# Documentation and Metadata

# **INTRODUCTION TO DATA DOCUMENTATION AND METADATA**

# What are metadata?

- **Metadata are...**
  - ... data about data, i.e. a description of data
  - ... “structured or semi-structured information which enables the creation, management, and use of records [i.e. data] through time and within and across domains“ (Day, 2005)

⇒ **Metadata tell a story about the data, i.e. makes ...**

... sense of the data

... the data detectable

	v1	v2	v3	v4	v5	v6	v7	v8	v9	v10	v11	v12	v13	v14	v15	v16

What is the study about?  
When and by whom was it conducted? etc.

What do the variables and underlying questions mean?

Who was observed?  
What is the underlying population? etc.

What do the codes mean?

# Functions of metadata

Images pixabay (CC-0)

**CREDIBILITY**

# Levels of data documentation

Metadata on...

**variable** level

**study** level

# Metadata can be...

## unstructured

Un-/semi-standardized documentation of the data, e.g.

- codebooks
- methodical reports etc.
- protocols

## structured

structured information in a standardized manner

- ISCO (Classification)
- DDI (Metadata)

# Standards for Structured Metadata

- Different standards exist, for example
  - Dublin Core
  - Data Documentation Initiative (DDI)
  - Statistical Data and Metadata eXchange (SDMX)
- Standard guidelines for documentation
- Only indirectly relevant for smaller research projects
- Directly relevant for data repositories and archives

# Take-Home Message

- Documentation and registration are important
- Minimum requirements for re-use and replication (good scientific practice):
  - Data file
  - Variable documentation
  - Questionnaire
  - Methodological report
- Scope of documentation depends on project size, amount of data, personal and financial resources
- Create data management plan and apply for sufficient grants for data documentation and processing work

# DOCUMENTATION AT THE STUDY LEVEL

# Study Level

- **Study description**
  - aim of study
  - primary researchers
  - funders etc.
- **Study design**
  - population and sampling procedure
  - method of data collection etc.
- **Data processing**
  - data cleaning
  - anonymization etc.

Image: Erin Standley (CC-BY)

# Basic Elements

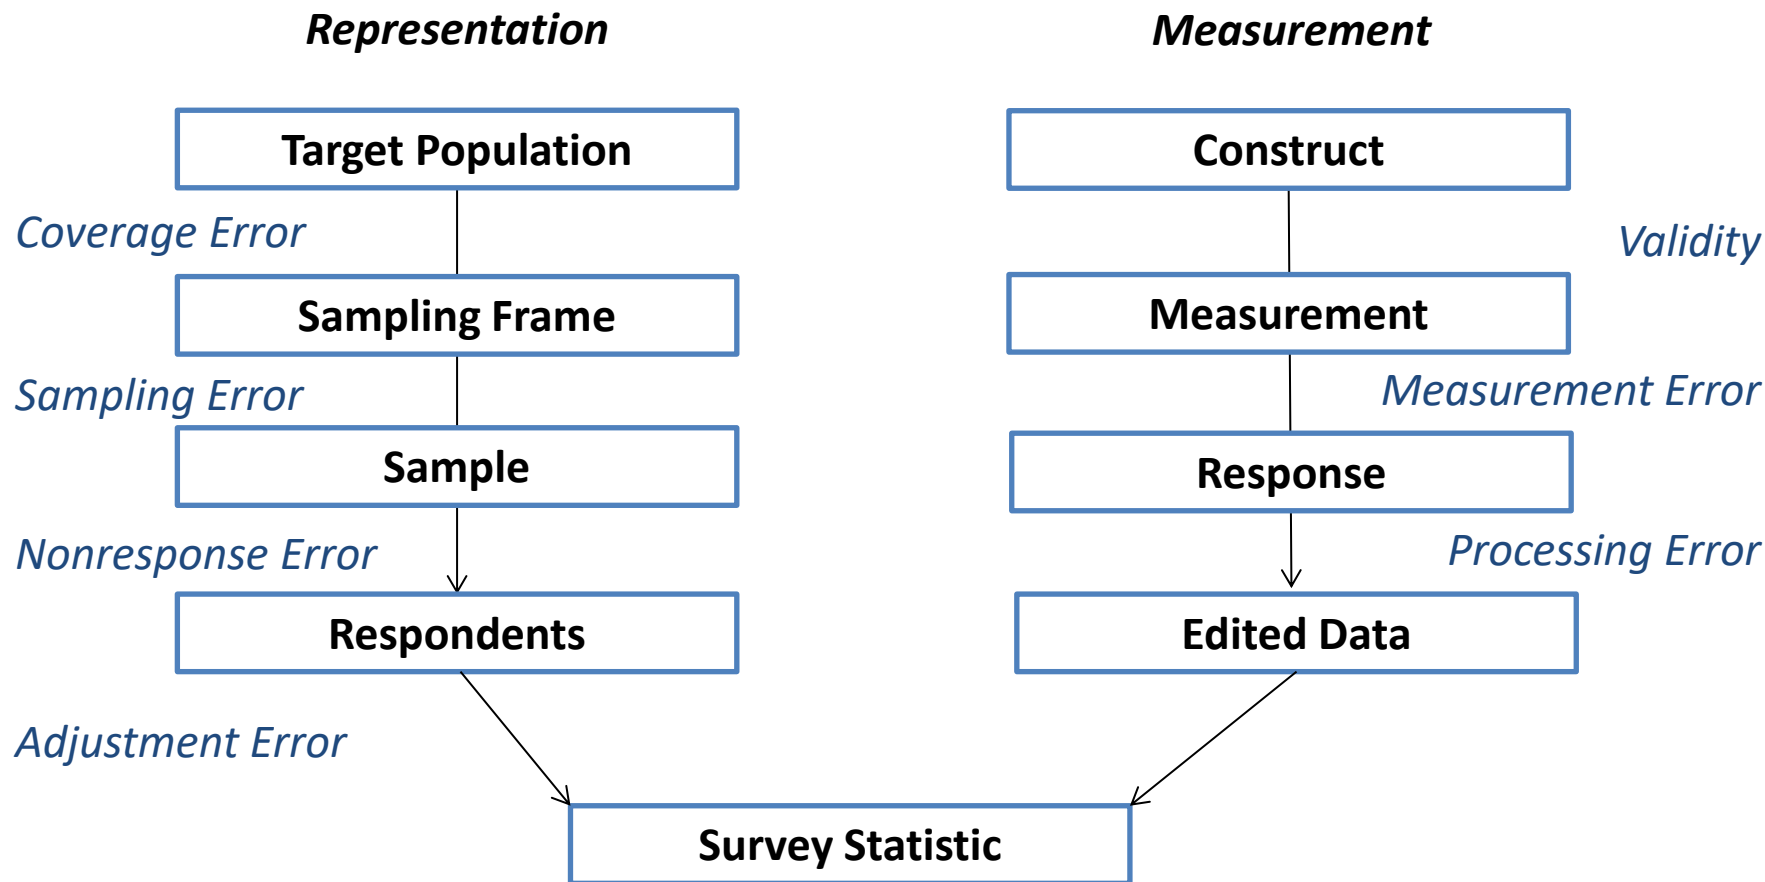

**General context in which data were collected and the methodological steps in generating the data at hand:**

- Methodological or technical report
- Questionnaire
- Any other materials (e.g. interviewer selection grid for households, respondent stimuli)

# Methodological Reports

- (aka field reports or technical reports)
- Provide researchers with an overview of
  - survey design,
  - data collection, and
  - statistical processing of the data to be analyzed
- Should enable the researchers to assess the quality and the analytical potential of the data
- Related to possible “errors” occurring during the survey research process based on the total survey error (TSE) approach.

# Total Survey Error Framework

Source: Adapted from Groves et al. (2004).

# Guidelines for Survey Documentation

Question	Report Section	Sources of Error
<b>For what purpose were the data collected?</b>	Objective and Design	
<b>How were the respondents selected?</b>	Target Population and Sampling	Coverage error Sampling error Unit nonresponse
<b>How were the data collected?</b>	Mode of Data Collection	Mode measurement error
<b>What information was collected?</b>	Survey Instrument	Respondent measurement error Item nonresponse
<b>Who has collected the data when and where?</b>	Fieldwork	Interviewer measurement error House effects
<b>How were the data edited, coded, and weighted?</b>	Data Processing	Processing errors Adjustment errors
<b>Were provisions of data protection laws respected?</b>	Data Protection and Ethical Issues	Ignoring legal issues

# Guidelines for Survey Documentation

## **Methodological report front matter:**

- Study title/series title
- Principal investigators/project team
- Funding
- Recommended citation

# Guidelines for Survey Documentation

**Objectives and Design:** background, research objectives, research design (e.g. cross-section, trend, panel)

## Example

*The European Values Study (EVS) is a large-scale, cross-national, and longitudinal survey research program on how Europeans think about family, work, religion, politics and society. Repeated every nine years in an increasing number of countries, the survey provides insights into the ideas, beliefs, preferences, attitudes, values, and opinions of citizens all over Europe. Four waves of surveys were executed from 1981 to 2008. These surveys explore value differences, similarities, and value changes.*

*Source: EVS 2008 Method Report*

# Guidelines for Survey Documentation

**Target Population and Sampling:** the target population and eligibility criteria, sampling frame, respondent selection at each sampling stage, description of clustering and/or stratification

## **Example EVS Sampling Procedure Germany**

*Persons 18 years or older who are resident within private households, regardless of nationality and citizenship or language. [...] The basis for the study is a random sample drawn from resident registers of German municipalities (a national resident register does not exist). Therefore the sampling has to proceed in two steps: (1) a random sample of municipalities had to be drawn and (2) random samples of the municipalities' resident registers. The sample design is disproportional and takes the distinction of East and West Germany into account where the East and West of Berlin are attributed to the respective parts of Germany. In order to realize the oversampling of East German population, the sample of municipalities is stratified according to the federal states and to 7 size-classes of the municipalities (in order to reflect the population of the municipalities in the sampling probabilities).*

*Source: EVS 2008 Method Report*

# Guidelines for Survey Documentation

**Mode of Data Collection:** self-administered vs. interviewer-administered, computer-assisted vs. not computer-assisted, mixed-mode designs

## Example EVS

*In all countries, fieldwork was conducted on the basis of detailed and uniform instructions prepared by the EVS advisory groups. The EVS questionnaires were administered as face-to-face interviews in the appropriate national language(s). As far as the data capture is concerned, CAPI or PAPI was used in nearly all countries. Exceptions are Finland (internet panel) and Sweden (postal survey).*

*Source: EVS 2008 Method Report*

# Guidelines for Survey Documentation

**Survey Instrument:** topics of the questionnaire, construction of scales (psychometric quality), special instruments, and results of traditional or cognitive pretests, translation

*Table 2: Thematic categories and related variables in EVS 2008*

Preceding character	Thematic category	New category	Number of variables	Number of new variables	Number of variables used in EVS 1999 and 2008
A	Perceptions of life		155	12	73
B	Environment		14	6	1
C	Work		63	5	25
D	Family		71	7	24
E	Politics and Society		160	9	63
F	Religion and Morale		164	8	46
G	National identity		30	20	4

*Source: EVS 2008 Project and Data Management*

# Guidelines for Survey Documentation

**Fieldwork:** field dates, number of interviews, interview duration, interviewer training and monitoring

## Example EVS Belgium

*The fieldwork was performed by a total of 104 interviewers. The majority (n = 87) of the interviewers, selected by the field agency, had previous experience with scientific survey research. Interviewers were classified as experienced if they had participated in at least one academic social survey in the past three years. The inexperienced interviewers (n = 17) were trained by the field agency and have already worked on non-academic market research. They also participated in the EVS-Briefing, as did all interviewers. The interviewers had an average age of 54 years, ranging from 25 years to 90 years. A crosstabulation of educational level by gender is provided in table 2.6.*

*Source: EVS 2008 Method Report*

# Guidelines for Survey Documentation

**Response Rates:** contact rates, cooperation rates, response rates and refusal rates (AAPOR)

## *Standard Definitions*

### **Final Dispositions of Case Codes and Outcome Rates for Surveys**

Revised 2016

*RDD Telephone Surveys*  
*In-Person Household Surveys*  
*Mail Surveys of Specifically Named Persons*  
*Mail Surveys of Unnamed Persons*  
*Internet Surveys of Specifically Named Persons*

# Guidelines for Survey Documentation

**Data Processing:** how the data were edited and cleaned up in general, coding of open-ended responses, creation of different types of weights

## Example EVS Weighting Procedure Germany

*The variable "weight" was computed by the EVS for all national datasets on the basis of information and population statistics provided by the EVS countries. The weight is constructed on the basis of gender and age categories (-24; 25-34; ... ; 65-74; 75 and over). Value '0' implies that year of birth information was missing in the data. The weight adjusts the socio-structural characteristic in the samples to the distribution of gender and age of the universe-population. For German and Belgium data an additional country-specific weight variable (weight\_c) is provided that includes a special weight factor for the regions of Germany (East- and West) and of Belgium (Brussels capital region, Flanders and Walloon region). This design weight corrects for the disproportional sample size of these regions in both countries. The reported population sizes refer to adult inhabitants, i.e. people of age 18 and older. For the computation of the weighing factors two calculation steps are necessary:*

*(I) (inh. Region1 / inh. country) \* total sample size = proportional share of interviews from Region1*

*(II) proportional share of interviews / realized share of interviews = weighing factor*

*Source: EVS 2008 Method Report*

# Guidelines for Survey Documentation

**Data Protection and Ethical Issues:** documentation of informed consents, any measures to protect respondent privacy (e.g. aggregation of variables).

# Documentation of Survey Instruments

- Include the original questionnaire and any other materials used during fieldwork processes (respondent- and interviewer-related)
- Document fieldwork questionnaire as used by the survey vendor
- Use screenshots from the survey software to detect differences between original questionnaire and the questionnaire in field
- Respondent materials: advance letters, show cards, consent forms, experimental stimuli etc.

# Exercise: Data Documentation

work in 5-6 groups

time: about 30 minutes

afterwards, we will  
commonly discuss your  
suggestions

see Exercise-Booklet for  
details on Exercise 7

Exercise Booklet:  
Research Data Management,  
September 16-21, 2019, Masaka, Uganda

gesis Leibniz Institute  
for the Social Sciences

**Exercise 7: Data Documentation**

- ✎ Work in 2-4 groups
- 🕒 Time: about 30 minutes
- 🗣️ At the end, one member of your group should briefly present the results of your discussion and your conclusions.

Have a look at the following field report and discuss within your working group how useful you consider it for the purpose of re-using the data. Take into account

- the content of the document and the language used, i.e. is the report understandable and unambiguously written? Do you miss any important information or are there any statements you would not include in such a field report? Do you recognize any contradictions in the description, etc.;
- the structure of the document, i.e. how would you present the relevant information in such a field report?

FIELD REPORT InDILeSo 14.09.2015

**FIELD REPORT**  
**RESEARCH PROJECT**  
**Interdisciplinary Learning in Social Sciences**  
**(InDILeSo)**

The current sample can be considered to represent the population of interest (students of social sciences at Swiss universities). In our research project we visited several colleges in Switzerland in the cantons of Basel, Lausanne and St. Gallen. Our highly qualified interviewers (most of them student research assistants) interviewed a total sample of 357 students, employing a standardized questionnaire. In the project, we randomly selected three universities and visited them on three Fridays in June and July 2015. There, we attended lectures based on availability and chose a number of students to briefly interview them (about 30 min) after the sessions.

10 / 14

cessda eric  
28

# Content and Language

- **Clear and unambiguous language**
  - “college” and “university” are no synonyms
- **Describe and don’t evaluate**
  - current sample can be considered to represent the population of interest
- **Complete information**
  - who were the interviewers?
  - how had they been trained?
- **Consistent information**
  - e.g. no lectures at University of St. Gallen in July 2015

# Structure of Field Report

## **1) Research population and area**

## **2) Sampling process**

⇒ method of sampling and underlying population

## **3) Realization of interviewing**

⇒ who did what, when (field period) and how (method of interviewing)

## **4) Realized sample**

⇒ realized interviews, drop-outs and response rate

# DOCUMENTATION AT THE VARIABLE LEVEL

# Variable Level or ...

- **Questionnaire**

- original question wording
- provided answer categories
- explanations, interviewer instructions etc.

- **Variables**

- labels and meanings of variables
- labels and meanings of coding
- variable notes etc.
- scales

# What is a Codebook?

“A codebook describes the contents, structure, and layout of a data collection. A well-documented codebook "contains information intended to be complete and self-explanatory for each variable in a data file”

ICPSR: What is a Codebook?  
<https://www.icpsr.umich.edu/icpsrweb/content/shared/ICPSR/faqs/what-is-a-codebook.html> (Accessed August 6th, 2019)

# Why provide a Codebook ?

- Documentation of the published dataset on variable level
- Description of a dataset's content, structure, and layout
- Provision of contextual information about the study the published data file is part of
- Connection of variables with questions, answer categories
- A report of findings of data checks and modifications during data cleaning/processing for specific variables
- An accompanying assisting handbook for dataset end-users

# Content of a Codebook

- **A detailed codebook should contain**
  - information on variable level in naming, structure, format
  - explanations for deviations between field questionnaire and dataset after data cleaning that are not obvious
  - Information about used standards
- **It might also include methodological information like**
  - if and which standards were used (e.g. ISO codes for geographic units, International Standards Classification of Education)
  - reference to scales and instruments used (if they are not documented in the report)

# Content of a Codebook

**Codebook front matter** section should contain basic (bibliographic and identificational) information about dataset and study/series for unambiguous assignment:

- study title, series information
- principal investigators of study/publisher of data
- information about the dataset file
  - persistent identifier of study if available
  - data set version and changes from previous changes
  - citation recommendation for dataset
- introducing part (purpose and format of a codebook)
- table of content of the CB
- An overview/list of all dataset variables

# Content of a Codebook

**Codebook main body** contains information about the dataset that are self-explanatory for each variable in a data file

- Variable name, variable label, variable format
- Question text / question number in field questionnaire
- Meaning of values (variable values)
  - For scale variables: The variable's units of measurement
  - For categorical variables: if numeric codes and what they represent
- missing data: Values and labels of user and system missing data (e.g. question not asked, not applicable, don't know, no answer)
- Variable notes: filter, modifications, standards, variable functions, inconsistencies

# Example of Variable Documentation

Variable: Educational level of respondent in the European Values Study 2008 ([doi:10.4232/1.11004](https://doi.org/10.4232/1.11004))

1. Online data documentation provided for retrieval purposes and data exploration in [GESIS ZACAT](#)

ZA4800: EVS 2008: Integrated Dataset  
[ZA4800 Datafiles and Documentation download](#) (via data catalogue)

**Variable v336\_r: education level (Q110) (recoded)**

---

LITERAL QUESTION  
 EDUCATIONAL LEVEL OF RESPONDENT - RECODED (3 CATEGORIES)

Source variable: v336\_4  
 [What is the highest level you have completed in your education?]

- 5 other missing
- 4 question not asked
- 3 not applicable
- 2 no answer
- 1 don't know
- 1 Lower
- 2 Middle
- 3 Upper

Comparability:  
 Trend question (EVS 2008=EVS 1999).

[Show Card](#)

# Examples of Variable Documentation

2. Variable documentation  
(Codebook in PDF)  
provided in [GESIS Data Catalogue](#)

EVS 2008 - Germany

GESIS StudyNo 4753, v1.1.0, <http://dx.doi.org/doi:10.4232/1.10151>

v1 - how important in your life: work (Q1A)

WE START WITH SOME QUESTIONS ABOUT LIFE IN GENERAL, LEISURE TIME ACTIVITIES AND WORK

Q1

<SHOW CARD 1>

Please say, for each of the following, how important it is in your life.

Q1.A Work

- 5 other missing
- 4 question not asked
- 3 nap
- 2 na
- 1 dk
- 1 very important
- 2 quite important
- 3 not important
- 4 not at all important

v1, weighted by weight\_c

Value	Label	Missing	Count	Percent	Valid Percent
-2	na	M	4	0.2	
-1	dk	M	21	1.0	
1	very important		1000	48.2	48.8
2	quite important		696	33.5	34.0
3	not important		184	8.9	9.0
4	not at all important		170	8.2	8.3
	Sum		2075	100.0	100.0
	Valid Cases		2050		

# Persistent identifiers

# Persistent Identifiers

- **Ensures**

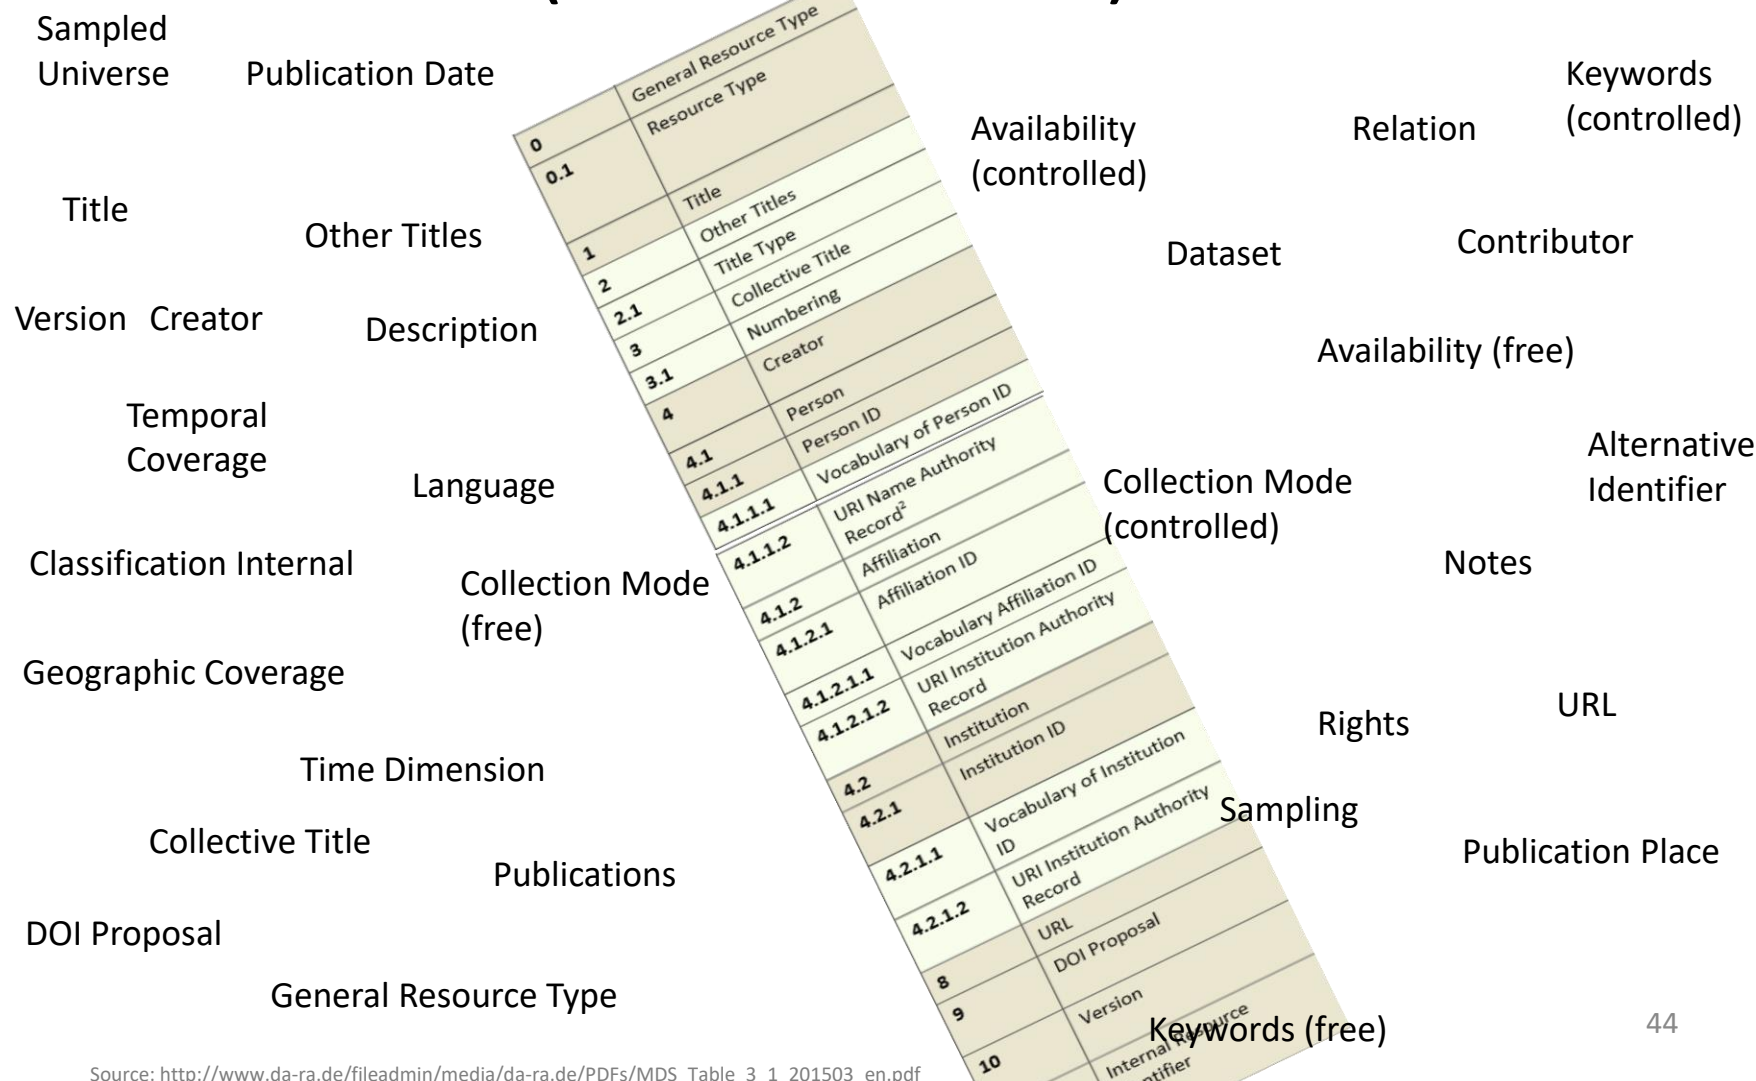

- permanent findability
- unambiguous identification
- citation

DOI: 10.ORGANIZATION/ID  
Example: 10.4232/1.11159  
Prefix/Suffix

- **Example: Digital Object Identifier (DOI)**

- a kind of PID
- ca. 5000 registration agencies, e.g. DataCite or da|ra
- „DOI-resolver“  
e.g. <http://www.doi.org/index.html>

# da|ra schema: main categories (rich metadata)

# Cite the data you use!

## WHY IS IT SO IMPORTANT TO CITE DATA?

Books and journal articles have long benefited from an infrastructure that makes them easy to cite, a key element in the process of research and academic discourse. We believe that you should cite data in just the same way that you can cite other sources of information, such as articles and books.

DataCite DOIs help further research and assures reliable, predictable, and unambiguous access to research data in order to:

- support proper attribution and credit
- support collaboration and reuse of data
- enable reproducibility of findings
- foster faster and more efficient research progress, and
- provide the means to share data with future researchers

DataCite also looks to community practices that provide data citation guidance. The Joint Declaration of Data Citation Principles is a set of guiding principles for data within scholarly literature, another dataset, or any other research object (Data Citation Synthesis Group 2014). The FAIR Guiding Principles provide a guideline for the those that want to enhance reuse of their data (Wilkinson 2016).

## Data Citation Examples

We recognise that the challenges associated with data publication vary across disciplines, and we encourage research communities to develop citation systems that work well for them. Our recommended format for data citation is as follows:

Creator (PublicationYear). Title. Publisher. Identifier

It may also be desirable to include information about two optional properties, Version and ResourceType (as appropriate). If so, the recommended form is as follows:

<https://datacite.org/cite-your-data.html>

# Metadata Standard DDI

# What is DDI?

- Data Documentation Initiative
- *“An effort to develop a specification for documenting data files in XML. The DDI Alliance is the organization that created the specification, ...”*
- More information can be found on the DDI website:  
<http://www.ddialliance.org/>

# DDI as a standard

- DDI is a *standard* for metadata
- The standard structure means that all computers, even if they are using different applications, can work on the same data and related information (metadata/documentation)
  - The formats are not proprietary to any specific system
  - Uses generic XML technology as the basis for cross-platform use

# Example XML
