

Implementing Increased Transparency, and Reproducibility in Economics

Lars Vilhuber
Cornell University

The opinions expressed in this talk are solely the authors, and do not represent the views of the U.S. Census Bureau, the American Economic Association, or any of the funding agencies.

Efficiency of scholarly discourse?

- Early publications (20th century) contained **tables of data**, and the **math** was simple (maybe)
 - **Data** became electronic, was no longer **included** or **cited**
 - **Math** was transcribed to **code**, and was no longer **included**

- Wider Replication (Pesaran 2003)
- Scientific Replication (Hamermesh 2007)
- Reanalysis/Robustness (Clemens 2015)

Results?

In a nutshell

- **40%** use restricted-access data
- **25%** use public-use data and are mostly or completely reproducible
- **25%** use public-use data and are only partially reproducible
- **10%** fail to yield useful results

It's only $\frac{1}{2}$ full!

Hey, it's not empty!

Failure to curate

404. That's an error.

The requested URL `/a_cool_website` was not found on this server. That's all we know.

Poor citation practices

- **Macrodata:**

“We use data downloaded from the Bureau of Economic Analysis...”

- **Microdata:**

“... this paper uses data from the Current Population Survey...”

Problems describing RELIABLE archives

Many datasets

- Are imperfectly described
 - Very few data citations
- Are badly documented
- Have no (permanent) location defined
 - Even for data from high-profile organizations!
- All of the above

What to
do?

Second round (2012-)

- **Greater enforcement of data (and code) availability**
 - 2015, AJ Political Science
 - 2016, Data Editor for ASA Software Section
 - 2016, Statistical review added Science
 - 2017: AEA appoints Data Editor, with mandate to do similar activities (also EJ, Restud)

→ Verifying
reproducibility

Current Data Availability Policies are Broken

- If the Data is **not open-access,**

no systematic information is collected
("exemption")

We asked for “deposits” ...

If you used files at
the National Archives,

would we ask you to
“deposit” them?

We asked for “deposits” ...

If you used files at
the National Archives,

**you should describe
where they are!**

→ Require
greater
transparency of
data/code

Why do journals like “supplemental ZIP files” and affiliated repositories?

- They can ensure **longevity/ persistence**
- They can ensure **access**
- They can ensure **availability**

What are the characteristics of **trusted repositories** (data archives)?

- They DO ensure **longevity/ persistence**
- They DO ensure **access**
- They DO ensure **availability**

Evolving Journal and Data Infrastructure

- More self-deposit repositories in the social sciences
 - Dataverse
 - Figshare
 - (open)ICPSR
 - Zenodo
 - Qualitative Data Repository (QDR)
 - Others...

In a nutshell

- **40%** use restricted-access data
- **25%** use public-use data and are mostly or completely reproducible
- **25%** use public-use data and are only partially reproducible
- **10%** fail to yield useful results

It's only $\frac{1}{2}$ full!

Hey, it's not empty!

Evolving Journal and Data Infrastructure

- More ~~self-deposit~~ repositories in the social sciences

- Dataverse
- Figshare
- (open)ICPSR
- Zenodo
- Qualitative Data Repository (QDR)
- Others...

- CASD
- IAB
- Norway
- US Federal Statistical RDC
-

→ Use trusted
repositories
where possible

Evolving Journal and Data Infrastructure

**Goal: Use any
repository!**
(subject to conditions)

Problems
with that?

Here are the problems...

Failure to curate

Economics makes wide use of public-use data

- **Macrodata:**

“We use data downloaded from the Bureau of Economic Analysis...”

- **Microdata:**

“... this paper uses data from the Current Population Survey...”

Verifying Data and Code Deposits

- Not every data repository is created equal
 - **Github, Dropbox, etc. are not data or code repositories**
 - Is the institutional repository at the University of Southern Venezuela a reliable repository?
 - Is the institutional repository at Cornell University a reliable repository?
 - Is the institutional repository at Harvard University (Dataverse!) a reliable repository?
 - **Are the National Archives a reliable repository?**

Verifying Data and Code Deposits

- Not every restricted-access repository is created equal
 - The **Second Bank of Third City credit card data** is not a data/code repository
 - Is the School Board of Third City a reliable repository?
 - Is the JPMC Institute a reliable repository?
 - Is the **US Census Bureau** a reliable repository?
 - **Are any restricted-access repositories reliable archives?**

Evolving Journal and Data Infrastructure

So: Describe them!

(cite them!)

Action: Data citations and metadata

What is **FAIR**?

- **F**indable,
- **A**ccessible,
- **I**nteroperable, and
- **R**e-usable

A screenshot of the FORCE11 website. At the top is the FORCE11 logo, which consists of a blue circular icon with a white dot in the center, followed by the text "FORCE11" in a bold, sans-serif font. Below the logo is the tagline "The Future of Research Communications and e-Scholarship". A dark grey navigation bar contains three items: "ABOUT" with a downward arrow, "COMMUNITY" with a downward arrow, and "CODE OF CON". Below the navigation bar is a breadcrumb trail: "FORCE11 » Groups » The FAIR Data Principles". The main heading is "THE FAIR DATA PRINCIPLES" in bold. Below this is a sub-heading "JOIN IN THE DISCUSSION - LEA FAIR Data Principles". Underneath is the word "Preamble" in a larger font, followed by the text "One of the grand challenges of data-intensiv".

perceived criteria of importance.

1. Importance

Data should be considered legitimate, citable products of research. Data should be accorded the same importance in the scholarly record as citable research objects, such as publications[1].

DC¹

Data Citation Principles

2. Credit and Attribution

Data citations should facilitate giving scholarly credit and normative and le attribution to all contributors to the data, recognizing that a single style or of attribution may not be applicable to all data[2].

3. Evidence

In scholarly literature, whenever and wherever a claim relies upon data, the corresponding data should be cited[3].

4. Unique Identification

A data citation should include a persistent method for identification that is actionable, globally unique, and widely used by a community[4].

5. Access

Data citations should facilitate access to the data themselves and to such metadata, documentation, code, and other materials as are necessary for

Data Citation Synthesis Group: Joint Declaration of Data Citation Principles. Martone M. (ed.) San Diego CA: FORCE11; 2014
[<https://www.force11.org/group/joint-declaration-data-citation-principles-final>].

Evolving Journal and Data Infrastructure

**Data Citations are not
enough!**

Why are data citations not enough?

- They tell you “where”
- But most do not
 - “who can access”
 - “for how long”
 - “under what conditions”

(Though in theory, these are covered by the Data Citation Principles)

Data Availability Statements (DAS)

- A statement about **where data** supporting the results reported in a published article can be found
 - including unique identifiers linking to publicly archived datasets analyzed or generated during the study.
- DASs can **increase transparency** by providing a reason why data cannot be made (immediately) available
 - **need for registration**, ethical or legal restrictions, or because of an embargo period

Data Availability Statements

- A statement about **how long** data will be **available** (policy)
 - DOI assignments implies **long-term curation**
 - But long-term curation **does not require DOI!**
- A statement about **usage rights**
 - Not every dataset is in the public domain
 - Not everybody knows that U.S. Government data are usually in the public domain

→ Improve
provenance
documentation

Why
Reproducibility,
Provenance?

Credibility

Loss in the Time of Cholera: Long-Run Impact of a Disease Epidemic on the Urban Landscape[†]

By ATTILA AMBRUS, ERICA FIELD, AND ROBERT GONZALEZ*

How do geographically concentrated income shocks influence the long-run spatial distribution of poverty within a city? We examine the impact on housing prices of a cholera epidemic in one neighborhood of nineteenth century London. Ten years after the epidemic, housing prices are significantly lower just inside the catchment area of the water pump that transmitted the disease. Moreover, differences in housing prices persist over the following 160 years. We make sense of these patterns by building a model of a rental market with frictions in which poor tenants exert a negative externality on their neighbors. This showcases how a locally concentrated income shock can persistently change the tenant composition of a block. (JEL D62, O18, R21, R31)

Indeed, it is the peculiar nature of epidemic disease to create terrible urban carnage and leave almost no trace on the infrastructure of the city.
—Steven Johnson, *The Ghost Map*

Can disease exert a permanent effect on the geography of urban poverty? While it is well understood that illness is impoverishing, because health shocks have no direct impact on infrastructure or land, it is not obvious that epidemics which affect a small number of residents would leave an economic footprint on a city. As the quote above illustrates, a common presumption is that residential migration will preserve the spatial distribution of income in the long run, erasing such shocks from the map over time. In this manner, idiosyncratic income shocks to households should not lead to lasting pockets of poverty in a city. Yet, in reality, spatial discontinuities in urban land values are frequently observed and do not always appear related to discrete changes in local amenities.

We examine this question in the context of a cholera epidemic that hit a single urban parish of London in 1854. Over the course of one month, 660 residents living

Project Description

Summary: How do geographically concentrated income shocks influence the long-run spatial distribution of poverty within a

Published Versions

Credibility

AMERICAN ECONOMIC ASSOCIATION

American Economic Review

The *American Economic Review* is a general-interest economics journal. Established in 1911, the AER is among the nation's oldest and most respected scholarly journals in economics.

American Economic Review: Insights

AER: Insights is designed to be a top-tier, general-interest economics journal publishing papers of the same quality and importance as those in the AER, but devoted to publishing papers with important insights that can be conveyed succinctly.

Journal of Economic Literature

The *Journal of Economic Literature* (JEL), first published in 1969, is designed to help economists keep abreast of and synthesize the vast flow of literature.

Journal of Economic Perspectives

The *Journal of Economic Perspectives* (JEP) fills the gap between the general interest press and academic economics journals.

American Economic Journal: Applied Economics

American Economic Journal: Applied Economics publishes papers covering a range of topics in applied economics, with a focus on empirical microeconomic issues.

American Economic Journal: Economic Policy

American Economic Journal: Economic Policy publishes papers covering a range of topics, the common theme being the role of economic policy in economic outcomes.

American Economic Journal: Macroeconomics

American Economic Journal: Macroeconomics focuses on studies of aggregate fluctuations and growth, and the role of policy in that context.

American Economic Journal: Microeconomics

American Economic Journal: Microeconomics publishes papers focusing on microeconomic theory; industrial organization; and the microeconomic aspects of international trade, political economy, and finance.

Current efforts at the AEA

- **Pre-emptively improve code archives**
 - By conducting reproducibility checks when we can
 - By working with groups that conduct reproducibility checks when we cannot
- **Better archives**
 - Greater transparency of the code and data archives
- **Better provenance tracking**
 - Leave code where it is when appropriate
 - Leave data where it is almost always
 - Display that information

AEA “Data Availability Policy” (2018)

- **It is the policy of the American Economic Association to publish papers only if the data used in the analysis are clearly and precisely documented and are readily available to any researcher for purposes of replication.**
- Authors of accepted papers that contain empirical work, simulations, or experimental work must **provide**, prior to publication, the **data, programs, and other details of the computations sufficient to permit replication**. These will be posted on the AEA website. The Editor should be notified at the time of submission if the data used in a paper are proprietary or if, for some other reason, the requirements above cannot be met.

AEA Data & Code Availability Policy (2019)

- It is the policy of the American Economic Association to publish papers only if the data used in the analysis are **clearly and precisely documented and access to the data and code is clearly and precisely documented and is non-exclusive to the authors.**
- Authors of accepted papers that contain empirical work, simulations, or experimental work must **provide, prior to acceptance,** the data, programs, and other details of the computations **sufficient to permit replication,** as well as **information about access to data and programs.**

AEA DCAP (2018→2019)

- These will be **posted on the AEA website**. The Editor should be notified at the time of submission if the data used in a paper are proprietary or if, for some other reason, the requirements above cannot be met.

Data and programs should **be archived in the AEA Data and Code Repository**. Authors will **provide access** to editors and reviewers, if requested, **to both data and programs prior to acceptance**. The Editor should be notified at the time of submission if access to the data used in a paper is restricted or limited, or if, for some other reason, the requirements above cannot be met. **The AEA Data Editor will assess compliance with this policy, and will verify the accuracy of the information prior to acceptance by the Editor.**

Current efforts at the AEA

- **Pre-emptively improve code archives**
 - By conducting reproducibility checks when we can
 - By working with groups that conduct reproducibility checks when we cannot
- **Better archives**
 - Greater transparency of the code and data archives
- **Better provenance tracking**
 - Leave code where it is when appropriate
 - Leave data where it is almost always
 - Display that information

AEA Pre-Publication Verification

- Every paper that receives a “conditional acceptance” is verified
 - *Data citations*
 - *Quality of README*
 - *Quality of code*
 - *Reproducibility of code*
 - *Quality of metadata in the repository*

Replication continuum

Same data	Same code	Same methods	Same context

Reproducibility

- Narrow Replication (Pesaran 2003)
- Pure Replication (Hamermesh 2007)
- Verification (Clemens 2015)

Action: Reproducibility Check

Data and Code Guidance by Data Editors

Guidance for authors wishing to create data and code supplements, and for replicators.

Verification guidance

On this page:

- [Overview](#)
- [Review the README file](#)
- [For each listed data source](#)
- [For each listed table, figure, in-text number](#)
- [Conduct a code verification, if data is available](#)
- [Examples](#)

Overview

This document describes

- what authors should check before providing data and code to journals
- what verifier teams should check for in the data and code submitted to them for the purpose of verification

Who is doing that?

- Earlier reproducibility work: **Flavio Stanchi** (now at AirBnb), **Sylverie Herbert** (on the market), **Hautahi Kingi** (Impaq)
- Current lead graduate students: **David Wasser** (until Dec 2019), **Meredith Welch** (since Jan 2020)
- Current and past undergraduate students: Alexia Ge, Anthony Peraza, Craig Schulman, Elijah B. Ruiz, Gabriel Bond, Jason S. Katz, **Jeong Hyun Lee**, **Jiayin Song**, John Park, **Joshua Passel**, Kirubeal T. Wondimu, Linchen Zhang, **Louis Liu**, **Luis Lopez Cabrera**, Luke O'Leary, **Mary-Jo Ajiduah**, **Naomi Li**, Nicholas Swan, Nishat Peuly, **Ryan Ali**, Samuel Frey, Siyang (Elaine) Yu, **Steve Yeh**, **Weilun Shi**, William Hernandez, **Yanyun (Iris) Chen**, Yuan-Hsuan (Sharon) Lin, **Zebang Xu**, Xing Su, Jiazhen Tan, Xueshi Su, Vendela Norman, Anderson Park, *Nehedin Juarez, Rubal Mistry, Syon Verma, William Silverman, Zechariah Karsana*
- Other graduate students: Aviv Caspi, Leah Kim

Goal: Improve reproducibility

Verifying Data and Code Deposits

- Check README
 - Legible? Intelligible? Complete?
- Check Code
 - Where is Table 1? Figure 1? Could this work?
- Check Access Rights
 - Can the author provides us with data?
 - Does the data access as described work?

AEA Data and Code Guidance

**AMERICAN
ECONOMIC
ASSOCIATION**

Guidance for authors wishing to create data and code supplements, and for replicators.

Unofficial guidance on various topics by the AEA Data Editor

These web pages provide unofficial and developing guidance on the implementation of the American Economic Association (AEA)'s Data and Code Availability Policy. We also provide links to **generic guidance** being developed by a loose collective ("guild") of data editors and people in a similar role at various social science journals.

 Follow @aeadata

Order in which AEA authors should read these resources:

1. Start with the **official Data and Code Availability Policy**
2. Look for general guidance at the **Social Science Data Editors pages**
3. Read the **AEA's FAQ**
4. Look for any guidance specific to the AEA at the **Unofficial AEA Data and Code Guidance**
5. Last but not least, have a look at the **draft FAQ on this site**

Comments are welcome, please file them as **issues** in our Github repo.

Guidance on creating replicable data and program archives

How should researchers create replicable data and program archives? How

[MC number] [Manuscript Title] Validation and Replication results

INSTRUCTIONS: Once you've read these instructions, DELETE THESE AND SIMILAR LINES. In the above title, replace [Manuscript Title] with the actual title of the paper, and [MC number] with the Manuscript Central number (e.g., AEJPol-2017-0097) Go through the steps to download and attempt a replication. Document your steps here, the errors generated, and the steps you took to alleviate those errors.

You may want to consult [Unofficial Verification Guidance](#) for additional tips and criteria.

SUMMARY

INSTRUCTION: The Data Editor will fill this part out. It will be based on any [REQUIRED] and [SUGGESTED] action

Stats on reproduced articles

Between July 16, 2019, and November 28, 2019 (4.5 mths), the AEA Data Editor team conducted

- **216 assessments**
- for **138 manuscripts**.
- (as of today, approx. 600 assessments)

Stats on reproduced articles

- The typical article goes through **at least two rounds** of assessment (none were perfect)
- Conversely, **not a single study was irreproducible** (not supporting manuscript claims)

Stats on reproduced articles

- Goal is turnaround of **two weeks**
- Currently still **too long**

Stats on reproduced articles

- Total time (from first submission to final signoff) is **too long**

Increasing team size

- Grown from **7 undergrads** + 1 graduate assistant
- To **18 undergraduates**, **15 trainees**, + 1 graduate assistant (+ 1 volunteer)
- And:

A cascad certification allows researchers to signal the reproducibility nature of their research to their peers

HOME / ABOUT / NEWS /

Announcing the Alexander and Diviya Magaro Peer Pre-Review Program at IQSS

January 10, 2019

The Institute for Quantitative Social Science is excited to announce the Alexander and Diviya Magaro Peer Pre-Review Program (PPR). PPR is designed to help IQSS-affiliated faculty improve scholarship before it becomes public, speed scientific discovery and publication, and reduce substantial inefficiencies for individual researchers.

The process of turning a draft paper into a journal publication may take months or years through multiple rounds of often peer review

Stats on reproduced articles

- But author response time is also a contributor

Current efforts at the AEA

- **Pre-emptively improve code archives**
 - By conducting reproducibility checks when we can
 - By working with groups that conduct reproducibility checks when we cannot
- **Better archives**
 - Greater transparency of the code and data archives
- **Better provenance tracking**
 - Leave code where it is when appropriate
 - Leave data where it is almost always
 - Display that information

 **AMERICAN ECONOMIC ASSOCIATION** AEA Deposit Instructions Browse AEA Deposits Contact

Depositing Data in the AEA Data and Code Repository

The *American Economic Association journals* require authors to deposit data and materials with a community-recognized or general repositories. The *AEA Data and Code Repository at ICPSR* serves that purpose. Please see the AEA's [Data and Code Availability Policy](#) and data citation guidance at the [Sample References](#) page for more details. **Authors are required to include a citation pointing to the deposit in the reference section of the final version of the article sent to the AEA.** The *openICPSR* repository automatically generates a citation when the data are "published."

Deposits should include all data, annotated program code, command files, and documentation that is needed to replicate the findings from the authors' submitted article.

- **Data** should be comprehensively documented (see ICPSR's [Guide to Social Science Data Preparation and Archiving, 5th Edition](#) for guidance). The **author** is responsible for removing identifying information from the data to protect [confidentiality](#). Neither the AEA nor ICPSR review submissions for disclosure risk.
- **Program** code and command files should be annotated to facilitate replication and ensure clear correspondence between code and figures, tables, and analyses in the published article.
- Authors retain ownership and copyright to the data and code. Authors are required to affirm that they have the right to publish and redistribute the material. However,
 - ICPSR requires a license for distribution of data.
 - An **open license** is required by the AEA, in order to allow others to re-use the data and code, in particular for replication. Authors can select from several license options, including CC-BY 4.0 for data and Modified BSD for software and code. If an author would like to use multiple licenses or create a customized license, she should select the "Other" license option and upload a LICENSE file alongside the data and documentation.

By depositing in the AEA Data and Code Repository, the depositors allow the AEA staff to add keywords and other metadata which are important for proper indexing in linking. Any other changes are subject to the license chosen for the materials.

Some statistics

- **Stata** is the most popular statistical software in the journals of the AEA
(**72.96%** of all supplements)
- followed by **Matlab** (**22.45%**)

Current efforts at the AEA

- **Pre-emptively improve code archives**
 - By conducting reproducibility checks when we can
 - By working with groups that conduct reproducibility checks when we cannot
- **Better archives**
 - Greater transparency of the code and data archives
- **Better provenance tracking**
 - Leave code where it is when appropriate
 - Leave data where it is almost always
 - Display that information

perceived criteria of importance.

1. Importance

Data should be considered legitimate, citable products of research. Data should be accorded the same importance in the scholarly record as citable research objects, such as publications[1].

Data Citation Principles

2. Credit and Attribution

Data citations should facilitate giving credit and attribution and

1 Bureau of Labor Statistics. 2000–2010. “Current Employment Statistics: Colorado, Total Nonfarm, Seasonally adjusted - SMS080000000000000001.” United States Department of Labor. <http://data.bls.gov/cgi-bin/surveymost?sm+08> (accessed February 9, 2011).

in scholarly literature, whenever and wherever a claim relies upon data, the corresponding data should be cited[3].

4. Unique Identification

A data citation should include a persistent method for identification that is actionable, globally unique, and widely used by a community[4].

5. Access

Data citations should facilitate access to the data themselves and to such related documentation, code, and other materials as are necessary for

AEA “Data Availability Policy” (2019)

- It is the policy of the American Economic Association to publish papers only if the data used in the analysis are **clearly and precisely documented and access to the data and code is clearly and precisely documented and is non-exclusive to the authors.**
- Authors of accepted papers that contain empirical work, simulations, or experimental work must **provide, prior to acceptance,** the data, programs, and other details of the computations **sufficient to permit replication,** as well as **information about access to data and programs.**

Every manuscript is checked

- What datasets are used
- Are they cited?
 - → in Article?
 - → in Online Appendix?
 - → in README?

Every manuscript is checked

- What datasets are used
- Are they cited?
- Is there additional information access?
 - → URL leads to exact data?
 - → URL leads to application procedure?
 - → other access procedure is described?

Every manuscript is checked

- What datasets are used
- Are they cited?
- Is there additional information on access?
- Is there license/ data use information?
 - → Should the author provide the data?
 - → Is the author allowed to provide data?

Proposed:

Explicit DAS or

Incorporate into README

Evolving Journal and Data Infrastructure

Authors struggle with
this!

The author contacted the data provider, and received an answer similar to this one:

Hi John Doe, The simple answer is no, we do not want this data to be released publicly. Doing so would require revisiting the data use agreement and another round of Privacy Impact Assessment for internal approval. Regards,
Your Data Provider

[Japan](#) [South Korea](#)

The chart displays the Economic Policy Uncertainty Index over time, with a y-axis ranging from 100 to 200. The index shows significant volatility, with major peaks around 2008 and 2014-2015, and a notable dip around 2011. The data points are connected by a blue line.

Response

Thanks, but I'll stick with what I've been doing for at least 20 years. At some point I might figure out the right license, but it's been working so far. And your inference is correct, the authors can use the data but not redistribute it. In this specific case, there is no reason for them to do so because the data are freely available to everyone.

Example 3: FRED (St. Louis Fed)

The screenshot shows the top navigation bar of the FRED website. On the left is the FRED logo with the text "ECONOMIC DATA | ST. LOUIS FED". To its right is the text "ECONOMIC RESEARCH" and "FEDERAL RESERVE BANK OF ST. LOUIS". On the far right is a "MY ACCOUNT" link. Below this is a search bar labeled "Search FRED". A secondary navigation bar contains links for "FRED® Economic Data", "Information Services", "Publications", "Working Papers", "Economists", and "About". On the right side of this bar is a link for "St. Louis Fed Home". Below the navigation bar is a breadcrumb trail: "Categories > Prices > Consumer Price Indexes (CPI and PCE)".

Some Suggestions

For authors

Action: Encourage Best Practices

- **Follow robust coding**
 - Ensure that code reliably produces results
(possibly automated)
 - Before you finish the manuscript, run all analysis code again
(if not too onerous)

Improving replication packages

- Victoria Stodden's TIER talk
2020-02-07

- Whole Tale
- CodeOcean
- OSF
- Binder.org
- Runmycode.org

Beware: reproducibility
tomorrow, platform gone the day
after!

- Scott Long's TIER talk
2020-03-06

- Dual-workflow
- Emphasize reproducibility from
the start

Beware: document provenance of
data!

Streamlining replication packages

- Master script preferred
 - Least amount of manual effort
- No manual manipulation
 - “Change the parameter to 0.2, then run the code again” 
- No manual copying of results
 - Write out/save tables and figures using packages
 - Compute all numbers in package
- No manual install of packages
 - Use a script to create all directories, install all necessary packages/requirements/etc.
- Clear instructions!

Data Availability Statements (DAS)

- A statement about **where data** supporting the results reported in a published article can be

to publicly
ated during
y providing a
restrictions,

Provide data citations (in manuscript) and data availability statements (in README or appendix)

Data Availa

- A statement **available**
 - DOI assi
 - But long
- A statement about **usage rights**
 - Not every dataset is in the public domain
 - Not everybody knows that U.S. Government data are usually in the public domain

For institutions

Better support for researchers

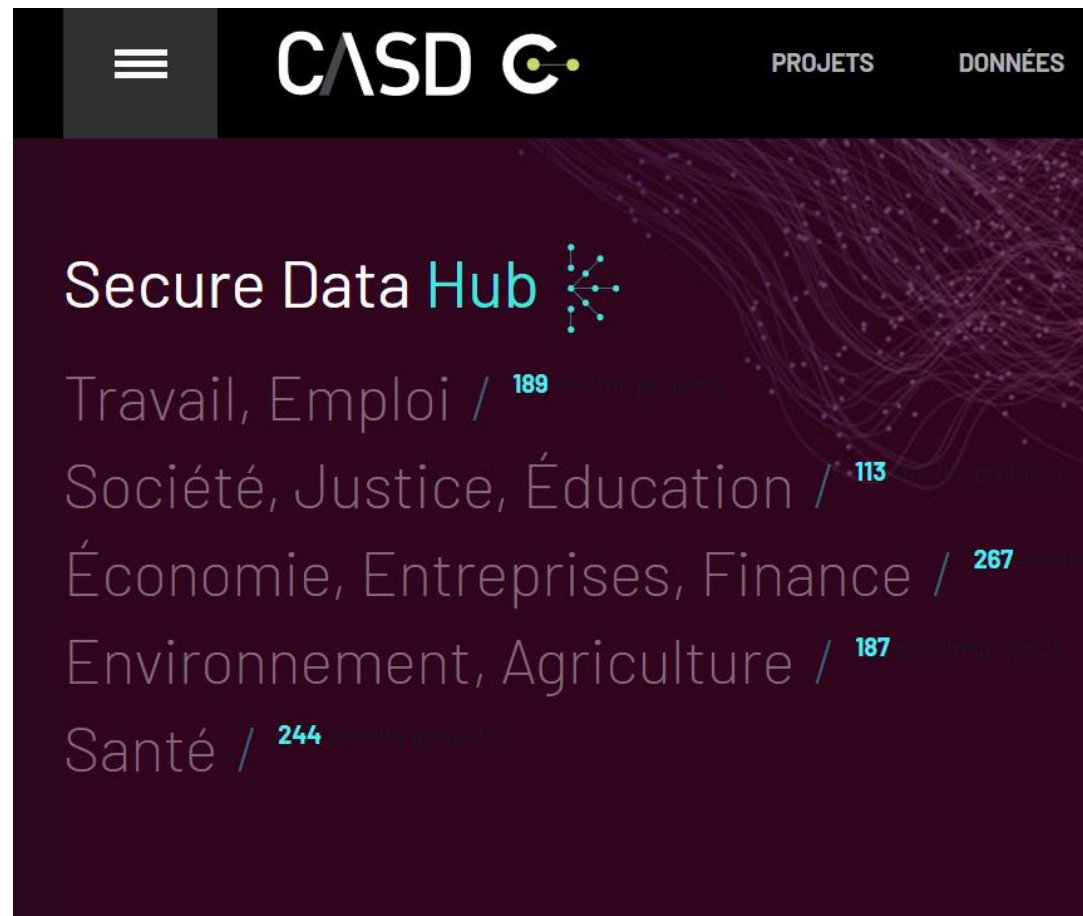

- Training in methods (with various centers, institutions, etc.)
 - For current researchers (Carpentries, custom, etc.)
 - For integration into curriculums
- Tools to streamline the process
 - A few technical things (not described here)
 - Coordinate among journals (no duplicate effort)
- Awareness
 - Consider badges/ certification
 - Address issues with confidential data

Verification services

 **cascad**
*the first certification
agency for scientific
code & data*

A cascadi certification allows researchers to signal the reproducibility nature of their research to their peers

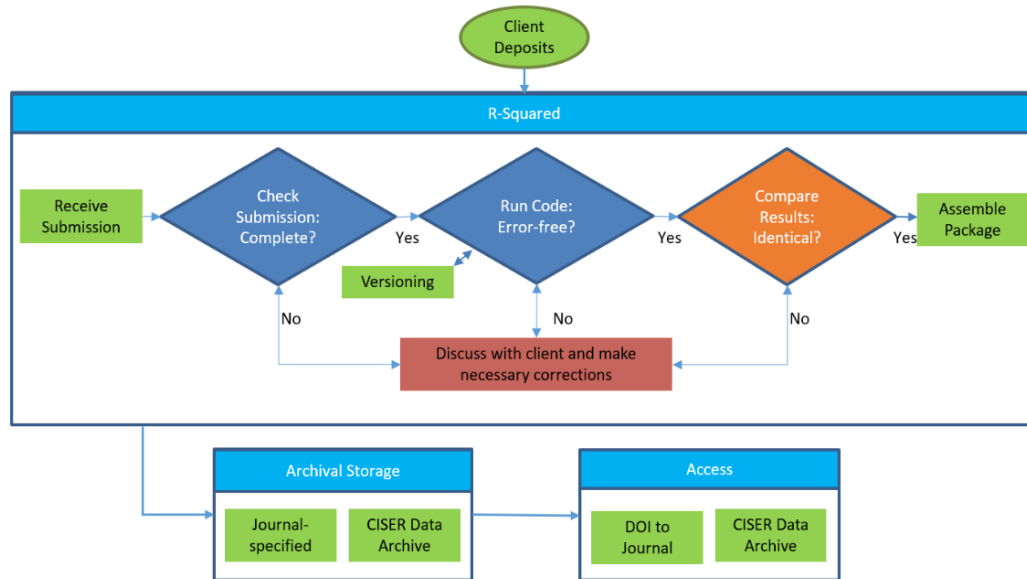

The screenshot shows the CASD website interface. At the top, there is a dark navigation bar with a hamburger menu icon on the left, the 'CASD' logo in the center, and the words 'PROJETS' and 'DONNÉES' on the right. Below the navigation bar, the main content area has a dark purple background with a network-like pattern of white lines and dots. The text 'Secure Data Hub' is prominently displayed in white, with a small network icon to its right. Below this, there are five categories listed in a lighter purple font, each followed by a count in red: 'Travail, Emploi / 189', 'Société, Justice, Éducation / 113', 'Économie, Entreprises, Finance / 267', 'Environnement, Agriculture / 187', and 'Santé / 244'.

RESULTS REPRODUCTION (R-SQUARED)

Results Reproduction (R-Squared) is a service that computationally reproduces the results of your research to ensure Reproducibility and Transparency – think of it as *enhanced proofreading for your Data and Code*.

Announcing the Alexander and Diviya Magaro Peer Pre-Review Program at IQSS

January 10, 2019

The Institute for Quantitative Social Science is excited to announce the Alexander and Diviya Magaro Peer Pre-Review Program (PPR). PPR is designed to help IQSS-affiliated faculty improve scholarship before it becomes public, speed scientific discovery and publication, and reduce substantial inefficiencies for individual researchers.

Verification services

Your students!
Your colleagues!

For journals

Goal: Transportability

Any standards, tools, methods: must be transportable across journals (no custom solutions)
