

OPEN SCIENCE E OPEN ACCESS 2-L'ALTERNATIVA OPEN

Torino, PhD Economia, gennaio 2020

Elena Giglia
Università di Torino
elena.giglia@unito.it
 @egiglia

In questo modulo impareremo:

1. Open Science è solo la scienza, fatta bene
2. come potete aprire tutti i passi del ciclo della ricerca

Question: I agree with Alessandra :) and it was really helpful to have in mind there is an alternative way that give us the chance of being treated with dignity and truly focus on the essence of our work

Take home message by
Petra, PhD, May 2020

MESSAGGI CHIAVE

- C'è una comunità lì fuori che vi sostiene (soprattutto giovani ricercatori)
- potete fare un passo alla volta...
- ...ma fatelo, provateci!...

...un po' di ispirazione...

The best thing about **Internet** is that it's **open**. In every field **it let us share and innovate**.

In science, **OPENNESS IS ESSENTIAL**.

Open science doesn't mean ignoring economic reality.

Of course **we need business models to be sustainable**. But that **doesn't mean we have to carry on doing things the way they have always been done**.

So, wherever you sit in the value chain, whether you're a researcher or an investor or a policy maker, my message is clear:

let's invest in collaborative tools that let us progress...

Let's tear down the walls that keep learning sealed off.

And let's make science open.

...cosa ci ha insegnato il COVID?

CORRIERE DELLA SERA / OPINIONI

Il coronavirus insegna: la scienza ha sempre bisogno di trasparenza

di Massimo Sideri | 30 gennaio 2020

La grande rivoluzione nata in un piccolo centro veneto specializzato nel passaggio dei virus da animali a umani, allora diretto da Ilaria Capua. E a quel tempo fu osteggiata Jan. 30, 2020

**SOLO COLLABORANDO SI
TROVA UNA SOLUZIONE
ALL'EMERGENZA**

We find ourselves at a pivotal moment in history—we must cooperate effectively to respond to an unprecedented global health emergency. The mantra, “when we share, everyone wins” applies now more than ever.

Now Is the Time for Open Access Policies—Here's Why

Victoria Heath and Brigitte Vézina
March 19, 2020

March 19, 2020

Open Science

'Open Science' stands for the transition to a new, more open and participatory way of conducting, publishing and evaluating scholarly research. Central to this concept is the goal of increasing cooperation and transparency in all research stages. This is achieved, among other ways, by sharing research data, publications, tools and results as early and open as possible.

<https://doi.org/10.32388/838962>

Open Science leads to more robust scientific results, to more efficient research and (faster) access to scientific results for everyone. This results in turn in greater societal and economic impact.

<https://www.accelerateopensecience.nl/what-is-open-science/>

Jeff Rouder
@JeffRouder

What is Open Science? It is endeavoring to preserve the rights of others to reach independent conclusions about your data and work.

Open S

APPELLO CONGIUNTO PER LA OPEN SCIENCE

Oct. 27, 2020

Joint Appeal for Open Science UNESCO, WHO, HCHR,
CERN

We, the Directors-General of UNESCO, WHO and CERN, and the United Nations High Commissioner for Human Rights, reaffirm the fundamental right to enjoy the benefits of scientific progress and its applications and advocate for open, inclusive and collaborative science.

APERTA, INCLUSIVA, COLLABORATIVA

Considering that Open Science can reduce inequalities, help respond to the immediate challenges of Covid-19 and accelerate progress towards the implementation of the 2030 Agenda for Sustainable Development, we therefore:

- (i) Call on every Member State to ensure the fundamental right to access scientific research and its applications, with a view to creating a global knowledge commons and closing existing gaps in science, technology and innovation, especially in developing countries and with respect to women;
- (ii) Commit to supporting the international scientific community by fostering a culture of collaboration and solidarity, rather than competition, and by sharing research outcomes and knowledge wherever possible in order to make science v

CONOSCENZA COME BENE COMUNE

COLLABORAZIONE vs COMPETIZIONE

The core idea behind Open Science is to allow scientific information, data and outputs to be more widely accessible (Open Access) and more reliably harnessed (Open Data) with the active engagement of all stakeholders (Open to Society). The Open Science movement has emerged from the scientific community and has rapidly spread across nations, calling for the opening of the gates of knowledge. In a fragmented scientific and policy environment, a stronger global understanding of the opportunities and challenges of Open Science is needed.

RACCOMANDAZIONE ERAC

EUROPEAN UNION
EUROPEAN RESEARCH AREA
AND INNOVATION COMMITTEE
– ERAC –
Secretariat

Brussels, 14 December 2020
(OR. en)

ERAC, Dec. 14, 2020

ERAC 1211/20

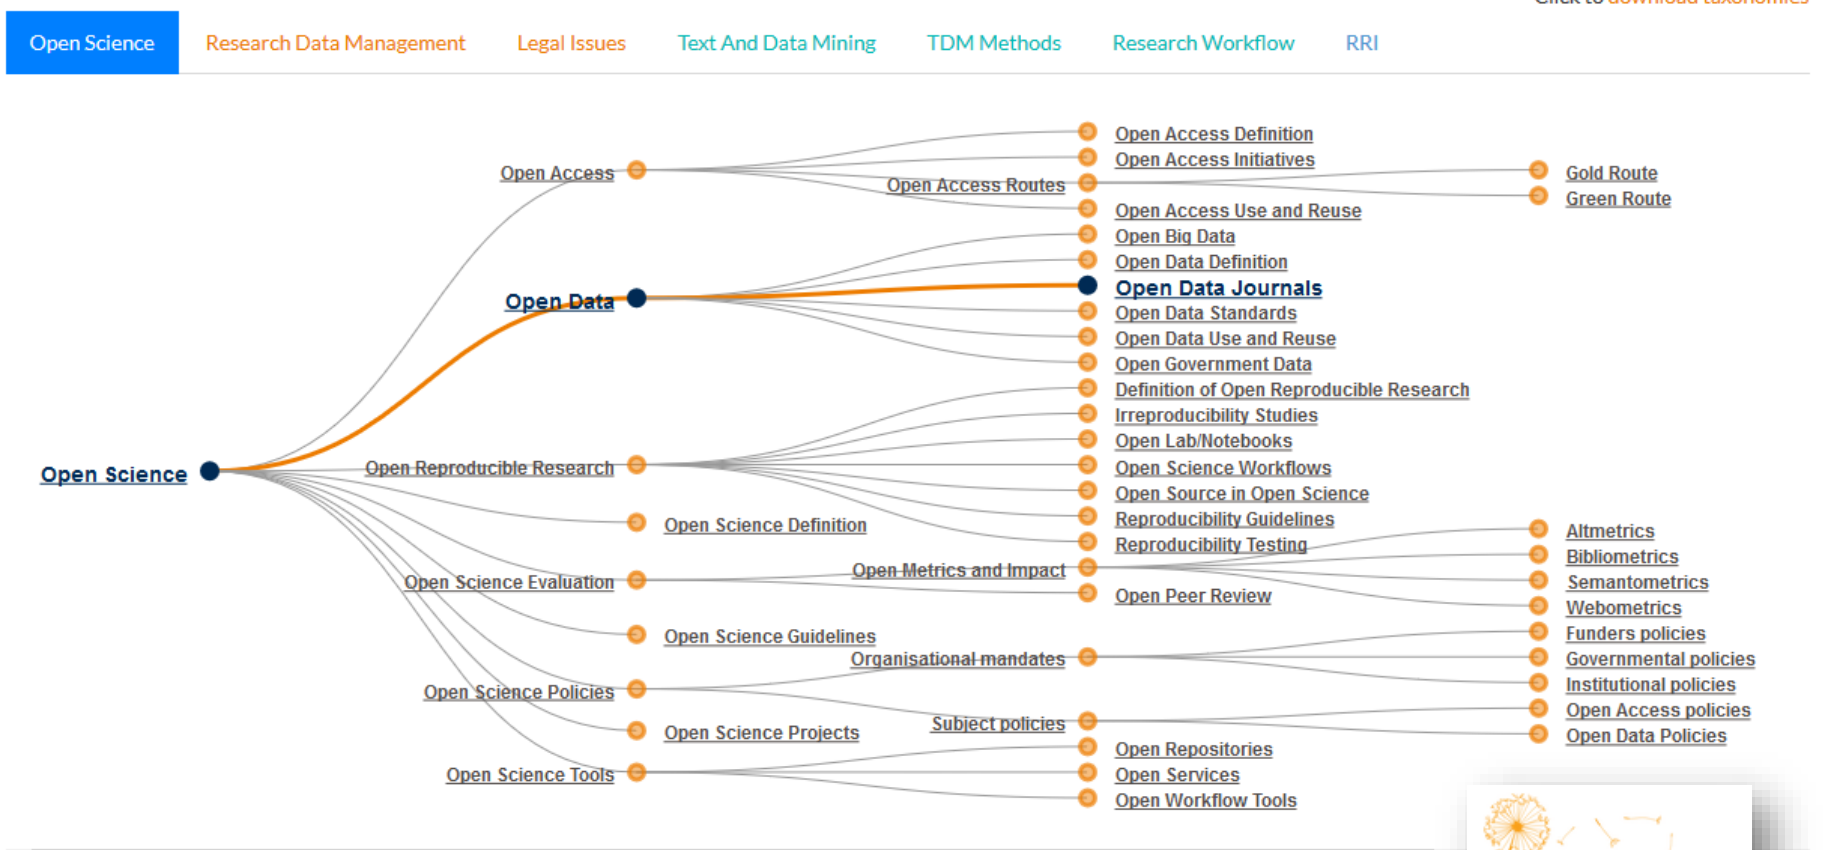

Executive summary

The current COVID-19 pandemic presents unique opportunities for Open Science and Open Innovation. Preprints have shown their potential for fastened discussion of research results between peers and a certain ability to auto-correct, while the benefits of opening the access to research outputs in all disciplines - including the social sciences and the humanities -, investing in FAIR data infrastructures and services as well as promoting training in data stewardship have been made obvious.

Hence the ERAC SWG OSI notably recommends that open access to publications resulting from publicly funded research activities be generalized in all disciplines. Proper data standards should be agreed early on, taking into account the disciplinary specificities, while interoperable and federated ecosystems of FAIR data have to be implemented, as well as distributed analytics and machine learning. Furthermore we recommend that research assessment and research integrity policies take more into account, and in a more systematic way, the requirements connected to Open Science and Open Innovation, in order to foster researchers' engagement in these areas, as well as the trustworthiness of scientific knowledge.

What is the difference between open science and good science? If research papers are inaccessible, with no code or data, cherry picked results, inability to even attempt to reproduce, is that really even science? Science without openness is more anecdote and faith than science.

SUSTAINABLE DEVELOPMENT GOALS

17 GOALS TO TRANSFORM OUR WORLD

Open Science funzionale a

The participants reached a consensus on the following views

- I. Open Science is an accelerator of the Sustainable Development Goals (SDGs).
- II. Publicly funded science should be Open Science.
- III. We are not on track to achieve the SDGs. We must work collaboratively toward the goals of humanity laid out in the SDGs.
- IV. The importance of Open Access (OA) is key takeaway from the 2019 Global Sustainable Development Report.
- V. Open Science must be inclusive. Important relevant research cited research.
- VI. Incentives for research should be aligned with open science for the benefit of humanity.
- VII. Open Science requires the opening of barriers to a science process. Libraries are natural information/data brokers in science processes, and their role is essential.

Roadmap to a Science Commons

1. There cannot be a Science Commons without Open Science. A Science Commons can be viewed as the framework organized around principles, universal values and the architecture of open research.
 - The principles should apply to all scientists who receive public research funding wherever they are located. Outputs of the global, publicly funded research should be:
 - universally available (no lock-in and not sold as a premium service)
 - as open as possible, as closed as needed
 - as distributed as possible, as centralized as needed
 - FAIR (findable, accessible, interoperable and reusable).
 - Open Science must be guided by universal values:
 - inclusiveness and respect for diversity
 - equitable practice reciprocity and complementarity
 - universally shared benefits, and
 - opportunities for scientific education and social participation.

Open Science e OCDE

Access to publicly funded data has become more important than ever during the COVID-19 crisis.

Enhanced Access to Publicly Funded Data for Science, Technology and Innovation

Enhanced Access to Publicly Funded Data for Science, Technology and Innovation

7 main challenges addressed

- 1/ Data governance for trust
- 2/ Discoverability/findability, machine readability and data standards.
- 3/ Recognition and reward system for data authors.
- 4/ Definition of responsibility and ownership.
- 5/ Business models for open data provision.
- 6/ Building human and institutional capabilities.
- 7/ Exchange of sensitive data across borders.

Open Science e UNESCO

UNESCO Recommendation on Open Science

At the 40th session of UNESCO's General Conference, 193 Members States tasked the Organization with the development of an international standard-setting instrument on Open Science in the form of a UNESCO Recommendation on Open Science to be adopted by Member States in 2021.

Nov. 2020

8. The term 'Open Science' refers to an umbrella concept that combines various movements and practices aiming to make scientific knowledge, methods, data and evidence freely available and accessible for everyone, increase scientific collaborations and sharing of information for the benefits of science and society, and open the process of scientific knowledge creation and circulation to societal actors beyond the institutionalized scientific community.

Considering that Open Science should not only foster enhanced sharing of scientific knowledge but also promote inclusion of scholarly knowledge from marginalized groups (such as women, minorities, Indigenous scholars, non-Anglophone scholars, scholars from less-advantaged countries) and contribute to reducing inequalities in access to scientific development, infrastructures and capabilities among different countries and regions;

Recognizing that Open Science respects the diversity of cultures and knowledge systems around the world as foundations for sustainable development, fostering open and robust dialogue with indigenous peoples and local communities and diverse knowledge holders for contemporary problem-solving and emergent strategies towards transformative change;

Acknowledging the transformative potential of Open Science for reducing the existing inequalities in science, technology and innovation and accelerating progress towards the implementation of the Agenda 2030 and the achievement of the Sustainable Development Goals and beyond;

Important message to bring to university leadership is that we miss out on talent by not making equality and diversity a priority. Mixed teams work better. Addressing diversity issues is a win-win situation for students, staff and institutions, says @Stephen_Curry

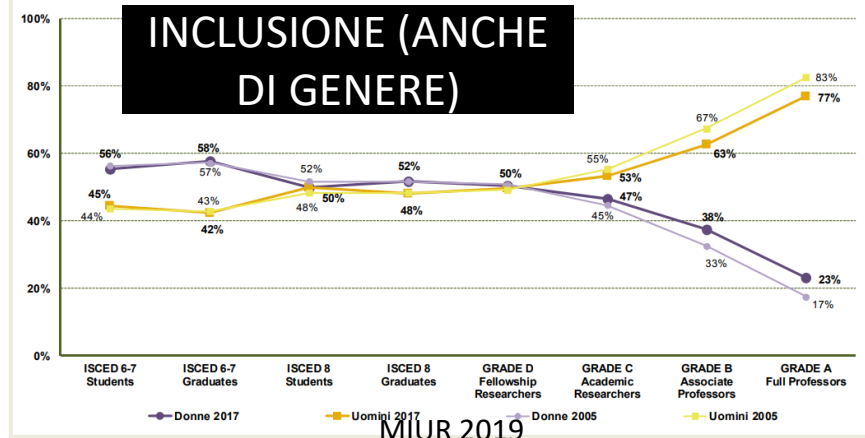

It's time to talk explicitly about inclusiveness

We have talked enough about diversity in an **implicit** way but we have not focused on it in an **explicit** way and we may therefore have missed the real point: **equity, diversity and inclusiveness are non-negotiable** and they must be built into the foundation of what we do.

Addiction has teamed up with Qeios ([queios.com](https://www.queios.com)) to facilitate the most effective and efficient use of preprints because this platform provides an easy way for people to review or comment on the preprint and to update preprints while maintaining an archive of previous versions. Most importantly, it offers a simple way of ensuring that terms used in the article are linked to definitions, which aligns with *Addiction*'s drive to improving the clarity of scientific writing [1, 2]. Authors are advised not to use pre-print servers for specific journals because of the complications that arise if the journal rejects the article.

COVID-19 has reinforced the importance of preprints as an indispensable means for rapid research dissemination.

The uptake of preprints during the COVID-19 pandemic has been nothing short of remarkable. In April, the clinical preprint repository medRxiv published between 50 and 100 SARS-CoV-2-related preprints daily. The burgeoning adoption of preprints by the medical community in recent months underscores their importance as a means for sharing and updating of research findings during an outbreak.

INDISPENSABILI,
EFFICACI...DOVREBBERO
DIVENTARE LA NORMA

Preprints – unvetted versions of research papers – offer open publication, establish precedence of research, enable rapid dissemination of results, provide early recognition and visibility for work (especially for early-career researchers) and avoid the selection bias against negative findings commonly associated with traditional peer review. Although they are not a new idea, the *The Atlantic* in the life sciences after the 2013 launch of *medRxiv* and *bioRxiv* archives host biology preprints;

How Science Beat the Virus

And what it lost in the process

Story by Ed Yong

Dec.14, 2020

endeavor into something nimbler and more transparent. Traditionally, a scientist submits her paper to a journal, which sends it to a (surprisingly small) group of peers for (several rounds of usually anonymous) comments; if the paper passes this (typically months-long) peer-review gantlet, it is published (often behind an expensive paywall). Languid and opaque, this system is ill-suited to a fast-moving outbreak. But biomedical scientists can now upload preliminary versions of their papers, or “preprints,” to freely accessible websites, allowing others to immediately dissect and build upon their results. This practice had been slowly gaining popularity before 2020, but proved so vital for sharing information about COVID-19 that it will likely become a mainstay of modern biomedical research. Preprints accelerate science, and the pandemic accelerated the use of preprints. At the start of the year, one repository, medRxiv (pronounced “med archive”), held about 1,000 preprints. By the end of October, it had more than 12,000.

[non è tutto rose e fiori]

ancora delle modifiche se necessarie. “Pubblicare un preprint senza il database completo dei dati e i dettagli dei metodi di analisi utilizzati non aiuta la ricerca né la comunicazione della scienza, dentro e fuori dalla comunità di ricercatori. Si impedisce a chiunque altro di verificare e riprodurre l’esperimento riportato. E la stampa prende per buono quello che trova nel pdf”, spiega Masuzzo.

Per gli autori dello studio, comunque, queste dinamiche non dimostrano che l’*open science* non funziona. Sono invece la prova che mettere in atto solo alcune delle pratiche di “scienza aperta” può essere dannoso. “La pandemia ha reso evidente che ogni passaggio della ricerca scientifica deve essere trasparente. Dall’idea dello studio ai dati raccolti in ogni fase”. Per evitare problemi come quelli emersi, Paola Masuzzo e i suoi colleghi propongono diverse soluzioni. Il processo di revisione degli articoli, le correzioni e i commenti della peer review, devono essere resi pubblici e consultabili da tutti. Secondo gli attivisti una maggiore trasparenza potrebbe migliorare anche la qualità delle revisioni, stimolando i ricercatori a fare un lavoro più accurato. Per la verifica dei risultati ottenuti dalle ricerche, chiedono la condivisione completa dei dati raccolti durante la ricerca e la pubblicazione dei codici di programmazione usati dagli statistici per le analisi. Un’altra proposta prevede la registrazione su piattaforme dedicate di tutti gli studi in corso, con una descrizione approfondita del progetto oltre a tutte le informazioni sull’approvazione da parte del comitato etico e sui metodi per la raccolta e l’analisi dei dati. La registrazione è uno strumento utile a verificare che gli studi siano condotti in linea con le normative nazionali e internazionali, ma ha anche vantaggi per i ricercatori. Può evitare duplicazioni di una stessa ricerca da parte di altri gruppi e permettere agli scienziati di ideare progetti complementari a quelli già esistenti. “Siamo convinti che la piena adozione dei principi dell’open science avrebbe potuto accelerare la scoperta di soluzioni alla pandemia sia in campo medico sia socio-economico”, conclude Paola Masuzzo.

The platform will complement the current policy in Horizon 2020 – where publication is mandatory – in order to balance obligations with incentives. To be free to use for Horizon 2020 grantees at the point of delivery (the cost covered by the proposed public procurement) and operate on a strictly open access. Furthermore, the platform will explore many features not found in traditional journals: not only open access but also open peer review, next generation metrics, and access to pre-prints; all of these are important components of Open Science (and part of the 2016 Amsterdam Call for Action).

To implement such a demand-driven platform we need a robust service, on par with the highest quality standards of scientific publishing; this can only be provided by outsourcing the implementation of the platform through a fully transparent public procurement process, allowing any entity to apply. Such an action has therefore been included in the Work Programme 2018.¹ Over a duration of 4 years a maximum of 6.4 million € are foreseen for this action.

Through this action the Commission builds on and further develops the best practice example of other funders, such as the Wellcome Trust and the Bill & Melinda Gates Foundation.

PIATTAFORMA PER CONDIVIDERE LA RICERCA IN OGNI SUO PASSO

Introducing Hypergraph (Beta)

by **Liberate Science** 8 days ago · 2 MIN READ

The beta release of [Hypergraph](#) is here 🎉 If you want to dive in immediately, download [Hypergraph \(Beta\)](#) for [Windows](#), [macOS](#), or [Linux](#).

[Hypergraph helps researchers reset research publishing, by publicly documenting research step by step, before the issues of after-the-fact articles even begin. Traditionally, articles are often written in hindsight, causing selective publication, p-hacking, and many other issues.](#)

In [Hypergraph](#), you only have to indicate what step you're taking, link it to the step(s) it follows from, add relevant files, and indicate what file you want people to see first. This means that you can share all kinds of steps in your research—the theory, predictions, transcripts, materials, code, data, results (and more). Plus, you can share files such as [Jupyter notebooks](#), [scripts](#), [data files](#), [videos](#), [audio files](#), [text](#), and any other [open file format](#).

When you share your latest research step, your peers can immediately see it, link next steps to it, and help you improve it. You share when you're ready.

FARM DATA TRAIN

[perché c'è EOSC!]

The Vienna

Vienna, 23 Novem

BRINGING TOGETHER CURRENT AND FUTURE DATA INFRASTRUCTURES

We, Ministers European Op

1. **Recall** the challenge of the European Open Science Cloud Declaration signed in Brussels on 10 July 2018.
2. **Reaffirm** the political commitment of the European Council to the vision of the European Open Science Cloud, sustainable and based on the FAIR data principles.
3. **Recognise** that the European Open Science Cloud, by its nature iterative and based on the FAIR data principles, is a unique opportunity to build trust and reach out over the world, and the federated
4. **Highlight** that the European Open Science Cloud, by its nature iterative and based on the FAIR data principles, is a unique opportunity to build trust and reach out over the world, and the federated
5. **Recall** that the

**ACCESSO TRASPARENTE A DATI FAIR
«AS OPEN AS POSSIBLE, AS CLOSED AS NECESSARY»**

9. Call for the European Open Science Cloud to provide all researchers in Europe with seamless access to an open-by-default, efficient and cross-disciplinary environment for storing, accessing, reusing and processing research data supported by FAIR data principles.

9. Note that the 2018 EOSC Summit (held on 11 June 2018) called for acceleration towards making the European Open Science Cloud a reality, hinting at the need to further strengthen the ongoing dialogue across institutions and with stakeholders, for a new governance framework to be launched in Vienna, on 23 November 2018.

... con un Data Management Plan

DMP È

- UN MODO STRUTTURATO DI PENSARE AI PROPRI DATI:
raccolta, conservazione, descrizione, condivisione
- DICHIARAZIONE DI COME SI TRATTERANNO I DATI
 - living document: va aggiornato
 - ...E SOPRATTUTTO VA MESSO IN PRATICA...

The screenshot shows the DMPonline website. At the top, there is a navigation bar with the DMPonline logo and links for Home, About, Future plans, Help, and Change language. Below the navigation bar, there is a 'Welcome' section with a brief description of the service. A 'Sign in' section follows, with fields for email address and password, and a 'Remember me' checkbox. Below the sign-in section is a 'Create account' section with a link to 'New to DMPonline? Create an account today.' At the bottom of the screenshot, there is a video player showing a screencast on how to use DMPonline.

PREREGISTRAZIONE
OSF Registries o
AsPredicted
- PRIORITÀ
- DIFFICILE FALSIFICARE
- RISULTATI NEGATIVI

What's an AsPredicted?

It is a standardized pre-registration that requires only what's necessary to separate exploratory from confirmatory analyses. You will easily generate a pre-registration document that takes less effort to evaluate than it takes to evaluate the published study itself.

[About](#) [Terms of use](#)

How does it work?

- One author briefly answers 9 questions.
- All participating authors receive an email asking for approval.
- If everyone approves, it is saved and stays private until an author acts to make it public, or it remains private forever. ([Why?](#))
- Authors may share anonymous .pdf with reviewers.
- If made public, a single-page .pdf is generated. That document can be used as a supplement. ([See sample](#))
- The .pdf contains a unique URL that allows for one-click verification. That URL can be included in the paper.
- The .pdf is automatically stored in the web-archive. ([See sample](#))
- There are no accounts, userids, or passwords.

What if things don't go "as predicted"

You can just say so in the paper:

- "Contrary to expectations, we found that..."
- "Unexpectedly, we also found that..."
- "In addition to the analyses we pre-registered we also ran..."
- "We encountered an unexpected situation, and followed our Standard Operating Procedure" (.pdf)

...disseminado in modo diverso

Ten steps to innovative dissemination

1. Get the basics right

Define your objectives, map your audience(s), target and frame your messages and bring this together into a dissemination plan of what you'll release and when.

2. Keep the right profile

Use personal websites, social media accounts, researcher identifiers and academic social networks to make you and your research visible.

3. Encourage participation

In the age of Open Science, don't just broadcast, go for multi-directional dissemination. Invite & engage with others to participate & collaborate.

4. Open science for impact

Open Access publications and preprints mean more citations. In addition, publishing datasets, software and peer reviews increase your number of citable research outputs.

5. Remix traditional outputs

Give traditional outputs like research articles and books an impact-boost with accompanying lay-summaries, press-releases, blogs, and visual/video abstracts.

6. Go live

In person dissemination doesn't just have to be at stuffy conferences – hit the road and take part in science festivals, science slams, TEDx talks, science festivals, or roadshows.

7. Think visual

Disseminate findings through art or multimedia interpretations. Let your artistic side loose or use new visualisation techniques to produce intuitive, attractive data displays.

8. Respect diversity

Research should reach all who might benefit. Respect inclusion in scientific dissemination by creating messages which reflect gender, demography and ability diversity.

9. Find the right tools

Choose media, format and dissemination strategy based on your communication objectives. Find tools via, e.g., the OpenUP Hub: openuphub.eu/disseminate/services

10. Evaluate, evaluate, evaluate

Assess your dissemination activities. Are they having the right impact? If not, why not?

Open science

From Wikipedia, the free encyclopedia

Open science is the movement to make scientific research (including publications, data, physical samples, and software) and its dissemination **accessible** to all levels of an inquiring society, amateur or professional.^[2] Open science is transparent and accessible knowledge that is shared and developed through collaborative networks.^[3] It encompasses practices such as publishing **open research**, campaigning for **open access**, encouraging scientists to practice **open notebook science**, and generally making it easier to publish and communicate scientific knowledge.

Open Science can be seen as a continuation of, rather than a revolution in, practices begun in the 17th century with the advent of the **academic journal**, when the societal demand for access to scientific knowledge reached a point at which it became necessary for groups of scientists to share resources^[4] with each other so that they could collectively do their work.^[5] In modern times there is debate about the extent to which scientific information should be shared.^[6] The conflict that led to the Open Science movement is between the desire of scientists to have access to shared resources versus the desire of individual entities to profit when other entities partake of their resources.^[7] Additionally, the status of **open access** and resources that are available for its promotion are likely to differ from one field of academic inquiry to another^[8]

FOSTER About Resources Events Courses News

Open Science Training Courses

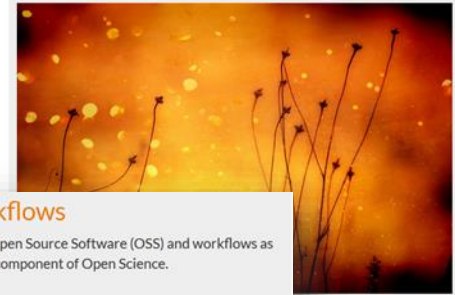

What is Open Science?

This introductory course will help you to understand what open science is and why it is something you should care about.

Best Practices

This course introduces funding body policies and other environmental factors that influence good practice in opening up research practice.

Managing and Sharing Research Data

In this course, you'll focus on which data you can share and how you can go about doing this most effectively.

OSS and Workflows

This course introduces Open Source Software (OSS) and workflows as an emerging but critical component of Open Science.

Data Protection and Ethics

This course helps you to get to grips with responsible data sharing.

Licensing

This course helps you to find the best license for your outputs.
