Reinhart, Rogoff... and Herndon: The student who caught out the profs

By Rich Anderson
BBC News

© 20 April 2010

This week, economists have been astonished to find that a famous academic paper often used to make the case for austerity cuts contains major errors. Another surprise is that the mistakes, by two eminent Harvard professors, were spotted by a student doing his homework.

It's 4 January 2010, the Marriott Hotel in Atlanta. At the annual meeting of the American Economic Association, Professor Carmen Reinhart and the former chief economist of the International Monetary Fund, Ken Rogoff, are presenting a research paper called *Growth in a Time of Crisis*.

Guide for Reproducible Research

This guide covers topics related to skills, tools and best practices for research reproducibility.

The Turing Way defines reproducibility in data research as data and code being available to fully rerun the analysis.

There are several definitions of reproducibility in use, and we discuss these in more detail in the [Definitions of Reproducibility](#) section of this chapter. While it is absolutely fine for us each to use different words, it will be useful for you to know how *The Turing Way* defines reproducibility to avoid misunderstandings when reading the rest of the handbook.

Book contributions 11

The Turing Way es una guía aertiva para la ciencia de datos reproducible. Puedes leerla aquí: <https://the-turing-way.netlify.com> Actualmente está en el repositorio de GitHub del proyecto donde se encuentran todos los fragmentos que componen la guía y donde ocurre el proceso de escritura/construcción de la misma.

Nuestro objetivo es proporcionar toda la información que las personas que hacen investigación necesitan al inicio de sus proyectos para garantizar que sean fáciles de reproducir al final.

Esto también significa asegurarse de que estudiantes de doctorado, post-doctorantes, investigadores e investigadores principales y los equipos de financiación sepan qué partes de la "responsabilidad de reproducibilidad" poseen y qué deben hacer para impulsar que la ciencia de datos sean más eficiente, efectiva y comprensible.

Tabla de contenidos:

- Acerca del proyecto
- El equipo
- Como contribuir al proyecto
- Quando The Turing Way
- Contactos
- Colaboradores

Si prefieres una introducción de audio al proyecto (en inglés) Rachel, una colaboradora del proyecto presentó en el Open Science Fair 2019 en Oporto y su presentación fue grabada por el Podcast OHS. La descripción general del The Turing Way comienza en el minuto 5:13.

Acerca del proyecto

La investigación reproducible es necesaria para garantizar que se pueda confiar en el trabajo científico. Quiénes financian y editan trabajos científicos están comenzando a exigir que las publicaciones incluyan acceso a los datos subyacentes y al código de análisis. El objetivo es garantizar que todos los resultados puedan verificarse de forma independiente y servir como base para trabajos futuros. Esto a veces es más fácil decirlo que hacerlo. Compartir entre resultados de investigación significa comprender la gestión de datos, bibliotecología, el desarrollo de software y las técnicas de integración continua: habilidades que no se enseñan ni se esperan de los investigadores académicos y científicos de datos. Como estas actividades no se enseñan comúnmente, reconocemos que la carga de datos reproducible sea "desmenuado fácil" como para o hacerla" incluso para personas que nunca antes han trabajado de esta manera. Incluiremos material de capacitación sobre control de versiones, testing de análisis y comunicación abierta y transparente con futuras personas usuarias, y se basará en los estudios de caso y talleres del Instituto Turing. Este proyecto se desarrolla de manera abierta y todos y cada uno de sus preguntas, comentarios y recomendaciones son bienvenidos en nuestro repositorio de GitHub: <https://github.com/alan-turing-institute/the-turing-way>.

Formatting

Formatting refers to how *The Turing Way* is written, and directly affects the book's appearance and presentation. Proper formatting ensures that *The Turing Way* is readable, accessible, and resembles a polished piece of work.

Hard Requirements

The hard requirements in the consistency checklist ensure that *The Turing Way* prioritises accessibility, collaboration, readability and ease of use. The checks that deal with the *The Turing Way's* formatting include:

Check 1: Add labels to chapters, subchapters, sections and images to enable cross-referencing

Often, a chapter might refer to content from another chapter to explain a concept or expand on a point. Cross-Referencing facilitates this by ensuring that the referred content is easy to find with a simple click. Cross-Referencing helps make *The Turing Way* easily navigable and accessible.

[Cross-Referencing](#) is discussed in detail in the [Style Guide](#). The subchapter explains what labels are, provides a naming convention for labels in *The Turing Way*, and gives several useful examples for how cross-referencing should be done.

Check 2: Convert HTML formatting to Markdown

The Turing Way is a [Jupyter-book](#) and should be written in [Markdown](#), where possible, so that it renders as intended.

Some chapters in *The Turing Way* are not entirely written in Markdown, making some of its content hard to read. For example, in the Licencing chapter of the [Guide for Reproducible Research](#), the [Software Licences](#) subchapter contains a
