

Darwin Core & Georeferencing

John Wieczorek

Ver⁺Ne⁺

Georeferencing

Assigning a **numerical description** of a **location** in a **coordinate reference system**, including the **extent** and accounting for associated **uncertainties**.

Best Practice: ... with sufficient information to be reproducible.

Prospective Georeferencing

Gathering location information directly in numerical form in the field.

Retrospective Georeferencing

Interpreting location in numerical form from information available post-facto.

Darwin Core quick reference guide

This page provides a list of all currently recommended terms of the Darwin Core standard. Categories such as [Occurrence](#) or [Event](#) correspond to Darwin Core classes which group other terms. Convenient [files of these terms](#) and [their full history](#) can be found in the [Darwin Core repository](#).

| Location | | Class |
|------------|---|-------|
| Identifier | http://purl.org/dc/terms/Location | |
| Definition | A spatial region or named place. | |
| Comments | | |
| Examples | The municipality of San Carlos de Bariloche, Río Negro, Argentina. The place defined by a georeference. | |
