BLUE ACTION

Blue-Action is a major European research project investigating the effect of a changing Arctic on weather and climate.

WEATHER FORECASTING STONE

CONDITION	FORECAST
Stone is Wet	Rain
Stone is Dry	Not Raining
Shadow on Ground	Sunny
White on Top	Snowing
Can't see Stone	Foggy
Swinging Stone	Windy
Stone Jumping Up & Down	Earthquake
Stone Gone	Tornado

Thank you!

Communication: lessons learned from our case study

All involved want to co-create new value

This helps to overcome communication difficulties

- Scientific jargon; complex problems; no easy answers; concern to be misunderstood; scientists with different backgrounds

Art is the universal language

- Find common ground
- “One picture says more than thousand words”

Art can be interpreted in different ways

- Science conveys a concrete message, which ideally should not be interpreted in different ways

Co-design Viewed Simply

A model for discussion

Martin Coath

Senior Affiliated Researcher – University of Lapland

The Blue-Action project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 727852.

Introduction

- Talk about co-creation/co-design
- In the simplest possible terms
- Cartoon approach
- Give a shape and a vocabulary
- Often overlooked or overcomplicated

Anticipate the end

- Co-creation is the management of the tension/equilibrium between conversations between team members, and the establishment of common frames
- Neither the conversations nor the frames are usually stable enough to give rise to the output
- If the management is successful then this will give rise to the output

Preamble I

- A is for 'Actor'

Preamble II

- A is for 'Actor'
- V is for 'View'

Preamble III

- A is for 'Actor'
- V is for 'View'
- O is for 'Output'

Creation I

- Bad comparison
- Not perfect, unitary
- Or complete

Creation II

- Complex
- Only partially explicable
- Is the process judged?

Creation III

- For example - this presentation
- A is M. Coath
- V is 'a simple view of co-design'
- O is a Powerpoint

Creation IV

- A is H. Bosch
- V is 'the infernal realm'
- O is a painting

Creation V

- By virtue of creation
- We learn stuff
- And have our **view changed**

Creation with observer I

- Orange is for 'Observer'
- They bring their view to the interaction

Creation with observer II

- Orange -> Pink = 'Impact'
- Although all parts have value
- Parallel to Hermeneutics

Co-creation?

- Just change the orange arrow to grey
- Co-creation?
- Where is the observer?

Co-creation with observer?

- Easy to add an **observer**
- I have dropped the letter labels

Co-creation I

- This is far too simple

Co-creation II

- **Actors** from very different CODs
- All actors contribute something
- But different things

Co-creation III

- And all actors **observe**

The conversation

- And these observations have **impact**

Conversation simplified

- Simplified diagram
- Epistemic Leakage
- Transgressive Knowledge

Performance

- Easy to add an observer
- Interview, Jazz Concert
- Performance?
- The actors are visible/constrained

Critical stage I

- Critical stage

The critical stage II

- Can we take this ...

The critical stage III

- And make a
- Synthetic world **view**
- A common frame

The critical stage IV

- The ideal result
- Common frame established
- Output arises from it

Management of co-creation I

- More realistic
- Tension or equilibrium
- Conversation(s) and common frame(s)
- The equilibrium can be harnessed

Management of co-creation II

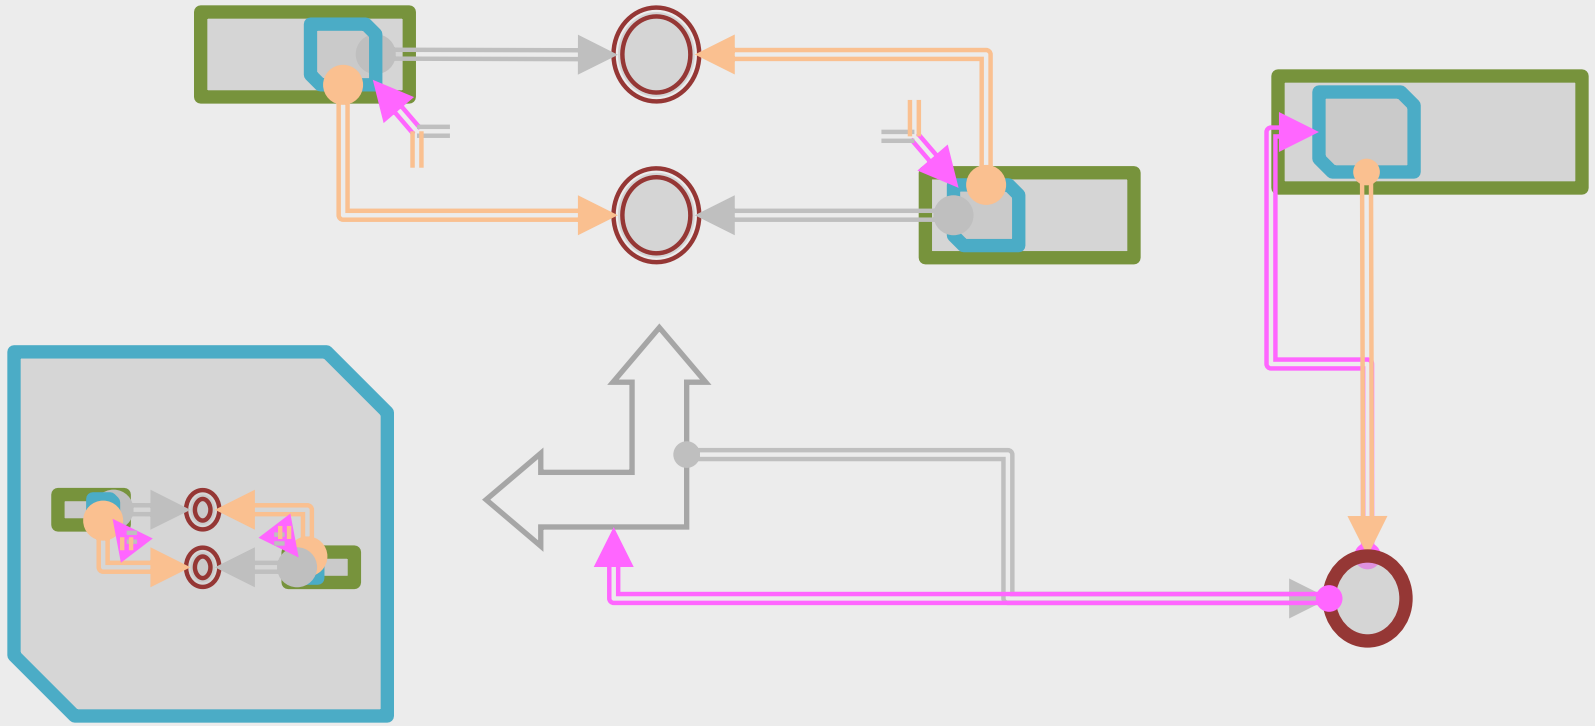

- The equilibrium can be harnessed

Summary

- Co-creation is the management of the tension/equilibrium between conversations between team members, and the establishment of common frames
- Neither the conversations nor the frames are usually stable enough to give rise to the output
- If the management is successful then this will give rise to the output

The end

Thank you
