Anti-Exo70 blot

Anti-tubulin blot

Original Western blotting images from Figure 4B

Anti-Sec5 blot

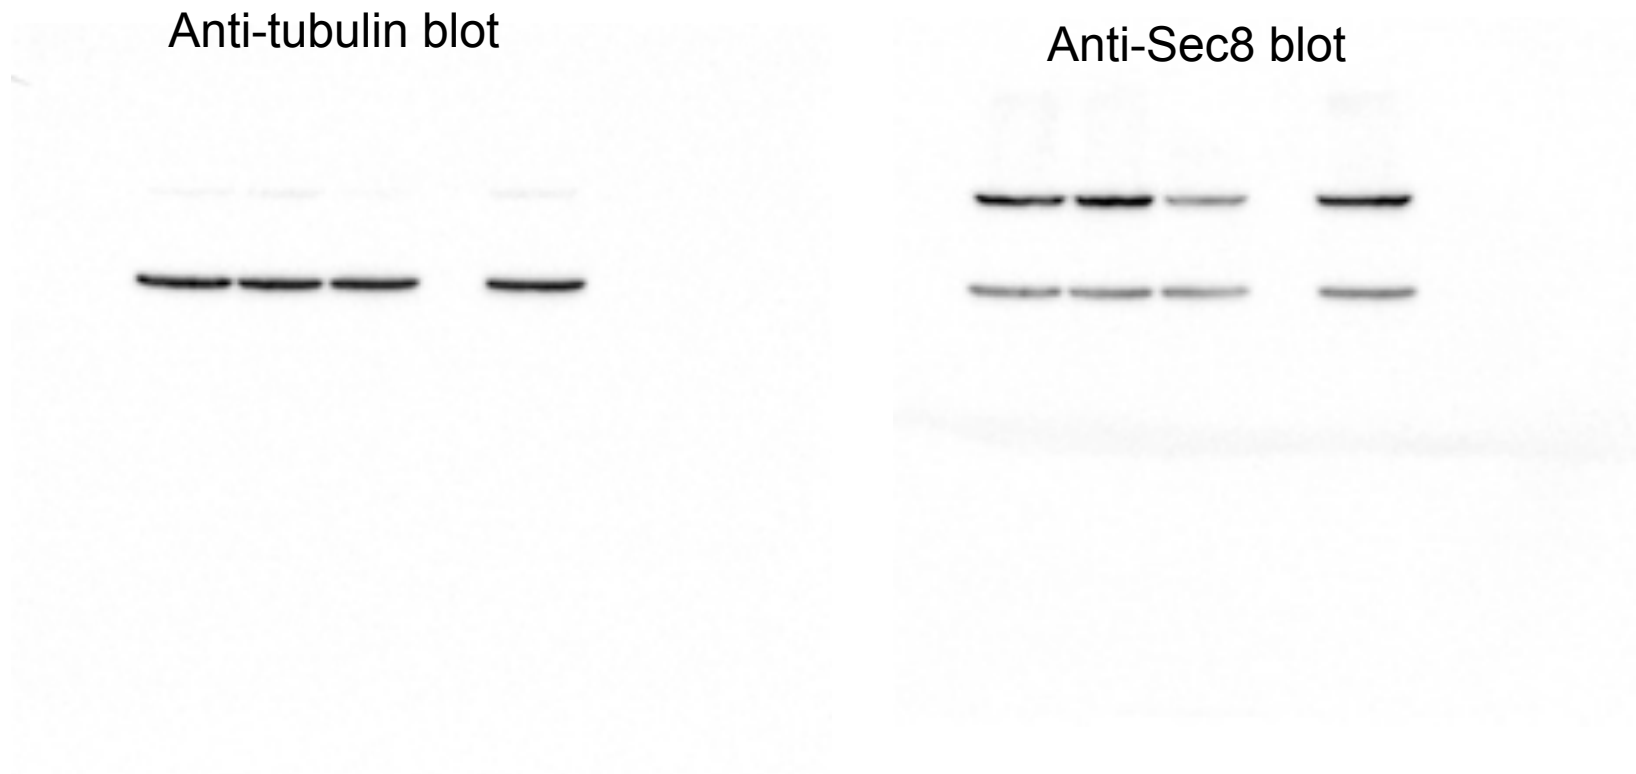

Anti-tubulin blot

Original Western blotting images from Figure 4C

Only the first 3 lanes are relevant for the figure in the paper.

The anti-tubulin blot was done first and then the membrane was stripped and probed with anti-Sec8. The upper band in the anti-Sec8 blot is Sec8 and the lower band is tubulin (remaining due to incomplete stripping of the anti-tubulin antibody).
