investigación

Ventajas de la ciencia abierta

- › Para la **ciencia**: mayor transparencia, ciencia más eficiente, evita duplicidad de trabajo y recursos
- › Para la **sociedad**: más responsable, más accesible, mejora la innovación y recupera el papel de los ciudadanos
- › Para los **investigadores**: ¡mayor impacto y mayor visibilidad de sus trabajos!

Implicaciones de la ciencia abierta

Cambio de paradigma

Ciencia Cerrada	Ciencia Abierta
• Basada en publicar artículos científicos	• Basada en publicar cualquier resultado de investigación
• Ciencia individualista	• Ciencia colaborativa
• Solo unos pocos tienen acceso a los resultados de investigación	• Toda la sociedad tiene acceso a los resultados de investigación
• Ciencia vertical / especializada	• Ciencia horizontal, interdisciplinar
• Sin participación ciudadana	• Ciencia Ciudadana con y para la sociedad
• Sistema de crédito basado en el impacto de las publicaciones	• Sistema de crédito basado en el impacto del investigador
• Factor de Impacto (FI – JCR)	• Nuevas métricas (Next Generation Metrics). Nuevos indicadores

Desmontando algunos mitos

El acceso abierto es caro...

CURRENT FEES		
PLOS ONE	PLOS Computational Biology	PLOS Genetics
Registered Report Protocol \$1,300 USD	All primary research articles \$2,500 USD	All primary research articles \$2,500 USD
Registered Report Article \$750 USD*		
All other articles \$1,695 USD		
PLOS Neglected Tropical Diseases	PLOS Pathogens	
All primary research articles \$2,350 USD	All primary research articles \$2,500 USD	
*The APC for Registered Reports Articles will be waived for submissions associated with Registered Report Protocols submitted before July 31, 2020 at midnight Pacific Time.		
PLOS Community Action Publishing took effect January 1, 2021 for PLOS Biology and PLOS Medicine . Authors will only incur fees if their institutions are not members of the journal's collective action community. For work submitted in 2021 these non-member fees are as below:		
PLOS Biology	PLOS Medicine	
Discovery Report \$3,350 USD Update Articles \$2,350 All other primary research articles \$4,000	All primary research articles \$4,000 USD	

Nature journals reveal terms of landmark open-access option

The journals will charge authors up to €9,500 to make research papers free to read, in a long-awaited alternative to subscription-only publishing.

Holly Else

Nature and 32 other subscription titles in the Nature family will offer open-access publishing from 2021. Credit: Nature

Publisher Springer Nature has announced how scientists can make their papers in its most selective titles free to read as soon as they are published – part of a long-awaited move to offer open-access publishing in the Nature family of journals.

From 2021, the publisher will charge €9,500, US\$11,390 or £8,290 to make a paper open access (OA) in *Nature* and 32 other journals that currently keep most of their articles behind paywalls and are financed by subscriptions. It is also trialling a scheme that would halve that price for some journals, under a common-review system that might guide papers to a number of titles.

OA advocates are pleased that the publisher has found ways to offer open access to all authors, which it first committed to in April. But they are concerned about the price. The development is a “very significant” moment in the movement to make scientific articles free for all to read, but “it looks very expensive”, says Stephen Curry, a structural biologist at Imperial College London.

Elsevier Expands Open Access Options for Cell Press Journals from January 2021

December 18, 2020

Elsevier, a global leader in research publishing and information analytics, today announced that the Cell Press portfolio of journals will be expanding open access publishing options for authors from 1 January 2021.

Open access is an integral part of Elsevier's commitment to a more collaborative, inclusive, and transparent world of research where authors, researchers, and academic institutions can share knowledge and build on each other's work to advance outcomes. We recognise that authors

around the world have diverse needs and preferences, so we have been working collaboratively with the communities that we serve to test and learn from different ways of accelerating open access. As one of the fastest-growing open access publishers in the world, nearly all of Elsevier's 2,600 journals now enable open access publishing, including 500 fully open access journals.

From January 2021, all authors will have the option to publish open access across the entire range of the highly regarded and influential Cell Press family of journals. This publishing route means all Cell Press authors can choose to make their research article available for everyone to read immediately following publication.

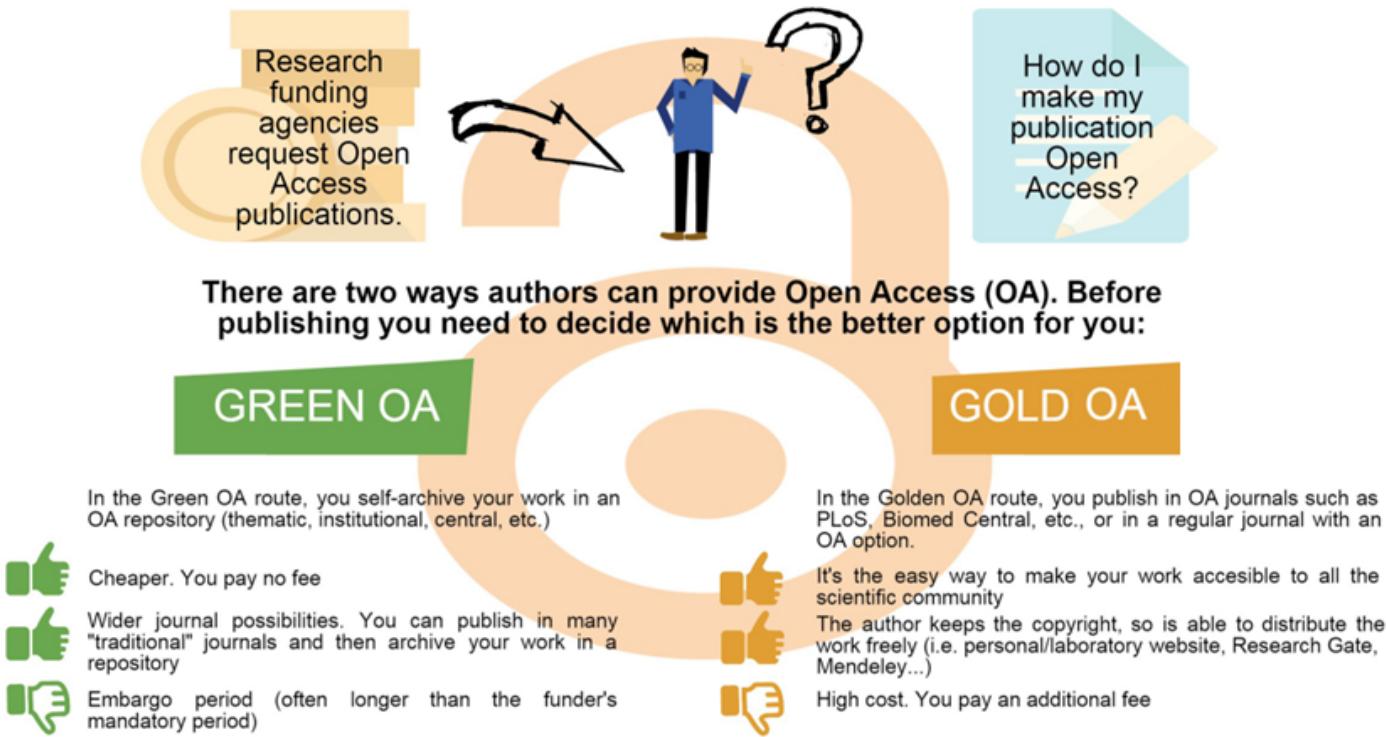

In enabling more open access, our principle is always to offer substantial value to the scientific community relative to the quality and rigour of the editorial and publishing services we provide. As a result, for those titles that do not currently offer an open access publishing option, the article publishing charges (APCs) will be £7,000/€7,600/\$8,900 for the majority of journals, and £7,800/€8,500/\$9,900 for our flagship title, *Cell*. We will align our existing Cell Press APCs for hybrid journals with these new publishing charges.

These journals will also continue to offer authors the option to publish through the subscription model. Since 2004, we have made all the subscription articles published in Cell Press research journals free for everyone to read from 12 months after publication in our Open Archive.

The APCs will remain unchanged for most of our existing gold open access journals, including the growing Cell Reports family, *iScience* and *Heliyon*. Overall, the Cell Press journals will offer open access publishing at APCs starting from £1,400/€1,500/\$1,750.

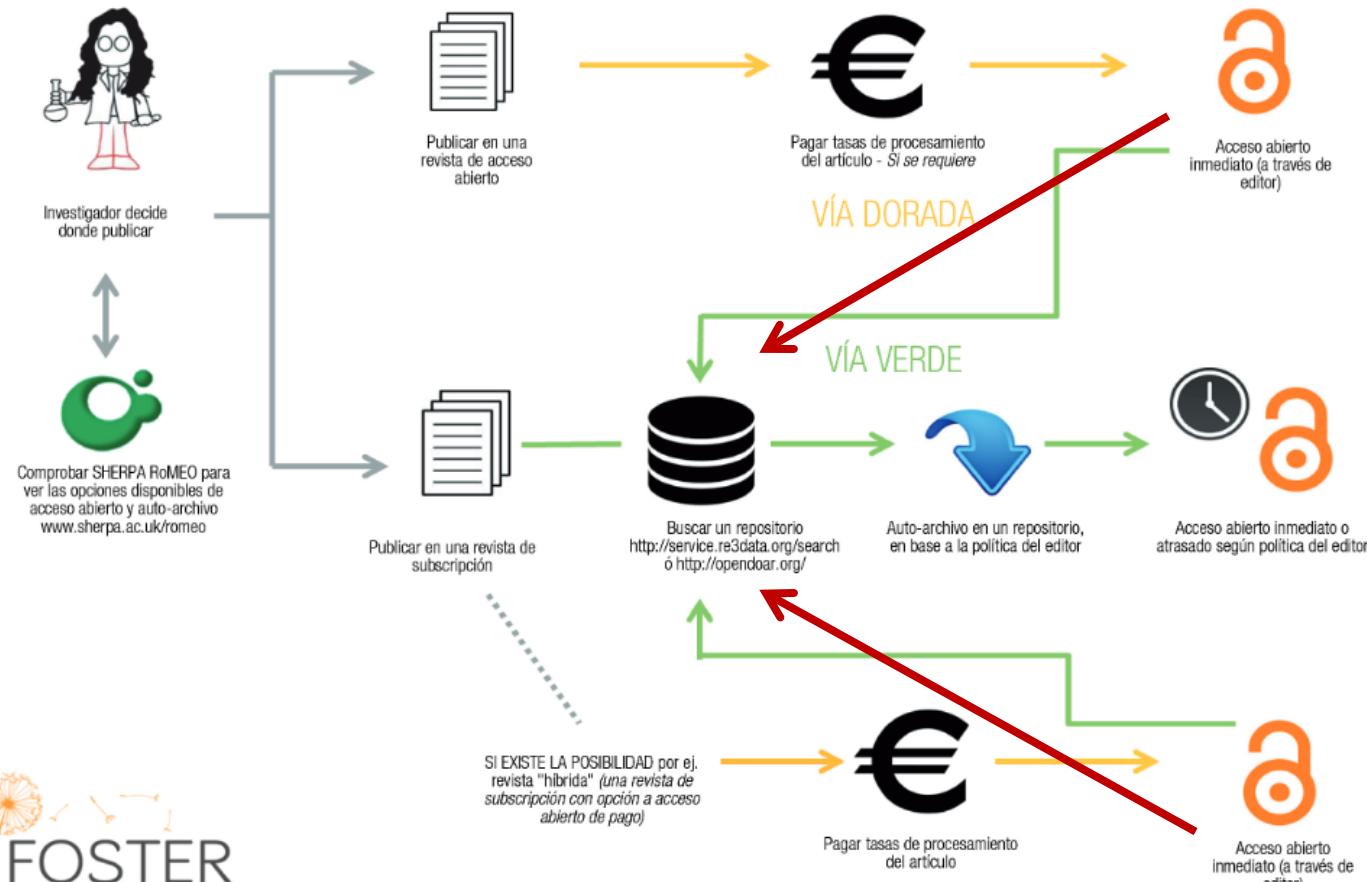

Las APCs de algunas revistas son caras

... ¡publiquemos en repositorios!

OpenAIRE H2020 OA Guide Model for Publishing

Open Access addendum to the Publication Agreement

https://ec.europa.eu/research/participants/data/ref/h2020/other/hi/oa-pilot/h2020-oa-guide-model-for-publishing-a_en.pdf

PP templates: Open Access Publishing Agreement: V1.0 – 20.03.2017

OPEN ACCESS PUBLISHING AGREEMENT

- Instructions and footnotes in blue should be deleted.
- For options [in square brackets]: choose the applicable option. Options not chosen should be deleted.
- For fields in [grey in square brackets]: enter the appropriate data.

ADDENDUM

(To be filled out by the beneficiary/author and the publisher. This model is not mandatory but reflects the obligations for the beneficiary under the H2020 grant agreements. It can be supplemented by further provisions agreed between the parties, provided they are compatible with the Grant Agreement. The Commission/Agency takes no responsibility for the use of this model.)

This 'Addendum' is between the following parties:

on the one part,

1. the publisher

[full official name (short name)], established in [official address in full], represented by [...],

and

on the other part,

1. 'the corresponding author':

[full name], [official address in full], represented by [...]

and the following other authors

2. [full name], [official address in full], represented by [...]

3. [full name], [official address in full], represented by [...]

[same for each author].

With this Addendum, the parties agree to complement and amend the attached Publication Agreement concerning the publication [insert name of publication] in the Journal [insert name of journal] with the following open access clause:

Open access

The author(s) retain(s) the right to:

1

ADDENDUM TO PUBLICATION AGREEMENT

1. THIS ADDENDUM hereby modifies and supplements the attached Publication Agreement concerning the following Article:

(manuscript title) _____
(journal name) _____

2. The parties to the Publication Agreement as modified and supplemented by this Addendum are:

(corresponding author) _____ | (Publisher) _____
(Individually or, if one than more author, collectively, Author) _____

3. This Addendum and the Publication Agreement, taken together, allocate all rights under copyright with respect to all versions of the Article. The parties agree that wherever there is any conflict between this Addendum and the Publication Agreement, the provisions of this Addendum are paramount and the Publication Agreement shall be construed accordingly.

4. **Author's Retention of Rights.** Notwithstanding any terms in the Publication Agreement to the contrary, AUTHOR and PUBLISHER agree that in addition to any rights under copyright retained by Author in the Publication Agreement, Author retains: (i) the rights to reproduce, to distribute, to publicly perform, and to publicly display the Article in any medium for non-commercial purposes; (ii) the right to prepare derivative works from the Article; and (iii) the right to authorize others to make any non-commercial use of the Article so long as Author receives credit as author and the journal in which the Article has been published is cited as the source of first publication of the Article. For example, Author may make and distribute copies in the course of teaching and research and may post the Article on personal or institutional Web sites and in other open-access digital repositories.

5. **Publisher's Additional Commitments.** Publisher agrees to provide to Author within 14 days of first publication and at no charge an electronic copy of the published Article in a format, such as the Portable Document Format (.pdf), that preserves final page layout, formatting, and content. No technical restriction, such as security settings, will be imposed to prevent copying or printing of the document.

6. **Acknowledgment of Prior License Grants.** In addition, where applicable and without limiting the retention of rights above, Publisher acknowledges that Author's assignment of copyright or Author's grant of exclusive rights in the Publication Agreement is subject to Author's prior grant of a non-exclusive copyright license to Author's employing institution and/or to a funding entity that financially supported the research reflected in the Article as part of an agreement between Author or Author's employing institution and such funding entity, such as an agency of the United States government.

7. For record keeping purposes, Author requests that Publisher sign a copy of this Addendum and return it to Author. However, if Publisher publishes the Article in the journal or in any other form without signing a copy of this Addendum, such publication manifests Publisher's assent to the terms of this Addendum.

How to negotiate with publishers: an example of immediate self-archiving despite publisher's embargo policy

In this post I share a recent experience as an example of how to negotiate with a publisher your right to make your research freely available without any money. Hope it proves useful to more researchers in a situation where they offer my personal opinion on how researchers can change the current unethical system of scholarly communication by gradually adopting an alternative model that will foster collaboration instead of competition.

A few days ago one of my co-authors happily announced via email that the article he had written had been accepted by a Springer journal. Knowing that I am deeply involved in the Open Access movement she asked me whether we should consider paying 2000 euros to Springer in order the Open Choice and publish the article as open access. I told her that I would be happy to do so if the journal accepted our manuscript as a pre-print. She agreed and I sent her the following email:

Search

Dear Pandelis,

Please use this email confirmation that you can self-archive the post-reviewed author's copy (but not the published PDF) on your project website and the zenodo.org archive.

Thanks, and best wishes,
[REDACTED]

Los datos de investigación tienen que estar en abierto

POLÍTICA EUROPEA – HORIZONTE 2020 ACCESO ABIERTO A DATOS

..... 29.3 Open access to research data

[OPTION for actions participating in the open Research Data Pilot: Regarding the digital research data generated in the action ('data'), the beneficiaries must:

- a) deposit in a research data repository and take measures to make it possible for third parties to access, mine, exploit, reproduce and disseminate — free of charge for any user — the following:

(i) the data, including associated metadata, needed to validate the results presented in scientific publications as soon as possible;
(ii) other data, including associated metadata, as specified and within the deadlines laid down in the 'data management plan' (see Annex 1);

- b) provide information — via the repository — about tools and instruments at the disposal of the beneficiaries and necessary for validating the results (and — where possible — provide the tools and instruments themselves).

This does not change the obligation to protect results in Article 27, the confidentiality obligations in Article 36, the security obligations in Article 37 or the obligations to protect personal data in Article 39, all of which still apply.

As an exception, the beneficiaries do not have to ensure open access to specific parts of their research data if the achievement of the action's main objective, as described in Annex 1, would be jeopardised by making those specific parts of the research data openly accessible. In this case, the data management plan must contain the reasons for not giving access.]

Lo que requiere la normativa europea

Garantizar el acceso abierto a:

- ✓ Los **datos de investigación y los metadatos** necesarios para validar los resultados presentados en publicaciones científicas
- ✓ Otros datos y sus metadatos incluidos en el **Plan de gestión de datos** (PGD)

EXCEPCIONES:

- Protección derechos de propiedad industrial
- Protección datos personales
- Confidencialidad en relación a asuntos de seguridad
- El objetivo principal del proyecto se vea comprometido
- No se generen datos en el proyecto
- Otras razones a justificar

Y respecto a la normativa en España

Plan Estatal de Investigación Científica y Técnica y de Innovación 2017-2020

[https://www.ciencia.gob.es/stfls/
MICINN/Prensa/FICHEROS/2018/PlanEstatalIDI.pdf](https://www.ciencia.gob.es/stfls/MICINN/Prensa/FICHEROS/2018/PlanEstatalIDI.pdf)

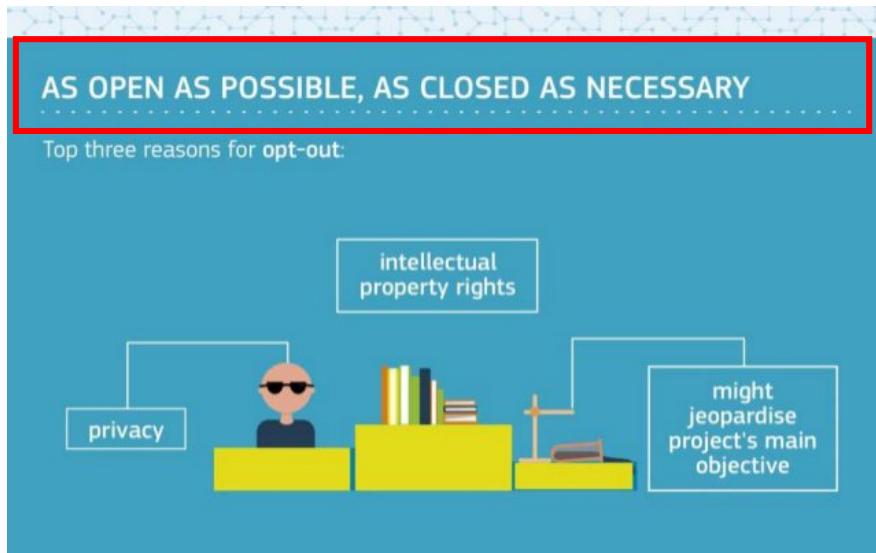

2. TRANSPARENCIA Y RENDICIÓN DE CUENTAS de las ayudas concedidas y del proceso de concesión de las mismas, incluyendo:

- LA EVALUACIÓN (ex ante y ex post) de las actuaciones amparada en principios de transparencia, publicidad y competencia y la aplicación de criterios claros, públicos y objetivos de carácter científico y técnico y, en su caso, de viabilidad tecnológica y empresarial, así como la incorporación de criterios de evaluación asociados al impacto científico, social y económico de las ayudas concedidas. En los procesos de evaluación por pares y en los comités se harán pública la composición de los mismos tras la resolución de las convocatorias y anualmente se publicará la relación de evaluadores externos participantes.
- ACCESO ABIERTO A RESULTADOS Y DATOS DE INVESTIGACIÓN de las actividades de investigación subvencionadas con recursos públicos. Los trabajos publicados en revistas científicas financiados a través del Plan Estatal se depositarán en repositorios, institucionales y/o internacionales, en abierto teniendo en cuenta las características específicas de las distintas materias, en cumplimiento de lo establecido en el Artículo 37 de la Ley 14/2011, de 1 de junio, de la Ciencia, la Tecnología y la Innovación y de las recomendaciones vinculadas a la agenda europea en materia de acceso abierto y ciencia en abierto¹⁹. Con el fin de impulsar el acceso a datos de investigación, los proyectos de I+D+i financiados podrán incluir, con carácter optativo, un plan de gestión de los datos de investigación que se depositarán en repositorios institucionales, nacionales y/o internacionales tras la finalización del proyecto y transcurrido el plazo establecido en las correspondientes convocatorias²⁰. No obstante, se respetarán todas las situaciones en las que los mismos han de protegerse por razones de confidencialidad, seguridad, protección, etc. o cuando los mismos sean necesarios para la explotación comercial de los resultados obtenidos. Finalmente, en la evaluación curricular de los investigadores así como en la evaluación ex post de las actuaciones financiadas se tendrán en cuenta los trabajos publicados en abierto en repositorios institucionales y temáticos, nacionales y/o internacionales, y la puesta de los datos de su investigación en abierto, de modo que puedan ser utilizados para replicar y reproducir los análisis y resultados de investigación.

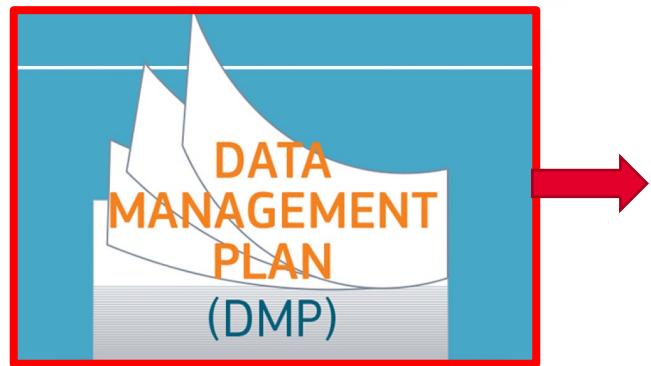

El Plan de Gestión de Datos (PGD) o Data Management Plan (DMP)

- Es un **entregable del proyecto**, en sí por lo general no forma parte de la propuesta (salvo excepciones).
- **Instrumento vivo**, primera versión en los 6 primeros meses del proyecto: no es un documento estático, debe evolucionar y ganar en precisión.
- Nueva versión cada vez que haya cambios importantes en el proyecto (al menos una revisión intermedia y otra final).
- **En el DMP se indica qué datos se general, su tipología, qué datos estarán en abierto y cuáles no, por qué y bajo qué licencias.**

Entonces la obligación es:

Research and Innovation

H2020 templates: Data management plan v1.0 – 13.10.2016

TEMPLATE HORIZON 2020 DATA MANAGEMENT PLAN (DMP)

- Instructions and footnotes in blue must not appear in the text.
- For options [in square brackets]: the option that applies must be chosen.
- For fields in [grey in square brackets] (even if they are part of an option as specified in the previous item): enter the appropriate data.

Introduction

This Horizon 2020 DMP template has been designed to be applicable to any Horizon 2020 project that produces, collects or processes research data. You should develop a single DMP for your project to cover its overall approach. However, where there are specific issues for individual datasets (e.g. regarding openness), you should clearly spell this out.

Guidelines on FAIR Data Management in Horizon 2020 are available in the Online Manual.

FAIR data management

In general terms, your research data should be 'FAIR', that is findable, accessible, interoperable and re-usable. These principles precede implementation choices and do not necessarily suggest any specific technology, standard, or implementation-solution.

This template is not intended as a strict technical implementation of the FAIR principles, it is rather inspired by FAIR as a general concept.

More information about FAIR:

[FAIR data principles \(FORCE11 discussion forum\)](#)

[FAIR principles \(article in Nature\)](#)

Structure of the template

The template is a set of questions that you should answer with a level of detail appropriate to the project.

It is not required to provide detailed answers to all the questions in the first version of the DMP that needs to be submitted by month 6 of the project. Rather, the DMP is intended to be a living document in which information can be made available on a finer level of granularity through updates as the implementation of the project progresses and when significant changes occur. Therefore, DMPs should have a clear version number and include a timetable for updates. As a minimum, the DMP should be updated in the context of the periodic evaluation/assessment of the project. If there are no other periodic reviews envisaged within the grant agreement, an update needs to be made in time for the final review at the latest.

In the following the main sections to be covered by the DMP are outlined. At the end of the document, Table 1 contains a summary of these elements in bullet form.

This template itself may be updated as the policy evolves.

En definitiva:

- El acceso abierto (OA) no es un objetivo final en sí mismo, sino el primer **paso para lograr una investigación académica transparente**.
- El "conocimiento abierto" es cualquier contenido, información o datos que las personas son libres de **usar, reutilizar y redistribuir, sin ninguna restricción legal, tecnológica o social**.
- **Los datos abiertos son los componentes básicos del conocimiento abierto.** El conocimiento abierto es en lo que se convierten los datos abiertos cuando son útiles, utilizables y utilizados.

Open Knowledge Foundation (OKF)

Limitaciones

- ✓ Los investigadores reconocen los beneficios de publicar en abierto y compartir datos, pero las prácticas de intercambio de datos aún son limitadas.
- ✓ No existe un enfoque único, las prácticas varían según las áreas, zonas geográficas, etc.
- ✓ Se requieren infraestructuras y apoyo técnico

¡Gracias!
