

# BioExcel Webinar Series #47

## COVID-19 Molecular Structure and Therapeutics Hub

**Presenter:** Levi Naden (Molecular Sciences Software Institute (MolSSI))

**Host:** Rossen Apostolov (KTH Royal Institute of Technology)

# Today's Presenter

***Levi Naden***

*Software Scientist at MolSSI*  
*lnaden@vt.edu*

Levi Naden is a Software Scientist at MolSSI and lead for COVID-19 Molecular Structure and Therapeutics Hub project. Levi has a background in computational free energy algorithms, scientific software development and deployment, and software interoperability. He has a Bachelors in Chemical Engineering from Kansas State University and a PhD in Chemical Engineering from University of Virginia.

**The Molecular Sciences Software Institute:** <https://www.molssi.org/>

# What is MolSSI?

Designed to **serve** and **enhance** the software development efforts of the broad field of computational molecular science (CMS) – a domain that includes quantum chemistry, computational materials science, and biomolecular simulation.

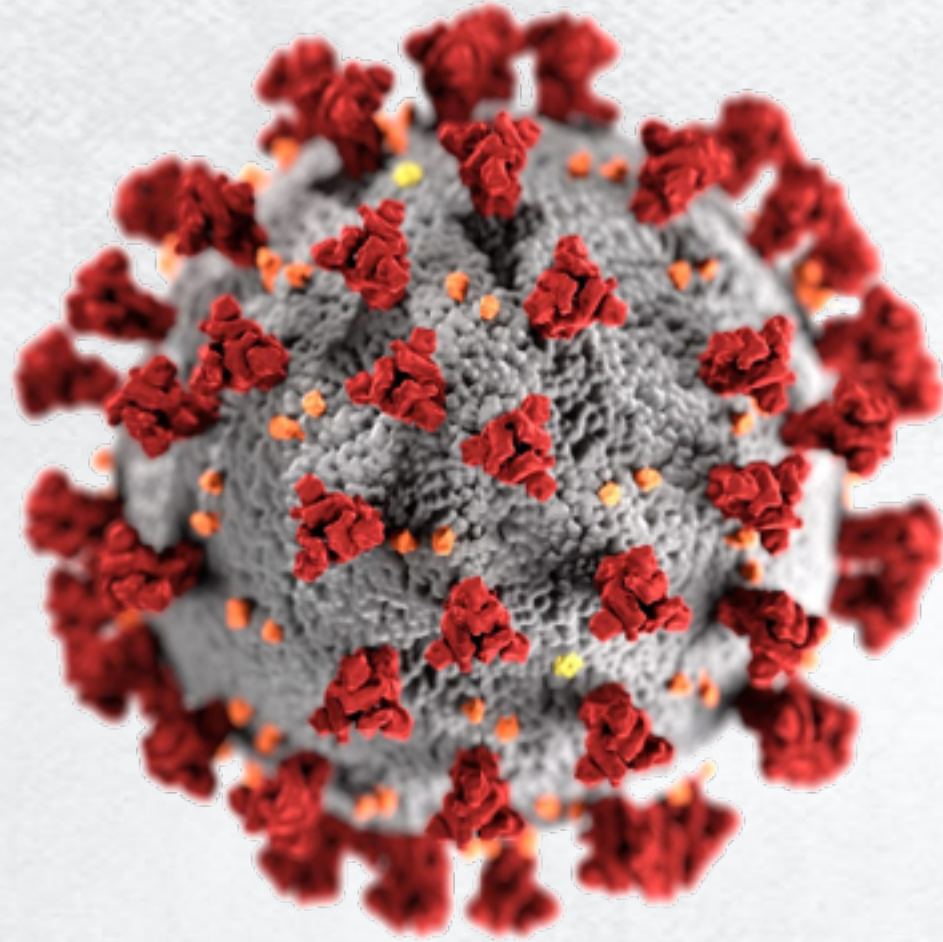

Goals:

1. Provide software expertise and infrastructure
2. Provide education and training
3. Provide community engagement and leadership

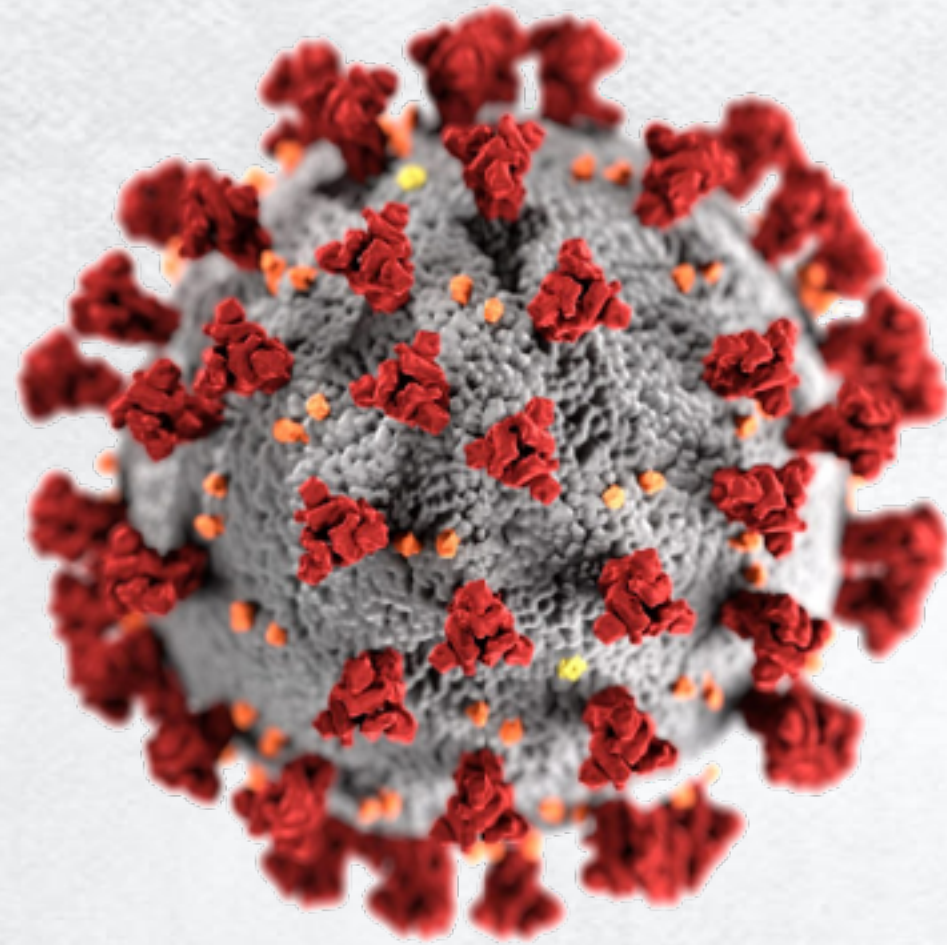

# There are ups and downs to the current state of research

The Enemy

# There are ups and downs to the current state of research

The Enemy

The Good

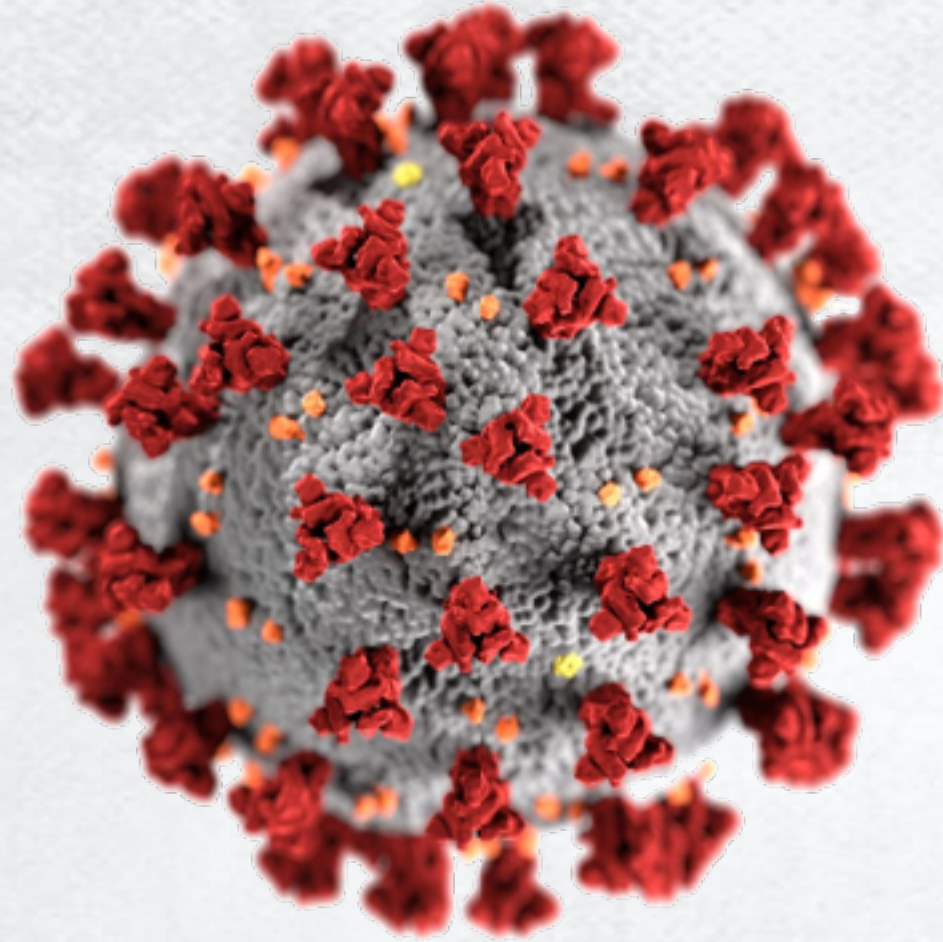

## ***Covid-19 Changed How the World Does Science, Together***

Never before, scientists say, have so many of the world's researchers focused so urgently on a single topic. Nearly all other research has ground to a halt.

Lots of scientists stuck at home right now looking to help

Source: First google search for "antsy person"

# Every institute and lab under the sun is doing something with SARS-CoV-2

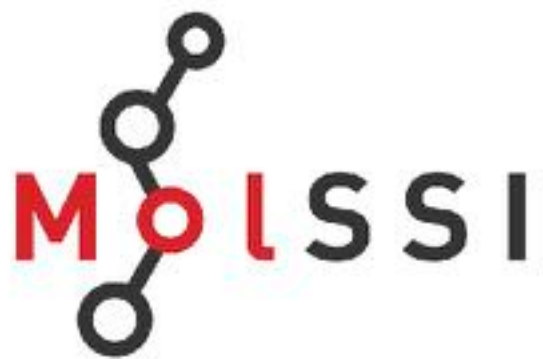

- Overall a good thing, but has downsides
  - Editors: “We are being overwhelmed with papers”
  - Quality: Mixed bag
  - Collaborators: We have data, people want data, how do I get them data?

# Even good data are nebulous

- Everyone does their own work
- And is great in their own rights!
