

The ELIXIR-GR OpenAIRE Dashboard

Thanasis Vergoulis

ELIXIR-GR is the Greek National Node of the [ESFRI European RI ELIXIR](#), a distributed e-Infrastructure aiming at the construction of a sustainable European infrastructure for biological information. ELIXIR-GR supports life-science research and its translation to medicine, biological sciences and society. It offers a catalogue of tools, services and benchmarks, ensuring best practices as well as sustainability and interoperability with other biological and medical science infrastructures. ANASTASIA: An Automated Metagenomic Analysis Pipeline for Novel Enzyme Discovery Exploiting Next Generation Sequencing Data.

OPEN ACCESS

Authors: Theodoros Koutsandreas; Theodoros Koutsandreas; Efthymios Ladoukakis; Efthymios Ladoukakis; Eleftherios Pilalis; Eleftherios Pilalis; Dimitra Zarafeta; Fragiskos N. Kolisis; Fragiskos N. Kolisis; Georgios Skretas; ...

DOI: 10.3389/fgene.2019.00469 | 10.3389/fgene.2019.00469/full

Project: EC | HOTZYME (265933)

: Metagenomic analysis of environmental samples provides deep insight into the enzymatic mixture of the corresponding niches, capable of revealing peptide sequences with novel functional properties exploiting the high performance of next-generation sequencing (NGS) tech...
