## 1.2 Credits

The heat stress exposure data (e.g. average number of heat wave days per year) are extracted from local urban climate simulations (UrbClim model) performed by VITO over the period 1986-2005.

<https://vito.be/en/land-use/sustainable-cities/urban-climate-services>

Data such as 3D buildings, land use/cover and socio-economic data related to the considered maps is provided by city of Antwerp.

<https://www.antwerpen.be>

The UrbClim input data (e.g. land surface parameters), output results (e.g. daily temperature statistics) and the socio-economic data are processed by GIM.

## 2 DESCRIPTION OF THE MAPS AND DATASETS

### 2.1 General Metadata

#### 2.1.1 Map coordinate projection

The coordinate projection of maps and data is projected Belgian Lambert 1972 (EPSG 31370).

#### 2.1.2 Maps style

Two versions of maps are generated per socio-economic theme.

The first one ("\_ backgr") has World Imagery Service Layer as background of the map.

The second one ("\_ nobackgr") doesn't contain any background.
