The pandemic results in unprecedented collaborations.

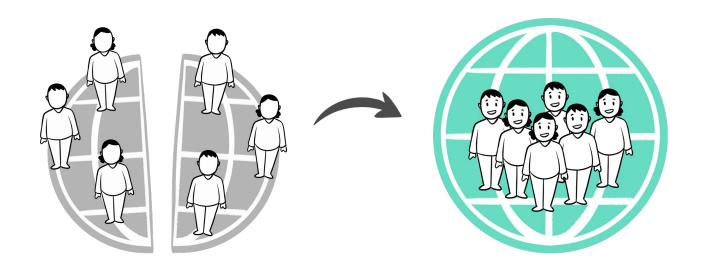

In March, 60+ hackathons were organized.¹

The biggest rallied 18000 people, creating 1200 projects in 4 days. ²

To ensure these efforts save lives, we need to **cooperate** beyond events/projects.

Example: how to ensure people in all countries can locally produce one ventilation machine, from the 65+ open versions³ being build?

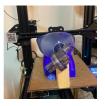

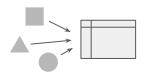

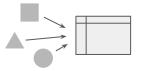

What if it was as easy as five steps?

Are safety and health outcome validated?

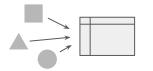

Can I reproduce it with everyday's parts?

I'm 6, can I reproduce it with my older brother?

Before the pandemy, 1 human in 2 had access to essential care.¹

This is the time to adopt **new ways of working together**, so that everyone will be able to afford a healthy and decent life.²

The Emerging Change approach can help us do that.

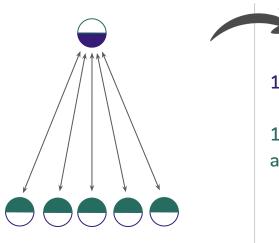

^{1.} World Bank and WHO: Half the world lacks access to essential health services, 100 million still pushed into extreme poverty because of health expenses.

^{2.} The Global Goals. Ensure healthy lives and promote well-being for all at all ages.

What if we shifted from competition to cooperation?

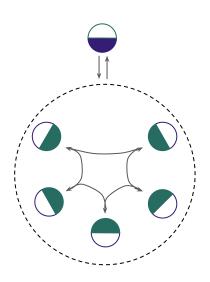

1 goal

5 ideas competing

1 goal

1 idea agreed among peers

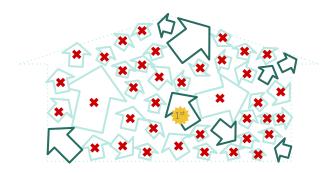

- participants seek host recognition (power plays)
- · host is overwhelmed
- · scarcity → wasted motivation and resources

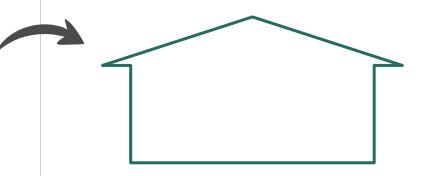

- · participants seek mutual recognition (respect)
- · host gets time for strategic work
- · abundance → mutual support and creativity

The example of hackathons

Yesterday

Today: teams of teams (commons)

- · host sets the topic agenda, awards
- · teams of participants compete to build projects
- · finally: few rewarded, most work discarded

- · host sets the topic agenda, awards
- · teams cooperate to build 1 meaningful project
- · finally: all rewarded, most work valued

Should you feel inspired and be determined to collaborate differently, I would be glad to share the approach and discuss it with you. :)
