

Table 3

Mediation effects for the British Muslim sample: Models A and B

	Mediator	Outgroup attitudes	β	<i>T</i> -test	<i>p</i>
Model A					
Intergroup anxiety →	Thermometer		.47	.39	.69
	Beh intentions		-.01	-.16	.87
	Future contact		-.06	-.72	.47
Negative emotions →	Thermometer		-3.46	-3.97	<.001
	Beh intentions		-.17	-2.68	.007
	Future contact		-.20	-3.36	<.001
Positive emotions →	Thermometer		4.73	5.15	<.001
	Beh intentions		.32	4.99	<.001
	Future contact		.30	4.84	<.001
IOS →	Thermometer		2.62	3.93	<.001
	Beh intentions		.18	3.91	<.001
	Future contact		.08	1.87	.06
Model B					
Intergroup anxiety →	Thermometer		-3.31	-3.11	<.002
	Beh intentions		-.23	-3.18	<.002
	Future contact		-.28	-4.03	<.001
IOS →	Thermometer		3.86	5.61	<.001
	Beh intentions		.26	5.48	<.001
	Future contact		.16	3.51	<.001

Note. Boldfaced effects are significant; β coefficients are unstandardised; IOS= inclusion of the other in the self; Thermometer = the outgroup feeling thermometer; Beh intentions = intended contact behavioural intentions toward the outgroup; Future contact = importance of future contact with the outgroup.
