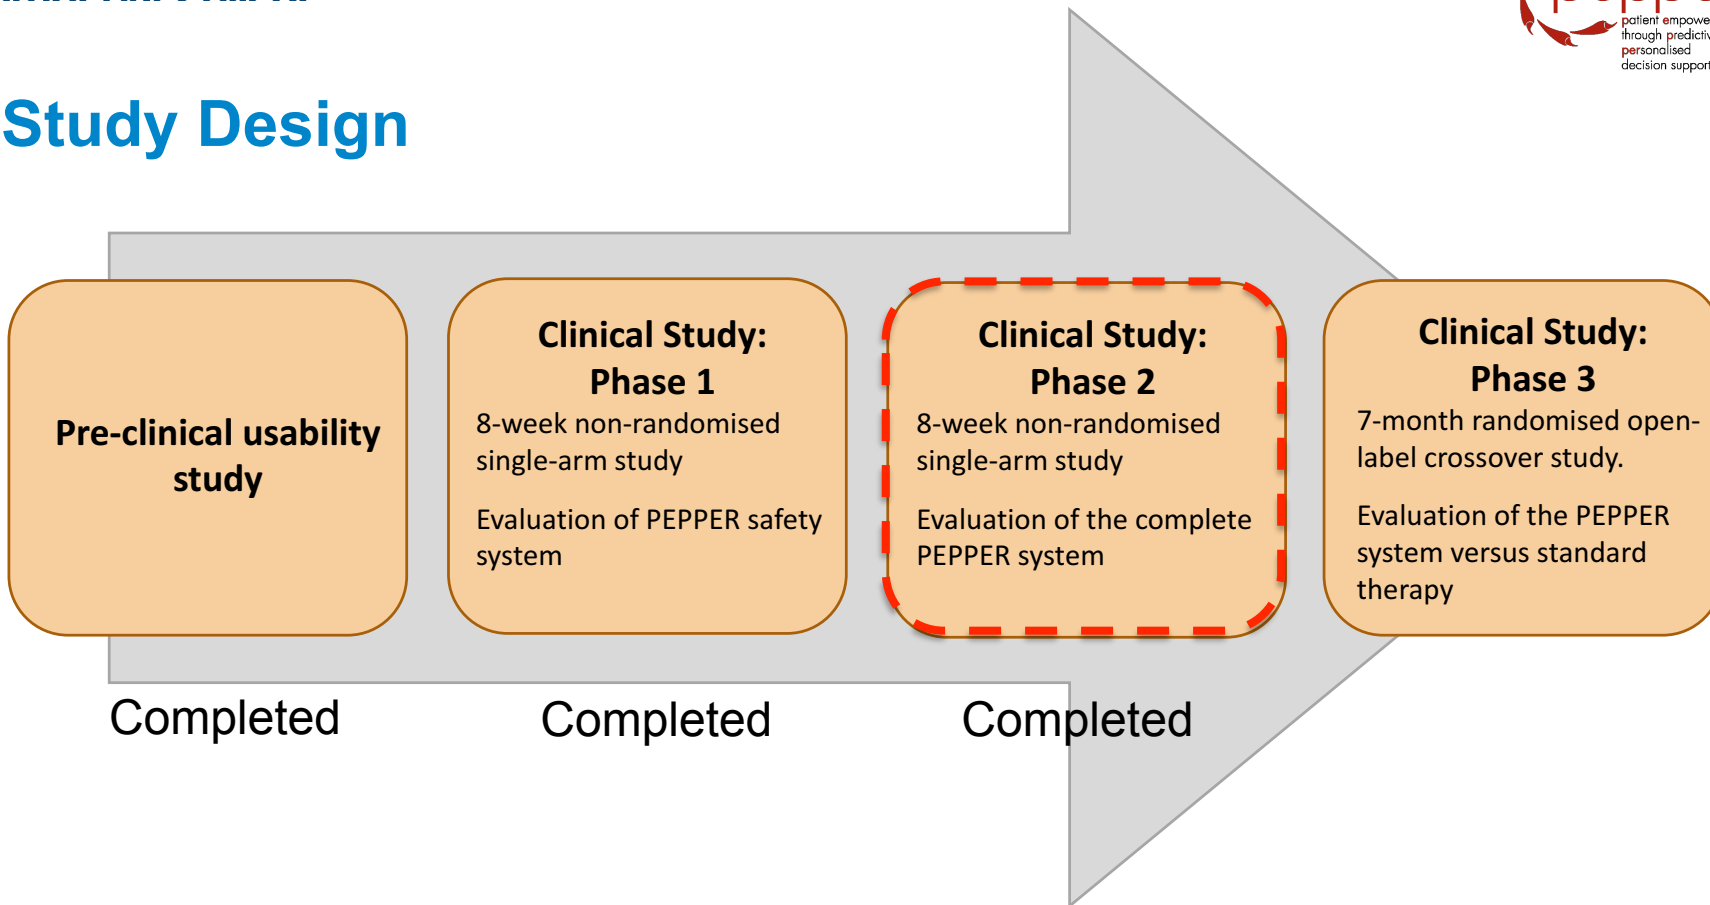

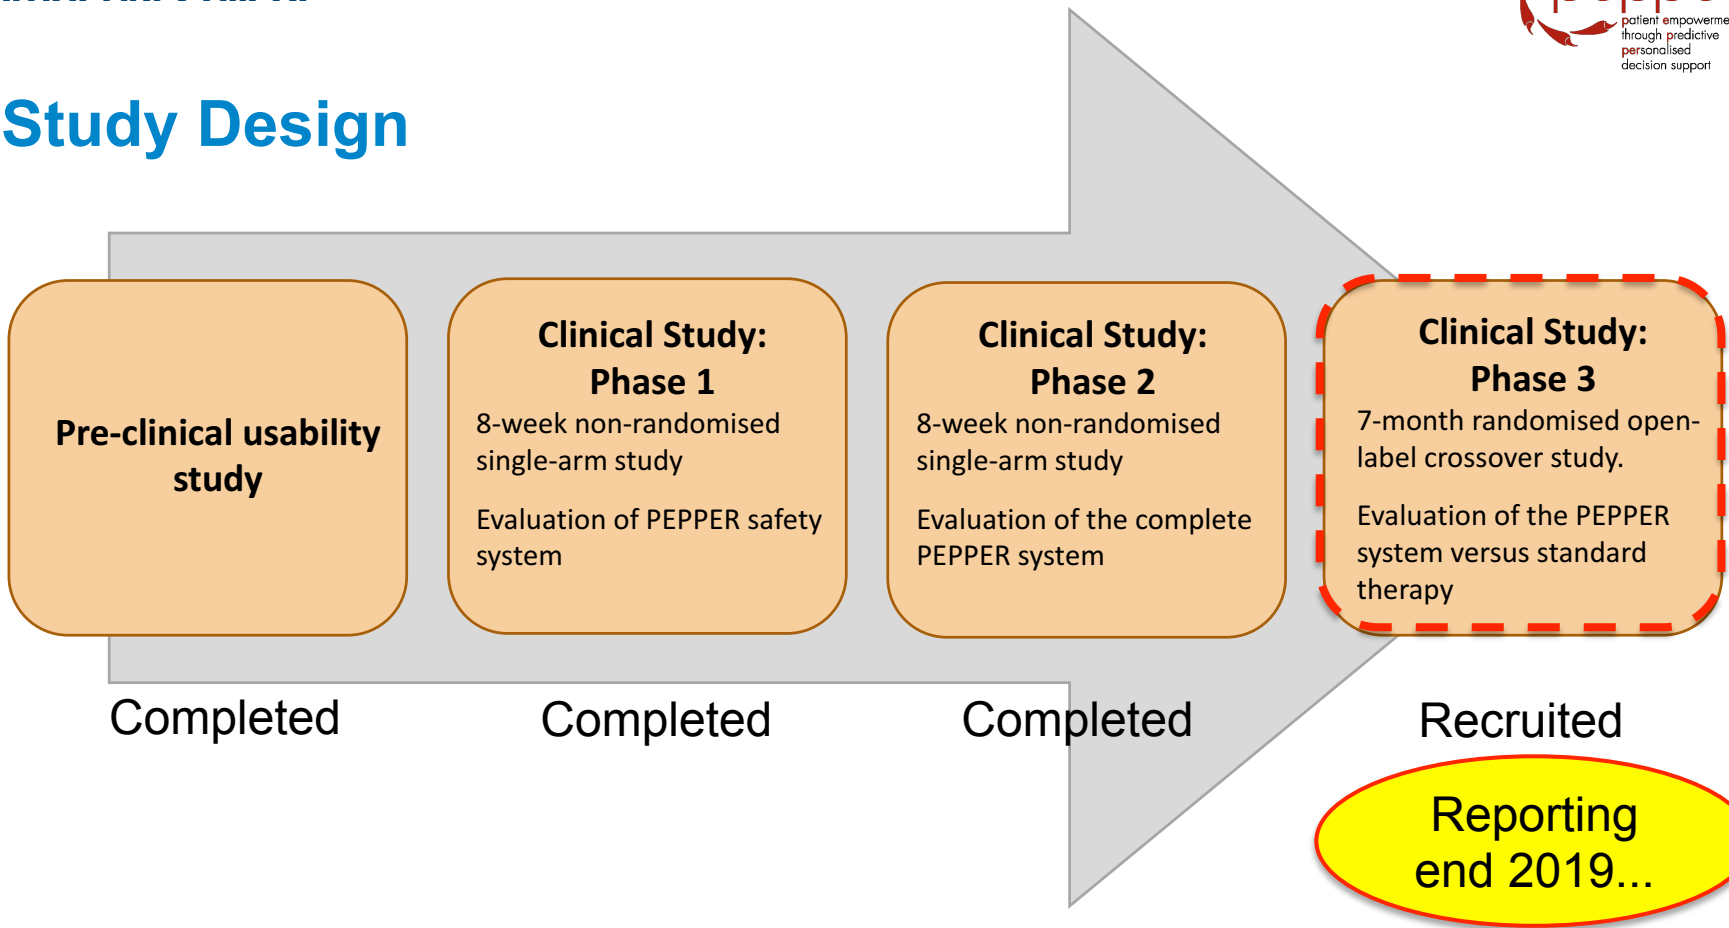

# Study Design

# Study Design

# Study Design

## Phase 1: Aims & Objectives

Non-randomised, open label study (8 weeks)  
n=15 pump and MDI (ICL & IDIBGI participants)

**Aim:** To assess the safety and usability of the PEPPER system.

**Primary outcome:** % time in hypoglycaemia ( $< 3.9$  mmol/l)

**Secondary outcomes:**

Other glycaemic outcomes

Safety system outcomes

Quality of life (QoL) questionnaire scores

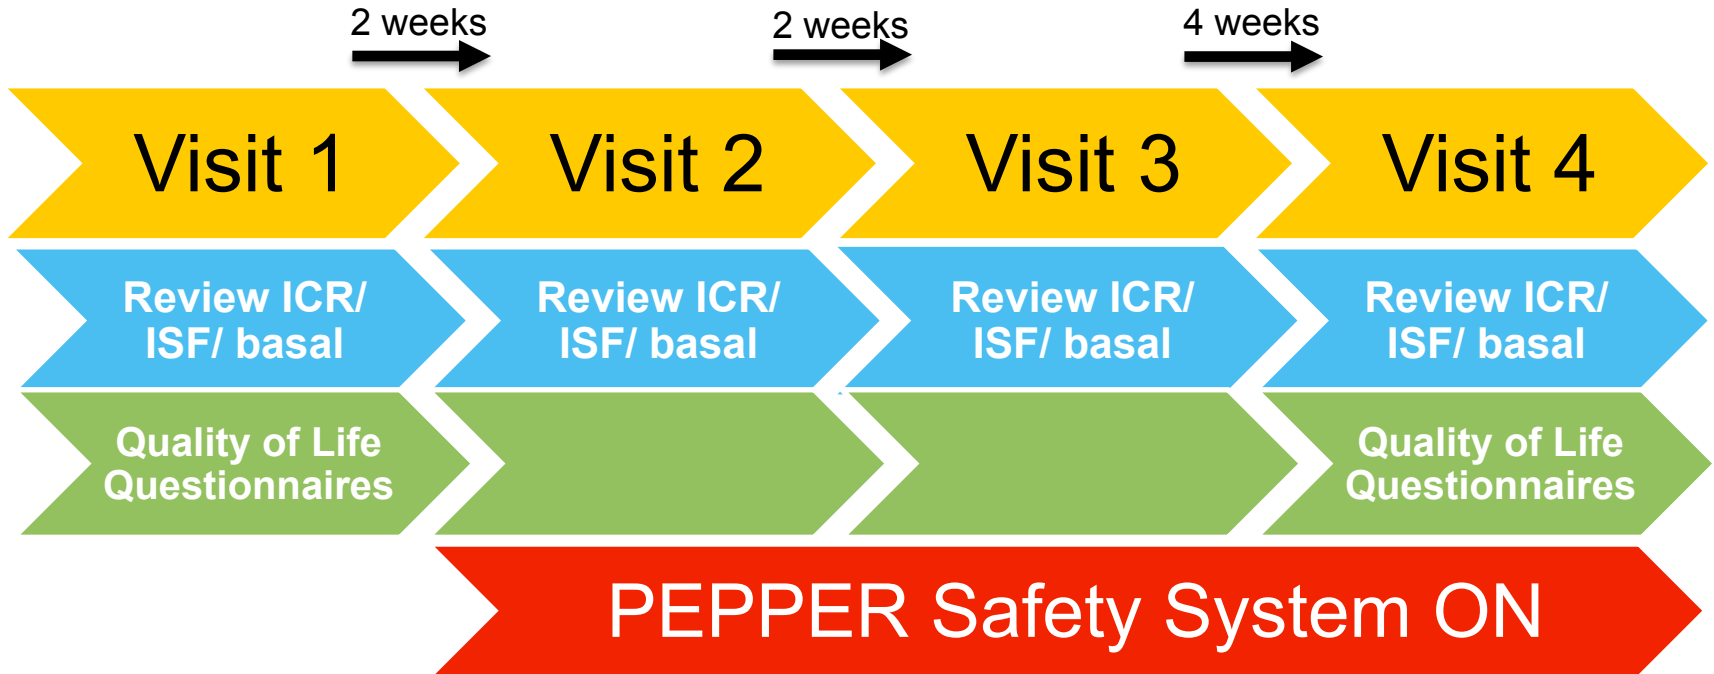

## Inclusion Criteria

- >18 years of age
- Type 1 diabetes > 1 years
- On MDI or CSII > 6 months
- HbA1c: 48-86mmol/mol
- Structured education

## Exclusion Criteria

- Severe hypoglycaemia in last 6 months
- DKA in last 6 months
- Use of regular acetaminophen
- Pregnant or planning pregnancy
- Breastfeeding
- Enrolled in other clinical trials
- Have active malignancy or under investigation for malignancy
- Severe visual impairment
- Reduced manual dexterity

## Methods

# Feasibility data for Phase 1 in MDI participants

## Baseline characteristics

<b>Demographics</b>	<b>Median (IQR) (n=8)</b>
<b>Gender (male:female)</b>	3:5
<b>Age (years)</b>	37.5 (31.8-53.3)
<b>BMI (kg/m<sup>2</sup>)</b>	23.8 (23.2-27.5)
<b>Duration of diabetes (years)</b>	22.5 (18.0-26.5)
<b>Gold score</b>	2.0 (1.75-2.25)
<b>HbA1c (mmol/mol)</b>	63 (57-66)
<b>Number of CBG measurements per day</b>	3.5 (2-5)

## Glycaemic outcomes

	Run-in (n=6) Weeks 1 & 2	Endpoint (n=6) Weeks 7 & 8	P-value
<b>% time in hypoglycaemia</b>			
<3.9mmol/l	3.7 (1.6 - 6.4)	2.7 (0.9 - 7.3)	0.15
<3.3mmol/l	1.8 (0.7 - 3.6)	0.8 (0.0 - 1.5)	0.05
<3.0mmol/l	0.8 (0.1 - 4.8)	0.3 (0.0 - 0.9)	0.02

## Glycaemic outcomes

	Run-in (n=6) Weeks 1 & 2	Endpoint (n=6) Weeks 7 & 8	P-value
<b>% time in hypoglycaemia</b>			
<3.9mmol/l	3.7 (1.6 - 6.4)	2.7 (0.9 - 7.3)	0.15
<3.3mmol/l	1.8 (0.7 - 3.6)	0.8 (0.0 - 1.5)	0.05
<3.0mmol/l	0.8 (0.1 - 4.8)	0.3 (0.0 - 0.9)	0.02
<b>% time in target</b>			
3.9-10.0mmol/l	52.8 (38.3 - 61.5)	61.3 (47.5 - 71.7)	0.03

## Glycaemic outcomes

	Run-in (n=6) Weeks 1 & 2	Endpoint (n=6) Weeks 7 & 8	P-value
<b>% time in hypoglycaemia</b>			
<3.9mmol/l	3.7 (1.6 - 6.4)	2.7 (0.9 - 7.3)	0.15
<3.3mmol/l	1.8 (0.7 - 3.6)	0.8 (0.0 - 1.5)	0.05
<3.0mmol/l	0.8 (0.1 - 4.8)	0.3 (0.0 - 0.9)	0.02
<b>% time in target</b>			
3.9-10.0mmol/l	52.8 (38.3 - 61.5)	61.3 (47.5 - 71.7)	0.03
<b>% time in hyperglycaemia</b>			
>10.0mmol/l	44.3 (37.3 - 57.8)	33.8 (27.5 - 49.2)	0.09

# Safety System outcomes

Box plot showing total alarms per fortnight

Box plot showing total alerts per fortnight

## Safety System outcomes

Box plot showing total alarms to carers per fortnight

Box plot showing total number of carbohydrate recommendations (CR) per fortnight

## Data loss

Box plot showing the %missing  
CGM signals

## Quality of Life

Quality of life questionnaire	Baseline score	Endpoint score	P-value
<b>PAID</b>	30.6 (22.8-50.0)	38.1 (25.0-52.3)	0.84
<b>DQOL</b>	34.1 (28.7-47.3)	33.3 (32.0-50.8)	0.20

**PAID:** Problem Area in Diabetes

**DQOL:** Diabetes Quality of Life

## Discussion

### **Glycaemic outcomes**

- Reduction % time in hypoglycaemia
- Significant increase in % time in target

### **Safety system**

- Significant reduction in number of alerts
- Reduction in number of carbohydrate recommendations, alarms to carers
- Reduction in % of missing CGM data

### **Quality of Life questionnaires**

- No significant change

## Study Limitations

- Small participant numbers
- Selection bias
- Short follow up period
- CGM effect
- CGM data loss
- Alert thresholds changed during the study

## Conclusion

- Proof of concept study
- Feasibility and safety of the PEPPER safety system in MDI participants
- Data suggests PEPPER safety system has the potential to enable improvements in hypoglycaemia and time in range.
- Future directions:
  - Phase 2: assess artificial intelligence component
  - Phase 3: assess PEPPER system vs. standard therapy
