EXECUTIVE SUMMARY

The present deliverable is the last submitted iteration of the demonstrators and accompanying reports that describe progress and evolvement of the AGINFRA+ workflow design components, i.e. the software components that will be incorporated in the overall AGINFRA+ architecture and will allow the management and execution of scientific workflows.

The current version of the deliverable provides a summary of the workflow management platforms that are used in the context of the project, and the steps carried out for making them available to the user communities involved in AGINFRA+. The incorporated software components are three major workflow management systems, used directly by scientific communities or as part of the proposed AGINFRA+ data e-infrastructure.

The aforementioned developments will be made directly available via updates on the deliverable's public Wiki space, hosted within the AGINFRA+ gateway (https://aginfra.d4science.org/). The wiki can be accessed at:
