# Why persistent identifiers?

- Standard part of modern digital archive (proper citation)
- Institute of sociology is social science book and journal publisher, we introduced DOI for journal articles and books, datasets were next step.

# What PID system to choose?

- 👤 I knew about only two: URN and DOI
- 👤 DOI was chosen because it was already in use in our institute
- 👤 There is no DOI registration agency in Czech republic
- 👤 DaRa

# Challenges concerning the introduction of PID

- We hired MA information science student to take care of DOI database filling and updating
- Dataset are mostly (90%) in Czech language
- Translation of metadata (keywords, abstracts, institutions etc.).
- Our DOI database records are very simple for now, just mandatory fields.
- We are rebuilding our data catalogue, new topics classification, keywords based on ELSST.

# Satisfaction, future plans and CESSDA role

- We are using web based and xml input of DOI metadata, we are satisfied with DaRa user interface
- We want our data to be part of international databases (thomson reuters data citation index) so we want our DOI records will be best as possible.
- CESSDA role ?
