Figure S2. Distribution of **a** *Portiera,* **b** *Arsenophonus,* **c** *Cardinium,* **d** *Hemipteriphilus,* **e** *Rickettsia,* and **f** *Wolbachia* in twelve districts of Pakistan. Bars represent the relative abundance of endosymbionts per district. *Bemisia tabaci* mitotypes Asia II-5 and -7 were only recorded from Lahore, whereas mitotype Asia II-1 was widely distributed across cotton growing districts. Blue lines in map represent rivers, dotted lines indicate provincial limits and the polygon shows the cotton growing area of Pakistan.
