OpenAIRE in EOSC

EOSC

Why – What – How

Europe's response to data driven research

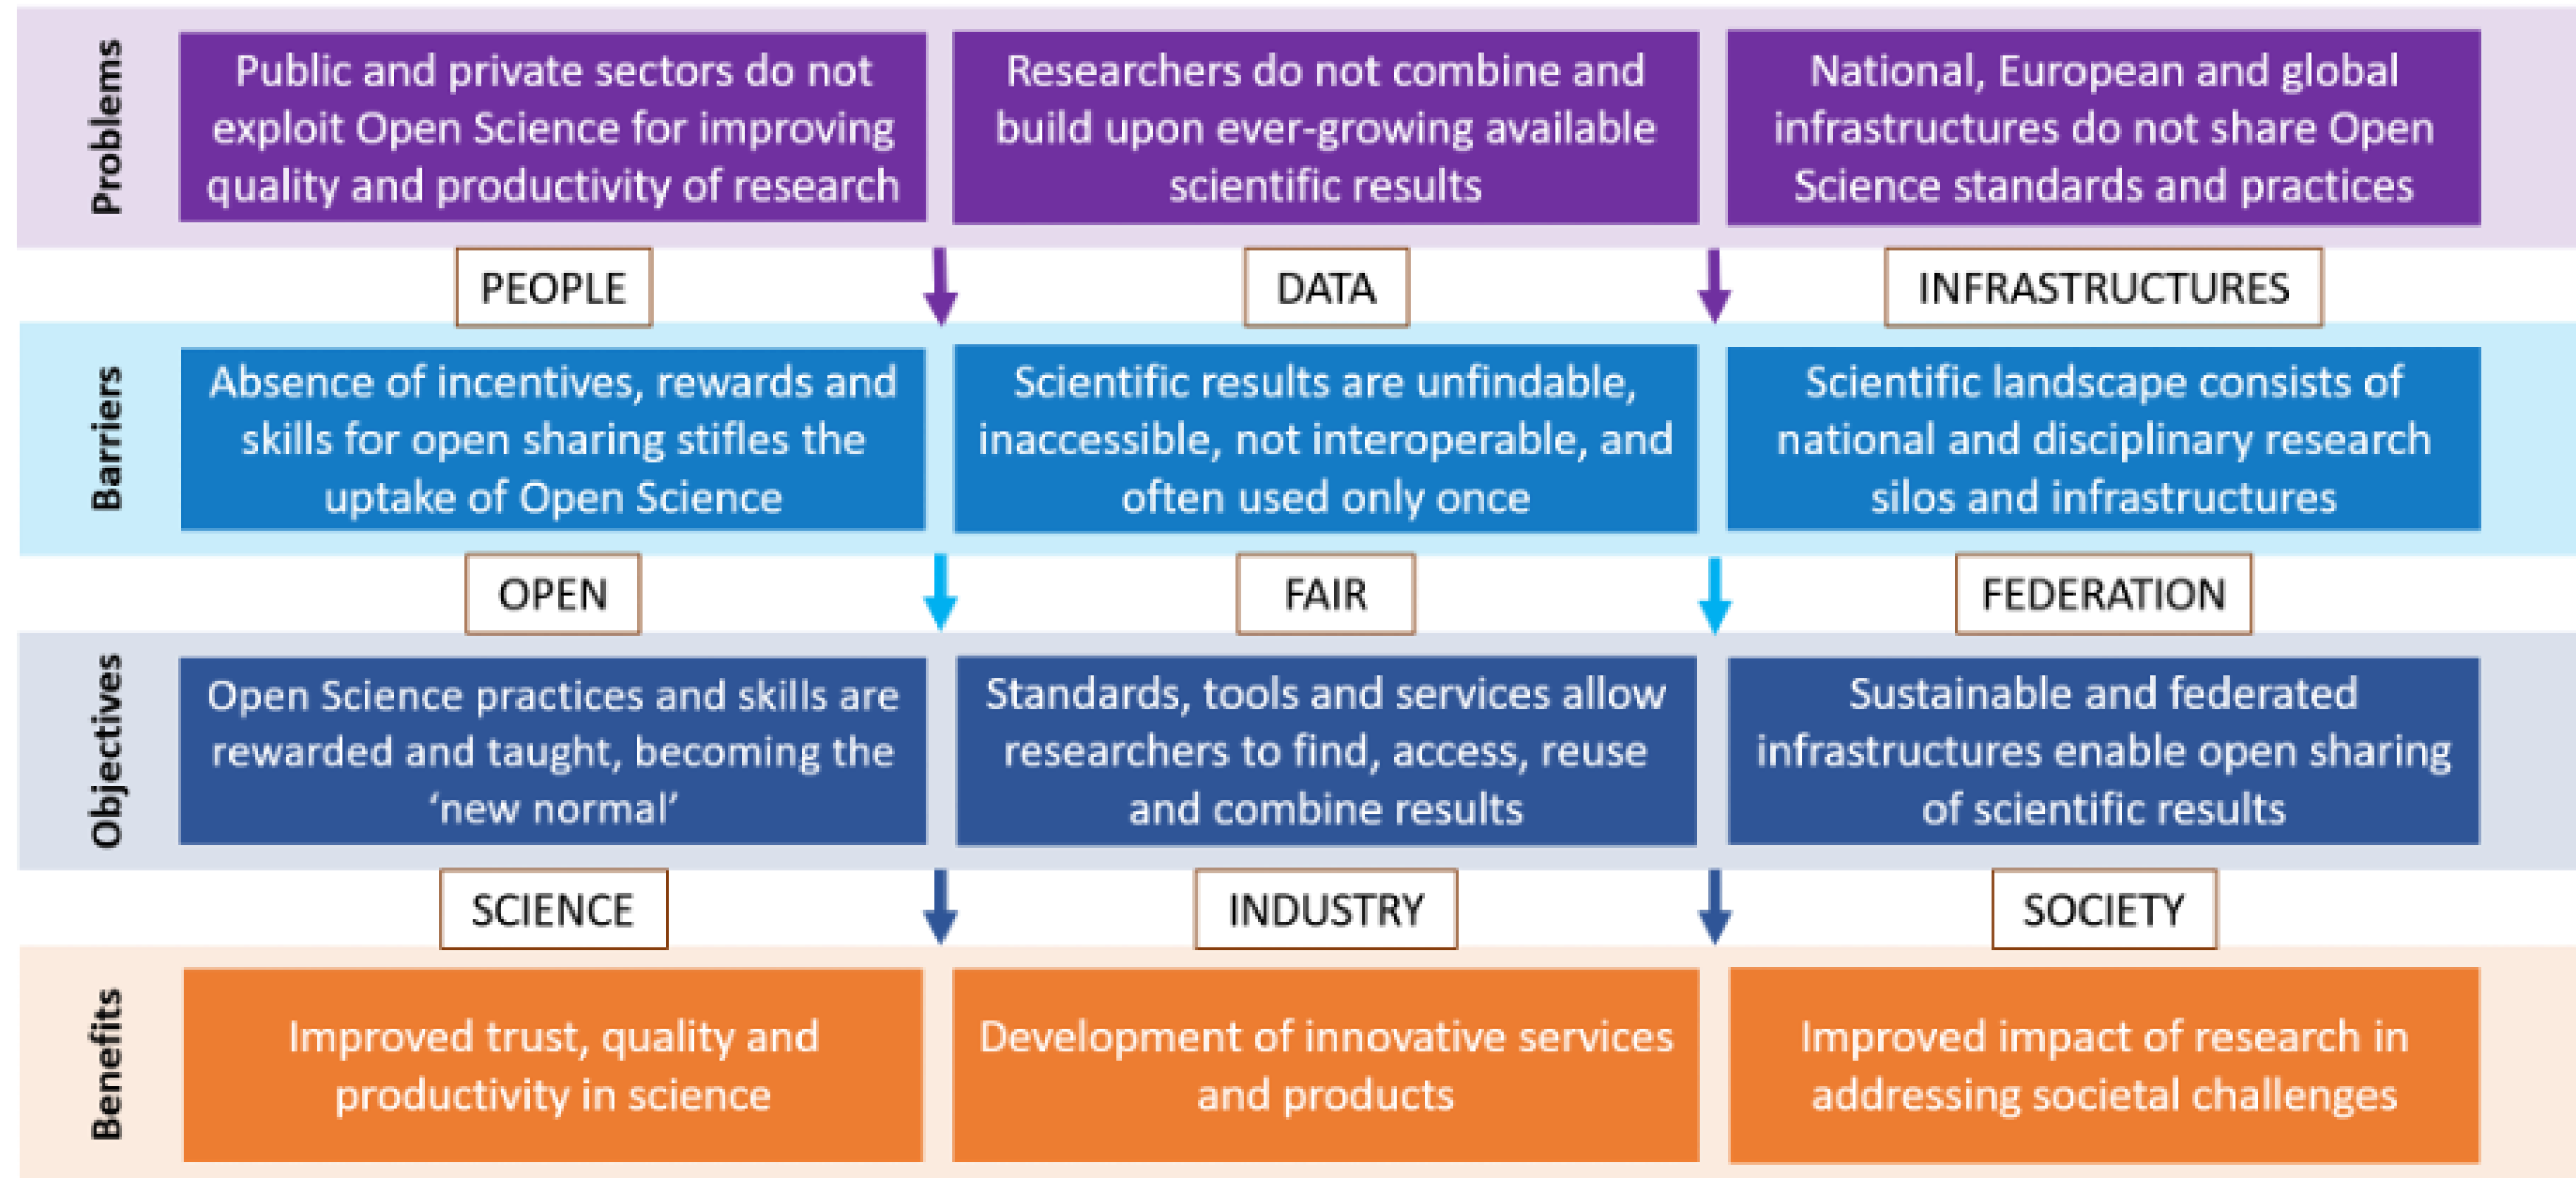

For researchers

- Tools to find, access, verify and combine multi-disciplinary scientific data for new discoveries
- Measures to increase data findability and accessibility
- Clear incentives and rewards for sharing

For policy makers

- Societal and global challenges demand cross-disciplinary research
- A lack of available FAIR data costs Europe €10 billion per year (PWC)
- Europe needs a data commons to maintain its position as global leader in innovation
- An increase in data resources will boost the usage of distributed machine learning and emerging artificial intelligence techniques giving Europe a competitive advantage

European Open Science Cloud Objectives Tree

v12

Openness is the success factor for EOSC

Free (at the point of use), **uncomplicated** and **intelligent access** to data

Open Science and specifically **Open Access to all research results** (data, publications, software, protocols, as well as tools and services) is a strategic priority, a key enabler into achieving a critical mass of accessible content for researchers to experiment with, stimulating the demand.

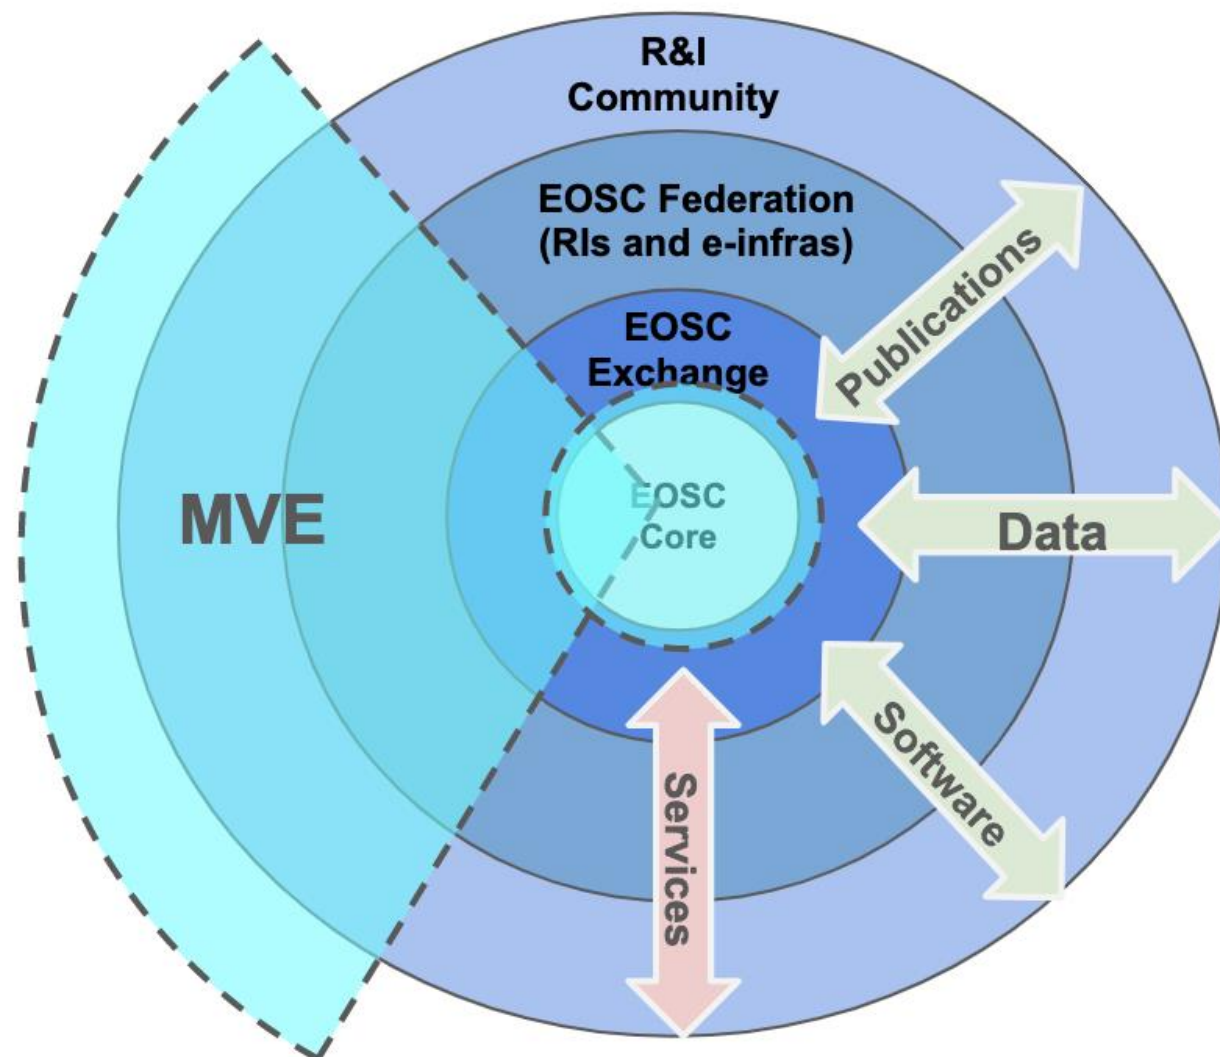

The EOSC will only be successful if there is enough researcher engagement and uptake

EOSC in a nutshell

Sharing research outcomes **and** research resources – building on, learning from each other.

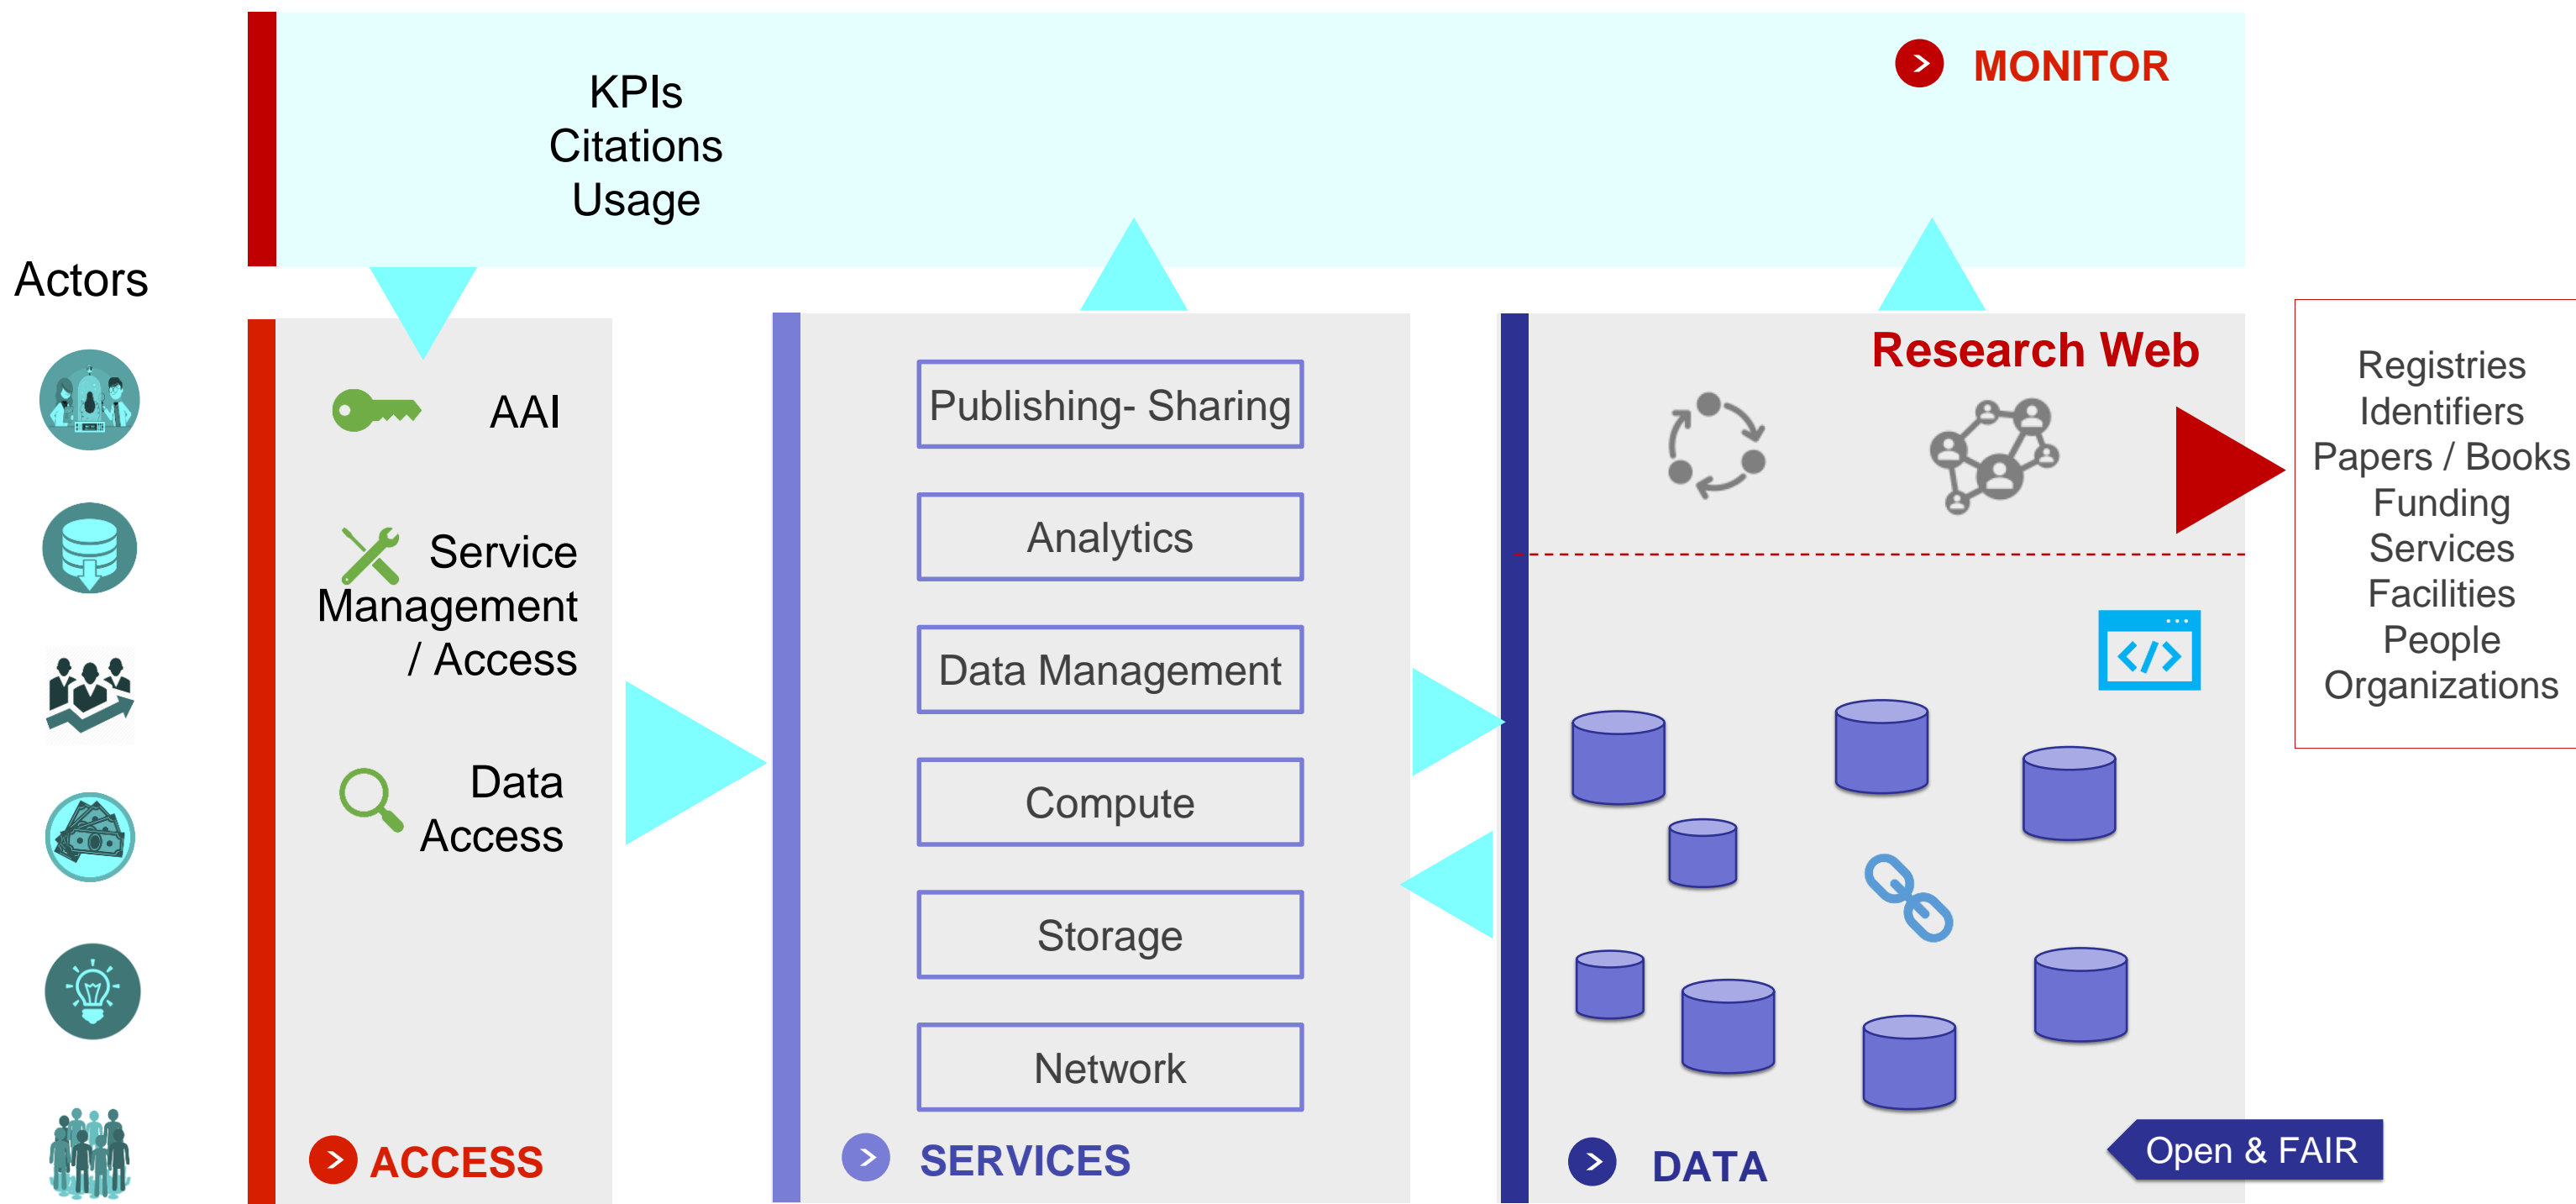

Unique Selling Point, adding value to **existing** EC and MS/AC **investments** – federation.

Driven by **Rules of Participation** – consensus

- Each layer defines its own policies (RoPs)
- **MVE** includes:
 - EOSC Core and subsets of EOSC Exchange, Federation
 - EOSC resources (services, research products) required to “market” the EOSC
 - Subset of the R&I community (showcases, e.g., COVID-19)

EOSC “deconstructed”

EOSC Core

- **A shared open science policy framework.** Embeds a data compliance framework for open / FAIR data. It defines and applies the rules of how the data elements are published, shared and re-used.
- **Authentication & Authorization Interoperability (AAI) framework,** a trust and identity service to allow seamless access to any EOSC resource
- **Data access framework.** Enable open interfaces where data consumers (users and machines) are able to discover and use data.
- **Service management and access framework.** Provide a consistent and agreed upon understanding of e-science services: what they offer, which science problem they address, what is their operational capacity, how they are accessed, who pays for them.
- **A minimum interoperable metadata framework.** Ensures openness and interoperability across disciplines while respecting privacy and security (disclosure limitations, patents, IP, personal data, PSI, etc.)
- **An open metrics framework.** Sets the rules (usage, performance, value for money, user satisfaction) for the assessment of EOSC elements, i.e., policies, access framework, services, data, business, funding and usage models. Includes elements to facilitate the incentives and awards mechanisms.
- **PID:** Services to generate, resolve and validate persistent identifiers.
- **Security policies and procedures.** Ensures consistent and coordinated security operations across the federated services.
- Operational support services.
- Web-portal including web-content as well as supply and demand facing services providing for accessing the EOSC resources.

Partnerships - An EU alignment mechanism

Horizon Europe will support European Partnerships to deliver on global challenges through concerted R&I effort with the Member States, private sector, foundations and other stakeholders.

EU Partnerships

- provide mechanisms to link R&I closely to policy needs,
- develop close synergies with national and regional programmes,
- bring together a broad range of innovation actors to work towards a common goal, and
- turn research into socio-economic results

- [health](#)
- [digital, industry and space](#)
- [climate, energy and mobility](#)
- [food, bioeconomy, natural resources, agriculture and environment](#)
- [partnerships across themes](#)

49 EU Partnerships

https://ec.europa.eu/info/horizon-europe-next-research-and-innovation-framework-programme/european-partnerships-horizon-europe_en#partnership-candidates-and-contact-details

EOSC Partnership

- **Develop synergies:** Enable a trusted, virtual, federated environment in Europe to store, share and re-use research data across borders and scientific disciplines.
- **Bring all actors under one umbrella:** Bring together institutional, national and European initiatives and engage all relevant stakeholders to co-design and deploy a European Research Data Commons.
- **Help researchers:** Enhance the possibilities for researchers to find, share and reuse publications, data, and software leading to new insights and innovations, higher research productivity and improved reproducibility in science.

EOSC Partnership – Key objectives

Objective 1: Open science practices and skills are rewarded and taught, becoming the “new normal”

Main milestone: The EOSC ecosystem underpins the reward of open science practices and data stewardship that improve trust, quality and productivity in science.

Objective 2: Standards, tools and services allow researchers to find, access and reuse results

Main milestone: The EOSC provides a trusted platform supporting the development of innovative services and products.

Objective 3: Sustainable and federated infrastructures enable open sharing of scientific results

Main milestone: The EOSC infrastructure is in operation, providing a web of FAIR data and related services underpinning research addressing major societal challenges.

Crosscutting objective: Boosting the impact of EOSC through collaboration and alliances

EOSC Governance

The Partnership will operate through a new **Association** (Belgian AISBL) along the principles of decentralisation, transparency and openness.

Core tasks

- Coordination and alignment (SRIA)
- Monitoring and reporting
- EOSC technical guidance
- FAIR training
- Communication

*The Association will be essentially resourced via the **membership fees** from its members. The activities resulting from the SRIA will be **resourced through commitments** by the European Commission, at European level, and by the members of the Association at national and institutional level.*

4 founding members

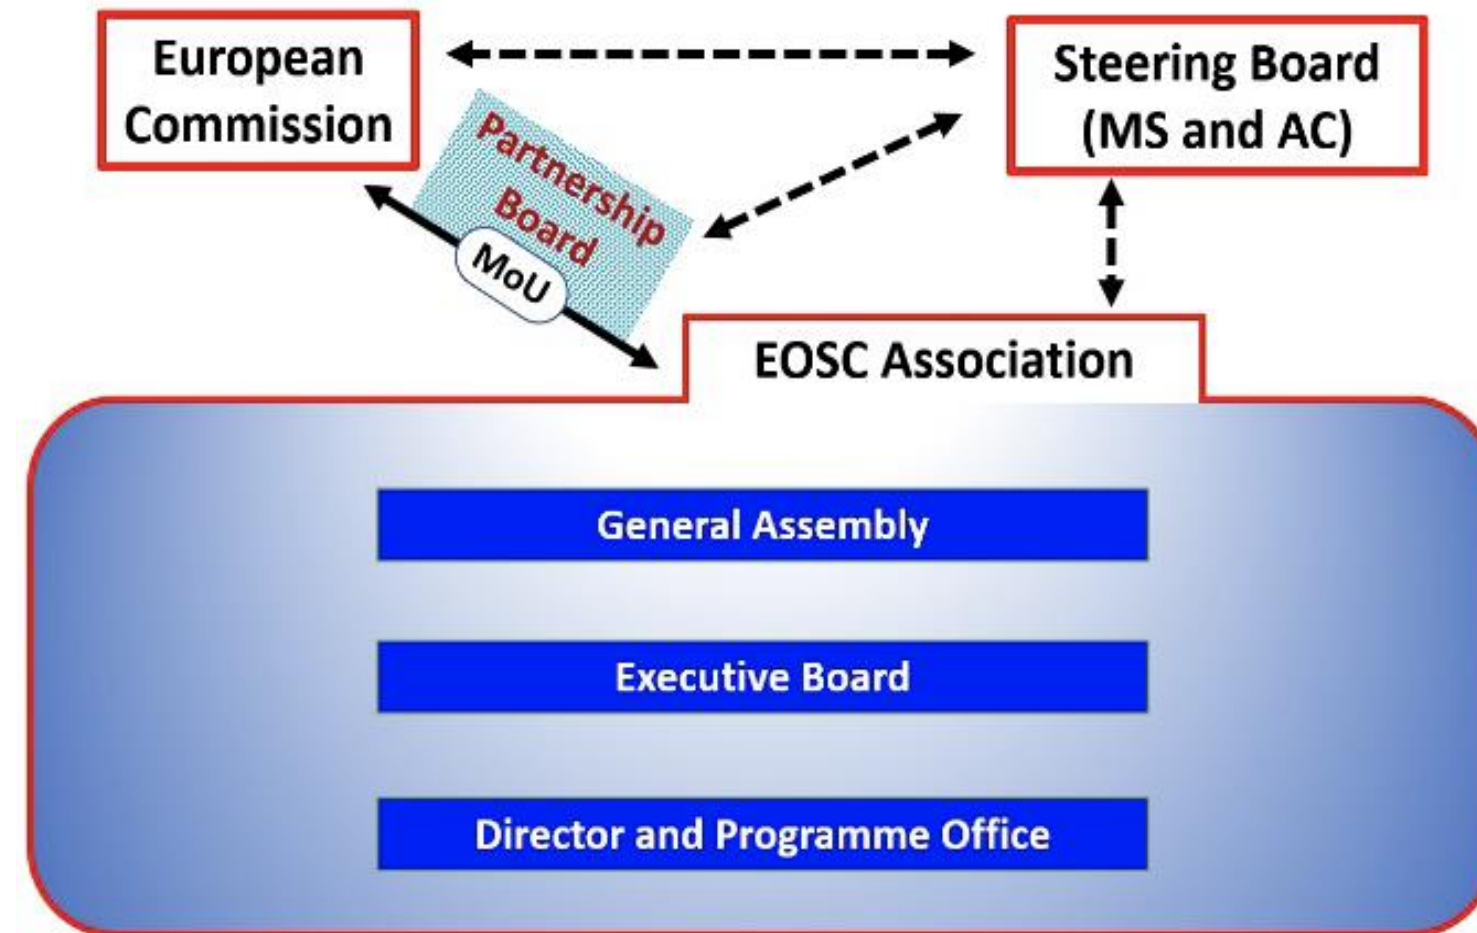

Interest from ~90

Membership fees

Full - 10,000 €

Observers - 2,000 €

Governance of the Partnership

Strategic Research & Innovation Agenda (SRIA)

[NEWS](#)

In 2016 the portuguese Government and the Ministry of Science, Technology and Higher Education (MCTES) have defined Open Science as a priority. The Council of Ministers approved a resolution with the guidelines for the National Open Science Policy and mandated the MCTES to create an Interministerial Working Group (WG-NOSP). That WG produced an initial report with a diagnosis and characterisation of various
